TEACHER EDITION

Michael Farlam

this e-book is licensed for use by teachers at

NEW ZEALAND

School Code: ??????
Build Version: Version 4

This product is not to be used unless all the site license details below have been read and are agreed to by all users.

Freefall Mathematics products are sold with a perpetual site license, no reporting or further contact with Freefall Mathematics is required after purchase. While the school above is licensed to use this product, this product remains the sole property of Freefall Mathematics.

This product can not be shared or exhibited with any third party, without the written consent of Freefall Mathematics.

Teacher Edition can not be shared with students. It can only be shared with teaching staff. It can be transferred by RAM devices, such as USB drives, RAM cards, zip disks, or CD/DVD ROM or other optical devices. Web upload or transmission is not allowed for the Teacher Edition. Teachers who leave the employment of the licensed school must delete all Freefall files and destroy/return all printed worksheets/ answer sheets to the school above.

Unlimited printing of this file, by the licensed institution shown above, (including answer sheets) is permitted for worksheet distribution with students. Unlimited duplication of this file, by the licensed institution shown above, is permitted for back-up and teacher distribution purposes. Use or possession of this file and/or printed worksheets by persons not employed by the institution above is a breach of copyright law and is an illegal act.

All Freefall Mathematics e-books (Adobe files) are labeled with the licensed institution's name shown above. Under no circumstance is a school/institution allowed to use this product without their correct school/institution name shown above, to do so constitutes copyright fraud. A lack of compliance with the outlined site license conditions results in the user of this software not having copyright approval from the copyright owner, with any non approved action liable to copyright infringement penalties under prevailing copyright acts.

Reverse engineering, removal of security features, or any form of file modification is not allowed without the written consent of Freefall Mathematics.

This product is bought 'as is' and is sold with no obligation upon Freefall Mathematics to modify its content.

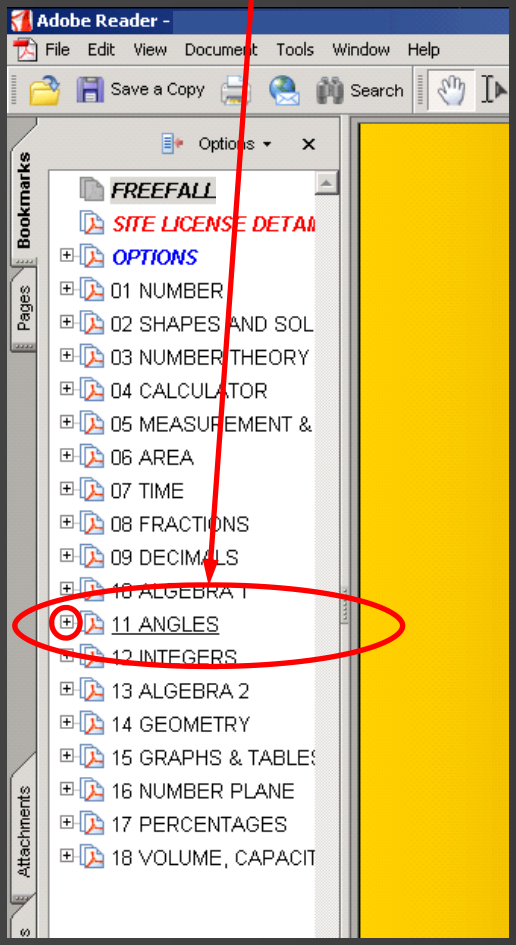
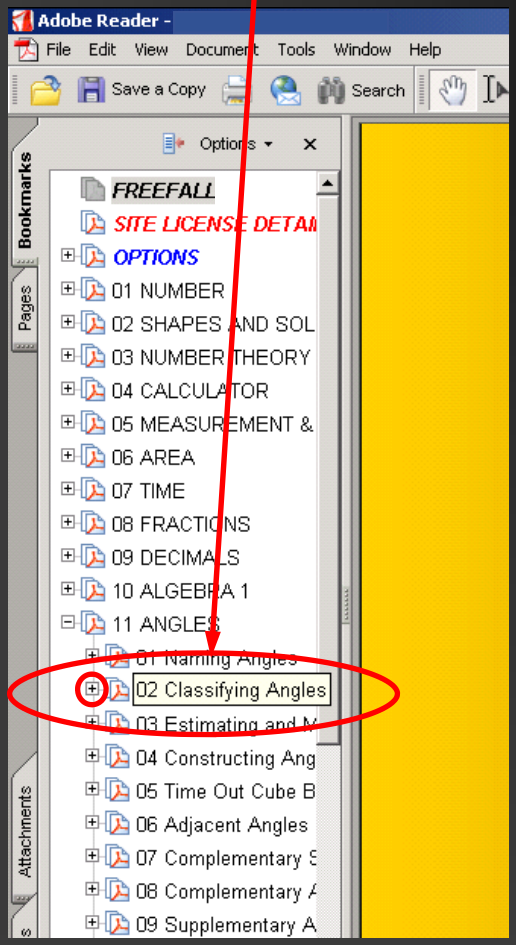
SUPPORT

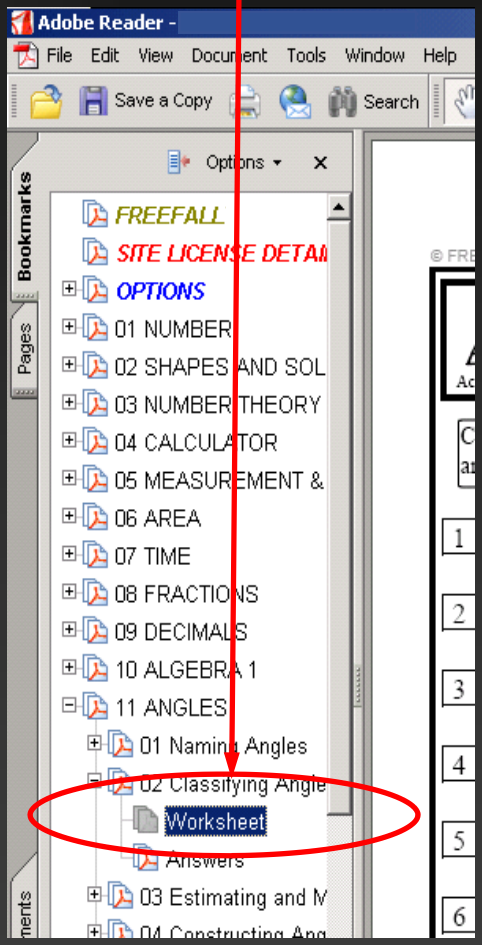
E-book Navigation

Freefall uses 'bookmarks' to navigate through its contents, every page has its own bookmark and simply requires you to click on the bookmark to jump to that page. If for example "02 Classifying Angles" is required:

1	2	3
Open the ebook then single click on the '+' sign in front of the "11 Angles" chapter .	Single click on the + sign in front of 02 Classifying angles.	Then click on worksheet and the sheet is on screen. Zoom in for a better view.







click here to visit our website at:

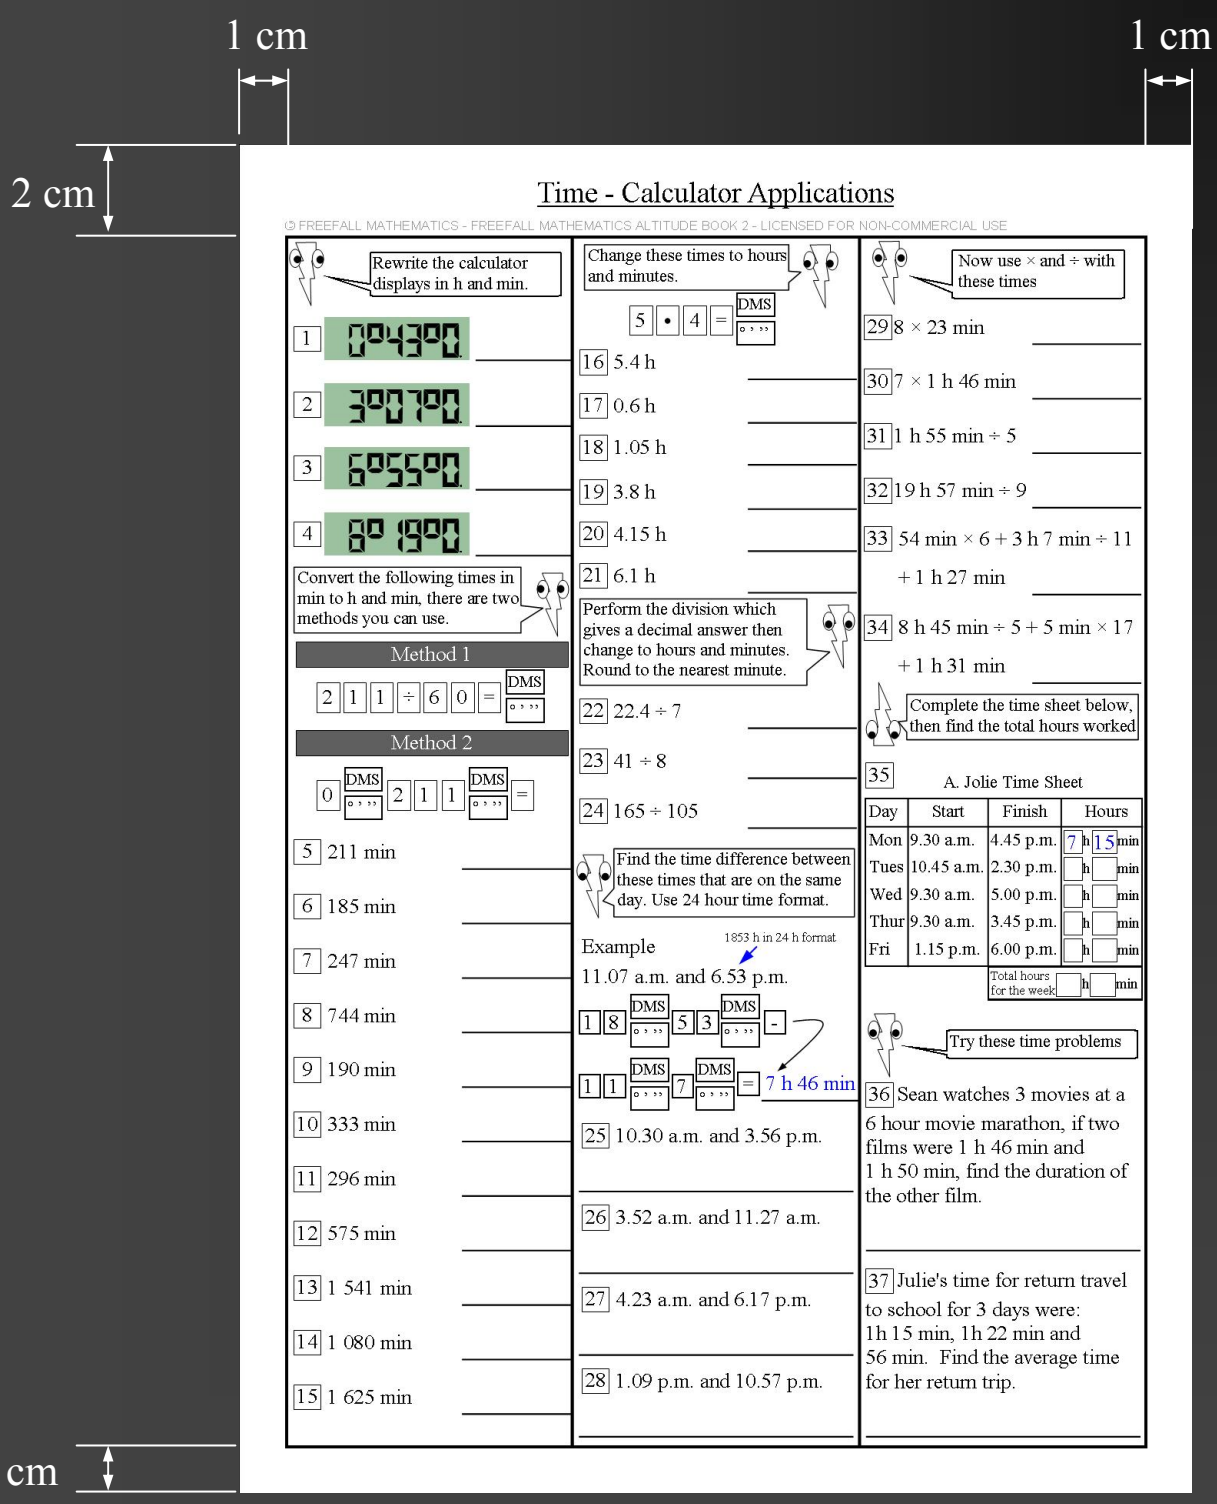
FREEFALL
MATHEMATICS

Page Specifications

Freefall worksheets are designed to have gaps of 1 cm on the bottom and sides of the worksheet. The top line is 2 cm down from the top edge of the page.

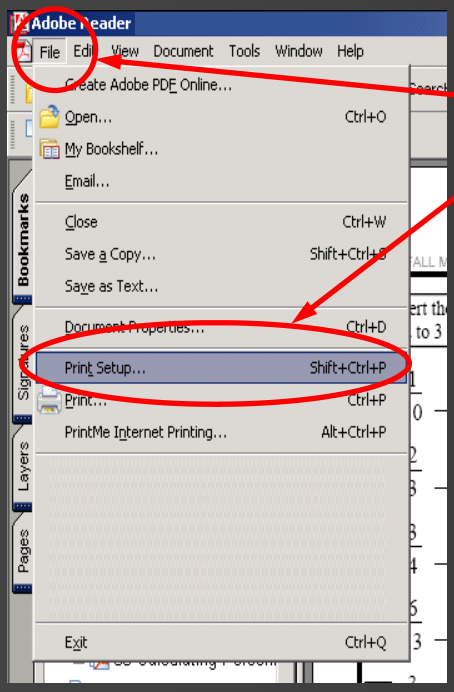
It is essential that you understand that when you print a worksheet, it has to come out this way otherwise sheets which use a ruler or protractor or grid will have answers that don't match those in the software. So read the next pages to understand the importance of 'No Scaling' when you print worksheets



FREEFALL MATHEMATICS

Printer Setup - These worksheets are designed to be printed on A4 paper.

Adobe Reader is usually set in US 'Letter' format as its default setting. Adobe Reader can print on any page size but Freefall worksheets are designed to be printed on A4 paper. To change the paper setting follow the steps below. This step only has to be done once.

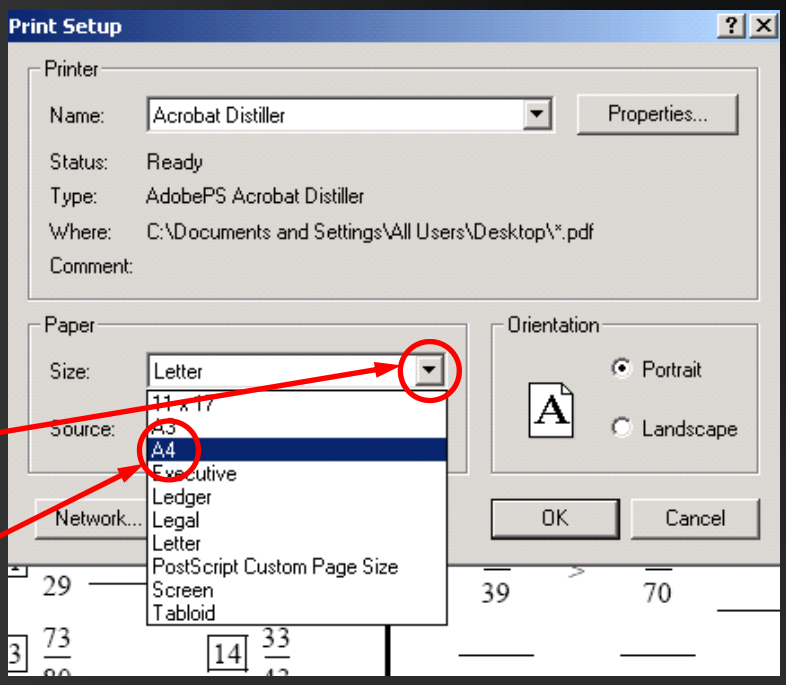


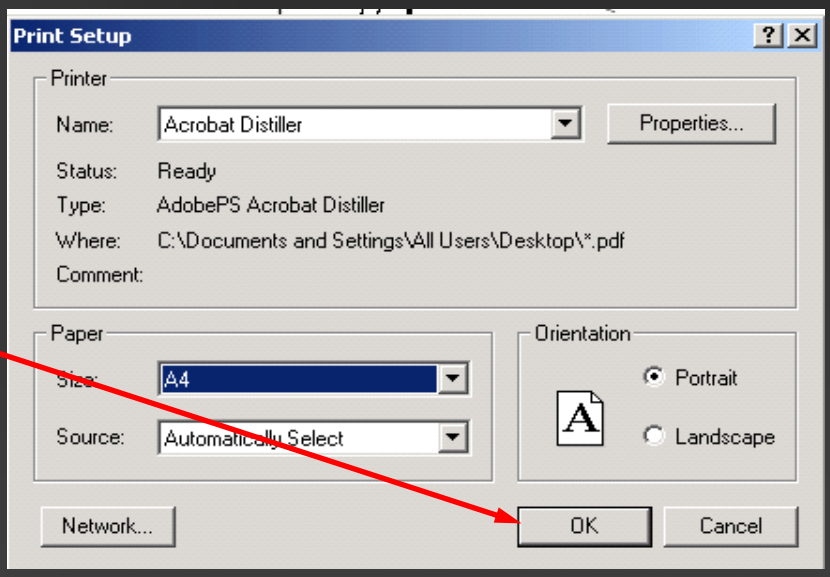
1

Select the 'File' menu and then 'Print Setup'.

2

Press the down arrow & select 'A4' size paper.





3

Press 'OK'. The format is now set to A4.

Setting will stay as A4 unless it is changed.

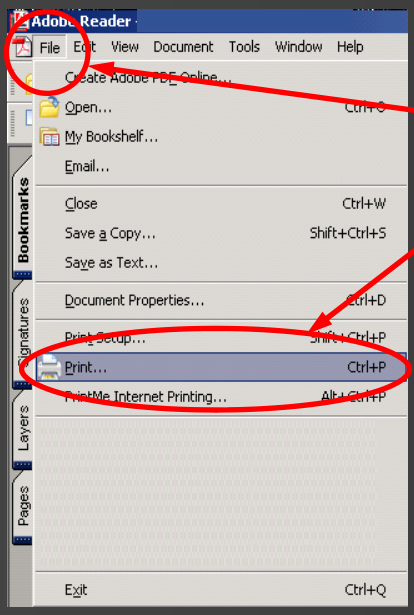
click here to visit our website at:
http://www.freefallmathematics.com

FREEFALL
MATHEMATICS

Printing Worksheets - These worksheets are designed to be printed on A4 paper.

NOTE THAT IF PAGE SCALING ISN'T SET TO 'NO SCALING' THEN ANSWERS WILL BE INCORRECT IF A RULER OR PROTRACTOR IS REQUIRED.

To print a worksheet navigate to the sheet using the bookmarks to the left of screen until the page required is on screen. Ensure that only one page is being displayed (not two) and then follow the steps outlined below.

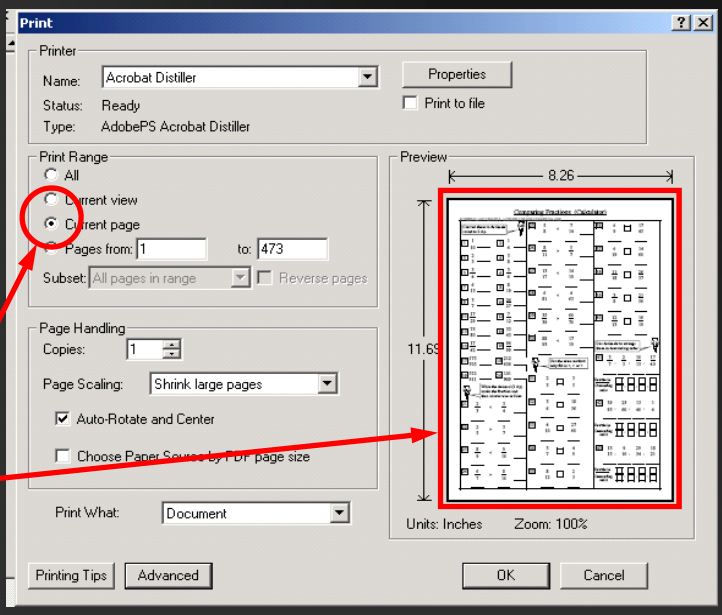


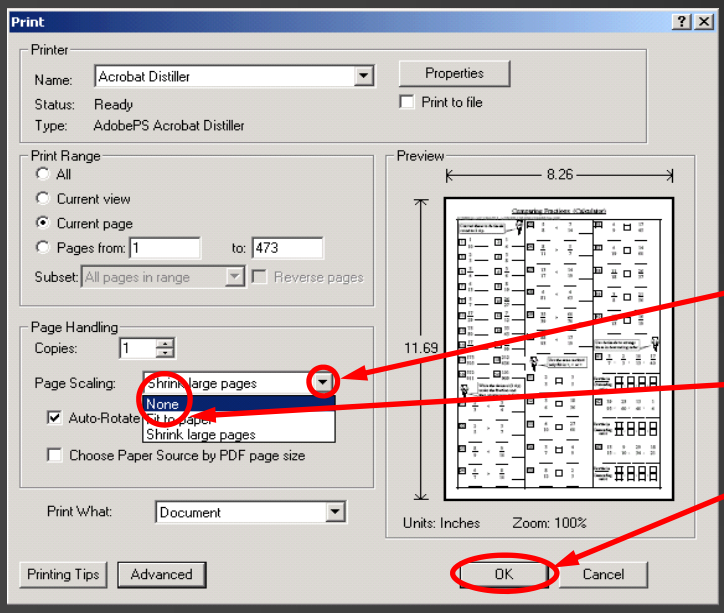
1

Select the 'File' menu and then 'Print'.

2

Select 'Current page'. The page is then displayed.





3

At 'Paper Scaling' press the down arrow and select 'None' then press the 'OK' button.

Your page should then print.

Repeat for answer sheet

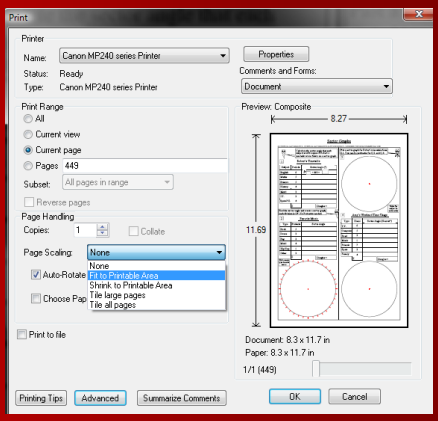
click here to visit our website at:
http://www.freefallmathematics.com

FREEFALL
MATHEMATICS

Problem - My printer misses out information at the base of the page

Some older printers are unable to print within 1 cm of the base of the page, which is where Freefall worksheets end. If you are printing sheets using "No Scaling" and the bottom of the page is not being fully printed you have two options:

Select "Fit to Printable Area" as shown in the image to the right, this will shrink the worksheet slightly.

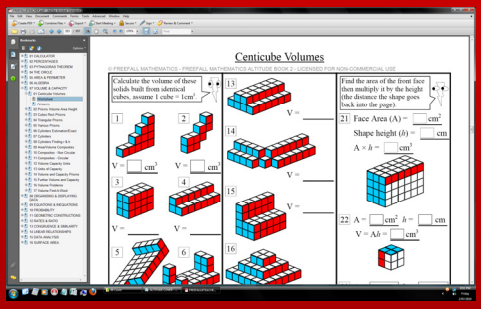


REALISE THAT THE SCALE OF THE WORKSHEET CHANGES IF YOU CHOOSE THIS PRINT OPTION.

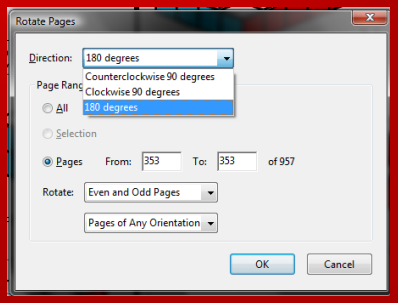
*If a **RULER** or a **PROTRACTOR** is used to answer the sheet, or grid squares of a specific size are used then your **ANSWERS WILL BE WRONG**.*
Note also that the amount of space to write your answer is reduced as the sheet is smaller.

The other method is to turn the page upside-down and print it that way. The title will be affected rather than the bottom of the worksheet. To do this:

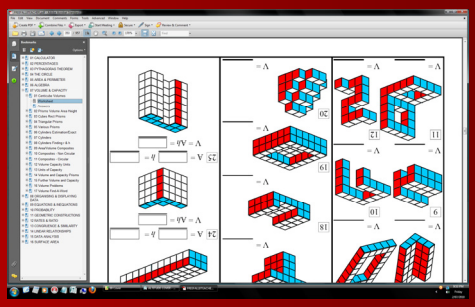
Navigate to the page you want to print



Hold CTRL+ SHIFT and Press R SELECT 180°



The page is now upside-down.



You can also use the View menu & Select Rotate View

Select "No Scaling" when you print the page, so any measurements on the page stay to scale. You will lose the top of your title when you do this, as it is printed last. So write the title in yourself after the page has been printed.

FREEFALL MATHEMATICS

click here to visit our website at: http://www.freefallmathematics.com

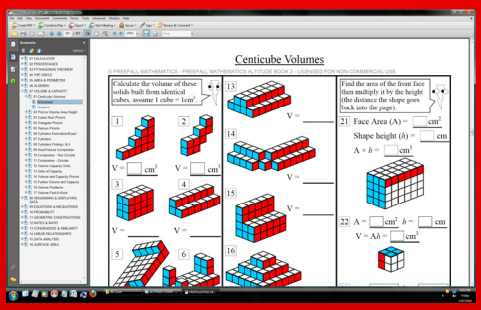
Problem - My printer doesn't print the coloured writing on the page

Some sheets use colour on the page, some examples are in blue and will vanish if you have no colour left in your colour printer. If you have a monochrome (or black only) printer this isn't a problem, because the printer automatically changes the colour to a shade of gray. But if you have a colour printer and either:

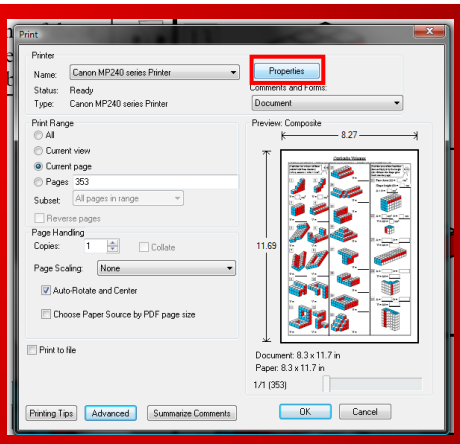
- *Don't want to waste the colour ink on the worksheet, or*
- *Are out of colour ink and you still want to print the coloured parts of the sheet*

Then you need to grayscale your printing. This is how you do it.

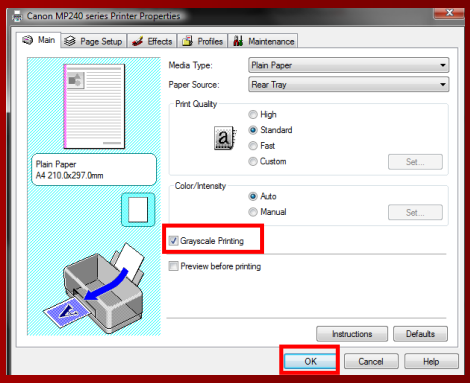
Navigate to the page you want to print



Select Properties from the Print Menu



Select Grayscale Printing and then press OK



Note that the printing menu varies on brand and model of printer. It may be that you have to select a tab such as the 'effects' tab to find the grayscale option, but it will be there. The result will have the colours changed to gray and they will be visible without the need to use your coloured ink.

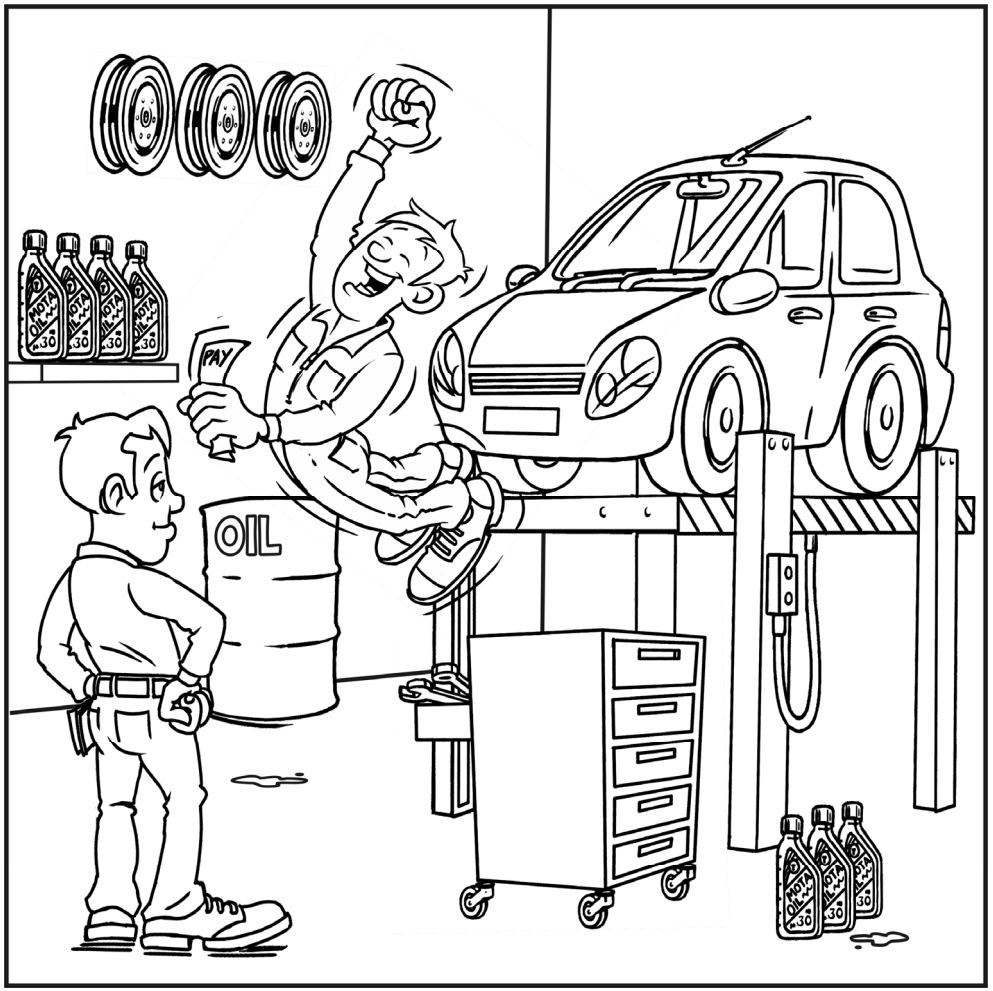
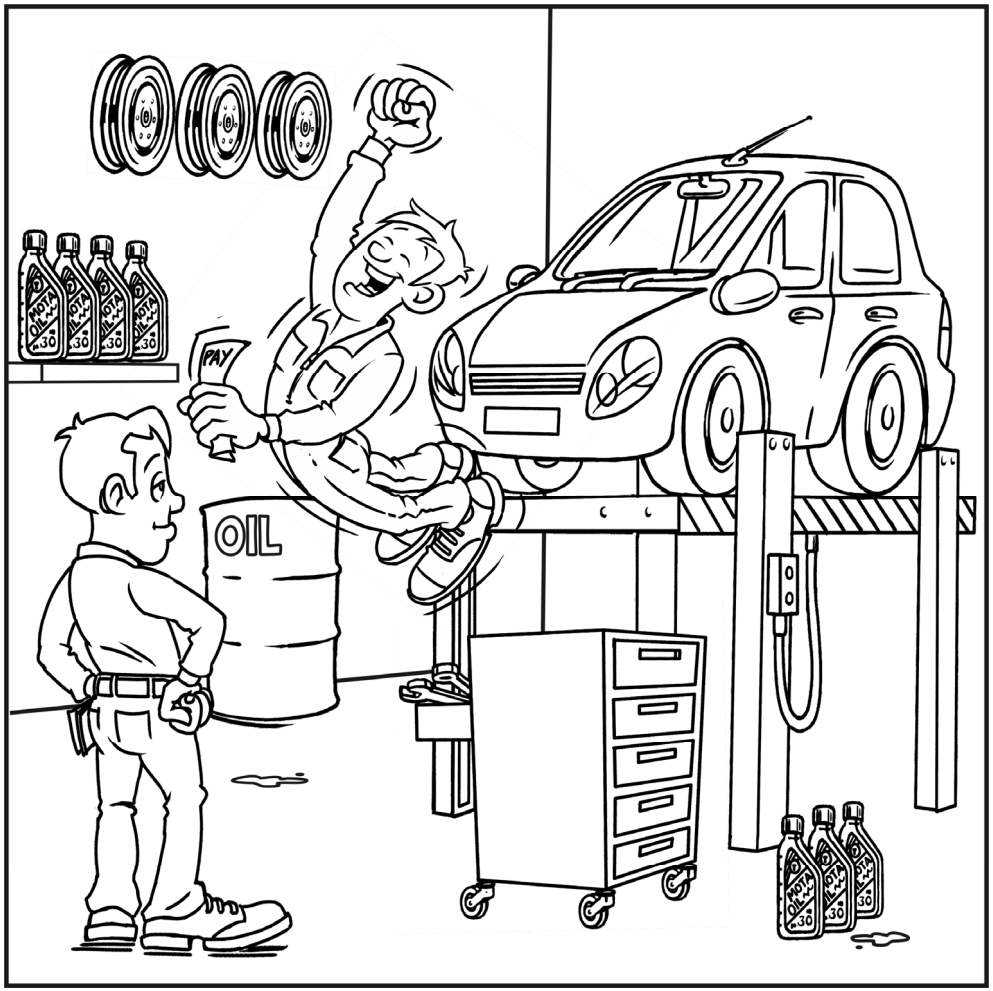
EARNING MONEY

Earning Money



© Freefall Mathematics - School Use Only

Earning Money



© Freefall Mathematics - School Use Only

Earning Money - Hourly Rates

To find how much a person earns in a week, you multiply the hourly rate by the number of hours worked in a day. So if you earn $19.40/h and work a 36 hour week then your pay is:

Example

$19.40/h for a 36 hour week

Weekly Pay = 19.40×36

Weekly Pay = $698.40

Remember dollar sign and always write cents to 2 decimal places

The first sheet gives you hourly rates and you find the weekly pay. Column 3 asks you to compare people's wages or calculate a percentage that a person's wage is from the total of the wages paid.

The second sheet also deals with hourly rates but it asks you to find the daily rate as well as the weekly rate.

Example

Find daily pay by Daily hours × hourly rate

Find weekly pay by Daily pay × days per week

Name	*Daily Hours*	*Hourly Rate*	*Daily Pay*	*Days per Week*	*Weekly Pay*
Ron	6	$17.35	$104.10	4	$416.40
Don	8	$19.72	$157.76	5	$788.80
John	7	$23.11	$161.77	3	$485.31
		Total Daily	$423.63	*Total Weekly*	$1 690.51

Add columns for totals

The third sheet has worded questions testing all the above skills.

Earning Money - Hourly Rates (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

To convert an hourly rate to a weekly wage, multiply the rate by the hours.

Example: Find the weekly pay on $23/h for a 38 hour week.

$23 \times 38 = \$874$

1 $19/h for a 27 hour week.

Weekly Pay = ☐ × ☐

Weekly Pay = $ ☐☐☐

2 $24/h for a 32 hour week.

Weekly Pay = ☐ × ☐

Weekly Pay = $ ☐☐☐

3 $17.17/h for a 41 hour week

Weekly Pay = ☐ × ☐

Weekly Pay = $ ☐☐☐.☐☐

4 $13.95/h for an 8 hour week

Weekly Pay = ☐ × ☐

Weekly Pay = $ ☐☐☐.☐☐

5 $16.80/h for a 18 hour week

Weekly Pay =

Use the hourly rate to calculate the pay for these employees.

1 Rami earns $28.20 per hour. He works 7 hours one day, and 5 hours the next. Find:

a) Total hours worked

Hours = 7 + 5 = 12 h

b) Total pay earned

Pay = 28.20 × 12

Pay = $338.40

Show the $ sign and cents to 2 decimal places

2 Jess earns $37.35 per hour. She works 8 hours per day, and 4 days each week. Find:

a) Her daily pay

Pay = 37.35 × 8

Pay = $298.80

b) Her weekly pay

Pay = 298.80 × 4

Pay = $1 195.20

3 James earns $21.90/h. If he works a 38 hour week and pays $230/wk rent and has $275/wk in living expenses. Find:

a) His weekly pay

Pay = 21.90 × 38

Pay = $832.20

b) His savings for the week.

Savings = 832.20 - 230 - 275

Savings = $327.20

4 Ellen earns $43.85/h while Ben earns $27.90/h. If both work a 38 hour week, find:

a) Ellen's weekly pay

Pay = 43.85 × 38

Pay = $1 666.30

b) Ben's weekly pay

Pay = 27.90 × 38

Pay = $1 060.20

c) The difference between Ellen's and Ben's weekly pay.

Difference = 1 666.30 - 1060.20

Difference = $606.10

5 Travis earns $28.63/h for a 16 h week, while Lewis earns $31.55/h for a 19 h week, find:

a) Travis' weekly pay

Pay = 28.63 × 16

Pay = $458.08

b) Lewis' weekly pay

Pay = 31.55 × 19

Pay = $599.45

c) The difference between Travis' and Lewis' weekly pay.

Difference = 599.45 - 458.08

Difference = $141.37

d) Express Travis' pay as a percentage of Lewis' pay. (1 dp)

$$\text{Travis \%} = \frac{458.08}{599.45} \times 100$$

Travis % = 76.4 %

6 Kelly earns $33.15/h, Toby earns $29.16/h and Ahmed earns $30.25/h. If all work a 38 hour week, find:

a) Kelly's weekly pay

Pay = 33.15 × 38

Pay = $1 259.70

b) Toby's weekly pay

Pay = 29.16 × 38

Pay = $1 108.08

c) Ahmed's weekly pay

Pay = 30.25 × 38

Pay = $1 149.50

d) The average wage earned.

$$\text{Average Wage} = \frac{3\ 527.28}{3}$$ ← Total Wages

Add the 3 wages, press '=', then press '÷3'.

Average Wage = $1 172.43

7 Tye earns $23.45/h for a 16 h week, while Kwan earns $22.85/h for a 38 h week, find:

a) Tye's weekly pay

Pay = 23.45 × 16

Pay = $375.20

b) Kwan's weekly pay

Pay = 22.85 × 38

Pay = $868.30

c) Express Tye's pay as a percentage of Kwan's pay. (1dp)

$$\text{Tye's \%} = \frac{375.20}{868.30} \times 100$$

Tye's % = 43.2%

Calculating Hourly Rates and Weekly/Fortnightly Pay Periods

To find how much a person earns in a fortnight, you multiply the hourly rate by the number of hours worked in a week, then double it (× by 2). So if you earn $19.40/h and work a 36 hour week then your fortnightly pay is:

Example

$19.40/h for a 36 hour week

F'tnightly Pay = 19.40 × 36 × 2

F'tnightly Pay = $1 396.80 ← Remember dollar sign and always write cents to 2 decimal places

The second column gives you a weekly wage and hours worked, you have to calculate the hourly rate. If you divide the weekly wage by the hours worked, you find the hourly rate.

Column 3 asks you to find the hourly rate but this time the data is in a table. After you complete the table, calculate the mean hourly rate. The mean hourly rate is found by adding the hourly rates for each person, then dividing by the number of people.

The second sheet also deals with hourly rates but it asks you to find weekly pay, fortnightly pay or divide to find the hourly rate.

The third sheet is a mixture of the above skills with worded questions.

Calculating Hourly Rates and Weekly/Fortnightly Pay Periods (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert an hourly rate to a fortnightly wage. Multiply the rate by the 2 × weekly hours.

Example: Find the fortnightly pay on $21/h for a 38 hour week.

F'tnightly Pay = 38 × 2 × 21

Hours × 2 × Hourly rate

F'tnightly Pay = $1 596

1 $17/h for a 34 hour week.

F'tnightly Pay = ____ × 2 × ____

F'tnightly Pay = $ ____

2 $18.35 /h for a 34 h week.

F'tn Pay =

F'tn Pay =

3 $23.72 /h for an 18 h week.

F'tn Pay =

F'tn Pay =

4 $35.67 /h for a 38 h week.

5 $29.55 /h for a 25 h week.

6

Show the $ sign and cents to 2 decimal places

Name	*Weekly Hours*	*Hourly Rate*	*Ftn'ly Pay*
Zoe	26	$17.45	
Chloe	25	$19.26	
Joey	16	$22.90	
		Total Paid	

Find the hourly rate by dividing the pay by the hours worked.

Example: Find the hourly rate if paid $790 for a 25 hour week.

Hourly rate = 790 ÷ 25

Pay ÷ hours

Hourly rate = $31.60 / h

7 $456.30 for a 26 hour week.

Hourly rate = ____ ÷ ____

Hourly rate = $ ____ / h

8 $919.60 for a 38 hour week.

Hourly rate =

Hourly rate = $ ____ / h

Calculating Hourly Rates and Weekly/Fortnightly Pay Periods (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Given an hourly rate, or weekly wage, or fortnightly wage, find these wages/rates/hours worked.

1 Jim earns $38.15 / h for a 38 hour week. Find his:

Weekly Pay = 38.15 × 38

Multiply the hourly rate by hours worked

= $1 449.70

F'nightly Pay = 1 449.70 × 2

Hourly rate × hours × 2, **or** weekly pay × 2

= $2 899.40

2 Kim earns $43.82 / h for a 40 hour week. Find her:

Weekly Pay = 43.82 × 40

= $1 752.80

F'nightly Pay = 1 752.80 × 2

= $3 505.60

3 Tim earns $1 061.34 for a 38 hour week. Find his:

Hourly Rate = 1 061.34 ÷ 38

= $27.93 / h

F'nightly Pay = 1 061.34 × 2

= $2 122.68

4 Lim earns $1 408 / f'night working a 25 hour week. Find:

Weekly Pay = 1 408 ÷ 2

= $704

Hourly Rate = 704 ÷ 25

=$28.16 / h

5 Tom earns $21.96 / h earning $746.64 / week. Find:

Hours Worked = 746.64 ÷ 21.96

= 34 hours

F'nightly Pay = 746.64 × 2

= $1 493.28

6 Dom earns $25.65 / h for a 15 hour week. Find his:

Weekly Pay = 25.65 × 15

= $384.75

F'nightly Pay = 384.75 × 2

= $769.50

7 Jess earns $1 634.36/f'night She is paid $31.43 / h. Find her:

Weekly Pay = 1 634.36 ÷ 2

= $817.18

Weekly Hours Worked = 817.18 ÷ 31.43

= 26 hours

8 Tess earns $20.72 / h for a 56 hour f'tnight. Find her:

F'nightly Pay = 20.72 × 56

= $1 160.32

Weekly Hours Worked = 56 ÷ 2

= 28 hours

9 Complete these tables and then find the mean (average) hours worked and mean weekly pay for the employees listed.

Name	*Weekly Hours*	*Hourly Rate*	*Weekly Wage*	*Fortnightly Wage*
Ralph	35	$23.22	$812.70	$1 625.40

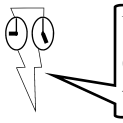
Calculating Hourly Rates and Weekly/Fortnightly Pay Periods (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7



Use the hourly rate to calculate the pay for these employees.

1 Tyrone works 17 hours a week and earns $328.10, find:

a) His hourly rate.

Rate = 328.10 ÷ 17

Rate = $19.30 /h

Write '$' sign and show money to 2 d.p.

b) His fortnightly pay.

Pay = 328.10 × 2

Pay = $656.20

2 Thien earns $24.95 per hour. If he earned $798.40 for the week, calculate:

a) The hours worked this week

Hours = 798.40 ÷ 24.95

Hours = 32 hours

b) His fortnightly pay.

Pay = 798.40 × 2

Pay = $1 596.80

3 Bassam earns $27.20 per hour. If he works 38 h per week, calculate:

a) His weekly pay

Pay = 27.20 × 38

Pay = $1 033.60

b) His fortnightly pay.

Pay = 1 033.60 × 2

Pay = $2 067.20

3 Jemma earns $21.40/h and has recorded her hours below.

Day	M	T	W	T	F	Total
Hours	4	7	7	4	8	30

a) Complete the total column Finding the total hours worked.

b) Find Jemma's weekly pay.

Pay = 21.40 × 30

Pay = $642

4 Simon earns $21.45/h and has a weekly pay of $729.30

a) Calculate the total hours Simon has worked for the week.

Hours = 729.30 ÷ 21.45

Hours = 34 hours

b) Complete the table below showing Simon's daily hours.

Day	M	T	W	T	F	Total
Hours	8	4	7	7	8	34

5 Chloe earns $19.55/h and has a weekly pay of $625.60

a) Calculate the hours Chloe has worked for the week.

Hours = 625.60 ÷ 19.55

Hours = 32 hours

b) Complete the table below showing Chloe's daily hours.

Day	M	T	W	T	F	Total
Hours	7	8	6	3	8	32

c) Find her Thursday earnings.

Pay = 19.55 × 3

Pay = $58.65

6 Hollie earns $23.30/h. If she works 25½ h each week, find:

a) Her weekly pay

Pay = 23.3 × 25.5

Pay = $594.15

b) Her fortnightly pay.

Pay = 594.15× 2

Pay = $1 188.30

7 Faith earns $38.80 per hour. If she earned $2 754.80 for the fortnight, calculate her:

a) Fortnightly hours worked

Hours = 2 754.80 ÷ 38.80

Hours = 71 hours

b) Her weekly pay.

Pay = 2 754.80 ÷ 2

Pay = $1 377.40

8 Georgia earns $84.15 when she works a 5½ h day. How much does she earn for a 38 hour week?

Rate = 84.15 ÷ 5.5

Rate = $15.30/h

Pay = 15.30 × 38

Pay = $581.40/week

9 Robert earns $21.20/h and is paid $805.60 weekly. How many hours does he work per fortnight?

Hours = 805.60 ÷ 21.20

Hours = 38 hours/week

Hours = 38 × 2 = 76 h/fortnight

Date Due:

Find the hourly rate

1 $146 for an 8 hour day.

Hourly rate = 146 ÷ 8

Hourly rate = $ 18.25

2 $568.48 for a 34 hour week.

Hourly rate = 568.48 ÷ 34

Hourly rate = $ 16.72

3 $926.40 for a 32 hour week

Hourly rate = 926.40 ÷ 32

Hourly rate = $ 28.95

4 $315.52 for a 17 hour week.

Hourly rate = 315.52 ÷ 17

Hourly rate = $ 18.56

5 $121.52 for a 7 hour day.

Hourly rate = 121.52 ÷ 7

Hourly rate = $ 17.36

Pay Period Calculations - Annual Wages

An annual wage is a yearly wage. It is called ‘per annum’ which is shortened to ‘p.a.’. To find an annual wage follow these steps:

Column 1 - Convert weekly to yearly by multiplying by 52.
(as there are 52 weeks in a year)

Example $595 weekly

Wage p.a. = 595 × 52

= $30 940

Column 1 - Convert daily to yearly by multiplying the daily wage by the days worked per week, then 52.

Example $206 daily, 4 days per week.

Wage p.a. = 206 × 4 × 52

= $42 848

Column 2 - Convert hourly rate and hours worked to annual. Multiply hourly rate by hours worked per week, then multiply by 52.

Example $19.85 / h, 22 hour week.

Wage p.a. = 19.85 × 22 × 52

= $436.70

Column 3 - Convert fortnightly to yearly by multiplying the fortnightly wage by 26. Or divide by 2 to get weekly then multiply by 52.

Example $2 588 fortnightly

Wage p.a. = 2 588 ÷ 2 × 52

= $67 288

Below Columns 2 and 3 are two tables to complete. These use the same skills as above, only they are answered in stages. Finding daily pay first, then weekly wage, then annually. Total the annual wage column for the full pay details for all the listed employees.

The second sheet is the reverse of the first. Converting from an annual wage to weekly, Fortnightly and hourly rates. As this is the opposite action, instead of multiplying you divide.

Column 1 - Convert annual to weekly by dividing by 52.
(as there are 52 weeks in a year)

Example $24 551.80 p.a. (annually)

Weekly wage = 25 551.80 ÷ 52

= $472.15

Column 2 - Convert an annual wage to an hourly rate by dividing the annual wage by 52, then divide again by the number of weekly hours worked.

Example $38 038 p.a., for a 38 hour week

Hourly rate = 38 038 ÷ 52 ÷ 38

= $19.25

Column 3 asks you to change an annual wage to a fortnightly wage. You can find the weekly wage by dividing by 52 and doubling it. Or you can divide by 26, as there are 26 fortnights in a year. Then complete the tables, which use the same skills as above.

Pay Period Calculations - Annual Wages (Sheet 1)

Convert a weekly wage to an annual wage (× by 52).

1 $358 weekly.

Wage p.a. = ☐ × 52

= $ ☐

2 $777 weekly.

Wage p.a. =

=

3 $443.58 weekly.

4 $1 952.37 weekly.

Convert a daily wage to an annual wage, (× days × 52).

5 $147 / day, 3 days per week.

Wage p.a. = ☐ × 3 × 52

= $ ☐

6 $165.20 / day, 2 days / week

Wage p.a. =

=

7 $207.45 / day, 4 days / week

8 $192.72 / day, 3 days / week

Convert an hourly rate to an annual wage (× hours × 52).

9 $24.20 / h, 38 hour week.

Wage p.a. = ☐ × 38 × 52

= $ ☐

10 $17.65 / h, 14 hour week.

Wage p.a. =

=

11 $32.75 / h, 25 hour week.

12 $20.42 / h, 38 hour week.

Convert a fortnightly wage to an annual wage, either (× 26) or you can (÷ 2 × 52).

13 $858 fortnightly.

Wage p.a. = ☐ ÷ 2 × 52

= $ ☐

14 $2 785 fortnightly.

15 $1 877 fortnightly.

16 $1 032 fortnightly.

Complete the tables and then calculate the total annual wages paid.

Find the weekly wage

1 $40 474.20 p.a.

Weekly Pay = 40 474.20 ÷ 52

Weekly Pay = $ 7 7 8 . 3 5

2 $49 666.24 p.a.

Weekly Pay = 49 666.24 ÷ 52

Weekly Pay = $ 9 5 5 . 1 2

Find the annual wage

3 $1 265 per week

Annual Pay = 1 265 × 52

Annual Pay = $ 65780

4 $2 055 per week

Annual Pay = 2 055 × 52

Annual Pay = $ 106 860

5 $26.20/h for a 23 h week

Annual Pay = 26.20 × 23 × 52

Annual Pay = $ 31 335.20

Earning Money - Monthly Wages

To change a person's annual wage to a monthly wage, you divide by 12 because there are 12 months in a year. To convert monthly to yearly, you multiply by 12:

Example — Annual to Monthly

$63 327.60 p.a.

Monthly Pay = 63 327.60 ÷ 12

Monthly Pay = $5 277.30

Remember the '$' sign and always write cents to 2 decimal places

Example — Monthly to Annual

$2 966.10/month

Annual Pay = 2 966.10 × 12

Annual Pay = $35 593.20

Remember the '$' sign and always write cents to 2 decimal places

Annual wages are always larger than monthly wages. So if you get a monthly wage that is larger than the annual wage after a conversion, then you have used '×' instead of '÷'. Always look at your answer, then ask yourself 'Does that make sense?'

There may be 4 weeks in a month but no month has exactly 4 weeks in it, except February every leap year. So forget using 4 weeks = 1 month. YOU WILL NEVER USE THIS. To convert weekly to monthly (or the reverse) you always change to annual first.

Example — Weekly to Monthly

$567/week

Monthly Pay = 567 × 52 ÷ 12

× 52 to get annual, then ÷ 12 for monthly

Monthly Pay = $2 457

Example — Monthly to Weekly

$3 718.52/month

Weekly Pay = 3 718.52 ×12 ÷ 52

× 12 to get annual, then ÷ 52 for weekly

Weekly Pay = $858.12

The largest conversion is to convert from an hourly rate to a monthly wage and the reverse.

Example — Hourly to Monthly

$24.96/h for a 36 hour week

Monthly Pay = 24.96 × 36 × 52 ÷ 12

× hours (weekly), × 52 (annual) then ÷ 12 (monthly)

Monthly Pay = $3 893.76

Example — Monthly to hourly

$5 987.26/month for a 38 hour week

Hourly rate = 5 987.26 × 12 ÷ 52 ÷ 38

× 12 (annual), ÷ 52 (weekly) then ÷ hours (hourly)

Hourly rate = $36.36/h

Answer these questions involving monthly wages.

1 James earns $32.96/h. If he works a 40 hour week, find:

a) His weekly wage

Pay = 32.96 × 40

Pay = $1 318.40

Show the $ sign and cents to 2 decimal places

b) His annual wage

Pay = 1 318.40 × 52

Pay = $68 556.80

c) His monthly wage

Pay = 68 556.80 ÷ 12

Pay = $5 713.07

Round your answer to the nearest cent

2 Juanita earns $2 709.98 per month. Find her weekly pay.

Pay = 2 709.98 × 12 ÷ 52

Pay = $625.38

3 If Juanita (Q.2) has living expenses of $575 per week, find:

a) Her weekly savings

Savings = 625.38 - 575

Savings = $50.38

b) Her monthly savings

Savings = 50.38 × 52 ÷ 12

Savings = $218.31

4 Josh earns $40 260 p.a., calculate his monthly wage.

Pay = 40 260 ÷ 12

Pay = $3 355

5 Kylie works as a computer programmer earning $92/hour. If she works a 38 hour week:

a) Calculate her weekly wage.

Pay = 92 × 38

Pay = $3 496

b) Find her monthly wage.

Pay = 3 496 × 52 ÷ 12

Pay = $15 149.33

Compare these jobs by converting them to monthly pay periods.

Optical Assistant

Pay: $1 315/ week
See you inside!

Medical Technician

Pay: $6 350/mth
Watch the step inside!

6 Convert the Optical position wage to a monthly wage.

Pay = 1 315 × 52 ÷ 12

Pay = $5 698.33

7 Which job pays the most?

○ Optical Assistant

● Medical Technician

Kitchen hand

Pay: $22.60/h
Hours: 38h week

Baker's Assistant

Pay: $4 130/mth
No Loafers!

8 Convert the Kitchen hand wage to a monthly wage.

Pay = 22.60 × 38 × 52 ÷ 12

Pay = $3 721.47

9 Calculate the difference between the two monthly wages

Difference = 4 130 - 3 721.47

Difference = $408.53

10 Jamie earns $3 776/month as salesperson and $220/week as a waiter in a second job.

a) Convert the waiter's wage to a monthly wage.

Pay = 220 × 52 ÷ 12

Pay = $953.33

b) Find his total monthly pay.

Pay = 953.33 + 3 776

Pay = $4 729.33

11 Three flat-mates are paid in different pay periods. Ted earns $1 170/week, Fred earns $28.38/h for a 38 h week, while Ned earns $95 628 p.a.

a) Convert Ted's weekly wage to a monthly wage.

Pay = 1 170 × 52 ÷ 12

Pay = $5 070

b) Convert Fred's hourly wage to a monthly wage.

Pay = 28.38 × 38 × 52 ÷ 12

Pay = $4 673.24

c) Convert Ned's annual salary to a monthly salary.

Pay = 95 628 ÷ 12

Pay = $7 969

d) Rank the flat-mates in order of their income.

1. Ned ($7 969/mth)

Write person's name with highest pay

2. Ted ($5 070/mth)

3. Fred ($4 673.24/mth)

Earning Money - Penalty Rates - Time-and-a-half

When an employee exceeds a certain number of hours in a day (varies with contract) they are paid overtime. This often starts with a penalty rate of 1.5×, so they earn 50% more each hour.

Sheet 1 Column 1 asks you to change hourly rates to time-and-a-half rates, just multiply by 1.5

Example

Convert $10.70/h to a Time+½ rate

Time+½ rate = 10.70×1.5

Time+½ rate = $16.05

Column 2 and 3 ask you to calculate the overtime earned when given the hours worked and the standard hourly rate. Multiply the hourly rate by 1.5, then by the number of hours worked.

Example

Normal Rate: $17.80/h, Overtime Hours: 6

Pay = $17.80 \times 1.5 \times 6$

Pay = $160.20

At the base of the two columns is a table to complete. Find the normal pay, then the overtime pay, then add the two together for the total.

Sheet two asks you to find the total pay by working out the normal pay, the overtime, then adding the two together.

Example

20 h week at $31.76/h plus 7 hours overtime.

Pay = 20 × 31.76 + ← This is the normal hours worked.

= 7 × 1.5 × 31.76 ← This is the overtime hours worked.

Pay = $333.48 ← Add the two for the total

The third sheet has you completing tables and payslips to calculate the weekly pay earned.

Earning Money - Penalty Rates - Time-and-a-half (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these hourly rates to an overtime rate of time-and-a-half, multiply by 1.5.

Example: Convert $11.60/h to a rate paid at time-and-a-half.

$11.60 = 11.60 × 1.5

Time+½ rate = $17.40/h

1 $14.90 = ☐ × 1.5

Time+½ rate = ☐ /h

Don't forget the '$' sign

2 $18.20 = ☐ × 1.5

Time+½ rate = ☐ /h

Always write cents with 2 decimal places

3 $35.40 = ☐ × ☐

Time+½ rate = ☐ /h

4 $22.10 = ☐ × ☐

Time+½ rate = ☐

5 $45.76 = ☐ × ☐

Time+½ rate = ☐

Now on you have to round to the nearest cent

6 $25.15 = ☐ × ☐

Time+½ rate = ☐

7 $17.05 = ☐ × ☐

Time+½ rate = ☐

8 $12.95 = ☐ × ☐

Time+½ rate = ☐

9 $48.19 = ☐ × ☐

Time+½ rate = ☐

10 $30.35 = ☐ × ☐

Time+½ rate = ☐

Find the overtime paid when given the hours worked.

Example:

Normal rate: $18.80/hour

Overtime Hours: 7

Pay = 18.80 × 1.5 × 7

Pay = $197.40

11 Normal Rate: $16.40/h
Overtime Hours: 4

Pay = ☐ × 1.5 × 4

Pay = ☐

12 Normal Rate: $15.88/h
Overtime Hours: 6

Pay = ☐ × ☐ × ☐

Pay = ☐

13 Normal Rate: $27.50/h
Overtime Hours: 8.5

Pay = ☐ × ☐ × ☐

Pay = ☐

You have to round these to the nearest cent

14 Normal Rate: $17.65/h
Overtime Hours: 2.5

Pay = ☐ × ☐ × ☐

Pay = ☐

15 Normal Rate: $11.99/h
Overtime Hours: 5

Pay = ☐ × ☐ × ☐

Pay = ☐

16 Normal Rate: $15.09/h
Overtime Hours: 1.5

Pay = ☐ × ☐ × ☐

Pay = ☐

17 Normal Rate: $37.37/h
Overtime Hours: 0.5

Pay = ☐ × ☐ × ☐

Pay = ☐

Complete these tables to calculate the daily pay for the employees.

Calculate the weekly pay, then the overtime (at time-and-a-half), then the total pay earned

1 Jane worked a 38 h week and also 6 h overtime. Her normal hourly rate is $23.10/h.

a) Calculate her standard pay

Pay = 38 × ☐

Pay = ☐ ← $ sign, cents to 2 d.p.

b) Calculate her overtime

Pay = ☐ × 1.5 × ☐

Pay = ☐

c) Calculate her total pay

Pay = ☐ + ☐

Pay = ☐

2 Geoff worked a 35 h week and also 7 h overtime. His normal hourly rate is $32.60/h.

a) Calculate his standard pay

Pay = ☐ × ☐

Pay = ☐

b) Calculate his overtime

Pay = ☐ × ☐ × ☐

Pay = ☐

c) Calculate his total pay

Pay = ☐ + ☐

Pay = ☐

d) Convert c) to an annual wage

Pay = ☐ × ☐

Pay = ☐

Calculate the weekly pay which includes overtime paid at time-and-a-half.

Example: 38 h week at $19.20 per hour plus 4 hours overtime.

Pay = 38 × 19.20 + [Normal Pay]

4 × 1.5 ×19.20 [Overtime]

Pay = $844.80 [Total]

3 18 h week at $13.48/h plus 3 hours overtime.

Pay = ☐ × ☐ +

= ☐ × 1.5 × ☐

Pay = ☐ ← $ sign, cents to 2 d.p.

4 25 h week at $38.40/h plus 5 hours overtime.

Pay = ☐ × ☐ +

= ☐ × ☐ × ☐

Pay = ☐

5 34 h week at $26.65/h plus 2 hours overtime.

Pay = ☐ × ☐ +

= ☐ × ☐ × ☐

Pay = ☐

6 17 h week at $15.55/h plus 2.5 hours overtime.

Pay = ☐ × ☐ +

= ☐ × ☐ × ☐

Pay = ☐ ← Round cents to 2 d.p.

7 5½ h week at $11.95/h plus 30 minutes overtime.

Pay = ☐ × ☐ +

= ☐ × ☐ × ☐

Pay = ☐

8 Convert 7 to an annual wage

Pay = ☐ × ☐

Pay = ☐

Complete Rebecca's pay for the week. She earns $18.50/h for her normal rostered hours, overtime for time above her rostered hours.

9

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these hourly rates to an overtime rate of time-and-a-half, multiply by 1.5.

Example: Convert $11.60/h to a rate paid at time-and-a-half.

$11.60 = 11.60 × 1.5

Time+½ rate = $17.40/h

1 $14.90 = 14.90 × 1.5

Time+½ rate = $22.35 /h

Don't forget the '$' sign

2 $18.20 = 18.20 × 1.5

Time+½ rate = $27.30 /h

Always write cents with 2 decimal places

3 $35.40 = 35.40 × 1.5

Time+½ rate = $53.10 /h

4 $22.10 = 22.10 × 1.5

Time+½ rate = $33.15/h

5 $45.76 = 45.76 × 1.5

Time+½ rate = $68.64/h

Now on you have to round to the nearest cent

6 $25.15 = 25.15 × 1.5

Time+½ rate = $37.73/h

7 $17.05 = 17.05 × 1.5

Time+½ rate = $25.58/h

8 $12.95 = 12.95 × 1.5

Time+½ rate = $19.43/h

9 $48.19 = 48.19 × 1.5

Time+½ rate = $72.29/h

10 $30.35 = 30.35 × 1.5

Time+½ rate = $45.53

Find the overtime paid when given the hours worked.

Example:

Normal rate: $18.80/hour

Overtime Hours: 7

Pay = 18.80 × 1.5 × 7

Pay = $197.40

11 Normal Rate: $16.40/h

Overtime Hours: 4

Pay = 16.40 × 1.5 × 4

Pay = $98.40

12 Normal Rate: $15.88/h

Overtime Hours: 6

Pay = 15.88 × 1.5 × 6

Pay = $142.92

13 Normal Rate: $27.50/h

Overtime Hours: 8.5

Pay = 27.50 × 1.5 × 8.5

Pay = $350.63

You have to round these to the nearest cent

14 Normal Rate: $17.65/h

Overtime Hours: 2.5

Pay = 17.65 × 1.5 × 2.5

Pay = $66.19

15 Normal Rate: $11.99/h

Overtime Hours: 5

Pay = 11.99 × 1.5 × 5

Pay = $89.93

16 Normal Rate: $15.09/h

Overtime Hours: 1.5

Pay = 15.09 × 1.5 × 1.5

Pay = $33.95

17 Normal Rate: $37.37/h

Overtime Hours: 0.5

Pay = 37.37 × 1.5 × 0.5

Pay = $28.03

Complete these tables to calculate the daily pay for the employees.

Calculate the weekly pay, then the overtime (at time-and-a-half), then the total pay earned

1 Jane worked a 38 h week and also 6 h overtime. Her normal hourly rate is $23.10/h.

a) Calculate her standard pay

Pay = 38 × 23.10

Pay = $877.80 ← $ sign, cents to 2 d.p.

b) Calculate her overtime

Pay = 6 × 1.5 × 23.10

Pay = $207.90

c) Calculate her total pay

Pay = 877.80 + 207.90

Pay = $1 085.70

2 Geoff worked a 35 h week and also 7 h overtime. His normal hourly rate is $32.60/h.

a) Calculate his standard pay

Pay = 35 × 32.60

Pay = $1 141

b) Calculate his overtime

Pay = 7 × 1.5 × 32.60

Pay = $342.30

c) Calculate his total pay

Pay = 1 141 + 342.30

Pay = $1 483.30

d) Convert c) to an annual wage

Pay = $1 483.30 × 52

Pay = $77 131.60

Calculate the weekly pay which includes overtime paid at time-and-a-half.

Example: 38 h week at $19.20 per hour plus 4 hours overtime.

Pay = 38 × 19.20 + [Normal Pay]

4 × 1.5 ×19.20 [Overtime]

Pay = $844.80 [Total]

3 18 h week at $13.48/h plus 3 hours overtime.

Pay = 18 × 13.48 +

= 3 × 1.5 × 13.48

Pay = $303.30 ← $ sign, cents to 2 d.p.

4 25 h week at $38.40/h plus 5 hours overtime.

Pay = 25 × 38.40 +

= 5 × 1.5 × 38.40

Pay = $1 248

5 34 h week at $26.65/h plus 2 hours overtime.

Pay = 34 × 26.65 +

= 2 × 1.5 × 26.65

Pay = $986.05

6 17 h week at $15.55/h plus 2.5 hours overtime.

Pay = 17 × 15.55 +

= 2.5 × 1.5 × 15.55

Pay = $322.66 ← Round cents to 2 d.p.

7 5½ h week at $11.95/h plus 30 minutes overtime.

Pay = 5.5 × 11.95 +

= 0.5 × 1.5 × 11.95

Pay = $74.69

8 Convert 7 to an annual wage

Pay = 74.69 × 52

Pay = $3 883.88

Complete Rebecca's pay for the week. She earns $18.50/h for her normal rostered hours, overtime for time above her rostered hours.

Overtime Hours: 3

Pay = 28.54 × 1.5 × 3

Pay = $128.43

Earning Money - Penalty Rates - Double Time

When an employee exceeds a certain number of hours in a day (varies with contract) they are paid overtime. This often starts with a penalty rate of 1.5×, then after 3 hours (again, varies with contract) they earn double time. Double time is 2× the normal hourly rate.

But when an employee works on days such as:

- Public Holidays;
- Sundays (some industries);
- Or they start another shift within a certain number of hours of finishing their previous shift;

They are often paid double time for the entire shift. This is simply 2× the normal rate.

Double Time Rate = 2 × Normal Hourly Rate

Column 1 asks you to change hourly rates to double time rates, just multiply by 2.

Column 1, then columns 2 and 3 ask you to calculate the double time pay. Multiply the hourly rate by 2 then by the hours.

Example

Normal rate: \$23.25/hour, Double-time hours: 5

Pay = $23.25 \times 2 \times 5$

Pay = \$232.50

At the base of the two columns asks you to calculate the double time earned and match it with the answer on the right.

The second sheet asks you to calculate the pay earned when an employee works normal hours and double time hours. Below is an example.

38 h week at \$28.05/h plus 4 hours on Sunday at double-time rate.

Pay = 38 (Normal Hours) × 28.05 (Normal Rate) + 4 (Double Hours) × 2 × 28.05 (Normal Rate)

Pay = \$1 209.30

'\$' sign and cents to 2 decimal places

There are 4 pay slips at the base of the second sheet, this is the same as above except you calculate the double time rate (double normal rate), normal pay, double time pay, then add them.

Earning Money - Penalty Rates - Double Time (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these hourly rates to an overtime rate of double time, so multiply by 2.

Example: Convert $13.85/h to a rate paid at double time

$13.85 = 13.85 × 2

D.T rate = $27.70

1 $17.60 = ____ × 2

D.T rate = ____ /h

'$' sign and cents to 2 d.p.

2 $16.63 = ____ × 2

D.T rate = ____ /h

3 $35.40 = ____ × ____

D.T rate = ____ /h

4 $23.11 = ____ × ____

D.T rate = ____

Include the /h to show it is a rate.

5 $25.73 = ____ × ____

D.T rate = ____

An earthmoving business pays its employees double-time on Sundays. Find the pay earned.

Example:

Normal rate: $19.10/hour

Double-time hours: 7

Pay = 19.10 × 2 × 7

Pay = $267.40

6 Normal Rate: $16.40/h
Double-time hours: 6

Pay = ____ × 2 × 6

Pay = ____

7 Normal Rate: $19.25/h
Double-time hours: 7

Pay = ____ × ____ × ____

Pay = ____

8 Normal Rate: $25.60/h
Double-time hours: 5

Pay = ____ × ____ × ____

Pay = ____

9 Normal Rate: $19.45/h
Double-time hours: 8

Pay =

Pay =

10 Normal Rate: $13.07/h
Double-time hours: 4.5

Pay =

Pay =

11 Normal Rate: $35.80/h
Double-time hours: 6.25

12 Normal Rate: $38.63/h
Double-time hours: 4.75

Cents to 2 d.p.

13 Normal Rate: $22.53/h
Double-time hours: 5.25

14 Normal Rate: $31.95/h
Double-time hours: 7.75

Calculate the double time earnings given the normal rate and the hours worked, then match it up with a line to the correct answer.

15 Normal Rate: $13.22/h D.T. Hours: 5 •

16 Normal Rate: $10.15/h D.T. Hours: 2 •

17 Normal Rate: $17.11/h D.T. Hours: 6.5 •

Double Time Hours: 7

Pay = 25.92 × 2 × 7

Pay = $362.88

Earning Money - Penalty Rates

When an employee exceeds a certain number of hours in a day (varies with contract) they are paid overtime. This often starts with a penalty rate of 1.5×, then after two or three hours at time-and-a-half, double time begins.

Sheet 1, Columns 1 & 2 lists the hours that an employee has worked, in three bands. Normal hours, time-and-a-half hours and double time hours. Work out the pay for each and then add them together.

Example

Erika earns $17.08/h and works:

Normal Time:	30 h
Time+½:	9 h
Double Time:	3 h

Calculate Erika's earnings for:

a) Her normal hours.

Pay = 17.08×30

Pay = $512.40

b) Her Time+½ hours.

Pay = $17.08 \times 1.5 \times 9$

Pay = $230.58

c) Her Double time hours.

Pay = $17.08 \times 2 \times 3$

Pay = $102.48

d) Calculate Erika's total wage:

Pay = Normal 512.40 + Time+½ 230.58 + Double 102.48 = $845.46

Column 2 and Column 1 of sheet 2 ask you to perform the same steps above, but this time do it all at once.

Example

Adam earns $23.25/h and works:

Normal Time:	19 h
Time+½:	8 h
Double Time:	3 h

Calculate Adam's total pay.

Pay = 23.25×19 ← Normal hours worked.

\+ $23.25 \times 1.5 \times 8$ ← Time+½ hours worked.

\+ $23.25 \times 2 \times 3$ ← Double time hours worked.

Pay = $860.25

The last column of sheet 2 has two tables. The first table is a weekly time sheet for an employee, note that the rate is at the top of the table. Calculate the normal, time-and-a-half and double time wages writing them below the hours in each cell of the table. Then add the three for the final column.

The second table is for 7 employees, they have had their hours totaled in each column. Again get totals for each cell and then add them for the final column.

Calculate the pay, in steps.

Dave earns $14.60/h and works:

Normal Time:	38 h
Time+½:	7 h
Double Time:	3 h

Calculate Dave's earnings from:

1 His normal hours.

Pay = 14.60 × 38

Pay = $554.80 ← '$' sign and cents to 2 d.p.

2 His time-and-a-half hours:

Pay = 14.60 × 1.5 × 7

Pay = $153.30

3 His double time hours:

Pay = 14.60 × 2 × 3

Pay = $87.60

4 Calculate Dave's total pay.

Pay = 554.80 + 153.30

\+ 87.60

Pay = $795.70

Jess earns $16.70/h and works:

Normal Time:	25 h
Time+½:	4 h
Double Time:	2 h

Calculate Jess' earnings from:

5 Her normal hours.

Pay = 16.70 × 25

Pay = $417.50

6 Her time-and-a-half hours:

Pay = 16.70 × 1.5 × 4

Pay = $100.20

7 Her double time hours:

Pay = 16.70 × 2 × 2

Pay = $66.80

8 Calculate Jess' total pay.

Pay = 417.50 + 100.20

\+ 66.80

Pay = $584.50

Toby earns $23.80/h and in a week, he works:

Normal Time:	38 h
Time+½:	8 h
Double Time:	3 h

Calculate Toby's earnings from:

9 His normal hours.

Pay = 23.80 × 38

Pay = $904.40

10 His time-and-a-half hours:

Pay = 23.80 × 1.5 × 8

Pay = $285.60

11 His double time hours:

Pay = 23.80 × 2 × 3

Pay = $142.80

12 Calculate Toby's total pay.

Pay = 904.40 + 285.60

\+ 142.80

Pay = $1 332.80

13 Convert Toby's total weekly pay to an annual wage.

Pay = 1 332.80 × 52

Pay = $69 305.60

Find total pay in one step

Kwan earns $22.90/h and works:

Normal Time:	34 h
Time+½:	3 h
Double Time:	2 h

14 Calculate Kwan's total pay.

Pay = 22.90 × 34

Rate × Normal hours

\+ 22.90 × 1.5 × 3

Rate × 1.5 × Time+½ hours

\+ 22.90 × 2 × 2

Rate × 2 × Double time hours

Pay = $973.25

Caleb earns $27.15/h and works:

Normal Time:	19 h
Time+½:	8 h
Double Time:	3 h

15 Calculate Caleb's total pay.

Pay = 27.15 × 19

\+ 27.15 × 1.5 × 8

\+ 27.15 × 2 × 3

Pay = $1 004.55

Rose earns $31.80/h and works:

Normal Time:	38 h
Time+½:	6 h
Double Time:	1.5 h

14 Calculate Rose's total pay.

Pay = 31.80 × 38

31.80 × 1.5 × 6

31.80 × 2 × 1.5

Pay = $1 590

Earning Money - Penalty Rates (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Calculate the total pay earned.

Josh earns $26.50/h and works a 38 hour week, with 6 hours at time-and-a-half and 2 hours double time.

1 Calculate Josh's total pay.

Pay = 26.50 × 38
Rate × Normal Hours

\+ 26.50 × 1.5 × 6
+ Rate × 1.5 × Time+½ Hours

\+ 26.50 × 2 × 2
+ Rate × 2 × Double Time Hours

Pay = $1 351.50

Maysun earns $22.85/h and works a 30 hour week, with 4 hours at time-and-a-half and 1.5 hours double time.

2 Find Maysun's total pay.

Pay = 22.85 × 30

\+ 22.85 × 1.5 × 4

\+ 22.85 × 2 × 1.5

Pay = $891.15

Connie earns $30.45/h and works a 36 hour week, with 7 hours at time-and-a-half and 4.5 hours double time.

3 Find Connie's total pay.

Pay = 30.45 × 36

\+ 30.45 × 1.5 × 7

\+ 30.45 × 2 × 4.5

Pay = $1 689.98

Round cents to 2 decimal places

Calculate the daily earnings, then total them for the week.

4 Normal hourly rate = $28.40/h

Day	*Normal hrs*	*Time+½ hrs*	*Double Time hrs*	*Total Pay*
Mon	7 $198.80	2 $85.20	3 $170.40	$454.40
Tues	6 $170.40	- -	- -	$170.40
Wed	6 $170.40	2 $85.20	2 $113.60	$369.20
Thur	6 $170.40	1 $42.60	- -	$213
Fri	7 $198.80	2 $85.20	1.5 $85.20	$369.20
			Total Pay (Week)	$1 576.20

Calculate each employee's weekly earnings

5

Name	*Hourly rate*	*Normal hrs*	*Time+½ hrs*	*Double Time hrs*	*Total Pay*
Ben	$19.70	16 $315.20	2 $59.10	1 $39.40	$413.70
Ken	$28.50	26 $741	7 $299.25	2 $114	$1 154.25

Pay = $91.20

4 Calculate Oscar's total pay.

Pay = 532 + 159.60

\+ 91.20

Pay = $782.80

24 Hour Time and Time Sheet Calculations

While time in employment is normally a.m./p.m. format, you can use 24 hour time to make using a calculator possible.

The first 2 digits of 24 hour time are the hours, the second 2 digits are the minutes.
The time starts at 0000 hours (midnight) and ends at 2359 (1 minute before midnight). Note that there is no full stop separating hours and minutes. So:

- The time is 0000 hours at 12 a.m. (midnight), 12.30 a.m. is 0030 hours
- Then each hour adds 100 so 1 a.m. is 0100 hours, 2 a.m. is 0200 hours etc
- Noon is 1200 hours and 1 p.m. is 1300 hours

So once the time reaches 1 p.m. add 12 hours to the normal time to get your answer in 24 hr time format, e.g. 4.45 p.m. = 1645 hours (hours = 4 + 12 = 16, minutes stay the same)

Note that the word 'hours' or 'h' can be written after the time.

Sheet 1 Column 1 starts with asking you to change the time from a.m/p.m. to 24 hour format. If the time is 1 p.m. or later add 12 to the hours.

Column 2 asks you to calculate the time worked by giving you a start and finishing time. Convert the times to 24 hr format first, then using your calculator, subtract the two times, the latest time minus the earlier time.

Example

5.45 p.m. in 24 hour time

9.25 a.m. until 5.45 p.m.

= 1 7 4 5 h - 0 9 2 5 h

= 8h 20 m

9.25 a.m. in 24 hour time

Your calculator's DMS key could have DMS on it or these symbols

Column 3 asks you to round times. When time sheets are used the times are usually rounded to the nearest 15 minutes.

Example

7h 20 min = 7h 15 min

7h 20m is in between 7h 15m and 7h 30m. It is closer to 7h 15m (5 minutes) rather than 7h 30m (10 minutes). So it becomes 7h 15 m after rounding.

The last part of Column 3 asks you to perform a subtraction to find the time difference, then round the answer as above. So it joins the two skills.

The last two sheets involve completing time sheets. The above skills of time subtraction and rounding are used, but the last step asks you to multiply the time and the hourly rate. There are examples in Q.2 and Q.8 to show you the calculator steps.

24 Hour Time and Time Calculations

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Change these times to 24 hour time format, (from 1 p.m. add 12 hours, keep minutes as is).

Example

4.45 p.m. 1645 h

1 3 a.m. = ☐☐☐☐ h

2 8 a.m. = ☐☐☐☐ h

3 4 p.m. = ☐☐☐☐ h

4 11.25 a.m.

5 3.52 p.m.

6 5.17 p.m.

7 8.47 p.m.

8 4.56 a.m.

9 12.33 p.m.

10 10.25 p.m.

11 12.19 a.m.

12 7.39 p.m

13 4.06 a.m.

14 11.39 a.m.

15 6.26 p.m

16 11.08 p.m

17 10.43 a.m.

18 9.43 p.m

19 5.56 a.m.

20 11.48 a.m.

Find the time worked, use 24 hour time and subtract the earlier time from the later time.

Example

9.15 a.m. until 4.35 p.m.

= 1635 h - 0915 h

16 DMS 35 DMS - 9 DMS 15 DMS

= ☐ h ☐ min

21 11.25 a.m. until 6.15 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

22 8.35 a.m. until 4.45 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

23 7.50 a.m. until 3.30 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

24 6.10 a.m. until 2.25 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

25 7.05 a.m. until 11.50 a.m.

= ☐☐☐☐ h - ☐☐☐☐ h

26 12.07 p.m. until 8.53 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

27 9.13 a.m. until 5.55 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

Round these times to the nearest 15 mins. So minutes will be 0 or 15 or 30 or 45.

Examples

7h 20 min = 7h 15 min

5h 38 min = 5h 45 min

28 6h 4 min = ☐ h ☐ min

29 4h 19 min = ☐ h ☐ min

30 8h 42 min = ☐ h ☐ min

31 5h 54 min = ☐ h ☐ min

32 7h 38 min = ☐ h ☐ min

33 6h 52 min = ☐ h ☐ min

34 4h 36 min = ☐ h ☐ min

35 3h 50 min = ☐ h ☐ min

Find the time worked, but this time get your answer then round it to the nearest 15 min.

36 9.17 a.m. until 5.38 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min = ☐ h ☐ min

Actual Rounded

37 7.41 a.m. until 2.17 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min = ☐ h ☐ min

38 6.07 a.m. until 1.34 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min = ☐ h ☐ min

39 10.43 a.m. until 4.21 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min = ☐ h ☐ min

Time Sheet Calculations (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the time worked and the pay earned for the shift, given the hourly rate.

1 9.45 a.m. until 5.15 p.m.

17 DMS 15 DMS - 9 DMS 45 DMS =

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min

2 Hourly rate is $21.40/h.

Using the answer on your calculator screen, then do this: × 21.40 = DMS

= ☐ h ☐ min × ☐

= $ ☐

3 10.45 a.m. until 7.30 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min

4 Hourly rate is $25.60/h.

= ☐ h ☐ min × ☐

= $ ☐

5 7.30 a.m. until 3.15 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min

6 Hourly rate is $31.90/h.

= ☐ h ☐ min × ☐

= $ ☐

Convert the answer in Q.6 to an annual wage if the employee works that shift 4 days/week.

7

Pay =

Pay =

Now complete the table, converting to 24 h time and rounding to the nearest 15 minutes. You have to subtract the employees' lunch time.

8 Hourly rate for all employees is $28.12

Name	*Time In a.m.*	*Time Out p.m.*	*Lunch Time*	*Actual hours*	*Rounded hours*	*Daily Wage*

24 Hour Time and Time Calculations

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Change these times to 24 hour time format, (from 1 p.m. add 12 hours, keep minutes as is).

Example

4.45 p.m. 1645 h

1. 3 a.m. = 0300 h
2. 8 a.m. = 0800 h
3. 4 p.m. = 1600 h
4. 11.25 a.m. 1125h
5. 3.52 p.m. 1552h
6. 5.17 p.m. 1717h
7. 8.47 p.m. 2047h
8. 4.56 a.m. 0456h
9. 12.33 p.m. 1233h
10. 10.25 p.m. 2225h
11. 12.19 a.m. 0019h
12. 7.39 p.m 1939h
13. 4.06 a.m. 0406h
14. 11.39 a.m. 1139h
15. 6.26 p.m 1826h
16. 11.08 p.m 2308h
17. 10.43 a.m. 1043h
18. 9.43 p.m 2143h
19. 5.56 a.m. 0556h
20. 11.48 a.m. 1148h

Find the time worked, use 24 hour time and subtract the earlier time from the later time.

Example

9.15 a.m. until 4.35 p.m.

= 1635 h - 0915 h

16 DMS 35 DMS - 9 DMS 15 DMS =

= 7 h 20 min

21. 11.25 a.m. until 6.15 p.m.

= 1815 h - 1125 h

= 6h 50m

22. 8.35 a.m. until 4.45 p.m.

= 1645 h - 0835 h

= 8h 10m

23. 7.50 a.m. until 3.30 p.m.

= 1530 h - 0750 h

= 7h 40m

24. 6.10 a.m. until 2.25 p.m.

= 1425 h - 0610 h

= 8h 15h

25. 7.05 a.m. until 11.50 a.m.

= 1150 h - 0705 h

= 4h 45m

26. 12.07 p.m. until 8.53 p.m.

= 2053 h - 1207 h

= 8h 46m

27. 9.13 a.m. until 5.55 p.m.

= 1755 h - 0913 h

= 8h 42m

Round these times to the nearest 15 mins. So minutes will be 0 or 15 or 30 or 45.

Examples

7h 20 min = 7h 15 min

5h 38 min = 5h 45 min

28. 6h 4 min = 6 h 0 min
29. 4h 19 min = 4 h 15 min
30. 8h 42 min = 8 h 45 min
31. 5h 54 min = 6 h 0 min
32. 7h 38 min = 7 h 45 min
33. 6h 52 min = 6 h 45 min
34. 4h 36 min = 4 h 30 min
35. 3h 50 min = 3 h 45 min

Find the time worked, but this time get your answer then round it to the nearest 15 min.

36. 9.17 a.m. until 5.38 p.m.

= 1738 h - 0917 h

= 8 h 21 min = 8 h 15 min

Actual Rounded

37. 7.41 a.m. until 2.17 p.m.

= 1417 h - 0741 h

= 6 h 36 min = 6 h 30 min

38. 6.07 a.m. until 1.34 p.m.

= 1334 h - 0607 h

= 7 h 27 min = 7 h 30 min

39. 10.43 a.m. until 4.21 p.m.

= 1621 h - 1043 h

= 5 h 38 min = 5 h 45 min

Time Sheet Calculations (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the time worked and the pay earned for the shift, given the hourly rate.

1 9.45 a.m. until 5.15 p.m.

17 DMS 15 DMS - 9 DMS 45 DMS =

= 17 15 h - 09 45 h

= 7 h 30 min

2 Hourly rate is $21.40/h.

Using the answer on your calculator screen, then do this: × 21.40 = DMS

= 7 h 30 min × 21.40

= $ 160.50

3 10.45 a.m. until 7.30 p.m.

= 19 30 h - 10 45 h

= 8 h 45 min

4 Hourly rate is $25.60/h.

= 8 h 45 min × 25.60

= $ 224

5 7.30 a.m. until 3.15 p.m.

= 15 15 h - 07 30 h

= 7 h 45 min

6 Hourly rate is $31.90/h.

= 7 h 45 min × 31.90

= $ 247.23

Convert the answer in Q.6 to an annual wage if the employee works that shift 4 days/week.

7

Pay = 247.23 × 4 × 52

Pay = $51 423.84

Now complete the table, converting to 24 h time and rounding to the nearest 15 minutes. You have to subtract the employees' lunch time.

8 Hourly rate for all employees is $28.12

Name	*Time In a.m.*	*Time Out p.m.*	*Lunch Time*	*Actual hours*	*Rounded hours*	*Daily Wage*

Earning Money - Percentage Applications

Percentages are regularly used with wages. It may be that you get a raise in your hourly rate, for undertaking uncomfortable or more difficult work. Or it may be that your wage is annually reviewed and each year you get an increase in your pay.

Sheet 1 Column 1 asks you to find a percentage of a wage, which is the amount a wage will be increased by. Change the percentage to a fraction by putting it 'over 100', then multiply it with the wage.

Example

Find 8% of $49 300

$$49\,300 \times \frac{8}{100} = \$3\,944$$

Using your calculator's fraction key

4 9 3 0 0 × 8 a b/c 1 0 0 =

Columns 2 and 3 ask you to find the new wage. So it is the same as above, except you then add the increase to the original wage.

Example

Increase $49 300 by 8%

Increase:

$$49\,300 \times \frac{8}{100} = \$3\,944$$

Same as before

New Wage:

$$= 49\,300 + 3\,944$$

$$= \$53\,244$$

Add to original wage

Sheet 2 deals with getting an increased hourly rate when you undertake different work. This may be a height allowance, a wet workplace allowance, dust allowances … there are many different possibilities.

Column 1 asks you to calculate a person's wage after considering their hourly rate being increased for some of the hours worked. These questions are done in stages, finding the increase, finding the new rate, then finding the pay.

Example

Helen earns $28.70/h as window cleaner. When she works above 4 storeys she gets a 15% height allowance. Calculate:
- her hourly rate increase
- her increased hourly rate
- her weekly pay when she works 18h at the normal rate and 20h at the increased rate.

1 The hourly rate increase

$$28.70 \times \frac{15}{100} = \$4.31$$

Hourly rate × percentage (as a fraction)

2 The increased hourly rate

$$28.70 + 4.31 = \$33.01/h$$

Original rate + the increase

3

$$\underset{\text{Weekly Wage}}{} = \underset{\text{Rate}}{28.70} \times \underset{\text{Hours}}{18} +$$

$$\underset{\text{Increased Rate}}{33.01} \times \underset{\text{Hours}}{20}$$

$$\text{Weekly Wage} = \$1\,176.80$$

Rates × hrs added together

If you get an increase in pay, it is often by a percentage. Find these percentages.

Example: Find 7% of $17 800

$$17\,800 \times \frac{7}{100} = \$1\,246$$

Using your calculator's fraction key

1 7 8 0 0 × ▣ 7 ◯ 1 0 0 =

1 Find 4% of $48 000

$$\square \times \frac{\square}{100} = \$\square$$

2 Find 6% of $82 000

$$\square \times \frac{\square}{\square} = \square$$

'$' sign

3 Find 5.4% of $63 200

$$\square \times \frac{\square}{\square} = \square$$

Write answer to 2 decimal places.

4 Find 2.6% of $45 670

$$\square \times \frac{\square}{\square} = \square$$

5 Find 6.1% of $104 600

$$\square \times \frac{\square}{\square} = \square$$

6 Find 3.35% of $88 777

$$\square \times \frac{\square}{\square} = \square$$

Round answer to 2 decimal places.

7 Find 5.15% of $78 441

$$\square \times \frac{\square}{\square} = \square$$

8 Find 8.28% of $138 881

$$\square \times \frac{\square}{\square} = \square$$

Increase these annual wages by the percentage given.

Example: Find the new annual wage after $53 000 is increased by 8%.

Increase:

$$53\,000 \times \frac{8}{100} = \$4\,240$$

New Wage:

$= 53\,000 + 4\,240$

$= \$57\,240$

9 Increase $45 000 by 6%

Increase:

$$\square \times \frac{\square}{100} = \square$$

New Wage:

$= \square + \square$

$= \square$

10 Increase $125 500 by 4%

Increase:

$$\square \times \frac{\square}{\square} = \square$$

New Wage:

$= \square + \square$

$= \square$

11 Increase $78 400 by 3%

Increase:

$$\square \times \frac{\square}{\square} = \square$$

New Wage:

$= \square + \square$

$= \square$

Increase the annual salary, then find the new weekly salary.

12 Increase $38 300 by 4.2%

$$\square \times \frac{\square}{\square} = \square$$

Wage = $\square + \square$

Wage = $\square$

13 Find the new weekly wage.

Work in a different position and you might get paid extra for it. Find the increased rates.

David earns $28.20/h as a welder. When he works on elevators he gets a 15% height allowance. Calculate:

1 The hourly rate increase

$\square \times \frac{\square}{100} = \$\square$

2 The increased hourly rate

$\square + \square = \$\quad /h$

3 If David works 17 hours at the normal rate and 21 hours at the increased rate, calculate his weekly pay.

Weekly Wage $= \square$ (Rate) $\times \square$ (Hours) $+$

$\square$ (Increased Rate) $\times \square$ (Hours)

Weekly Wage $= \square$

Mischa is a power pole contractor earning $38.10/h. When she works in a hoist she is paid 20% extra per hour. Calculate:

4 Her hourly rate increase

$\square \times \frac{\square}{\square} = \square$

5 Her increased hourly rate

$\square + \square = \square$

6 If Mischa works 25 hours at the normal rate and 13 hours at the increased rate, calculate her weekly pay.

Weekly Wage $= \square \times \square +$

$\square \times \square$

Weekly Wage $= \square$

Chloe earns $32.80/h as a car smash repairer. When she works in the spray booth she gets an 18% increase on her hourly rate. In a 38 hour week she works 17 h in the booth. Find:

7 Her hourly rate increase

$\square \times \frac{\square}{\square} = \square$ (2 d.p.)

8 Her increased hourly rate

$\square + \square = \square$

9 The number of hours Chloe works out of the spray booth.

10 Her weekly pay.

Weekly Wage $= \square \times \square +$

$\square \times \square$

Weekly Wage $= \square$

Sasha earns $45.90/h as a computer programmer. He earns 25% more per hour when he works off-site. If he works a 40 hour week of which 17h is off-site, calculate:

11 His off-site hourly rate

12 The number of hours Sasha works on-site (in his office).

13 His weekly pay.

Raj earns $24.90/h as a baker. He is paid an additional 8% for early hours before 6 a.m. If he works a 38 h week and 10 of those hours are 'early hours', find:

14 His 'early hours' rate

15 The number of standard hours Raj works

16 His weekly pay.

17 His annual wage

Rachel is a Human Resource consultant earning $85.90/h. When she takes on team leader status she earns 15% more. Calculate:

18 Rachel's team leader rate.

19 Her weekly pay given she works 27h at the normal rate and 8h at the team leader rate.

If you get an increase in pay, it is often by a percentage. Find these percentages.

Example: Find 7% of $17 800

$$17\,800 \times \frac{7}{100} = \$1\,246$$

Using your calculator's fraction key

1 7 8 0 0 × ▣ 7 ◯ 1 0 0 =

1 Find 4% of $48 000

48 000 × $\frac{4}{100}$ = $1 920

2 Find 6% of $82 000

82 000 × $\frac{6}{100}$ = $4 920

3 Find 5.4% of $63 200

63 200 × $\frac{5.4}{100}$ = $3 412.80

Write answer to 2 decimal places.

4 Find 2.6% of $45 670

45 670 × $\frac{2.6}{100}$ = $1 187.42

5 Find 6.1% of $104 600

104 600 × $\frac{6.1}{100}$ = $6 380.60

6 Find 3.35% of $88 777

88 777 × $\frac{3.35}{100}$ = $2 974.03

Round answer to 2 decimal places.

7 Find 5.15% of $78 441

78 441 × $\frac{5.15}{100}$ = $4 039.71

8 Find 8.28% of $138 881

138 881 × $\frac{8.28}{100}$ = $11 499.35

Increase these annual wages by the percentage given.

Example: Find the new annual wage after $53 000 is increased by 8%.

Increase:

$$53\,000 \times \frac{8}{100} = \$4\,240$$

Using your calculator's fraction key

5 3 0 0 0 × 8 $a^b/_c$ 1 0 0 =

New Wage:

= 53 000 + 4 240

= $57 240

9 Increase $45 000 by 6%

Increase:

45 000 × $\frac{6}{100}$ = $2 700

New Wage:

= 45 000 + 2 700

= $47 700

10 Increase $125 500 by 4%

Increase:

125 500 × $\frac{4}{100}$ = $5 020

New Wage:

= 125 500 + 5 020

= $130 520

11 Increase $78 400 by 3%

Increase:

78 400 × $\frac{3}{100}$ = $2 352

New Wage:

= 78 400 + 2 352

= $80 752

12 Increase $38 300 by 4.2%

Increase:

38 300 × $\frac{4.2}{100}$ = $1 608.60

New Wage:

= 38 300 + 1 608.60

= $39 908.60

13 Increase $98 278 by 3.5%

Increase:

98 278 × $\frac{3.5}{100}$ = $3 439.73

New Wage:

= 98 278 + 3 439.73

= $101 717.73

14 Increase $143 558 by 6.5%

Increase:

143 558 × $\frac{6.5}{100}$ = $9 331.27

New Wage:

= 143 558 + 9 331.27

= $152 889.27

15 Increase $78 200 by 8.3%

Increase:

78 200 × $\frac{8.3}{100}$ = $6 490.60

New Wage:

= 78 200 + 6 490.60

= $84 690.60

16 Increase $105 600 by 2.17%

Increase:

105 600 × $\frac{2.17}{100}$ = $2 291.52

New Wage:

= 105 600 + 2 291.52

= $107 891.52

Work in a different position and you might get paid extra for it. Find the increased rates.

David earns $28.20/h as a welder. When he works on elevators he gets a 15% height allowance. Calculate:

1 The hourly rate increase

$28.20 \times \frac{15}{100} = \$4.23$

2 The increased hourly rate

$28.20 + 4.23 = \$32.43/h$

3 If David works 17 hours at the normal rate and 21 hours at the increased rate, calculate his weekly pay.

Weekly Wage $= 28.20$ (Rate) $\times 17$ (Hours) $+$

32.43 (Increased Rate) $\times 21$ (Hours)

Weekly Wage $= \$1\ 160.43$

Mischa is a power pole contractor earning $38.10/h. When she works in a hoist she is paid 20% extra per hour. Calculate:

4 Her hourly rate increase

$38.10 \times \frac{20}{100} = \$7.62$

5 Her increased hourly rate

$38.10 + 7.62 = \$45.72$

6 If Mischa works 25 hours at the normal rate and 13 hours at the increased rate, calculate her weekly pay.

Weekly Wage $= 38.10 \times 25 +$

45.72×13

Weekly Wage $= \$1\ 546.86$

Chloe earns $32.80/h as a car smash repairer. When she works in the spray booth she gets an 18% increase on her hourly rate. In a 38 hour week she works 17 h in the booth. Find:

7 Her hourly rate increase

$32.80 \times \frac{18}{100} = \$5.90$ (2 d.p.)

8 Her increased hourly rate

$32.80 + 5.90 = \$38.70$

9 The number of hours Chloe works out of the spray booth.

$38 - 17 = 21$ h

10 Her weekly pay.

Weekly Wage $= 32.80 \times 21 +$

38.70×17

Weekly Wage $= \$1\ 346.70$

Sasha earns $45.90/h as a computer programmer. He earns 25% more per hour when he works off-site. If he works a 40 hour week of which 17h is off-site, calculate:

11 His off-site hourly rate

$45.90 \times \frac{25}{100} = \$11.48$

$45.90 + 11.48 = \$57.38$

12 The number of hours Sasha works on-site (in his office).

$40 - 17 = 23$h

13 His weekly pay.

Weekly Wage $= 23 \times 45.90 +$

17×57.38

Weekly Wage $= \$2\ 031.16$

Raj earns $24.90/h as a baker. He is paid an additional 8% for early hours before 6 a.m. If he works a 38 h week and 10 of those hours are 'early hours', find:

14 His 'early hours' rate

$24.90 \times \frac{8}{100} = \$1.99$

$24.90 + 1.99 = \$26.89$

15 The number of standard hours Raj works

$38 - 10 = 28$h

16 His weekly pay.

Weekly Wage $= 28 \times 24.90 +$

10×26.89

Weekly Wage $= \$966.10$

17 His annual wage

Annual Wage $= 966.10 \times 52$

Annual Wage $= \$50\ 237.20$

Rachel is a Human Resource consultant earning $85.90/h. When she takes on team leader status she earns 15% more. Calculate:

18 Rachel's team leader rate.

$85.90 \times \frac{15}{100} = \$12.89$

$85.90 + 12.89 = \$98.79$

19 Her weekly pay given she works 27h at the normal rate and 8h at the team leader rate.

Weekly Wage $= 27 \times 85.90 +$

8×98.79

Weekly Wage $= \$3\ 109.62$

$$58\,500 \times \frac{8}{100} = \$4\,680$$

New Wage:

$$= 58\,500 + 4\,680$$

$$= \$63\,180$$

Earning Money - Piecework

Not all people earn a salary or wage, others are paid directly on what they produce. The more you make the more you earn. This type of work is called Piecework, and it allows workers to be as fast or slow as they like. They can stop and do something else then come back to the job. It is a flexible form of employment that has both advantages and disadvantages.

Sheet 1 Column 1 starts with some questions on rates. If you are paid, say $10 to produce something, how much do you earn to produce 5? $5 \times 10 = \$50$. just multiply the rate by the number of items.

At the base of the column is a daily table. A record of daily production is kept and this allows for a end-of-week payment to be received. Total up the table, then multiply by the rate.

Example

Horses reshoed at $58.30/horse

Day	M	Tu	W	Th	F	Total
Sheep	4	6	5	3	5	23

Add along the row

Rate: 58.30 × No. of horses: 23

Payment = 58.30 × 23

Payment = $1 340.90

Question 8 in column 2 is like the above example except there are two rates. The usual rate and a higher rate to motivate more daily production. You need to split the production into two numbers. One at the normal rate, the other at the higher rate. Question 8 has been split up for you already.

Sheet 2 deals with quoting for jobs by trades people. When a trades person is hired they supply a quote or 'price estimate' for the job. The prices vary from person to person, so you can get several quotes and select the best quote.

Column 1 starts with a roof tiler being offered a fixed price on a job. He has to compare the price with what he charges to decide on whether to take the job. These questions vary and so the first column has the operations that you need to do, so follow the steps.

Earning Money - Commission

Commission is when you are paid a percentage of your sales. This means the more you sell, the more you make. So it is a motivational method of payment to pay you more if you make more money for the business. It can result in low pay also for people who aren't good in sales, so commission can be a poor payment option for some people.

Commission is the same as finding a percentage of a quantity, except it is easier because the units are always $, and are always rounded to 2 decimal places.

Sheet 1 Column 1 is completed by multiplying the sales amount by the percentage as a fraction 'over 100'.

Example

Sales = $17 315, Rate = 6%

Commission = $17\,315 \times \frac{6}{100}$

Commission = $1 038.90

6% as a fraction is 6 over 100.

Column 2 starts with a table. The table has a list of sales employees. They are paid different rates because they sell different products. This is the same as the above method, just no working out is required.

The middle column asks you to compare two employees to see who earns the most. The last column asks you to match commission questions with their answers, use different colours so you don't make a webby mess.

Sheet 2 is about retainers, or base salary. A retainer is an amount paid to an employee regardless of how much they sell. This is used to give employees a wage as a safety net, against quiet times (such as after Christmas). Regardless if on a commission-based wage, an employee must be paid at least the award's minimum hourly rate, so a retainer assists employers in meeting this legal requirement.

Example

Base salary = $310/wk with
Sales = $8 175, Rate = 12%.

Pay = $310 + 8\,175 \times \frac{12}{100}$

Pay = $1 291

The only difference is you add the retainer

Earning Money - Commission (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the commission on these sales. Multiply by the percentage as a fraction written 'over 100'.

Example

Sales = \$15 540, Rate = 12%

Commission = $15\,540 \times \frac{12}{100}$

$= \$1\,864.80$

1 Sales = \$23 016, Rate = 11%

Commission = $\square \times \frac{\square}{100}$

$=$

2 Sales = \$17 880, Rate = 9%

Commission = $\square \times \frac{\square}{100}$

$=$

3 Sales = \$78 107, Rate = 4%

Commission = $\square \times \frac{\square}{\square}$

$=$

4 Sales = \$12 050, Rate = 8%

Commission =

Earning Money - Commission (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the commission on these sales. Multiply by the percentage as a fraction written 'over 100'.

Example

Sales = \$15 540, Rate = 12%

Commission = $15\,540 \times \frac{12}{100}$

= \$1 864.80

1 Sales = \$23 016, Rate = 11%

Commission = $23\,016 \times \frac{11}{100}$

= \$2 531.76

2 Sales = \$17 880, Rate = 9%

Commission = $17\,880 \times \frac{9}{100}$

= \$1 609.20

3 Sales = \$78 107, Rate = 4%

Commission = $78\,107 \times \frac{4}{100}$

= \$3 124.28

4 Sales = \$12 050, Rate = 8%

Commission = $12\,050 \times \frac{8}{100}$

= \$964

5 Sales = \$9 300, Rate = 15%

Commission = $9\,300 \times \frac{15}{100}$

= \$1 395

6 Sales = \$87 600, Rate = 6.5%

Commission = $87\,600 \times \frac{6.5}{100}$

= \$5 694

Complete the table by finding the commission payable. Then rank the earnings from highest (1) to the lowest (7).

	Name	Rate	Sales	Commission	Rank
7	Gwen	5%	\$40 555	\$2 027.75	4
8	Sven	11%	\$16 931	\$1 862.41	6
9	Len	18%	\$15 676	\$2 821.68	1
10	Wen	4%	\$46 855	\$1 874.20	5
11	Ben	7%	\$25 910	\$1 813.70	7
12	Jen	9.5%	\$23 166	\$2 200.77	3
13	Toby	13%	\$17 582	\$2 285.66	2

Calculate the commission and fill the circle for who earns the most per week.

14 Steve 5% on \$38 960 sales, Georgie 8% on sales of \$18 777.

Steve = $38\,960 \times \frac{5}{100}$

= \$1 948

Georgie = $18\,777 \times \frac{8}{100}$

= \$1 502.16

● Steve ○ Georgie

15 Nicki 12% on \$43 110 sales, Zaina 8% on sales of \$54 550.

Nicki = $43\,110 \times \frac{12}{100}$

= \$5 173.20

Zaina = $54\,550 \times \frac{8}{100}$

= \$4 364

● Nicki ○ Zaina

16 James 13% on \$11 522 sales, Jessie 17% on sales of \$14 070.

James = $11\,522 \times \frac{13}{100}$

= \$1 497.86

Jessie = $14\,070 \times \frac{17}{100}$

= \$2 391.90

○ James ● Jessie

Earning Money - Commission (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A retainer is a base salary paid with a commission payment. Calculate the pay earned.

Example Base salary = $200/wk
Sales = $13 700, Rate = 9.2%

Pay = $200 + 13\,700 \times \frac{9.2}{100}$

Pay = $1 460.40

1 Base salary = $370/wk with Sales = $8 295, Rate = 25%.

Pay = 370 + 8 295 × $\frac{25}{100}$

Pay = $2 443.75

2 Base salary = $440/wk with Sales = $28 040, Rate = 6%.

Pay = 440 + 28 040 × $\frac{6}{100}$

Pay = $2 122.40

3 Base salary = $290/wk with Sales = $158 900, Rate = 1.5%.

Pay = 290 + 158 900 × $\frac{1.5}{100}$

Pay = $2 673.50

4 Retainer of $340/wk with Sales = $38 775, Rate = 4.5%.

Pay = $340 + 38\,775 \times \frac{4.5}{100}$

Pay = $2 084.88 ← Cents to 2 d.p.

5 Base salary of $550/wk with Sales = $73 145, Rate = 3.5%.

Pay = $550 + 73\,145 \times \frac{3.5}{100}$

Pay = $3 110.08

6 Base salary = $225/wk with Sales = $899 600, Rate = 0.3%.

Pay = $225 + 899\,600 \times \frac{0.3}{100}$

Pay = $2 923.80

Add the base salary to the commission earned to find the pay. Then rank the earnings from highest (1) to the lowest (7).

	Name	Base Salary	Rate	Sales	Weekly pay	Rank
7	Katniss	$800	7%	$38 900	$3 523	3
8	Cinna	$220	5%	$50 052	$2 722.60	5
9	Gale	$350	8%	$41 776	$3 692.08	2
10	Marvel	$150	10%	$50 735	$5 223.50	1
11	Thresh	$500	5.5%	$27 846	$2 031.53	6
12	Seneca	$280	4%	$37 200	$1 768	7
13	Peeta	$640	8.5%	$29 670	$3 161.95	4

Compare these wages to get the best deal.

Hakim sells home loan products. He has average weekly sales of $780 000. He is offered two weekly pay options:
1. $600 + 0.2% commission on sales
2. Flat 0.3% commission on sales, find:

14 His weekly pay for Option 1.

Pay = $600 + 780\,000 \times \frac{0.2}{100}$

Pay = $2 024.20

15 His weekly pay for Option 2.

Pay = $780\,000 \times \frac{0.3}{100}$

Pay = $2 340

16 Which is the best offer?

○ Option 1 ● Option 2

Francis works with Hakim, his sales average $555 000/wk. Find:

17 His weekly pay for Option 1.

Pay = $600 + 555\,000 \times \frac{0.2}{100}$

Pay = $1 710

18 His weekly pay for Option 2.

Pay = $555\,000 \times \frac{0.3}{100}$

Pay = $1 665

Best? ● Option 1 ○ Option 2

Rosie sells life insurance. She has average weekly sales of $43 000. She is offered two weekly pay options:
1. $300 + 4% commission on sales
2. An annual salary of $94 952, find:

19 Her weekly pay for Option 1.

Pay = $300 + 43\,000 \times \frac{4}{100}$

Pay = $2 020

20 Her weekly pay for Option 2.

Pay = 94 952 ÷ 52

Pay = $1 826

21 Which is the best offer?

● Option 1 ○ Option 2

Jane works with Rosie, her sales average $39 200/wk. Find:

22 Her weekly pay for Option 1.

Pay = $300 + 39\,200 \times \frac{4}{100}$

Pay = $1 868

23 Her weekly pay for Option 2.

Pay = $1 826

Same answer as Question 20

24 Which is the best offer?

● Option 1 ○ Option 2

= $2 509

5 Sales = $47 920, Rate = 6.5%

Commission = 47 920 × $\frac{2}{100}$

= $3 114.80

Earning Money - Leave Loading

An employee is entitled to 4 weeks holiday per year, called annual leave. This is paid leave but on yop of the normal 4 weeks pay, the employee also receives an extra 17½% on top of that pay. This is called leave loading.

To find leave loading, you first have to calculate 4 weeks pay. If you earn a weekly pay, then multiply by 4. But you may earn a monthly or yearly salary, or an hourly rate. Sheet 1, Column 1 asks you to convert weekly and fortnightly wages to 4 week's pay.

Examples

Weekly wage of $568.20

4 weeks pay = 568.20 × 4

4 weeks pay = $2 272.80

Multiply weekly wage by 4

Fortnightly wage of $1 317.60

4 weeks pay = 1 317.60 × 2

4 weeks pay = $2 635.20

Multiply fortnightly wage by 2

Columns 2 and 3 ask you to convert annual and monthly wages to 4 weeks pay. You may need to round the cents in later questions. Remember that 4 weeks doesn't equal a month.

Examples

Annual wage of $35 776

4 weeks pay = 35 776 ÷ 52 × 4

4 weeks pay = $2 752

Divide annual wage by 52 to get a weekly wage, then multiply by 4.

Monthly wage of $5 616

4 weeks pay = 5 616 × 12 ÷ 52 × 4

4 weeks pay = $5 184

Multiply monthly wage by 12 to get an annual wage, then divide by 52 for weekly and finally multiply by 4.

Sheets 2 and 3 ask you to calculate leave loading and holiday pay. This is a three step process:

- Calculate 4 weeks pay first (as above)
- Calculate the leave loading (17½% of 4 weeks pay)
- Add the two answers together. Holiday Pay = 4 weeks pay + Loading

Examples

Tamika earns $59 020 p.a. Find: 4 weeks pay; the leave loading; her holiday pay.

4 weeks pay = 59 020 ÷ 52 × 4

4 weeks pay = $4 540

First convert Annual pay to 4 weeks pay

L. Loading $= 4\,540 \times \frac{17.5}{100}$

$= \$794.50$

Then find the leave loading, Which is always 17½%.

H. Pay = 4 540 + 794.50

= $5 334.50

Then find the holiday pay, Which is 4 weeks pay + The leave loading

Earning Money - Leave Loading (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these wages to 4 weeks pay.

Example: $1 365.20/week

4 weeks Pay = 1 365.20 × 4

= $5 460.80

1 $623.17/week

4 weeks Pay = ☐ × ☐

= $ ☐

2 $435.76/week

4 weeks Pay = ☐ × ☐

= $ ☐

3 $1 738.15/week

4 weeks Pay =

=

Show the $ sign and cents to 2 decimal places

4 $1 674.83/week

4 weeks Pay =

=

To find 4 weeks pay, multiply the fortnightly rate by 2 (So, × 2)

5 $2 560.77/fortnight

4 weeks Pay = ☐ × ☐

= ☐

6 $1 363.45/fortnight

4 weeks Pay =

=

7 $425.65/fortnight

4 weeks Pay =

=

Convert an annual wage to 4 weeks pay (÷ 52 × 4).

8 $62 774.40 p.a.

4 weeks pay = ☐ ÷ ☐ × ☐

= ☐

9 $28 605.20 p.a.

4 weeks pay = ☐ ÷ ☐ × ☐

= ☐

10 $45 705.63 p.a.

4 weeks pay =

= ← Round to 2 d.p.

11 $94 771 p.a.

4 weeks pay =

=

12 $59 883 p.a.

4 weeks pay =

=

Convert a monthly wage to 4 weeks pay (× 12 ÷ 52 × 4).

13 $4 680 per month.

4 weeks pay = ☐ × ☐ ÷ ☐ × ☐

= ☐

14 Is your answer above just less than the $4 680 per month?

◯ Yes, because 4 weeks while close, is slightly less than a month.

◯ No, I think I have to do it again.

15 $3 302 per month.

4 weeks pay = ☐ × ☐ ÷ ☐ × ☐

= ☐

16 $1 102.40 per month.

4 weeks pay =

=

17 $4 435 per month.

4 weeks pay =

= ← Round to 2 d.p.

Change the daily hours and rate to weekly pay to a 4 weekly pay.

Daily hours × Hourly rate × Days = Weekly Pay

	Name	*Daily Hours*	*Hourly Rate*	*Days per Week*	*Weekly Pay*	*4 Weeks Pay*
18	E. Claire	7	$24.85	5		
19	I. Sore	6	$19.40	6		
20	D. Light	5½	$25.60	4		
21	C. Saw	7	$15.40	5		
22	G. Whizz	8	$32.80	5		
23	T. Time	6½	$38.90	3		
24	X. Tract	4	$28.90	2

Earning Money - Leave Loading (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these wages to 4 weeks pay.

Example: $1 365.20/week

4 weeks Pay = 1 365.20 × 4

= $5 460.80

1 $623.17/week

4 weeks Pay = 623.17 × 4

= $ 2 492.68

2 $435.76/week

4 weeks Pay = 435.76 × 4

= $ 1 743.04

3 $1 738.15/week

4 weeks Pay = 1 738.15 × 4

= $6 952.60

Show the $ sign and cents to 2 decimal places

4 $1 674.83/week

4 weeks Pay = 1 674.83 × 4

= $6 699.32

To find 4 weeks pay, multiply the fortnightly rate by 2 (So, × 2)

5 $2 560.77/fortnight

4 weeks Pay = 2 560.77 × 2

= $5 121.54

6 $1 363.45/fortnight

4 weeks Pay = 1 363.45 × 2

= $2 726.90

7 $425.65/fortnight

4 weeks Pay = 425.65 × 2

= $851.30

Convert an annual wage to 4 weeks pay (÷ 52 × 4).

8 $62 774.40 p.a.

4 weeks pay = 62 774.40 ÷ 52 × 4

= $4 828.80

9 $28 605.20 p.a.

4 weeks pay = 28 605.20 ÷ 52 × 4

= $2 200.40

10 $45 705.63 p.a.

4 weeks pay = 45 705.63 ÷ 52 × 4

= $3 515.62 ← Round to 2 d.p.

11 $94 771 p.a.

4 weeks pay = 94 771 ÷ 52 × 4

= $7 290.08

12 $59 883 p.a.

4 weeks pay = 59 883 ÷ 52 × 4

= $4 606.38

Convert a monthly wage to 4 weeks pay (× 12 ÷ 52 × 4).

13 $4 680 per month.

4 weeks pay = 4 680 × 12 ÷ 52 × 4

= $4 320

14 Is your answer above just less than the $4 680 per month?

● Yes, because 4 weeks while close, is slightly less than a month.

○ No, I think I have to do it again.

15 $3 302 per month.

4 weeks pay = 3 302 × 12 ÷ 52 × 4

= $3 048

16 $1 102.40 per month.

4 weeks pay = 1 102.40 × 12 ÷ 52 × 4

= $1 017.60

17 $4 435 per month.

4 weeks pay = 4 435 × 12 ÷ 52 × 4

= $4 093.85 ← Round to 2 d.p.

Change the daily hours and rate to weekly pay to a 4 weekly pay.

Daily hours × Hourly rate × Days = Weekly Pay

	Name	*Daily Hours*	*Hourly Rate*	*Days per Week*	*Weekly Pay*	*4 Weeks Pay*
18	E. Claire	7	$24.85	5	$869.75	$3 479
19	I. Sore	6	$19.40	6	$698.40	$2 793.60
20	D. Light	5½	$25.60	4	$563.20	$2 252.80
21	C. Saw	7	$15.40	5	$539	$2 156
22	G. Whizz	8	$32.80	5	$1 312	$5 248
23	T. Time	6½	$38.90	3	$758.55	$3 034.20
24	X. Tract	4	$28.90	2	$231.20	$924.80

Earning Money - Leave Loading (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Leave loading is 17½%. So multiply by 17.5 'over 100' to find the leave loading.

Example: Find 17½% of $560

L. Loading = $560 \times \frac{17.5}{100}$

= $98

1 Find 17½% of $2 186

L. Loading = 2 186 × $\frac{17.5}{100}$

= $382.55

2 Find 17½% of $778

L. Loading = 778 × $\frac{17.5}{100}$

= $136.15

3 Find 17½% of $1 412

L. Loading = 1 412 × $\frac{17.5}{100}$

= $247.10

4 Find 17½% of $895.70

L. Loading = 895.70 × $\frac{17.5}{100}$

= $156.75

5 Find 17½% of $1 033

L. Loading = 1 033 × $\frac{17.5}{100}$

= $180.78 ← Round to 2 d.p.

6 Find 17½% of $1 043.52

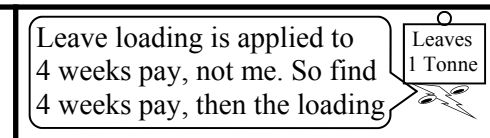
L. Loading = 1 043.52 × $\frac{17.5}{100}$

= $182.62

7 Find 17½% of $358.38

L. Loading = 358.38 × $\frac{17.5}{100}$

= $62.72



Leave loading is applied to 4 weeks pay, not me. So find 4 weeks pay, then the loading

Jodie earns $850 per week. Find:

8 4 Weeks pay.

4 weeks Pay = 850 × 4

= $ 3 400

9 17½% of 4 weeks pay

L. Loading = 3 400 (Q.8) × $\frac{17.5}{100}$

= $595

10 Jodie's holiday pay.

H. Pay = 3 400 (Q.8) + 595 (Q.9)

= $3 995

Iskandar earns $1 055 per week. Find:

11 4 Weeks pay.

4 weeks Pay = 1 055 × 4

= $ 4 220

12 17½% of 4 weeks pay

L. Loading = 4 220 (Q.11) × $\frac{17.5}{100}$

= $738.50

13 Iskandar's holiday pay.

H. Pay = 4 220 (Q.11) + 738.50 (Q.12)

= $4 958.50

Carla earns $777.70 per week. Find:

14 4 Weeks pay.

4 weeks Pay = 777.70 × 4

= $3 110.80

15 17½% of 4 weeks pay

L. Loading = 3 110.80 (Q.14) × $\frac{17.5}{100}$

= $544.39

16 Carla's holiday pay.

H. Pay = 3 110.80 + 544.39

= $3 655.19

Tegan earns $81 120 p.a. Find:

17 4 Weeks pay.

4 weeks pay = 81 120 ÷ 52 × 4

= $6 240

18 17½% of 4 weeks pay

L. Loading = 6 240 × $\frac{17.5}{100}$

= $1 092

19 Tegan's holiday pay.

H. Pay = 6 240 + 1 092

= $7 332

William earns $49 527.92 p.a. Find:

20 4 Weeks pay.

4 weeks pay = 49 527.92 ÷ 52 × 4

= $3 809.84

21 17½% of 4 weeks pay

L. Loading = 3 809.84 × $\frac{17.5}{100}$

= $666.72 2 d.p.

22 William's holiday pay.

H. Pay = 3 809.84 + 666.72

= $4 476.56

Earning Money - Leave Loading (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find 4 weeks pay, the leave loading (at 17½%), then find the holiday pay.

William earns $80 080 p.a. Find:

1 4 Weeks pay.

$\text{4 weeks pay} = 80\,080 \div 52 \times 4$

$= \$6\,160$

2 17½% of 4 weeks pay

$\text{L. Loading} = 6\,160 \times \frac{17.5}{100}$

$= \$1\,078$

3 William's holiday pay.

$\text{H. Pay} = 6\,160 + 1\,078$

$= \$7\,238$

Jaycee earns $5 304/month. Find:

4 4 Weeks pay.

$\text{4 weeks pay} = 5\,304 \times 12 \div 52 \times 4$

$= \$4\,896$

5 17½% of 4 weeks pay

$\text{L. Loading} = 4\,896 \times \frac{17.5}{100}$

$= \$856.80$

6 Jaycee's holiday pay.

$\text{H. Pay} = 4\,896 + 856.80$

$= \$5\,752.80$

Nathan earns $19.30/h for a 12 hour week. Find:

7 4 Weeks pay.

$\text{4 weeks pay} = 19.30 \times 12 \times 4$

$= \$926.40$

8 17½% of 4 weeks pay

$\text{L. Loading} = 926.40 \times \frac{17.5}{100}$

$= \$162.12$

9 Nathan's holiday pay.

$\text{H. Pay} = 926.40 + 162.12$

$= \$1\,088.52$

Tony earns $2 444/month. Find:

10 4 Weeks pay.

$\text{4 weeks pay} = 2\,444 \times 12 \div 52 \times 4$

$= \$2\,256$

11 17½% of 4 weeks pay

$\text{L. Loading} = 2\,256 \times \frac{17.5}{100}$

$= \$394.80$

12 Tony's holiday pay.

$\text{H. Pay} = 2\,256 + 394.80$

$= \$2\,650.80$

Brad earns $76 492 p.a. Find:

13 4 Weeks pay.

$\text{4 weeks pay} = 76\,492 \div 52 \times 4$

$= \$5\,884$

14 17½% of 4 weeks pay

$\text{L. Loading} = 5\,884 \times \frac{17.5}{100}$

$= \$1\,029.70$

15 Brad's holiday pay.

$\text{H. Pay} = 5\,884 + 1\,029.70$

$= \$6\,913.70$

Fei Yen earns $24.90/h for a 38 hour week. Find:

16 4 Weeks pay.

$\text{4 weeks pay} = 24.90 \times 38 \times 4$

$= \$3\,784.80$

17 17½% of 4 weeks pay

$\text{L. Loading} = 3\,784.80 \times \frac{17.5}{100}$

$= \$662.34$

18 Fei Yen's holiday pay.

$\text{H. Pay} = 3\,784.80 + 662.34$

$= \$4\,447.14$

Alena earns commission at 14% of her weekly sales. Find:

19 Her weekly commission, given she has average weekly sales of $12 800.

$\text{Commission} = 12\,800 \times \frac{14}{100}$

Use commission rate here - not 17.5%

$= \$1\,792$

20 4 Weeks pay.

$\text{4 weeks pay} = 1\,792 \times 4$

$= \$7\,168$

21 17½% of 4 weeks pay

$\text{L. Loading} = 7\,168 \times \frac{17.5}{100}$

$= \$1\,254.40$

22 Alena's holiday pay.

$\text{H. Pay} = 7\,168 + 1\,254.40$

$= \$8\,422.40$

= $4 359.25

Earning Money - Find A Word

Look for words in the list at the bottom of the grid. Once you find a word cross it off the list.

A letter could be used more than once so don’t colour it in too dark (using a texta for example) so that you can still read it.

Earning Money - Find a Word

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Calculate the amount earned.

1 $96/day, for 3 days.

2 $26/h, for 4 hours.

3 $795.20/week, for 2 weeks.

Calculate the weekly wage.

4 $25.45/h for a 38 h week.

5 $18.75/h for a 20 h week.

6 $135.65/day for a 3 day week.

Find the weekly wage earned.

7 $46 498.40 p.a.

8 $4 992/month.

Frances is paid $473.10 for a 38 hour week. Convert this rate of pay to:

11 An annual wage

12 A monthly wage

13 An hourly rate

Convert these wages to monthly

9 $61 034 p.a.

10 $775.20/week.

11 $24.90/h for a 20 h week.

Convert these normal hourly rates to rates paid at time-and-a-half

12 $12.50 _____

13 $18.60 _____

Convert these normal hourly rates to rates paid at double time

14 $13.55 _____

15 $9.95 _____

Calculate the penalty rate payments.

16 6 h at time-and-a-half.
(Normal hourly rate is $18.40 per hour.)

17 4 h at double time.
(Normal hourly rate is $23.70 per hour.)

18 3 h at time-and-a-half and 1½ h at double time.
(Normal hourly rate is $21.20 per hour.)

19 **Complete the table using a normal hourly rate of $16.50/hour.**

James earns $584 per week. If he receives a pay increase of 7.5%, find:

20 The increase in pay

21 His new annual salary

Jaegar is paid 15% commission on sales. Find the commission paid on:

22 Sales of $4 670

Kieran is paid a base salary of $760 per week, as well as 4% commission on sales. Find his earnings if he makes sales of $38 500 for the week.

23 Sales of $38 500

Ahmad earns fits smoke alarms and fire extinguishers. He is paid $9 per smoke alarm and $26 per fire Extinguisher. Find his earnings when he fits the following:

24 6 smoke alarms, and
4 fire extinguishers

25 11 smoke alarms, and
7 fire extinguishers

Husna applies silkscreen artwork to T-shirts. She is paid $16 per shirt, for up to 20 shirts. The rate increases to $19 per shirt on those shirts she produces after the first 20. Her supply figures are in the table below, calculate her earnings for the week.

26

Day	M	T	W	T	F
Quantity	15	20	28	11	32

27 Complete the table

Hourly rate is $20.40 per hour.
Round time worked to nearest 15 minutes.
Lunch times are unpaid.

Day	*Time In a.m.*	*Time Out p.m.*	*Lunch Time*	*Actual hours*	*Rounded hours*	*Daily Wage*
Mon	8.20	2.25	30 m			
Tues	8.35	4.10	45 m			

Izolde earns $850.90 per week. She is about to go on 4 weeks holiday. Calculate the following:

28 4 Weeks pay.

29 Leave Loading at 17½% of 4 weeks pay.

30 Izolde's holiday pay.

Carmen earns $70 418.40 p. a. She is about to go on 4 weeks holiday. Calculate the following:

31 4 Weeks pay.

32 Leave Loading at 17½% of 4 weeks pay.

33 Carmen's holiday pay.

Earning Money - Topic Review

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Calculate the amount earned.

1 $96/day, for 3 days.

Pay = 96 × 3

Pay = $288

2 $26/h, for 4 hours.

Pay = 26 × 4

Pay = $104

3 $795.20/week, for 2 weeks.

Pay = 795.20 × 2

Pay = $1 590.40

Calculate the weekly wage.

4 $25.45/h for a 38 h week.

Pay = 25.45 × 38

Pay = $967.10

5 $18.75/h for a 20 h week.

Pay = 18.75 × 20

Pay = $375

6 $135.65/day for a 3 day week.

Pay = 135.65 × 3

Pay = $406.95

Find the weekly wage earned.

7 $46 498.40 p.a.

Weekly = 46 498.40 ÷ 52

Weekly = $894.20

8 $4 992/month.

Weekly = 4 992 × 12 ÷ 52

Weekly = $1 152

Frances is paid $473.10 for a 38 hour week. Convert this rate of pay to:

11 An annual wage

Pay = 473.10 × 52

Pay = $24 601.20

12 A monthly wage

Pay = 24 601.20 ÷ 12

Pay = $2 050.10

13 An hourly rate

Rate = 473.10 ÷ 38

Rate = $12.45/hour

Convert these wages to monthly

9 $61 034 p.a.

Pay = 61 034 ÷ 12

Pay = $5 086.17

10 $775.20/week.

Pay = 775.20 × 52 ÷ 12

Pay = $3 359.20

11 $24.90/h for a 20 h week.

Pay = 24.90 × 20 × 52 ÷ 12

Pay = $2 158

Convert these normal hourly rates to rates paid at time-and-a-half

12 $12.50 — $18.75

13 $18.60 — $27.90

Convert these normal hourly rates to rates paid at double time

14 $13.55 — $27.10

15 $9.95 — $19.90

Calculate the penalty rate payments.

16 6 h at time-and-a-half.

(Normal hourly rate is $18.40 per hour.)

Pay = 6 × 1.5 × 18.40

Pay = $165.60

17 4 h at double time.

(Normal hourly rate is $23.70 per hour.)

Pay = 4 × 2 × 23.70

Pay = $189.60

18 3 h at time-and-a-half and 1½ h at double time.

(Normal hourly rate is $21.20 per hour.)

Pay = 3 × 1.5 × 21.20

+ 1.5 × 2 × 21.20

Pay = $159

19 Complete the table using a normal hourly rate of $16.50/hour.

Name	*Normal Hours*	*Time and a half*	*Double Time*	*Total*
Jane	35 577.50	4 99	- 0	$676.50
Tina	17 280.50	7 173.25	4 132	$585.75
Brad	38 627	3 74.25	1 33	$734.25
David	25 412.50	8 198	2 66	$676.50
Mel	30 495	6½ 160.88	2½ 82.50	$738.38

James earns $584 per week. If he receives a pay increase of 7.5%, find:

20 The increase in pay

$\text{Increase} = 584 \times \frac{7.5}{100}$

$\text{Increase} = \$43.80$

21 His new annual salary

$\text{Weekly} = 584 + 43.80$

$\text{Weekly} = \$627.80$

$\text{Annual} = 627.80 \times 52$

$\text{Annual} = \$32\,645.60$

Jaegar is paid 15% commission on sales. Find the commission paid on:

22 Sales of $4 670

$\text{Commission} = 4\,670 \times \frac{15}{100}$

$\text{Commission} = \$700.50$

Kieran is paid a base salary of $760 per week, as well as 4% commission on sales. Find his earnings if he makes sales of $38 500 for the week.

23 Sales of $38 500

$\text{Earnings} = 760 + 38\,500 \times \frac{4}{100}$

$\text{Earnings} = \$2\,300$

Ahmad earns fits smoke alarms and fire extinguishers. He is paid $9 per smoke alarm and $26 per fire Extinguisher. Find his earnings when he fits the following:

24 6 smoke alarms, and 4 fire extinguishers

$\text{Earnings} = 6 \times 9 + 4 \times 26$

$\text{Earnings} = \$158$

25 11 smoke alarms, and 7 fire extinguishers

$\text{Earnings} = 11 \times 9 + 7 \times 26$

$\text{Earnings} = \$281$

Husna applies silkscreen artwork to T-shirts. She is paid $16 per shirt, for up to 20 shirts. The rate increases to $19 per shirt on those shirts she produces after the first 20. Her supply figures are in the table below, calculate her earnings for the week.

26

Day	M	T	W	T	F	
Quantity	15	20	28	11	32	
$16:	15	20	20	11	20	86
$19:	-	-	8	-	12	20

$\text{Earnings} = 86 \times 16 + 20 \times 19$

$\text{Earnings} = \$1\,756$

Izolde earns $850.90 per week. She is about to go on 4 weeks holiday. Calculate the following:

28 4 Weeks pay.

$\text{4 weeks pay} = 850.90 \times 4$

$\text{4 weeks pay} = \$3\,403.60$

29 Leave Loading at 17½% of 4 weeks pay.

$\text{L.Loading} = 3\,403.60 \times \frac{17.5}{100}$

$\text{L.Loading} = \$595.63$

30 Izolde's holiday pay.

$\text{H. Pay} = 3\,403.60 + 595.63$

$\text{H. Pay} = \$3\,999.23$

Carmen earns $70 418.40 p. a. She is about to go on 4 weeks holiday. Calculate the following:

31 4 Weeks pay.

$\text{4 weeks Pay} = 70\,418.40 \div 52 \times 4$

$\text{4 weeks Pay} = \$5\,416.80$

32 Leave Loading at 17½% of 4 weeks pay.

$\text{L.Loading} = 5\,416.80 \times \frac{17.5}{100}$

$\text{L.Loading} = \$947.94$

33 Carmen's holiday pay.

$\text{H. Pay} = 5\,416.80 + 947.94$

$\text{H. Pay} = \$6\,364.74$

27 Complete the table

Hourly rate is $20.40 per hour.
Round time worked to nearest 15 minutes.
Lunch times are unpaid.

Day	*Time In a.m.*	*Time Out p.m.*	*Lunch Time*	*Actual hours*	*Rounded hours*	*Daily Wage*
Mon	8.20 0820	2.25 1425	30 m	5h 35m	5h 30m	$112.20
Tues	8.35 0835	4.10 1610	45 m	6h 50m	6h 45m	$137.70

Pay Period Calculations - Annual Wages (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert an annual wage to a weekly wage (÷ by 52).

1 $46 644 p.a.

W'kly pay = ☐ ÷ 52

= $ ☐

2 $68 484 p.a.

W'kly pay =

=

3 $51 090 p.a.

Show the $ sign and cents to 2 decimal places

4 $73 655.40 p.a.

5 $26 355.68 p.a.

6 $7 587.84 p.a.

Questions 7 - 9 require you to round the cents.

7 $44 901.22 p.a.

8 $28 700 p.a.

9 $73 189.74 p.a.

Convert an annual wage to an hourly rate (÷ 52 ÷ hours).

10 $41 496 p.a., 38 hour week.

H'rly Rate= ☐ ÷ 52 ÷ 38

= $ ☐ / h

11 $38 532 p.a., 38 hour week.

H'rly Rate=

=

Show $ sign, cents to 2 d.p., and '/ h' at end.

12 $51 251.20 p.a., 28 hr week.

13 $21 996 p.a., 15 hour week.

Convert an annual wage to a fortnightly wage, (÷ 26) or you can (÷ 52 × 2).

14 $75 400 p.a.

Wage p.a. = ☐ ÷ 52 × 2

= $ ☐

15 $35 734.40 p.a.

16 $88 725 p.a.

17 $47 120.84 p.a.

Complete the tables and then calculate the average fortnightly pay.

18

Name	*Annual Wage*	*Weekly Wage*	*Fortnightly Wage*	*Fortnightly Hours*	*Hourly Rate*
Don	$41 693.60			38	
Bon	$157 170			78	
Con	$15 741.44			22	
Ron	$20 217.60			48	

Add the fortnight wages, press '=', then divide by 4. (the number of employees). ☐ ← *Average fortnightly wage* (2 d.p.)

19

Earning Money - Monthly Wages (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert a weekly wage to a monthly wage, (× by 52 ÷ 12).

1 $480 weekly.

M'thly pay = ☐ × 52 ÷ 12

= $ ☐

2 $510 weekly.

M'thly pay =

=

3 $624 weekly.

M'thly pay =

=

4 $1 123.20 weekly.

M'thly pay =

=

Write your answer to 2 decimal places.

5 $842.40 weekly.

M'thly pay =

=

These have to be rounded.

6 $712.22 weekly.

M'thly pay =

=

7 $295.70 weekly.

M'thly pay =

=

8 $356.84 weekly.

M'thly pay =

=

Given the weekly hours worked, convert an hourly rate to a monthly wage.
(hourly rate × hours × 52 ÷ 12)

9 $24/h for a 16 hour week.

Monthly Pay = ☐ × ☐ × 52 ÷ 12

= $ ☐

10 $18/h for a 35 hour week.

Monthly Pay = ☐ × ☐ × 52 ÷ 12

= $ ☐

11 $19/h for a 38 hour week.

Monthly Pay =

= $ ☐

Write your answer to 2 decimal places.

12 $17/h for an 8 hour week.

Monthly Pay =

= $ ☐

Reverse it! Given the monthly wage find the hourly rate.
(monthly wage × 12 ÷ 52 ÷ hrs)

13 $3 250/mth at 25 hours/wk.

Hourly Rate = ☐ × 12 ÷ 52 ÷ 25

= $ ☐ /h

14 $2 173.60/mth at 38 hrs/wk.

Hourly Rate =

= $ ☐ /h

Write your answer to 2 decimal places.

15 $2 372.50/mth at 30 hrs/wk.

Hourly Rate =

= $ ☐

16 $7 657/mth at 38 hrs/wk.

Hourly Rate =

= $ ☐

Convert all wages to annual wages then rewrite the wages in ascending order. Rewrite the actual wages, not the annual wages.

17 $2 665/week, $11 650/mth, $57/h (38 h week), $5 888/f'tnight.

Annual Wages: ☐ ☐ ☐ ☐

Ascending Wages:

Write the wages from the question, not the equivalent annual wages.

18 $7 434/mth, $24.20/h (34 h week), $3 256 f'tnight, $1 798/week.

Annual Wages: ☐ ☐ ☐ ☐

Ascending Wages:

Write the wages from the question, not the equivalent annual wages.

19 $32.85/h (28 h week), $1 838/f'tnight, $935/week, $4 050/mth.

Annual Wages: ☐ ☐ ☐ ☐

Ascending Wages:

Write the wages from the question, not the equivalent annual wages.

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Answer these questions involving monthly wages.

1 James earns $32.96/h. If he works a 40 hour week, find:

a) His weekly wage

Pay = ☐ × ☐

Pay = ☐

Show the $ sign and cents to 2 decimal places

b) His annual wage

Pay = ☐ × ☐

Pay = ☐

c) His monthly wage

Pay = ☐ ÷ ☐

Pay = ☐

Round your answer to the nearest cent

2 Juanita earns $2 709.98 per month. Find her weekly pay.

Pay =

Pay =

3 If Juanita (Q.2) has living expenses of $575 per week, find:

a) Her weekly savings

Savings =

Savings =

b) Her monthly savings

Savings =

Savings =

4 Josh earns $40 260 p.a., calculate his monthly wage.

Pay =

Pay =

5 Kylie works as a computer programmer earning $92/hour. If she works a 38 hour week:

a) Calculate her weekly wage.

b) Find her monthly wage.

Compare these jobs by converting them to monthly pay periods.

Optical Assistant

Pay: $1 315/ week
See you inside!

Medical Technician

Pay: $6 350/mth
Watch the step inside!

6 Convert the Optical position wage to a monthly wage.

7 Which job pays the most?

○ Optical Assistant

○ Medical Technician

Kitchen hand

Pay: $22.60/h
Hours: 38h week

Baker's Assistant

Pay: $4 130/mth
No Loafers!

8 Convert the Kitchen hand wage to a monthly wage.

Pay = ☐ × ☐ × ☐ ÷ ☐

9 Calculate the difference between the two monthly wages

10 Jamie earns $3 776/month as salesperson and $220/week as a waiter in a second job.

a) Convert the waiter's wage to a monthly wage.

b) Find his total monthly pay.

11 Three flat-mates are paid in different pay periods. Ted earns $1 170/week, Fred earns $28.38/h for a 38 h week, while Ned earns $95 628 p.a.

a) Convert Ted's weekly wage to a monthly wage.

b) Convert Fred's hourly wage to a monthly wage.

c) Convert Ned's annual salary to a monthly salary.

d) Rank the flat-mates in order of their income.

1. ☐
   Write person's name with highest pay
2. ☐
3. ☐

Earning Money - Penalty Rates - Time-and-a-half (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these hourly rates to an overtime rate of time-and-a-half, multiply by 1.5.

Example: Convert $11.60/h to a rate paid at time-and-a-half.

$11.60 = 11.60 × 1.5

Time+½ rate = $17.40/h

1 $14.90 = ☐ × 1.5

Time+½ rate = ☐ /h

Don't forget the '$' sign

2 $18.20 = ☐ × 1.5

Time+½ rate = ☐ /h

Always write cents with 2 decimal places

3 $35.40 = ☐ × ☐

Time+½ rate = ☐ /h

4 $22.10 = ☐ × ☐

Time+½ rate = ☐

5 $45.76 = ☐ × ☐

Time+½ rate = ☐

Now on you have to round to the nearest cent

6 $25.15 = ☐ × ☐

Time+½ rate = ☐

7 $17.05 = ☐ × ☐

Time+½ rate = ☐

8 $12.95 = ☐ × ☐

Time+½ rate = ☐

9 $48.19 = ☐ × ☐

Time+½ rate = ☐

10 $30.35 = ☐ × ☐

Time+½ rate = ☐

Find the overtime paid when given the hours worked.

Example:

Normal rate: $18.80/hour

Overtime Hours: 7

Pay = 18.80 × 1.5 × 7

Pay = $197.40

11 Normal Rate: $16.40/h
Overtime Hours: 4

Pay = ☐ × 1.5 × 4

Pay = ☐

12 Normal Rate: $15.88/h
Overtime Hours: 6

Pay = ☐ × ☐ × ☐

Pay = ☐

13 Normal Rate: $27.50/h
Overtime Hours: 8.5

Pay = ☐ × ☐ × ☐

Pay = ☐

You have to round these to the nearest cent

14 Normal Rate: $17.65/h
Overtime Hours: 2.5

Pay = ☐ × ☐ × ☐

Pay = ☐

15 Normal Rate: $11.99/h
Overtime Hours: 5

Pay = ☐ × ☐ × ☐

Pay = ☐

16 Normal Rate: $15.09/h
Overtime Hours: 1.5

Pay = ☐ × ☐ × ☐

Pay = ☐

17 Normal Rate: $37.37/h
Overtime Hours: 0.5

Pay = ☐ × ☐ × ☐

Pay = ☐

Complete these tables to calculate the daily pay for the employees.

18

	A	B	C = A×B	D	E = B×1.5	F = D×E	G = C+F

Calculate the weekly pay, then the overtime (at time-and-a-half), then the total pay earned

1 Jane worked a 38 h week and also 6 h overtime. Her normal hourly rate is $23.10/h.

a) Calculate her standard pay

Pay = 38 × ☐

Pay = ☐ ← $ sign, cents to 2 d.p.

b) Calculate her overtime

Pay = ☐ × 1.5 × ☐

Pay = ☐

c) Calculate her total pay

Pay = ☐ + ☐

Pay = ☐

2 Geoff worked a 35 h week and also 7 h overtime. His normal hourly rate is $32.60/h.

a) Calculate his standard pay

Pay = ☐ × ☐

Pay = ☐

b) Calculate his overtime

Pay = ☐ × ☐ × ☐

Pay = ☐

c) Calculate his total pay

Pay = ☐ + ☐

Pay = ☐

d) Convert c) to an annual wage

Pay = ☐ × ☐

Pay = ☐

Calculate the weekly pay which includes overtime paid at time-and-a-half.

Example: 38 h week at $19.20 per hour plus 4 hours overtime.

Pay = 38 × 19.20 + [Normal Pay]

4 × 1.5 ×19.20 [Overtime]

Pay = $844.80 [Total]

3 18 h week at $13.48/h plus 3 hours overtime.

Pay = ☐ × ☐ +

= ☐ × 1.5 × ☐

Pay = ☐ ← $ sign, cents to 2 d.p.

4 25 h week at $38.40/h plus 5 hours overtime.

Pay = ☐ × ☐ +

= ☐ × ☐ × ☐

Pay = ☐

5 34 h week at $26.65/h plus 2 hours overtime.

Pay = ☐ × ☐ +

= ☐ × ☐ × ☐

Pay = ☐

6 17 h week at $15.55/h plus 2.5 hours overtime.

Pay = ☐ × ☐ +

= ☐ × ☐ × ☐

Pay = ☐ ← Round cents to 2 d.p.

7 5½ h week at $11.95/h plus 30 minutes overtime.

Pay = ☐ × ☐ +

= ☐ × ☐ × ☐

Pay = ☐

8 Convert 7 to an annual wage

Pay = ☐ × ☐

Pay = ☐

Complete Rebecca's pay for the week. She earns $18.50/h for her normal rostered hours, overtime for time above her rostered hours.

9

Earning Money - Penalty Rates - Double Time (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these hourly rates to an overtime rate of double time, so multiply by 2.

Example: Convert $13.85/h to a rate paid at double time

$13.85 = 13.85 × 2

D.T rate = $27.70

1 $17.60 = ____ × 2

D.T rate = ____ /h

'$' sign and cents to 2 d.p.

2 $16.63 = ____ × 2

D.T rate = ____ /h

3 $35.40 = ____ × ____

D.T rate = ____ /h

4 $23.11 = ____ × ____

D.T rate = ____

Include the /h to show it is a rate.

5 $25.73 = ____ × ____

D.T rate = ____

An earthmoving business pays its employees double-time on Sundays. Find the pay earned.

Example:

Normal rate: $19.10/hour

Double-time hours: 7

Pay = 19.10 × 2 × 7

Pay = $267.40

6 Normal Rate: $16.40/h
Double-time hours: 6

Pay = ____ × 2 × 6

Pay = ____

7 Normal Rate: $19.25/h
Double-time hours: 7

Pay = ____ × ____ × ____

Pay = ____

8 Normal Rate: $25.60/h
Double-time hours: 5

Pay = ____ × ____ × ____

Pay = ____

9 Normal Rate: $19.45/h
Double-time hours: 8

Pay =

Pay =

10 Normal Rate: $13.07/h
Double-time hours: 4.5

Pay =

Pay =

11 Normal Rate: $35.80/h
Double-time hours: 6.25

12 Normal Rate: $38.63/h
Double-time hours: 4.75

Cents to 2 d.p.

13 Normal Rate: $22.53/h
Double-time hours: 5.25

14 Normal Rate: $31.95/h
Double-time hours: 7.75

Calculate the double time earnings given the normal rate and the hours worked, then match it up with a line to the correct answer.

15 Normal Rate: $13.22/h D.T. Hours: 5 •

16 Normal Rate: $10.15/h D.T. Hours: 2 •

17 Normal Rate: $17.11/h D.T. Hours: 6.5 •

Earning Money - Penalty Rates (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Calculate the pay, in steps.

Dave earns $14.60/h and works:

Normal Time:	38 h
Time+½:	7 h
Double Time:	3 h

Calculate Dave's earnings from:

1 His normal hours.

Pay = [Rate] × 38

Pay = [ ] ← '$' sign and cents to 2 d.p.

2 His time-and-a-half hours:

Pay = [Rate] × 1.5 × [Hrs]

Pay = [ ]

3 His double time hours:

Pay = [Rate] × 2 × [Hrs]

Pay = [ ]

4 Calculate Dave's total pay.

Pay = [Normal] + [Time+½]

\+ [Double]

Pay = [ ]

Jess earns $16.70/h and works:

Normal Time:	25 h
Time+½:	4 h
Double Time:	2 h

Calculate Jess' earnings from:

5 Her normal hours.

Pay = [ ] × [ ]

Pay = [ ]

6 Her time-and-a-half hours:

Pay = [ ] × [ ] × [ ]

Pay = [ ]

7 Her double time hours:

Pay = [ ] × [ ] × [ ]

Pay = [ ]

8 Calculate Jess' total pay.

Pay = [ ] + [ ]

\+ [ ]

Pay = [ ]

Toby earns $23.80/h and in a week, he works:

Normal Time:	38 h
Time+½:	8 h
Double Time:	3 h

Calculate Toby's earnings from:

9 His normal hours.

Pay =

Pay =

10 His time-and-a-half hours:

Pay =

Pay =

11 His double time hours:

Pay =

Pay =

12 Calculate Toby's total pay.

Pay =

13 Convert Toby's total weekly pay to an annual wage.

Find total pay in one step

Kwan earns $22.90/h and works:

Normal Time:	34 h
Time+½:	3 h
Double Time:	2 h

14 Calculate Kwan's total pay.

Pay = [ ] × [ ]

Rate × Normal hours

\+ [ ] × 1.5 × [ ]

Rate × 1.5 × Time+½ hours

\+ [ ] × 2 × [ ]

Rate × 2 × Double time hours

Pay = [ ]

Caleb earns $27.15/h and works:

Normal Time:	19 h
Time+½:	8 h
Double Time:	3 h

15 Calculate Caleb's total pay.

Pay = [ ] × [ ]

\+ [ ] × [ ] × [ ]

\+ [ ] × [ ] × [ ]

Pay = [ ]

Rose earns $31.80/h and works:

Normal Time:	38 h
Time+½:	6 h
Double Time:	1.5 h

14 Calculate Rose's total pay.

Pay =

Earning Money - Penalty Rates (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Calculate the total pay earned.

Josh earns $26.50/h and works a 38 hour week, with 6 hours at time-and-a-half and 2 hours double time.

1 Calculate Josh's total pay.

Pay =

Rate × Normal Hours

+ Rate × 1.5 × Time+½ Hours

+ Rate × 2 × Double Time Hours

Pay =

Maysun earns $22.85/h and works a 30 hour week, with 4 hours at time-and-a-half and 1.5 hours double time.

2 Find Maysun's total pay.

Pay =

Pay =

Connie earns $30.45/h and works a 36 hour week, with 7 hours at time-and-a-half and 4.5 hours double time.

3 Find Connie's total pay.

Round cents to 2 decimal places

Calculate the daily earnings, then total them for the week.

4

Normal hourly rate = $28.40/h

Day	*Normal hrs*	*Time+½ hrs*	*Double Time hrs*	*Total Pay*
Mon	7	2	3	
Tues	6	-	-	
Wed	6	2	2	
Thur	6	1	-	
Fri	7	2	1.5	
			Total Pay (Week)	

Calculate each employee's weekly earnings

5

Name	*Hourly rate*	*Normal hrs*	*Time+½ hrs*	*Double Time hrs*	*Total Pay*

				Total Employee Wages	

24 Hour Time and Time Calculations

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Change these times to 24 hour time format, (from 1 p.m. add 12 hours, keep minutes as is).

Example

4.45 p.m. 1645 h

1 3 a.m. = ☐☐☐☐ h

2 8 a.m. = ☐☐☐☐ h

3 4 p.m. = ☐☐☐☐ h

4 11.25 a.m.

5 3.52 p.m.

6 5.17 p.m.

7 8.47 p.m.

8 4.56 a.m.

9 12.33 p.m.

10 10.25 p.m.

11 12.19 a.m.

12 7.39 p.m

13 4.06 a.m.

14 11.39 a.m.

15 6.26 p.m

16 11.08 p.m

17 10.43 a.m.

18 9.43 p.m

19 5.56 a.m.

20 11.48 a.m.

Find the time worked, use 24 hour time and subtract the earlier time from the later time.

Example

9.15 a.m. until 4.35 p.m.

= 1635 h - 0915 h

16 DMS 35 DMS - 9 DMS 15 DMS

= ☐ h ☐ min

21 11.25 a.m. until 6.15 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

22 8.35 a.m. until 4.45 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

23 7.50 a.m. until 3.30 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

24 6.10 a.m. until 2.25 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

25 7.05 a.m. until 11.50 a.m.

= ☐☐☐☐ h - ☐☐☐☐ h

26 12.07 p.m. until 8.53 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

27 9.13 a.m. until 5.55 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

Round these times to the nearest 15 mins. So minutes will be 0 or 15 or 30 or 45.

Examples

7h 20 min = 7h 15 min

5h 38 min = 5h 45 min

28 6h 4 min = ☐ h ☐ min

29 4h 19 min = ☐ h ☐ min

30 8h 42 min = ☐ h ☐ min

31 5h 54 min = ☐ h ☐ min

32 7h 38 min = ☐ h ☐ min

33 6h 52 min = ☐ h ☐ min

34 4h 36 min = ☐ h ☐ min

35 3h 50 min = ☐ h ☐ min

Find the time worked, but this time get your answer then round it to the nearest 15 min.

36 9.17 a.m. until 5.38 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min = ☐ h ☐ min

Actual Rounded

37 7.41 a.m. until 2.17 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min = ☐ h ☐ min

38 6.07 a.m. until 1.34 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min = ☐ h ☐ min

39 10.43 a.m. until 4.21 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min = ☐ h ☐ min

Time Sheet Calculations (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the time worked and the pay earned for the shift, given the hourly rate.

1 9.45 a.m. until 5.15 p.m.

17 DMS 15 DMS - 9 DMS 45 DMS =

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min

2 Hourly rate is $21.40/h.

Using the answer on your calculator screen, then do this: × 21.40 = DMS

= ☐ h ☐ min × ☐

= $ ☐

3 10.45 a.m. until 7.30 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min

4 Hourly rate is $25.60/h.

= ☐ h ☐ min × ☐

= $ ☐

5 7.30 a.m. until 3.15 p.m.

= ☐☐☐☐ h - ☐☐☐☐ h

= ☐ h ☐ min

6 Hourly rate is $31.90/h.

= ☐ h ☐ min × ☐

= $ ☐

Convert the answer in Q.6 to an annual wage if the employee works that shift 4 days/week.

7

Pay =

Pay =

Now complete the table, converting to 24 h time and rounding to the nearest 15 minutes. You have to subtract the employees' lunch time.

8 Hourly rate for all employees is $28.12

Name	*Time In a.m.*	*Time Out p.m.*	*Lunch Time*	*Actual hours*	*Rounded hours*	*Daily Wage*

If you get an increase in pay, it is often by a percentage. Find these percentages.

Example: Find 7% of $17 800

$$17\,800 \times \frac{7}{100} = \$1\,246$$

Using your calculator's fraction key

1 7 8 0 0 × ▣ 7 ◯ 1 0 0 =

1 Find 4% of $48 000

$$\square \times \frac{\square}{100} = \$\square$$

2 Find 6% of $82 000

$$\square \times \frac{\square}{\square} = \square$$

'$' sign

3 Find 5.4% of $63 200

$$\square \times \frac{\square}{\square} = \square$$

Write answer to 2 decimal places.

4 Find 2.6% of $45 670

$$\square \times \frac{\square}{\square} = \square$$

5 Find 6.1% of $104 600

$$\square \times \frac{\square}{\square} = \square$$

6 Find 3.35% of $88 777

$$\square \times \frac{\square}{\square} = \square$$

Round answer to 2 decimal places.

7 Find 5.15% of $78 441

$$\square \times \frac{\square}{\square} = \square$$

8 Find 8.28% of $138 881

$$\square \times \frac{\square}{\square} = \square$$

Increase these annual wages by the percentage given.

Example: Find the new annual wage after $53 000 is increased by 8%.

Increase:

$$53\,000 \times \frac{8}{100} = \$4\,240$$

New Wage:

$= 53\,000 + 4\,240$

$= \$57\,240$

9 Increase $45 000 by 6%

Increase:

$$\square \times \frac{\square}{100} = \square$$

New Wage:

$= \square + \square$

$= \square$

10 Increase $125 500 by 4%

Increase:

$$\square \times \frac{\square}{\square} = \square$$

New Wage:

$= \square + \square$

$= \square$

11 Increase $78 400 by 3%

Increase:

$$\square \times \frac{\square}{\square} = \square$$

New Wage:

$= \square + \square$

$= \square$

Increase the annual salary, then find the new weekly salary.

12 Increase $38 300 by 4.2%

$$\square \times \frac{\square}{\square} = \square$$

Wage = $\square + \square$

Wage = $\square$

13 Find the new weekly wage.

Weekly Wage = $\square \div 52$

Weekly Wage = $\square$

14 Increase $143 558 by 6.5%

Wage = $\square + \square$

Wage = $\square$

15 Find the new weekly wage.

Weekly Wage =

Weekly Wage =

16 Increase $105 600 by 2.17%

Work in a different position and you might get paid extra for it. Find the increased rates.

David earns $28.20/h as a welder. When he works on elevators he gets a 15% height allowance. Calculate:

1 The hourly rate increase

$\square \times \frac{\square}{100} = \$\square$

2 The increased hourly rate

$\square + \square = \$\quad /h$

3 If David works 17 hours at the normal rate and 21 hours at the increased rate, calculate his weekly pay.

Weekly Wage $= \square$ (Rate) $\times \square$ (Hours) $+$

$\square$ (Increased Rate) $\times \square$ (Hours)

Weekly Wage $= \square$

Mischa is a power pole contractor earning $38.10/h. When she works in a hoist she is paid 20% extra per hour. Calculate:

4 Her hourly rate increase

$\square \times \frac{\square}{\square} = \square$

5 Her increased hourly rate

$\square + \square = \square$

6 If Mischa works 25 hours at the normal rate and 13 hours at the increased rate, calculate her weekly pay.

Weekly Wage $= \square \times \square +$

$\square \times \square$

Weekly Wage $= \square$

Chloe earns $32.80/h as a car smash repairer. When she works in the spray booth she gets an 18% increase on her hourly rate. In a 38 hour week she works 17 h in the booth. Find:

7 Her hourly rate increase

$\square \times \frac{\square}{\square} = \square$ (2 d.p.)

8 Her increased hourly rate

$\square + \square = \square$

9 The number of hours Chloe works out of the spray booth.

10 Her weekly pay.

Weekly Wage $= \square \times \square +$

$\square \times \square$

Weekly Wage $= \square$

Sasha earns $45.90/h as a computer programmer. He earns 25% more per hour when he works off-site. If he works a 40 hour week of which 17h is off-site, calculate:

11 His off-site hourly rate

12 The number of hours Sasha works on-site (in his office).

13 His weekly pay.

Raj earns $24.90/h as a baker. He is paid an additional 8% for early hours before 6 a.m. If he works a 38 h week and 10 of those hours are 'early hours', find:

14 His 'early hours' rate

15 The number of standard hours Raj works

16 His weekly pay.

17 His annual wage

Rachel is a Human Resource consultant earning $85.90/h. When she takes on team leader status she earns 15% more. Calculate:

18 Rachel's team leader rate.

19 Her weekly pay given she works 27h at the normal rate and 8h at the team leader rate.

Glen fits T.V. antenna masts for \$450 and fits sockets for \$35 per room. Give a quote for these jobs.

16 1 mast and 2 sockets

17 1 mast and 4 sockets

18 2 masts and 5 sockets

Earning Money - Commission (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the commission on these sales. Multiply by the percentage as a fraction written 'over 100'.

Example

Sales = \$15 540, Rate = 12%

Commission = $15\,540 \times \frac{12}{100}$

$= \$1\,864.80$

1 Sales = \$23 016, Rate = 11%

Commission = $\square \times \frac{\square}{100}$

$=$

2 Sales = \$17 880, Rate = 9%

Commission = $\square \times \frac{\square}{100}$

$=$

3 Sales = \$78 107, Rate = 4%

Commission = $\square \times \frac{\square}{\square}$

$=$

4 Sales = \$12 050, Rate = 8%

Commission =

$=$

5 Sales = \$9 300, Rate = 15%

Commission =

$=$

6 Sales = \$87 600, Rate = 6.5%

Commission =

$=$

Complete the table by finding the commission payable. Then rank the earnings from highest (1) to the lowest (7).

	Name	Rate	Sales	Commission	Rank
7	Gwen	5%	\$40 555		
8	Sven	11%	\$16 931		
9	Len	18%	\$15 676		
10	Wen	4%	\$46 855		
11	Ben	7%	\$25 910		
12	Jen	9.5%	\$23 166		
13	Toby	13%	\$17 582		

Calculate the commission and fill the circle for who earns the most per week.

14 Steve 5% on \$38 960 sales, Georgie 8% on sales of \$18 777.

Steve =

$=$

Georgie =

$=$

◯ Steve ◯ Georgie

15 Nicki 12% on \$43 110 sales, Zaina 8% on sales of \$54 550.

◯ Nicki ◯ Zaina

16 James 13% on \$11 522 sales, Jessie 17% on sales of \$14 070.

◯ James ◯ Jessie

Find the commission and connect it to the answer.

Use a different colour for each line

17 Commission: 5% Sales: \$41 500	•	A • \$1 413.60

Earning Money - Commission (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A retainer is a base salary paid with a commission payment. Calculate the pay earned.

Example Base salary = $200/wk
Sales = $13 700, Rate = 9.2%

Pay = $200 + 13\,700 \times \frac{9.2}{100}$

Pay = $1 460.40

1 Base salary = $370/wk with Sales = $8 295, Rate = 25%.

Pay = ☐ + ☐ × ☐/100

Pay = ☐

2 Base salary = $440/wk with Sales = $28 040, Rate = 6%.

Pay = ☐ + ☐ × ☐/100

Pay = ☐

3 Base salary = $290/wk with Sales = $158 900, Rate = 1.5%.

Pay = ☐ + ☐ × ☐/☐

Pay = ☐

4 Retainer of $340/wk with Sales = $38 775, Rate = 4.5%.

Pay =

Pay = ← Cents to 2 d.p.

5 Base salary of $550/wk with Sales = $73 145, Rate = 3.5%.

Pay =

Pay =

6 Base salary = $225/wk with Sales = $899 600, Rate = 0.3%.

Pay =

Pay =

Add the base salary to the commission earned to find the pay. Then rank the earnings from highest (1) to the lowest (7).

	Name	Base Salary	Rate	Sales	Weekly pay	Rank
7	Katniss	$800	7%	$38 900		
8	Cinna	$220	5%	$50 052		
9	Gale	$350	8%	$41 776		
10	Marvel	$150	10%	$50 735		
11	Thresh	$500	5.5%	$27 846		
12	Seneca	$280	4%	$37 200		
13	Peeta	$640	8.5%	$29 670		

Compare these wages to get the best deal.

Hakim sells home loan products. He has average weekly sales of $780 000. He is offered two weekly pay options:
1. $600 + 0.2% commission on sales
2. Flat 0.3% commission on sales, find:

14 His weekly pay for Option 1.

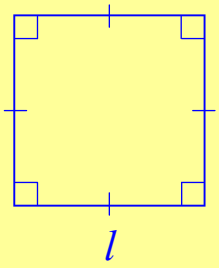
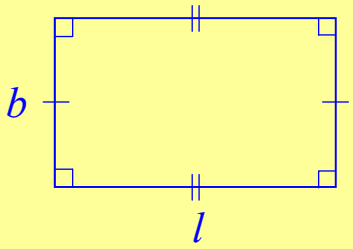
Area of Squares and Rectangles

The area of a square and rectangle is found in the same way. Multiply one side by the other. As squares have sides all the same length, this means you just 'square' the side length.

Square $A = l^2$

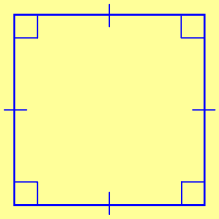


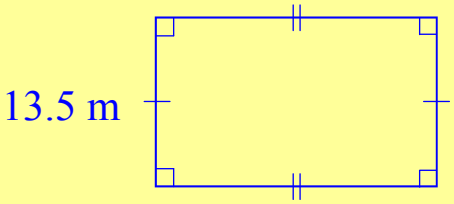
Rectangle $A = lb$



While the answer isn't affected, the length is usually considered the longest length in a rectangle.

Examples - Find the area to 1 decimal place.





$A = l^2$	Write the formula	$A = lb$
$= 22^2$	Substitute l (or l & b)	$= 22 \times 13.5$
$A = 484\ cm^2$	Solve showing square units.	$A = 297\ m^2$

The first sheet is all squares, the second all rectangles, while the third sheet is a combination of both. The third sheet also deals with changing units.

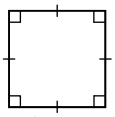
You may measure a length in a unit such as mm, but wish to express the area in a square unit which is more relevant to the material, such as cm^2. Convert the length units and then approach the question in the same way as previous questions.

Area of Squares

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use $A=l^2$ to find the area of these squares, to 1 d.p. Show units with a ^{2} after them.

1



$A = l^2$

$= \square^2$

Calc: 9 x^2 =

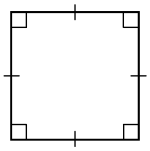
$A = \square$ cm^2

2

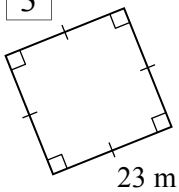
$A = l^2$

$= \square^2$

$A = \square$ cm^2



3



$A = l^2$

$= \square^2$

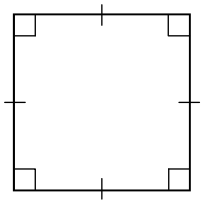
$A = \square$ m^2

4

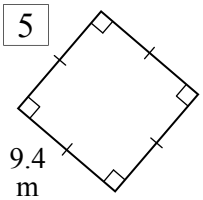
$A = l^2$

$= \square^2$

$A = \square$ m^2

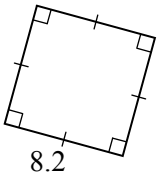


5

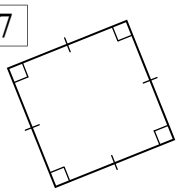


6

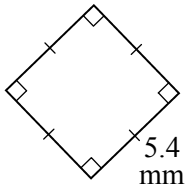
Remember Square Units



7

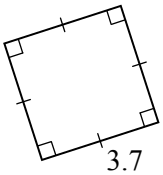


8



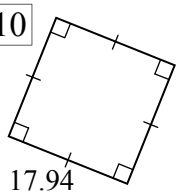
Keep going with these, but round your answer to 1d.p.

9

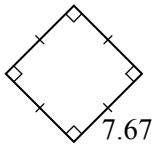


Round answer to 1 d.p.

10



11



Find the price of these square areas. Find the area of the square, then multiply by the cost.

Thomas has a square roof on a shed that has a side length of 3.4 m. Find:

12 The area of the square roof

No Rounding

13 Rewrite your answer above rounded **UP** to whole m^2.

$A =$

14 The cost to replace the roof if iron sheeting costs \$41.80/m^2

Cost = $\square \times \square$

Area (Q13) | Iron Cost

Cost = $\square$

Show the \$ sign and cents to 2 d.p.

Phom is constructing a raised 6.5 m square platform for use in his gym.

15 Find the platform area.

16 Rewrite your answer above rounded **UP** to whole m^2.

17 Find the build cost for the platform, MDF costs \$17.80/m^2

Cost =

Cost =

18 Draw a square that has sides 4.1 cm length below, show perpendicular symbols and dashes on the sides. Write the side length on one side Make sure you use a ruler.

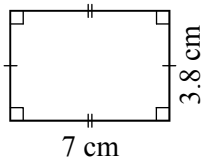
19 Calculate the area of the square you have just drawn.

Area of Rectangles

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Now rectangles. Use A=*lb* to find the area, round to 1 d.p. when required.

Example



$A = lb$

$= 7 \times 3.8$

$A = 26.6\ cm^2$

Show square units

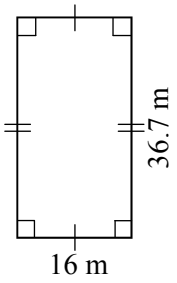
1

$A = lb$

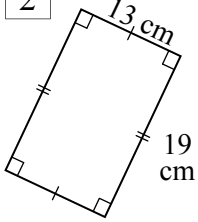
$= \square \times \square$

Multiply, in any order

$A = \square\ m^2$



2



$A = lb$

$= \square \times \square$

$A = \square\ cm^2$

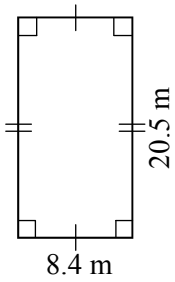
3

$A = lb$

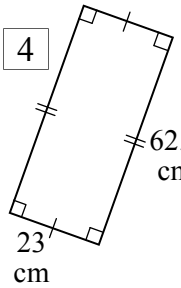
$= \square \times \square$

$A = \square$

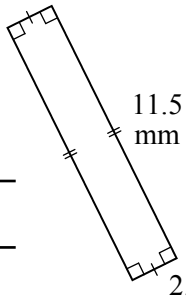
Show square units



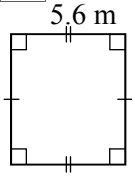
4



5

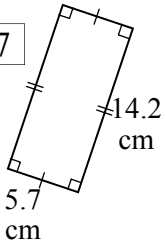


6



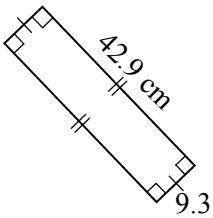
Find the area, but round your answer to 1d.p.

7

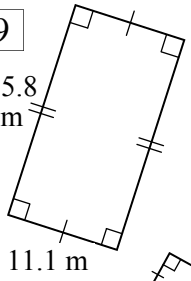


Round to 1 d.p.

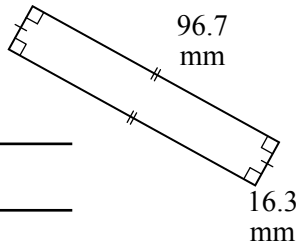
8



9



10



Draw these rectangles then find their area. Mark matching side lengths, show right angles and write side lengths on two sides.

RULER!

11 3.2 cm by 2.5 cm

12 Calculate the area of the rectangle you have just drawn.

13 5.3 cm by 3.7 cm

Long side across

14 Calculate the area of the rectangle you have just drawn.

Now find the area, then calculate the cost.

Jason is painting his lounge room's rectangular ceiling. It is 4.7 × 3.4 m.

15 Find the ceiling's area

16 Rewrite your answer above rounded **UP** to whole m^2.

17 If 1 litre of paint covers 9 m^2 how many whole litres of paint are required.

Paint =

18 If 1 litre of paint costs $28.90 calculate the cost to paint the ceiling.

Cost =

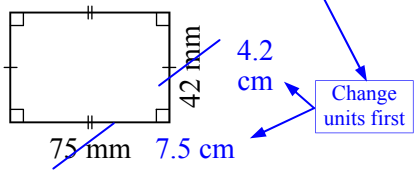
Cost =

Area of Squares and Rectangles - Unit Conversion

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Change the units first, then use A=*lb* or A = l^2 to find the area.

Example Answer in cm^2.



A = *lb*

= 7.5 × 4.2

A = 31.5 cm^2 ← Show square units

1 Answer in cm^2.

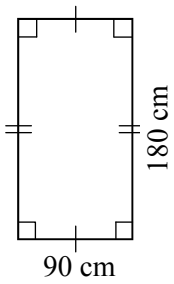
A = *lb*

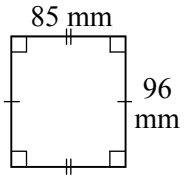
= ☐ × ☐

A = ☐

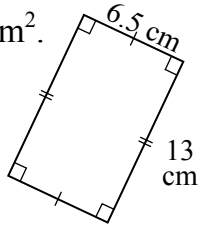
Show square units



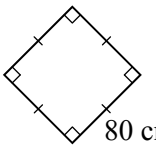
3 Answer in cm^2.



5 Answer in mm^2.

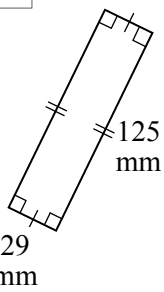


6 in m^2.

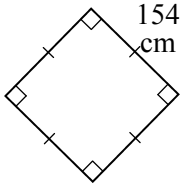


Keep going, but round your answer to 1 decimal place.

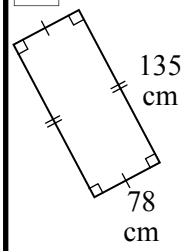
7 Answer in cm^2.



8 Answer in m^2.



9 Answer in m^2.



Draw a rectangle, mark the matching side lengths, show right angles and write the side lengths on two sides. Ruler!

10 4.5 cm by 2.8 cm

11 Calculate the area of the rectangle you have just drawn, but give your answer in mm^2.

Now find the area, to answer the questions.

A rectangular farm paddock is 1.7 km by 850 m wide.

12 Convert 1.7 km to metres.

1.7 km = ☐ m

13 Find the area of the field in square metres.

14 1 ha = 10 000 m^2, rewrite the area in ha

A = ☐ ÷ ☐

Divide Q. 13 by 10 000

A = ☐ ha

A square farm paddock has sides of 1.25 km.

15 Convert 1.25 km to metres.

1.25 km = ☐ m

16 Find the area of the field in square metres.

17 Convert the area to ha, rounding to 1 decimal place.

A =

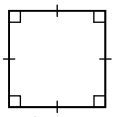
Area of Squares

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use $A=l^2$ to find the area of these squares, to 1 d.p. Show units with a ^{2} after them.

1



$A = l^2$

$= 9^2$

Calc: 9 x^2 =

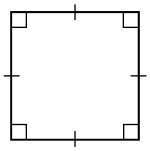
$A = 81$ cm^2

2

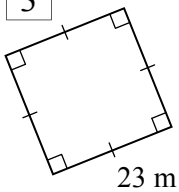
$A = l^2$

$= 17^2$

$A = 289$ cm^2



3



$A = l^2$

$= 23^2$

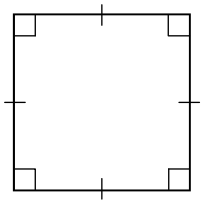
$A = 529$ m^2

4

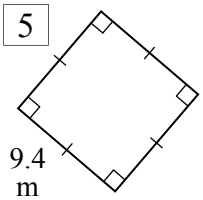
$A = l^2$

$= 4.5^2$

$A = 20.25$ m^2



5



$A = l^2$

$= 9.4^2$

$A = 88.36$ m^2

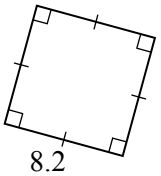
Remember Square Units

6

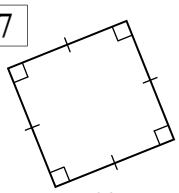
$A = l^2$

$= 8.2^2$

$A = 67.24$ cm^2



7



$A = l^2$

$= 64^2$

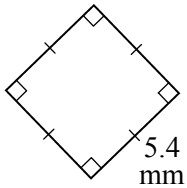
$A = 4\,096$ cm^2

8

$A = l^2$

$= 5.4^2$

$A = 29.16$ mm^2



Keep going with these, but round your answer to 1d.p.

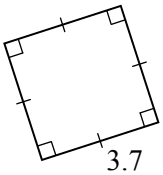
9

$A = l^2$

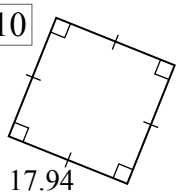
$= 3.7^2$

$A = 13.7$ cm^2

Round answer to 1 d.p.



10

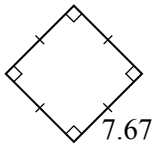


$A = l^2$

$= 17.94^2$

$A = 321.8$ mm^2

11



$A = l^2$

$= 7.67^2$

$A = 58.8$ m^2

Find the price of these square areas. Find the area of the square, then multiply by the cost.

Thomas has a square roof on a shed that has a side length of 3.4 m. Find:

12 The area of the square roof

$A = l^2$

$= 3.4^2$

$A = 11.56$ m^2 ← No Rounding

13 Rewrite your answer above rounded **UP** to whole m^2.

$A = 12$ m^2

14 The cost to replace the roof if iron sheeting costs \$41.80/m^2

Cost = 12 (Area (Q13)) × 41.80 (Iron Cost)

Cost = \$501.60

Show the \$ sign and cents to 2 d.p.

Phom is constructing a raised 6.5 m square platform for use in his gym.

15 Find the platform area.

$A = l^2$

$= 6.5^2$

$A = 42.25$ m^2

16 Rewrite your answer above rounded **UP** to whole m^2.

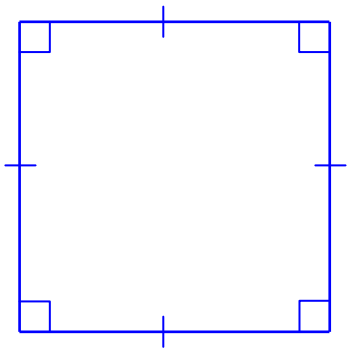
Area = 43 m^2

17 Find the build cost for the platform, MDF costs \$17.80/m^2

Cost = 43×17.80

Cost = \$765.40

18 Draw a square that has sides 4.1 cm length below, show perpendicular symbols and dashes on the sides. Write the side length on one side Make sure you use a ruler.



19 Calculate the area of the square you have just drawn.

$A = l^2$

$= 4.1^2$

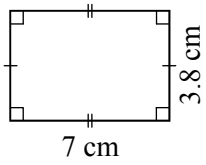
$A = 16.81$ cm^2

Area of Rectangles

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Now rectangles. Use A=*lb* to find the area, round to 1 d.p. when required.

Example



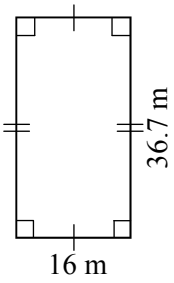
$A = lb$

$= 7 \times 3.8$

$A = 26.6 \text{ cm}^2$

Show square units

1



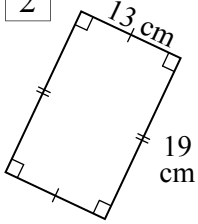
$A = lb$

$= 36.7 \times 16$

Multiply, in any order

$A = 587.2 \text{ m}^2$

2

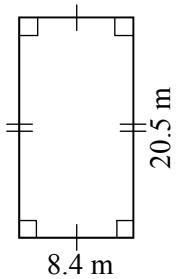


$A = lb$

$= 13 \times 19$

$A = 247 \text{ cm}^2$

3



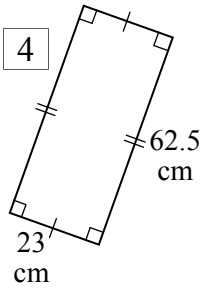
$A = lb$

$= 20.5 \times 8.4$

$A = 172.2 \text{ m}^2$

Show square units

4

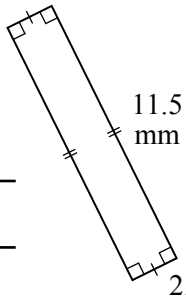


$A = lb$

$= 62.5 \times 23$

$A = 1\,437.5 \text{ cm}^2$

5

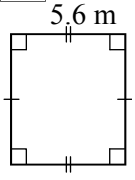


$A = lb$

$= 11.5 \times 2.8$

$A = 32.2 \text{ mm}^2$

6



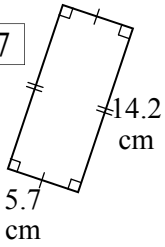
$A = lb$

$= 7.8 \times 5.6$

$A = 43.68 \text{ m}^2$

Find the area, but round your answer to 1d.p.

7



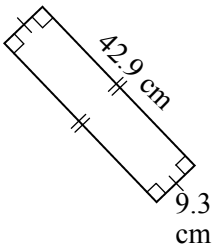
$A = lb$

$= 14.2 \times 5.7$

$A = 80.9 \text{ cm}^2$

Round to 1 d.p.

8

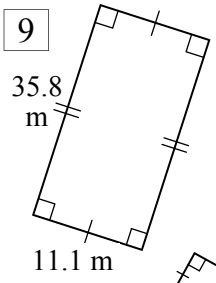


$A = lb$

$= 42.9 \times 9.3$

$A = 399.0 \text{ cm}^2$

9

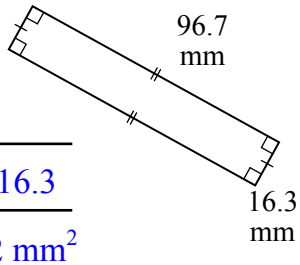


$A = lb$

$= 35.8 \times 11.1$

$A = 397.4 \text{ m}^2$

10



$A = lb$

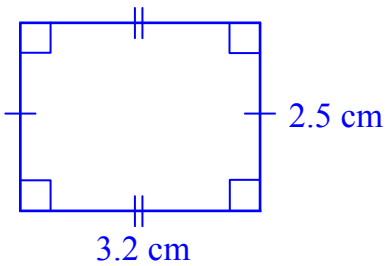
$= 96.7 \times 16.3$

$A = 1\,576.2 \text{ mm}^2$

Draw these rectangles then find their area. Mark matching side lengths, show right angles and write side lengths on two sides.

RULER!

11 3.2 cm by 2.5 cm



12 Calculate the area of the rectangle you have just drawn.

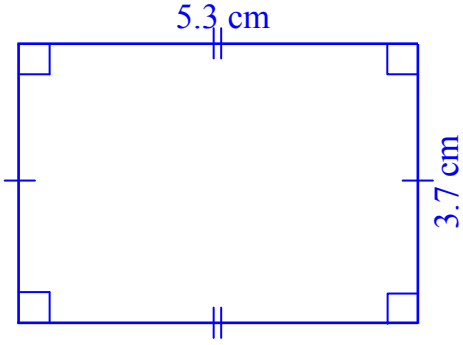
$A = lb$

$= 3.2 \times 2.5$

$A = 8 \text{ m}^2$

13 5.3 cm by 3.7 cm

Long side across



14 Calculate the area of the rectangle you have just drawn.

$A = lb$

$= 5.3 \times 3.7$

$A = 19.61 \text{ cm}^2$

Now find the area, then calculate the cost.

Jason is painting his lounge room's rectangular ceiling. It is 4.7 × 3.4 m.

15 Find the ceiling's area

$A = lb$

$= 4.7 \times 3.4$

$A = 15.98 \text{ m}^2$

16 Rewrite your answer above rounded **UP** to whole m^2.

$A = 16 \text{ m}^2$

17 If 1 litre of paint covers 9 m^2 how many whole litres of paint are required.

Paint $16 \div 9 = 1.\dot{7} = 2$ L

18 If 1 litre of paint costs $28.90 calculate the cost to paint the ceiling.

Cost = 2×28.90

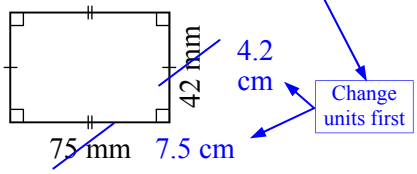
Cost = $57.80

Area of Squares and Rectangles - Unit Conversion

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Change the units first, then use A=*lb* or A = l^2 to find the area.

Example Answer in cm^2.

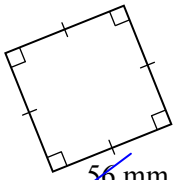


A = *lb*

= 7.5 × 4.2

A = 31.5 cm^2 ← Show square units

1 Answer in cm^2.



A = l^2

= 5.6^2

A = 31.36 cm^2

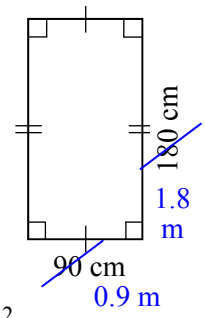
2 Answer in m^2.

A = *lb*

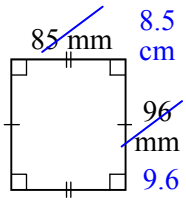
= 1.8 × 0.9

A = 1.62 m^2

Show square units



3 Answer in cm^2.

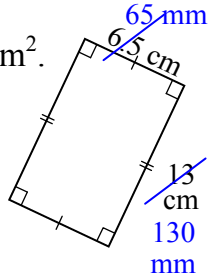


A = *lb*

= 9.6 × 8.5

A = 81.6 cm^2

5 Answer in mm^2.

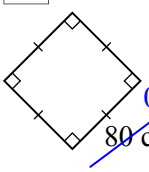


A = *lb*

= 130 × 65

A = 8 450 mm^2

6 in m^2.



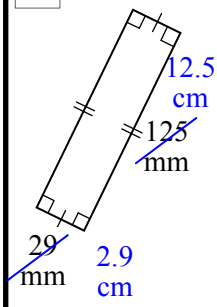
A = l^2

= 0.8^2

A = 0.64 m^2

Keep going, but round your answer to 1 decimal place.

7 Answer in cm^2.

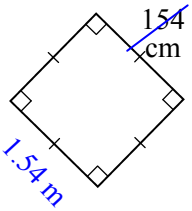


A = *lb*

= 12.5 × 2.9

A = 36.3 cm^2

8 Answer in m^2.

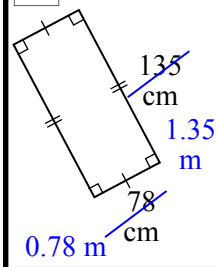


A = l^2

= 1.54^2

A = 2.4 m^2

9 Answer in m^2.



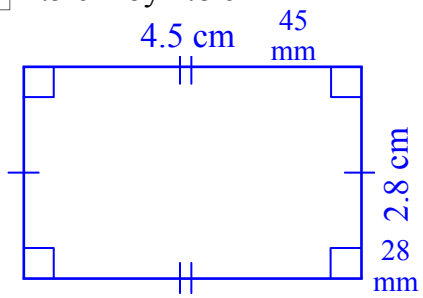
A = *lb*

= 1.35 × 0.78

A = 1.1 m^2

Draw a rectangle, mark the matching side lengths, show right angles and write the side lengths on two sides. Ruler!

10 4.5 cm by 2.8 cm



11 Calculate the area of the rectangle you have just drawn, but give your answer in mm^2.

A = *lb*

= 45 × 28

A = 1 260 mm^2

Now find the area, to answer the questions.

A rectangular farm paddock is 1.7 km by 850 m wide.

12 Convert 1.7 km to metres.

1.7 km = 1 700 m

13 Find the area of the field in square metres.

A = *lb*

= 1 700 × 850

A = 1 445 000 m^2

14 1 ha = 10 000 m^2, rewrite the area in ha

A = 1 445 000 ÷ 10 000

Divide Q. 13 by 10 000

A = 144.5 ha

A square farm paddock has sides of 1.25 km.

15 Convert 1.25 km to metres.

1.25 km = 1 250 m

16 Find the area of the field in square metres.

A = l^2

= 1 250^2

A = 1 562 500 m^2

17 Convert the area to ha, rounding to 1 decimal place.

A = 1 562 500 ÷ 10 000

A = 156.3 ha

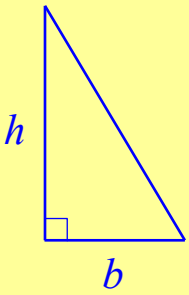
Area of Triangles

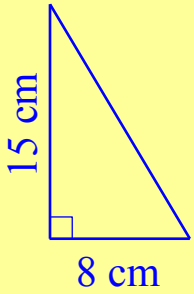
The area of a triangle is found by "half times the base times the perpendicular height." A triangle is half of a rectangle, so it makes sense that the formula is the same as that of a rectangle except it is halved.

Triangle $A = \frac{1}{2}bh$



Where:
b = base length
h = perpendicular height

Note that the height is the perpendicular height, the base and the height must always be at right angles to each other. Below is an example of finding the area of a triangle.



$A = \frac{1}{2}bh$ ← Write the formula

$= \frac{1}{2} \times 8 \times 15$ ← Substitute b and h

$A = 60\ cm^2$ ← Solve showing square units. Round answer if required.

Sheet 1 Column 1 asks you to find the area for a triangle. You may find it hard to decide which is the height and which is the base. It won't affect the answer, whichever you choose. Remember to watch for units and it is quicker to use 0.5 rather than a ½ on your calculator.

Column 2 continues finding the area of a triangle but this time you have to select which numbers you multiply, remember that the height must be perpendicular to the base length. So cross out the length you don't need, from Q 11, you remove 2 lengths.

Column 3 continues with finding the area, but this time you need to round your answer to 1 d.p.

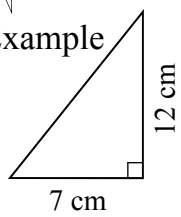
Sheet 2 starts with asking you to draw triangles and calculate the area, rounding to 1 d.p. There are marks on the sheet to show you where to start the construction. Column 2 are some worded questions on area. Column 3 asks you to change units to match a given area unit. So you have to convert one of the side lengths. Except with the last question which requires a double conversion.

Area of Triangles (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of these triangles.
Units are square units, e.g. cm^2.

Example



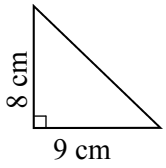
$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 7 \times 12$

$A = 42\ cm^2$

Show square units

1



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times \square \times \square$

Calc: 0 . 5 × 9 × 8 =

Area of Triangles (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Draw a right-angled triangle label the two side lengths and show the right angle. Ruler!

1 Base: 4.3 cm, Height: 3.7 cm

2 Calculate the area of the triangle above, round to 1 d.p.

3 Base: 3.3 cm, Height: 2.8 cm

4 Calculate the area of the triangle above, round to 1 d.p.

5 Base: 8.2 cm, Height: 3.8 cm

Now apply your skills to these.

7 A triangular advertising sail is 8.5 m tall and has a base of 1.2 m. Find its area.

8 If space on the sail is sold for \$85/m^2, how much will it cost to advertise on the whole sail?

Cost =

Cost =

9 A triangular courtyard has base 6.8 m and height 10 m. Find its area.

10 The courtyard is to be tiled and needs 16 tiles/m^2. How many tiles will be used to tile the entire courtyard floor?

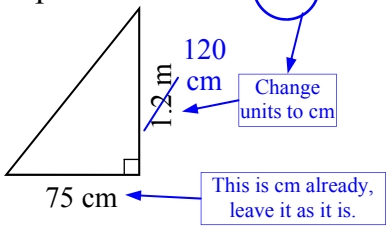
Tiles =

Tiles =

6 Calculate the area of the triangle you have drawn, 1 d.p.

Change the units to match the required area measurement, then find the area, to 1 d.p.

Example Answer in cm^2.

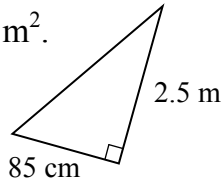


$A = \frac{1}{2}bh$

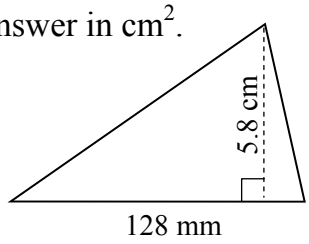
$= \frac{1}{2} \times 75 \times 120$

$A = 4\,500$ cm^2

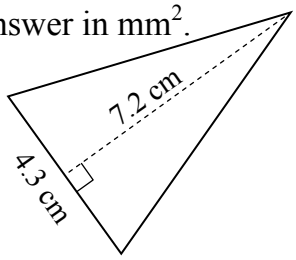
11 Answer in m^2.



12 Answer in cm^2.



13 Answer in mm^2.

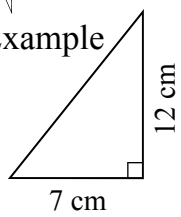


Area of Triangles (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of these triangles.
Units are square units, e.g. cm^2.

Example



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 15.37 \times 21.8$

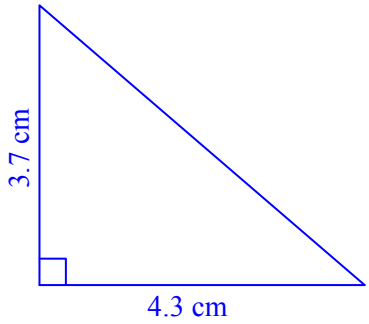
$A = 167.5\ m^2$

Area of Triangles (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Draw a right-angled triangle label the two side lengths and show the right angle. Ruler!

1 Base: 4.3 cm, Height: 3.7 cm



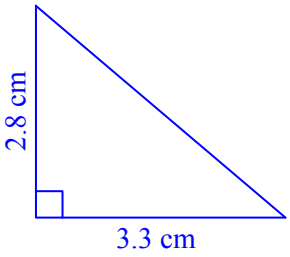
2 Calculate the area of the triangle above, round to 1 d.p.

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 4.3 \times 3.7$

$A = 8.0 \text{ cm}^2$

3 Base: 3.3 cm, Height: 2.8 cm



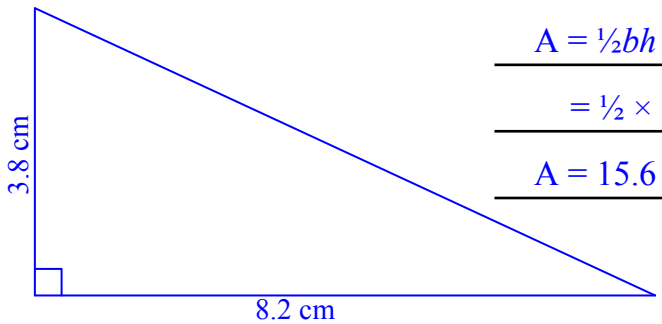
4 Calculate the area of the triangle above, round to 1 d.p.

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 3.3 \times 2.8$

$A = 4.6 \text{ cm}^2$

5 Base: 8.2 cm, Height: 3.8 cm



6 Calculate the area of the triangle you have drawn, 1 d.p.

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 8.2 \times 3.8$

$A = 15.6 \text{ cm}^2$

Now apply your skills to these.

7 A triangular advertising sail is 8.5 m tall and has a base of 1.2 m. Find its area.

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 1.2 \times 8.5$

$A = 5.1 \text{ m}^2$

8 If space on the sail is sold for \$85/m^2, how much will it cost to advertise on the whole sail?

Cost = 5.1×85

Cost = \$433.50

9 A triangular courtyard has base 6.8 m and height 10 m. Find its area.

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 6.8 \times 10$

$A = 34 \text{ m}^2$

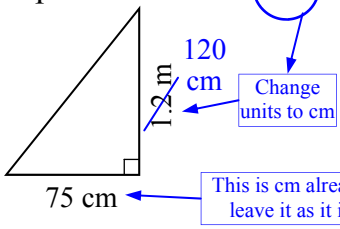
10 The courtyard is to be tiled and needs 16 tiles/m^2. How many tiles will be used to tile the entire courtyard floor?

Tiles = 34×16

Tiles = 544 tiles

Change the units to match the required area measurement, then find the area, to 1 d.p.

Example Answer in cm^2.

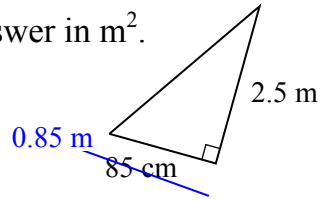


$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 75 \times 120$

$A = 4\,500 \text{ cm}^2$

11 Answer in m^2.

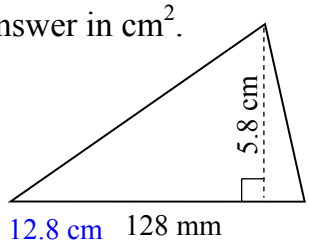


$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 0.85 \times 2.5$

$A = 1.1 \text{ m}^2$

12 Answer in cm^2.

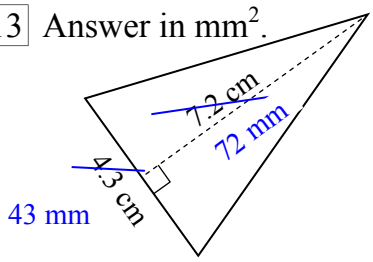


$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 12.8 \times 5.8$

$A = 37.1 \text{ cm}^2$

13 Answer in mm^2.



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 43 \times 72$

$A = 1\,548 \text{ mm}^2$

$= \frac{1}{2} \times 15 \times 36.4$

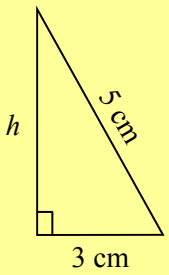
$A = 273 \text{ cm}^2$

Finding a Short Side - Whole Number Answers

Pythagoras' Theorem $c^2 = a^2 + b^2$ can be used to find the length of the hypotenuse given the two short sides of the right-angled triangle. The process can be reversed when given the length of the hypotenuse and one of the short sides of the triangle.

$$b^2 = c^2 - a^2$$

In other words, use subtraction instead of addition. Just remember to use the hypotenuse length as '*c*' (the first number) as if you don't you will get a calculator error.



$h^2 = 5^2 - 3^2$ ← Remember to use '-' not '+' and it is the hypotenuse squared minus the short side squared.

$h^2 = 16$ ← Rewrite h^2 then subtract the two squared numbers.

$h = \sqrt{16}$ ← Rewrite the line above but change h^2 to h and write the number in a square root sign.

$h = 4$ cm ← Solve the square root, on this sheet all the answers are whole numbers, include the units.

Calculator Steps:

5 x^2 - 4 x^2 =

$\sqrt{\ }$ ANS =

The entire sheet is answered in the same way as the method above. Two of the diagrams in Column 3 include isosceles triangles, these are solved by bisecting the triangle to create a right -angled triangle.

The second sheet involves using Pythagoras Theorem to first find a required side of the triangle, then use the area formula. Remember that to find the area, you require the base and the perpendicular height. All these triangles require Pythagoras Theorem (subtraction) first.

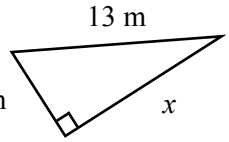
Column 1 has an example for you to get you started.

Finding a Short Side - Whole Number Answers

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the length of the short side, the answer will be a whole number.

Example



$x^2 = 13^2 - 5^2$

Calc: 1 3 x^2 - 5 x^2 =

$x^2 = 144$

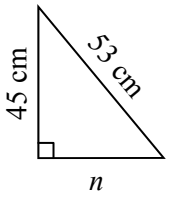
$x = \sqrt{144}$

Calc: $\sqrt{}$ Ans =

Write the units

$x = 12$ m

1



$n^2 = 53^2 - \square^2$

$n^2 = \square$

$n = \sqrt{\square}$

$n = \square$ cm

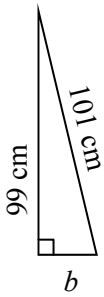
2

$b^2 = \square^2 - \square^2$

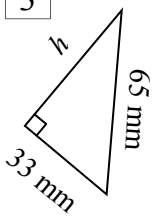
$b^2 = \square$

$b = \sqrt{\square}$

$b = \square$ cm



3



$h^2 =$

$h^2 =$

$h =$

$h =$

Remember the units

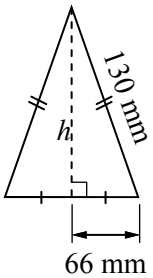
15

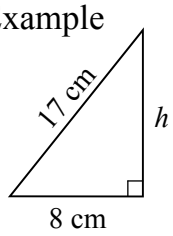


Area of Triangles - Pythagoras

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use Pythagoras Theorem and subtraction for these. Find the length, then find the area. Answers are all whole numbers.

Example



$h^2 = 17^2 - 8^2$

$h^2 = 225$

$h = \sqrt{225}$

$h = 15$ cm

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 8 \times 15$

$A = 60$ cm^2

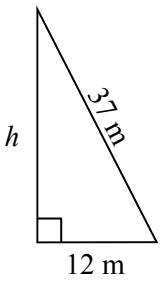
1

$h^2 =$ [37]^2 - [ ]^2

$h^2 =$ [ ]

$h = \sqrt{\ }$ [ ]

$h =$ [ ] m



This answer should be a whole number and less than 37.

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ [ ] $\times$ [ ]

Use the base of '12' and the height, that you calculated.

$A =$ [ ] m^2

This answer is an area, use square units.

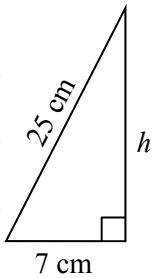
2

$h^2 =$ [ ]^2 - [ ]^2

$h^2 =$ [ ]

$h = \sqrt{\ }$ [ ]

$h =$ [ ] cm



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ [ ] $\times$ [ ]

$A =$ [ ] cm^2

3

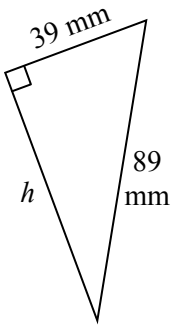
$h^2 =$ [ ]^2 - [ ]^2

$h^2 =$ [ ]

$h = \sqrt{\ }$ [ ]

$h =$ [ ]

Length, so no square units.



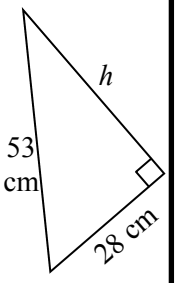
$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ [ ] $\times$ [ ]

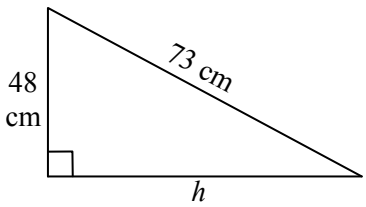
$A =$ [ ]

Area, so use square units.

4

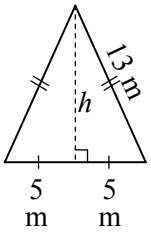


5



With isosceles triangles use the same method, except when you find the area, use the whole base length, not half.

6



$h^2 = 13^2 - 5^2$

$h^2 =$ [ ]

$h = \sqrt{\ }$ [ ]

$h =$ [ ] m

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ [ ] $\times$ [ ]

Use $b = 10$ (2×5) not 5!

$A =$ [ ] m^2

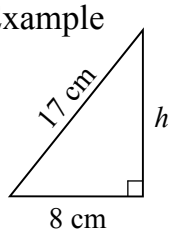
$h = 112$ mm

Area of Triangles - Pythagoras

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use Pythagoras Theorem and subtraction for these. Find the length, then find the area. Answers are all whole numbers.

Example



$h^2 = 17^2 - 8^2$

$h^2 = 225$

$h = \sqrt{225}$

$h = 15$ cm

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 8 \times 15$

$A = 60$ cm^2

1

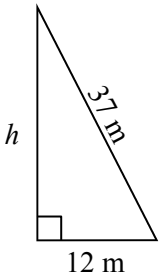
$h^2 =$ 37 ^{2} - 12 ^{2}

$h^2 =$ 1 225

$h = \sqrt{1\ 225}$

$h =$ 35 m

This answer should be a whole number and less than 37.



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ 12 $\times$ 35

Use the base of '12' and the height, that you calculated.

$A =$ 210 m^2

This answer is an area, use square units.

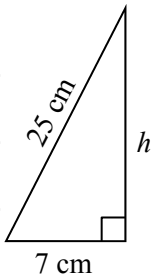
2

$h^2 =$ 25 ^{2} - 7 ^{2}

$h^2 =$ 576

$h = \sqrt{576}$

$h =$ 24 cm



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ 7 $\times$ 24

$A =$ 84 cm^2

3

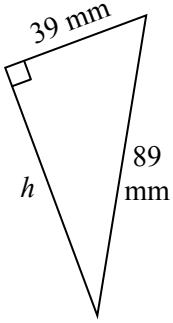
$h^2 =$ 89 ^{2} - 39 ^{2}

$h^2 =$ 6 400

$h = \sqrt{6\ 400}$

$h =$ 80 mm

Length, so no square units.



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ 39 $\times$ 80

$A =$ 1 560 mm^2

Area, so use square units.

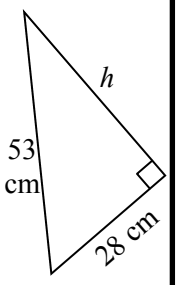
4

$h^2 = 53^2 - 28^2$

$h^2 = 2\ 025$

$h = \sqrt{2\ 025}$

$h = 45$ cm

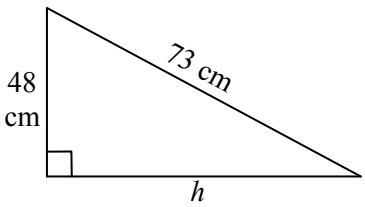


$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 28 \times 45$

$A = 630$ cm^2

5



$h^2 = 73^2 - 48^2$

$h^2 = 3\ 025$

$h = \sqrt{3\ 025}$

$h = 55$ cm

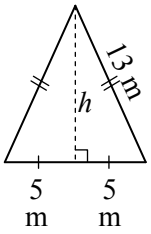
$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 55 \times 48$

$A = 1\ 320$ cm^2

With isosceles triangles use the same method, except when you find the area, use the whole base length, not half.

6



$h^2 = 13^2 - 5^2$

$h^2 =$ 144

$h = \sqrt{144}$

$h =$ 12 m

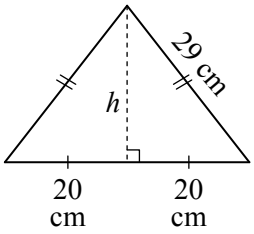
$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ 10 $\times$ 12

Use $b = 10$ (2 × 5) not 5!

$A =$ 60 m^2

7



$h^2 = 29^2 - 20^2$

$h^2 = 441$

$h = \sqrt{441}$

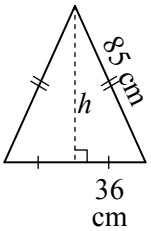
$h = 21$ cm

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 40 \times 21$

$A = 420$ cm^2

8



$h^2 = 85^2 - 36^2$

$h^2 = 5\ 929$

$h = \sqrt{5\ 929}$

$h = 77$ cm

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 72 \times 77$

$A = 2\ 772$ cm^2

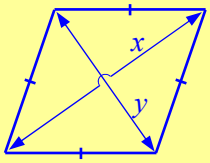
Area of Parallelograms and Rhombuses

A parallelogram looks like a rectangle that has been pushed. A rhombus, also called a diamond, looks like a square that has been pushed over. So a parallelogram has two pairs of parallel sides of the same length, like a rectangle. A rhombus has four sides all the same length, with two pairs of parallel sides.

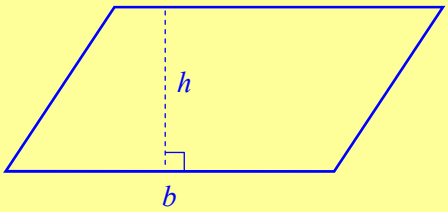
Rhombus $A = \frac{1}{2}xy$



Where:

x and y are the lengths of the diagonals.

Parallelogram $A = bh$

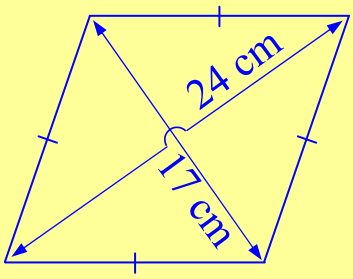


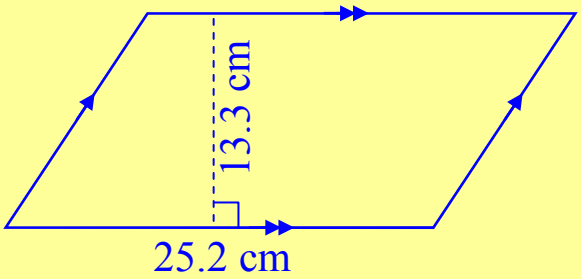
Where:

b = base length

h = perpendicular height

Below are two examples.





$A = \frac{1}{2}xy$	Write the formula	$A = bh$
$= \frac{1}{2} \times 17 \times 24$	Substitute x & y (or b & h)	$= 25.2 \times 13.3$
$A = 204$ cm^2	Solve showing square units. Round to 1 decimal place.	$A = 335.2$ m^2 (1 d.p.)

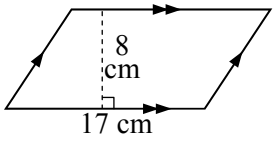
What happens if you aren't given the diagonals of a rhombus, but instead base and its perpendicular height? Solve just like it is a parallelogram. By definition all rhombuses (or rhombi) are parallelograms.

Area of Parallelograms

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of these parallelograms.

Example

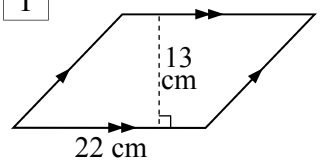


$A = bh$

$= 17 \times 8$

$A = 136 \text{ cm}^2$

1

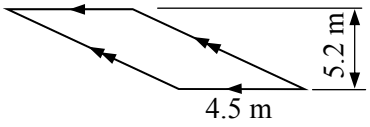


$A = bh$

$= \square \times \square$

$A = \square \text{ cm}^2$

2



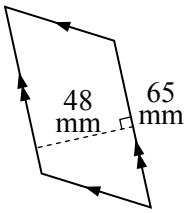
$A = bh$

$= \square \times \square$

$A = \square$

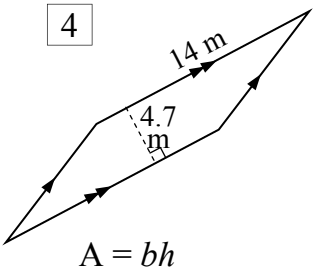
Remember square units

3



$A = bh$

4



$A = bh$

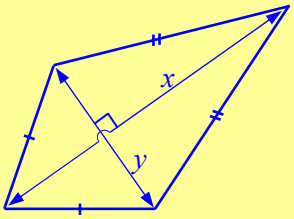
Area of Kites and Trapeziums

A kite is the easiest shape to remember because its name is the same as the kite that you see flying. To find its area the same formula as the rhombus formula is used, that is, its internal diagonal lengths are multiplied together and by a half. Trapeziums are similar to rectangles in a way. The height is the perpendicular height like in a rectangle, but the base is the average of the top and bottom lengths. This average is then multiplied by the height. The formulae are below:

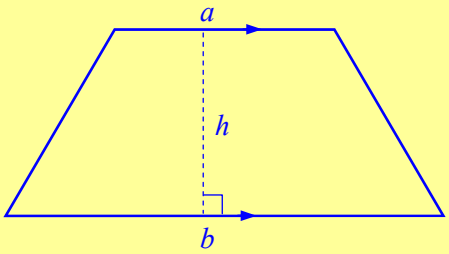
Kite $A = \frac{1}{2}xy$



Where:

x and y are the lengths of the diagonals.

Trapezium $A = \frac{1}{2}(a + b)h$

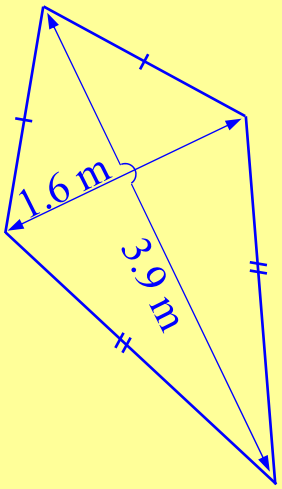


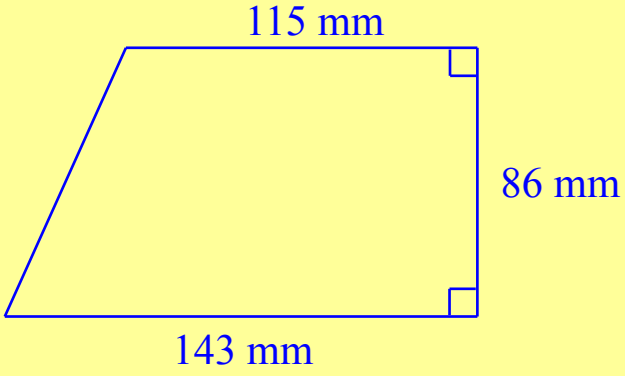
Where:

a, b = parallel side lengths

h = perpendicular height

Here are two examples. With trapeziums you need to use the brackets keys on your calculator.





$A = \frac{1}{2}xy$	Write the formula	$A = \frac{1}{2}(a + b)h$
$= \frac{1}{2} \times 3.9 \times 1.6$	Substitute x & y (or a, b & h)	$= \frac{1}{2} \times (115 + 143) \times 86$
Calc: 0 . 5 × 3 . 9 × 1 . 6 =		Calc: 0 . 5 × (1 1 5 + 1 4 3) × 8 6 =
$A = 3.1$ m^2 (1 d.p.)	Solve showing square units. Round to 1 decimal place.	$A = 11\,094$ mm^2

Area of Kites

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of these kites.

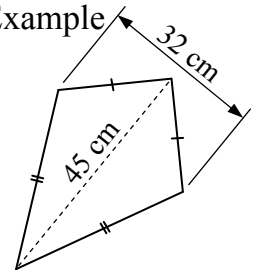
$A = \frac{1}{2}xy$

Calc: 0 . 5 × 3 2 × 4 5 =

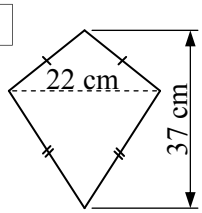
$= \frac{1}{2} \times 32 \times 45$

$A = 720 \text{ cm}^2$

Example



1

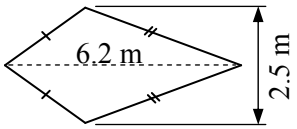


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times \square \times \square$

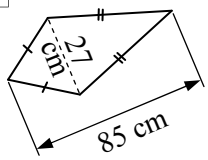
$A = \square \text{ cm}^2$

2

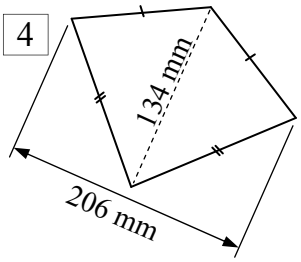


$A = \frac{1}{2}xy$

3

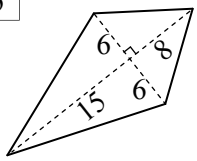


4



From Q.5 all units are in cm.

5

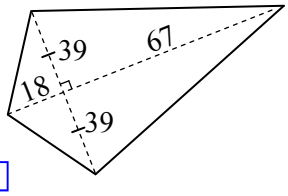


$A = \frac{1}{2}xy$ (6 + 6) (8 + 15)

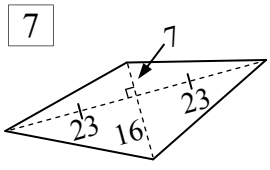
$= \frac{1}{2} \times \square \times \square$

$A = \square \text{ cm}^2$

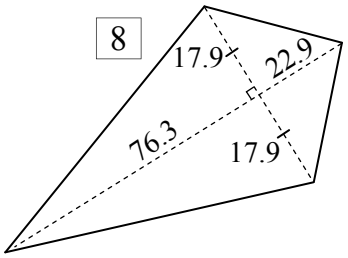
6



7

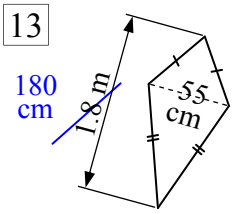


8



Find the area in cm^2. Change all the lengths that aren't in cm, to cm, before you multiply them.

13

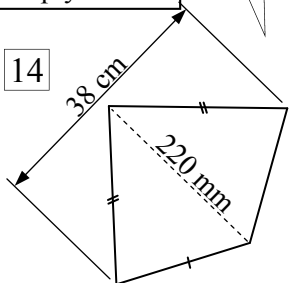


$A = \frac{1}{2}xy$

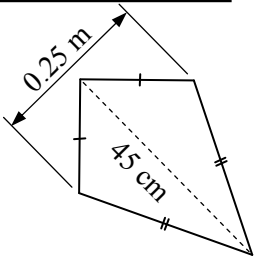
$= \frac{1}{2} \times \square \times \square$

$A = \square \text{ cm}^2$

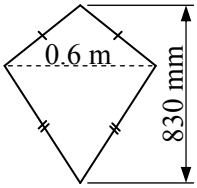
14



15



16



Join the dots to form a kite and measure the axis lengths in cm to 1 d.p. Then calculate the area in cm^2. Give the area to 1 decimal place.

13

Measure the axes not the sides!

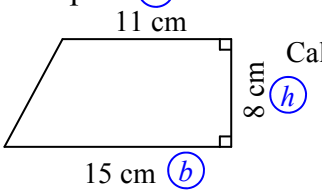
14

Area of Trapeziums

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of these trapeziums. '*a*' and '*b*' are the parallel sides, '*h*' is the distance between them.

Example



$A = \frac{1}{2}(a + b)\,h$

Calc: 0 . 5 × (1 1 + 1 5) × 8 =

$= \frac{1}{2} \times (11 + 15) \times 8$

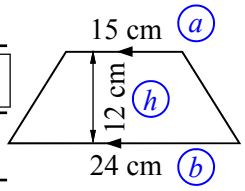
$A = 104 \text{ cm}^2$

1

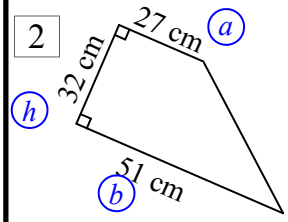
$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (\square + \square) \times \square$

$A = \square \text{ cm}^2$

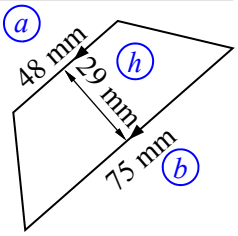


2

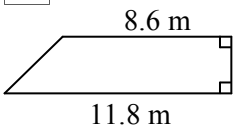


$A = \frac{1}{2}(a + b)\,h$

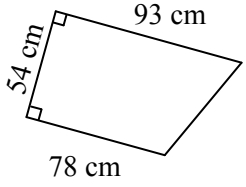
3



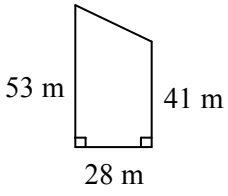
4



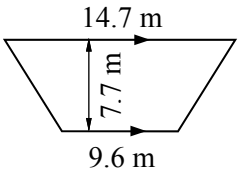
5



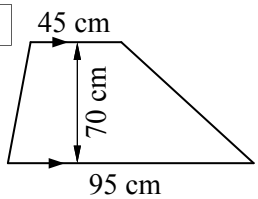
6



7



8



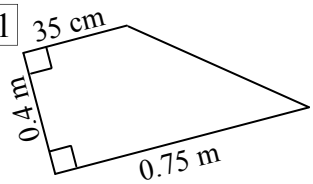
Join the dots to form a trapezium and measure the two parallel sides and the height. Measure the lengths to 1 decimal place. Then calculate the area (in cm^2).

9

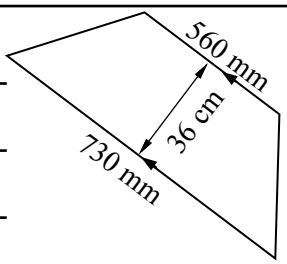
10

Find the area in cm^2. Change all the lengths that aren't in cm, to cm, before you multiply them.

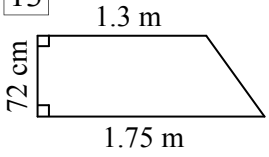
11



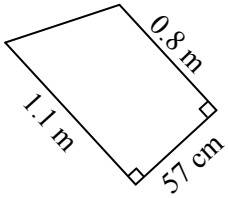
12



13



14



Area of Kites

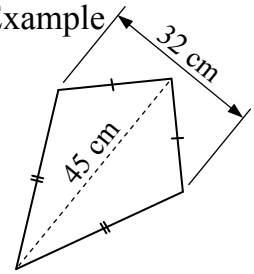
Find the area of these kites.

Example



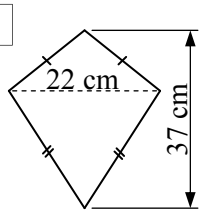
$A = \frac{1}{2}xy$

Calc: 0 . 5 × 3 2 × 4 5 =

$= \frac{1}{2} \times 32 \times 45$

$A = 720 \text{ cm}^2$

1

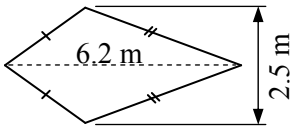


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 22 \times 37$

$A = 407 \text{ cm}^2$

2

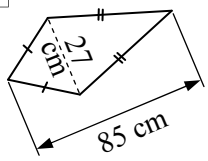


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 2.5 \times 6.2$

$A = 7.75 \text{ m}^2$

3

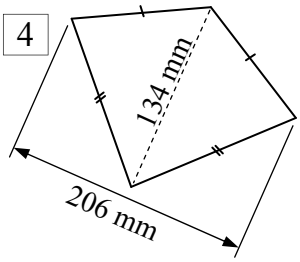


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 27 \times 85$

$A = 1\,147.5 \text{ cm}^2$

4



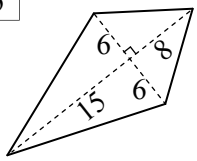
$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 206 \times 134$

$A = 13\,802 \text{ m}^2$

From Q.5 all units are in cm.

5

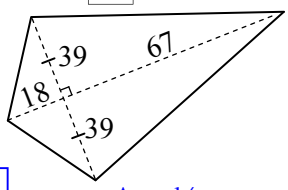


$A = \frac{1}{2}xy$ (6 + 6, 8 + 15)

$= \frac{1}{2} \times 12 \times 23$

$A = 138 \text{ cm}^2$

6

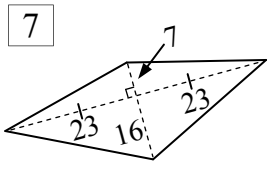


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 78 \times 85$

$A = 3\,315 \text{ cm}^2$

7

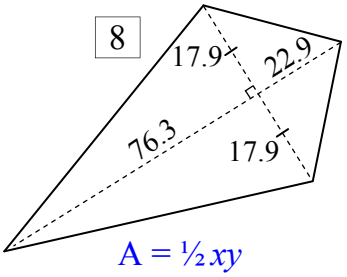


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 23 \times 46$

$A = 529 \text{ cm}^2$

8



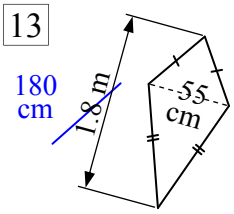
$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 35.8 \times 99.2$

$A = 1\,775.68 \text{ cm}^2$

Find the area in cm^2. Change all the lengths that aren't in cm, to cm, before you multiply them.

13

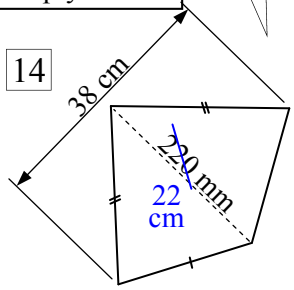


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 180 \times 180$

$A = 16\,200 \text{ cm}^2$

14

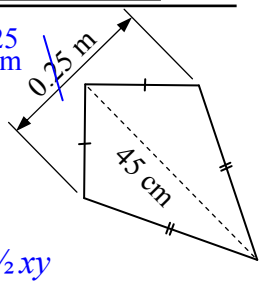


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 22 \times 38$

$A = 418 \text{ cm}^2$

15

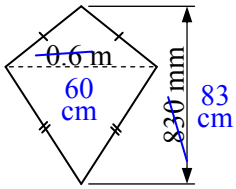


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 25 \times 45$

$A = 562.5 \text{ cm}^2$

16



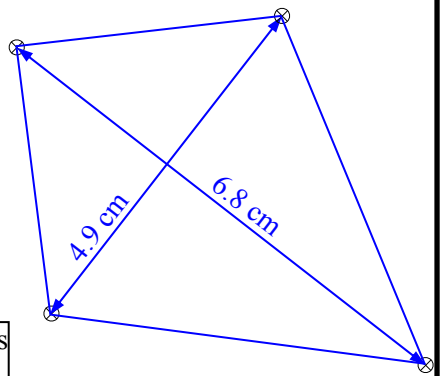
$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 83 \times 60$

$A = 2\,490 \text{ cm}^2$

Join the dots to form a kite and measure the axis lengths in cm to 1 d.p. Then calculate the area in cm^2. Give the area to 1 decimal place.

13



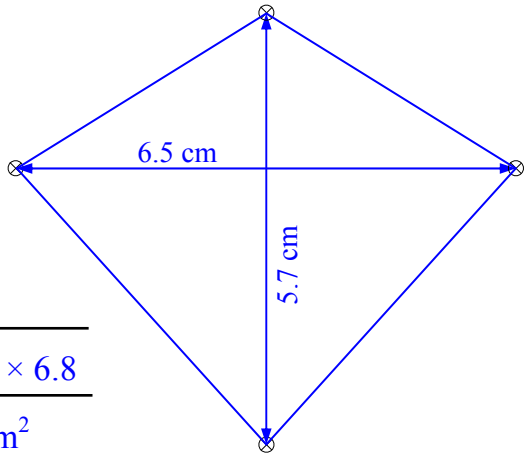
$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 4.9 \times 6.8$

$A = 16.7 \text{ cm}^2$

Measure the axes not the sides!

14



$A = \frac{1}{2}xy$

$= \frac{1}{2} \times 5.7 \times 6.8$

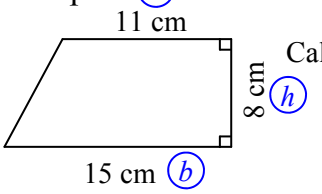
$A = 19.38 \text{ cm}^2$

Area of Trapeziums

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of these trapeziums. '*a*' and '*b*' are the parallel sides, '*h*' is the distance between them.

Example



$A = \frac{1}{2}(a + b)\,h$

Calc: 0 . 5 × (1 1 + 1 5) × 8 =

$= \frac{1}{2} \times (11 + 15) \times 8$

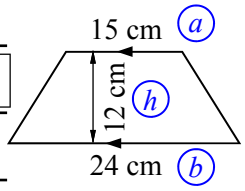
$A = 104 \text{ cm}^2$

1

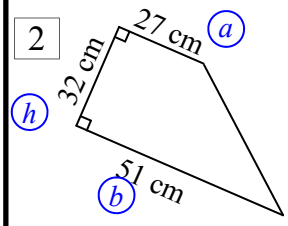
$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (\boxed{15} + \boxed{24}) \times \boxed{12}$

$A = \boxed{234} \text{ cm}^2$



2



$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (27 + 51) \times 32$

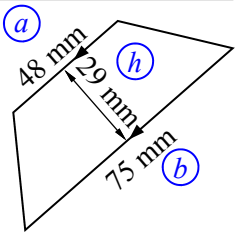
$A = 1\,248 \text{ cm}^2$

3

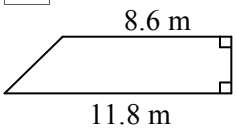
$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (48 + 75) \times 29$

$A = 1\,783.5 \text{ mm}^2$



4



$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (8.6 + 11.8) \times 2.2$

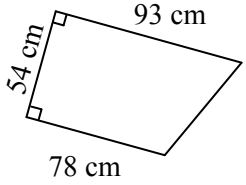
$A = 22.44 \text{ m}^2$

5

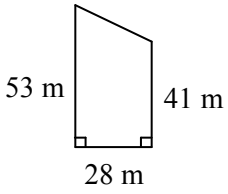
$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (78 + 93) \times 54$

$A = 4\,617 \text{ cm}^2$



6



$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (53 + 41) \times 28$

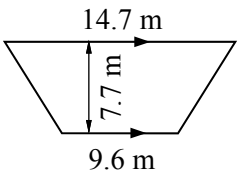
$A = 1\,316 \text{ m}^2$

7

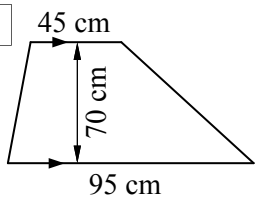
$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (9.6 + 14.7) \times 7.7$

$A = 93.555 \text{ m}^2$



8



$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (45 + 95) \times 70$

$A = 4\,900 \text{ m}^2$

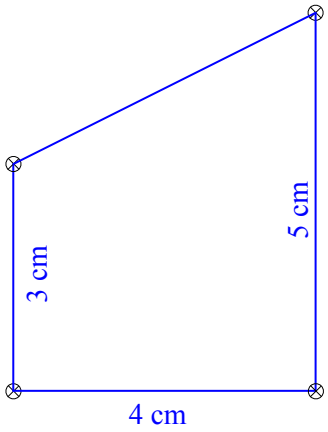
Join the dots to form a trapezium and measure the two parallel sides and the height. Measure the lengths to 1 decimal place. Then calculate the area (in cm^2).

9

$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (3 + 5) \times 4$

$A = 16 \text{ cm}^2$

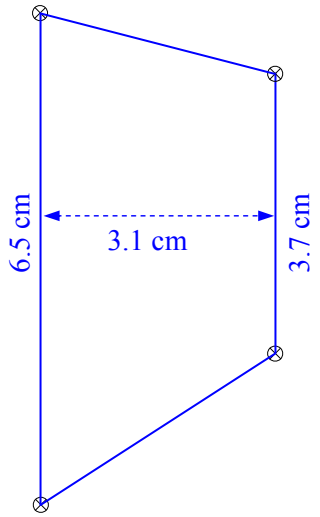


10

$A = \frac{1}{2}(a + b)\,h$

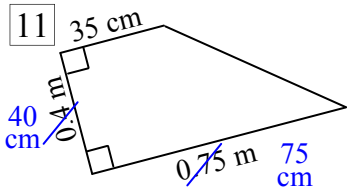
$= \frac{1}{2} \times (3.7 + 6.5) \times 3.1$

$A = 15.81 \text{ cm}^2$



Find the area in cm^2. Change all the lengths that aren't in cm, to cm, before you multiply them.

11



$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (35 + 75) \times 40$

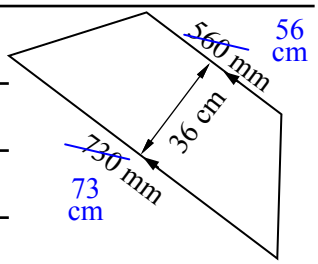
$A = 2\,200 \text{ cm}^2$

12

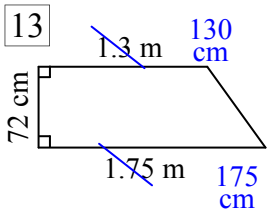
$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (56 + 73) \times 36$

$A = 2\,322 \text{ cm}^2$



13



$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (130 + 175) \times 72$

$A = 10\,980 \text{ cm}^2$

14

$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (80 + 110) \times 57$

$A = 5\,415 \text{ cm}^2$

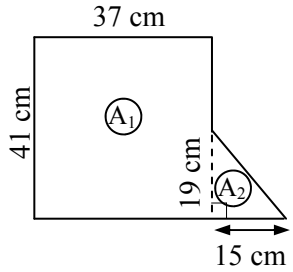
Area - Composite Shapes

The first sheet has two columns, the left column are questions finding the area by adding areas. The right column is finding the area using subtraction of areas. You need to know how to find the area for squares, rectangles and triangles. On sheet 2 there is a trapezium also.

Sheet 1 Column 1 starts with questions that have already divided up the composite area in to parts. Find the area of the parts and then add them. It is just the same as finding the area, but doing the process twice (or more) and then adding them.

Example



$A_1 = lb$

$= 41 \times 37$

$A_1 = 1\ 517\ cm^2$

$A_2 = \frac{1}{2}bh$

$= \frac{1}{2} \times 15 \times 19$

$A_2 = 142.5\ cm^2$

$A = A_1 + A_2 = 1\ 517 + 142.5 = 1\ 659.50\ cm^2$

Column 2 has shapes within others, so that means that you subtract. So calculate the individual areas, then subtract the smaller area(s) from the larger area.

Sheet 2 are worded questions and involve real world applications such as metal fabrication, painting or landscape gardening.

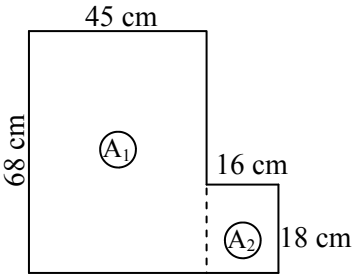
Sheet 3 is more difficult as it involved finding missing lengths first and doesn't help you in dividing the shape up.

Area - Composite Shapes (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Calculate the area of these shapes by breaking them up into parts first. All angles that look like right angles, are right angles!

1



$A_1 = lb$

$= \square \times \square$

$A_1 = \square$ cm^2

$A_2 = lb$

$= \square \times \square$

$A_2 = \square$ cm^2

$A = A_1 + A_2 = \square + \square = \square$ cm^2

2

$A_1 = lb$

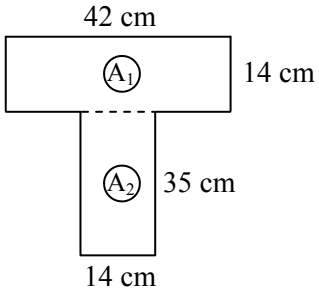
$= \square \times \square$

$A_1 = \square$ cm^2

$A_2 = lb$

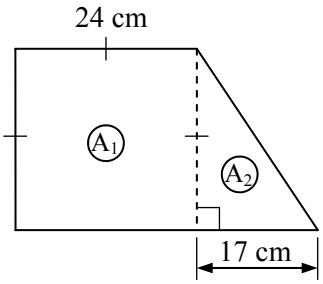
$= \square \times \square$

$A_2 = \square$ cm^2



$A = A_1 + A_2 = \square + \square = \square$ cm^2

3



$A_1 = l^2$

$= \square^2$

$A_1 = \square$

$A_2 = \frac{1}{2}bh$

$= \frac{1}{2} \times \square \times \square$

$A_2 = \square$

$A = A_1 + A_2 = \square + \square = \square$

4

$A_1 = l^2$

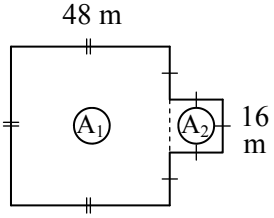
$= \square^2$

$A_1 = \square$

$A_2 = l^2$

$= \square^2$

$A_2 = \square$



$A = A_1 + A_2 = \square + \square = \square$

Finding the shaded area is just the same, except instead of adding the areas, you subtract. So it is $A_1 - A_2$, the biggest area minus the smaller one.

5

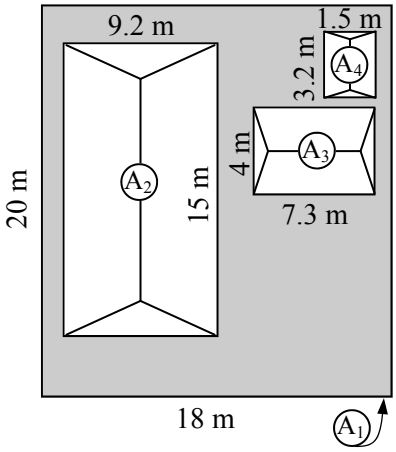
Area - Composite Shapes (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your composite area skills to find these.

A block of land has a house, garage and garden shed on the property. The diagram shows a plan (top) view.

Find the:



1 Block Area (A_1)

$A_1 = lb$

$= \square \times \square$

$A_1 = \square$ m^2

2 House Area (A_2)

$A_2 = lb$

$= \square \times \square$

$A_2 = \square$ m^2

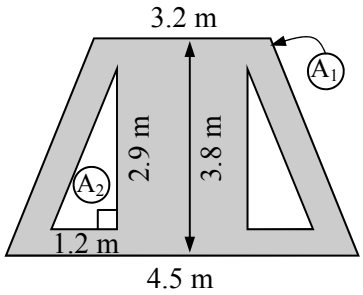
3 Garage Area (A_3)

4 Shed Area (A_4)

5 Grass Area (shaded area).

6 Cost of laying turf on the block if turf costs \$5.60 per m^2. Turf is only sold in whole m^2.

A foot of a crane is shown. It is fabricated from plate steel in the shape of a trapezium with two identical triangular sections removed. Find the:



7 Trapezium Area (A_1)

$A_1 = ½ (a + b) \times h$

8 Triangle Area (A_2)

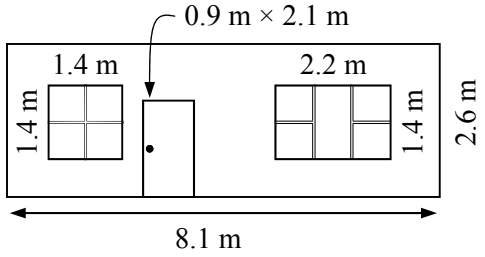
$A_2 = ½bh$

9 Steel area (shaded area).

Remember that there are two triangles!

10 The weight of the footing, if the plate steel weighs 285 kg per m^2.

Dave wants to repaint the front wall of his house. It features a doorway and two windows. The front view is shown below. Find the area of the:



11 Front wall

12 Square window

13 Doorway

14 Rectangular window

15 Paintable Area of the wall.

16 Number of litres required for one coat, if 1 m^2 needs 0.3 L.

17 The paint is sold in 2 L cans, with each can costing \$38.20. How much does it cost to paint the wall?

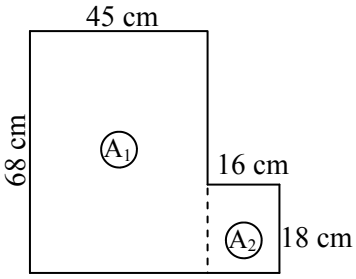
Area - Composite Shapes (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Calculate the area of these shapes by breaking them up into parts first. All angles that look like right angles, are right angles!

1



$A_1 = lb$

$= 68 \times 45$

$A_1 = 3\,060 \text{ cm}^2$

$A_2 = lb$

$= 16 \times 18$

$A_2 = 288 \text{ cm}^2$

$A = A_1 + A_2 = 3\,060 + 288 = 3\,348 \text{ cm}^2$

2

$A_1 = lb$

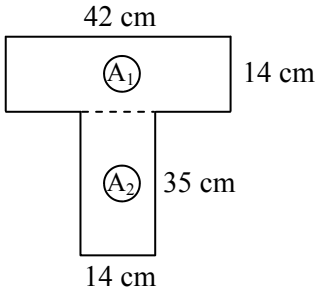
$= 42 \times 14$

$A_1 = 588 \text{ cm}^2$

$A_2 = lb$

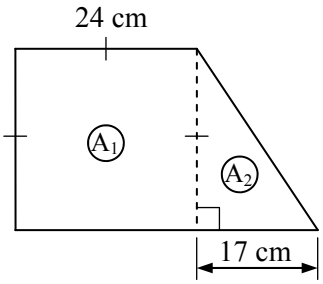
$= 35 \times 14$

$A_2 = 490 \text{ cm}^2$



$A = A_1 + A_2 = 588 + 490 = 1\,078 \text{ cm}^2$

3



$A_1 = l^2$

$= 24^2$

$A_1 = 576 \text{ cm}^2$

$A_2 = \frac{1}{2}bh$

$= \frac{1}{2} \times 17 \times 24$

$A_2 = 204 \text{ cm}^2$

$A = A_1 + A_2 = 576 + 204 = 780 \text{ cm}^2$

4

$A_1 = l^2$

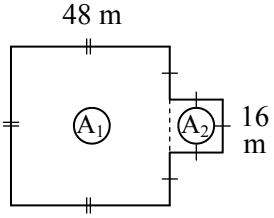
$= 48^2$

$A_1 = 2\,304 \text{ m}^2$

$A_2 = l^2$

$= 16^2$

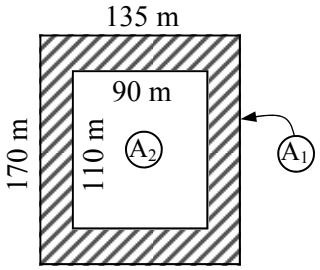
$A_2 = 256 \text{ m}^2$



$A = A_1 + A_2 = 2\,304 + 256 = 2\,560 \text{ m}^2$

Finding the shaded area is just the same, except instead of adding the areas, you subtract. So it is $A_1 - A_2$, the biggest area minus the smaller one.

5



$A_1 = lb$

$= 170 \times 135$

$A_1 = 22\,950 \text{ m}^2$

$A_2 = lb$

$= 110 \times 90$

$A_2 = 9\,900 \text{ m}^2$

$A = A_1 - A_2 = 22\,950 - 9\,900 = 13\,050 \text{ m}^2$

6

$A_1 = lb$

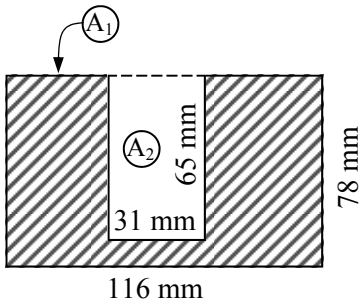
$= 116 \times 78$

$A_1 = 9\,048 \text{ mm}^2$

$A_2 = lb$

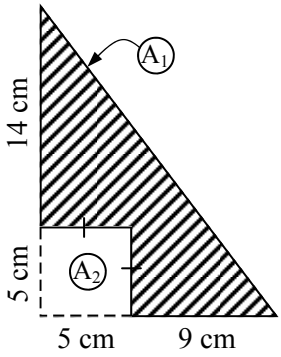
31×65

$A_2 = 2\,015 \text{ mm}^2$



$A = A_1 - A_2 = 9\,048 - 2\,015 = 7\,033 \text{ mm}^2$

7



$A_1 = \frac{1}{2}bh$

$= \frac{1}{2} \times 14 \times 19$

Add 2 lengths for the base and also the height of the triangle.

$A_1 = 133 \text{ cm}^2$

$A_2 = l^2$

$= 5^2$

$A_2 = 25 \text{ cm}^2$

$A = A_1 - A_2 = 133 - 25 = 108 \text{ cm}^2$

8

$A_1 = l^2$

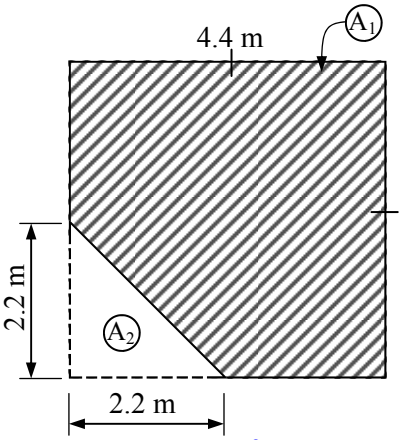
$= 4.4^2$

$A_1 = 19.36 \text{ m}^2$

$A_2 = \frac{1}{2}bh$

$= \frac{1}{2} \times 2.2 \times 2.2$

$A_2 = 2.42 \text{ m}^2$



$A = A_1 - A_2 = 19.36 - 2.42 = 16.94 \text{ m}^2$

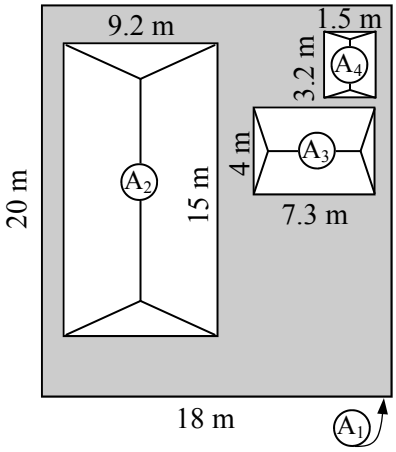
Area - Composite Shapes (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your composite area skills to find these.

A block of land has a house, garage and garden shed on the property. The diagram shows a plan (top) view.

Find the:



1 Block Area (A_1)

$A_1 = lb$

$= 20 \times 18$

$A_1 = 360$ m^2

2 House Area (A_2)

$A_2 = lb$

$= 15 \times 9.2$

$A_2 = 138$ m^2

3 Garage Area (A_3)

$A_3 = lb$

$= 7.3 \times 4$

$A_3 = 29.2$ m^2

4 Shed Area (A_4)

$A_4 = lb$

$= 3.2 \times 1.4$

$A_4 = 4.48$ m^2

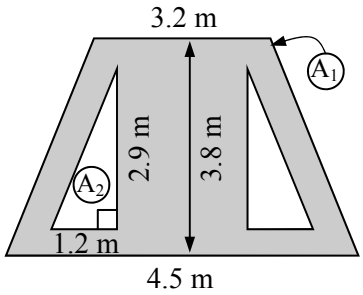
5 Grass Area (shaded area).

$A = 360 - 138 - 29.2 - 4.48 = 188.32$ m^2

6 Cost of laying turf on the block if turf costs \$5.60 per m^2. Turf is only sold in whole m^2.

Cost = $189 \times 5.60 = \$1\,058.40$

A foot of a crane is shown. It is fabricated from plate steel in the shape of a trapezium with two identical triangular sections removed. Find the:



7 Trapezium Area (A_1)

$A_1 = \frac{1}{2}(a + b) \times h$

$= \frac{1}{2} \times (3.2 + 4.5) \times 3.8$

$A_1 = 14.63$ m^2

8 Triangle Area (A_2)

$A_2 = \frac{1}{2}bh$

$= \frac{1}{2} \times 1.2 \times 2.9$

$A_2 = 1.74$ m^2

9 Steel area (shaded area).

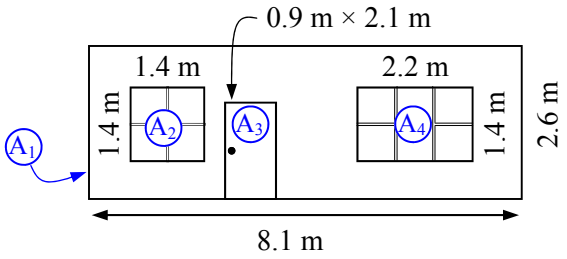
$A = 14.63 - 2 \times 1.74 = 11.15$ m^2

Remember that there are two triangles!

10 The weight of the footing, if the plate steel weighs 285 kg per m^2.

Weight = $11.15 \times 285 = 3\,177.75$ kg

Dave wants to repaint the front wall of his house. It features a doorway and two windows. The front view is shown below. Find the area of the:



11 Front wall

$A_1 = lb$

$= 8.1 \times 2.6$

$A_1 = 21.06$ m^2

12 Square window

$A_2 = l^2$

$= 1.4^2$

$A_2 = 1.96$ m^2

13 Doorway

$A_3 = lb$

$= 2.1 \times 0.9$

$A_3 = 1.89$ m^2

14 Rectangular window

$A_4 = lb$

$= 2.2 \times 1.4$

$A_4 = 3.08$ m^2

15 Paintable Area of the wall.

$A = 21.06 - 1.96 - 1.89 - 3.08 = 14.13$ m^2

16 Number of litres required for one coat, if 1 m^2 needs 0.3 L.

Paint = $14.13 \times 0.3 = 4.239$ L

17 The paint is sold in 2 L cans, with each can costing \$38.20. How much does it cost to paint the wall?

Need 3 cans because 4 L (2 cans) not enough.

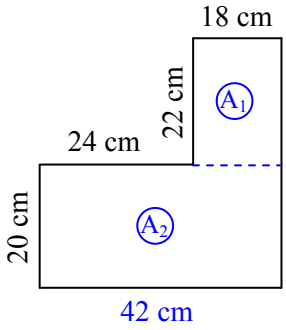
Cost = $3 \times 38.20 = \$114.60$

Area - Further Composite Shapes (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the missing sides, then break up the area into more simple shapes. All angles that look like right angles, are right angles!

1



$A_1 = lb$

$= 22 \times 18$

$A_1 = 396 \text{ cm}^2$

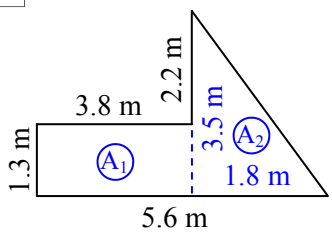
$A_2 = lb$

$= 42 \times 20$

$A_2 = 840 \text{ cm}^2$

$A = A_1 + A_2 = 396 + 840 = 1\,236 \text{ cm}^2$

2



$A_1 = lb$

$= 3.8 \times 1.3$

$A_1 = 4.94 \text{ m}^2$

$A_2 = \frac{1}{2}bh$

$= \frac{1}{2} \times 1.8 \times 3.5$

$A_2 = 3.15 \text{ m}^2$

$A = A_1 + A_2 = 4.94 + 3.15 = 8.09 \text{ m}^2$

3

$A_1 = lb$

$= 9.3 \times 4.6$

$A_1 = 42.78 \text{ m}^2$

$A_2 = lb$

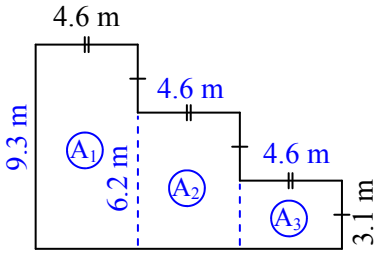
$= 6.2 \times 4.6$

$A_2 = 28.52 \text{ m}^2$

$A_3 = lb$

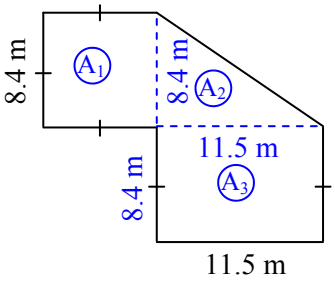
$= 3.1 \times 4.6$

$A_3 = 14.26 \text{ m}^2$



$A = 42.78 + 28.52 + 14.26 = 85.56 \text{ m}^2$

4 *Solve with 2 or 3 Areas



$A_1 = l^2$

$= 8.4^2$

$A_1 = 70.56 \text{ m}^2$

$A_2 = \frac{1}{2}bh$

$= \frac{1}{2} \times 11.5 \times 8.4$

$A_2 = 48.3 \text{ m}^2$

$A_3 = lb$

$= 11.5 \times 8.4$

$A_3 = 96.6 \text{ m}^2$

$A = 70.56 + 48.3 + 96.6 = 215.46 \text{ m}^2$

5

$A_1 = \frac{1}{2}bh$

$= \frac{1}{2} \times 6.2^2$

$A_1 = 19.22 \text{ cm}^2$

$A_2 = \frac{1}{2}bh$

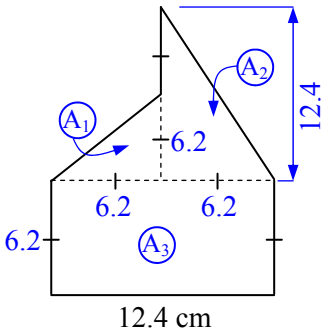
$= \frac{1}{2} \times 6.2 \times 12.4$

$A_2 = 38.44 \text{ cm}^2$

$A_3 = lb$

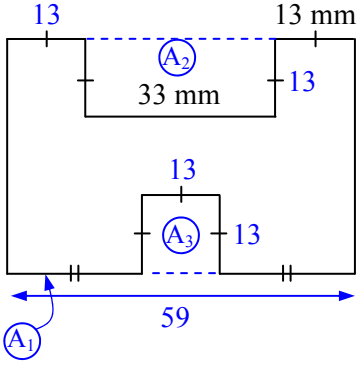
$= 6.2 \times 12.4$

$A_3 = 76.88 \text{ cm}^2$



$A = 19.22 + 38.44 + 76.88 = 134.54 \text{ cm}^2$

6 *Use Subtraction Or Addition



$A_1 = lb$

$= 59 \times 39$

$A_1 = 2\,301 \text{ mm}^2$

$A_2 = lb$

$= 33 \times 13$

$A_2 = 429 \text{ mm}^2$

$A_3 = l^2$

$= 13^2$

$A_3 = 169 \text{ mm}^2$

$A = 2\,301 - 429 - 169 = 1\,703 \text{ mm}^2$

$A_2 = 68$ cm^2

$A = 225 - 68 = 157$ m^2

Area of a Circle

The formula for calculating the area of a circle is:

$$A = \pi r^2$$

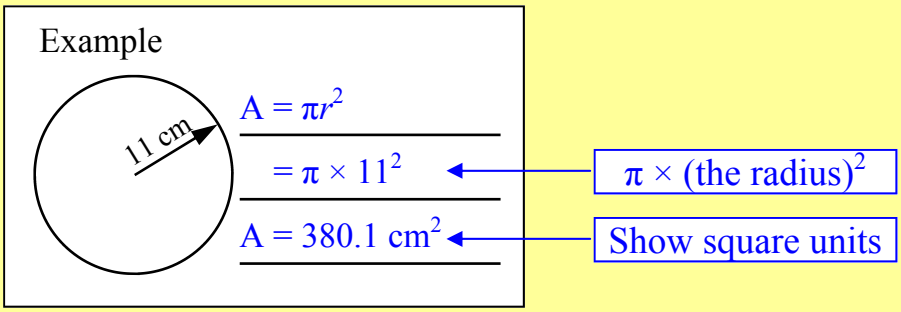
Where:

A = Area of the circle, in the same units as the radius, but squared. (cm^2, m^2, mm^2)
r = The radius of the circle (distance from centre to circumference).

Sheet 1 starts with you being asked to estimate the area of a circle. This is achieved by placing the circle in a cm^2 grid, then counting the grids within the circle. Question 1 is started for you to show you how it is done. Note the symmetry, this will make it easier for you.

After you have finished estimating the areas, use $\pi = 3.14$ and calculate the areas of the circles more accurately. See how you went.

Sheet 2 is finding the area of a circle using the 'Pi' key on your calculator. The location of π will vary, it can have its own button or require the pressing of the SHIFT key or 2ndF key. Column 1 starts with some questions on calculator use. Then the area of circles questions Commence. The process I straight forward, simply multiply π with the square of the radius. Below is an example.



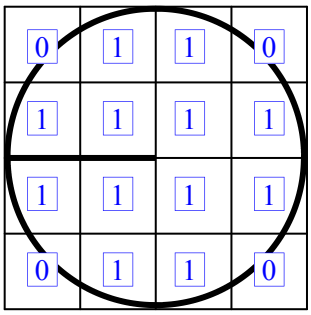
Column 2 is the same as Column 1 except for one additional step. Instead of the radius you are given the diameter. So convert the diameter to a radius by dividing it by 2, write the radius in the space provided at the top of the question. Then solve the questions the same way, using the radius in your calculation.

Area of a Circle (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Estimate the area of these circles, using the 1 cm^2 grid squares. If square is close to a ½, call it ½. Less than ½ filled, call it zero. If it is close to full, call it 1 cm^2. Add them up and estimate the area.

1

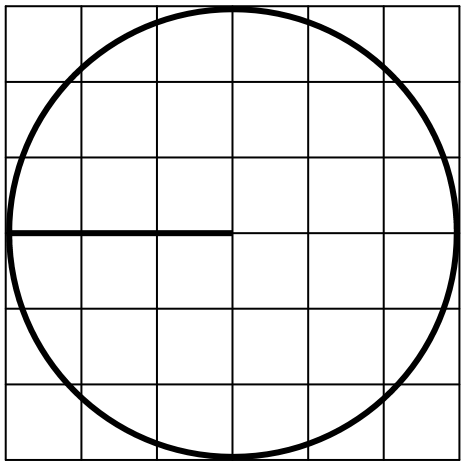


A = 12 × 1

\+ 0 × ½

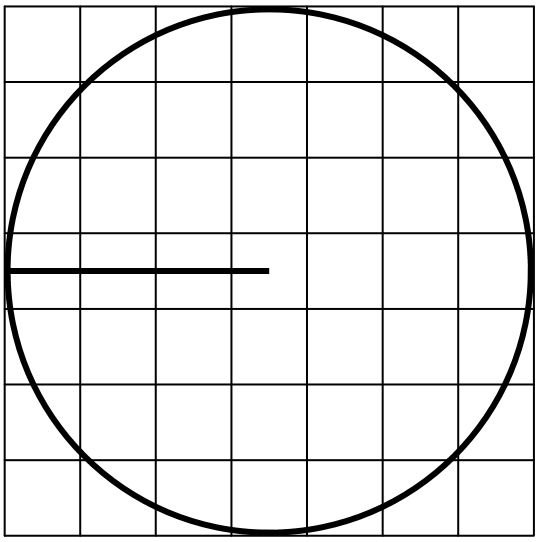
A = ____ cm^2

2



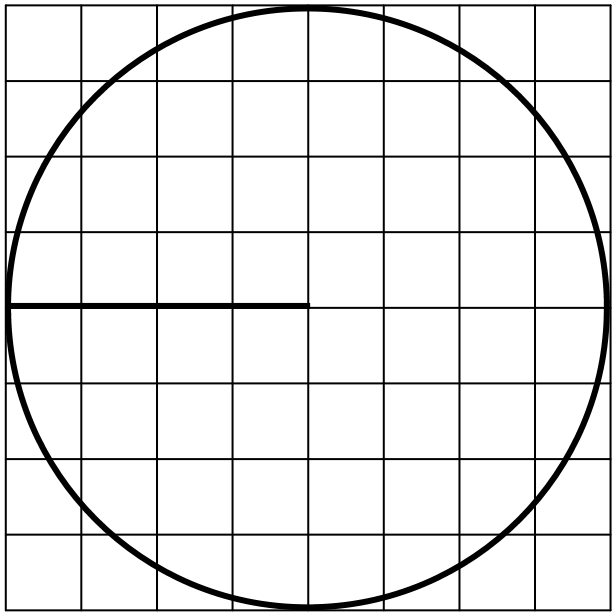
A = ____ × 1 + ____ × ½ = ____ cm^2

3



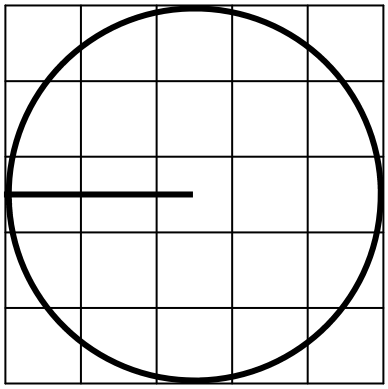
A = ____ × 1 + ____ × ½ = ____ cm^2

4



A = ____ × 1 + ____ × ½ = ____ cm^2

5



A = ____ × 1 + ____ × ½ = ____ cm^2

Now more accurately estimate the area by using $A = 3.14 \times r^2$. Compare the answer with your grid answer you calculated for the first four circles.

6 Circle in Q.1.

$A = 3.14 \times r^2$

$= 3.14 \times$ ____^{2}

Radius = length of black line

A = ____ cm^2

Answer to nearest half cm.

Area of Semi-Circles and Quadrants

The formula for calculating the area of a semi-circle is:

$$A = \tfrac{1}{2}\pi r^2$$

Where:

A = Area of the semi-circle, in the same units as the radius, but squared. (cm^2, etc)
r = The radius of the semi-circle (distance from centre to circumference).

Column 1 features semi-circles with the radius shown. Use the area formula above to calculate the answer. The answer should be rounded to 1 decimal place and the units should be shown as square units. There is an example at the top of the column.

Column 2 and column 3 are the same as Column 1 except for one additional step. Instead of the radius you are given the diameter. So convert the diameter to a radius by dividing it by 2, write the radius in the space provided, next to the question number. Then solve the questions the same way.

At the bottom of the page are three semi-circles. Use a ruler to measure the diameter, then divide the length by two to get the radius. Then calculate the area

The formula for calculating the area of a quadrant is:

$$A = \tfrac{1}{4}\pi r^2$$

Where:

A = Area of the quadrant, in the same units as the radius, but squared. (cm^2, etc)
r = The radius of the quadrant (distance from centre to circumference).

Column 1 starts off with some calculator questions, realise that ¼ can be used on your calculator with the fraction key but it may be easier to use 0.25

The rest of the questions are using the quadrant formula. There is an example before Q.7. Note that you are generally given a radius with a quadrant unlike diameters which could feature a radius or diameter.

At the bottom of the page are three quadrants. Use a ruler to measure the radius, then calculate the area

Area of Semi-Circles and Quadrants (Sheet 1)

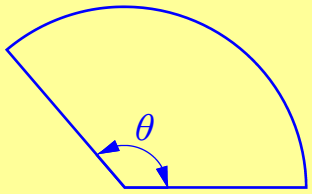
Area of Sectors

If you know how to multiply by a fraction and how to find the area of a circle, then these worksheets simply blends the two skills.

The formula for calculating the area of a circle is $A = \pi r^2$. But with sectors the circle formula is multiplied by a fraction. The formula for the Area of a sector is:

$$A = \frac{\theta}{360} \times \pi r^2$$



Where:

A = Area of the circle, in the same units as the radius, but squared. (cm^2, m^2, mm^2)
θ = The internal angle of the sector (measured in degrees '°')
r = The radius of the circle (distance from centre to circumference).

Column 1 starts with fractions of a circle. This is the internal angle over 360°. So using your calculator's fraction key, enter the fraction and press '=' to simplify it. Note that you may be given an external angle, that is, the angle outside the sector. If given an external angle, subtract it from 360° first, (Internal angle = 360° - external angle), before calculating the fraction.

Column 2 introduces the calculation process by giving calculations that are the same as the area calculation. There is a calculator key step process shown underneath Q.10. Then from Q.16 you are asked to calculate the area of a sector. There is an example above Q.16. All these questions feature internal angles, remember to show square units (mm^2, cm^2, m^2, etc.)

The second sheet deals firstly with external angle questions. So these have a 2-step process. The first step is to subtract the angle from 360° to get an internal angle, then solve the same as before.

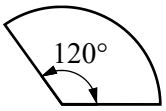
The second column is four questions on Area of Sectors, but this time you have to measure the angle with a protractor and measure the radius with a ruler. Then using the measurements, calculate the area using the spaces at the base of the column.

Area of Sectors (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Write the fraction of a circle with a denominator of 360, then simplify with your calculator.

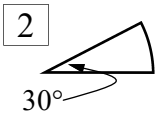
1



$\frac{\square}{360} = \frac{\square}{\square}$

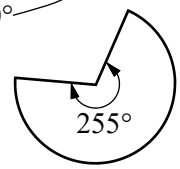
Calc: 1 2 0 ▪ 3 6 0 =

2



$\frac{\square}{\square} = \frac{\square}{\square}$

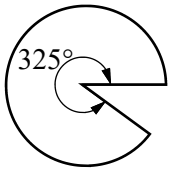
3



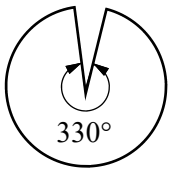
$\frac{\square}{\square} = \frac{\square}{\square}$

4

$\frac{\square}{\square} = \frac{\square}{\square}$



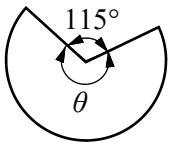
5



$\frac{\square}{\square} = \frac{\square}{\square}$

Find the internal angle θ, by subtracting from 360°. Then solve for the fraction as above.

6



$\theta = 360 - 115$

$\theta = \square°$

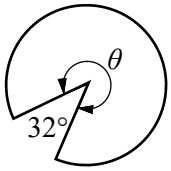
$\frac{\square}{360} = \frac{\square}{\square}$

7

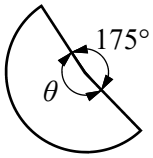
$\theta = 360 - \square$

$\theta = \square°$

$\frac{\square}{\square} = \frac{\square}{\square}$



8



$\theta =$

$\theta =$

$\frac{\square}{\square} = \frac{\square}{\square}$

9

12 $\frac{212}{360} \times \pi \times 25^2 =$ **1 156.3**

13 $\frac{90}{360} \times \pi \times 34.3^2 =$ **924.0**

14 $\frac{322}{360} \times \pi \times 40.8^2 =$ **4 677.6**

15 $\frac{159}{360} \times \pi \times 19.6^2 =$ **533.0**

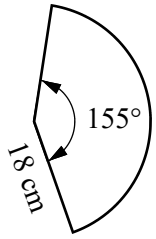
Calculate the area of these sectors, answering to 1 d.p.

Example

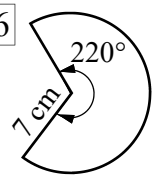
$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{155}{360} \times \pi \times 18^2$

$A = 438.3 \text{ cm}^2$



16



$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{220}{360} \times \pi \times 7^2$

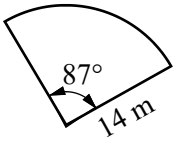
$A = 94.1 \text{ cm}^2$

17

$A = \frac{\theta}{360} \times \pi r^2$

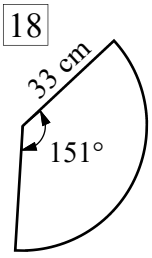
$= \frac{87}{360} \times \pi \times 14^2$

$A = 148.8 \text{ m}^2$



Remember to square the radius!

18

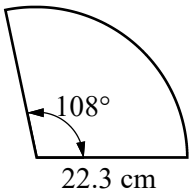


$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{151}{360} \times \pi \times 33^2$

$A = 1\,435.0 \text{ cm}^2$

19



$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{108}{360} \times \pi \times 22.3^2$

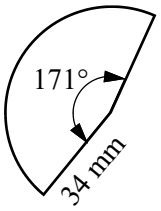
$A = 468.7 \text{ cm}^2$

20

$A = \frac{\theta}{360} \times \pi r^2$

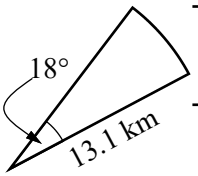
$= \frac{171}{360} \times \pi \times 34^2$

$A = 1\,725.0 \text{ mm}^2$



21

$A = \frac{\theta}{360} \times \pi r^2$



$= \frac{18}{360} \times \pi \times 13.1^2$

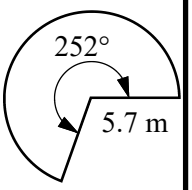
$A = 27.0 \text{ km}^2$

22

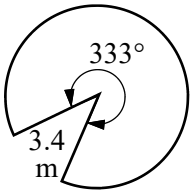
$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{252}{360} \times \pi \times 5.7^2$

$A = 71.4 \text{ m}^2$



23

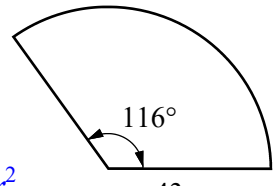


$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{333}{360} \times \pi \times 3.4^2$

$A = 33.6 \text{ m}^2$

24



$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{116}{360} \times \pi \times 43^2$

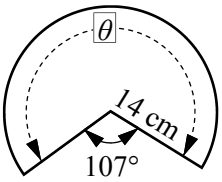
$A = 1\,871.7 \text{ cm}^2$

Area of Sectors (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the internal angle θ, then calculate the area of the sectors, rounding your answer to 1 d.p.

1



$\theta = 360 - 107$

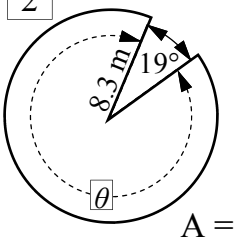
$\theta = 253°$

$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{253}{360} \times \pi \times 14^2$

$A = 432.7 \text{ cm}^2$

2

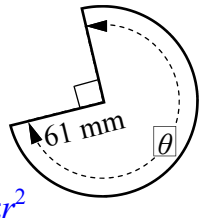


$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{341}{360} \times \pi \times 8.3^2$

$A = 205.0 \text{ m}^2$

3



$\theta = 360 - 90$

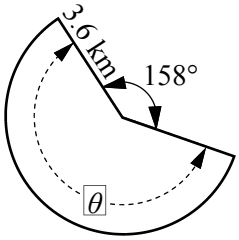
$\theta = 270°$

$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{270}{360} \times \pi \times 61^2$

$A = 8\,767.4 \text{ mm}^2$

4



$\theta = 360 - 158$

$\theta = 202°$

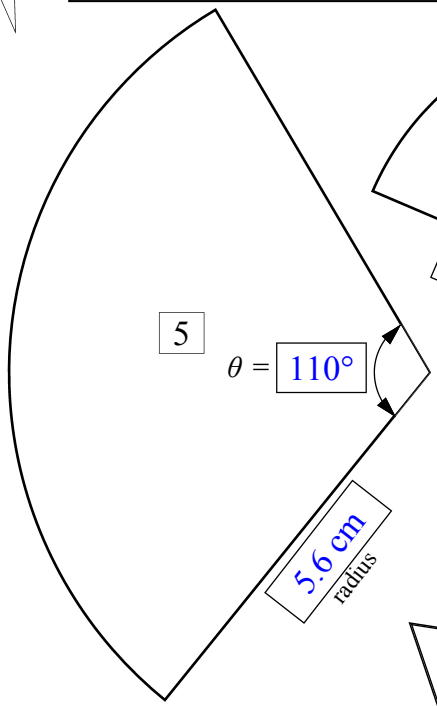
$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{158}{360} \times \pi \times 3.6^2$

$A = 17.9 \text{ km}^2$

Measure the radius in cm to 1 decimal place, measure the angle to the nearest degree, then find the area (1 d.p.). Ruler and protractor needed!

5

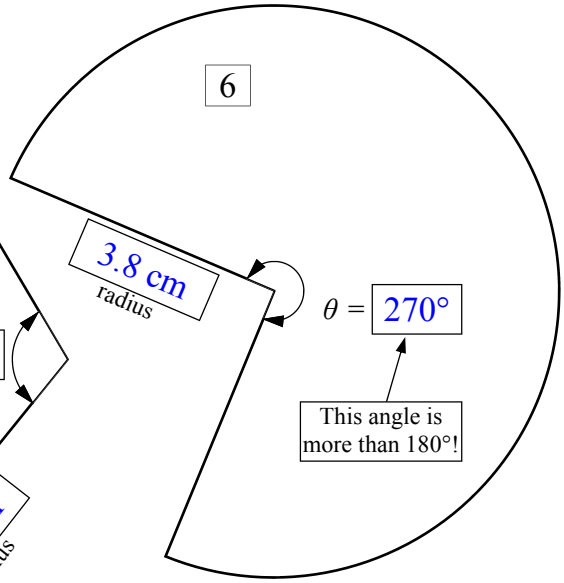


$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{110}{360} \times \pi \times 5.6^2$

$A = 30.1 \text{ cm}^2$

6

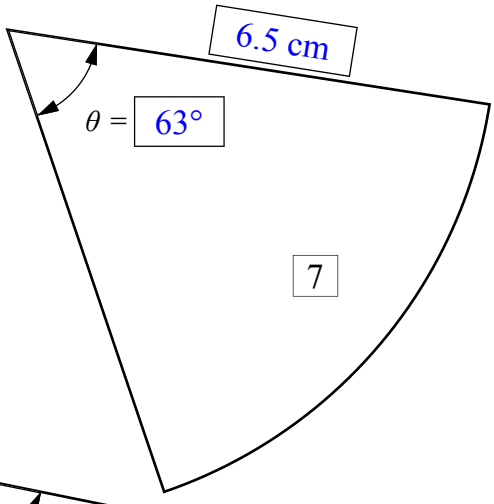


$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{270}{360} \times \pi \times 3.8^2$

$A = 34.0 \text{ cm}^2$

7

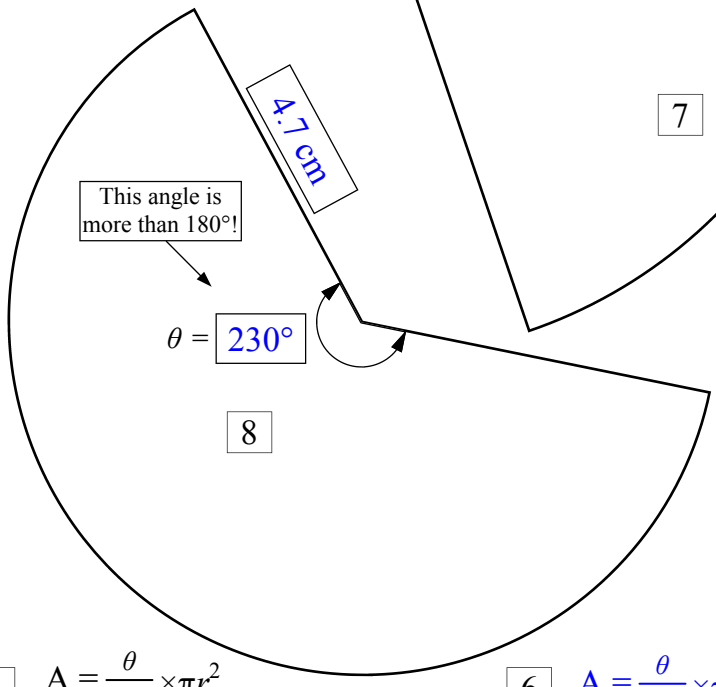


$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{63}{360} \times \pi \times 6.5^2$

$A = 23.2 \text{ cm}^2$

8



$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{230}{360} \times \pi \times 4.7^2$

$A = 44.3 \text{ km}^2$

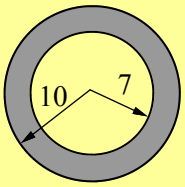
The Annulus

An annulus is a ring-like figure, in other words a circle within another circle. Most students recognise the similarity with the word ‘anus’, as well as the similar appearance. For this reason it is usually an easy mathematical word to remember!

Column 1 deals with calculating the area of an annulus. The process is to calculate the outside circle’s area, then calculate the inside circle’s area, then subtract them. An example is below.

Example - Area of an Annulus



Lengths are in cm

$A_1 = \pi R^2$

$= \pi \times 10^2$

$A_1 = 314.2 \text{ cm}^2$ (1 dp)

Capital R, means ‘big’ radius.

So A_1 is the area of the outside circle.

$A_2 = \pi r^2$

$= \pi \times 7^2$

$A_2 = 153.9 \text{ cm}^2$ (1 dp)

Lower case r, means ‘small’ radius.

So A_2 is the area of the inside circle.

$A = A_1 - A_2 = 314.2 - 153.9$

$A = 160.3 \text{ cm}^2$

Then subtract for the annulus area. The larger area - smaller area.

Column 2 of the first sheet adds a step by giving some measurements as diameters. Change any diameters to radii (plural of radius) first. Then solve the same way.

Sheet 2 introduces the annulus formula. This is a faster way of solving exercises but it is important that you understand the process above as well. The formula is:

$$A = \pi (R^2 - r^2)$$

Where:

A = Area of annulus
R = outside circle’s radius
r = inside circle’s radius

This formula uses the radius, so when you are given diameters (most of the second column) you have to divide by 2 first.

The Annulus (Circle Formula) - Sheet 1

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the outside area and the inside area, then subtract to find the shaded area. (1 d.p.)

All measurements are in cm

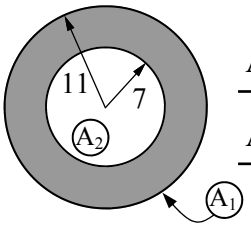
Find the outside area and the inside area, then subtract to find the shaded area. (1 d.p.)

All measurements are in cm

1 $A_1 = \pi R^2$ $= \pi \times 11^2$ $A_1 =$ 380.1 cm²

$A_2 = \pi r^2$ $= \pi \times 7^2$ $A_2 =$ 153.9 cm²



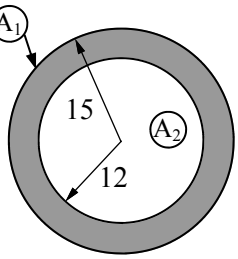
$A =$ 380.1 - 153.9

$A =$ 226.2 cm²

2 $A_1 = \pi R^2$ $= \pi \times$ 15 ² $A_1 =$ 706.9 cm²

This Annulus

$A_2 = \pi r^2$ $= \pi \times$ 12 ² $A_2 =$ 452.4 cm²

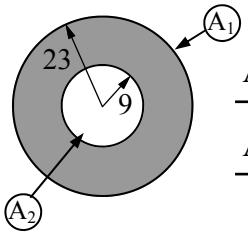


$A =$ 706.9 - 452.4

$A =$ 254.5 cm²

3 $A_1 = \pi R^2$ $= \pi \times$ 23 ² $A_1 =$ 1 661.9 cm²

$A_2 = \pi r^2$ $= \pi \times$ 9 ² $A_2 =$ 254.5 cm²



$A =$ 1 661.9 - 254.5

$A =$ 1 407.4 cm²

4

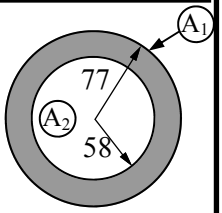
$A_1 = \pi R^2$ $= \pi \times 77^2$ $A_1 = 18\,626.5$ cm²

This Annulus

$A_2 = \pi r^2$ $= \pi \times 58^2$ $A_2 = 10\,568.3$ cm²

$A = 18\,626.5 - 10\,568.3$

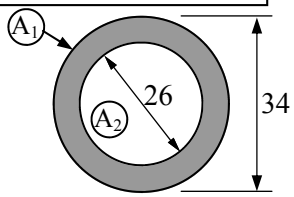
$A = 8\,058.2$ cm²



Change diameters to radii first, before calculation of the shaded area. All lengths are in cm. (1 d.p.)

5 $R =$ 17 cm

$r =$ 13 cm

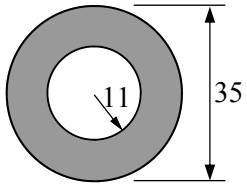


$A_1 = \pi R^2$ $= \pi \times 17^2$ $A_1 = 907.9$ cm²

$A_2 = \pi r^2$ $= \pi \times 13^2$ $A_1 = 530.9$ cm²

$A = 907.9 - 530.9 = 377.0$ cm²

6 $R =$ 17.5 cm



$A_1 = \pi R^2$ $= \pi \times 17.5^2$ $A_1 = 962.1$ cm²

$A_2 = \pi r^2$ $= \pi \times 11^2$ $A_2 = 380.1$ cm²

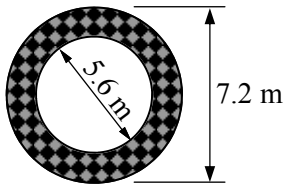
$A = 962.1 - 380.1 = 582.0$ cm²

A plan view of a proposed circular swimming pool is shown below. The pool is to have a circular tiled area surrounding it with a fence around the tiled area.

7 Find the tiled (shaded) area (1 d.p.)

$R =$ 3.6 m

$r =$ 2.8 m



$A_1 = \pi R^2$ $= \pi \times 3.6^2$ $A_1 = 40.7$ m²

$A_2 = \pi r^2$ $= \pi \times 2.8^2$ $A_2 = 24.6$ m²

$A = 40.7 - 24.6 = 16.1$ m²

8 Find the cost of tiling the area given that the tiles cost \$47.55/m² and are sold in whole m² only.

Cost = 47.55 × 17 (17 m² required)

Cost = \$808.35

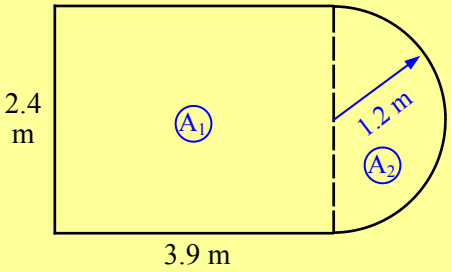
Area of Composite Shapes

A composite shape is a shape that is composed of other plane shapes. The shape can be broken up into these shapes and the area calculated by either adding the shapes together, or subtracting them.

Areas on the diagram are labeled, such as A_1, A_2 etc. Below is an example.

Example - Find the area to 1 d.p.



The radius is 1.2 m because it is half of the 2.4 m side.

The shape consists of a rectangle and a semi-circle.

$A_1 = lb$

$= 2.4 \times 3.9$

$A_1 = 9.4 \text{ m}^2$

$A_2 = \frac{1}{2}\pi r^2$

$= \frac{1}{2} \times \pi \times 1.2^2$

$A_2 = 2.3 \text{ m}^2$

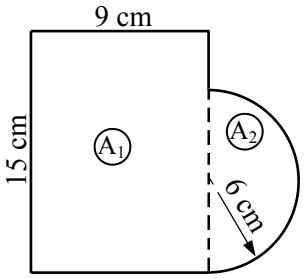
$A = A_1 + A_2 = 9.4 + 2.3 = 11.7 \text{ m}^2$ ← Add the two areas together for the answer

Area - Composite Shapes (Circular) - Sheet 1

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Calculate the area of these shapes by breaking the shapes into parts first. All angles that look like right angles, are right angles! Answer to 1 d.p.

1



$A_1 = lb$

$= \square \times \square$

$A_1 = \square$ cm^2

$A_2 = \frac{1}{2}\pi r^2$

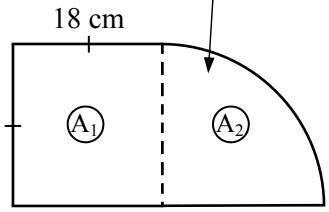
$= \frac{1}{2} \times \pi \times \square^2$

$A_2 = \square$ cm^2

$A = \square + \square = \square$ cm^2

2

Radius of the Quadrant is the same as the side of the square



$A_1 = l^2$

$= \square^2$

$A_1 = \square$ cm^2

$A_2 = \frac{1}{4}\pi r^2$

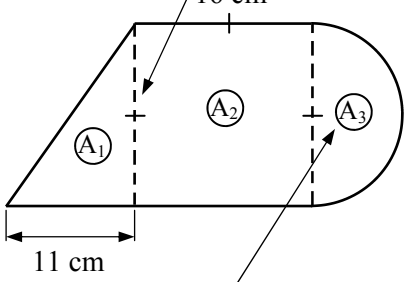
$= \frac{1}{4} \times \pi \times \square^2$

$A_2 = \square$ cm^2

$A = \square + \square = \square$ cm^2

3

Height of the triangle is the same as square side length.



Radius of semi-circle is half the side length of the square.

$A_1 = \frac{1}{2}bh$

$= \frac{1}{2} \times \square \times \square$

$A_1 = \square$ cm^2

$A_2 = l^2$

$= \square^2$

$A_2 = \square$ cm^2

$A_3 = \frac{1}{2}\pi r^2$

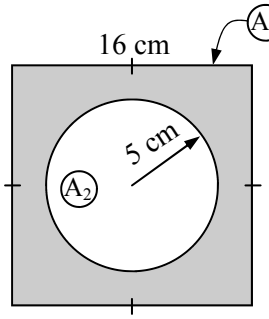
$= \frac{1}{2} \times \pi \times \square^2$

$A_3 = \square$ cm^2

$A =$

Find the shaded area, subtract the smaller area from the larger one. Answer to 1 d.p.

4



$A_1 = l^2$

$= \square^2$

$A_1 = \square$ cm^2

$A_2 = \pi r^2$

$= \pi \times \square^2$

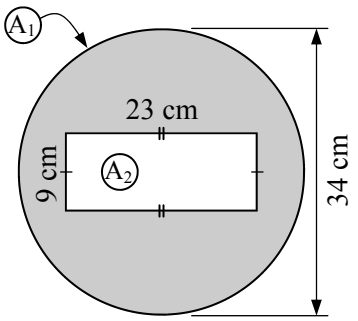
$A_2 = \square$ cm^2

$A = \square - \square = \square$ cm^2

5

Find the radius of the circle first

$r = \square$ cm



$A_1 = \pi r^2$

$= \pi \times \square^2$

$A_1 = \square$ cm^2

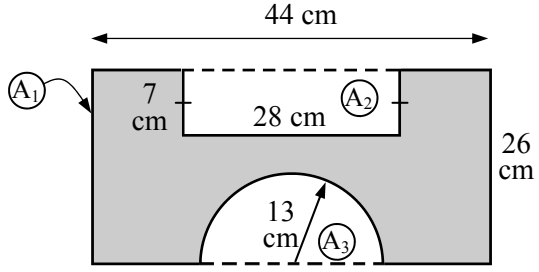
$A_2 = lb$

$= \square \times \square$

$A_2 = \square$ cm^2

$A =$

6



$A_1 = lb$

$= \square \times \square$

$A_1 = \square$ cm^2

$A_2 = lb$

$= \square \times \square$

$A_2 = \square$ cm^2

$A_3 = \frac{1}{2}\pi r^2$

$= \frac{1}{2} \times \pi \times \square^2$

$A_3 = \square$ cm^2

$A =$

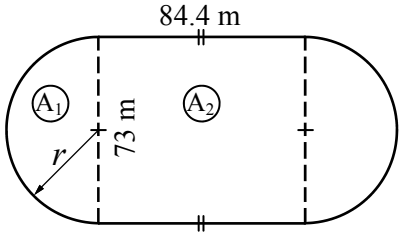
Area - Composite Shapes (Circular) - Sheet 2

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your composite area skills to find these. Answer to 1 decimal place when required.

An athletics field is shown. Find the:



1 Radius of the semi-circle $r =$ ____

2 Area (A_1)

$A_1 = \frac{1}{2}\pi r^2$

$= \frac{1}{2} \times \pi \times$ ____^{2}

$A_1 =$ ____ m^2

3 Area (A_2)

$A_2 = lb$

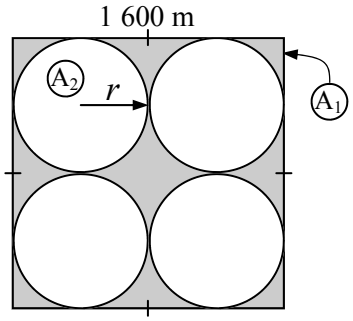
$=$ ____ $\times$ ____

$A_2 =$ ____ m^2

4 Total field area.

5 If 1 m^2 requires 2.2 L of water, how much water is required to irrigate the entire field.

A square field has four identical circular fields fitting perfectly within it. Find the:



6 Radius of the circular field $r =$ ____

7 Area (A_1)

$A_1 = l^2$

8 Area (A_2)

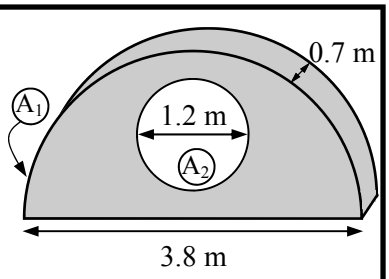
$A_2 = \pi r^2$

9 Amount of the square field which is unused.

10 The percentage of the square field unused.

% Unused = $\frac{\text{Q9}}{\text{Q7}} \times 100 =$ ____

A concrete anchor block for bridge cabling is shown. It is semi-circular with a circular opening. Find the:



11 Radius of the circle $r =$ ____

12 Radius of the semi-circle $R =$ ____

13 Area (A_1)

$A_1 = \frac{1}{2}\pi R^2$

14 Area (A_2)

$A_2 = \pi r^2$

15 Area of the concrete (shaded) face.

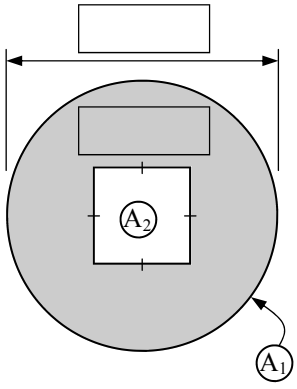
16 Use: $V = Ah$ to find the volume of concrete.

Volume is the face area (Q.15) multiplied by the block's depth (0.7 m).

$V = Ah$

$=$ ____ $\times$ ____

$V =$ ____ m^3



A circular washer with a 25 mm diameter has a square hole with 9 mm sides through its centre. Write these lengths in the boxes on the diagram, then find:

17 Radius of the circle $r =$ ____

18 Area (A_1)

$A_1 = \pi r^2$

19 Area (A_2)

$A_2 = l^2$

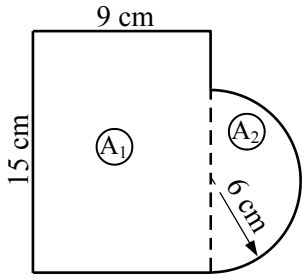
20 Face area of the steel washer (shaded area).

Area - Composite Shapes (Circular) - Sheet 1

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Calculate the area of these shapes by breaking the shapes into parts first. All angles that look like right angles, are right angles! Answer to 1 d.p.

1



$A_1 = lb$

$= 15 \times 9$

$A_1 = 135$ cm^2

$A_2 = \frac{1}{2}\pi r^2$

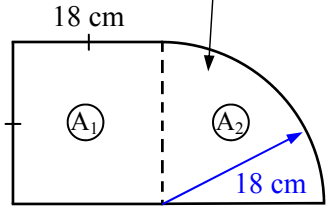
$= \frac{1}{2} \times \pi \times 6^2$

$A_2 = 56.5$ cm^2

$A = 135 + 56.5 = 191.5$ cm^2

2

Radius of the Quadrant is the same as the side of the square



$A_1 = l^2$

$= 18^2$

$A_1 = 324$ cm^2

$A_2 = \frac{1}{4}\pi r^2$

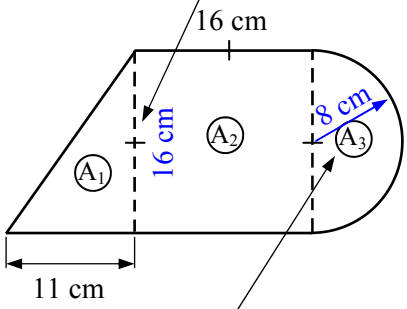
$= \frac{1}{4} \times \pi \times 18^2$

$A_2 = 254.5$ cm^2

$A = 324 + 254.5 = 578.5$ cm^2

3

Height of the triangle is the same as square side length.



Radius of semi-circle is half the side length of the square.

$A_1 = \frac{1}{2}bh$

$= \frac{1}{2} \times 11 \times 16$

$A_1 = 88$ cm^2

$A_2 = l^2$

$= 16^2$

$A_2 = 256$ cm^2

$A_3 = \frac{1}{2}\pi r^2$

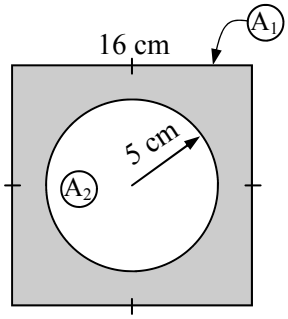
$= \frac{1}{2} \times \pi \times 8^2$

$A_3 = 100.5$ cm^2

$A = 88 + 256 + 100.5 = 444.5$ cm^2

Find the shaded area, subtract the smaller area from the larger one. Answer to 1 d.p.

4



$A_1 = l^2$

$= 16^2$

$A_1 = 256$ cm^2

$A_2 = \pi r^2$

$= \pi \times 5^2$

$A_2 = 78.5$ cm^2

$A = 256 - 78.5 = 177.5$ cm^2

5

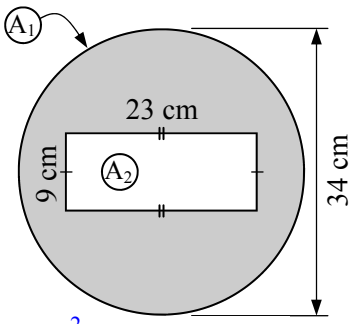
Find the radius of the circle first

$r = 17$ cm

$A_1 = \pi r^2$

$= \pi \times 17^2$

$A_1 = 907.9$ cm^2



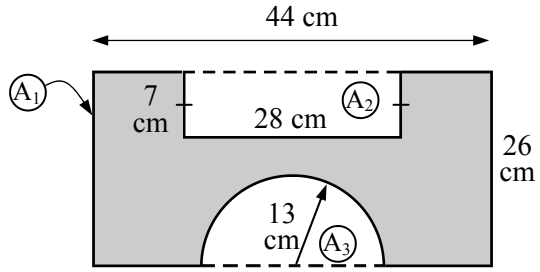
$A_2 = lb$

$= 23 \times 9$

$A_2 = 207$ cm^2

$A = 907.9 - 207 = 700.9$ cm^2

6



$A_1 = lb$

$= 44 \times 26$

$A_1 = 1\,144$ cm^2

$A_2 = lb$

$= 28 \times 7$

$A_2 = 196$ cm^2

$A_3 = \frac{1}{2}\pi r^2$

$= \frac{1}{2} \times \pi \times 13^2$

$A_3 = 265.5$ cm^2

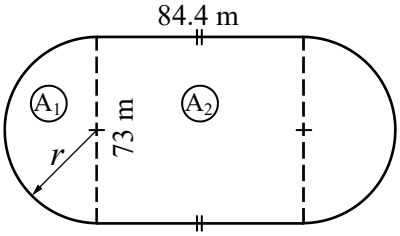
$A = 1\,144 - 196 - 265.5 = 682.5$ cm^2

Area - Composite Shapes (Circular) - Sheet 2

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your composite area skills to find these. Answer to 1 decimal place when required.

An athletics field is shown. Find the:



1 Radius of the semi-circle $r =$ 36.5 m

2 Area (A_1)

$A_1 = \frac{1}{2}\pi r^2$

$= \frac{1}{2} \times \pi \times$ 36.5 ^{2}

$A_1 =$ 2 092.7 m^2

3 Area (A_2)

$A_2 = lb$

$=$ 84.4 $\times$ 73

$A_2 =$ 6 161.2 m^2

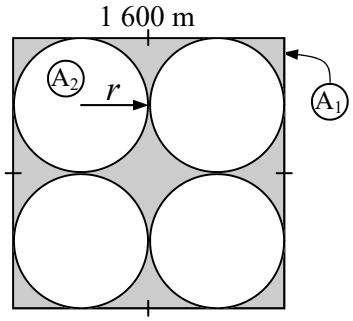
4 Total field area.

$A = 2 \times 2\,092.7 + 6\,161.2 = 10\,346.6\ m^2$

5 If 1 m^2 requires 2.2 L of water, how much water is required to irrigate the entire field.

Water = 10 346.6 × 2.2 = 22 762.52 L

A square field has four identical circular fields fitting perfectly within it. Find the:



6 Radius of the circular field $r =$ 400 m

7 Area (A_1)

$A_1 = l^2$

$= 1\,600^2$

$A_1 = 2\,560\,000\ m^2$

8 Area (A_2)

$A_2 = \pi r^2$

$= \pi \times 400^2$

$A_2 = 502\,654.8\ m^2$

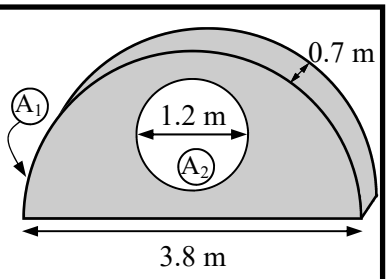
9 Amount of the square field which is unused.

$A = 2\,560\,000 - 4 \times 502\,654.8 = 549\,380.8\ m^2$

10 The percentage of the square field unused.

$$\%\ \text{Unused} = \frac{549\,380.8}{2\,560\,000} \times 100 = 21.5\%$$

A concrete anchor block for bridge cabling is shown. It is semi-circular with a circular opening. Find the:



11 Radius of the circle $r =$ 0.6 m

12 Radius of the semi-circle $R =$ 1.9 m

13 Area (A_1)

$A_1 = \frac{1}{2}\pi R^2$

$= \frac{1}{2} \times \pi \times 1.9^2$

$A_1 = 5.7\ m^2$

14 Area (A_2)

$A_2 = \pi r^2$

$= \pi \times 0.6^2$

$A_2 = 1.1\ m^2$

15 Area of the concrete (shaded) face.

$A = 5.7 - 1.1 = 4.6\ m^2$

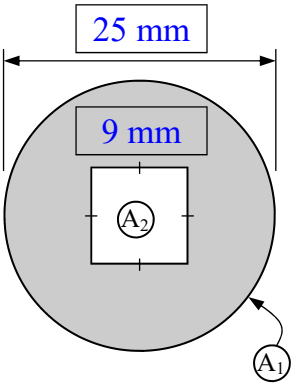
16 Use: $V = Ah$ to find the volume of concrete.

Volume is the face area (Q.15) multiplied by the block's depth (0.7 m).

$V = Ah$

$=$ 4.6 $\times$ 0.7

$V =$ 3.2 m^3



A circular washer with a 25 mm diameter has a square hole with 9 mm sides through its centre. Write these lengths in the boxes on the diagram, then find:

17 Radius of the circle $r =$ 12.5 mm

18 Area (A_1)

$A_1 = \pi r^2$

$= \pi \times 12.5^2$

$A_1 = 490.9\ mm^2$

19 Area (A_2)

$A_2 = l^2$

$= 9^2$

$A_2 = 81\ mm^2$

20 Face area of the steel washer (shaded area).

$A = 490.9 - 81 = 409.9\ mm^2$

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Formula List

Squares: $A = l^2$
Rectangles: $A = lb$
Triangles: $A = \frac{1}{2}bh$
Circles: $A = \pi r^2$
Annulus: $A = \pi(R^2 - r^2)$
Sector: $A = \frac{\theta}{360}\ \pi r^2$
Parallelograms: $A = bh$
Rhombus and Kites: $A = \frac{1}{2}xy$
Trapeziums: $A = \frac{1}{2}(a + b)h$

Pythagoras Theorem:
$c^2 = a^2 + b^2$

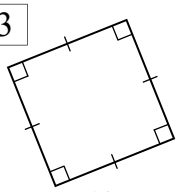
Use one of these words to make the two sentences correct:
Square, length, base or space.

1 Area is the measurement of _____ inside a shape.

2 Area is measured in _____ units.

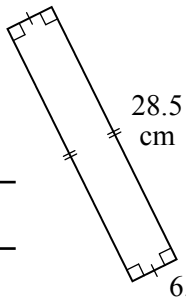
Find the area of these shapes, answer to 1 decimal place.

3

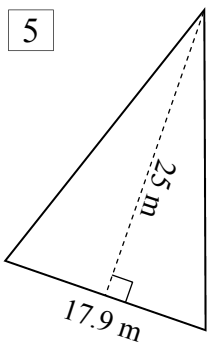


19 cm

4

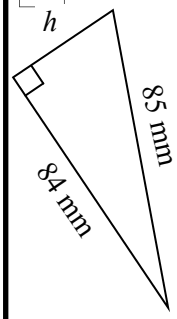


5



Use Pythagoras Theorem to find the height of this triangle, 'h'.

6

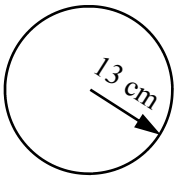


Find the area of the triangle above.

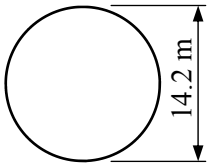
7

Calculate the area of the two circles below, answering to 1 decimal place.

8

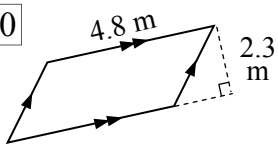


9



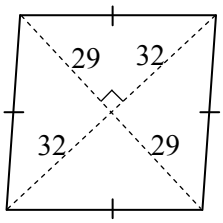
Calculate the area of these shapes, answering to 1 d.p. when necessary.

10

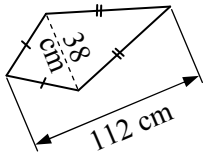


11

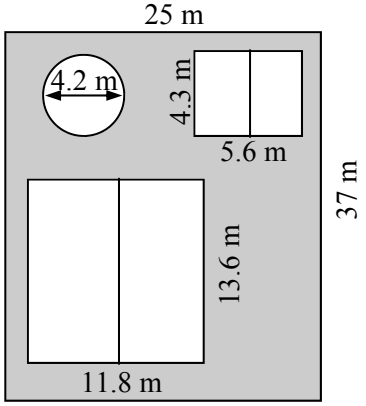
Lengths are in cm



12



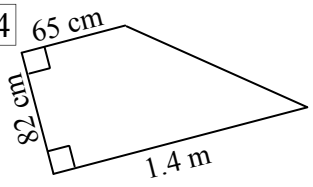
13 The plan view shows a house block with a house, garage and pool. Find the undeveloped area (shaded area), answering to 1 d.p.



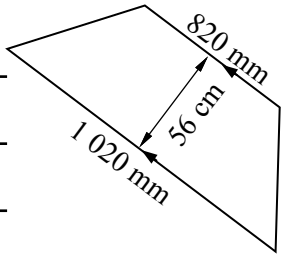
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of the trapeziums shown.
Give the area in cm^2.

14



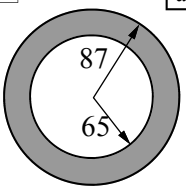
15



Find the area of the annulus shown, answering to 1 d.p.

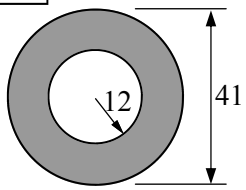
16

Lengths are in cm



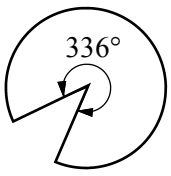
17

Lengths are in cm



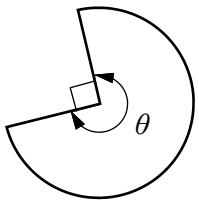
Calculate the fraction of a circle these sectors represent.
Fully simplify your answer.

18



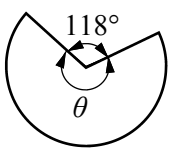
$\frac{\square}{\square} = \frac{\square}{\square}$

19



$\frac{\square}{\square} = \frac{\square}{\square}$

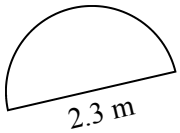
20



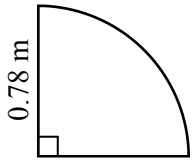
$\frac{\square}{\square} = \frac{\square}{\square}$

Find the area of the semi-circle and quadrant shown.
Answer to 2 d.p.

21

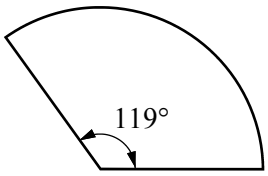


22

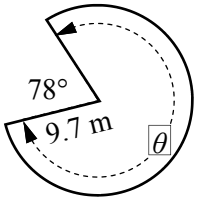


Find the area of the sectors shown. Answering to 1 d.p.

23



24



Find the area of the shape below, answering to 1 d.p.

25

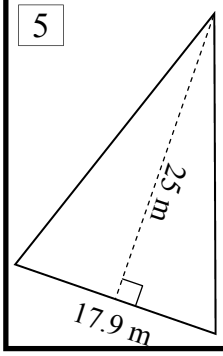
$= 28.5 \times 6.3$
$A = 179.6 \text{ cm}^2$

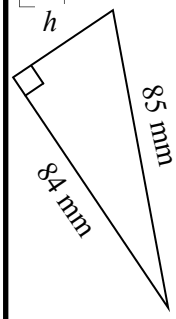
5



$A = \frac{1}{2}bh$
$= \frac{1}{2} \times 17.9 \times 25$
$A = 223.8 \text{ m}^2$

Use Pythagoras Theorem to find the height of this triangle, 'h'.

6



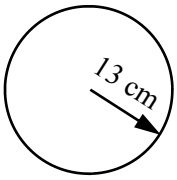
$h^2 = 85^2 - 84^2$
$h^2 = 169$
$h = \sqrt{169}$
$h = 13 \text{ mm}$

Find the area of the triangle above.

7 $A = \frac{1}{2}bh$
$= \frac{1}{2} \times 84 \times 13$
$A = 546 \text{ mm}^2$

Calculate the area of the two circles below, answering to 1 decimal place.

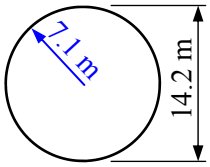
8



$A = \pi r^2$
$= \pi \times 13^2$
$A = 530.9 \text{ cm}^2$

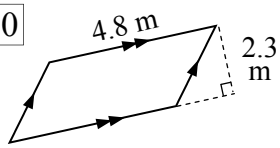
9

$A = \pi r^2$
$= \pi \times 7.1^2$
$A = 158.4 \text{ m}^2$



Calculate the area of these shapes, answering to 1 d.p. when necessary.

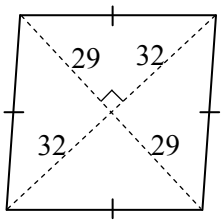
10



$A = bh$
$= 4.8 \times 2.3$
$A = 11.0 \text{ m}^2$

11

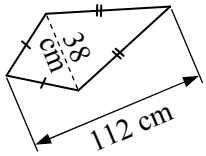
Lengths are in cm



32 + 32 = 64
29 + 29 = 58

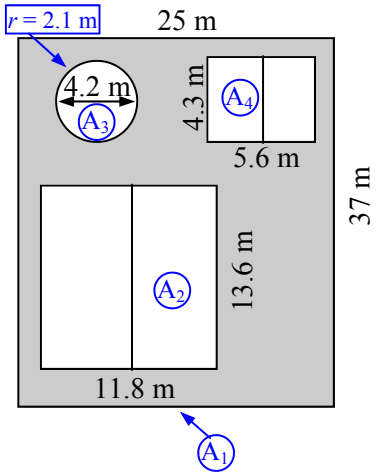
$A = \frac{1}{2}xy$
$= \frac{1}{2} \times 64 \times 58$
$A = 1\,856 \text{ cm}^2$

12



$A = \frac{1}{2}xy$
$= \frac{1}{2} \times 38 \times 112$
$A = 2\,128 \text{ m}^2$

13 The plan view shows a house block with a house, garage and pool. Find the undeveloped area (shaded area), answering to 1 d.p.



$A_1 = lb$
$= 37 \times 25$
$A_1 = 925 \text{ m}^2$

$A_2 = lb$
$= 11.8 \times 13.6$
$A_2 = 160.5 \text{ m}^2$

$A_3 = \pi r^2$
$= \pi \times 2.1^2$
$A_1 = 13.9 \text{ m}^2$

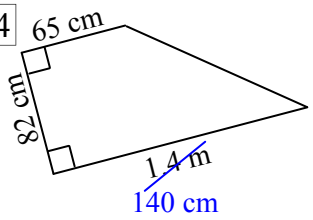
$A_4 = lb$
$= 5.6 \times 4.3$
$A_4 = 24.1 \text{ m}^2$

$A = 925 - 160.5 - 13.9 - 24.1$
$A = 726.5 \text{ m}^2$

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of the trapeziums shown.
Give the area in cm^2.

14



$A = \frac{1}{2}(a + b)h$

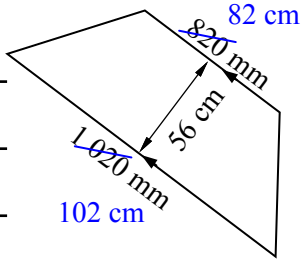
$= \frac{1}{2} \times (65 + 140) \times 82$

$A = 8\,405 \text{ cm}^2$

15 $A = \frac{1}{2}(a + b)h$

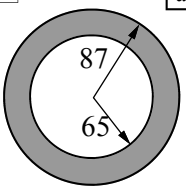
$= \frac{1}{2} \times (82 + 102) \times 56$

$A = 5\,152 \text{ cm}^2$



Find the area of the annulus shown, answering to 1 d.p.

16

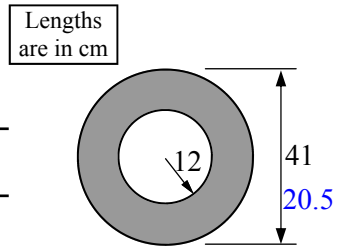


$A = \pi(R^2 - r^2)$

$= \pi \times (87^2 - 65^2)$

$A = 10\,505.5 \text{ cm}^2$

17



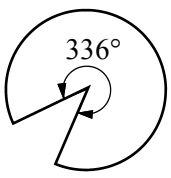
$A = \pi(R^2 - r^2)$

$= \pi \times (20.5^2 - 12^2)$

$A = 867.9 \text{ cm}^2$

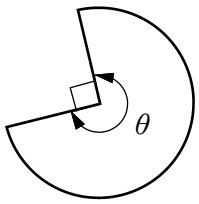
Calculate the fraction of a circle these sectors represent.
Fully simplify your answer.

18



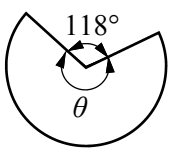
$\frac{336}{360} = \frac{14}{15}$

19



$\frac{270}{360} = \frac{3}{4}$

20



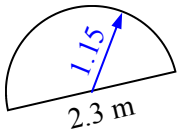
$\theta = 360 - 118$

$\theta = 242°$

$\frac{242}{360} = \frac{121}{180}$

Find the area of the semi-circle and quadrant shown.
Answer to 2 d.p.

21

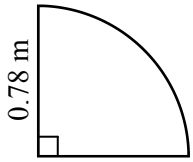


$A = \frac{1}{2}\pi r^2$

$= \frac{1}{2} \times \pi \times 1.15^2$

$A = 2.08 \text{ m}^2$

22



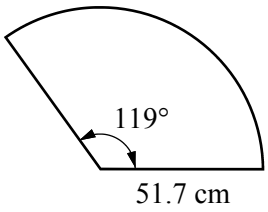
$A = \frac{1}{4}\pi r^2$

$= \frac{1}{4} \times \pi \times 0.78^2$

$A = 0.48 \text{ m}^2$

Find the area of the sectors shown. Answering to 1 d.p.

23



$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{119}{360} \times \pi \times 51.7^2$

$A = 2\,775.7 \text{ cm}^2$

24

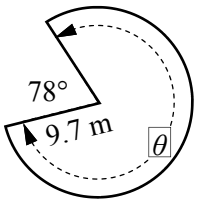
$\theta = 360 - 78$

$\theta = 282°$

$A = \frac{\theta}{360} \times \pi r^2$

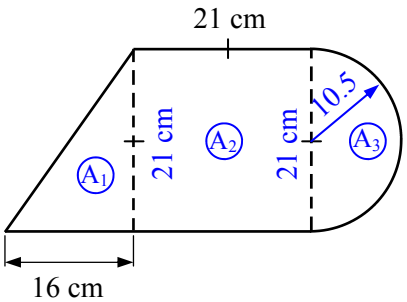
$= \frac{282}{360} \times \pi \times 9.7^2$

$A = 231.5 \text{ m}^2$



Find the area of the shape below, answering to 1 d.p.

25



$A_1 = \frac{1}{2}bh$

$= \frac{1}{2} \times 16 \times 21$

$A_1 = 168 \text{ cm}^2$

$A_2 = l^2$

$= 21^2$

$A_2 = 441 \text{ cm}^2$

$A_3 = \frac{1}{2}\pi r^2$

$= \frac{1}{2} \times \pi \times 10.5^2$

$A_3 = 173.2 \text{ cm}^2$

$A = 168 + 441 + 173.2$

$A = 782.2 \text{ cm}^2$

Area

6

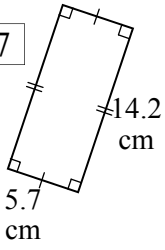
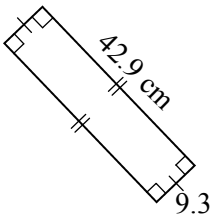
Find the area, but round your answer to 1d.p.

7

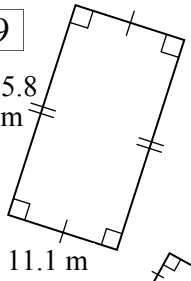


Round to 1 d.p.

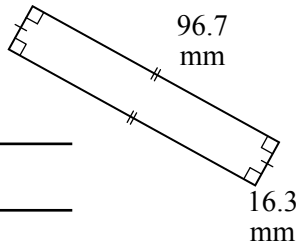
8



9



10



Draw these rectangles then find their area. Mark matching side lengths, show right angles and write side lengths on two sides.

RULER!

11 3.2 cm by 2.5 cm

12 Calculate the area of the rectangle you have just drawn.

13 5.3 cm by 3.7 cm

Long side across

14 Calculate the area of the rectangle you have just drawn.

Now find the area, then calculate the cost.

Jason is painting his lounge room's rectangular ceiling. It is 4.7 × 3.4 m.

15 Find the ceiling's area

16 Rewrite your answer above rounded **UP** to whole m^2.

17 If 1 litre of paint covers 9 m^2 how many whole litres of paint are required.

Paint =

18 If 1 litre of paint costs $28.90 calculate the cost to paint the ceiling.

Cost =

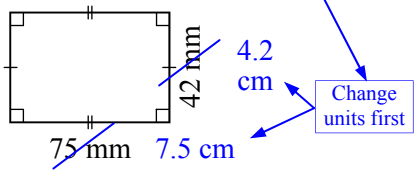
Cost =

Area of Squares and Rectangles - Unit Conversion

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Change the units first, then use A=*lb* or A = l^2 to find the area.

Example Answer in cm^2.

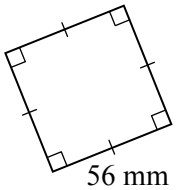


A = *lb*

= 7.5 × 4.2

A = 31.5 cm^2 ← Show square units

1 Answer in cm^2.



A = l^2

= ☐^{2}

A = ☐ cm^2

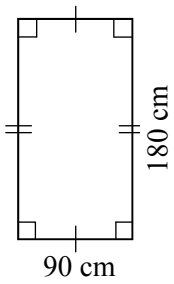
2 Answer in m^2.

A = *lb*

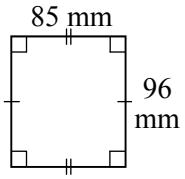
= ☐ × ☐

A = ☐

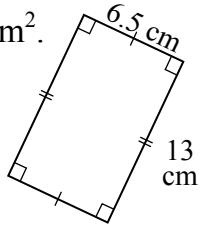
Show square units



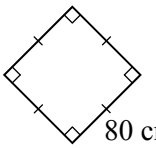
3 Answer in cm^2.



5 Answer in mm^2.

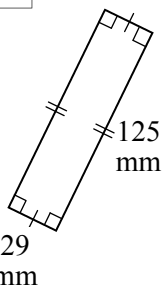


6 in m^2.

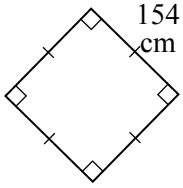


Keep going, but round your answer to 1 decimal place.

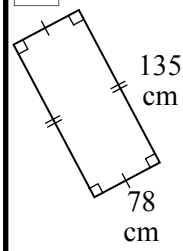
7 Answer in cm^2.



8 Answer in m^2.



9 Answer in m^2.



Draw a rectangle, mark the matching side lengths, show right angles and write the side lengths on two sides. Ruler!

10 4.5 cm by 2.8 cm

11 Calculate the area of the rectangle you have just drawn, but give your answer in mm^2.

Now find the area, to answer the questions.

A rectangular farm paddock is 1.7 km by 850 m wide.

12 Convert 1.7 km to metres.

1.7 km = ☐ m

13 Find the area of the field in square metres.

14 1 ha = 10 000 m^2, rewrite the area in ha

A = ☐ ÷ ☐

Divide Q. 13 by 10 000

A = ☐ ha

A square farm paddock has sides of 1.25 km.

15 Convert 1.25 km to metres.

1.25 km = ☐ m

16 Find the area of the field in square metres.

17 Convert the area to ha, rounding to 1 decimal place.

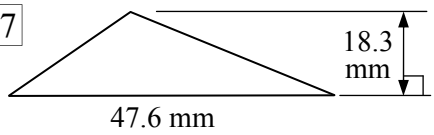
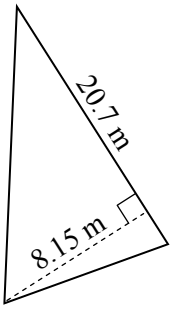
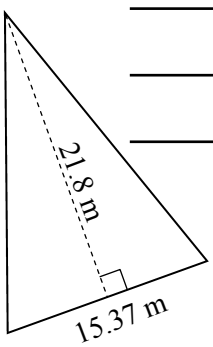
17



18



19



Area of Triangles (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Draw a right-angled triangle label the two side lengths and show the right angle. Ruler!

1 Base: 4.3 cm, Height: 3.7 cm

2 Calculate the area of the triangle above, round to 1 d.p.

3 Base: 3.3 cm, Height: 2.8 cm

4 Calculate the area of the triangle above, round to 1 d.p.

5 Base: 8.2 cm, Height: 3.8 cm

Now apply your skills to these.

7 A triangular advertising sail is 8.5 m tall and has a base of 1.2 m. Find its area.

8 If space on the sail is sold for \$85/m^2, how much will it cost to advertise on the whole sail?

Cost =

Cost =

9 A triangular courtyard has base 6.8 m and height 10 m. Find its area.

10 The courtyard is to be tiled and needs 16 tiles/m^2. How many tiles will be used to tile the entire courtyard floor?

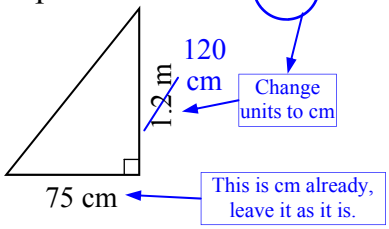
Tiles =

Tiles =

6 Calculate the area of the triangle you have drawn, 1 d.p.

Change the units to match the required area measurement, then find the area, to 1 d.p.

Example Answer in cm^2.

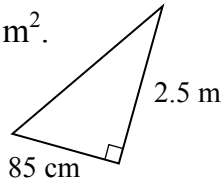


$A = \frac{1}{2}bh$

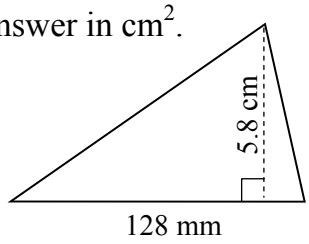
$= \frac{1}{2} \times 75 \times 120$

$A = 4\,500$ cm^2

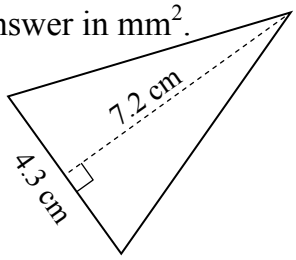
11 Answer in m^2.



12 Answer in cm^2.



13 Answer in mm^2.

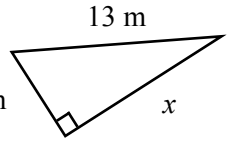


Finding a Short Side - Whole Number Answers

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the length of the short side, the answer will be a whole number.

Example



$x^2 = 13^2 - 5^2$

Calc: 1 3 x^2 - 5 x^2 =

$x^2 = 144$

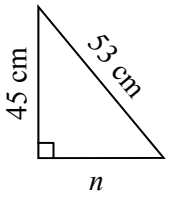
$x = \sqrt{144}$

Calc: $\sqrt{}$ Ans =

Write the units

$x = 12$ m

1



$n^2 = 53^2 - \square^2$

$n^2 = \square$

$n = \sqrt{\square}$

$n = \square$ cm

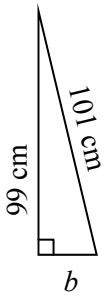
2

$b^2 = \square^2 - \square^2$

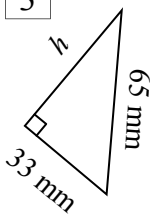
$b^2 = \square$

$b = \sqrt{\square}$

$b = \square$ cm



3



$h^2 =$

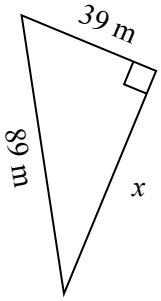
$h^2 =$

$h =$

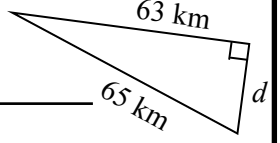
$h =$

Remember the units

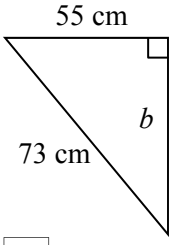
4



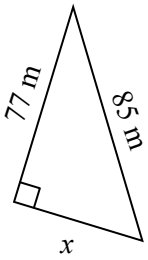
5



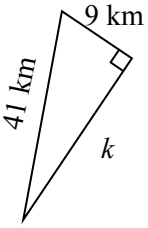
6



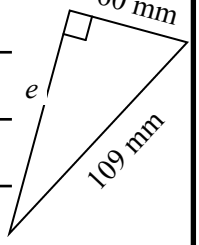
7



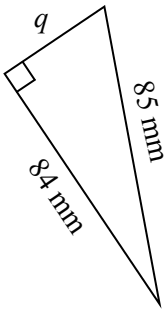
8



9

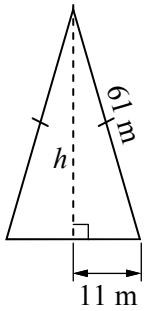


10

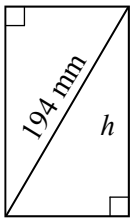


Find '*h*' the unknown height, the answer will be a whole number.

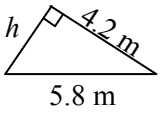
11



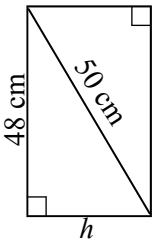
12



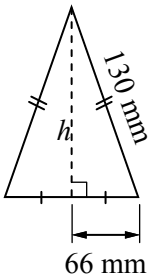
13



14



15

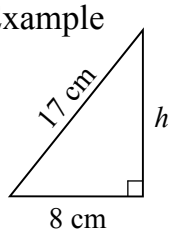


Area of Triangles - Pythagoras

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use Pythagoras Theorem and subtraction for these. Find the length, then find the area. Answers are all whole numbers.

Example



$h^2 = 17^2 - 8^2$

$h^2 = 225$

$h = \sqrt{225}$

$h = 15$ cm

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 8 \times 15$

$A = 60$ cm^2

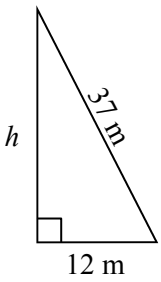
1

$h^2 =$ [37]^2 - [ ]^2

$h^2 =$ [ ]

$h = \sqrt{\ }$ [ ]

$h =$ [ ] m



This answer should be a whole number and less than 37.

$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ [ ] $\times$ [ ]

Use the base of '12' and the height, that you calculated.

$A =$ [ ] m^2

This answer is an area, use square units.

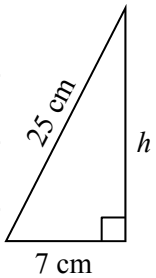
2

$h^2 =$ [ ]^2 - [ ]^2

$h^2 =$ [ ]

$h = \sqrt{\ }$ [ ]

$h =$ [ ] cm



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ [ ] $\times$ [ ]

$A =$ [ ] cm^2

3

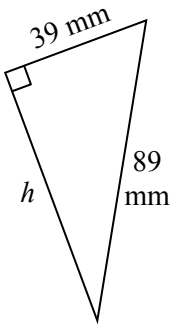
$h^2 =$ [ ]^2 - [ ]^2

$h^2 =$ [ ]

$h = \sqrt{\ }$ [ ]

$h =$ [ ]

Length, so no square units.



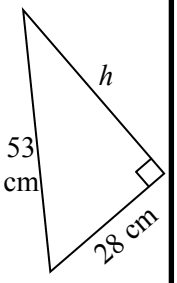
$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ [ ] $\times$ [ ]

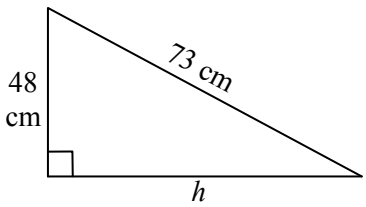
$A =$ [ ]

Area, so use square units.

4

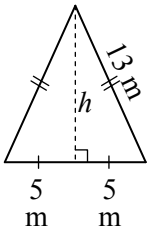


5



With isosceles triangles use the same method, except when you find the area, use the whole base length, not half.

6



$h^2 = 13^2 - 5^2$

$h^2 =$ [ ]

$h = \sqrt{\ }$ [ ]

$h =$ [ ] m

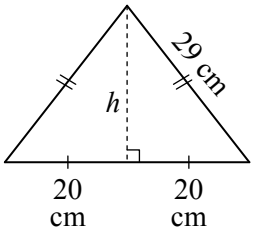
$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ [ ] $\times$ [ ]

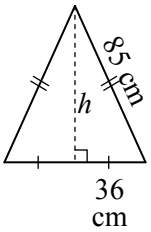
Use $b = 10$ (2×5) not 5!

$A =$ [ ] m^2

7



8

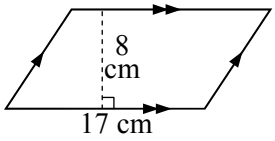


Area of Parallelograms

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of these parallelograms.

Example

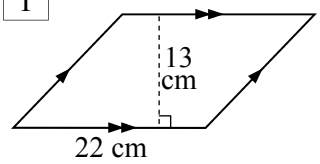


$A = bh$

$= 17 \times 8$

$A = 136 \text{ cm}^2$

1

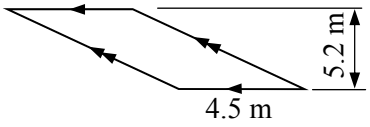


$A = bh$

$= \square \times \square$

$A = \square \text{ cm}^2$

2



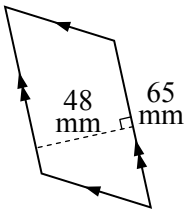
$A = bh$

$= \square \times \square$

$A = \square$

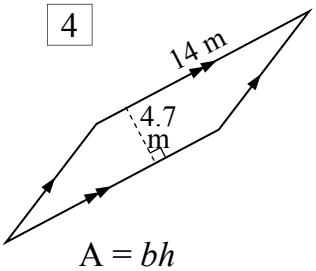
Remember square units

3



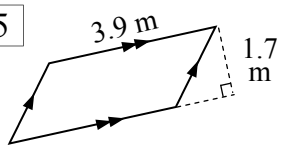
$A = bh$

4

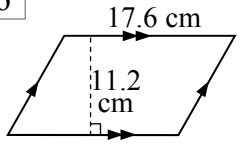


$A = bh$

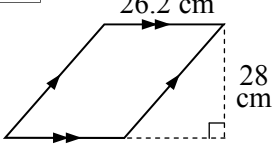
5



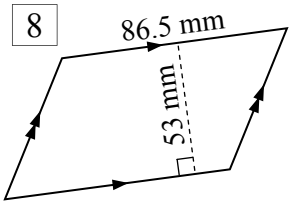
6



7

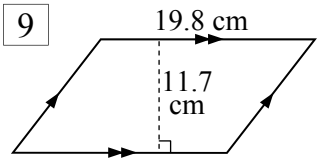


8



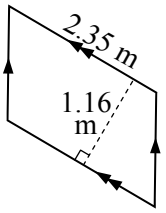
Find the area, rounding your answer to 1 d.p.

9



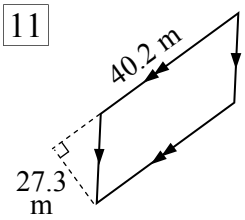
$A = bh$

10

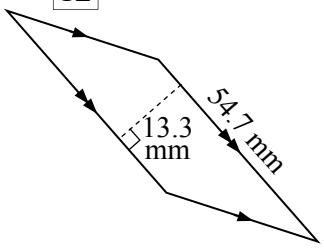


Square units to 1 d.p.

11

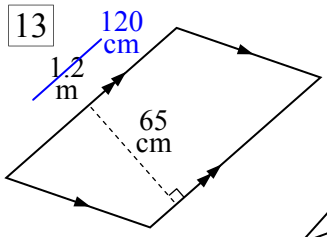


12



Find the area in cm^2. Change all the lengths that aren't in cm, to cm, before you multiply them.

13

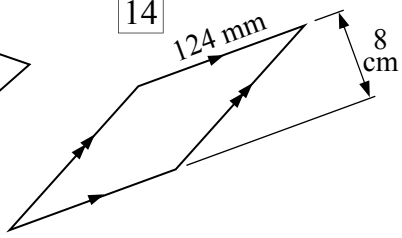


$A = bh$

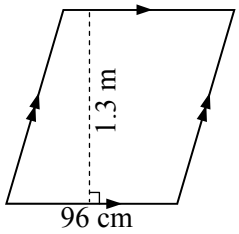
$= \square \times \square$

$A = \square \text{ cm}^2$

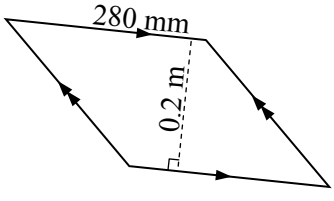
14



15



16

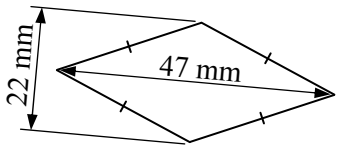


Area of Rhombuses (Rhombi)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A rhombus is like a square that has been pushed over. Find the area, using $A = \frac{1}{2}xy$.

Example



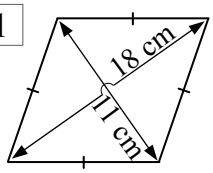
$A = \frac{1}{2}xy$

Calc: 0 . 5 × 2 2 × 4 7 =

$= \frac{1}{2} \times 47 \times 22$

$A = 517 \text{ mm}^2$

1

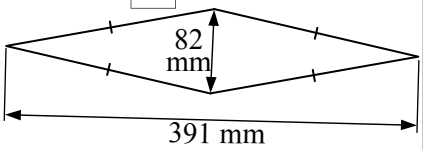


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times \square \times \square$

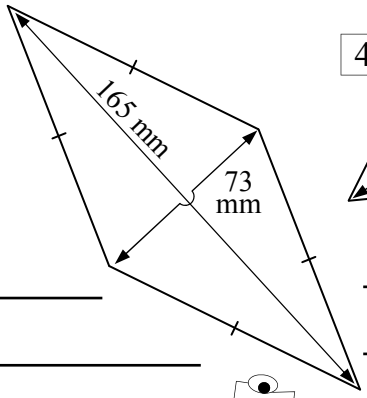
$A = \square \text{ cm}^2$

2

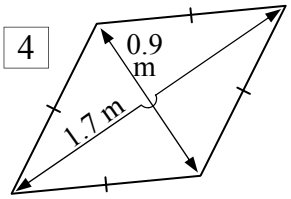


$A = \frac{1}{2}xy$

3

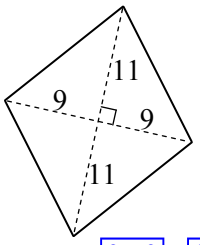


4

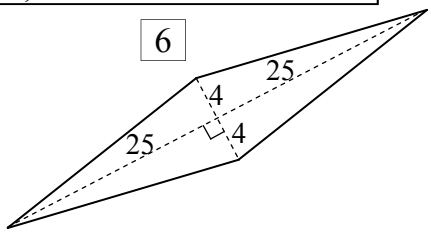


Add for the lengths first, all measurements are in cm.

5



6

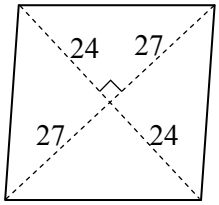


$A = \frac{1}{2}xy$ (9 + 9) (11 + 11)

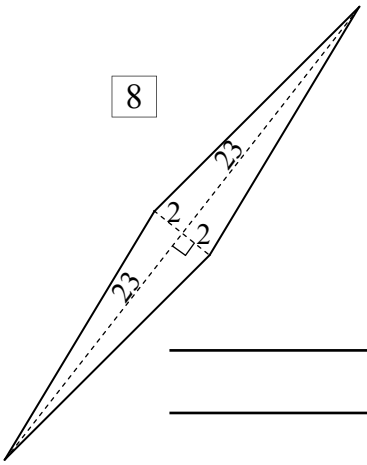
$= \frac{1}{2} \times \square \times \square$

$A = \square \text{ cm}^2$

7

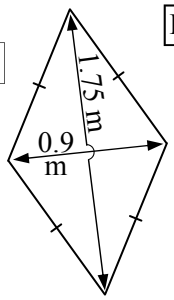


8

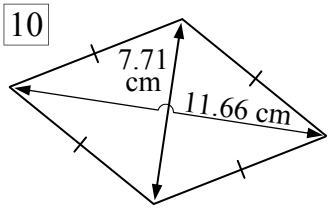


Round 'em up! To 1 d.p. that is.

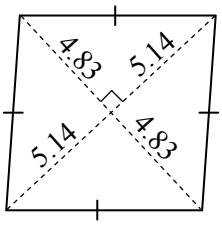
9



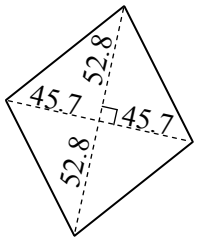
10



11 All cm



12 All mm



Join the dots to form a rhombus and measure the axis lengths in cm to 1 d.p. Then calculate the area in cm^2. Give the area to 1 decimal place.

13

Measure the axes not the sides!

14

Measure the axes not the sides!

Area of Kites

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of these kites.

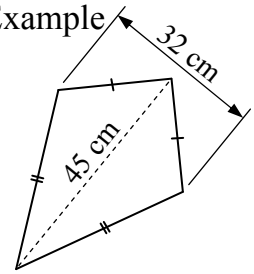
$A = \frac{1}{2}xy$

Calc: 0 . 5 × 3 2 × 4 5 =

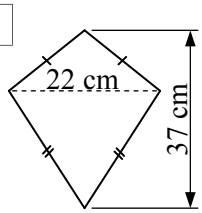
$= \frac{1}{2} \times 32 \times 45$

$A = 720 \text{ cm}^2$

Example



1

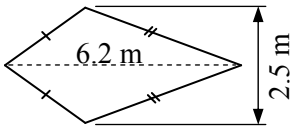


$A = \frac{1}{2}xy$

$= \frac{1}{2} \times \square \times \square$

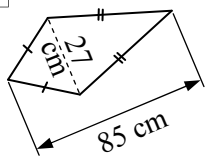
$A = \square \text{ cm}^2$

2

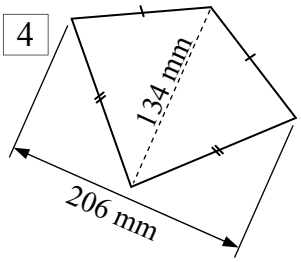


$A = \frac{1}{2}xy$

3

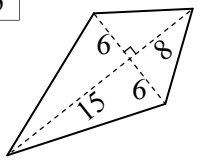


4



From Q.5 all units are in cm.

5

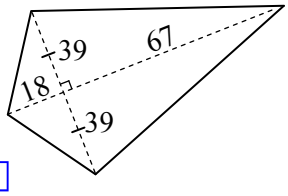


$A = \frac{1}{2}xy$ (6 + 6) (8 + 15)

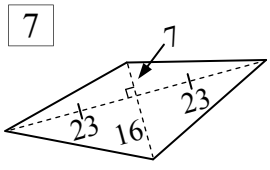
$= \frac{1}{2} \times \square \times \square$

$A = \square \text{ cm}^2$

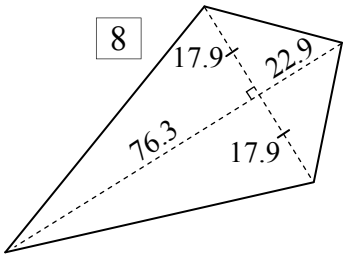
6



7

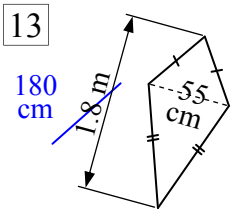


8



Find the area in cm^2. Change all the lengths that aren't in cm, to cm, before you multiply them.

13

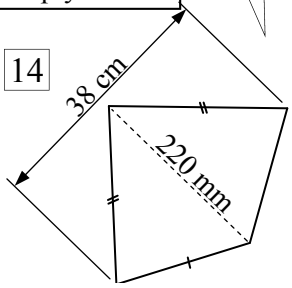


$A = \frac{1}{2}xy$

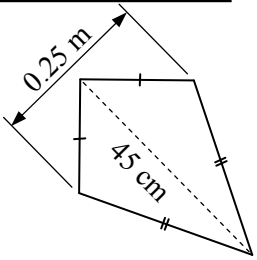
$= \frac{1}{2} \times \square \times \square$

$A = \square \text{ cm}^2$

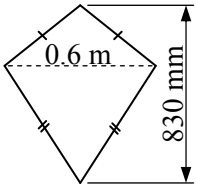
14



15



16



Join the dots to form a kite and measure the axis lengths in cm to 1 d.p. Then calculate the area in cm^2. Give the area to 1 decimal place.

13

Measure the axes not the sides!

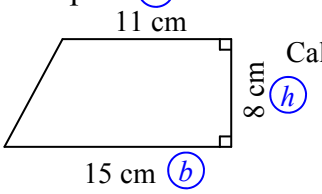
14

Area of Trapeziums

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the area of these trapeziums. '*a*' and '*b*' are the parallel sides, '*h*' is the distance between them.

Example



$A = \frac{1}{2}(a + b)\,h$

Calc: 0 . 5 × (1 1 + 1 5) × 8 =

$= \frac{1}{2} \times (11 + 15) \times 8$

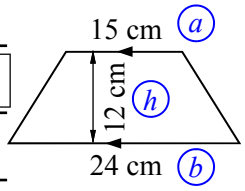
$A = 104 \text{ cm}^2$

1

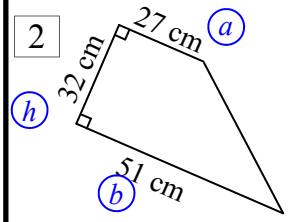
$A = \frac{1}{2}(a + b)\,h$

$= \frac{1}{2} \times (\square + \square) \times \square$

$A = \square \text{ cm}^2$

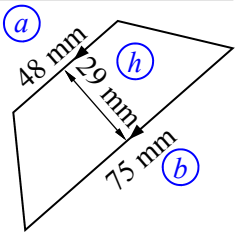


2

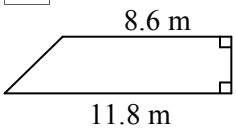


$A = \frac{1}{2}(a + b)\,h$

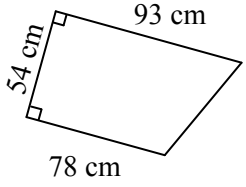
3



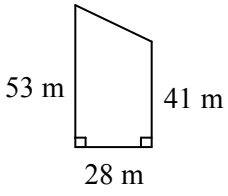
4



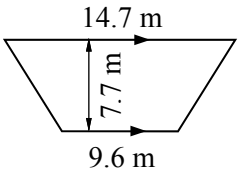
5



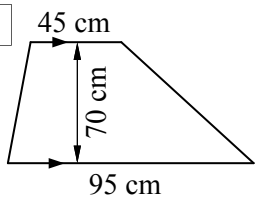
6



7



8



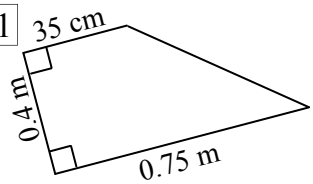
Join the dots to form a trapezium and measure the two parallel sides and the height. Measure the lengths to 1 decimal place. Then calculate the area (in cm^2).

9

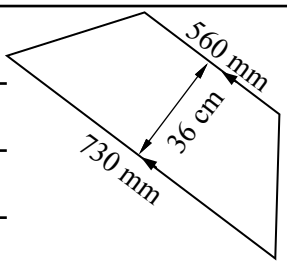
10

Find the area in cm^2. Change all the lengths that aren't in cm, to cm, before you multiply them.

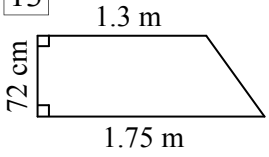
11



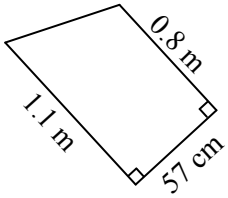
12



13



14

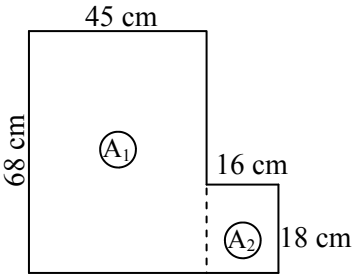


Area - Composite Shapes (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Calculate the area of these shapes by breaking them up into parts first. All angles that look like right angles, are right angles!

1



$A_1 = lb$

$= \square \times \square$

$A_1 = \square$ cm^2

$A_2 = lb$

$= \square \times \square$

$A_2 = \square$ cm^2

$A = A_1 + A_2 = \square + \square = \square$ cm^2

2

$A_1 = lb$

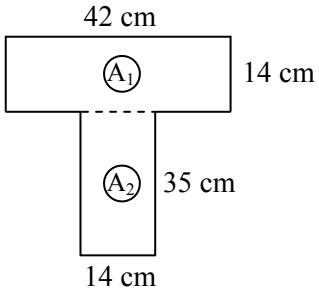
$= \square \times \square$

$A_1 = \square$ cm^2

$A_2 = lb$

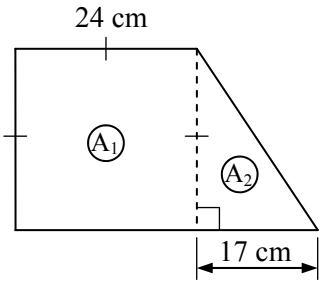
$= \square \times \square$

$A_2 = \square$ cm^2



$A = A_1 + A_2 = \square + \square = \square$ cm^2

3



$A_1 = l^2$

$= \square^2$

$A_1 = \square$

$A_2 = \frac{1}{2}bh$

$= \frac{1}{2} \times \square \times \square$

$A_2 = \square$

$A = A_1 + A_2 = \square + \square = \square$

4

$A_1 = l^2$

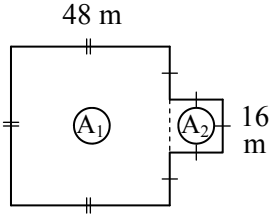
$= \square^2$

$A_1 = \square$

$A_2 = l^2$

$= \square^2$

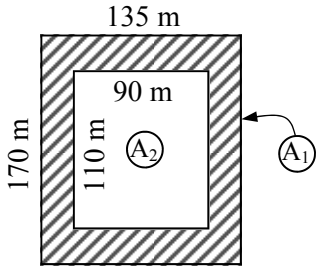
$A_2 = \square$



$A = A_1 + A_2 = \square + \square = \square$

Finding the shaded area is just the same, except instead of adding the areas, you subtract. So it is $A_1 - A_2$, the biggest area minus the smaller one.

5



$A_1 =$

$A_1 =$

$A_2 =$

$A_2 =$

$A = A_1 - A_2 = \square - \square = \square$ m^2

6

$A_1 =$

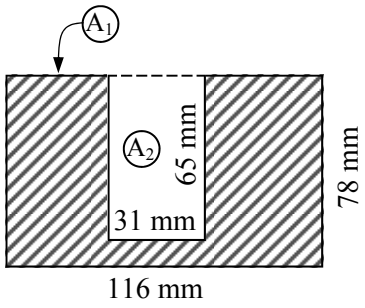
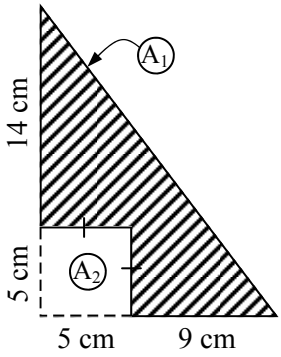
$A_2 =$

$A_2 =$



$A = A_1 - A_2 =$

7



$A_1 =$

Add 2 lengths for the base and also the height of the triangle.

$A_1 =$

$A_2 =$

$A_2 =$

$A = A_1 - A_2 =$

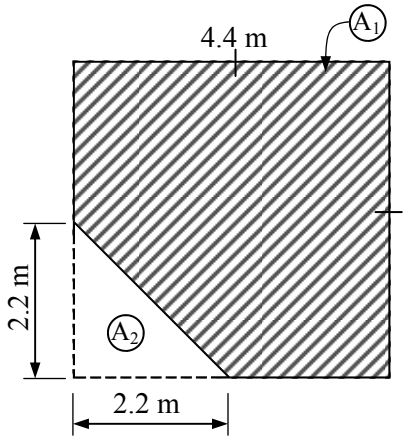
8

$A_1 =$

$A_1 =$

$A_2 =$

$A_2 =$



$A = A_1 - A_2 =$

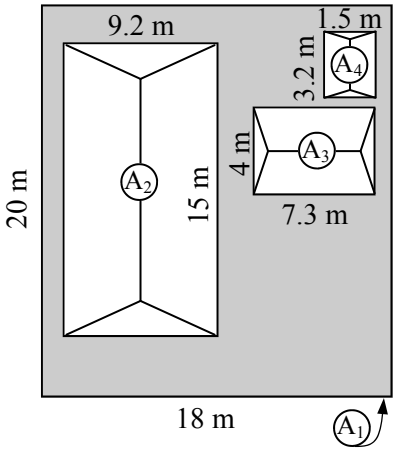
Area - Composite Shapes (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your composite area skills to find these.

A block of land has a house, garage and garden shed on the property. The diagram shows a plan (top) view.

Find the:



1 Block Area (A_1)

$A_1 = lb$

$= \square \times \square$

$A_1 = \square$ m^2

2 House Area (A_2)

$A_2 = lb$

$= \square \times \square$

$A_2 = \square$ m^2

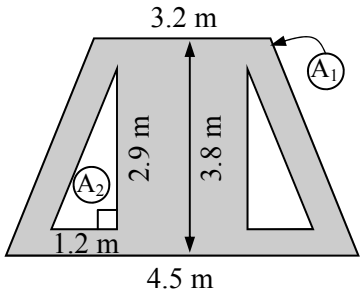
3 Garage Area (A_3)

4 Shed Area (A_4)

5 Grass Area (shaded area).

6 Cost of laying turf on the block if turf costs \$5.60 per m^2. Turf is only sold in whole m^2.

A foot of a crane is shown. It is fabricated from plate steel in the shape of a trapezium with two identical triangular sections removed. Find the:



7 Trapezium Area (A_1)

$A_1 = ½ (a + b) \times h$

8 Triangle Area (A_2)

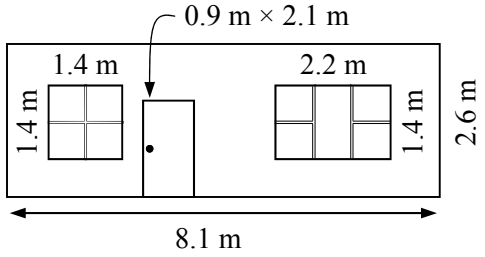
$A_2 = ½bh$

9 Steel area (shaded area).

Remember that there are two triangles!

10 The weight of the footing, if the plate steel weighs 285 kg per m^2.

Dave wants to repaint the front wall of his house. It features a doorway and two windows. The front view is shown below. Find the area of the:



11 Front wall

12 Square window

13 Doorway

14 Rectangular window

15 Paintable Area of the wall.

16 Number of litres required for one coat, if 1 m^2 needs 0.3 L.

17 The paint is sold in 2 L cans, with each can costing \$38.20. How much does it cost to paint the wall?

Area - Further Composite Shapes (Sheet 3)

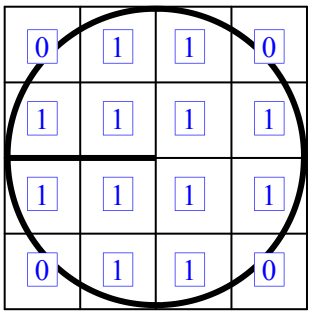
Area of a Circle (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Estimate the area of these circles, using the 1 cm^2 grid squares. If square is close to a ½, call it ½. Less than ½ filled, call it zero. If it is close to full, call it 1 cm^2. Add them up and estimate the area.

1

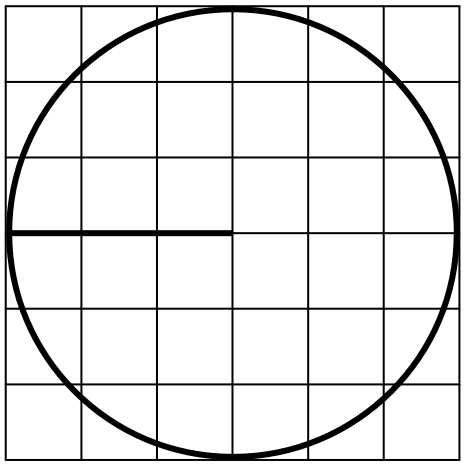


A = 12 × 1

\+ 0 × ½

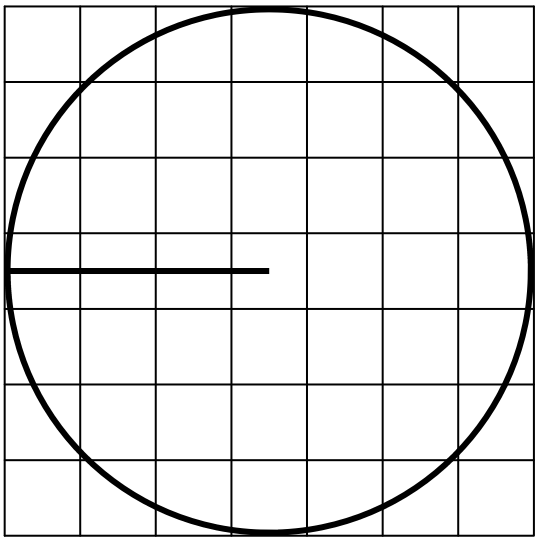
A = ____ cm^2

2



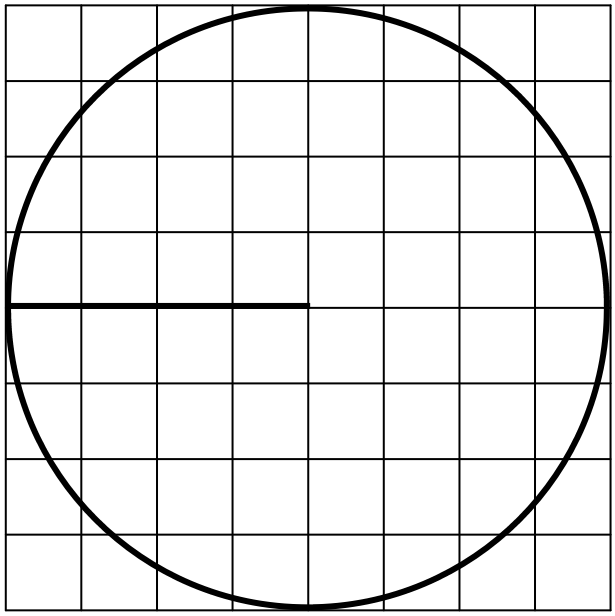
A = ____ × 1 + ____ × ½ = ____ cm^2

3



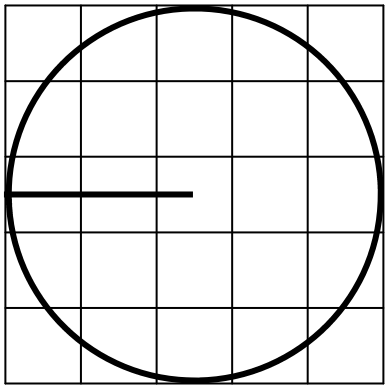
A = ____ × 1 + ____ × ½ = ____ cm^2

4



A = ____ × 1 + ____ × ½ = ____ cm^2

5



A = ____ × 1 + ____ × ½ = ____ cm^2

Now more accurately estimate the area by using $A = 3.14 \times r^2$. Compare the answer with your grid answer you calculated for the first four circles.

6 Circle in Q.1.

$A = 3.14 \times r^2$

$= 3.14 \times$ ____^{2}

Radius = length of black line

A = ____ cm^2

Answer to nearest half cm.

7 Circle in Q.2.

$A = 3.14 \times r^2$

$= 3.14 \times$ ____^{2}

A = ____ cm^2

8 Circle in Q.3.

$A = 3.14 \times r^2$

$= 3.14 \times$ ____^{2}

A = ____ cm^2

9 Circle in Q.4.

$A = 3.14 \times r^2$

$= 3.14 \times$ ____^{2}

A = ____ cm^2

Area of a Circle (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

To calculate area of a circle you need to use your 'π' key. Calculate these to 1 d.p.

1 $\pi \times 15^2 =$ ____ Round to 1 d.p.

Calc: SHIFT $\times 10^x$ × 1 5 x^2 =

2 $\pi \times 24^2 =$ ____

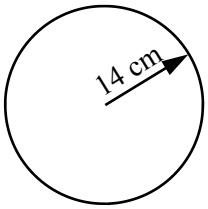
3 $\pi \times 16.5^2 =$ ____

4 $\pi \times 35.6^2 =$ ____

5 $\pi \times 11.2^2 =$ ____

Calculate the area of these circles, round to 1 d.p.

Example

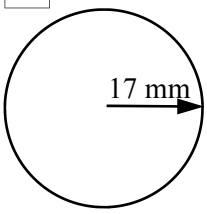


$A = \pi r^2$

$= \pi \times 14^2$

$A = 615.8 \text{ cm}^2$

6



$A = \pi r^2$

$= \pi \times$ ____ ^{2}

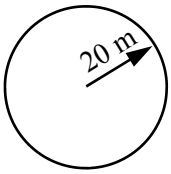
$A =$ ____ mm^2

7

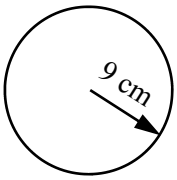
$A = \pi r^2$

$= \pi \times$ ____ ^{2}

$A =$ ____ m^2



8



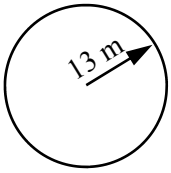
$A = \pi r^2$

$A =$ ____

Show square units

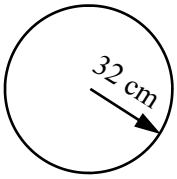
9

$A = \pi r^2$

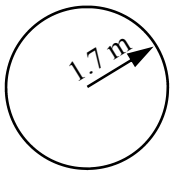


$A =$ ____

10

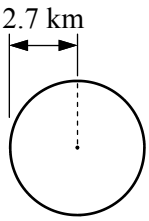


11

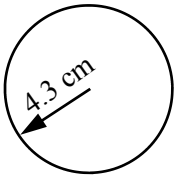


12

13



14

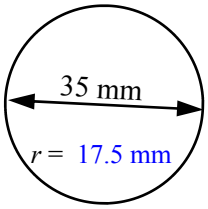


Complete the table below, answering to 2 d.p.

Q.	Radius	Area
15	9.2 m	
16	30 cm	
17	117 m	
18	45.9 mm	
19	72 cm	
20	5.4 km	
21	60.8 cm	
22	40.2 m	
23	8.92 m	

When given a diameter, find the radius first by dividing by 2, then find the area to 1 d.p.

Example



$A = \pi r^2$

$= \pi \times 17.5^2$

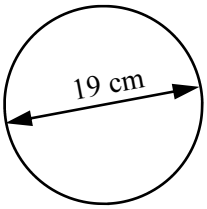
$A = 962.1 \text{ mm}^2$

24 $r =$ ____ cm

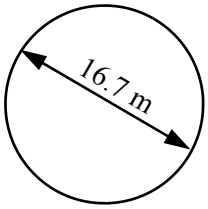
$A = \pi r^2$

$= \pi \times$ ____ ^{2}

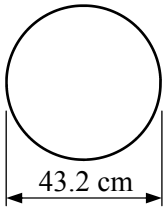
$A =$



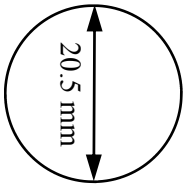
25 $r =$ ____ m



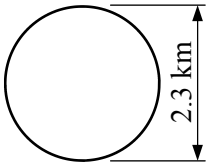
26 $r =$ ____



27 $r =$ ____



28 $r =$ ____

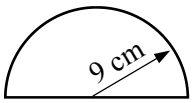


Area of Semi-Circles and Quadrants (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A semi-circle is half a circle, so use $A=\frac{1}{2}\pi r^2$, find the area to 1 d.p.

Example



$A = \frac{1}{2}\pi r^2$

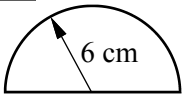
$= \frac{1}{2} \times \pi \times 9^2$

Calc: 0 . 5 × SHIFT ×10^x × 9 x^2 =

$A = 127.2\ cm^2$

Show square units

1



$A = \frac{1}{2}\pi r^2$

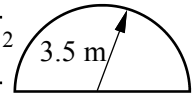
$= \frac{1}{2} \times \pi \times$ ☐^{2}

$A =$ ☐ cm^2

2

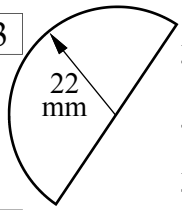
$A = \frac{1}{2}\pi r^2$

$= \frac{1}{2} \times \pi \times$ ☐^{2}



$A =$ ☐ m^2

3

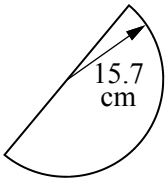


$A = \frac{1}{2}\pi r^2$

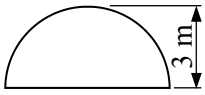
$=$

$A =$ ☐

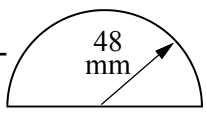
4



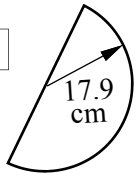
5



6



7



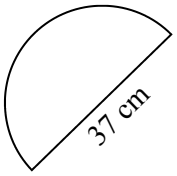
Find the area, but find the radius first by halving the diameter (÷2). Answer to 1 d.p.

8 $r =$ ☐ cm

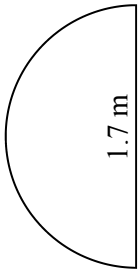
$A = \frac{1}{2}\pi r^2$

$= \frac{1}{2} \times \pi \times$ ☐^{2}

$A =$ ☐ cm^2



10 $r =$ ☐ m



$A = \frac{1}{2}\pi r^2$

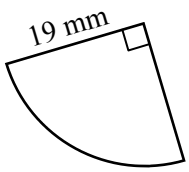
9

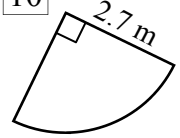
$A = \frac{1}{4}\pi r^2$

$= \frac{1}{4} \times \pi \times$ ☐^{2}

$A =$ ☐ mm^2



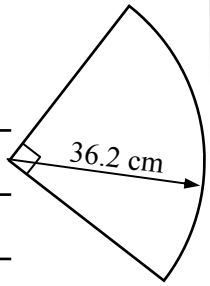
10



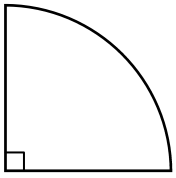
$A = \frac{1}{4}\pi r^2$

$A =$

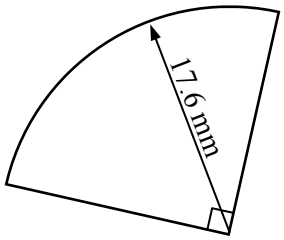
11



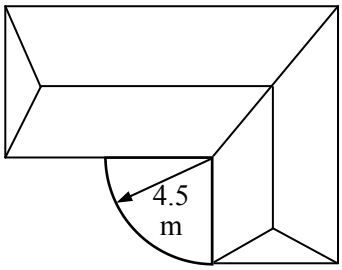
12



13



A plan view is a view from above. Look at the plan of a courtyard of a house below.

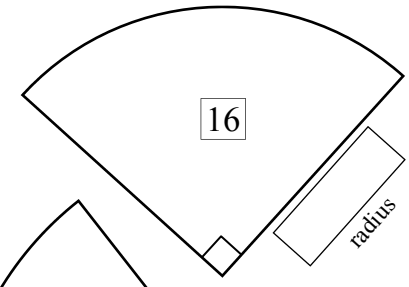


14 Calculate the area of the quadrant shaped courtyard, round your answer to 1 d.p.

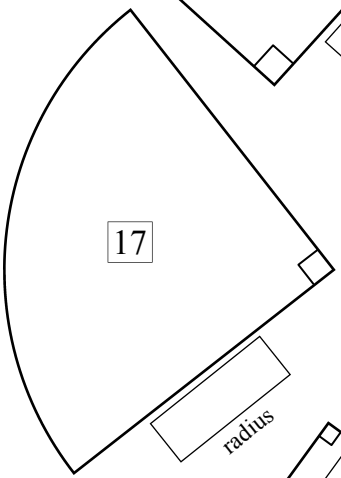
15 Estimate the cost of tiling the area if tiles cost \$56.20/m^2 and are sold in whole m^2 only.

Measure the radius with a ruler then find the area. Round your answer to 1 d.p.

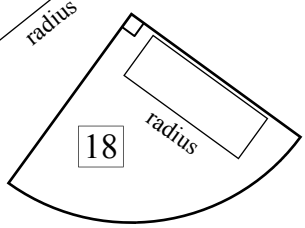
16



17



18

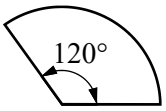


Area of Sectors (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Write the fraction of a circle with a denominator of 360, then simplify with your calculator.

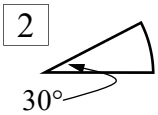
1



$\frac{\square}{360} = \frac{\square}{\square}$

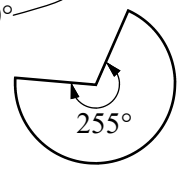
Calc: 1 2 0 ▪ 3 6 0 =

2



$\frac{\square}{\square} = \frac{\square}{\square}$

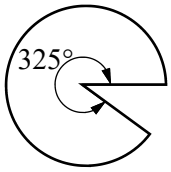
3



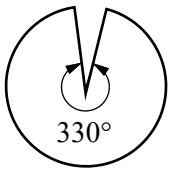
$\frac{\square}{\square} = \frac{\square}{\square}$

4

$\frac{\square}{\square} = \frac{\square}{\square}$



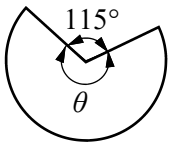
5



$\frac{\square}{\square} = \frac{\square}{\square}$

Find the internal angle θ, by subtracting from 360°. Then solve for the fraction as above.

6



$\theta = 360 - 115$

$\theta = \square°$

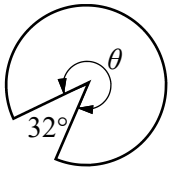
$\frac{\square}{360} = \frac{\square}{\square}$

7

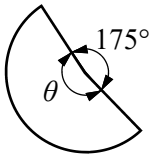
$\theta = 360 - \square$

$\theta = \square°$

$\frac{\square}{\square} = \frac{\square}{\square}$



8



$\theta =$

$\theta =$

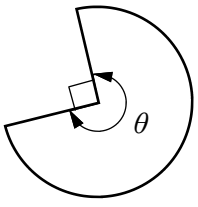
$\frac{\square}{\square} = \frac{\square}{\square}$

9

$\theta =$

$\theta =$

$\frac{\square}{\square} = \frac{\square}{\square}$



Evaluate using your calculator. Round to 1 d.p.

10 $\frac{105}{360} \times \pi \times 16^2 =$

1 0 5 ▪ 3 6 0 ◯ × SHIFT ×10^x × 1 6 x^2 =

11 $\frac{52}{360} \times \pi \times 7^2 =$

12 $\frac{212}{360} \times \pi \times 25^2 =$

13 $\frac{90}{360} \times \pi \times 34.3^2 =$

14 $\frac{322}{360} \times \pi \times 40.8^2 =$

15 $\frac{159}{360} \times \pi \times 19.6^2 =$

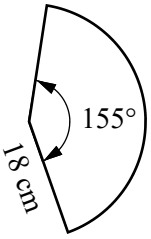
Calculate the area of these sectors, answering to 1 d.p.

Example

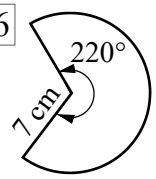
$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{155}{360} \times \pi \times 18^2$

$A = 438.3 \text{ cm}^2$



16



$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{220}{360} \times \pi \times \square^2$

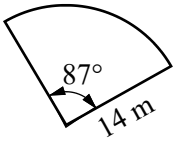
$A = \square \text{ cm}^2$

17

$A = \frac{\theta}{360} \times \pi r^2$

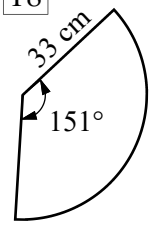
$= \frac{87}{360} \times \pi \times \square^2$

$A = \square \text{ m}^2$



Remember to square the radius!

18



$A = \frac{\theta}{360} \times \pi r^2$

$= \frac{\square}{360} \times \pi \times \square^2$

$A = \square \text{ cm}^2$

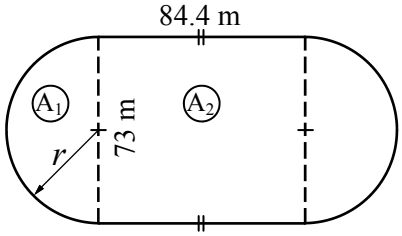
Use your composite area skills to find these. Answer to 1 decimal place when required.

An athletics field is shown. Find the:



1 Radius of the semi-circle $r =$ ____

2 Area (A_1)

$A_1 = \frac{1}{2}\pi r^2$

$= \frac{1}{2} \times \pi \times$ ____^{2}

$A_1 =$ ____ m^2

3 Area (A_2)

$A_2 = lb$

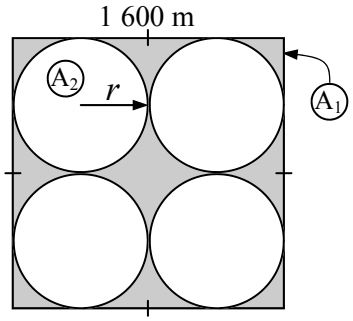
$=$ ____ $\times$ ____

$A_2 =$ ____ m^2

4 Total field area.

5 If 1 m^2 requires 2.2 L of water, how much water is required to irrigate the entire field.

A square field has four identical circular fields fitting perfectly within it. Find the:



6 Radius of the circular field $r =$ ____

7 Area (A_1)

$A_1 = l^2$

8 Area (A_2)

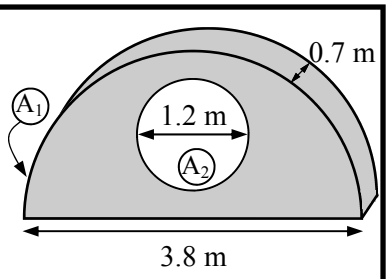
$A_2 = \pi r^2$

9 Amount of the square field which is unused.

10 The percentage of the square field unused.

% Unused = $\frac{\text{Q9}}{\text{Q7}} \times 100 =$ ____

A concrete anchor block for bridge cabling is shown. It is semi-circular with a circular opening. Find the:



11 Radius of the circle $r =$ ____

12 Radius of the semi-circle $R =$ ____

13 Area (A_1)

$A_1 = \frac{1}{2}\pi R^2$

14 Area (A_2)

$A_2 = \pi r^2$

15 Area of the concrete (shaded) face.

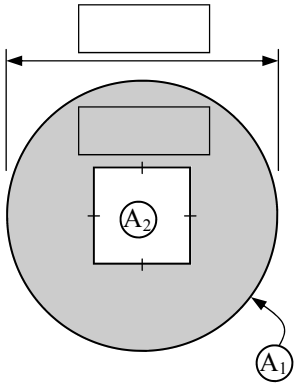
16 Use: $V = Ah$ to find the volume of concrete.

Volume is the face area (Q.15) multiplied by the block's depth (0.7 m).

$V = Ah$

$=$ ____ $\times$ ____

$V =$ ____ m^3



A circular washer with a 25 mm diameter has a square hole with 9 mm sides through its centre. Write these lengths in the boxes on the diagram, then find:

17 Radius of the circle $r =$ ____

18 Area (A_1)

$A_1 = \pi r^2$

19 Area (A_2)

$A_2 = l^2$

20 Face area of the steel washer (shaded area).

Probability Devices

These are spinners for probability applications. Just add toothpicks and tape.

There are also two grids for dropping an object, such as a paperclip on.

Theoretical Probability Review

Sample space is a list of all the possible outcomes for an event. The sample space is normally listed using braces and commas, eg. Sample space of a coin = {H, T} or {Head, Tail}.
So look at all the outcomes and list them. If one outcome could happen twice then list it twice.

Theoretical probability is the theoretical chance of an event occurring it is found by:

$$P(E) = \frac{\text{Number of favourable outcomes}}{\text{Total number of outcomes}}$$

If the above is a bit confusing then think of it as:

$$P(E) = \frac{\text{How many of what you are after}}{\text{Size of sample space}}$$

Example - Find the probability of rolling an even number with a die.

There are 3 numbers, 2, 4 and 6 are even.

$$P(\text{Even}) = \frac{3}{6} = \frac{1}{2}$$

Simplify if you can. Divide 3 and 6 by 3 and you are left with 1 over 2 (= ½).

Write in the brackets what you are after

There are 6 numbers on a die.

Column 1 starts with finding the sample space. Write 'Sample Space = {' then list all the possibilities, separated by commas. At the top of column 2 are a few questions on simplifying. To answer these put the fraction into your calculator and press '=' or divide the top and bottom (numerator and denominator) by the largest number that goes into both, (HCF).

Column 2 and 3 and all of sheet 2 are all probability questions. Remember to write what you are looking for in the brackets, then write the fraction and simplify if possible.

Theoretical Probability Review (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

List the sample space for the following. Which is a list of all the possible outcomes

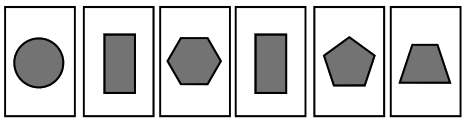
1 A coin.

Sample Space is { ____ }

2 A die.

Sample Space is { ____ }

3 These cards.

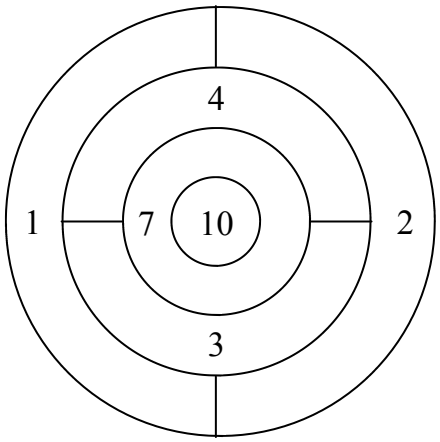


Sample Space is { ____

____

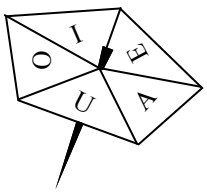
____ }

4 This stickball board



Sample Space is { ____ }

5 This spinner



Sample Space is { ____ }

Use your calculator's fraction key, or your mathematical skills to simplify these fractions.

6 $\frac{2}{8} = \frac{\square}{\square}$ 7 $\frac{10}{15} = \frac{\square}{\square}$

8 $\frac{8}{10} = \frac{\square}{\square}$ 9 $\frac{9}{12} = \frac{\square}{\square}$

10 $\frac{12}{16} = \frac{\square}{\square}$ 11 $\frac{12}{20} = \frac{\square}{\square}$

Find the probability of these events occurring.

Jay's pencil case contains 4 blue pens, 3 red pens, 2 black pens, 2 green pens and a purple pen.

12 How many pens in Jay's pencil case? $\square$

If he reaches in without looking what is the chance of the selected pen being:

13 Green $P(Gr) = \frac{\square}{\square} = \frac{\square}{\square}$ Simplify

14 Red $P(Red) = \frac{\square}{\square} = \frac{\square}{\square}$

15 Red or Purple

$P(R,P) = \frac{\square}{\square} = \frac{\square}{\square}$

16 Any colour but blue

$P(\widetilde{Blue}) = \frac{\square}{\square} = \frac{\square}{\square}$

17 A Green or Blue Pen

____ $= \frac{\square}{\square} = \frac{\square}{\square}$

18 An orange pen

____ $= \frac{\square}{\square} = \square$

A bag has 8 discs inside. The discs are labeled 1 through to 8. If one disc is randomly selected:

19 Find P (Even)

____ $= \frac{\square}{\square} = \frac{\square}{\square}$

20 Find P (< 7)

____ $= \frac{\square}{\square} = \frac{\square}{\square}$

21 Find P (Factor of 12)

Factor means what numbers go into 12

____ $= \frac{\square}{\square}$

22 Find P (Prime number)

A prime no. has no factors other than 1 & itself
Note: 1 is considered not prime or composite

____ $= \frac{\square}{\square} = \frac{\square}{\square}$

23 Find P (>4)

____ $= \frac{\square}{\square} = \frac{\square}{\square}$

A sideshow has a large dartboard displayed (below). If you land the dart on a 2, you double your money. Get a 1 and you lose your money.
There are more 2's than 1's, so there is more chance of winning than losing.
Discuss this last sentence.

A bag contains the letters that spell P-R-O-B-A-B-I-L-I-T-Y.

If a student randomly selects a single letter, what is the chance it is:

1 An 'L'. P(L) = $\frac{\square}{\square}$

2 An 'I'. P(I) = $\frac{\square}{\square}$

3 An 'I' or 'R'. P(I,R) = $\frac{\square}{\square}$

4 A vowel. P(vowel) = $\frac{\square}{\square}$

5 Not an 'I' or 'B'. $P(\widetilde{I,B}) = \frac{\square}{\square}$

If 25 ping-pong balls are labeled 1 to 25, find the chance of selecting:

6 A '25'. P(25) = $\frac{\square}{\square}$

7 A '19'. P(19) = $\frac{\square}{\square}$

8 A ball with a '5' digit. P(5 digit) = $\frac{\square}{\square}$

9 A ball with a two-digit number, greater than 18.

_____ = $\frac{\square}{\square}$

10 A ball without a '2' in the number.

_____ = $\frac{\square}{\square}$

11 A ball with a '1' in the number.

_____ = $\frac{\square}{\square}$

A lottery has 100 tickets, numbered 1 to 100. There is a single prize awarded. Find the probability of:

12 Buying a single ticket and winning the prize.

_____ = $\frac{\square}{\square}$

13 Buying 20 tickets and winning the prize.

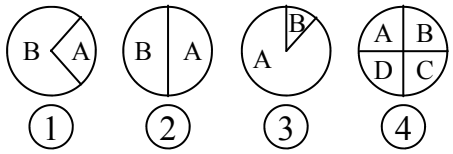
_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

14 Buying 15 tickets and not winning the prize.

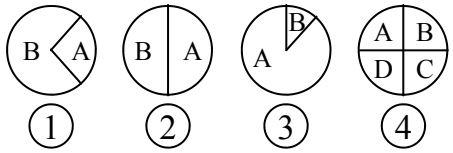
_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

Which spinner is most likely to generate the following results? Fill in the circle of your choice.

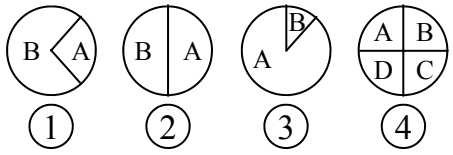
15 10 A's and 2 B's



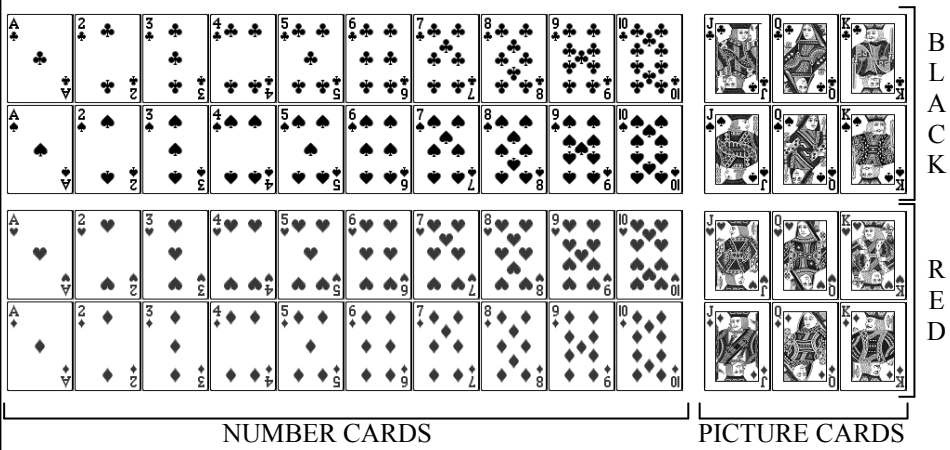
16 20 A's and 21 B's



17 5 A's and 15 B's



A deck of cards has 4 suits. Two suits are black, two are red. Each suit has 10 number cards: Ace through to 10, and 3 picture cards: Jack, Queen and King.



If one card from a standard deck is chosen, find the probability of selecting:

18 A queen

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

19 A red picture card

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

20 A number card

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

21 A 5, 8 or a jack.

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

22 A number card less than 7

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

23 Any card but a red king

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

Theoretical Probability Review (Sheet 1)

List the sample space for the following. Which is a list of all the possible outcomes

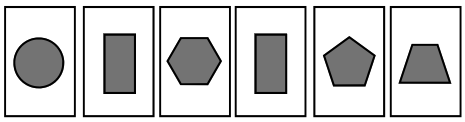
1 A coin.

Sample Space is { H, T. }

2 A die.

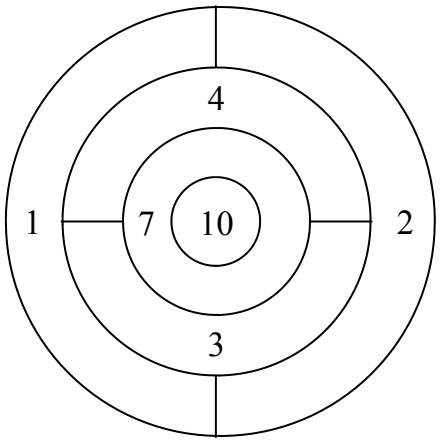
Sample Space is { 1, 2, 3, 4, 5, 6. }

3 These cards.



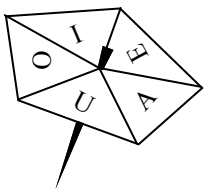
Sample Space is { Circle, rectangle, hexagon, rectangle, pentagon, trapezium. }

4 This stickball board



Sample Space is { 1, 2, 3, 4, 7, 10. }

5 This spinner



Sample Space is { A, E, I, O, U. }

Use your calculator's fraction key, or your mathematical skills to simplify these fractions.

6 $\frac{2}{8} = \frac{1}{4}$

7 $\frac{10}{15} = \frac{2}{3}$

8 $\frac{8}{10} = \frac{4}{5}$

9 $\frac{9}{12} = \frac{3}{4}$

10 $\frac{12}{16} = \frac{3}{4}$

11 $\frac{12}{20} = \frac{3}{5}$

Find the probability of these events occurring.

Jay's pencil case contains 4 blue pens, 3 red pens, 2 black pens, 2 green pens and a purple pen.

12 How many pens in Jay's pencil case? 12

If he reaches in without looking what is the chance of the selected pen being:

13 Green $P(Gr) = \frac{2}{12} = \frac{1}{6}$ Simplify

14 Red $P(Red) = \frac{3}{12} = \frac{1}{4}$

15 Red or Purple

$P(R,P) = \frac{4}{12} = \frac{1}{3}$

16 Any colour but blue

$P(\widetilde{Blue}) = \frac{8}{12} = \frac{2}{3}$

17 A Green or Blue Pen

$P(Gr,Blue) = \frac{6}{12} = \frac{1}{2}$

18 An orange pen

$P(Orange) = \frac{0}{12} = 0$

A bag has 8 discs inside. The discs are labeled 1 through to 8. If one disc is randomly selected:

19 Find P (Even)

$P(Even) = \frac{4}{8} = \frac{1}{2}$

20 Find P (< 7)

$P(<7) = \frac{6}{8} = \frac{3}{4}$

21 Find P (Factor of 12)

Factor means what numbers go into 12

$P(\text{Factor of 12}) = \frac{5}{8}$

22 Find P (Prime number)

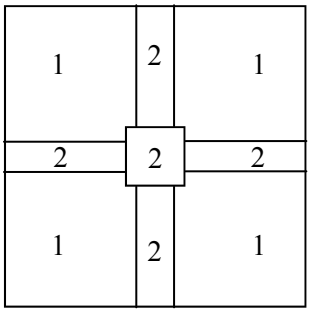
A prime no. has no factors other than 1 & itself
Note: 1 is considered not prime or composite

$P(\text{Prime}) = \frac{4}{8} = \frac{1}{2}$

23 Find P (>4)

$P(>4) = \frac{4}{8} = \frac{1}{2}$

A sideshow has a large dartboard displayed (below). If you land the dart on a 2, you double your money. Get a 1 and you lose your money.
There are more 2's than 1's, so there is more chance of winning than losing.
Discuss this last sentence.



While there are more '2' areas, the combined area of the '2' areas is far less than '1' areas. So it is a false statement.

Theoretical Probability Review (Sheet 2)

Date Due:

A bag contains 6 Blue marbles, 2 Red marbles and 10 Yellow marbles. If a single marble is randomly selected, find the following probabilities.

1 P(Yellow) = $\frac{10}{18} = \frac{5}{9}$

2 P(Red) = $\frac{2}{18} = \frac{1}{9}$

3 P(Red or Blue) = $\frac{8}{18} = \frac{4}{9}$

4 P(Black) = $\frac{0}{18} = 0$

5 P(Not Blue) = $\frac{12}{18} = \frac{2}{3}$

If a marble was selected and replaced 50 times. How many times would you expect to select a marble that is:

6 Red $\frac{2}{18} \times 50 = 6$ Whole Number

7 Not Blue $\frac{12}{18} \times 50 = 33$ Whole Number

Probability Experiment Sheet

This sheet is designed to compare experimental results with theoretical results. There are two sheets as the first sheet has the "Sum of two Dice" grid left blank, the second grid has the numbers filled in, to avoid mistakes if this is an issue. As this is an experiment sheet there are no answers.

Column 1 has a table for recording the tossing of two coins. This requires either 2 different coins so that one is called 'Coin 1' and the other 'Coin 2', or use a single coin and toss it twice. The table has a tally and frequency column to complete, find $\sum f$ at the base of the column to verify the correct number of tosses has occurred. The data can then be transferred to the column graph below the table which has the theoretical results already graphed.

Compare the results and describe how your results related to the theoretical, indicate how the sample space size (the number of times the coins are tossed) affects the results.

Column 2 requires you to roll two dice 72 times. The dice can be rolled at the same time. Once rolled, add the two upper face numbers together to get a total and record the sum in the table using the tally column, converting to a frequency on completion. Again find the two $\sum f$'s and add them to verify that you have rolled the dice 72 times.

Now complete the theoretical probability grid (if blank) by adding the two numbers. You should notice a pattern along the diagonals. Plot the experimental result, then plot the theoretical result by counting all the same numbers in the grid, but because you rolled the dice 72 times then you have to double this number. Use different coloured columns for experimental and theoretical results.

Compare the results and describe how your results related to the theoretical, indicate how the sample space size (the number of times the dice are rolled) affects the results.

Probability Experiment Sheet

Generating Random Numbers

A calculator can be used to generate decimals and whole numbers. You can use this function to simulate real world situations such as maths class experiments like rolling a die or tossing a coin or they applied in processes like selecting a team in a sports draw. In maths, it is important to understand the relationship with sample size, the more data you have the more the data will behave like theory. The less sample size, the more unpredictable the result.

The first two sheets ask you to generate decimals, the key strokes required are on the sheet, these are for a Casio FX-82AU Plus. If you have a different calculator, the keys required may not be the same.

Sheet 1 asks you to generate decimals in two sample sizes. The first is 5 decimals, the second is 50 decimals, so 10 times larger. By graphing these you should see that the larger the data, the more it tends to theoretical. This may not be the case! You may find the data is more Balanced from 5 samples. But if you look at other class member's results, the 5 samples will vary wildly, but the 50 will show a greater similarity.

Sheet 2 is also about comparing results with increasing sample size. But this time instead of comparing a graph of the results, you are comparing them mathematically. By finding the mean of the data and seeing which is closest to 0.5, you can see if the data tends toward the mean with more samples. Again, this is an experiment and answers will vary. Look at your class members results and see that the answer will change greatly for the 5 number samples, but be similar for the largest data set.

Sheet 3 asks you to generate whole numbers (integers) to represent a coin and a die. By graphing your results on a column graph with a proportioned scale, you can compare results to check whether your data is getting closer to theoretical results with more iterations.

Generating Random Numbers - Decimals (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator to generate random decimals.

Generating Random Numbers - Decimals (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator to generate random decimals, find the mean.

0.096, 0.293, 0.491, 0.511, 0.803.

Total the 5 scores 2.194

Calculate the mean:

$\bar{x} = \frac{2.194}{5} = 0.439$ (3 d.p.)

0.432, 0.749, 0.978, 0.121, 0.725, 0.454, 0.760, 0.740, 0.333, 0.361, 0.97, 0.630, 0.825, 0.608, 0.359.

Total these 15 scores 9.045

$\bar{x} = \frac{9.045}{15} = 0.603$ (3 d.p.)

0.605, 0.185, 0.467, 0.398, 0.032, 0.743, 0.909, 0.439, 0.415, 0.612, 0.005, 0.506, 0.060, 0.718, 0.888, 0.850, 0.327, 0.611, 0.708, 0.269, 0.368, 0.854, 0.684, 0.897, 0.840.

Total : 13.390
25 scores

$\bar{x} = \frac{13.390}{25} = 0.536$ (3 d.p.)

0.385, 0.015, 0.217, 0.200, 0.935, 0.932, 0.225, 0.829, 0.260, 0.754, 0.451, 0.393, 0.959, 0.433, 0.921, 0.747, 0.853, 0.45, 0.242, 0.692, 0.309, 0.492, 0.814, 0.757, 0.850, 0.506, 0.694, 0.34, 0.787, 0.875, 0.585, 0.373, 0.017, 0.423, 0.304.

Total these 35 scores 19.019 $\bar{x} = \frac{19.019}{35} = 0.543$

Now find the mean for all 80 scores. Is it closer to 0.500? If not, remember that this is an experiment! Not theory!

$\sum x = 2.194 + 9.045 + 13.390 + 19.019$

5 score total, 15 score total, 25 score total, 35 score total

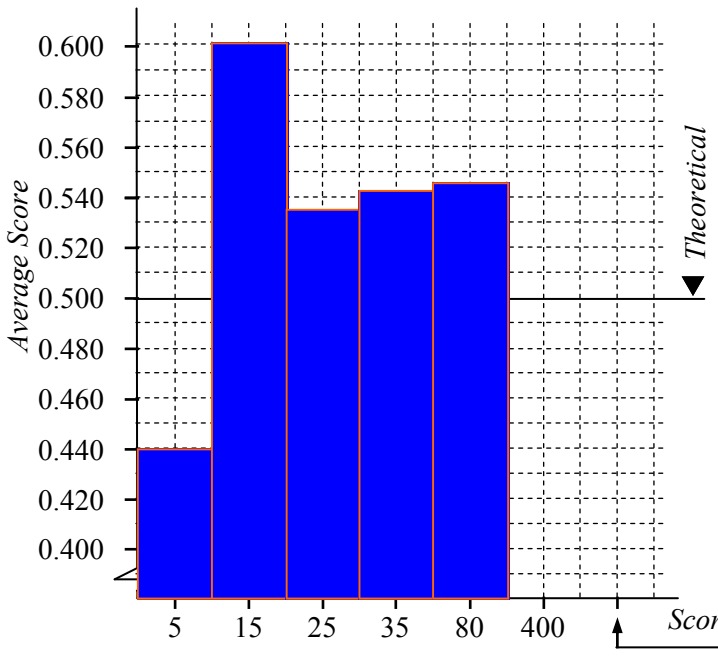
$\sum x = 43.648$ (80 score total) $\bar{x} = \frac{\sum x}{n} = \frac{43.648}{80} = 0.545$

You can further refine your experiment by getting 4 other student's '80 score totals' adding them to yours and finding the mean by ÷ 400. Plot results as a column graph, include a class average if you have one.

$\sum x = \_\_\_ + \_\_\_ + \_\_\_ + \_\_\_ + \_\_\_$

Your 80 total, name

$\sum x = \_\_\_$ (400 score total) $\bar{x} = \frac{\sum x}{n} = \frac{\_\_\_}{\_\_\_} = \_\_\_$



If you have a class average, plot it here

Generating Random Numbers - Integers and Intervals (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator to generate random numbers, to represent a tossed coin, a 1 = tail, a 2 = head

1 Generate 4 coin results.

Calc: ALPHA . 1 SHIFT) 2) = For the 1st integer from 1 to 2

Calc: = For the next integer

Write 'H' or 'T'

T, T, H, T.

Write 'H' or 'T', NOT '1' OR '2'

2 Generate 10 coin results.

T, H, T, T, T,
H, T, H, H, T.

3 Generate 36 coin results.

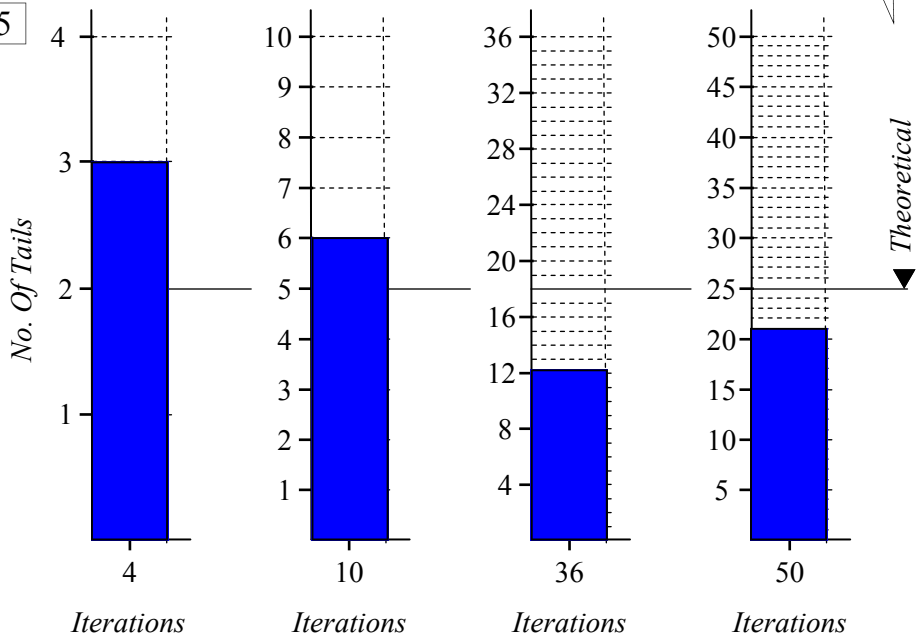
H, T, H, T, H,
H, H, H, T, T,
H, H, T, T, H,
H, H, T, H, H,
H, T, T, T, H,
H, H, H, T, H,
H, H, H, H, T,
H.

4 Count the number of 'tails' results you recorded and display them in the table below.

Iterations	*No. of Tails*
4	3
10	6
36	12
50	21

Graph your results for question 4 on the grid, just a single column for each. All axes are scaled to the same height so you can compare them.

5



6 Compare the results. End result is closest, 36 iterations was a low result dragged total down. Note if 4 iterations was 2 tails?

Use your calculator to generate random numbers, to represent a die.

Calc: ALPHA . 1 SHIFT) 6) = For the 1st integer from 1 to 6

Write '1' or '2' etc. up to 6

Calc: = For the next integer

7 Generate 6 die results. 6, 4, 2, 5, 6, 1.

8 Generate 18 die results. 1, 4, 2, 2, 6, 1, 5,
5, 5, 2, 4, 6, 6, 2, 3, 4, 3, 2.

9 Generate 30 die results. 4, 3, 2, 2, 4, 5, 4,
2, 6, 1, 2, 4, 2, 6, 6, 6, 4, 2,
5, 6, 5, 4, 6, 2, 5, 4, 2, 2, 1, 2.

If you rolled a die 6 times and achieved theoretical probability, you get 1 of each number. See if experimental probability gets closer to theoretical with more rolls! Complete the table using your experimental data above.

Iterations	1's	2's	3's	4's	5's	6's	*Theoretical*
6	1	1	0	1	1	2	1
18	2	5	2	3	3	3	3
30	2	10	1	7	4	6	5
54	5	16	3	11	8	11	9

Relative Frequency

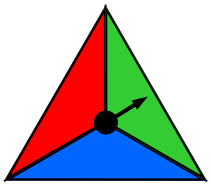
Relative frequency is the same as experimental probability. It is frequently used to get an idea of sales, usage or patronage by taking a sample and then applying the relative frequencies to different models. The larger the sample, the more likely it is to reflect actual numbers, but it is just an estimate regardless of the size of the sample.

To find the relative frequency, total the frequency column, then write the frequency of the target over that total. Here is an example for a three-coloured spinner being spun 120 times.

Example

Face	*f*	*r.f.*
R	38	$\frac{38}{120} = \frac{19}{60}$
G	46	$\frac{46}{120} = \frac{23}{60}$
B	36	$\frac{36}{120} = \frac{3}{10}$
$\Sigma f =$	120	

Step 2:Write the frequency 'over' the total, then simplify.



Step 1:Total the frequency column

From the above it appears that the spinner is biased towards landing on red. This may not be the case, but from the 120 spins the relative frequency suggests that it is.

To use relative frequency, you are usually asked to apply your results to another model.

Example If the above spinner was spun 1 000 times how many times is it likely to land on Green?

$\frac{23}{60} \times 1\,000 = 383$ times

Round to the nearest whole number

Use the green relative frequency

Multiply by the new number of spins

Relative Frequency (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these fractions

1 $\frac{150}{195} = \frac{\square}{\square}$

2 $\frac{171}{285} = \frac{\square}{\square} = \frac{\square}{\square}$

3 $\frac{46}{138}$

Find the relative frequency for the data below. Express your answer as a simplified fraction.

- Total the frequency '*f*' column
- Write the 49, heads 'H' frequency in top box and Σf number in the bottom box
- simplify the fraction.

4 Coin Results

Face	*f*	*r.f.*
H	49	$\frac{\square}{\square} = \frac{\square}{\square}$

Relative Frequency (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the relative frequency for the data for sales at Dave's Electrical. Then answer the questions.

Product	*f*	*r.f.*
Toaster	15	$\frac{\square}{\square} = \frac{\square}{\square}$
Kettle	18	$\frac{\square}{\square} = \frac{\square}{\square}$
Phone	12	$\frac{\square}{\square} = \frac{\square}{\square}$
PC/ Tablet	8	$\frac{\square}{\square} = \frac{\square}{\square}$
Other	17	$\frac{\square}{\square}$
$\Sigma f =$		

Based on the sales figures above apply relative frequencies to estimate sales. If 350 products were sold, what would be the sales of:

1 Toasters?

$\frac{\square}{\square} \times \square = \square$

2 Phones?

$\frac{\square}{\square} \times \square = \square$

3 Kettles or Toasters?

Add the fractions for kettles and toasters first

$\frac{\square}{\square} \times \square = \square$

4 Everything but toasters?

Subtract the toasters fraction from 1

$\frac{\square}{\square} \times \square = \square$

5 PCs, Tablets or phones?

$\frac{\square}{\square} \times \square = \square$

Find the relative frequency for the daily sales at Pete's Pies. Then answer the questions.

Product	*f*	*r.f.*
Pies	95	
Sausage Rolls	66	
Pastries	125	
Bread	106	
Other	48	
$\Sigma f =$		

Based on the sales figures above apply relative frequencies to estimate sales. Estimate the number of pies sold if total sales were:

6 500?

$\frac{\square}{\square} \times \square = \square$

Round to nearest pie!

7 800?

$\frac{\square}{\square} \times \square = \square$

8 300?

$\frac{\square}{\square} \times \square = \square$

Pete has run a promotion and estimates sales will be 1 300 items on the day. Estimate the number of:

9 Pies that Pete should bake.

10 Products other than bread he should bake.

Write the relative frequencies as decimals. This time it is weekly car sales. No need to round.

Car Type	*f*	*r.f.*
Family	6	0.15
Hatch	5	
4WD	16	
Hybrid	2	
Sports	4	
Wagon	3	
Other	4	
$\Sigma f =$		

Multiply relative frequencies by 100 to answer these questions.
What percentage of sales were:

11 Sports cars?

12 Family cars or wagons?

13 Not a hatchback?

14 Hatchbacks or hybrids?

If a person entered the sales area, what three types of vehicle are they most likely to buy? List them in order of popularity, most popular first.

15

The showroom floor has room for 5 cars. If the showroom cars are to reflect the above sales figures, how many:

16 4WDs should be displayed?

Relative Frequency (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A bag contains red, green and blue marbles. Apply your relative frequency knowledge.

A marble is selected and replaced from the bag 20 times, the results are:
Red 8, Green 10 and Blue 2.

1 Are there more red marbles than blue? ○ Yes ○ No ○ Can't tell

2 Are there 20 marbles in the bag? ○ Yes ○ No ○ Can't tell

3 Is it possible that there are more blue marbles than green or red? ○ Yes ○ No

4 Are there definitely more green marbles than blue marbles? ○ Yes ○ No

A computer monitor manufacturer sorts its products as follows:
Class A - Zero Dead Pixels
Class B - 1 to 2 Dead Pixels
Class C - More than 2 Dead Pixels
After taking samples it is found:
Zero Dead Pixels have *r.f.* of 0.87
One Dead Pixel have an *r.f.* of 0.08
Two Dead Pixels have an *r.f.* of 0.03

5 What is the *r.f.* for a monitor to be 'Class A'.

P(Class A) = ☐

6 Calculate the *r.f.* for a monitor to be 'Class B'.

7 Calculate the *r.f.* for a monitor to be 'Class C'.

If 800 monitors are produced in a day, how many would be:

8 'Class A' monitors?

9 'Class B' monitors?

10 'Class C' monitors?

Monitor wholesale prices are:
Class A - $350
Class B - $185
Class C - $55

11 Calculate the income for the 800 monitors.

A fire station has analysed its response times. They are:
Arrival Under 5 mins: 77%
Arrival within 5 to 10 mins: 20%
Arrival more than 10 mins: 3%

12 Convert the percentages to decimals.

77% = ☐ 20% = ☐

3% = ☐

If the station responds to an average of 56 calls per year, calculate (nearest whole number) the number of arrivals:

13 In under 5 minutes

14 In 10 minutes or less.

15 Within 5 to 10 minutes.

16 In 5 minutes or more.

The Ginormous Egg Company only sells eggs larger than 80 g. It sells the smaller eggs to wholesalers.
Its production statistics are:
Saleable eggs 80 g and over: 0.67
Wholesale eggs less than 80 g: 0.27
All other eggs are discarded.

17 Calculate the *r.f.* for an egg to be discarded.

If production averages 17 000 eggs per day, calculate the number of:

18 Daily wholesaled eggs.

19 Weekly discarded eggs.

20 Yearly company-sold eggs.

Relative Frequency (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these fractions

1 $\frac{150}{195} = \frac{10}{13}$

2 $\frac{171}{285} = \frac{3}{5} = \frac{1}{3}$

3 $\frac{46}{138}$

Find the relative frequency for the data below. Express your answer as a simplified fraction.

- Total the frequency '*f*' column
- Write the 49, heads 'H' frequency in top box and Σf number in the bottom box
- simplify the fraction.

4 Coin Results

Face	*f*	*r.f.*
H	49	$\frac{49}{105} = \frac{7}{15}$
T	56	$\frac{56}{105} = \frac{8}{15}$
$\Sigma f =$	105	

5 Di Results

Face	*f*	*r.f.*
1	45	$\frac{45}{267} = \frac{15}{89}$
2	33	$\frac{33}{267} = \frac{11}{89}$
3	42	$\frac{42}{267} = \frac{14}{89}$
4	57	$\frac{57}{267} = \frac{19}{89}$
5	39	$\frac{39}{267} = \frac{13}{89}$
6	51	$\frac{51}{267} = \frac{17}{89}$

Relative Frequency (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the relative frequency for the data for sales at Dave's Electrical. Then answer the questions.

Product	*f*	*r.f.*
Toaster	15	$\frac{15}{70} = \frac{3}{14}$
Kettle	18	$\frac{18}{70} = \frac{9}{35}$
Phone	12	$\frac{12}{70} = \frac{6}{35}$
PC/ Tablet	8	$\frac{8}{70} = \frac{4}{35}$
Other	17	$\frac{17}{70}$
$\Sigma f =$	70	

Based on the sales figures above apply relative frequencies to estimate sales. If 350 products were sold, what would be the sales of:

1 Toasters?

$\frac{3}{14} \times 350 =$ 75 toasters

2 Phones?

$\frac{6}{35} \times 350 =$ 60 phones

3 Kettles or Toasters?

Add the fractions for kettles and toasters first

$\frac{33}{70} \times 350 =$ 165 products

4 Everything but toasters?

Subtract the toasters fraction from 1

$\frac{11}{14} \times 350 =$ 275 products

5 PCs, Tablets or phones?

$\frac{2}{7} \times 350 =$ 100 products

Find the relative frequency for the daily sales at Pete's Pies. Then answer the questions.

Product	*f*	*r.f.*
Pies	95	$\frac{95}{440} = \frac{19}{88}$
Sausage Rolls	66	$\frac{66}{440} = \frac{3}{20}$
Pastries	125	$\frac{125}{440} = \frac{25}{88}$
Bread	106	$\frac{106}{440} = \frac{53}{220}$
Other	48	$\frac{48}{440} = \frac{6}{55}$
$\Sigma f =$	440	

Based on the sales figures above apply relative frequencies to estimate sales. Estimate the number of pies sold if total sales were:

6 500?

$\frac{19}{88} \times 500 =$ 108 pies

Round to nearest pie!

7 800?

$\frac{19}{88} \times 800 =$ 173 pies

8 300?

$\frac{19}{88} \times 300 =$ 65 pies

Pete has run a promotion and estimates sales will be 1 300 items on the day. Estimate the number of:

9 Pies that Pete should bake.

$\frac{19}{88} \times 1\,300 = 281$ pies

10 Products other than bread he should bake.

$\frac{167}{220} \times 1\,300 = 987$ products

Write the relative frequencies as decimals. This time it is weekly car sales. No need to round.

Car Type	*f*	*r.f.*
Family	6	0.15
Hatch	5	0.125
4WD	16	0.4
Hybrid	2	0.05
Sports	4	0.1
Wagon	3	0.075
Other	4	0.1
$\Sigma f =$	40	

Multiply relative frequencies by 100 to answer these questions. What percentage of sales were:

11 Sports cars?

$0.1 \times 100 = 10\%$

12 Family cars or wagons?

$0.225 \times 100 = 22.5\%$

13 Not a hatchback?

$0.875 \times 100 = 87.5\%$

14 Hatchbacks or hybrids?

$0.175 \times 100 = 17.5\%$

If a person entered the sales area, what three types of vehicle are they most likely to buy? List them in order of popularity, most first.

15 4WD, Family cars and Hatchbacks.

The showroom floor has room for 5 cars. If the showroom cars are to reflect the above sales figures, how many:

16 4WDs should be displayed?

$0.4 \times 5 = 2$

There should be two 4WDs.

Relative Frequency (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A bag contains red, green and blue marbles. Apply your relative frequency knowledge.

A marble is selected and replaced from the bag 20 times, the results are:
Red 8, Green 10 and Blue 2.

1 Are there more red marbles than blue?

○ Yes ○ No ● Can't tell

2 Are there 20 marbles in the bag?

○ Yes ○ No ● Can't tell

3 Is it possible that there are more blue marbles than green or red?

● Yes ○ No

4 Are there definitely more green marbles than blue marbles?

○ Yes ● No

A computer monitor manufacturer sorts its products as follows:
Class A - Zero Dead Pixels
Class B - 1 to 2 Dead Pixels
Class C - More than 2 Dead Pixels
After taking samples it is found:
Zero Dead Pixels have *r.f.* of 0.87
One Dead Pixel have an *r.f.* of 0.08
Two Dead Pixels have an *r.f.* of 0.03

5 What is the *r.f.* for a monitor to be 'Class A'.

P(Class A) = 0.87

6 Calculate the *r.f.* for a monitor to be 'Class B'.

P(Class B) = 0.08 + 0.03

P(Class B) = 0.11

7 Calculate the *r.f.* for a monitor to be 'Class C'.

P(Class C) = 1 - 0.87 - 0.11

P(Class C) = 0.02

If 800 monitors are produced in a day, how many would be:

8 'Class A' monitors?

Class A = 0.87 × 800

Class A = 696 monitors

9 'Class B' monitors?

Class B = 0.11 × 800

Class B = 88 monitors

10 'Class C' monitors?

Class C = 0.02 × 800

Class C = 16 monitors

Monitor wholesale prices are:
Class A - $350
Class B - $185
Class C - $55

11 Calculate the income for the 800 monitors.

Income = 696 × 350 + 88 × 185

+16 × 55 = $260 760

A fire station has analysed its response times. They are:
Arrival Under 5 mins: 77%
Arrival within 5 to 10 mins: 20%
Arrival more than 10 mins: 3%

12 Convert the percentages to decimals.

77% = 0.77 20% = 0.2

3% = 0.03

If the station responds to an average of 56 calls per year, calculate (nearest whole number) the number of arrivals:

13 In under 5 minutes

Under 5 arrivals = 0.77 × 56

= 43 arrivals

14 In 10 minutes or less.

10 min or less = 0.97 × 56

= 54 arrivals

15 Within 5 to 10 minutes.

5 to 10 min = 0.2 × 56

= 11 arrivals

16 In 5 minutes or more.

5 min or more = 0.23 × 56

= 13 arrivals

The Ginormous Egg Company only sells eggs larger than 80 g. It sells the smaller eggs to wholesalers.
Its production statistics are:
Saleable eggs 80 g and over: 0.67
Wholesale eggs less than 80 g: 0.27
All other eggs are discarded.

17 Calculate the *r.f.* for an egg to be discarded.

P(Discard) = 1 - 0.67 - 0.27

P(Discard) = 0.06

If production averages 17 000 eggs per day, calculate the number of:

18 Daily wholesaled eggs.

WS eggs = 0.27 × 17 000

WS eggs = 4 590 eggs

19 Weekly discarded eggs.

Disc. eggs = 0.03 × 17 000 × 7

Disc. eggs = 3 570 eggs

20 Yearly company-sold eggs.

Sold eggs = 0.67 × 17 000 × 365

Sold eggs = 4 157 350 eggs

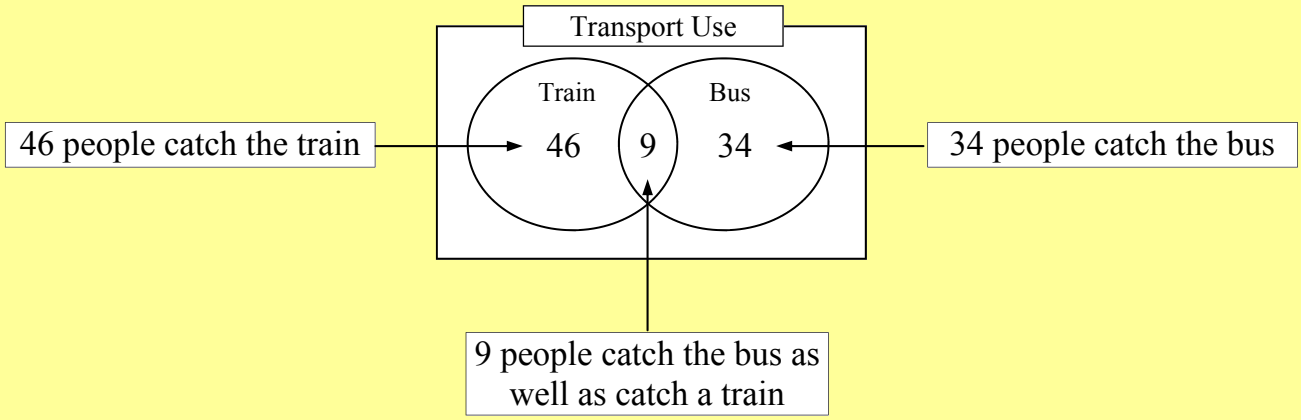
$\frac{8}{15} \times 4\,230 = 2\,256$

2 The service good or satisfactory.

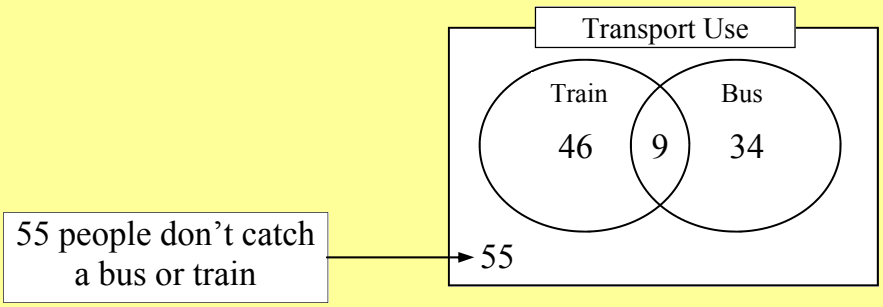
$\frac{5}{6} \times 4\,230 = 3\,525$

Venn Diagrams

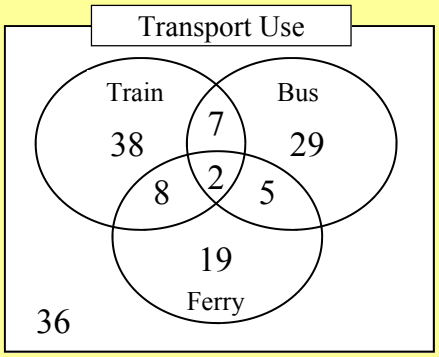
A Venn Diagram is an effective way of showing data when two groups (or more) have some interaction, or in other words, something is common or shared between the groups of data. So you wouldn't use a Venn Diagram to compare unrelated data, such as 'Number of People on a Bus' and 'Shoe Size'. But 'People who catch the bus', 'People who catch the train' and an overlap of 'People who catch a train and a bus' could be shown, see below.



The above could result from separating people who either catch a train, or a bus, and asking them which they use. But what if you asked anybody if they catch a train or bus? As people would drive, walk, bike ride etc. They don't fit in the rings, they either need another ring, or they are outside of the rings.



There can be more than two rings, what if the travel was in a city with a harbor and ferry travel was an option.



32 people use a ferry, but 15 of those ferry users were already in the rings using trains and buses. You can now see that 2 people use all three transport methods.

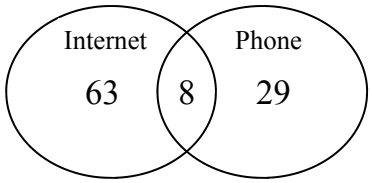
A web-based bank account offers account access by either telephone or internet. Answer these questions.

Customer Usage (%)



What percentage of people access their account using:

1 A phone only? ____

2 A phone? ____

3 The internet? ____

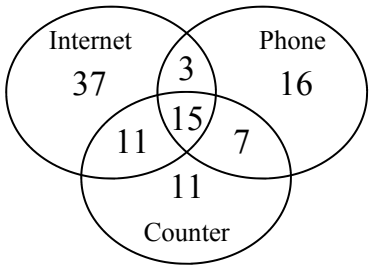
4 The internet only? ____

5 One method only? ____

6 Both methods? ____

The 'extras' bank account includes branch counter service, answer these.

Extras Customer Usage (%)



What percentage of people access their 'Extras' account:

7 Using a phone only? ____

8 Using counter services? ____

9 Using all three methods? ____

10 Not using the internet? ____

What percentage of people access their 'Extras' account using:

11 Both counter and internet services? ____

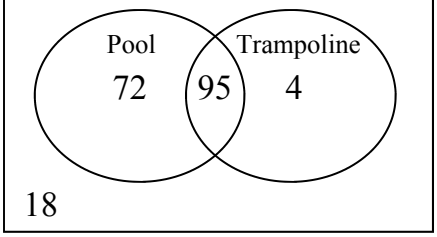
12 Both counter and internet services only? ____

13 A phone but not the internet? ____

14 Counter services but not phone services? ____

A swimming complex offers two pools and six trampolines. Answer these questions.

Monday's Entry Figures (people)



How many people entering the complex on Monday:

15 Only used the pool? ____

16 Used nothing? ____

17 Used only the trampolines? ____

18 Used only one service? ____

19 Didn't enter a pool? ____

20 Didn't use the trampolines? ____

21 Used both services? ____

22 Used the pool? ____

23 Used a pool or a trampoline? ____

Tickets cost: \$2 for the trampolines, \$3 for the pool, \$4 for both and \$1 for spectating care-givers. What were the gate takings?

24 ____

Calculate the relative frequency, as a percentage (to 1 d.p.) for a person to enter the complex and:

25 Use the Pool

All people Using pool

$P(\text{pool}) = \frac{\square}{\square} \times 100$

All People

$P(\text{pool}) =$ ____

Show % sign, round to 1 d.p.

26 Use only the pool or only the trampoline.

$P(\text{tr,pl}) = \frac{\square}{\square} \times \square$

$P(\text{tr,pl}) =$ ____ % sign!

27 Not use the trampoline.

28 Not use the pool.

29 Use the pool only.

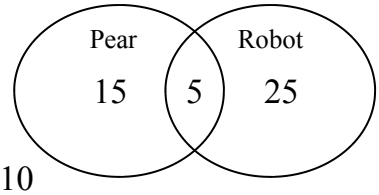
A survey of people that own a mobile phone has had the results shown in the Venn Diagram. Answer these questions.

Mobile Phone Operating Systems



How many people own:

1 A Pear-based phone? ____ (15 + 5)

2 A Robot-based phone? ____

3 A phone that is not Pear or Robot based? ____

4 Both Pear and Robot based phones? ____

Calculate the relative frequency, expressed as a simplified fraction, for a person having a:

5 Pear-based phone.

$P(\text{Pear}) = \frac{15+5}{15+5+25+10} = \frac{\square}{\square}$ (Simplify Using Fraction Key)

6 Phone being neither Pear or Robot based.

$P(\widetilde{P,R}) = \frac{\square}{\square} = \frac{\square}{\square}$

7 Robot-based phone only.

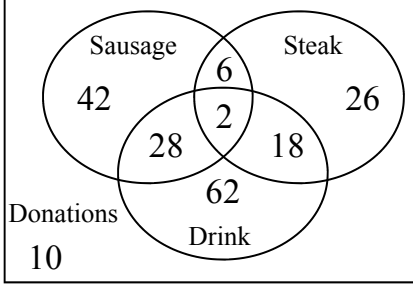
$P(\text{R only}) = \frac{\square}{\square} = \frac{\square}{\square}$

8 Phone that isn't Pear-based.

$P(\widetilde{\text{Pear}}) = \frac{\square}{\square} = \frac{\square}{\square}$

A school stall sells sausage and steak sandwiches as well as drinks. Some people donate money without buying anything.

Sausage Sizzle School-Fund Raiser



How many people bought:

9 A sausage sandwich? ____

10 Only a Sausage sandwich? ____

11 Nothing but donated? ____

12 All three products? ____

13 Both a drink and a sausage sandwich? ____

14 Two products only? ____

15 A steak sandwich and a drink only? ____

Calculate the total number of:

16 Visitors ____ 17 Purchasers ____

How many people came to the stall but didn't buy:

18 A sausage sandwich? ____

Include people making a donation

19 A sandwich? ____

20 A drink? ____

21 A drink or a steak sandwich? ____

22 Two products or more? ____

It's time to analyse the school sales. Use the Sausage Sizzle Venn Diagram to find these.

Calculate the relative frequency as a percentage (1 d.p.) for a person:

23 Visiting the stall and buying any product or products.

$P(\text{buy}) = \frac{\square}{\square} \times 100$ (All numbers in rings Q.17 / All numbers)

$P(\text{buy}) =$ ____

Show % sign, round to 1 d.p.

24 Visiting the stall and buying a drink.

$P(\text{drink}) = \frac{\square}{\square} \times \square$

$P(\text{drink}) =$ ____ (% sign!)

25 Buying from the stall and buying a steak sandwich.

Don't include people giving donation - Buying

26 Buying from the stall and buying both a drink and a sandwich.

27 Visiting the stall and not buying a drink.

28 Buying from the stall and not buying a sausage sandwich.

Venn Diagrams (Sheet 1)

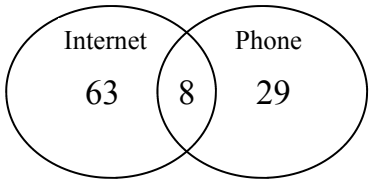
A web-based bank account offers account access by either telephone or internet. Answer these questions.

Customer Usage (%)

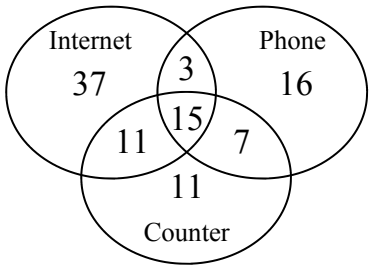


What percentage of people access their account using:

1. A phone only? **29**
2. A phone? **37**
   29 + 8
3. The internet? **71**
   63 + 8
4. The internet only? **63**
5. One method only? **92**
   63 + 29
6. Both methods? **8**

The 'extras' bank account includes branch counter service, answer these.

Extras Customer Usage (%)



What percentage of people access their 'Extras' account:

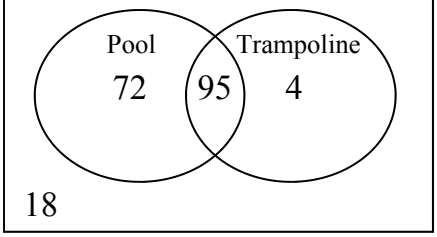
7. Using a phone only? **16**
8. Using counter services? **44**
   2 ×11 + 7 + 15
9. Using all three methods? **15**
10. Not using the internet? **34**
    11 + 7 + 16

What percentage of people access their 'Extras' account using:

11. Both counter and internet services? **26**
    11 + 15
12. Both counter and internet services only? **11**
13. A phone but not the internet? **23**
    16 + 7
14. Counter services but not phone services? **22**
    11 + 11

A swimming complex offers two pools and six trampolines. Answer these questions.

Monday's Entry Figures (people)



How many people entering the complex on Monday:

15. Only used the pool? **72**
16. Used nothing? **18**
17. Used only the trampolines? **4**
18. Used only one service? **76**
    72 + 4
19. Didn't enter a pool? **22**
    18 + 4
20. Didn't use the trampolines? **90**
    72 + 18
21. Used both services? **95**
22. Used the pool? **167**
    95 + 72
23. Used a pool or a trampoline? **171**
    95 + 72 + 4

Tickets cost: \$2 for the trampolines, \$3 for the pool, \$4 for both and \$1 for spectating care-givers. What were the gate takings?

24. Takings = 4 × 2 + 72 × 3 + 95 × 4 + 18 × 1

Takings = \$622

Calculate the relative frequency, as a percentage (to 1 d.p.) for a person to enter the complex and:

25. Use the Pool

$$P(\text{pool}) = \frac{167}{189} \times 100$$

(167: All people Using pool; 189: All People)

P (pool) = 88.4%

Show % sign, round to 1 d.p.

26. Use only the pool or only the trampoline.

$$P(\text{tr,pl}) = \frac{76}{189} \times 100$$

P (tr,pl) = 40.2% % sign!

27. Not use the trampoline.

$$P(\text{no tr}) = \frac{90}{189} \times 100$$

P (no tr) = 47.6%

28. Not use the pool.

$$P(\text{no pool}) = \frac{22}{189} \times 100$$

P (no pool) = 11.6%

29. Use the pool only.

$$P(\text{pool only}) = \frac{72}{189} \times 100$$

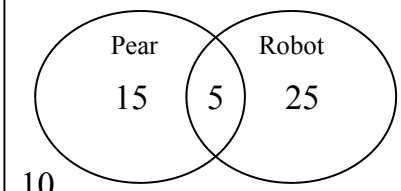
P (pool only) = 38.1%

Venn Diagrams (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A survey of people that own a mobile phone has had the results shown in the Venn Diagram. Answer these questions.

Mobile Phone Operating Systems



How many people own:

1. A Pear-based phone? **20** (15 + 5)
2. A Robot-based phone? **30**
3. A phone that is not Pear or Robot based? **10**
4. Both Pear and Robot based phones? **5**

Calculate the relative frequency, expressed as a simplified fraction, for a person having a:

5. Pear-based phone.

$$P(\text{Pear}) = \frac{20}{55} = \frac{4}{11}$$ (15 + 5; 15 + 5 + 25 + 10; Simplify Using Fraction Key)

6. Phone being neither Pear or Robot based.

$$P(\widetilde{P,R}) = \frac{10}{55} = \frac{2}{11}$$

7. Robot-based phone only.

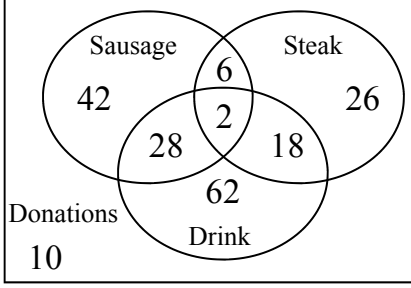
$$P(\text{R only}) = \frac{25}{55} = \frac{5}{11}$$

8. Phone that isn't Pear-based.

$$P(\widetilde{\text{Pear}}) = \frac{35}{55} = \frac{7}{11}$$

A school stall sells sausage and steak sandwiches as well as drinks. Some people donate money without buying anything.

Sausage Sizzle School-Fund Raiser



How many people bought:

9. A sausage sandwich? **78** (42 + 28 + 6 + 2)
10. Only a Sausage sandwich? **42**
11. Nothing but donated? **10**
12. All three products? **2**
13. Both a drink and a sausage sandwich? **30** (28 + 2)
14. Two products only? **52** (28 + 18 + 6)
15. A steak sandwich and a drink only? **18**

Calculate the total number of:

16. Visitors **194**
17. Purchasers **184**

How many people came to the stall but didn't buy:

18. A sausage sandwich? **88** (10 + 62 + 18 + 26)
19. A sandwich? **72** (62 + 10)
20. A drink? **84** (10 + 42 + 6 + 26)
21. A drink or a steak sandwich? **52** (10 + 42)
22. Two products or more? **140** (10 + 62 + 42 + 26)

It's time to analyse the school sales. Use the Sausage Sizzle Venn Diagram to find these.

Calculate the relative frequency as a percentage (1 d.p.) for a person:

23. Visiting the stall and buying any product or products. (All numbers in rings Q.17; All numbers)

$$P(\text{buy}) = \frac{184}{194} \times 100$$

$$P(\text{buy}) = 94.8\%$$

Show % sign, round to 1 d.p.

24. Visiting the stall and buying a drink. (62 + 28 + 2 + 18)

$$P(\text{drink}) = \frac{110}{194} \times 100$$

$$P(\text{drink}) = 56.7\%$$ (% sign!)

25. Buying from the stall and buying a steak sandwich.

Don't include people giving donation - Buying

$$P(\text{ss}) = \frac{90}{184} \times 100$$

$$P(\text{ss}) = 48.9\%$$

26. Buying from the stall and buying both a drink and a sandwich. (28 + 18 + 2)

$$P(\text{d,s}) = \frac{48}{184} \times 100$$

$$P(\text{d,s}) = 26.1\%$$

27. Visiting the stall and not buying a drink. (10 + 42 + 6 + 26)

$$P(\text{no drink}) = \frac{84}{194} \times 100$$

$$P(\text{no drink}) = 43.3\%$$

28. Buying from the stall and not buying a sausage sandwich. (62+18+26)

$$P(\text{no saus}) = \frac{106}{184} \times 100$$

$$P(\text{no saus}) = 57.6\%$$

7. What is the relative frequency for a student not catching a bus?

$$P(\text{no bus}) = \frac{102}{148} = \frac{51}{74}$$

Two-Way Tables

A two-way table compares two or more outcomes against another two (or more) outcomes. The outcomes may be related, like ‘Inadequate sleep’ & ‘Normal sleep’ against ‘Good Driver’ & ‘Poor Driver’. The lack of rest may affect the driving skill. But you can have unrelated comparisons like: ‘Right-handed’ & ‘Left-handed’ against ‘Male’ and ‘Female’. Your sex and the hand you write with may be unrelated, but can relevant for statistics. For example by Ordering more specialised handed equipment.

Sheet 1 asks you to complete the table first, by finding the totals. So add across and add down, check that the vertical totals add to the bottom left hand cell, then repeat for the horizontal totals. You are then given two pieces of information. The first piece of information selects the row or column, the second piece of information selects the cell within that column/row.

Example

	Right-H	Left-H	Total
Female	45	6	51
Male	52	3	55
Total	97	9	106

Add Down

Add across

How many female students are left handed? 6

Female so 1st row

Left handed so 2nd col

But these questions can also include probability based questions. Relative frequency is used because the results are based on experimental results, not necessarily theoretical results. For example the probabilities would change if students were absent.

Example

	Right-H	Left-H	Total
Female	45	6	51
Male	52	3	55
Total	97	9	106

What is the relative frequency of selecting from the male students, a male who is right handed?

Female so 2nd row

Right handed so 1st col

$$P(\text{male,right-h}) = \frac{52}{55}$$

There are 55 male students

Probability - Two-Way Tables (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Two-way tables can be read horizontally or vertically, answer the questions.

Year 9 Survey: Weather vs. Type of Clothing

	Shorts	Trousers	Total
Hot	198	24	A
Cold	36	162	B
Total	C	D	E

1 Complete the total boxes in the table above.

For the next 5 questions, how many Year 9 students:

2 Wore shorts on the hot day? ____

3 Wore shorts on the cold day? ____

4 Wore trousers on the cold day? ____

5 Wore trousers? ____ 6 Were surveyed? ____

7 An excursion was on one of the two survey days, which day, hot or cold, do you think it was on. Explain your answer.

_____

_____

Writing your answer as a fraction, then simplify it. Calculate the relative frequency of a Year 9 student:

8 On a cold day, wearing shorts. $P(sh,cold) = \frac{\square}{\square} = \frac{\square}{\square}$

9 On a hot day, not wearing shorts. $P(\widetilde{sh},hot) = \frac{\square}{\square} = \frac{\square}{\square}$

10 Wearing trousers. (On a cold or hot day). $P(trous) = \frac{\square}{\square} = \frac{\square}{\square}$ Careful! →

Writing your answer as a percentage (to 1 d.p.), calculate the relative frequency of a Year 9 student:

11 On a cold day, wearing trousers. $P(cold,tr) = \frac{\square}{\square} \times 100$

$= \frac{\square}{\square}$ 1 d.p. Show %

Vet Survey: Pets vs. Flea Infestation

	Cats	Dogs	Total
No fleas	188	285	A
Fleas	18	20	B
Total	C	D	E

12 Complete the total boxes in the table above.

13 How many cats had fleas? ____

14 How many dogs had fleas? ____

15 Calculate the relative frequency for a cat to have fleas, express your answer as a percentage (1 d.p.).

$P(cat,fleas) = \frac{\square}{\square} \times \square = \frac{\square}{\square}$ Show % sign

16 For a dog to have fleas.

$P(dog,fleas) = \frac{\square}{\square} \times \square = \square$

17 For a pet with fleas, to be a dog.

$P(fleas,dog) = \frac{\square}{\square} \times \square = \square$

Bus Transport Survey: Weather vs. Punctuality

	On-time	Late	Total
Raining	50	A	65
Dry	B	5	65
Total	D	E	C

18 Complete the lettered boxes in the table above.

19 How many buses were late? ____

Find the relative frequency as a simplified fraction for:

20 On a dry day, a bus being on-time . $P(dry,on\text{-}time) = \frac{\square}{\square} = \frac{\square}{\square}$

21 On a rainy day, a bus being late. $P(rain,late) = \frac{\square}{\square} = \frac{\square}{\square}$

Probability - Two-Way Tables (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

The key to car wash success is to never lose your drive. Answer these questions on two-way tables.

Car Wash Survey: Wash vs. Vacuum

	Wash	No Wash	Total
Vacuum	78	4	A
No Vacuum	36	0	B
Total	C	D	E

1 Complete the total boxes in the table above.

Find the relative frequency as a percentage (1 d.p.) from:

2 Cars having a car wash, cars that don't get vacuumed.

$P(\text{wash,no vac}) = \frac{\square}{\square} \times \square = \square$

3 Cars having a vacuum, cars not getting a car wash.

$P(\text{vac,no wash}) = \frac{\square}{\square} \times \square = \square$

4 Cars not having a car wash, cars getting a vacuum.

5 Cars entering the car wash, cars getting a car wash.

Year 9 Hair Survey: Length vs. Curliness

	Straight	Curly	Total
Short		4	125
Long	62		80
Total			

6 Complete all the missing cells in the table above.

Writing your answer as a fraction, then simplify it. Calculate the relative frequency of a Year 9 student:

7 With curly hair, having short hair. $P(\text{curl,sh}) = \frac{\square}{\square} = \frac{\square}{\square}$

8 Having curly short hair. $P(\text{curl,sh}) = \frac{\square}{\square}$

We are still dealing with hair, well you are, I'm not!

Calculate the relative frequency of a Year 9 student:

9 With long hair, having curly hair. $P(\text{lng,curl}) = \frac{\square}{\square} = \frac{\square}{\square}$

10 With curly hair, having long hair. $P(\text{curl,lng}) = \frac{\square}{\square} = \frac{\square}{\square}$

11 Having short hair. $P(\text{short}) = \frac{\square}{\square} = \frac{\square}{\square}$

12 Having straight hair. $P(\text{strgt}) = \frac{\square}{\square}$

Year 9 Language Survey: Language vs. Sex

	French	German	Total
Male		16	30
Female	12		
Total			56

13 Complete all the missing cells in the table above.

14 The survey was taken on a German class and a French class, how many students in each class?

German Students = $\square$ French Students = $\square$

15 If 12 language students were interviewed, how many would you expect to be male and studying French?

16 If there are 95 Year 9 students, how many don't study a language?

Find the relative frequency, as a % to 1 d.p., that a Year 9 student (full year group) chosen randomly, would be:

17 Male and study German.

18 Female and studies a language

Probability - Two-Way Tables (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Two-way tables can be read horizontally or vertically, answer the questions.

Year 9 Survey: Weather vs. Type of Clothing

	Shorts	Trousers	Total
Hot	198	24	A 222
Cold	36	162	B 198
Total	C 234	D 186	E 420

1 Complete the total boxes in the table above.

For the next 5 questions, how many Year 9 students:

2 Wore shorts on the hot day? 198

3 Wore shorts on the cold day? 36

4 Wore trousers on the cold day? 162

5 Wore trousers? 186 6 Were surveyed? 420

7 An excursion was on one of the two survey days, which day, hot or cold, do you think it was on. Explain your answer. Most likely the cold day because the number of students was 24 less

Writing your answer as a fraction, then simplify it. Calculate the relative frequency of a Year 9 student:

8 On a cold day, wearing shorts. $P(sh,cold) = \frac{36}{198} = \frac{2}{11}$

9 On a hot day, not wearing shorts. $P(\widetilde{sh},hot) = \frac{24}{222} = \frac{4}{37}$

10 Wearing trousers. (On a cold or hot day). $P(trous) = \frac{186}{420} = \frac{31}{70}$ Careful!

Writing your answer as a percentage (to 1 d.p.), calculate the relative frequency of a Year 9 student:

11 On a cold day, wearing trousers. $P(tr,cold) = \frac{162}{198} \times 100 = 81.8\%$ (1 d.p. Show %)

Vet Survey: Pets vs. Flea Infestation

	Cats	Dogs	Total
No fleas	188	285	A 473
Fleas	18	20	B 38
Total	C 206	D 305	E 473

12 Complete the total boxes in the table above.

13 How many cats had fleas? 18

14 How many dogs had fleas? 20

15 Calculate the relative frequency for a cat to have fleas, express your answer as a percentage (1 d.p.).

$P(cat,fleas) = \frac{18}{206} \times 100 = 8.7\%$ (Show % sign)

16 For a dog to have fleas.

$P(dog,fleas) = \frac{20}{305} \times 100 = 6.6\%$

17 For a pet with fleas, to be a dog.

$P(fleas,dog) = \frac{20}{38} \times 100 = 52.6\%$

Bus Transport Survey: Weather vs. Punctuality

	On-time	Late	Total
Raining	50	A 15	65
Dry	B 60	5	65
Total	D 110	E 20	C 130

18 Complete the lettered boxes in the table above.

19 How many buses were late? 20

Find the relative frequency as a simplified fraction for:

20 On a dry day, a bus being on-time . $P(dry,on\text{-}time) = \frac{60}{65} = \frac{12}{13}$

21 On a rainy day, a bus being late. $P(rain,late) = \frac{15}{65} = \frac{3}{13}$

Probability - Two-Way Tables (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

The key to car wash success is to never lose your drive. Answer these questions on two-way tables.

Car Wash Survey: Wash vs. Vacuum

	Wash	No Wash	Total
Vacuum	78	4	A 82
No Vacuum	36	0	B 36
Total	C 114	D 4	E 118

1 Complete the total boxes in the table above.

Find the relative frequency as a percentage (1 d.p.) from:

2 Cars having a car wash, cars that don't get vacuumed.

$$P(\text{wash,no vac}) = \frac{36}{114} \times 100 = 31.6\%$$

3 Cars having a vacuum, cars not getting a car wash.

$$P(\text{vac,no wash}) = \frac{4}{82} \times 100 = 4.9\%$$

4 Cars not having a car wash, cars getting vacuumed.

$$P(\text{no wash,vac}) = \frac{4}{4} \times 100 = 100\%$$

5 Cars entering the car wash, cars getting a car wash.

$$P(\text{no wash,vac}) = \frac{114}{118} \times 100 = 96.6\%$$

Year 9 Hair Survey: Length vs. Curliness

	Straight	Curly	Total
Short	121	4	125
Long	62	18	80
Total	183	22	205

6 Complete all the missing cells in the table above.

Writing your answer as a fraction, then simplify it. Calculate the relative frequency of a Year 9 student:

7 With curly hair, having short hair.

$$P(\text{curl,sh}) = \frac{4}{22} = \frac{2}{11}$$

8 Having curly short hair.

$$P(\text{curl,sh}) = \frac{4}{205}$$

We are still dealing with hair, well you are, I'm not!

Calculate the relative frequency of a Year 9 student:

9 With long hair, having curly hair.

$$P(\text{lng,curl}) = \frac{18}{80} = \frac{9}{40}$$

10 With curly hair, having long hair.

$$P(\text{curl,lng}) = \frac{18}{22} = \frac{9}{11}$$

11 Having short hair.

$$P(\text{short}) = \frac{125}{205} = \frac{25}{41}$$

12 Having straight hair.

$$P(\text{strgt}) = \frac{183}{205}$$

Year 9 Language Survey: Language vs. Sex

	French	German	Total
Male	14	16	30
Female	12	14	26
Total	26	30	56

13 Complete all the missing cells in the table above.

14 The survey was taken on a German class and a French class, how many students in each class?

German Students = 30 French Students = 26

15 If 12 language students were interviewed, how many would you expect to be male and studying French?

$$P(\text{male,french}) = \frac{14}{56} \times 12 = 25\%$$

16 If there are 95 Year 9 students, how many don't study a language? 95 - 56 = 39 students

Find the relative frequency, as a % to 1 d.p., that a Year 9 student (full year group) chosen randomly, would be:

17 Male and study German.

$$P(\text{male,german}) = \frac{16}{95} \times 100 = 16.8\%$$

18 Female and studies a language

$$P(\text{female,lang}) = \frac{26}{95} \times 100 = 27.4\%$$

Probability Review

This is the review of the Probability Topic.

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

10 cards numbered 1 to 10 are placed in a hat, then one card is randomly selected. Find the probability of:

1 Selecting an '8' card.

$P(8) = \frac{\square}{\square}$

2 Selecting an odd numbered card.

$\square = \frac{\square}{\square} = \frac{\square}{\square}$

3 Selecting a card with a number greater than 4.

$\square = \frac{\square}{\square} = \frac{\square}{\square}$

4 Selecting a card with a number that is a factor of 8.

$\square = \frac{\square}{\square} = \frac{\square}{\square}$

5 Not Selecting a card with a number less than 3.

$\square = \frac{\square}{\square} = \frac{\square}{\square}$

15 discs are in a bag. A single disc is selected, its colour recorded, then replaced. After 25 selections there have been 10 black discs, 3 red discs and 12 green discs selected.

Answer True or False

6 There are definitely more Green discs in the bag. (True) (False)

7 The bag may contain 12 purple discs. (True) (False)

8 There are definitely more green discs than red discs. (True) (False)

(These questions are on the discs still). If a disc was selected and replaced 325 times, estimate the:

9 Number of times a red disc would be selected.

_____

10 Number of times a black disc would be selected.

_____

11 Number of times a selected disc would be green or red.

_____

If a card is chosen from a standard deck of cards. Calculate the probability of:

12 Selecting a red card.

_____

13 Selecting a black picture card.

_____

14 Selecting a '5', '7' or an ace.

_____

15 Not selecting a picture card or an ace.

_____

Three Year 9 boys have nominated for the male SRC position, Joe, Omar and Lance. 70 students vote by selecting one of these students. Results are below.

Data:				
LJLOJ	LLOOJ	JOLLO	OOJLL	
LLLOJ	OOJLO	LOOLL	JLLLO	OLLLJ
OLJLO	JJLLL	JOLOO	LLLLJ	OLLLJ

16 Complete the table, simplifying the relative frequencies.

Student	*Tally*	*f*	*r.f.*
Joe	----------	$\square$	$\frac{\square}{\square} = \frac{\square}{\square}$
Omar	----------	$\square$	$\frac{\square}{\square} = \frac{\square}{\square}$
Lance	----------	$\square$	$\frac{\square}{\square} = \frac{\square}{\square}$
		$\Sigma f = \square$	

25 students were on an excursion on the day, but will vote the next day. Based on the relative frequencies above. How many of the 25 students:

17 Would vote for Omar.

_____

18 Would not vote for Lance.

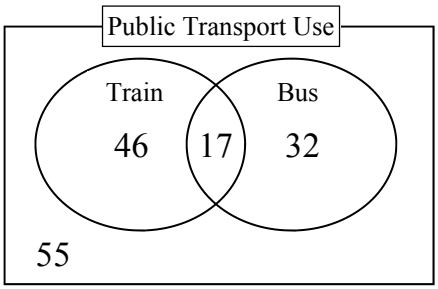
_____

19 Who would get the most of the total vote and how many would they get?

_____

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A business asked its staff who use public transport which type of transport they use. Results are shown



How many people:

20 Used the train only? ____

21 Used a both a bus and a train? ____

22 Didn't use a train? ____

23 Were surveyed? ____

Calculate the relative frequency and simplify the fraction if possible, for:

24 A person catching a train.

____ = ____ = ____

25 A person catching only a train, or only a bus.

____ = ____ = ____

26 A person not catching a train

____ = ____ = ____

Calculate the relative frequency as a percentage (1 d.p.), for:

27 A person not catching a train, or a bus.

The results for a survey of Year 9 students are shown below. Complete the spaces in the table and then answer the questions.

	Right-H	Left-H	Total
Female	45	6	
Male	52	3	
Total			

How many Year 9 students:

28 Are left-handed? ____

29 Were surveyed? ____

30 Are male? ____

Find the relative frequencies for these, answer as a percentage (to 1 d.p.)

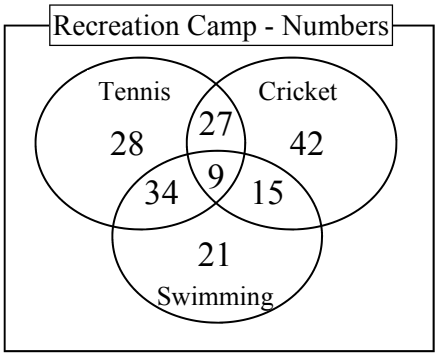
31 That a right-handed student, would be male.

32 That a female student, would would be left-handed.

33 That a Year 9 student, would be male and left-handed.

34 That a Year 9 student, would be right-handed.

35 That a Year 9 student, would be female.



A recreation camp offers a choice of three sports, which students can do individually or in conjunction with other sports. Answer these questions

How many students have chosen:

36 Just swimming? ____

37 Swimming? ____

38 All three sports? ____

39 Both tennis and cricket? ____

40 One sport only? ____

41 Not to do swimming? ____

Calculate the relative frequency as a percentage (1 d.p.), for:

42 A student to choose both swimming and cricket.

43 A student who has chosen cricket, to also choose swimming.

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

10 cards numbered 1 to 10 are placed in a hat, then one card is randomly selected. Find the probability of:

1 Selecting an '8' card.

$P(8) = \frac{1}{10}$

2 Selecting an odd numbered card.

$P(\text{odd}) = \frac{5}{10} = \frac{1}{2}$

3 Selecting a card with a number greater than 4.

$P(>4) = \frac{6}{10} = \frac{3}{5}$

4 Selecting a card with a number that is a factor of 8.

$P(\text{factor 8}) = \frac{4}{10} = \frac{2}{5}$

5 Not Selecting a card with a number less than 3.

$P(\widetilde{<3}) = \frac{8}{10} = \frac{4}{5}$

15 discs are in a bag. A single disc is selected, its colour recorded, then replaced. After 25 selections there have been 10 black discs, 3 red discs and 12 green discs selected.

Answer True or False

6 There are definitely more Green discs in the bag. True

7 The bag may contain 12 purple discs. False

8 There are definitely more green discs than red discs. True

(These questions are on the discs still). If a disc was selected and replaced 325 times, estimate the:

9 Number of times a red disc would be selected.

$\frac{3}{25} \times 325 = 39$ times

10 Number of times a black disc would be selected.

$\frac{10}{25} \times 325 = 130$ times

11 Number of times a selected disc would be green or red.

$\frac{15}{25} \times 325 = 195$ times

If a card is chosen from a standard deck of cards. Calculate the probability of:

12 Selecting a red card.

$P(\text{red}) = \frac{26}{52} = \frac{1}{2}$

13 Selecting a black picture card.

$P(\text{black pic}) = \frac{6}{52} = \frac{3}{26}$

14 Selecting a '5', '7' or an ace.

$P(5,7,\text{Ace}) = \frac{12}{52} = \frac{3}{13}$

15 Not selecting a picture card or an ace.

$P(\widetilde{\text{Pic,Ace}}) = \frac{36}{52} = \frac{9}{13}$

Three Year 9 boys have nominated for the male SRC position, Joe, Omar and Lance. 70 students vote by selecting one of these students. Results are below.

Data:				
LJLOJ	LLOOJ	JOLLO	OOJLL	
LLLOJ	OOJLO	LOOLL	JLLLO	OLLLJ
OLJLO	JJLLL	JOLOO	LLLLJ	OLLLJ

16 Complete the table, simplifying the relative frequencies.

Student	*Tally*	*f*	*r.f.*
Joe	𝍸 𝍸 𝍸	15	$\frac{15}{70} = \frac{3}{14}$
Omar	𝍸 𝍸 𝍸 𝍸 |	21	$\frac{21}{70} = \frac{3}{10}$
Lance	𝍸 𝍸 𝍸 𝍸 𝍸 𝍸 ||||	34	$\frac{34}{70} = \frac{17}{35}$
	$\Sigma f =$	70	

25 students were on an excursion on the day, but will vote the next day. Based on the relative frequencies above. How many of the 25 students:

17 Would vote for Omar.

$\frac{3}{10} \times 25 \approx 8$ students

18 Would not vote for Lance.

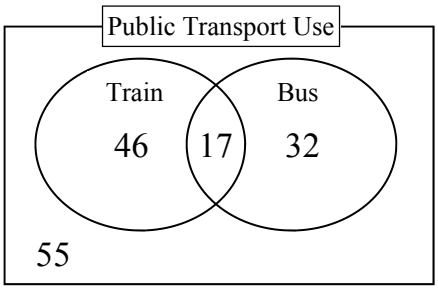
$\frac{18}{35} \times 25 \approx 13$ students

19 Who would get the most of the total vote and how many would they get?

Lance, $\frac{17}{35} \times 95 \approx 46$ students

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A business asked its staff who use public transport which type of transport they use. Results are shown



How many people:

20 Used the train only? 46

21 Used a both a bus and a train? 15

22 Didn't use a train? 89

23 Were surveyed? 150

Calculate the relative frequency and simplify the fraction if possible, for:

24 A person catching a train.

$P(\text{train}) = \frac{63}{150} = \frac{21}{50}$

25 A person catching only a train, or only a bus.

$P(\text{train,bus}) = \frac{78}{150} = \frac{13}{25}$

26 A person not catching a train

$P(\widetilde{\text{train}}) = \frac{87}{150} = \frac{29}{50}$

Calculate the relative frequency as a percentage (1 d.p.), for:

27 A person not catching a train, or a bus.

$P(\text{no bus or train}) = \frac{55}{150} \times 100$

$P(\text{no bus or train}) = 36.7\%$

The results for a survey of Year 9 students are shown below. Complete the spaces in the table and then answer the questions.

	Right-H	Left-H	Total
Female	45	6	51
Male	52	3	55
Total	97	9	106

How many Year 9 students:

28 Are left-handed? 9

29 Were surveyed? 106

30 Are male? 55

Find the relative frequencies for these, answer as a percentage (to 1 d.p.)

31 That a right-handed student, would be male.

$P(\text{r-h,male}) = \frac{52}{97} \times 100$

$P(\text{r-h,male}) = 53.6\%$

32 That a female student, would would be left-handed.

$P(\text{l-h,female}) = \frac{6}{51} \times 100$

$P(\text{l-h,female}) = 11.8\%$

33 That a Year 9 student, would be male and left-handed.

$P(\text{l-h,male}) = \frac{3}{106} \times 100$

$P(\text{l-h,male}) = 2.8\%$

34 That a Year 9 student, would be right-handed.

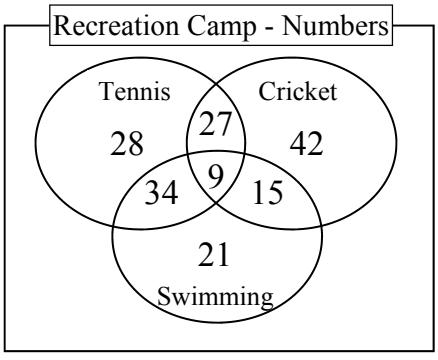
$P(\text{r-h}) = \frac{97}{106} \times 100$

$P(\text{r-h}) = 91.5\%$

35 That a Year 9 student, would be female.

$P(\text{female}) = \frac{51}{106} \times 100$

$P(\text{female}) = 48.1\%$



A recreation camp offers a choice of three sports, which students can do individually or in conjunction with other sports. Answer these questions

How many students have chosen:

36 Just swimming? 21

37 Swimming? 79

38 All three sports? 9

39 Both tennis and cricket? 36

40 One sport only? 91

41 Not to do swimming? 97

Calculate the relative frequency as a percentage (1 d.p.), for:

42 A student to choose both swimming and cricket.

$P(\text{swim,crick}) = \frac{24}{176} \times 100$

$P(\text{swim,crick}) = 13.6\%$

43 A student who has chosen cricket, to also choose swimming.

$P(\text{swim,crick}) = \frac{24}{93} \times 100$

$P(\text{swim,crick}) = 25.8\%$

Probability Review (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

List the sample space for the following. Which is a list of all the possible outcomes

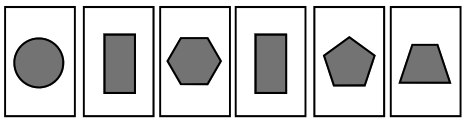
1 A coin.

Sample Space is { ____ }

2 A die.

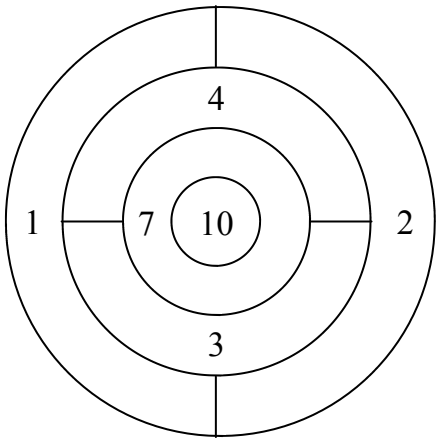
Sample Space is { _____ }

3 These cards.



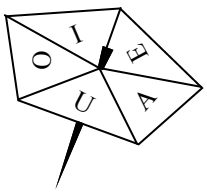
Sample Space is { _____ _____ }

4 This stickball board



Sample Space is { _____ }

5 This spinner



Sample Space is { _____ }

Use your calculator's fraction key, or your mathematical skills to simplify these fractions.

6 $\frac{2}{8} = \frac{\square}{\square}$

7 $\frac{10}{15} = \frac{\square}{\square}$

8 $\frac{8}{10} = \frac{\square}{\square}$

9 $\frac{9}{12} = \frac{\square}{\square}$

10 $\frac{12}{16} = \frac{\square}{\square}$

11 $\frac{12}{20} = \frac{\square}{\square}$

Find the probability of these events occurring.

Jay's pencil case contains 4 blue pens, 3 red pens, 2 black pens, 2 green pens and a purple pen.

12 How many pens in Jay's pencil case? $\square$

If he reaches in without looking what is the chance of the selected pen being:

13 Green $P(Gr) = \frac{\square}{\square} = \frac{\square}{\square}$ Simplify

14 Red $P(Red) = \frac{\square}{\square} = \frac{\square}{\square}$

15 Red or Purple

$P(R,P) = \frac{\square}{\square} = \frac{\square}{\square}$

16 Any colour but blue

$P(\widetilde{Blue}) = \frac{\square}{\square} = \frac{\square}{\square}$

17 A Green or Blue Pen

_____ $= \frac{\square}{\square} = \frac{\square}{\square}$

18 An orange pen

_____ $= \frac{\square}{\square} = \square$

A bag has 8 discs inside. The discs are labeled 1 through to 8. If one disc is randomly selected:

19 Find P (Even)

_____ $= \frac{\square}{\square} = \frac{\square}{\square}$

20 Find P (< 7)

_____ $= \frac{\square}{\square} = \frac{\square}{\square}$

21 Find P (Factor of 12)

Factor means what numbers go into 12

_____ $= \frac{\square}{\square}$

22 Find P (Prime number)

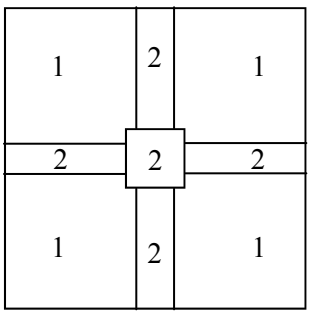
A prime no. has no factors other than 1 & itself
Note: 1 is considered not prime or composite

_____ $= \frac{\square}{\square} = \frac{\square}{\square}$

23 Find P (>4)

_____ $= \frac{\square}{\square} = \frac{\square}{\square}$

A sideshow has a large dartboard displayed (below). If you land the dart on a 2, you double your money. Get a 1 and you lose your money.
There are more 2's than 1's, so there is more chance of winning than losing.
Discuss this last sentence.



_____

_____

_____

_____

Probability Review (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A bag contains the letters that spell P-R-O-B-A-B-I-L-I-T-Y.

If a student randomly selects a single letter, what is the chance it is:

1 An 'L'. P(L) = $\frac{\square}{\square}$

2 An 'I'. P(I) = $\frac{\square}{\square}$

3 An 'I' or 'R'. P(I,R) = $\frac{\square}{\square}$

4 A vowel. P(vowel) = $\frac{\square}{\square}$

5 Not an 'I' or 'B'. $P(\widetilde{I,B}) = \frac{\square}{\square}$

If 25 ping-pong balls are labeled 1 to 25, find the chance of selecting:

6 A '25'. P(25) = $\frac{\square}{\square}$

7 A '19'. P(19) = $\frac{\square}{\square}$

8 A ball with a '5' digit. P(5 digit) = $\frac{\square}{\square}$

9 A ball with a two-digit number, greater than 18.

_____ = $\frac{\square}{\square}$

10 A ball without a '2' in the number.

_____ = $\frac{\square}{\square}$

11 A ball with a '1' in the number.

_____ = $\frac{\square}{\square}$

A lottery has 100 tickets, numbered 1 to 100. There is a single prize awarded. Find the probability of:

12 Buying a single ticket and winning the prize.

_____ = $\frac{\square}{\square}$

13 Buying 20 tickets and winning the prize.

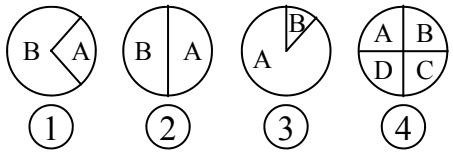
_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

14 Buying 15 tickets and not winning the prize.

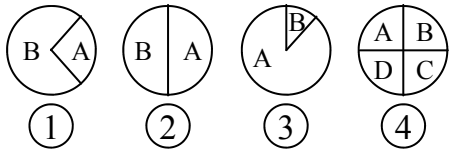
_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

Which spinner is most likely to generate the following results? Fill in the circle of your choice.

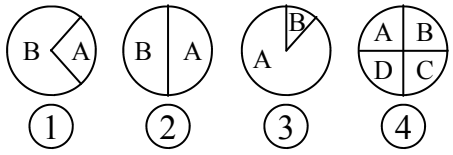
15 10 A's and 2 B's



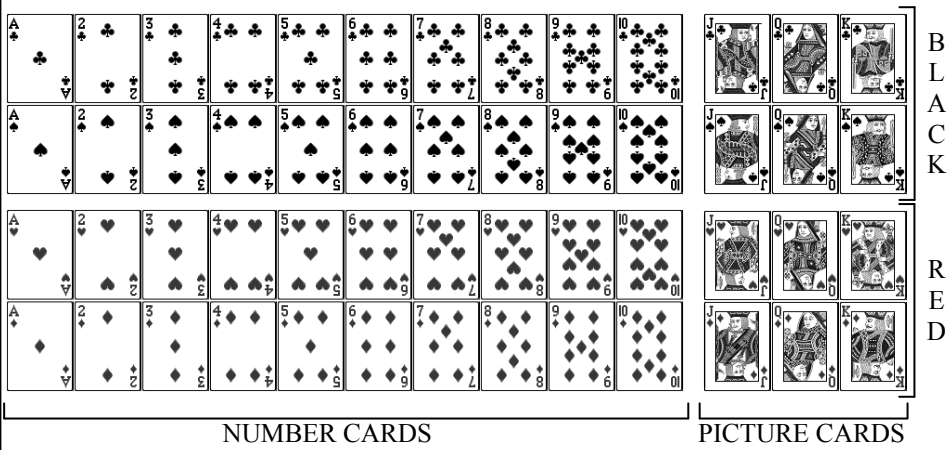
16 20 A's and 21 B's



17 5 A's and 15 B's



A deck of cards has 4 suits. Two suits are black, two are red. Each suit has 10 number cards: Ace through to 10, and 3 picture cards: Jack, Queen and King.



If one card from a standard deck is chosen, find the probability of selecting:

18 A queen

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

19 A red picture card

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

20 A number card

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

21 A 5, 8 or a jack.

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

22 A number card less than 7

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

23 Any card but a red king

_____ = $\frac{\square}{\square}$ = $\frac{\square}{\square}$

Probability Experiment Sheet

6	51	$\frac{\square}{\square} = \frac{\square}{\square}$
$\Sigma f =$		

James is recording data for 10 mins of the school parent-teacher evening. He records M=Man, W=Woman, G=Female Student, B=Male student. Put the data into a frequency table and calculate the relative frequencies.

6 Data:

WWMWB	MWGWM	WBWGM	BBMWW	
WMBWM	WMGGM	MMGMW	WWBMG	WMGMG
MMWWW	WMBWM	WMMWG	WMMWG	WWMMW

Type	*Tally*	*f*	*r.f.*
W	----------		$\frac{\square}{\square} = \frac{\square}{\square}$
M	----------		$\frac{\square}{\square} = \frac{\square}{\square}$
B			$\frac{\square}{\square} = \frac{\square}{\square}$
G			$\frac{\square}{\square} = \frac{\square}{\square}$
		$\Sigma f =$	

Deb works in a childcare centre, she asks parents how many children are in their family. Place the data into a frequency table and calculate the relative frequencies.

7 Data:

1, 2, 2, 1, 3,	2, 1, 1, 2, 1,	1, 3, 1, 2, 1	1, 2, 1, 2, 3,	2, 1, 1, 2, 4,
1, 4, 2, 2, 1,	1, 1, 1, 2, 1,	2, 3, 2, 1, 1,	1, 4, 1, 3, 1,	1, 2, 2, 2, 1,
2, 2, 1, 2, 1,	2, 1, 1, 3, 1,	1, 2, 1, 2, 1,	1, 3, 2, 2, 2,	2, 4, 2, 1, 2,
3, 2, 1, 1, 2,	3, 2, 3, 2, 2,	1, 4, 1, 2, 3,	2, 3, 1, 1, 2,	1, 1, 2, 1, 1,

Children	*Tally*	*f*	*r.f.*
	----------		$\frac{\square}{\square} = \frac{\square}{\square}$

Relative Frequency (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Find the relative frequency for the data for sales at Dave's Electrical. Then answer the questions.

Product	*f*	*r.f.*
Toaster	15	$\frac{\square}{\square} = \frac{\square}{\square}$
Kettle	18	$\frac{\square}{\square} = \frac{\square}{\square}$
Phone	12	$\frac{\square}{\square} = \frac{\square}{\square}$
PC/ Tablet	8	$\frac{\square}{\square} = \frac{\square}{\square}$
Other	17	$\frac{\square}{\square}$
$\Sigma f =$		

Based on the sales figures above apply relative frequencies to estimate sales. If 350 products were sold, what would be the sales of:

1 Toasters?

$\frac{\square}{\square} \times \square = \square$

2 Phones?

$\frac{\square}{\square} \times \square = \square$

3 Kettles or Toasters?

Add the fractions for kettles and toasters first

$\frac{\square}{\square} \times \square = \square$

4 Everything but toasters?

Subtract the toasters fraction from 1

$\frac{\square}{\square} \times \square = \square$

5 PCs, Tablets or phones?

$\frac{\square}{\square} \times \square = \square$

Find the relative frequency for the daily sales at Pete's Pies. Then answer the questions.

Product	*f*	*r.f.*
Pies	95	
Sausage Rolls	66	
Pastries	125	
Bread	106	
Other	48	
$\Sigma f =$		

Based on the sales figures above apply relative frequencies to estimate sales. Estimate the number of pies sold if total sales were:

6 500?

$\frac{\square}{\square} \times \square = \square$

Round to nearest pie!

7 800?

$\frac{\square}{\square} \times \square = \square$

8 300?

$\frac{\square}{\square} \times \square = \square$

Pete has run a promotion and estimates sales will be 1 300 items on the day. Estimate the number of:

9 Pies that Pete should bake.

10 Products other than bread he should bake.

Write the relative frequencies as decimals. This time it is weekly car sales. No need to round.

Car Type	*f*	*r.f.*
Family	6	0.15
Hatch	5	
4WD	16	
Hybrid	2	
Sports	4	
Wagon	3	
Other	4	
$\Sigma f =$		

Multiply relative frequencies by 100 to answer these questions.
What percentage of sales were:

11 Sports cars?

12 Family cars or wagons?

13 Not a hatchback?

14 Hatchbacks or hybrids?

If a person entered the sales area, what three types of vehicle are they most likely to buy? List them in order of popularity, most popular first.

15

The showroom floor has room for 5 cars. If the showroom cars are to reflect the above sales figures, how many:

16 4WDs should be displayed?

Relative Frequency (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A bag contains red, green and blue marbles. Apply your relative frequency knowledge.

A marble is selected and replaced from the bag 20 times, the results are:
Red 8, Green 10 and Blue 2.

1 Are there more red marbles than blue? ○ Yes ○ No ○ Can't tell

2 Are there 20 marbles in the bag? ○ Yes ○ No ○ Can't tell

3 Is it possible that there are more blue marbles than green or red? ○ Yes ○ No

4 Are there definitely more green marbles than blue marbles? ○ Yes ○ No

A computer monitor manufacturer sorts its products as follows:
Class A - Zero Dead Pixels
Class B - 1 to 2 Dead Pixels
Class C - More than 2 Dead Pixels
After taking samples it is found:
Zero Dead Pixels have *r.f.* of 0.87
One Dead Pixel have an *r.f.* of 0.08
Two Dead Pixels have an *r.f.* of 0.03

5 What is the *r.f.* for a monitor to be 'Class A'.

P(Class A) = ☐

6 Calculate the *r.f.* for a monitor to be 'Class B'.

7 Calculate the *r.f.* for a monitor to be 'Class C'.

If 800 monitors are produced in a day, how many would be:

8 'Class A' monitors?

9 'Class B' monitors?

10 'Class C' monitors?

Monitor wholesale prices are:
Class A - $350
Class B - $185
Class C - $55

11 Calculate the income for the 800 monitors.

A fire station has analysed its response times. They are:
Arrival Under 5 mins: 77%
Arrival within 5 to 10 mins: 20%
Arrival more than 10 mins: 3%

12 Convert the percentages to decimals.

77% = ☐ 20% = ☐

3% = ☐

If the station responds to an average of 56 calls per year, calculate (nearest whole number) the number of arrivals:

13 In under 5 minutes

14 In 10 minutes or less.

15 Within 5 to 10 minutes.

16 In 5 minutes or more.

The Ginormous Egg Company only sells eggs larger than 80 g. It sells the smaller eggs to wholesalers.
Its production statistics are:
Saleable eggs 80 g and over: 0.67
Wholesale eggs less than 80 g: 0.27
All other eggs are discarded.

17 Calculate the *r.f.* for an egg to be discarded.

If production averages 17 000 eggs per day, calculate the number of:

18 Daily wholesaled eggs.

19 Weekly discarded eggs.

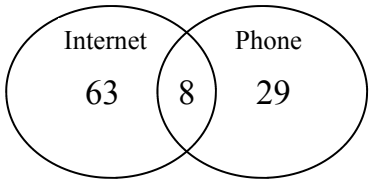
20 Yearly company-sold eggs.

Venn Diagrams (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A web-based bank account offers account access by either telephone or internet. Answer these questions.

Customer Usage (%)



What percentage of people access their account using:

1 A phone only? ____

2 A phone? ____

3 The internet? ____

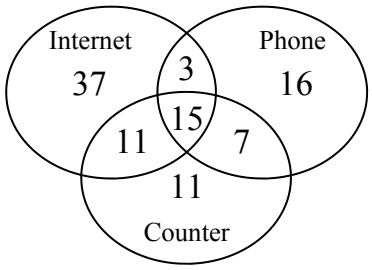
4 The internet only? ____

5 One method only? ____

6 Both methods? ____

The 'extras' bank account includes branch counter service, answer these.

Extras Customer Usage (%)



What percentage of people access their 'Extras' account:

7 Using a phone only? ____

8 Using counter services? ____

9 Using all three methods? ____

10 Not using the internet? ____

What percentage of people access their 'Extras' account using:

11 Both counter and internet services? ____

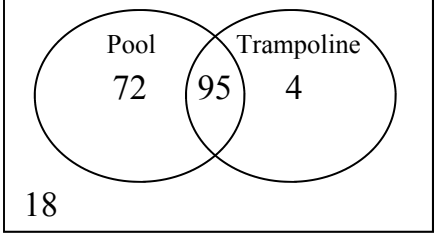
12 Both counter and internet services only? ____

13 A phone but not the internet? ____

14 Counter services but not phone services? ____

A swimming complex offers two pools and six trampolines. Answer these questions.

Monday's Entry Figures (people)



How many people entering the complex on Monday:

15 Only used the pool? ____

16 Used nothing? ____

17 Used only the trampolines? ____

18 Used only one service? ____

19 Didn't enter a pool? ____

20 Didn't use the trampolines? ____

21 Used both services? ____

22 Used the pool? ____

23 Used a pool or a trampoline? ____

Tickets cost: \$2 for the trampolines, \$3 for the pool, \$4 for both and \$1 for spectating care-givers. What were the gate takings?

24 ____

Calculate the relative frequency, as a percentage (to 1 d.p.) for a person to enter the complex and:

25 Use the Pool

All people Using pool

$P(\text{pool}) = \frac{\square}{\square} \times 100$

All People

$P(\text{pool}) =$ ____

Show % sign, round to 1 d.p.

26 Use only the pool or only the trampoline.

$P(\text{tr,pl}) = \frac{\square}{\square} \times \square$

$P(\text{tr,pl}) =$ ____ % sign!

27 Not use the trampoline.

28 Not use the pool.

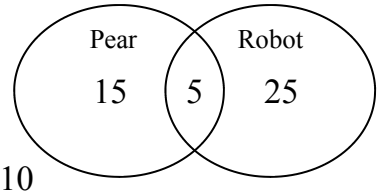
29 Use the pool only.

Venn Diagrams (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A survey of people that own a mobile phone has had the results shown in the Venn Diagram. Answer these questions.

Mobile Phone Operating Systems



How many people own:

1 A Pear-based phone? ____ (15 + 5)

2 A Robot-based phone? ____

3 A phone that is not Pear or Robot based? ____

4 Both Pear and Robot based phones? ____

Calculate the relative frequency, expressed as a simplified fraction, for a person having a:

5 Pear-based phone.

$P(\text{Pear}) = \frac{15+5}{15+5+25+10} = \frac{\square}{\square}$ (Simplify Using Fraction Key)

6 Phone being neither Pear or Robot based.

$P(\widetilde{P,R}) = \frac{\square}{\square} = \frac{\square}{\square}$

7 Robot-based phone only.

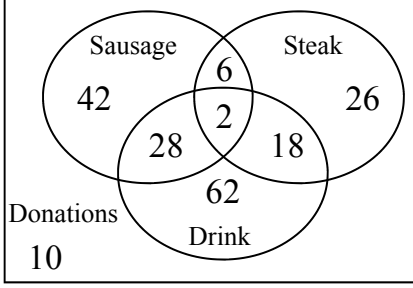
$P(\text{R only}) = \frac{\square}{\square} = \frac{\square}{\square}$

8 Phone that isn't Pear-based.

$P(\widetilde{\text{Pear}}) = \frac{\square}{\square} = \frac{\square}{\square}$

A school stall sells sausage and steak sandwiches as well as drinks. Some people donate money without buying anything.

Sausage Sizzle School-Fund Raiser



How many people bought:

9 A sausage sandwich? ____

10 Only a Sausage sandwich? ____

11 Nothing but donated? ____

12 All three products? ____

13 Both a drink and a sausage sandwich? ____

14 Two products only? ____

15 A steak sandwich and a drink only? ____

Calculate the total number of:

16 Visitors ____ 17 Purchasers ____

How many people came to the stall but didn't buy:

18 A sausage sandwich? ____

Include people making a donation

19 A sandwich? ____

20 A drink? ____

21 A drink or a steak sandwich? ____

22 Two products or more? ____

It's time to analyse the school sales. Use the Sausage Sizzle Venn Diagram to find these.

Calculate the relative frequency as a percentage (1 d.p.) for a person:

23 Visiting the stall and buying any product or products.

$P(\text{buy}) = \frac{\square}{\square} \times 100$ (All numbers in rings Q.17 / All numbers)

$P(\text{buy}) =$ ____

Show % sign, round to 1 d.p.

24 Visiting the stall and buying a drink.

$P(\text{drink}) = \frac{\square}{\square} \times \square$

$P(\text{drink}) =$ ____ (% sign!)

25 Buying from the stall and buying a steak sandwich.

Don't include people giving donation - Buying

26 Buying from the stall and buying both a drink and a sandwich.

27 Visiting the stall and not buying a drink.

28 Buying from the stall and not buying a sausage sandwich.

Probability - Two-Way Tables (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Two-way tables can be read horizontally or vertically, answer the questions.

Year 9 Survey: Weather vs. Type of Clothing

	Shorts	Trousers	Total
Hot	198	24	A
Cold	36	162	B
Total	C	D	E

1 Complete the total boxes in the table above.

For the next 5 questions, how many Year 9 students:

2 Wore shorts on the hot day? ____

3 Wore shorts on the cold day? ____

4 Wore trousers on the cold day? ____

5 Wore trousers? ____ 6 Were surveyed? ____

7 An excursion was on one of the two survey days, which day, hot or cold, do you think it was on. Explain your answer.

_____

_____

Writing your answer as a fraction, then simplify it. Calculate the relative frequency of a Year 9 student:

8 On a cold day, wearing shorts. $P(sh,cold) = \frac{\square}{\square} = \frac{\square}{\square}$

9 On a hot day, not wearing shorts. $P(\widetilde{sh},hot) = \frac{\square}{\square} = \frac{\square}{\square}$

10 Wearing trousers. (On a cold or hot day). $P(trous) = \frac{\square}{\square} = \frac{\square}{\square}$ Careful! →

Writing your answer as a percentage (to 1 d.p.), calculate the relative frequency of a Year 9 student:

11 On a cold day, wearing trousers. $P(cold,tr) = \frac{\square}{\square} \times 100$

$= \frac{\square}{\square}$ 1 d.p. Show %

Vet Survey: Pets vs. Flea Infestation

	Cats	Dogs	Total
No fleas	188	285	A
Fleas	18	20	B
Total	C	D	E

12 Complete the total boxes in the table above.

13 How many cats had fleas? ____

14 How many dogs had fleas? ____

15 Calculate the relative frequency for a cat to have fleas, express your answer as a percentage (1 d.p.).

$P(cat,fleas) = \frac{\square}{\square} \times \square = \frac{\square}{\square}$ Show % sign

16 For a dog to have fleas.

$P(dog,fleas) = \frac{\square}{\square} \times \square = \square$

17 For a pet with fleas, to be a dog.

$P(fleas,dog) = \frac{\square}{\square} \times \square = \square$

Bus Transport Survey: Weather vs. Punctuality

	On-time	Late	Total
Raining	50	A	65
Dry	B	5	65
Total	D	E	C

18 Complete the lettered boxes in the table above.

19 How many buses were late? ____

Find the relative frequency as a simplified fraction for:

20 On a dry day, a bus being on-time . $P(dry,on\text{-}time) = \frac{\square}{\square} = \frac{\square}{\square}$

21 On a rainy day, a bus being late. $P(rain,late) = \frac{\square}{\square} = \frac{\square}{\square}$

Probability - Two-Way Tables (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

The key to car wash success is to never lose your drive. Answer these questions on two-way tables.

Car Wash Survey: Wash vs. Vacuum

	Wash	No Wash	Total
Vacuum	78	4	A
No Vacuum	36	0	B
Total	C	D	E

1 Complete the total boxes in the table above.

Find the relative frequency as a percentage (1 d.p.) from:

2 Cars having a car wash, cars that don't get vacuumed.

$P(\text{wash,no vac}) = \frac{\square}{\square} \times \square = \square$

3 Cars having a vacuum, cars not getting a car wash.

$P(\text{vac,no wash}) = \frac{\square}{\square} \times \square = \square$

4 Cars not having a car wash, cars getting a vacuum.

5 Cars entering the car wash, cars getting a car wash.

Year 9 Hair Survey: Length vs. Curliness

	Straight	Curly	Total
Short		4	125
Long	62		80
Total			

6 Complete all the missing cells in the table above.

Writing your answer as a fraction, then simplify it. Calculate the relative frequency of a Year 9 student:

7 With curly hair, having short hair. $P(\text{curl,sh}) = \frac{\square}{\square} = \frac{\square}{\square}$

8 Having curly short hair. $P(\text{curl,sh}) = \frac{\square}{\square}$

We are still dealing with hair, well you are, I'm not!

Calculate the relative frequency of a Year 9 student:

9 With long hair, having curly hair. $P(\text{lng,curl}) = \frac{\square}{\square} = \frac{\square}{\square}$

10 With curly hair, having long hair. $P(\text{curl,lng}) = \frac{\square}{\square} = \frac{\square}{\square}$

11 Having short hair. $P(\text{short}) = \frac{\square}{\square} = \frac{\square}{\square}$

12 Having straight hair. $P(\text{strgt}) = \frac{\square}{\square}$

Year 9 Language Survey: Language vs. Sex

	French	German	Total
Male		16	30
Female	12		
Total			56

13 Complete all the missing cells in the table above.

14 The survey was taken on a German class and a French class, how many students in each class?

German Students = $\square$ French Students = $\square$

15 If 12 language students were interviewed, how many would you expect to be male and studying French?

16 If there are 95 Year 9 students, how many don't study a language?

Find the relative frequency, as a % to 1 d.p., that a Year 9 student (full year group) chosen randomly, would be:

17 Male and study German.

18 Female and studies a language

Probability - Find a Word

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

10 cards numbered 1 to 10 are placed in a hat, then one card is randomly selected. Find the probability of:

1 Selecting an '8' card.

$P(8) = \frac{\square}{\square}$

2 Selecting an odd numbered card.

$\square = \frac{\square}{\square} = \frac{\square}{\square}$

3 Selecting a card with a number greater than 4.

$\square = \frac{\square}{\square} = \frac{\square}{\square}$

4 Selecting a card with a number that is a factor of 8.

$\square = \frac{\square}{\square} = \frac{\square}{\square}$

5 Not Selecting a card with a number less than 3.

$\square = \frac{\square}{\square} = \frac{\square}{\square}$

15 discs are in a bag. A single disc is selected, its colour recorded, then replaced. After 25 selections there have been 10 black discs, 3 red discs and 12 green discs selected.

Answer True or False

6 There are definitely more Green discs in the bag. (True) (False)

7 The bag may contain 12 purple discs. (True) (False)

8 There are definitely more green discs than red discs. (True) (False)

(These questions are on the discs still). If a disc was selected and replaced 325 times, estimate the:

9 Number of times a red disc would be selected.

_____

10 Number of times a black disc would be selected.

_____

11 Number of times a selected disc would be green or red.

_____

If a card is chosen from a standard deck of cards. Calculate the probability of:

12 Selecting a red card.

_____

13 Selecting a black picture card.

_____

14 Selecting a '5', '7' or an ace.

_____

15 Not selecting a picture card or an ace.

_____

Three Year 9 boys have nominated for the male SRC position, Joe, Omar and Lance. 70 students vote by selecting one of these students. Results are below.

Data:				
LJLOJ	LLOOJ	JOLLO	OOJLL	
LLLOJ	OOJLO	LOOLL	JLLLO	OLLLJ
OLJLO	JJLLL	JOLOO	LLLLJ	OLLLJ

16 Complete the table, simplifying the relative frequencies.

Student	*Tally*	*f*	*r.f.*
Joe	----------	$\square$	$\frac{\square}{\square} = \frac{\square}{\square}$
Omar	----------	$\square$	$\frac{\square}{\square} = \frac{\square}{\square}$
Lance	----------	$\square$	$\frac{\square}{\square} = \frac{\square}{\square}$
		$\Sigma f = \square$	

25 students were on an excursion on the day, but will vote the next day. Based on the relative frequencies above. How many of the 25 students:

17 Would vote for Omar.

_____

18 Would not vote for Lance.

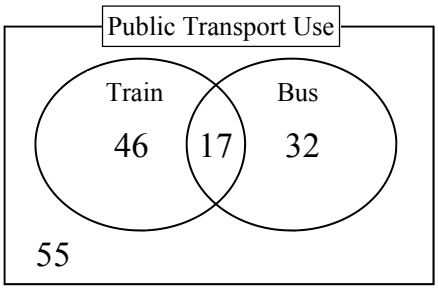
_____

19 Who would get the most of the total vote and how many would they get?

_____

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A business asked its staff who use public transport which type of transport they use. Results are shown



How many people:

20 Used the train only? ____

21 Used a both a bus and a train? ____

22 Didn't use a train? ____

23 Were surveyed? ____

Calculate the relative frequency and simplify the fraction if possible, for:

24 A person catching a train.

____ = ____ = ____

25 A person catching only a train, or only a bus.

____ = ____ = ____

26 A person not catching a train

____ = ____ = ____

Calculate the relative frequency as a percentage (1 d.p.), for:

27 A person not catching a train, or a bus.

The results for a survey of Year 9 students are shown below. Complete the spaces in the table and then answer the questions.

	Right-H	Left-H	Total
Female	45	6	
Male	52	3	
Total			

How many Year 9 students:

28 Are left-handed? ____

29 Were surveyed? ____

30 Are male? ____

Find the relative frequencies for these, answer as a percentage (to 1 d.p.)

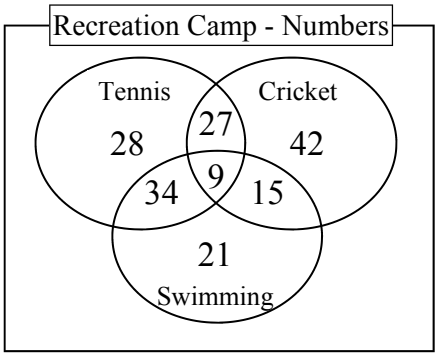
31 That a right-handed student, would be male.

32 That a female student, would would be left-handed.

33 That a Year 9 student, would be male and left-handed.

34 That a Year 9 student, would be right-handed.

35 That a Year 9 student, would be female.



A recreation camp offers a choice of three sports, which students can do individually or in conjunction with other sports. Answer these questions

How many students have chosen:

36 Just swimming? ____

37 Swimming? ____

38 All three sports? ____

39 Both tennis and cricket? ____

40 One sport only? ____

41 Not to do swimming? ____

Calculate the relative frequency as a percentage (1 d.p.), for:

42 A student to choose both swimming and cricket.

43 A student who has chosen cricket, to also choose swimming.

ORGANISING & DISPLAYING DATA

Organising & Displaying Data

© Freefall Mathematics - School Use Only

Organising & Displaying Data

© Freefall Mathematics - School Use Only

Data - Frequency Tables

The frequency of something is how often it occurs. So a Frequency Table records how many times scores in a data set occur. There are three columns to a frequency table, when the data is not already entered. These are the 'Score', 'Tally' and 'Frequency'. Score can be replaced with a title when the data is categorical (which means not numbers), for example 'Car Type' or 'Holiday Type', it can also just be called 'x'. The frequency column is regularly written just as 'f'. Note the use of Σf at the bottom of the frequency column. Σ means 'the sum of' so Σf means add all the frequency column up.

Example

Data: 6, 7, 5, 4, 6, 7, 10, 5, 6, 4, 9, 6, 5, 7, 6.

Score	Tally	Frequency
4		
5		
6		
7		
8		
9		
10		
		$\Sigma f =$

STEP 1

Circle the lowest score and the highest score in the data set.

STEP 2

In the score column of the table write in the lowest score at the top, increasing down the column until the highest score.

!

Note that there is no score of '8' in the data set. The number '8' is still included in the score column anyway.

Data: ~~6~~, 7, 5, 4, 6, 7, 10, 5, 6, 4, 9, 6, 5, 7, 6.

Score	Tally	Frequency
4		
5		
6	|	
7		
8		
9		
10		
		$\Sigma f =$

STEP 3

Data is now entered number by number Cross out the 6 and put a mark in the Tally column, then the 7 and so on.

!

Don't count all the 4's then all the 5's. This method is more likely to cause mistakes in large data sets. It also doesn't effectively use the Tally process.

Score	Tally	Frequency
4	||	2
5	|||	3
6	||||	5
7	|||	3
8		0
9	|	1
10	|	1
		$\Sigma f =$ 15

The 5th score is a cross stroke

STEP 4

Now change the Tally into numbers in the Frequency column.

STEP 5

Total the Frequency column to get Σf it has to equal the number of scores in the data set. If it doesn't ….start searching!

Data - Frequency Tables (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Complete the frequency column and total for Σf, then answer the questions.

1 Number of Fish in a Tank

Fish	Tally	Frequency
2	𝍸	
3	𝍸 ||	
4	𝍸 𝍸 |||	
5	𝍸 𝍸	
6	𝍸 𝍸 ||||	
7	𝍸 𝍸 |||	
		$\Sigma f =$

2 What number of fish had the highest frequency? _____

3 What number of fish had the same frequency? _____

4 What was the frequency for a tank to have an odd number of fish?

_____

5 What was the frequency for a tank to have less than 5 fish?

_____

6 Soft Drink Preference

Type	Tally	Frequency
A	𝍸 𝍸 𝍸 ||	
B	𝍸 𝍸 |||	
C	||||	
D		
E	𝍸 𝍸 ||	
F	𝍸 𝍸 𝍸	
		$\Sigma f =$ 75

7 D's results were unreadable due to a drink spill, use Σf to calculate them.

8 Rank the drink brands in order from least, to most popular.

_____

9 How many people preferred brand 'A' or brand 'F'? _____

Place the data into the Frequency table, showing the tally, the frequency and write 'Σf= *(total)*', then answer the questions.

10 Away from School - Sports Choices

Sport	Tally	Frequency

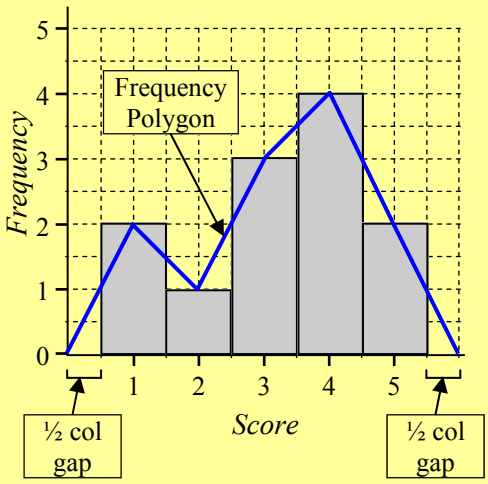
Data - Frequency Histograms and Frequency Polygons

Frequency Histograms are very similar to column graphs, the difference being that:

- A half-column gap is left between the first column and the vertical axis.
- The columns touch each other, there is no gap between them.
- A half-column gap is left after the last column.



Frequency Polygons are similar to line graphs, they:

- Always start and finish at the horizontal axis.
- They inter-connect the centres of the top of columns.

Because a half-column gap is required, it makes sense to use columns that are '2 grids' wide so that the grids help you to draw the graph. You shouldn't make a column '1 grid wide' and the gap '½ a grid wide' because your columns won't use the grid lines, it will be harder to create and use.

Sheet 1 starts with looking at a Frequency histogram and extracting the data. Then comparing a histogram with the column graph below it. The second column asks you to create your own frequency histograms/polygons. The first column is drawn so you don't forget the half column gap.

Sheet 2 continues with constructing histograms, the second column asks you to first create a Frequency Table first, as the data is supplied raw instead of in the table, ready to go. More has to be done with these graphs, like labeling the axes.

Data - Frequency Histograms with Classes

A frequency table is used when there is high repetition of a certain number of scores. Such as with a die, where there are only 6 outcomes. But when there are a large range of scores then the data is best grouped together in classes.

The process is essentially the same as a frequency table, using a tally column and then changing the tally to a number in the frequency column. The only difference is that the 'Score' column is replaced with the word 'Classes' which cover a range of scores rather than just a single score.

Example. 'BarknFlea' Dog Show - Points listing

Data: ~~15~~, ~~26~~, 11, 31, 27, 44, 28, 31, 46, 23, 5,

Cross out the first score and place a stroke in the tally column, 15 is in the 10-19 class.

Repeat for 26, which is in the 20-29 class.

Class	Tally	Frequency
0 - 9		
10 - 19	||	
20 - 29	||	
30 - 39		
40 - 49		
		$\Sigma f =$

Place all scores into the tally column then change the strokes to numbers in the frequency column.

Class	Tally	Frequency
0 - 9	|	1
10 - 19	||	2
20 - 29	||||	4
30 - 39	||	2
40 - 49	||	2
		$\Sigma f = 11$

Count the number of scores in the data, does it equal Σf?

The display of data in a Histogram/Polygon with classes uses exactly the same method as without classes, with one difference. Instead of displaying the score across the horizontal axis, you display the class centre.

The class centre is found by averaging the two scores shown in the class.

Example

$\frac{20 + 1}{2} = 10.5$

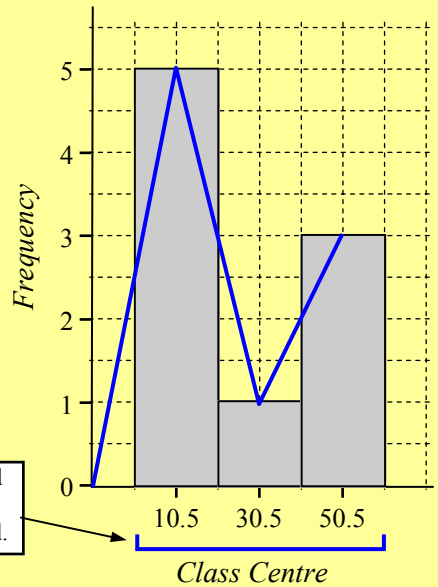
$\frac{21 + 40}{2} = 30.5$

$\frac{41 + 60}{2} = 50.5$

c.c. is short for class centre

Class	*c.c.*	Frequency
1 - 20	10.5	5
21 - 40	30.5	1
41 - 60	50.5	3

Remember that when you divide the sum of the two numbers, press '=' before you '÷2' or you will get the wrong answer, due to order of operations principles.



Plot the data using a histogram and polygon, the only difference being that the class centres are used.

Data - Frequency Histograms with Classes (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Place the data below in the frequency table, using the suggested class intervals.

1 Data: 25, 16, 32, 41, 28, 7, 11, 36, 27, 20, 34, 43, 19, 31, 7, 48, 9, 20, 5, 35, 22, 10, 33, 3, 21, 24, 17, 28, 2, 36, 32, 12, 26, 43, 7, 21, 7, 5.

Class	Tally	Frequency
0 - 9		
10 - 19		
20 - 29		
30 - 39		
40 - 49		
		$\Sigma f =$

Count the number of scores in the data, does it equal Σf?

2 'Appleshot' Archery Club Championship

Points: 80, 72, 83, 67, 94, 92, 85, 73, 79, 90, 65, 77, 97, 93, 89, 65, 85, 71, 62, 83, 79, 64, 92, 70, 62, 84, 75, 81, 98, 75, 73, 63, 84, 91, 99, 98, 76, 78, 85, 96, 70, 74, 76, 62, 68, 83, 95, 100, 72, 81.

Points	Tally	Frequency
61 - 65		
66 - 70		
71 - 75		
76 - 80		
81 - 85		
86 - 90		
91 - 95		
96 - 100		

3 How many archers were there? _____

4 How many archers scored 75 or less? _____

5 Which class had the highest frequency? _____

6 What percentage of the archers scored more than 90?

$\Sigma f \rightarrow \frac{\square}{\square} \times 100 =$ _____

7 What percentage scored between 65 and 81?

$\frac{\square}{\square} \times \square =$ _____

8 Time (min) to complete a survey

Data: 6, 15, 20, 11, 19, 22, 18, 5, 11, 10, 18, 24, 16, 23, 4, 18, 9, 14, 28, 9, 14, 13, 25, 14, 17, 29, 4, 15, 5, 23, 19, 12, 17, 25, 10, 14, 19, 24, 16.

Time (min)	Tally	Frequency
1 - 5		
6 - 10		
11 - 15		
16 - 20		
21 - 25		
26 - 30		

9 How many scores between 5 and 16 were there?

_____

10 How many scores were 25 or less? _____

11 Student Height (cm)

Data: 155, 172, 163, 158, 168, 174, 183, 165, 180, 161, 174, 168, 170, 181, 163, 162, 171, 155, 183, 175, 169, 149, 170, 162, 181, 172, 176, 162, 158, 166, 157, 184, 175, 166, 163, 159, 172, 170.

Height (cm)	Tally	Frequency
145 - 149		
150 - 154		
155 - 159		
160 - 164		
165 - 169		
170 - 174		
175 - 179		
180 - 184		

Answer these to 1 decimal place.

12 What percentage of students are 1.8 m or taller?

_____ = _____

13 What percentage of students are less than 1.7 m tall?

_____ = _____

Data - Frequency Histograms with Classes (Sheet 2)

Data - Dot Plots

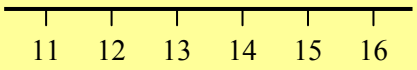
Dot Plots represent data with dots! Amazing! The beauty of a dot plot is it is simple. There is one axis which shows the score, or category and then dots are stacked above them. Dot plots can also be plotted sideways just like a column graph. Two critical features are:

- The dots have to have the same height, for example a column of four dots shouldn't be as high as a column of five dots, so be careful as you plot them.
- If you have a vertical scale then use it effectively. Because dot plots are supposed to be fast to read, a vertical scale can be included so that you don't have to count all the dots in a column.

Example

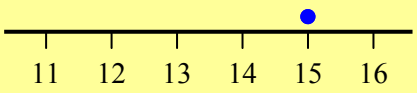
Data: 15, 12, 13, 11, 16, 15, 16, 12, 12, 15,
11, 13, 12, 11, 15, 16, 12, 13, 15, 11.

STEP 1 Circle the lowest score and the highest score in the data set.



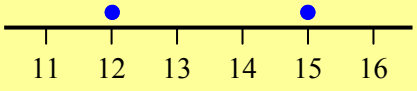
STEP 2 Number the axis from lowest to highest, note there is no 14 score, but it is still included on the axis.

Data: 15, 12, 13, 11, 16, 15, 16, 12, 12, 15,
11, 13, 12, 11, 15, 16, 12, 13, 15, 11.



STEP 3 Cross out the first score and place the dot above the number on the axis.

Data: 15, 12, 13, 11, 16, 15, 16, 12, 12, 15,
11, 13, 12, 11, 15, 16, 12, 13, 15, 11.



STEP 4 And so on until all the scores are represented with dots

Data - Ordered Stem and Leaf Plots

Stem and leaf plots separate data into its units component and its tens (and above) component. They then display the 'units' on the right in the leaf section and the 'tens' on left in a stem column. The effect is to break the data up into classes and also display a simple column graph (on its side) of numbers showing the way the data is spread.

Numbers have their units removed so:

- 23 becomes 'a 2' and 'a 3'
- 15 becomes 'a 1' and 'a 5'
- 9 (is seen as 09) becomes 'a 0' and 'a 9'

Stem	Leaf
0	9
1	5
2	3

In a plot this looks like the plot shown above. But what about larger numbers?

- 106 becomes 'a 10' and 'a 6'
- 117 becomes 'a 11' and 'a 7'
- 125 becomes 'a 12' and 'a 5'
- 120 becomes 'a 12' and 'a 0'
- 110 becomes 'a 11' and 'a 0'

Stem	Leaf
10	6
11	70
12	50

Because the units have two digits in front, both digits are shown in the Stem column.

When all data has been entered into the plot, the plot then has to be rewritten in order. The stem stays the same, but the leaf is put into ascending order. That is it!

Stem	Leaf
10	6
11	70
12	50

Leaf in order →

Stem	Leaf
10	6

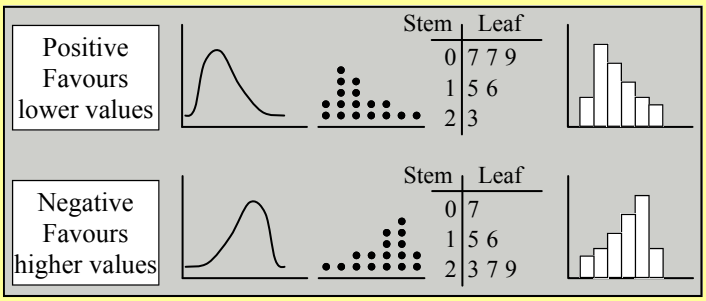
Data - Positive and Negative Skew

When scores is displayed in a graph the way the columns, or dots or polygon is spread out is called a distribution. When a distribution is skewed it is like it is pushed to the left or pushed to the right.



Positive skew is when the graph appears to be pushed to the left while Negative skew appears to be pushed to the right. A more involved definition is that Positive skew generally has an order of "mode then median then mean" so the mean has the highest value. While negative is the opposite, but this won't be dealt with, with these sheets. The appearance of the distribution is the deciding factor.

The first column asks you to look at the graphs and decide which way they are skewed, they are all skewed, just determine if it is positive or negative.

The remaining columns require you to organise the data into graphs and then suggest whether they are positively or negatively skewed.

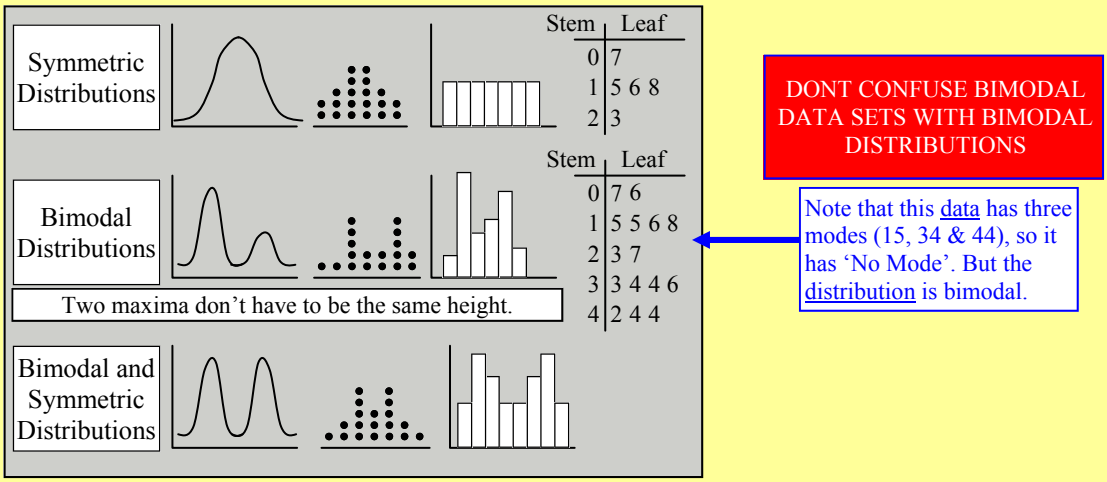
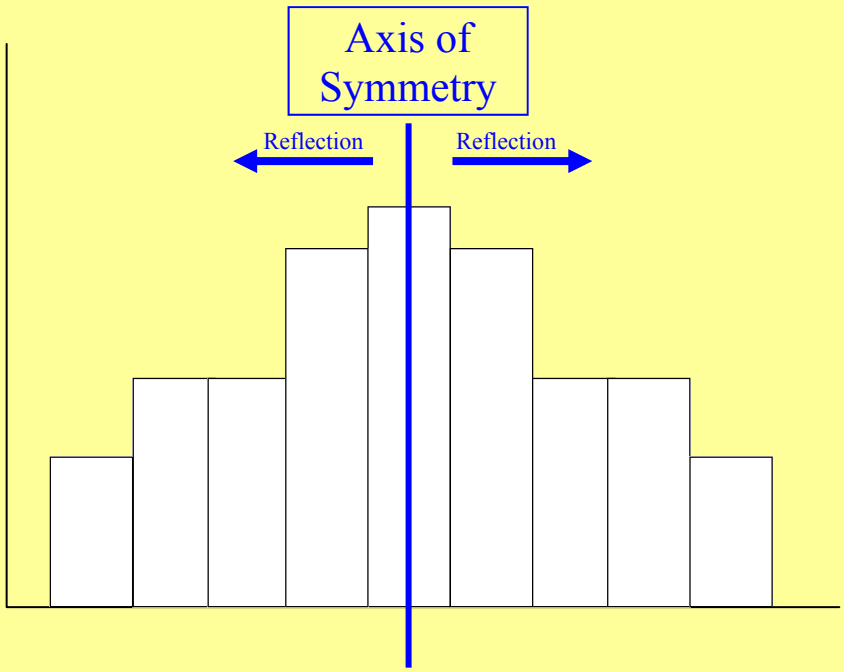
Data - Bimodal and Symmetric

When scores is displayed in a graph the way the columns, or dots or polygon is spread out is called a distribution. Previously ‘skew’ dealt with distributions that favoured lower or higher values in a ‘lop-sided’ distribution.

This worksheet deals with symmetric distributions, which are balanced, which could have an axis of symmetry and be reflected perfectly across it. Bimodal distributions are also covered which is when a distribution has two peaks or ‘maxima’. Don’t confuse Bimodal data with Bimodal distributions. Bimodal data has to have two scores occurring the most, with the same frequency. Bimodal distributions can have different frequency (heights) modes and may not even have a mode in the data set, such as with a stem and leaf plot.



You can also have bimodal and symmetric distributions are shown in the third row above. Bimodal is easy to see as there are two clear peaks, if you want to check for symmetry, find where the middle of the distribution is and check if each side is a reflection of the other.



Data - Bimodal and Symmetric (Sheet 1)

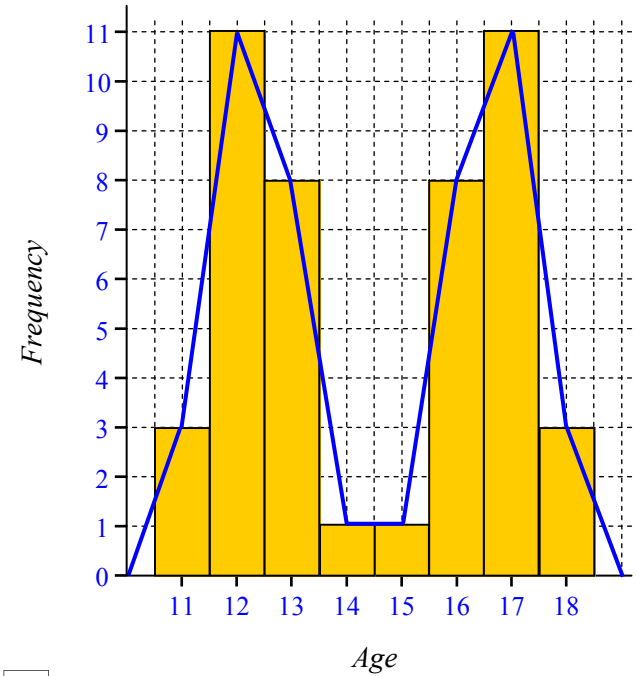
17	𝍸 𝍸 |	11
18	𝍸	3
		$\Sigma f = 46$



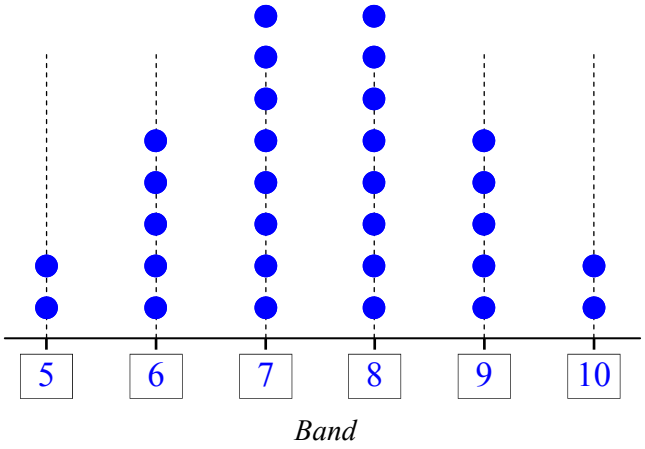
2 The distribution's shape is: Bimodal and symmetric

3 Describe why the distribution is the shape shown above

The distribution is bimodal because of the two distinct age groups. Symmetric by chance. There are no Year 9 and 10 students, so there is a drop in frequency in the 14-15 year age groups.

An English teacher selects 30 students randomly from Year 9 to compare their 'Persuasive Writing' band results. Plot their results in a dot plot.

4 Data: 9, 6, 8, 6, 7, 7, 9, 10, 8, 7, 8, 9, 6, 5, 7, 8, 8, 10, 8, 7, 9, 6, 7, 8, 7, 5, 9, 7, 6, 8.

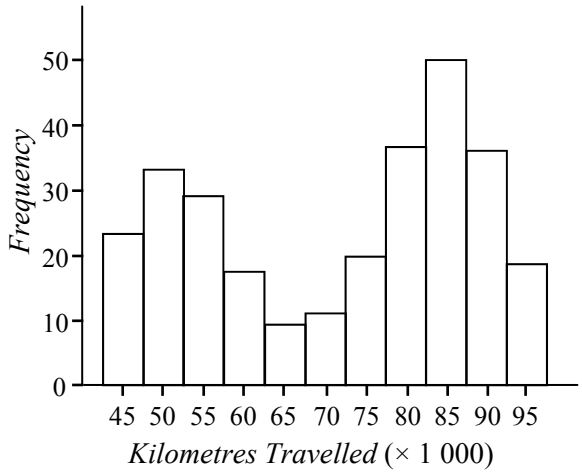


5 The distribution's shape is: symmetric

6 If the teacher chose 30 students just from the top English class, how would the results be affected?

Higher bands would be featured more. Results would be negatively skewed.

A tyre manufacturer has two different tyre types. After surveying its customers, it has plotted the data for the tyre life, to the nearest 5 000 km below.



7 Describe the distribution's shape and suggest a reason why it is shaped in that way.

The distribution is bimodal. There are two types of tyres. A more grip (sport) tyre (lower km) and a more popular longer kilometre (endurance) tyre.

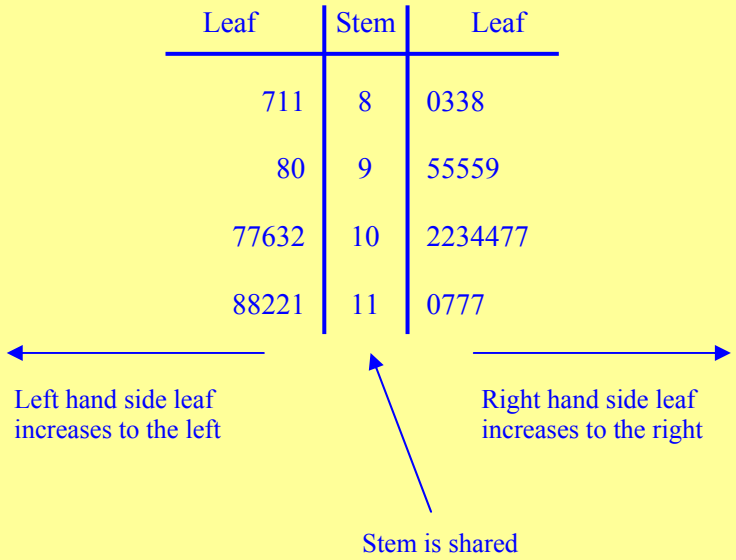
Data - Back-to-Back Stem and Leaf Plots

Back-to-back stem and leaf plots are used to display 2 different groups of data together in the one plot. The groups are displayed separately but share a common stem. One group is displayed on the left hand side, the other on the R.H.S.

The L.H.S has its leaf in ascending order (going up) with larger numbers to the left, while the R.H.S. leaf has its numbers ascending, as with single leaf stem and leaf plots, up to the right.



Two mistakes are regularly made with Stem and Leaf plots. These are:

- Commas are used in the plots, like data sets. Commas shouldn't be used in a stem and leaf plot.
- A mistake is made finding the smallest 'tens' to put in the stem, so the number is written at the bottom of the stem column. The stem has to be in order, so if you miss the smallest 'tens' then the plot should be redone.

Data - Types of Graphs - Categorical/Numerical/Misleading

Categorical data is data that involves items instead of numbers. For example the number of cars, trucks, buses and motorcycles that go past an intersection. You are still counting them and have a frequency, but the frequency involves items not numbers.

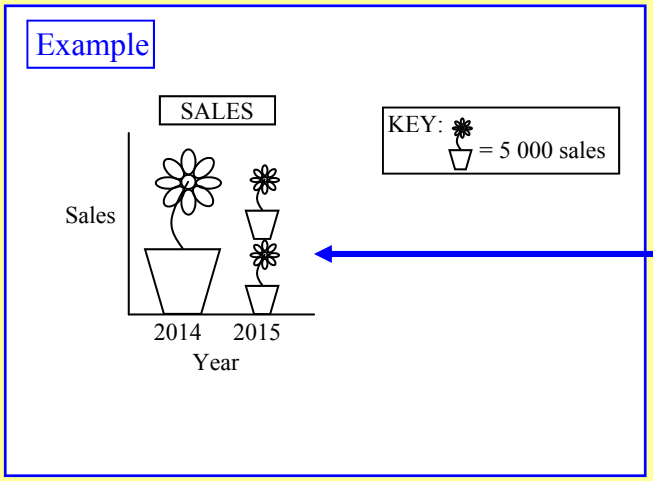
Numerical data is data that involves numbers. Such as rolling a dice or people entering a shop. Numerical data is different not only that it involves numbers, but because there is an order applied. When the data is organised, it will be displayed by the smallest number first, and increase. So the way it is displayed is controlled.

Categorical data can be controlled when the data is 'ordinal', but this isn't covered in this topic.

You are required to state whether the graphs contain categorical or numerical data. If you see an item name, it's simple it is categorical. But don't forget other descriptions like Skew, Bimodal and Symmetric. These are required to further define the graph.

The second sheet involves misleading graphs. Data can be displayed, either by accident or Intentionally, in a way that misleads. To see things in a way that may be the opposite to what is actually being displayed. Often news programs can use misleading graphs to suggest something has a huge difference, when in fact there is virtually no difference.

Example



If a flower in a pot is 5 000 sales then 2015 has 10 000 sales and 2014 has 5 000 sales (using the key). The bigger and taller flower in 2014, makes 2014 appear larger in sales. So selective use of scale has been done in a misleading way.

The second column of the second sheet is also about misleading graphs. But this time the graph itself isn't misleading. By organising data in specific ways you can mislead others. 'Trend' describes 'the path' that figures are heading. Investors look at trends to decide whether to invest in a company. If data is selectively displayed it is possible to suggest a trend that doesn't truly represent a circumstance.

18

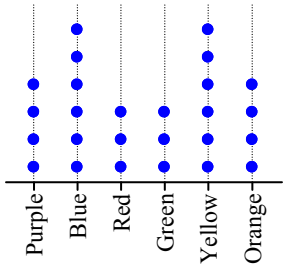
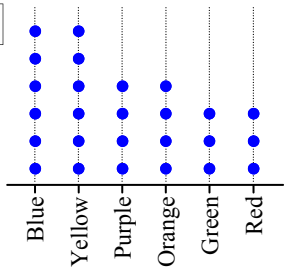
Categorical, Symmetric

19



Categorical, Symmetric/Bimodal

20



Categorical, Positive Skew

21 Do you think the words Bimodal, Symmetric and Skew should be used with Categorical data?

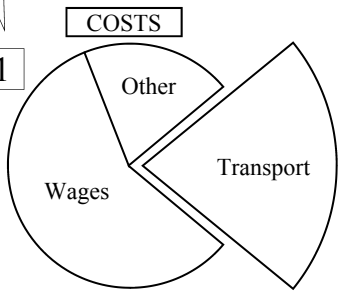
Due to arranging of the categories, skew and symmetric are irrelevant. Bimodal may be relevant

Data - Types of Graphs (Misleading Graphs)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

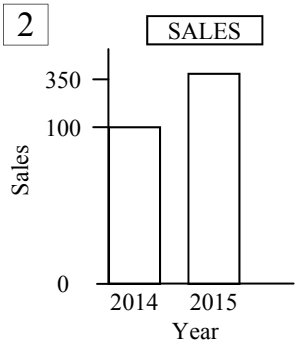
Describe why these graphs are misleading.

1



Transport costs are exaggerated and seem larger than 'other', but is almost the same

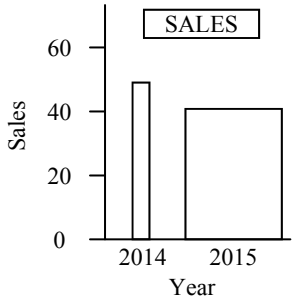
2



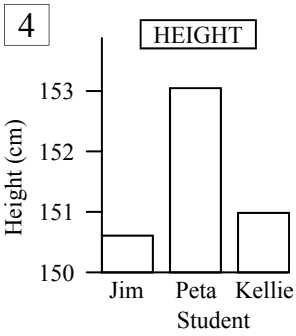
The vertical scale isn't in proportion and doesn't illustrate the increase in sales in 2015 fully.

3

The sales in 2015 are less than 2014 but because the column is wider, it looks larger. They should be of equal width.

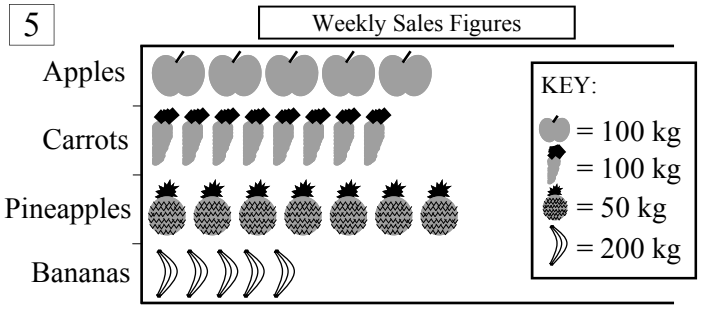


4



The heights are similar for the three students. But because the axis starts at 150 cm, differences are exaggerated.

5



Skinny banana and carrot symbols take less room and should be spaced. Key is inconsistent, makes banana sales look low and pineapple sales high.

Display the data in the table as a column graph. This isn't a histogram, so no half column gap at the start, no polygon and columns don't touch.

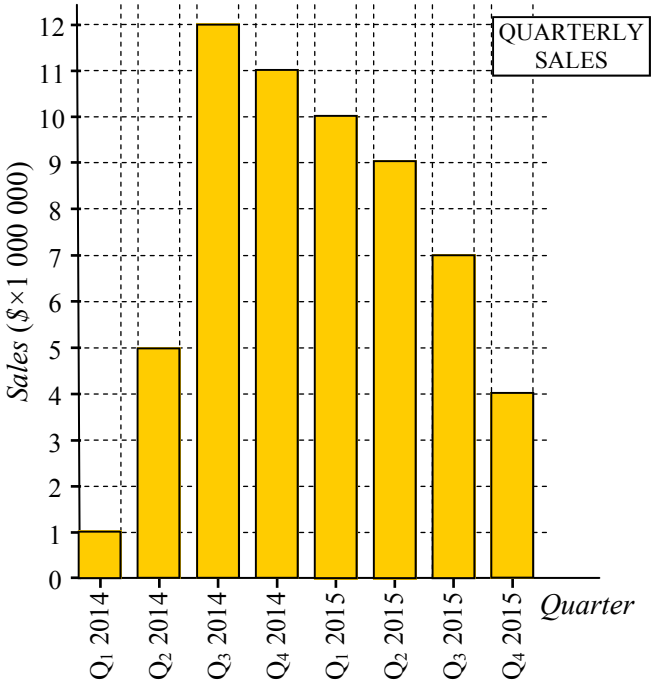
7 Complete the table's 'Total' column

SALES × $1 000 000

Year	Q_1	Q_2	Q_3	Q_4	Annual
2014	1	5	12	11	29
2015	10	9	7	4	30

'Q' means Quarter which is a 3 month period

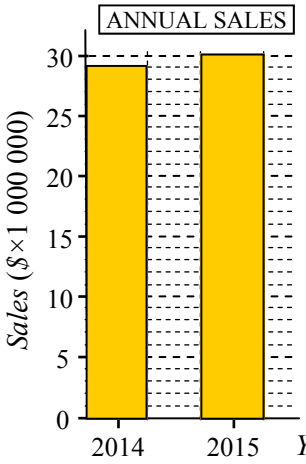
8 Construct a column graph for quarterly sales



9 Describe the quarterly sales above

Sales started in Q_1 2014, increased in Q_2 and peaked in Q_3 2014. Since that peak sales are steadily declining. 2016 looks like low sales.

10 Graph the total yearly sales. Comment on the differences between the graphs. 2016 indications?



Annual sales is misleading suggesting increasing sales. 2016 looks positive, which is the opposite to the first graph. Misleading by compressing information.

Data - Frequency Tables (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Complete the frequency column and total for Σf, then answer the questions.

1 Number of Fish in a Tank

Fish	Tally	Frequency
2	𝍸	
3	𝍸 ||	
4	𝍸 𝍸 |||	
5	𝍸 𝍸	
6	𝍸 𝍸 ||||	
7	𝍸 𝍸 |||	
		$\Sigma f =$

2 What number of fish had the highest frequency? _____

3 What number of fish had the same frequency? _____

4 What was the frequency for a tank to have an odd number of fish?

_____

5 What was the frequency for a tank to have less than 5 fish?

_____

6 Soft Drink Preference

Type	Tally	Frequency
A	𝍸 𝍸 𝍸 ||	
B	𝍸 𝍸 |||	
C	||||	
D		
E	𝍸 𝍸 ||	
F	𝍸 𝍸 𝍸	
		$\Sigma f =$ 75

7 D's results were unreadable due to a drink spill, use Σf to calculate them.

8 Rank the drink brands in order from least, to most popular.

_____

9 How many people preferred brand 'A' or brand 'F'? _____

Place the data into the Frequency table, showing the tally, the frequency and write 'Σf= *(total)*', then answer the questions.

10 Away from School - Sports Choices

Sport	Tally	Frequency
Tennis		
Gym		
Bocce		
Archery		

Data:

TTGAA	TTGAA
TGBBA	GBBAT
AAGGG	TTTTA
BTBTA	BTBBA
AAATG	GTBBA
BBGBT	AABTB
TTGBB	BBTBG
ATTTA	ABBTG

11 What was most popular 'away' sport chosen? _____

12 How many people chose 'ball sports'? _____

13 If there are a total of 135 students in the year, calculate the percentage that chose 'away' sports.

$$\%\ \text{Away Sport} = \frac{\square}{135} \times 100$$

$$= \underline{\square}\ \%$$

Round to 1 d.p.

14 A real estate agent is checking rental homes for smoke detectors, if the smoke detector was Battery powered, Mains powered, or Dual (both). If a detector didn't work its type wasn't recorded it was just recorded as Inoperative. If a house had no smoke detector, it was recorded as 'None'.

Smoke Detector Type or Status

Type	Tally	Frequency
Battery		
Mains		
Dual		
Inoperative		
None		

Data:

BBDMB	BBDBM
BIBBM	MNDIB
MBDBI	BBIIN
NBBIM	INDDB
BBNIB	NBBMB
MBBDN	IBBMB
NINBB	NDDMB

15 How many homes had operational smoke detectors? _____

16 What percentage (to 1 d.p.) of homes had inoperative or no smoke detectors?

$$\%\ \text{No S.D} = \frac{\square}{\square} \times 100 = \underline{\square}$$

Round to 1 d.p.

17 What percentage (to 1 d.p.) of homes had Dual-powered smoke detectors?

$$\%\ \text{Dual Powered} = \frac{\square}{\square} \times 100 = \underline{\square}$$

Round to 1 d.p.

Data - Frequency Tables (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Place the data below in a frequency table.

Before you start
Circle the smallest number
Circle the largest number

1 Data: ~~0~~, 3, 2, 6, 5, 3, 4, 5, 1, 6, 3, 4, 2, 5, 3, 2, 0, 5, 1, 2, 3, 5, 4, 3, 2, 4, 5, 2, 1, 5, 2, 3, 2, 5, 6, 1, 4, 3, 2, 2.

Score	Tally	Frequency
0	|	
		$\Sigma f =$

Count the numbers in the data, does it equal Σf?

2 Ages of Students on an Excursion.
Data: 15, 17, 12, 17, 16, 17, 12, 18, 13, 16, 17, 15, 11, 13, 13, 14, 12, 15, 17, 17, 15, 14, 13, 15, 16, 17, 12, 16, 14, 13, 15, 17, 17, 17, 16, 12, 14.

Table Title _____

Score	Tally	Frequency
		$\Sigma f =$

3 What was the age that occurred most? _____

4 How many students were older that 14? _____

5 How many teenage students were there? _____

6 What percentage of the students were 16 or older?

_____ = _____

Show working out | Answer to 1 d.p.

Student eye colour was recorded with the data shown, Br = Brown, Bl = Blue, G = Green and H = Hazel. Tabulate the results.

7 Data: Br, Br, Br, G, Bl, Br, Br, Br, Bl, H, H, Br, Br, Br, Br, Bl, H, Bl, Br, Br, H, Bl, G, Br, Br, Br, H, H, Bl.

_____

8 What was most common eye colour? _____

9 How many students had hazel eyes? _____

10 What percentage of the students had blue eyes?

_____ = _____

Answer to 1 d.p.

11 What percentage of the students had either brown or hazel eyes?

_____ = _____

Answer to 1 d.p.

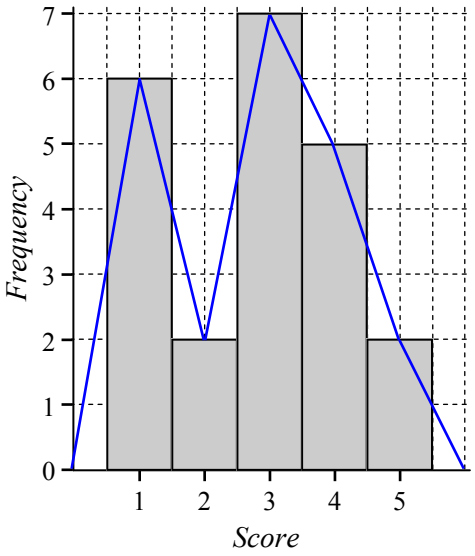
12 Place the spelling test results in the table.
Data: 9, 6, 8, 3, 6, 8, 10, 8, 5, 6, 9, 7, 9, 8, 7, 3, 8, 10, 6, 9, 8, 7, 9, 5, 6, 9, 8, 8, 8, 7, 5, 9, 6, 3, 7, 9, 6, 10, 8, 7, 10, 6, 5, 5, 3, 7, 9, 9, 10, 5.

_____

Data - Frequency Histograms and Frequency Polygons (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

A frequency histogram and polygon are shown. Complete the frequency table, then answer the questions.



Score	*f*
1	
2	
3	
4	
5	

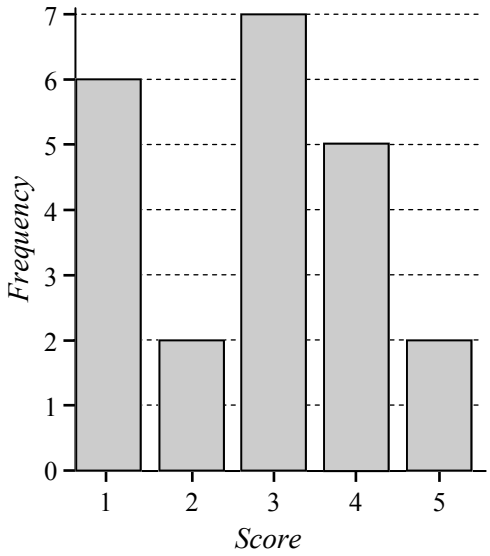
1 Which score occurred the most? _____

2 Which scores have the same frequency? _____

3 Which score occurred five times? _____

4 Total the frequencies. _____

This is a column graph for the same data.



5 List three differences between the column graph and the histogram above it. Write your answer in sentences.

_____

_____

_____

_____

_____

Construct a frequency histogram and frequency polygon for the data in these frequency tables.

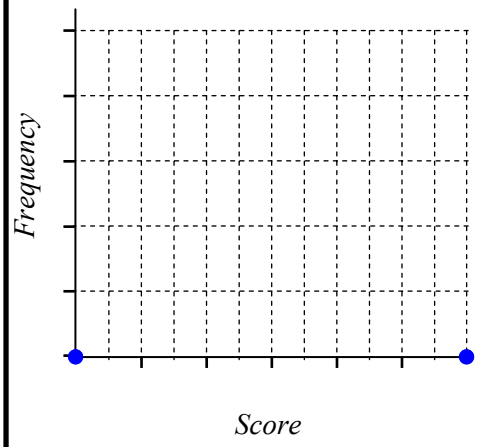
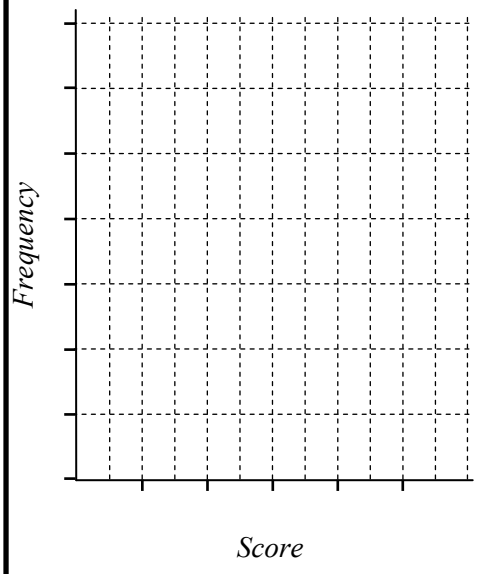
15	3
20	0
25	4



2

Score	*Frequency*
0	2
2	5
4	3
6	7
8	1

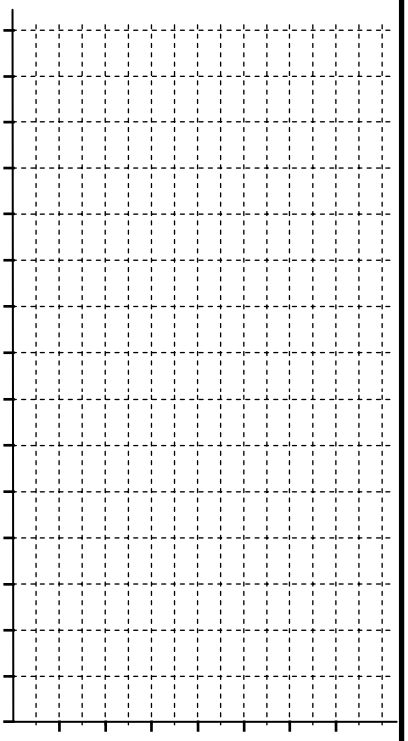


Given a data set, place the data into a Frequency Table then construct a Frequency Histogram and Frequency Polygon. Start with circling the lowest and the highest scores in the data set.

3 Family Size

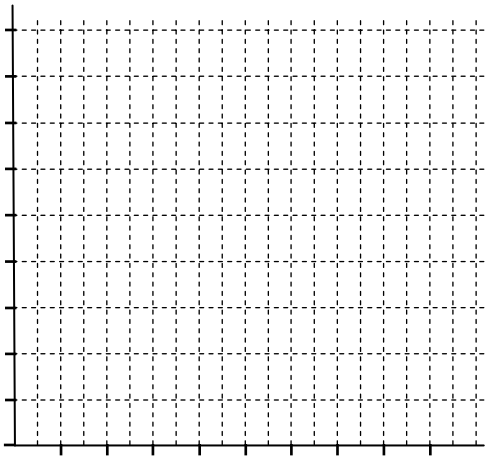
Data: 4, 3, 4, 2, 3, 7, 4, 5, 7, 6, 5, 3, 4, 8, 5, 4, 5, 3, 4, 3, 5, 4, 4, 2, 8, 6, 4, 4, 3, 5, 4, 4, 5, 6, 3, 4, 4, 3, 4.

Score	*Tally*	*Frequency*
Count the scores in the data and compare →		$\Sigma f =$



4 100 m Sprint times (s)

Data:
17, 19, 22, 16, 18, 19, 15, 21, 17, 22, 18, 16, 22, 17, 18, 20, 17, 19, 22, 16, 23, 18, 21, 19, 15, 17, 17, 19, 22, 21, 15, 17, 16, 16, 20, 23, 19, 19, 17, 18.



Data - Frequency Histograms with Classes (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Place the data below in the frequency table, using the suggested class intervals.

1 Data: 25, 16, 32, 41, 28, 7, 11, 36, 27, 20, 34, 43, 19, 31, 7, 48, 9, 20, 5, 35, 22, 10, 33, 3, 21, 24, 17, 28, 2, 36, 32, 12, 26, 43, 7, 21, 7, 5.

Class	Tally	Frequency
0 - 9		
10 - 19		
20 - 29		
30 - 39		
40 - 49		
		$\Sigma f =$

Count the number of scores in the data, does it equal Σf?

2 'Appleshot' Archery Club Championship

Points: 80, 72, 83, 67, 94, 92, 85, 73, 79, 90, 65, 77, 97, 93, 89, 65, 85, 71, 62, 83, 79, 64, 92, 70, 62, 84, 75, 81, 98, 75, 73, 63, 84, 91, 99, 98, 76, 78, 85, 96, 70, 74, 76, 62, 68, 83, 95, 100, 72, 81.

Points	Tally	Frequency
61 - 65		
66 - 70		
71 - 75		
76 - 80		
81 - 85		
86 - 90		
91 - 95		
96 - 100		

3 How many archers were there? _____

4 How many archers scored 75 or less? _____

5 Which class had the highest frequency? _____

6 What percentage of the archers scored more than 90?

$\Sigma f \rightarrow \frac{\square}{\square} \times 100 =$ _____

7 What percentage scored between 65 and 81?

$\frac{\square}{\square} \times \square =$ _____

8 Time (min) to complete a survey

Data: 6, 15, 20, 11, 19, 22, 18, 5, 11, 10, 18, 24, 16, 23, 4, 18, 9, 14, 28, 9, 14, 13, 25, 14, 17, 29, 4, 15, 5, 23, 19, 12, 17, 25, 10, 14, 19, 24, 16.

Time (min)	Tally	Frequency
1 - 5		
6 - 10		
11 - 15		
16 - 20		
21 - 25		
26 - 30		

9 How many scores between 5 and 16 were there?

_____

10 How many scores were 25 or less? _____

11 Student Height (cm)

Data: 155, 172, 163, 158, 168, 174, 183, 165, 180, 161, 174, 168, 170, 181, 163, 162, 171, 155, 183, 175, 169, 149, 170, 162, 181, 172, 176, 162, 158, 166, 157, 184, 175, 166, 163, 159, 172, 170.

Height (cm)	Tally	Frequency
145 - 149		
150 - 154		
155 - 159		
160 - 164		
165 - 169		
170 - 174		
175 - 179		
180 - 184		

Answer these to 1 decimal place.

12 What percentage of students are 1.8 m or taller?

_____ = _____

13 What percentage of students are less than 1.7 m tall?

_____ = _____

Data - Frequency Histograms with Classes (Sheet 2)

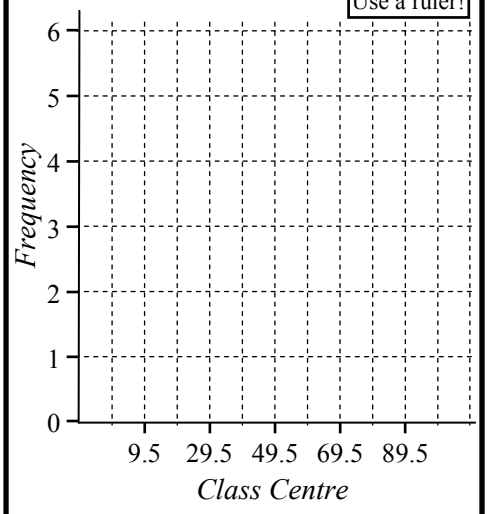
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Display the data below using a frequency histogram and polygon

1

Class	*c.c.*	Frequency
0 - 19	9.5	4
20 - 39	29.5	2
40 - 59	49.5	6
60 - 79	69.5	3
80 - 99	89.5	5

Use a ruler!



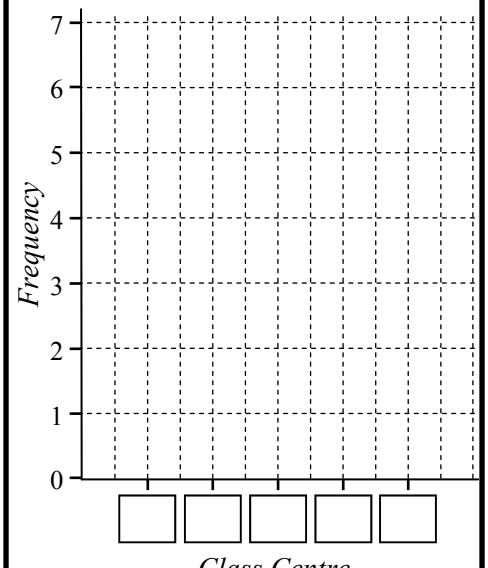
2

Class	*c.c.*	Frequency
1 - 5		4
6 - 10		7
11 - 15		0
16 - 20		2
21 - 25		5

To calculate Class Centre:

Calc: 1 + 5 = ÷ 2 =

Calc: 6 + 1 0 = ÷ 2 = and so on

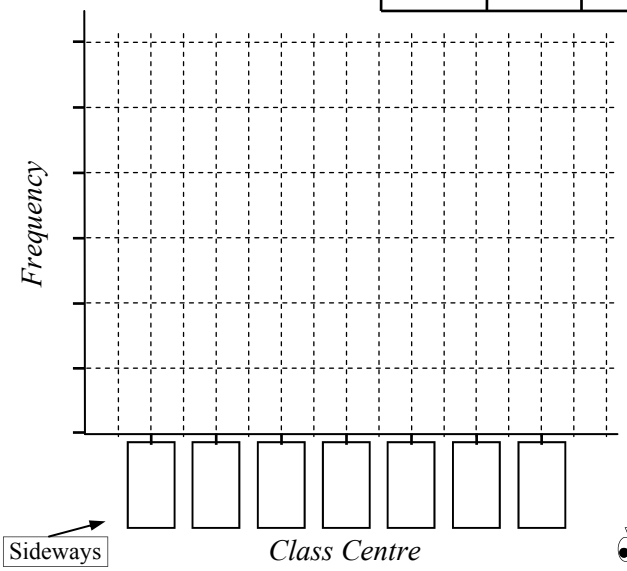


Place the data in the Frequency Table using classes 0 - 9, 10 -19 and so on. Then show the data as a Frequency Histogram and Polygon.

3 Data: 63, 9, 33, 43, 9, 63, 10, 67, 54, 3, 68, 16, 56, 13, 21, 15, 4, 50, 58, 8, 4, 40, 48, 17, 65, 59, 10, 44, 50, 23, 26, 25, 37, 31.

Class	*c.c.*	Tally	*f*
0 - 9			
10 - 19			
			$\Sigma f =$

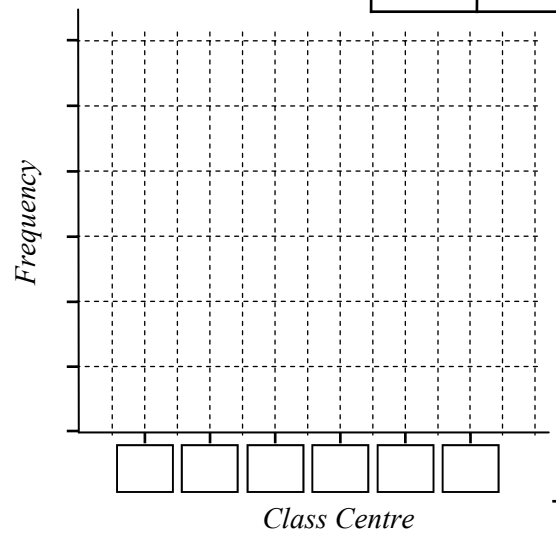
Count the number of scores in the data, does it equal Σf?



Repeat the process except this time use classes 1 - 5, 6 - 10, 11 - 15 and so on.

4 Data: 15, 30, 10, 25, 1, 30, 6, 10, 2, 21, 3, 12, 14, 27, 28, 6, 11, 16, 9, 15, 21, 17, 15, 20, 25.

Class	*c.c.*	Tally	*f*
			$\Sigma f =$



5 How many scores are larger than 15? _____

6 How many scores between 5 and 21? _____

7 What percentage of the scores were 20 or less?

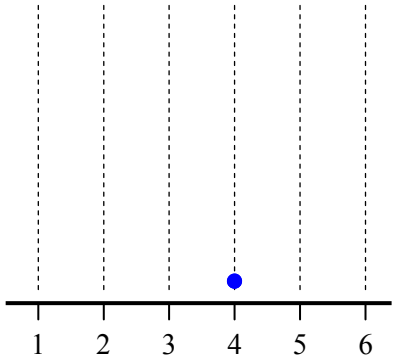
_____

Data - Dot Plots (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Display the data in a dot plot.

1 Data: 4, 5, 3, 3, 6, 1, 2, 4, 2, 3, 5, 6, 2, 3, 4, 4, 1, 2, 5, 6, 2, 3, 3, 2, 5, 2, 1, 4, 6, 3, 2.



2 An artificial sweetener is comparing itself with three other brands. Graph the results.

Data: BBBDA BABBC ABBBC

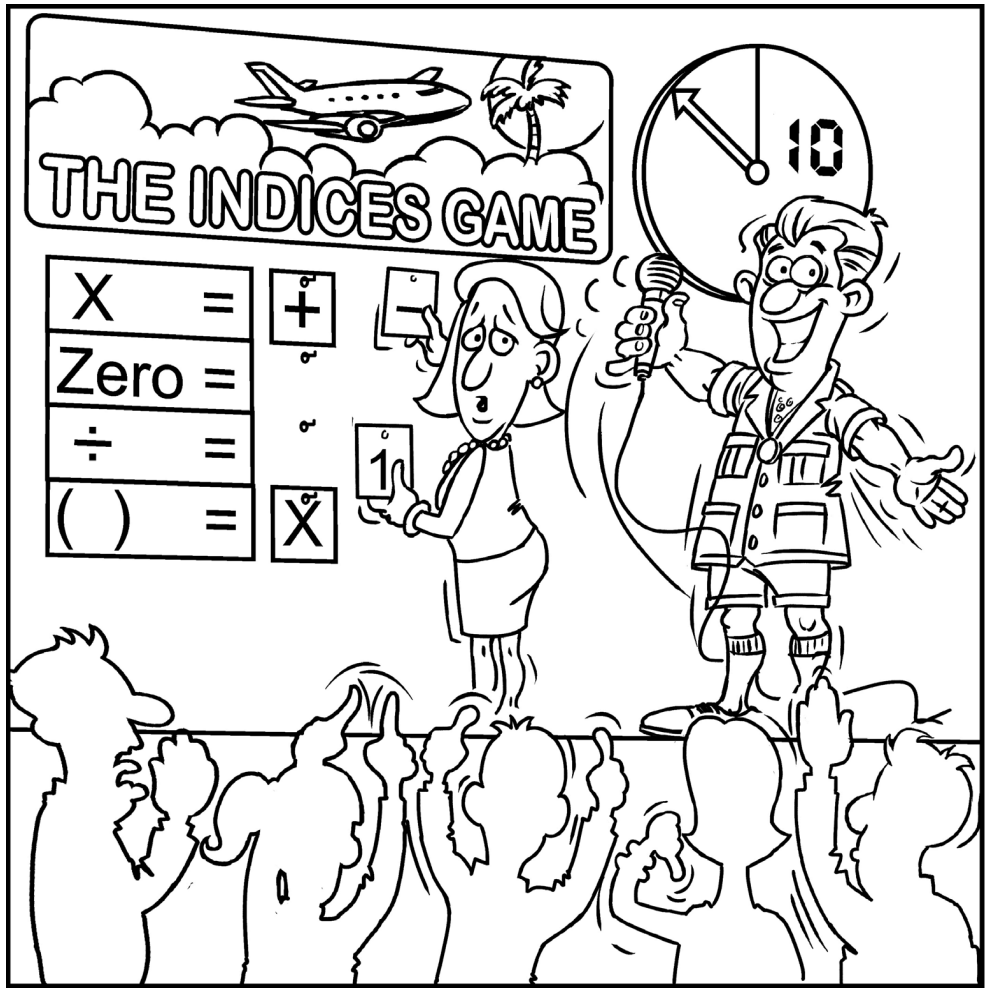
Indices



© Freefall Mathematics - School Use Only

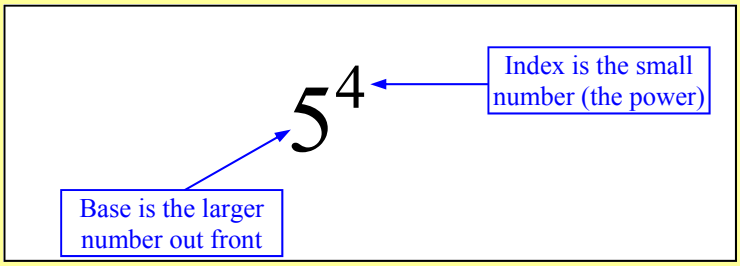
Indices - Power Key Applications

An indice is a number or letter (the base) with a power on it (the index). These sheets just deal with numbers, so examples of indices are: 5^2, 3^6 and 7^3.



This sheet involves use of the power key function of your calculator. While you have a 'Square Key' and a 'Cube key', the power key is used for all powers, not just 2 and 3.

Example Evaluate 5^4.

5^4 Calc: 5 $x^{\blacksquare}$ 4 = $= 625$

The second sheet deals with the properties of negative indices. A negative power is typed into the calculator the same way as above, just press the negative sign before entering the power. But the negative power also means '1 over'.

Example Evaluate 5^4.

5^{-4} Calc: 5 $x^{\blacksquare}$ - 4 = S⇔D $= \frac{1}{625} = \frac{1}{5^4}$

'1 over'

This key writes the answer as a fraction

The last part of the sheet asks you to complete tables. These tables have a pattern in them which allows you to complete them without using the power key each time. It also shows what happens when you have a power of zero.

Indices - Power Key Applications (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your power key to evaluate (find the value for) these.

Example $5^4 = 625$

Calc: 5 $x^{\blacksquare}$ 4 =

1 $3^3 =$ ____ 2 $2^5 =$ ____

3 $5^2 =$ ____ 4 $7^3 =$ ____

5 $4^4 =$ ____ 6 $3^5 =$ ____

7 $9^5 =$ ____

8 $15^4 =$ ____

9 $10^1 =$ ____ 10 $10^2 =$ ____

11 $10^3 =$ ____

12 $10^4 =$ ____

13 $10^5 =$ ____

14 $10^6 =$ ____

15 $1^1 =$ ____ 16 $1^2 =$ ____

17 $1^3 =$ ____ 18 $1^4 =$ ____

Name the base and the index in these.

Example 5^4 — 5 (Base), 4 (Index)

Base is the larger number out front

Index is the small number (the power)

19 6^7 Base ____ Index ____

20 9^8 Base ____ Index ____

21 7^6 Index ____ Base ____

22 13^5 Index ____ Base ____

Given the base and index, write the indices and evaluate.

Example Base 9, index 4.

$9^4 = 6\,561$

23 Base 4, index 6.

____ = ____

Calc: 4 $x^{\blacksquare}$ 6 =

24 Base 2, index 8.

____ = ____

25 Index 4, base 5.

____ = ____

26 Base 9, index 4.

____ = ____

27 Index 5, base 10.

____ = ____

Use guess, check and revise to find the correct index for these.

28 $2^{\square} = 128$ 29 $3^{\square} = 27$

30 $7^{\square} = 823\,543$

31 $5^{\square} = 48\,828\,125$

32 $13^{\square} = 28\,561$

33 $10^{\square} = 10\,000\,000$

34 $20^{\square} = 8\,000$

35 $2^{\square} = 262\,144$

36 $3^{\square} = 177\,147$

Use guess, check and revise to find the correct base for these.

37 $\square^3 = 64$ 38 $\square^5 = 243$

39 $\square^7 = 128$ 40 $\square^3 = 729$

41 $\square^4 = 83\,521$

42 $\square^9 = 19\,683$

43 $\square^4 = 10\,000$

44 $\square^6 = 64\,000\,000$

45 $\square^3 = 1$ 46 $\square^8 = 1$

Blend the two skills by finding both the base and the index!

47 $2^{\square} = 256 = \square^4$

48 $9^{\square} = 531\,441 = \square^{12}$

49 $\square^4 = 4\,096 = 2^{\square}$

50 $\square^5 = 1\,048\,576 = 2^{\square}$

51 $4^{\square} = 16\,777\,216 = \square^6$

Use '<' or '>' to make these true. Hint: Point the '<' or '>' to the smallest number.

52 4^5 ____ 2^9

53 7^4 ____ 4^7

Indices - Power Key Applications (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your power key to evaluate these indices, answer these as a fraction.

Example $5^{-2} = \frac{1}{25}$

Calc: 5 $x^{\blacksquare}$ - 2 = S⇔D

1 $3^{-3} =$ ☐/☐ 2 $2^{-5} =$ ☐/☐

3 $5^{-3} =$ ☐/☐ 4 $4^{-4} =$ ☐/☐

5 $2^{-3} =$ ☐/☐ 6 $3^{-5} =$ ☐/☐

7 $10^{-3} =$ ☐/☐

8 $10^{-5} =$ ☐/☐

A negative power means '1 over', so rewrite as a fraction, then evaluate.

Rewrite as '1 over' Use your calculator

9 $2^{-4} = \frac{1}{2^4} =$ ☐/☐

Calc: 1 $\frac{\blacksquare}{\square}$ 2 $x^{\blacksquare}$ 4 =

10 $5^{-3} = \frac{1}{5^3} =$ ☐/☐

Calc: 1 $\frac{\blacksquare}{\square}$ 5 $x^{\blacksquare}$ 3 =

11 $3^{-3} = \frac{1}{\square} = \frac{1}{\square}$

12 $6^{-2} =$ ☐/☐ = ☐/☐

13 $10^{-3} =$ ☐/☐ = ☐/☐

14 $6^{-5} =$ ☐/☐ = ☐/☐

15 $2^{-8} =$ ☐/☐ = ☐/☐

16 $3^{-6} =$ ☐/☐ = ☐/☐

17 $4^{-5} =$ ☐/☐ = ☐/☐

Remove the fraction by writing these as negative indices. No calculator required!

Example $\frac{1}{2^5} = 2^{-5}$

18 $\frac{1}{2^3} =$ ☐☐

19 $\frac{1}{7^2} =$ ☐☐

20 $\frac{1}{5^8} =$ ☐☐

Use your power key to complete these tables.

21

Indice	3^5	3^4	3^3	3^2	3^1	3^0	3^{-1}	3^{-2}	3^{-3}	3^{-4}

Indices - Power Key Applications (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your power key to evaluate (find the value for) these.

Example $5^4 =$ 625

Calc: 5 $x^{\blacksquare}$ 4 =

1 $3^3 =$ 27 2 $2^5 =$ 32

3 $5^2 =$ 25 4 $7^3 =$ 343

5 $4^4 =$ 256 6 $3^5 =$ 243

7 $9^5 =$ 59 049

8 $15^4 =$ 50 625

9 $10^1 =$ 10 10 $10^2 =$ 100

11 $10^3 =$ 1 000

12 $10^4 =$ 10 000

13 $10^5 =$ 100 000

14 $10^6 =$ 1 000 000

15 $1^1 =$ 1 16 $1^2 =$ 1

17 $1^3 =$ 1 18 $1^4 =$ 1

Name the base and the index in these.

Example 5^4 — 5 (Base), 4 (Index)

Base is the larger number out front

Index is the small number (the power)

19 6^7 — 6 (Base), 7 (Index)

20 9^8 — 9 (Base), 8 (Index)

21 7^6 — 6 (Index), 7 (Base)

22 13^5 — 5 (Index), 13 (Base)

Given the base and index, write the indices and evaluate.

Example Base 9, index 4.

$9^4 = 6\,561$

23 Base 4, index 6.

$4^6 =$ 4 096

Calc: 4 $x^{\blacksquare}$ 6 =

24 Base 2, index 8.

$2^8 =$ 256

25 Index 4, base 5.

$5^4 =$ 625

26 Base 9, index 4.

$9^4 =$ 6 561

27 Index 5, base 10.

$10^5 =$ 100 000

?

Use guess, check and revise to find the correct index for these.

28 $2^{\boxed{7}} = 128$ 29 $3^{\boxed{3}} = 27$

30 $7^{\boxed{7}} = 823\,543$

31 $5^{\boxed{11}} = 48\,828\,125$

32 $13^{\boxed{4}} = 28\,561$

33 $10^{\boxed{7}} = 10\,000\,000$

34 $20^{\boxed{3}} = 8\,000$

35 $2^{\boxed{18}} = 262\,144$

36 $3^{\boxed{11}} = 177\,147$

?

Use guess, check and revise to find the correct base for these.

37 $\boxed{4}^3 = 64$ 38 $\boxed{3}^5 = 243$

39 $\boxed{2}^7 = 128$ 40 $\boxed{9}^3 = 729$

41 $\boxed{17}^4 = 83\,521$

42 $\boxed{3}^9 = 19\,683$

43 $\boxed{10}^4 = 10\,000$

44 $\boxed{20}^6 = 64\,000\,000$

45 $\boxed{1}^3 = 1$ 46 $\boxed{1}^8 = 1$

Blend the two skills by finding both the base and the index!

47 $2^{\boxed{8}} = 256 = \boxed{4}^4$

48 $9^{\boxed{8}} = 531\,441 = \boxed{3}^{12}$

49 $\boxed{8}^4 = 4\,096 = 2^{\boxed{12}}$

50 $\boxed{16}^5 = 1\,048\,576 = 2^{\boxed{20}}$

51 $4^{\boxed{12}} = 16\,777\,216 = \boxed{16}^6$

Use '<' or '>' to make these true. Hint: Point the '<' or '>' to the smallest number.

52 4^5 > 2^9

Indices - Power Key Applications (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your power key to evaluate these indices, answer these as a fraction.

Example $5^{-2} = \frac{1}{25}$

Calc: 5 $x^{\blacksquare}$ - 2 = S⇔D

1 $3^{-3} = \frac{1}{27}$

2 $2^{-5} = \frac{1}{32}$

3 $5^{-3} = \frac{1}{125}$

4 $4^{-4} = \frac{1}{256}$

5 $2^{-3} = \frac{1}{8}$

6 $3^{-5} = \frac{1}{243}$

7 $10^{-3} = \frac{1}{1\,000}$

8 $10^{-5} = \frac{1}{100\,000}$

A negative power means '1 over', so rewrite as a fraction, then evaluate.

Rewrite as '1 over'

Use your calculator

9 $2^{-4} = \frac{1}{2^4} = \frac{1}{16}$

Calc: 1 $\frac{\blacksquare}{\square}$ 2 $x^{\blacksquare}$ 4 =

10 $5^{-3} = \frac{1}{5^3} = \frac{1}{125}$

Calc: 1 $\frac{\blacksquare}{\square}$ 5 $x^{\blacksquare}$ 3 =

11 $3^{-3} = \frac{1}{3^3} = \frac{1}{81}$

12 $6^{-2} = \frac{1}{6^2} = \frac{1}{36}$

13 $10^{-3} = \frac{1}{10^3} = \frac{1}{1\,000}$

14 $6^{-5} = \frac{1}{6^5} = \frac{1}{7\,776}$

15 $2^{-8} = \frac{1}{2^8} = \frac{1}{256}$

16 $3^{-6} = \frac{1}{3^6} = \frac{1}{729}$

17 $4^{-5} = \frac{1}{4^5} = \frac{1}{1\,024}$

Remove the fraction by writing these as negative indices. No calculator required!

Example $\frac{1}{2^5} = 2^{-5}$

18 $\frac{1}{2^3} = 2^{-3}$

19 $\frac{1}{7^2} = 7^{-2}$

20 $\frac{1}{5^8} = 5^{-8}$

Use your power key to complete these tables.

21

Indice	3^5	3^4	3^3	3^2	3^1	3^0	3^{-1}	3^{-2}	3^{-3}	3^{-4}

Indices - Power Key Applications (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Date Due:

Use your power key to find these.

1 $4^3 = 64$

2 $2^4 = 16$

3 $5^3 = 125$

4 $6^3 = 216$

5 $2^9 = 512$

6 $3^4 = 81$

Write these indices

7 Base 2, index 5. 2^5

8 Base 4, index 3. 4^3

9 Index 6, base 2. 2^6

Use your power key to find these.

10 $3^{-4} = \frac{1}{81}$

11 $2^{-6} = \frac{1}{64}$

12 $4^{-3} = \frac{1}{64}$

13 $2^{-4} = \frac{1}{16}$

Rewrite with a negative power

14 $\frac{1}{2^4} = 2^{-4}$

15 $\frac{1}{3^5} = 3^{-5}$

Indices - Multiplying Indices

An indice is a number or letter (the base) with a power on it (the index). A power on a number means '×' itself that many times. So $3^4 = 3 \times 3 \times 3 \times 3$, or with letters $x^3 = x \times x \times x$. When you write indices in this way it is called 'Expanded form'.

Example Write 2^5 in expanded form.

$$2^5 = 2 \times 2 \times 2 \times 2 \times 2$$

Example Write y^4 in expanded form.

$$y^4 = y \times y \times y \times y$$

This sheet starts with asking you to write expressions in expanded form. You can use expansion to multiply indices and to prove the rule that when you multiply 'like base' indices that you add the index.

Rule: When you multiply like base indices, you add the powers

$$a^m \times a^n = a^{m+n}$$

Here are two examples, applying the above rule:

Example Simplify $x^2 \times x^5$.

$$x^2 \times x^5 = x^7$$

2 + 5 = 7

Example Simplify $ax^2 \times a^5x^5$.

$$ax^2 \times a^5x^5 = a^6x^7$$

2 + 5 = 7

No power means that it has a power of '1'

1 + 5 = 6

A co-efficient is the number in front of the letter in an algebraic term. When you multiply terms, the co-efficient are multiplied:

Example Simplify $2x^2 \times 4x^5$.

$$2x^2 \times 4x^5 = 8x^7$$

2 × 4 = 8

2 + 5 = 7

Indices - Multiplying Indices (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Rewrite in expanded form.

Example $5^4 = 5 \times 5 \times 5 \times 5$

1 $3^5 = \square \times \square \times \square \times \square \times \square$

2 $15^3 =$

3 $9^4 =$

4 $1^6 =$

Now algebraic indices - same process

5 $y^4 = \square \times \square \times \square \times \square$

6 $a^5 =$

7 $k^6 =$

8 $b^2 =$

Use expansion to answer these in index form. No calculator.

Example $5^2 \times 5^4 = \overbrace{5 \times 5}^{5^2} \times \overbrace{5 \times 5 \times 5 \times 5}^{5^4} = 5^6$

9 $7^2 \times 7^2 = \square \times \square \times \square \times \square$

$7^2 \times 7^2 = \square^{\square}$

10 $3^3 \times 3^2 =$

$3^3 \times 3^2 = \square^{\square}$

11 $4^2 \times 4^4 =$

$4^2 \times 4^4 = \square^{\square}$

Now algebraic indices - same process

12 $x^2 \times x^3 =$

$x^2 \times x^3 = \square^{\square}$

13 $a \times a^3 =$

$a \times a^3 = \square^{\square}$

You can multiply indices by adding the indexes. Multiply these, leave answer in index form

Example $5^2 \times 5^4 = 5^{2+4} = 5^6$

14 $7^4 \times 7^2 = \square^{\square+\square} = \square^{\square}$

15 $9^3 \times 9^5 = \square^{\square+\square} = \square^{\square}$

No power - it's like there is a '1' there

16 $4^6 \times 4 = \square^{\square+\square} = \square^{\square}$

17 $5 \times 5^2 = \square^{\square+\square} = \square^{\square}$

18 $7 \times 7 = \square^{\square+\square} = \square^{\square}$

19 $3^9 \times 3^7 = \square^{\square+\square} = \square^{\square}$

Now algebraic indices - same process

20 $x^3 \times x^3 = \square^{\square+\square} = \square^{\square}$

21 $n^5 \times n = \square^{\square+\square} = \square^{\square}$

22 $a \times a^3 = \square^{\square+\square} = \square^{\square}$

23 $h^8 \times h^4 = \square^{\square+\square} = \square^{\square}$

Forget the middle step, answer only. Triples are just the same.

24 $5^8 \times 5^4 = \square^{\square}$

25 $7^3 \times 7^9 = \square^{\square}$

26 $7^3 \times 7^9 \times 7^2 = \square^{\square}$

27 $3 \times 3^6 \times 3^3 = \square^{\square}$

28 $e^4 \times e^3 \times e^5 = \square^{\square}$

29 $k \times k^5 \times k = \square^{\square}$

30 $h^2 \times h \times h^7 = \square^{\square}$

We now have unlike terms. At last, maths questions that have two correct answers! Simplify.

Example $a^2 \times b^2 \times a^4 \times b = a^6b^3$ *or* b^3a^6

31 $a^6 \times b =$ ____ *or* ____

32 $c^4 \times b^5 =$ ____ *or* ____

33 $k^9 \times t^3 =$ ____ *or* ____

Just one answer from now on

34 $x^3 \times a^5 \times x^2 \times a =$

35 $y^2 \times c^3 \times y^4 \times y^5 =$

36 $a^5 \times b^2 \times a \times b =$

37 $d \times d^2 \times c \times d^5 =$

Less '×' signs - but the same process

38 $bc \times b^2 =$ ____ *or* ____

39 $ay \times y^3 =$ ____ *or* ____

40 $g^3k \times k^3g^2 =$

41 $ab \times ab =$

42 $abc \times abc =$

43 $b^2ac^3 \times acb =$

44 $c^4a^2b^3 \times b^4c^3a^6 =$

45 $ab^3c \times a^2b \times ab^2 =$

Which of these is true?

46 $m^3 \times m^2 =$ ○ m^6 ○ m^5

47 $e^6 \times e =$ ○ e^6 ○ e^7 ○ e^0 ○ e

48 $a^2 \times a^5b =$ ○ $a^{10}b$ ○ a^7b^5 ○ a^2b^5 ○ a^7b

Indices - Multiplying Indices (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Coefficients are numbers in front of algebraic terms. Multiply the coefficients, but add the powers.

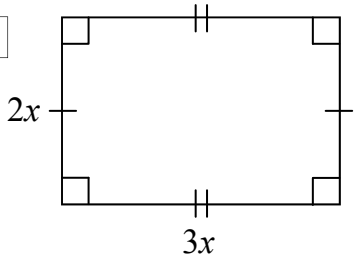
Example $2x \times 3x^2 = 6x^3$

Simplify these.

1. $2a^5 \times a^2 =$ _____
2. $c^2 \times 4c =$ _____
3. $a^3b^2 \times 3a^2 =$ _____
4. $5x^4y^2 \times xy =$ _____
5. $4n^3 \times 5n^2 =$ _____
6. $6j^7 \times 4j =$ _____
7. $2h^3 \times 9ah^2 =$ _____
8. $3s^2 \times 4sv^3 =$ _____
9. $2e^2h \times 8h^2e^4 =$ _____
10. $3x^2 \times 2x^3 \times 4y^2 =$ _____

The area of a rectangle is found by multiplying the two sides. Find the area of these.

11.

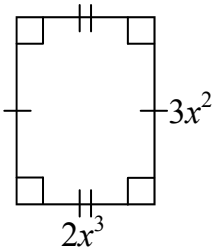


A = lb

= ____ × ____

A = ____ units^2

12.

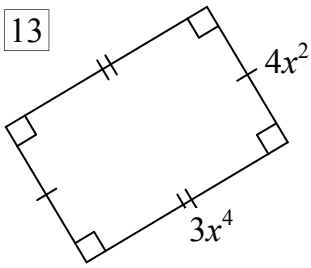


A = lb

= ____ × ____

A = ____ units^2

13.

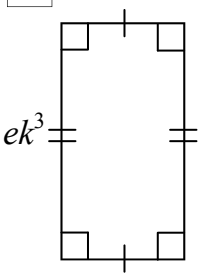


A = lb

= ____ × ____

A = ____ units^2

14.

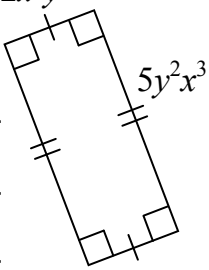


_____

_____

_____

15.



_____

_____

_____

When you square a term you multiply it by itself. Square these terms.

Example

$(3x)^2 = 3x \times 3x = 9x^2$

16. $(4y)^2 =$ ____ × ____ = ____
17. $(2a)^2 =$ ____ × ____ = ____
18. $(2a^2)^2 =$ ____ × ____ = ____
19. $(3a^3)^2 =$ ____ × ____ = ____
20. $(5a^2b)^2 =$ ____ × ____

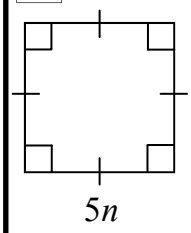
= ____

21. $(2x^3y^5)^2 =$ ____ × ____

= ____

The area of a square is found by squaring the sides. Find the area of these squares.

22.

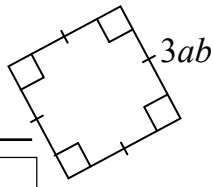


A = l^2

= ____ × ____

A = ____ units^2

23.



A = l^2

= ____ × ____

A = ____ units^2

24.

$3x^3y^2$			

Indices - Multiplying Indices (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Rewrite in expanded form.

Example $5^4 = 5 \times 5 \times 5 \times 5$

1 $3^5 = \square \times \square \times \square \times \square \times \square$

2 $15^3 = 15 \times 15 \times 15$

3 $9^4 = 9 \times 9 \times 9 \times 9$

4 $1^6 = 1 \times 1 \times 1 \times 1 \times 1 \times 1$

Now algebraic indices - same process

5 $y^4 = y \times y \times y \times y$

6 $a^5 = a \times a \times a \times a \times a$

7 $k^6 = k \times k \times k \times k \times k \times k$

8 $b^2 = b \times b$

Use expansion to answer these in index form. No calculator.

Example $5^2 \quad 5^4$

$5^2 \times 5^4 = 5 \times 5 \times 5 \times 5 \times 5 \times 5 = 5^6$

9 $7^2 \times 7^2 = 7 \times 7 \times 7 \times 7$

$7^2 \times 7^2 = 7^{4}$

10 $3^3 \times 3^2 = 3 \times 3 \times 3 \times 3 \times 3$

$3^3 \times 3^2 = 3^{5}$

11 $4^2 \times 4^4 = 4 \times 4 \times 4 \times 4 \times 4 \times 4$

$4^2 \times 4^4 = 4^{6}$

Now algebraic indices - same process

12 $x^2 \times x^3 = x \times x \times x \times x \times x$

$x^2 \times x^3 = x^{5}$

13 $a \times a^3 = a \times a \times a \times a$

$a \times a^3 = a^{4}$

You can multiply indices by adding the indexes. Multiply these, leave answer in index form

Example $5^2 \times 5^4 = 5^{2+4} = 5^6$

14 $7^4 \times 7^2 = 7^{4+2} = 7^{6}$

15 $9^3 \times 9^5 = 9^{3+5} = 9^{8}$

No power - it's like there is a '1' there

16 $4^6 \times 4 = 4^{6+1} = 4^{7}$

17 $5 \times 5^2 = 5^{1+2} = 5^{3}$

18 $7 \times 7 = 7^{1+1} = 7^{2}$

19 $3^9 \times 3^7 = 3^{9+7} = 3^{16}$

Now algebraic indices - same process

20 $x^3 \times x^3 = x^{3+3} = x^{6}$

21 $n^5 \times n = n^{5+1} = n^{6}$

22 $a \times a^3 = a^{1+3} = a^{4}$

23 $h^8 \times h^4 = h^{8+4} = h^{12}$

Forget the middle step, answer only. Triples are just the same.

24 $5^8 \times 5^4 = 5^{12}$

25 $7^3 \times 7^9 = 7^{12}$

26 $7^3 \times 7^9 \times 7^2 = 7^{14}$

27 $3 \times 3^6 \times 3^3 = 3^{10}$

28 $e^4 \times e^3 \times e^5 = e^{12}$

29 $k \times k^5 \times k = k^{7}$

30 $h^2 \times h \times h^7 = h^{10}$

We now have unlike terms. At last, maths questions that have two correct answers! Simplify.

Example

$a^2 \times b^2 \times a^4 \times b = a^6b^3$ or b^3a^6

31 $a^6 \times b = a^6b$ or ba^6

32 $c^4 \times b^5 = c^4b^5$ or b^5c^4

33 $k^9 \times t^3 = k^9t^3$ or t^3k^9

Just one answer from now on

34 $x^3 \times a^5 \times x^2 \times a = x^5a^6$

35 $y^2 \times c^3 \times y^4 \times y^5 = y^{11}c^3$

36 $a^5 \times b^2 \times a \times b = a^6b^3$

37 $d \times d^2 \times c \times d^5 = d^8c$

Less '×' signs - but the same process

38 $bc \times b^2 = cb^3$ or b^3c

39 $ay \times y^3 = y^4a$ or ay^4

40 $g^3k \times k^3g^2 = g^5k^4$

41 $ab \times ab = a^2b^2$

42 $abc \times abc = a^2b^2c^2$

43 $b^2ac^3 \times acb = a^2b^3c^4$

44 $c^4a^2b^3 \times b^4c^3a^6 = a^8b^7c^7$

45 $ab^3c \times a^2b \times ab^2 = a^4b^6c$

Which of these is true?

46 $m^3 \times m^2 =$ ○ m^6 ● m^5

47 $e^6 \times e =$ ○ e^6 ● e^7 ○ e^0 ○ e

48 $a^2 \times a^5b =$ ○ $a^{10}b$ ○ a^7b^5 ○ a^2b^5 ● a^7b

Indices - Multiplying Indices (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Coefficients are numbers in front of algebraic terms. Multiply the coefficients, but add the powers.

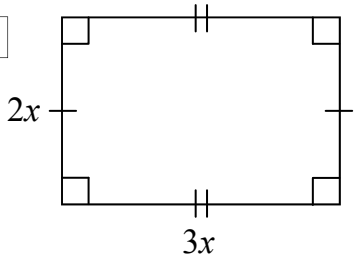
Example $2x \times 3x^2 = 6x^3$

Simplify these.

1. $2a^5 \times a^2 = 2a^7$
2. $c^2 \times 4c = 4c^3$
3. $a^3b^2 \times 3a^2 = 3a^5b^2$
4. $5x^4y^2 \times xy = 5x^5y^3$
5. $4n^3 \times 5n^2 = 20n^5$
6. $6j^7 \times 4j = 24j^8$
7. $2h^3 \times 9ah^2 = 18ah^5$
8. $3s^2 \times 4sv^3 = 12s^3v^3$
9. $2e^2h \times 8h^2e^4 = 16e^6h^3$
10. $3x^2 \times 2x^3 \times 4y^2 = 24x^5y^2$

The area of a rectangle is found by multiplying the two sides. Find the area of these.

11.

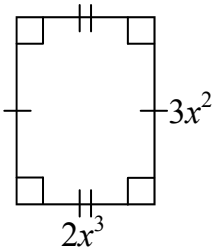


$A = lb$

$= 2x \times 3x$

$A = 6x^2$ units^2

12.

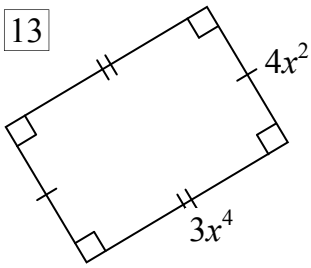


$A = lb$

$= 2x^3 \times 3x^2$

$A = 6x^5$ units^2

13.

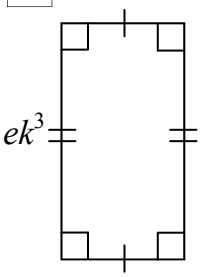


$A = lb$

$= 3x^4 \times 4x^2$

$A = 12x^6$ units^2

14.

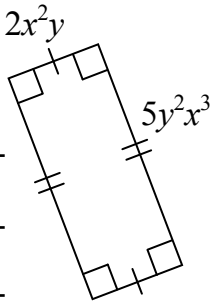


$A = lb$

$= 7e^2 \times ek^3$

$A = 7e^3k^3$ units^2

15.



$A = lb$

$= 2x^2y \times 5y^2x^3$

$A = 10x^5y^3$ units^2

When you square a term you multiply it by itself. Square these terms.

Example

$(3x)^2 = 3x \times 3x = 9x^2$

16. $(4y)^2 = 4y \times 4y = 16y^2$
17. $(2a)^2 = 2a \times 2a = 4a^2$
18. $(2a^2)^2 = 2a^2 \times 2a^2 = 4a^4$
19. $(3a^3)^2 = 3a^3 \times 3a^3 = 9a^6$
20. $(5a^2b)^2 = 5a^2b \times 5a^2b$

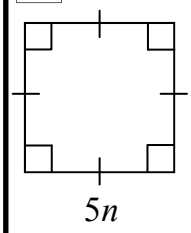
$= 25a^4b^2$

21. $(2x^3y^5)^2 = 2x^3y^5 \times 2x^3y^5$

$= 4x^6y^{10}$

The area of a square is found by squaring the sides. Find the area of these squares.

22.

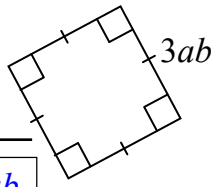


$A = l^2$

$= 5n \times 5n$

$A = 25n^2$ units^2

23.

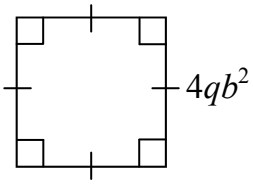


$A = l^2$

$= 3ab \times 3ab$

$A = 9a^2b^2$ units^2

24.



$A = l^2$

$= 4qb^2 \times 4qb^2$

$A = 16q^2b^4$ units^2

Complete the two times tables below.

25.

×	a	a^2b	ab^2	a^2b^2
a	a^2	a^3b	a^2b^2	a^3b^2
$5a$	$5a^2$	$5a^3b$	$5a^2b^2$	$5a^3b^2$

Indices - Multiplying Indices (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Date Due:

Write these in expanded form

1 $4^2 =$ 4 × 4

2 $7^5 = 7 \times 7 \times 7 \times 7 \times 7$

3 $h^4 = h \times h \times h \times h$

4 $b^3 = b \times b \times b$

Simplify these

5 $a^2 \times a^4 = a^6$

6 $x^3 \times x^5 = x^8$

7 $y^3 \times y^2 \times y^7 = y^{12}$

8 $a^3 \times b^2 \times a^5 \times b^4 = a^8b^6$

9 $e^3 \times v^3 \times e \times v^2 = e^4v^5$

10 $w^2a^3 \times w^5a = w^7a^4$

11 $g^3te^2 \times t^2g = g^4t^3e^2$

12 $3a^2b^3 \times a^5b = 3a^7b^4$

13 $4xy^3 \times 5x^2y^2 = 20x^3y^5$

Indices - Dividing Indices

An indice is a number or letter (the base) with a power on it (the index). A power on a number means '×' itself that many times. So $3^4 = 3 \times 3 \times 3 \times 3$, or with letters $x^3 = x \times x \times x$. When you write indices in this way it is called 'Expanded form'.

Example Write 2^5 in expanded form.

$$2^5 = 2 \times 2 \times 2 \times 2 \times 2$$

Example Write y^4 in expanded form.

$$y^4 = y \times y \times y \times y$$

This sheet starts with asking you to write expressions in expanded form. You can use expansion to divide indices and to prove the rule that when you divide 'like base' indices that you subtract the index.

Rule: When you divide like base indices, you subtract the powers

$$a^m \times a^n = a^{m-n}$$

Here are is an example, applying the above rule:

Example Simplify $x^5 \div x^2$.

$$x^5 \div x^2 = x^3$$

5 - 2 = 3

Students often experience difficulty with division. This sheet goes slowly has plenty of examples and increases difficulty, step-by-step. There are too many steps to outline them on this page. So hook in!

Indices - Dividing Indices (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Rewrite in expanded form.

Example $5^4 = 5 \times 5 \times 5 \times 5$

1 $7^5 = \square \times \square \times \square \times \square \times \square$

2 $4^6 =$

3 $3^4 =$

4 $2^3 =$

Now algebraic indices - same process

5 $k^3 = \square \times \square \times \square$

6 $b^4 =$

7 $m^5 =$

8 $c^2 =$

Use expansion and cancellation to answer these in index form.

Example

$5^5 \div 5^2 = \dfrac{\cancel{5} \times \cancel{5} \times 5 \times 5 \times 5}{\cancel{5} \times \cancel{5}}$

Cancel bottom with top

$= 5 \times 5 \times 5 = 5^3$

9 $3^6 \div 3^3 =$

10 $\dfrac{y^6}{y^2} =$

11 $a^3 \div a =$

Use expansion and cancellation to answer these, write a '1' on the top line when fully cancelled

Example

$5^2 \div 5^5 = \dfrac{\cancel{5} \times \cancel{5}^{\,1}}{\cancel{5} \times \cancel{5} \times 5 \times 5 \times 5}$

Cancel bottom with top

$= \dfrac{1}{5 \times 5 \times 5} = \dfrac{1}{5^3}$

12 $7^3 \div 7^5 =$

13 $k \div k^5 =$

14 $\dfrac{n^2}{n^4} =$

You can divide indices by subtracting the indexes. Divide these, bigger power - smaller

Example $5^7 \div 5^4 = 5^{7-4} = 5^3$

15 $3^5 \div 3^2 = \square^{\square - \square} = \square^{\square}$

16 $4^9 \div 4^4 = \square^{\square - \square} = \square^{\square}$

No power - it's like there is a '1' there

17 $8^6 \div 8 = \square^{\square - \square} = \square^{\square}$

18 $\dfrac{3^5}{3} = \square^{\square - \square} = \square^{\square}$

19 $6^8 \div 6 = \square^{\square - \square} = \square^{\square}$

Now algebraic indices - same process

20 $x^3 \div x = \square^{\square - \square} = \square^{\square}$

21 $\dfrac{n^7}{n^3} = \square^{\square - \square} = \square^{\square}$

22 $b^8 \div b^6 = \square^{\square - \square} = \square^{\square}$

23 $\dfrac{h^9}{h^4} = \square^{\square - \square} = \square^{\square}$

These will require a '1' up top, as the denominator is larger. Bigger power - smaller power.

Example

$\dfrac{h^4}{h^9} = \dfrac{1}{h^{9-4}} = \dfrac{1}{h^5}$

24 $\dfrac{a^3}{a^7} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

25 $5^5 \div 5^7 = \dfrac{5^5}{5^7} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

26 $\dfrac{n}{n^6} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

27 $\dfrac{e^3}{e^6} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

28 $b^2 \div b^9 = \dfrac{b^2}{b^9} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

29 $\dfrac{q^4}{q^5} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

30 $c \div c^4 = \dfrac{c}{c^4} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

31 $\dfrac{y^6}{y^8} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

Indices - Dividing Indices (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these, larger power minus the smaller power. Use '1 over' when the larger power is the denominator (bottom).

Examples

$\frac{h^{\cancel{9}\,5}}{\cancel{h^4}} = h^5$ $\qquad \frac{\cancel{h^3}}{h^{\cancel{7}\,4}} = \frac{1}{h^4}$

1 $\frac{n^3}{n^5} =$ $\qquad$ 2 $\frac{n^5}{n^3} =$

3 $\frac{a^7}{a^2} =$ $\qquad$ 4 $\frac{a^2}{a^7} =$

5 $\frac{x}{x^4} =$ $\qquad$ 6 $\frac{x^4}{x} =$

7 $\frac{y^5}{y^4} =$ $\qquad$ 8 $\frac{y^4}{y^5} =$

9 $\frac{b^2}{b^9} =$ $\qquad$ 10 $\frac{b^9}{b^2} =$

11 $\frac{c^5}{c^8} =$ $\qquad$ 12 $\frac{k^2}{k^7} =$

13 $\frac{p^9}{p^8} =$ $\qquad$ 14 $\frac{u}{u^2} =$

Two different bases now

Examples

$\frac{\cancel{b^2}\,\cancel{e^2}}{b^{\cancel{3}}\,e^{\cancel{4}\,2}} = \frac{1}{be^2}$ $\qquad \frac{b^{5\,4}\,\cancel{e^2}}{\cancel{be^3}} = b^4e^2$

15 $\frac{ab^9}{b^7} =$ $\qquad$ 16 $\frac{b^9}{ab^7} =$

17 $\frac{x^2y^9}{y^7} =$ $\qquad$ 18 $\frac{x^2y^9}{xy^7} =$

19 $\frac{a^2n^9}{a^2n^8} =$ $\qquad$ 20 $\frac{a^5n^3}{a^2n^9} =$

21 $\frac{bc}{b^2c} =$ $\qquad$ 22 $\frac{c^5b^2}{b^2c^3} =$

23 $\frac{s^4v}{v^2s^2} =$ $\qquad$ 24 $\frac{h^5t^9}{ht^8} =$

25 $\frac{xy^2}{x^2y} =$ $\qquad$ 26 $\frac{c^2f^2}{cf^7} =$

27 $\frac{a^4e}{e^2a^3} =$ $\qquad$ 28 $\frac{u^5v^9}{u^2v^3} =$

Simplify these fractions by dividing by the HCF, or use a calculator.

Examples

Divide both numbers by 5

$\frac{2}{4} = \frac{1}{2}$ $\qquad \frac{10}{15} = \frac{2}{3}$

Divide both numbers by 2

29 $\frac{4}{6} =$ $\qquad$ 30 $\frac{8}{10} =$

31 $\frac{6}{9} =$ $\qquad$ 32 $\frac{2}{8} =$

33 $\frac{10}{12} =$ $\qquad$ 34 $\frac{5}{10} =$

35 $\frac{9}{12} =$ $\qquad$ 36 $\frac{8}{12} =$

Simplify the improper fractions the result will be whole numbers.

Example $\frac{10}{5} = 2$

37 $\frac{10}{2} =$ $\qquad$ 38 $\frac{6}{3} =$

39 $\frac{12}{4} =$ $\qquad$ 40 $\frac{9}{3} =$

41 $\frac{15}{5} =$ $\qquad$ 42 $\frac{12}{3} =$

43 $\frac{8}{2} =$ $\qquad$ 44 $\frac{14}{7} =$

This time the fractions result remains an improper fraction. Simplify these.

Example

Divide both numbers by 5

$\frac{15}{10} = \frac{3}{2}$

or

Calc: 15 ■/□ 10 =

If your calculator says '1½' after trying the above, Press: Shift, Mode, Down arrow, 2.

45 $\frac{12}{8} =$ $\qquad$ 46 $\frac{8}{6} =$

47 $\frac{9}{6} =$ $\qquad$ 48 $\frac{15}{9} =$

Now its numbers and letters. Simplify these.

49 $\frac{6x^2}{x} =$ $\qquad$ 50 $\frac{x^2}{6x} =$

51 $\frac{x}{6x^2} =$ $\qquad$ 52 $\frac{3x}{6x^2} =$

53 $\frac{6x^2}{3x} =$ $\qquad$ 54 $\frac{6x^2}{3x^2} =$

55 $\frac{9x^2}{6x} =$ $\qquad$ 56 $\frac{9x}{6x^2} =$

Rewrite as fractions and then simplify.

Example

$5a \div 15a^2 = \frac{5a}{15a^2} = \frac{1}{3a}$

57 $2y \div 8y^2 =$ $\qquad =$

58 $8y^3 \div 6y =$ $\qquad =$

59 $9y^2 \div 12y^5 =$ $\qquad =$

Indices - Dividing Indices (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Rewrite in expanded form.

Example $5^4 = 5 \times 5 \times 5 \times 5$

1 $7^5 = 7 \times 7 \times 7 \times 7 \times 7$

2 $4^6 = 4 \times 4 \times 4 \times 4 \times 4 \times 4$

3 $3^4 = 3 \times 3 \times 3 \times 3$

4 $2^3 = 2 \times 2 \times 2$

Now algebraic indices - same process

5 $k^3 = k \times k \times k$

6 $b^4 = b \times b \times b \times b$

7 $m^5 = m \times m \times m \times m \times m$

8 $c^2 = c \times c$

Use expansion and cancellation to answer these in index form.

Example

$5^5 \div 5^2 = \dfrac{\cancel{5} \times \cancel{5} \times 5 \times 5 \times 5}{\cancel{5} \times \cancel{5}}$

Cancel bottom with top

$= 5 \times 5 \times 5 = 5^3$

9 $3^6 \div 3^3 = \dfrac{\cancel{3} \times \cancel{3} \times \cancel{3} \times 3 \times 3 \times 3}{\cancel{3} \times \cancel{3} \times \cancel{3}}$

$= 3 \times 3 \times 3 = 3^3$

10 $\dfrac{y^6}{y^2} = \dfrac{\cancel{y} \times \cancel{y} \times y \times y \times y \times y}{\cancel{y} \times \cancel{y}}$

$= y \times y \times y \times y = y^4$

11 $a^3 \div a = \dfrac{\cancel{a} \times a \times a}{\cancel{a}}$

$= a \times a = a^2$

Use expansion and cancellation to answer these, write a '1' on the top line when fully cancelled

Example

$5^2 \div 5^5 = \dfrac{\cancel{5} \times \cancel{5}^{\,1}}{\cancel{5} \times \cancel{5} \times 5 \times 5 \times 5}$

Cancel bottom with top

$= \dfrac{1}{5 \times 5 \times 5} = \dfrac{1}{5^3}$

12 $7^3 \div 7^5 = \dfrac{\cancel{7} \times \cancel{7} \times \cancel{7}}{\cancel{7} \times \cancel{7} \times \cancel{7} \times 7 \times 7}$

$= \dfrac{1}{7 \times 7} = \dfrac{1}{7^2}$

13 $k \div k^5 = \dfrac{\cancel{k}}{\cancel{k} \times k \times k \times k \times k}$

$= \dfrac{1}{k \times k \times k \times k} = \dfrac{1}{k^4}$

14 $\dfrac{n^2}{n^4} = \dfrac{\cancel{n} \times \cancel{n}}{\cancel{n} \times \cancel{n} \times n \times n}$

$= \dfrac{1}{n \times n} = \dfrac{1}{n^2}$

You can divide indices by subtracting the indexes. Divide these, bigger power - smaller

Example $5^7 \div 5^4 = 5^{7-4} = 5^3$

15 $3^5 \div 3^2 = 3^{5-2} = 3^3$

16 $4^9 \div 4^4 = 4^{9-4} = 4^5$

No power - it's like there is a '1' there

17 $8^6 \div 8 = 8^{6-1} = 8^5$

18 $\dfrac{3^5}{3} = 3^{5-1} = 3^4$

19 $6^8 \div 6 = 6^{8-1} = 6^7$

Now algebraic indices - same process

20 $x^3 \div x = x^{3-1} = x^2$

21 $\dfrac{n^7}{n^3} = n^{7-3} = n^4$

22 $b^8 \div b^6 = b^{8-6} = b^2$

23 $\dfrac{h^9}{h^4} = h^{9-4} = h^5$

These will require a '1' up top, as the denominator is larger. Bigger power - smaller power.

Example

$\dfrac{h^4}{h^9} = \dfrac{1}{h^{9-4}} = \dfrac{1}{h^5}$

24 $\dfrac{a^3}{a^7} = \dfrac{1}{a^{7-3}} = \dfrac{1}{a^4}$

25 $5^5 \div 5^7 = \dfrac{5^5}{5^7} = \dfrac{1}{5^{7-5}} = \dfrac{1}{5^2}$

26 $\dfrac{n}{n^6} = \dfrac{1}{n^{6-1}} = \dfrac{1}{n^5}$

27 $\dfrac{e^3}{e^6} = \dfrac{1}{e^{6-3}} = \dfrac{1}{e^3}$

28 $b^2 \div b^9 = \dfrac{b^2}{b^9} = \dfrac{1}{b^{9-2}} = \dfrac{1}{b^7}$

29 $\dfrac{q^4}{q^5} = \dfrac{1}{q^{5-4}} = \dfrac{1}{q}$

30 $c \div c^4 = \dfrac{c}{c^4} = \dfrac{1}{c^{4-1}} = \dfrac{1}{c^3}$

31 $\dfrac{y^6}{y^8} = \dfrac{1}{y^{8-6}} = \dfrac{1}{y^2}$

Indices - Dividing Indices (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these, larger power minus the smaller power. Use '1 over' when the larger power is the denominator (bottom).

Examples

$\frac{h^{9}}{h^{4}} = h^{5}$ $\qquad \frac{h^{3}}{h^{7}} = \frac{1}{h^{4}}$

1 $\frac{n^3}{n^5} = \frac{1}{n^2}$ $\qquad$ 2 $\frac{n^5}{n^3} = n^2$

3 $\frac{a^7}{a^2} = a^5$ $\qquad$ 4 $\frac{a^2}{a^7} = \frac{1}{a^5}$

5 $\frac{x}{x^4} = \frac{1}{x^3}$ $\qquad$ 6 $\frac{x^4}{x} = x^3$

7 $\frac{y^5}{y^4} = y$ $\qquad$ 8 $\frac{y^4}{y^5} = \frac{1}{y}$

9 $\frac{b^2}{b^9} = \frac{1}{b^7}$ $\qquad$ 10 $\frac{b^9}{b^2} = b^7$

11 $\frac{c^5}{c^8} = \frac{1}{c^3}$ $\qquad$ 12 $\frac{k^2}{k^7} = \frac{1}{k^5}$

13 $\frac{p^9}{p^8} = p$ $\qquad$ 14 $\frac{u}{u^2} = \frac{1}{u}$

Two different bases now

Examples

$\frac{b^{2}e^{2}}{b^{3}e^{2}} = \frac{1}{be^2}$ $\qquad \frac{b^{4}e^{2}}{b^{3}} = b^4e^2$

15 $\frac{ab^9}{b^7} = ab^2$ $\qquad$ 16 $\frac{b^9}{ab^7} = \frac{b^2}{a}$

17 $\frac{x^2y^9}{y^7} = x^2y^2$ $\qquad$ 18 $\frac{x^2y^9}{xy^7} = xy^2$

19 $\frac{a^2n^9}{a^2n^8} = n$ $\qquad$ 20 $\frac{a^5n^3}{a^2n^9} = \frac{a^2}{n^6}$

21 $\frac{bc}{b^2c} = \frac{1}{b}$ $\qquad$ 22 $\frac{c^5b^2}{b^2c^3} = c^2$

23 $\frac{s^4v}{v^2s^2} = \frac{s^2}{v}$ $\qquad$ 24 $\frac{h^5t^9}{ht^8} = h^4t$

25 $\frac{xy^2}{x^2y} = \frac{y}{x}$ $\qquad$ 26 $\frac{c^2f^2}{cf^7} = \frac{c}{f^5}$

27 $\frac{a^4e}{e^2a^3} = \frac{a}{e}$ $\qquad$ 28 $\frac{u^5v^9}{u^2v^3} = u^3v^6$

Simplify these fractions by dividing by the HCF, or use a calculator.

Examples

Divide both numbers by 5

$\frac{10}{15} = \frac{2}{3}$

$\frac{2}{4} = \frac{1}{2}$

Divide both numbers by 2

29 $\frac{4}{6} = \frac{2}{3}$ $\qquad$ 30 $\frac{8}{10} = \frac{4}{5}$

31 $\frac{6}{9} = \frac{2}{3}$ $\qquad$ 32 $\frac{2}{8} = \frac{1}{4}$

33 $\frac{10}{12} = \frac{5}{6}$ $\qquad$ 34 $\frac{5}{10} = \frac{1}{2}$

35 $\frac{9}{12} = \frac{3}{4}$ $\qquad$ 36 $\frac{8}{12} = \frac{2}{3}$

Simplify the improper fractions the result will be whole numbers.

Example $\frac{10}{5} = 2$

37 $\frac{10}{2} = 5$ $\qquad$ 38 $\frac{6}{3} = 2$

39 $\frac{12}{4} = 3$ $\qquad$ 40 $\frac{9}{3} = 3$

41 $\frac{15}{5} = 3$ $\qquad$ 42 $\frac{12}{3} = 4$

43 $\frac{8}{2} = 4$ $\qquad$ 44 $\frac{14}{7} = 2$

This time the fractions result remains an improper fraction. Simplify these.

Example

Divide both numbers by 5

$\frac{15}{10} = \frac{3}{2}$

or

Calc: 15 ▪/□ 10 =

If your calculator says '1½' after trying the above, Press: Shift, Mode, Down arrow, 2.

45 $\frac{12}{8} = \frac{3}{2}$ $\qquad$ 46 $\frac{8}{6} = \frac{4}{3}$

47 $\frac{9}{6} = \frac{3}{2}$ $\qquad$ 48 $\frac{15}{9} = \frac{5}{3}$

Now its numbers and letters. Simplify these.

49 $\frac{6x^2}{x} = 6x$ $\qquad$ 50 $\frac{x^2}{6x} = \frac{x}{6}$

51 $\frac{x}{6x^2} = \frac{1}{6x}$ $\qquad$ 52 $\frac{3x}{6x^2} = \frac{1}{2x}$

53 $\frac{6x^2}{3x} = 2x$ $\qquad$ 54 $\frac{6x^2}{3x^2} = 2$

55 $\frac{9x^2}{6x} = \frac{3x}{2}$ $\qquad$ 56 $\frac{9x}{6x^2} = \frac{3}{2x}$

Rewrite as fractions and then simplify.

Example

$5a \div 15a^2 = \frac{5a}{15a^2} = \frac{1}{3a}$

57 $2y \div 8y^2 = \frac{2y}{8y^2} = \frac{1}{4y}$

58 $8y^3 \div 6y = \frac{8y^3}{6y} = \frac{4y^2}{3}$

59 $9y^2 \div 12y^5 = \frac{9y^2}{12y^5} = \frac{3}{4y^3}$

14 $\frac{2y}{6y^3} = \frac{1}{3y^2}$

15 $\frac{6y^3}{2y^3} = 3$

16 $\frac{6y^4}{2y^3} = 3y$

Indices - Further Multiplying and Dividing

This sheet is a more difficult sheet as it combines multiplication and division together. The process is to complete the multiplications first, then complete the division.

Examples: Simplify these:

a) $\dfrac{c^4b \times b^2}{c^2 \times b} = \dfrac{c^4b^3}{c^2b} = c^2b^2$

b) $\dfrac{a^2e \times a^2}{ae^2 \times a^2e^5} = \dfrac{a^4e}{a^3e^7} = \dfrac{a}{e^6}$

The last two columns involve coefficients. These can't be simplified in the 2nd column, but in the first column they can be.

Examples: Simplify these:

Column 2 - No simplifying of coefficients.

a) $\dfrac{2c^4b \times 3b^2}{5c^2 \times b} = \dfrac{6c^4b^3}{5c^2b} = \dfrac{6c^2b^2}{5}$

Column 3 - Simplifying of coefficients.

a) $\dfrac{2c^4b \times 3b^2}{4c^2 \times b} = \dfrac{6c^4b^3}{4c^2b} = \dfrac{3c^2b^2}{2}$

Indices - Further Multiplying and Dividing

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these by multiplying first and then dividing.

Example $\dfrac{v^4 \times v^3}{v^6 \times v} = \dfrac{v^{12}}{v^7} = v^5$

1 $\dfrac{a^5 \times a^4}{a^6} = \dfrac{\quad}{\quad} = \quad$

2 $\dfrac{n^3}{n^7 \times n^2} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

3 $\dfrac{g^5}{g^2 \times g^4} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

4 $\dfrac{p^5}{p^3 \times p^4} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

5 $\dfrac{d^3 \times d^5}{d \times d^4} = \dfrac{\quad}{\quad} = \quad$

6 $\dfrac{c^5 \times c^4}{c^3 \times c^2} = \dfrac{\quad}{\quad} = \quad$

7 $\dfrac{ab \times b^2}{a^2 \times a^3} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

8 $\dfrac{mx^5 \times m^2}{m^4 \times xm} =$ _____

9 $\dfrac{xy^5 \times y^2}{x^4 \times x^2 y} =$ _____

10 $\dfrac{cn^3 \times cn^2}{c^2 \times cn^2} =$ _____

11 $\dfrac{ac^3 \times a^2}{a^3 c^4 \times c^2} =$ _____

12 $\dfrac{w^2 n^5 \times w^2}{nw \times w^3} =$ _____

13 $\dfrac{k^2 y \times y^2 k^4}{y^3 \times y^2 k^4} =$ _____

14 $\dfrac{q^3 n^2 \times n^4}{qn^6 \times n^4 q^3} =$ _____

15 $\dfrac{b^2 d^3 \times b^2 d}{bd^2 \times b^2 d^2} =$ _____

16 $\dfrac{s^2 u^5 \times u^3 s^2}{s^4 u^3} =$ _____

These feature coefficients. Simplify these.

Example

$\dfrac{v^4 x^5 \times 5v^3}{4vx^3 \times 3xv} = \dfrac{5v^7 x^5}{12v^2 x^4} = \dfrac{5v^5 x}{12}$

17 $\dfrac{3h^2 c \times 3h^4}{2h^3 \times c^3} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

18 $\dfrac{5a^2 y^2 \times 2y^4}{7y^4 \times a^3} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

19 $\dfrac{2j^2 k \times 4k^2}{3j^4} =$ _____ $=$ _____

20 $\dfrac{5m^2 e^3 \times m^2}{2m^4 \times e^4 m} =$ _____ $=$ _____

These feature coefficients which can be simplified. Simplify these.

Examples

a) $\dfrac{3v^4 x^5 \times v^3}{2vx^3 \times 6xv} = \dfrac{3v^7 x^5}{12v^2 x^4} = \dfrac{v^5 x}{4}$

b) $\dfrac{3a^2 b^3 \times 4a^3}{2a^3 \times ab} = \dfrac{12a^5 b^3}{2a^4 b} = 6ab^2$

21 $\dfrac{3ve^3 \times 5e}{2e^3 v^5} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

22 $\dfrac{2n^2 w \times 6n^4}{3n^3} = \dfrac{\quad}{\quad} = \quad$

23 $\dfrac{2x^2 y^3 \times 5y^4}{10x \times 2y^3} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

24 $\dfrac{6h^2 q \times 3q^2}{2hq^4 \times h^2 q^2} =$ _____ $=$ _____

25 $\dfrac{5y^2 x^5 \times 4y^2}{y^4 x^3 \times 10x^2} =$ _____ $=$ _____

Indices - Further Multiplying and Dividing

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these by multiplying first and then dividing.

Example $\dfrac{v^4 \times v^3}{v^6 \times v} = \dfrac{v^{12}}{v^7} = v^5$

1 $\dfrac{a^5 \times a^4}{a^6} = \dfrac{a^9}{a^6} = a^3$

2 $\dfrac{n^3}{n^7 \times n^2} = \dfrac{n^3}{n^9} = \dfrac{1}{n^6}$

3 $\dfrac{g^5}{g^2 \times g^4} = \dfrac{g^5}{g^6} = \dfrac{1}{g}$

4 $\dfrac{p^5}{p^3 \times p^4} = \dfrac{p^5}{p^7} = \dfrac{1}{p^2}$

5 $\dfrac{d^3 \times d^5}{d \times d^4} = \dfrac{d^8}{d^5} = d^3$

6 $\dfrac{c^5 \times c^4}{c^3 \times c^2} = \dfrac{c^9}{c^5} = c^5$

7 $\dfrac{ab \times b^2}{a^2 \times a^3} = \dfrac{ab^3}{a^5} = \dfrac{b^3}{a^4}$

8 $\dfrac{mx^5 \times m^2}{m^4 \times xm} = \dfrac{m^3x^5}{m^5x} = \dfrac{x^4}{m^2}$

9 $\dfrac{xy^5 \times y^2}{x^4 \times x^2y} = \dfrac{xy^7}{x^6y} = \dfrac{x^4}{m^2}$

10 $\dfrac{cn^3 \times cn^2}{c^2 \times cn^2} = \dfrac{c^2n^5}{c^3n^2} = \dfrac{n^3}{c}$

11 $\dfrac{ac^3 \times a^2}{a^3c^4 \times c^2} = \dfrac{a^3c^3}{a^3c^6} = \dfrac{1}{c^3}$

12 $\dfrac{w^2n^5 \times w^2}{nw \times w^3} = \dfrac{w^4n^5}{w^4n} = n^4$

13 $\dfrac{k^2y \times y^2k^4}{y^3 \times y^2k^4} = \dfrac{k^6y^3}{k^4y^5} = \dfrac{k^2}{y^2}$

14 $\dfrac{q^3n^2 \times n^4}{qn^6 \times n^4q^3} = \dfrac{q^3n^6}{q^4n^{10}} = \dfrac{1}{qn^4}$

15 $\dfrac{b^2d^3 \times b^2d}{bd^2 \times b^2d^2} = \dfrac{b^4d^4}{b^3d^4} = b$

16 $\dfrac{s^2u^5 \times u^3s^2}{s^4u^3} = \dfrac{s^4u^8}{s^4u^3} = u^5$

These feature coefficients. Simplify these.

Example $\dfrac{v^4x^5 \times 5v^3}{4vx^3 \times 3xv} = \dfrac{5v^7x^5}{12v^2x^4} = \dfrac{5v^5x}{12}$

17 $\dfrac{3h^2c \times 3h^4}{2h^3 \times c^3} = \dfrac{9h^6c}{2h^3c^3} = \dfrac{9h^3}{2c^2}$

18 $\dfrac{5a^2y^2 \times 2y^4}{7y^4 \times a^3} = \dfrac{10a^2y^4}{7a^3y^4} = \dfrac{10}{7a}$

19 $\dfrac{2j^2k \times 4k^2}{3j^4} = \dfrac{8j^2k^3}{3j^4} = \dfrac{8k^3}{3j^2}$

20 $\dfrac{5m^2e^3 \times m^2}{2m^4 \times e^4m} = \dfrac{5m^4e^3}{2m^5e^4} = \dfrac{5}{2me}$

These feature coefficients which can be simplified. Simplify these.

Examples

a) $\dfrac{3v^4x^5 \times v^3}{2vx^3 \times 6xv} = \dfrac{3v^7x^5}{12v^2x^4} = \dfrac{v^5x}{4}$

b) $\dfrac{3a^2b^3 \times 4a^3}{2a^3 \times ab} = \dfrac{12a^5b^3}{2a^4b} = 6ab^2$

21 $\dfrac{3ve^3 \times 5e}{2e^3v^5} = \dfrac{15ve^4}{2v^5e^3} = \dfrac{15e}{2v^4}$

22 $\dfrac{2n^2w \times 6n^4}{3n^3} = \dfrac{12n^6w}{3n^3} = 4n^3w$

23 $\dfrac{2x^2y^3 \times 5y^4}{10x \times 2y^3} = \dfrac{10x^2y^7}{20xy^3} = \dfrac{xy^4}{2}$

24 $\dfrac{6h^2q \times 3q^2}{2hq^4 \times h^2q^2} = \dfrac{18h^2q^3}{2h^3q^6} = \dfrac{9}{hq^3}$

25 $\dfrac{5y^2x^5 \times 4y^2}{y^4x^3 \times 10x^2} = \dfrac{20y^4x^5}{10y^4x^5} = 2$

9 $\dfrac{4uy^5 \times 2u^2y}{2yu^2 \times y^3u} = \dfrac{8u^3y^6}{2u^3y^4} = 4y^2$

Indices - Brackets and Indices

When an indice is inside brackets and is raised to a power, it can be expanded to find the solution.

Example Write $(2^5)^3$ without the brackets.

$$(2^5)^3 = 2^5 \times 2^5 \times 2^5 = 2^{15}$$

Example Write $(x^4)^2$ without the brackets.

$$(x^4)^2 = x^4 \times x^4 = x^8$$

This sheet starts with asking you to write expressions in expanded form and then solve them, just like the examples above. Then the rule below is used, where you multiply the powers.

Rule: When you expand bracketed indices, you multiply the powers.

$$(a^m)^n = a^{m \times n}$$

Here are is an example, applying the above rule:

Example Expand and simplify $(x^5)^2$.

$$(x^5)^2 = x^{5\times 2} = x^{10}$$

The bracketed term may include a coefficient as well. A coefficient is a number in front of the algebraic base. When there is a coefficient, the power outside the brackets is applied to the coefficient, you just slide it across.

Example Expand and simplify $(3x^5)^2$.

$$(3x^5)^2 = 3^2x^{5\times 2} = 9x^{10}$$

Indices - Brackets and Indices (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these by expanding first, then adding powers. Leave your answer in index form.

Example $(5^4)^3 = 5^4 \times 5^4 \times 5^4 = 5^{12}$ (4 + 4 + 4 = 12)

1 $(7^3)^2 =$ ☐ × ☐ = ☐

2 $(3^5)^3 =$ ☐ × ☐ × ☐

= ☐

3 $(9^5)^4 =$ ☐ × ☐ × ☐ × ☐

= ☐

Now letters - same process

4 $(y^2)^4 =$ ☐ × ☐ × ☐ × ☐

= ☐

5 $(x^6)^5 =$

=

6 $(k^3)^3 =$

=

Brackets means you multiply the indexes. Simplify these. Leave answer in index form.

$(m^6)^4 = m^{6 \times 4} = m^{24}$

7 $(8^3)^4 =$ ☐^☐×☐ = ☐^☐

8 $(4^3)^5 =$ ☐^☐×☐ = ☐^☐

9 $(y^2)^3 =$ ☐^☐×☐ = ☐^☐

10 $(x^5)^3 =$

11 $(n^8)^2 =$

12 $(k^6)^5 =$

Simplify these. Leave your answer in index form.

13 $(8^2)^3 =$

14 $(5^4)^2 =$

15 $(y^7)^2 =$

16 $(k^3)^2 =$

17 $(m^3)^2 =$

18 $(a^6)^3 =$

19 $(10^4)^3 =$

20 $(h^5)^5 =$

Use your power key to evaluate these.

Example $5^4 = 625$ Calc: 5 $x^{\blacksquare}$ 4 =

21 $2^4 =$

22 $3^6 =$

23 $8^4 =$

24 $2^8 =$

25 $4^5 =$

26 $10^2 =$

27 $10^4 =$

28 $10^3 =$

Simplify these by expanding first, then multiplying. Use your calculator to calculate the numbers with powers.

Example $(2x^4)^3 = 2x^4 \times 2x^4 \times 2x^4 = 2^3x^{12} = 8x^{12}$

29 $(3h^5)^2 =$ ☐ × ☐ = $3^{\square} h^{\square}$ = ☐

Indices - Brackets and Indices (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these by expanding first, then adding powers. Leave your answer in index form.

Example $(5^4)^3 = 5^4 \times 5^4 \times 5^4 = 5^{12}$ (4 + 4 + 4 = 12)

1 $(7^3)^2 = 7^3 \times 7^3 = 7^6$

2 $(3^5)^3 = 3^5 \times 3^5 \times 3^5 = 3^{15}$

3 $(9^5)^4 = 9^5 \times 9^5 \times 9^5 \times 9^5 = 9^{20}$

Now letters - same process

4 $(y^2)^4 = y^2 \times y^2 \times y^2 \times y^2 = y^8$

5 $(x^6)^5 = x^6 \times x^6 \times x^6 \times x^6 \times x^6 = x^{30}$

6 $(k^3)^3 = k^3 \times k^3 \times k^3 = k^9$

Brackets means you multiply the indexes. Simplify these. Leave answer in index form.

$(m^6)^4 = m^{6\times4} = m^{24}$

7 $(8^3)^4 = 8^{3\times4} = 8^{12}$

8 $(4^3)^5 = 4^{3\times5} = 4^{15}$

9 $(y^2)^3 = y^{2\times3} = y^6$

10 $(x^5)^3 = x^{5\times3} = x^{15}$

11 $(n^8)^2 = n^{8\times2} = n^{16}$

12 $(k^6)^5 = k^{6\times5} = k^{30}$

Simplify these. Leave your answer in index form.

13 $(8^2)^3 = 8^6$

14 $(5^4)^2 = 5^8$

15 $(y^7)^2 = y^{14}$

16 $(k^3)^2 = k^6$

17 $(m^3)^2 = m^6$

18 $(a^6)^3 = a^{18}$

19 $(10^4)^3 = 10^{12}$

20 $(h^5)^5 = h^{25}$

Use your power key to evaluate these.

Example $5^4 = 625$ Calc: 5 $x^{\blacksquare}$ 4 =

21 $2^4 = 16$

22 $3^6 = 729$

23 $8^4 = 4\,096$

24 $2^8 = 256$

25 $4^5 = 1\,024$

26 $10^2 = 100$

27 $10^4 = 10\,000$

28 $10^3 = 1\,000$

Simplify these by expanding first, then multiplying. Use your calculator to calculate the numbers with powers.

Example $(2x^4)^3 = 2x^4 \times 2x^4 \times 2x^4 = 2^3x^{12} = 8x^{12}$

29 $(3h^5)^2 = 3h^5 \times 3h^5 = 3^2 h^{10} = 9h^{10}$

30 $(5a^7)^3 = 5a^7 \times 5a^7 \times 5a^7 = 5^3 a^{21} = 125a^{21}$

31 $(2n^6)^4 = 2n^6 \times 2n^6 \times 2n^6 \times 2n^6 = 2^4 n^{24} = 16n^{24}$

32 $(3k^4)^3 = 3k^4 \times 3k^4 \times 3k^4 = 3^3k^{12} = 27k^{12}$

33 $(4c^5)^4 = 4c^5 \times 4c^5 \times 4c^5 \times 4c^5 = 4^4c^{20} = 256c^{20}$

Slide the power outside the brackets onto the number inside and multiply the two indexes for the power on the letter.

Example $(2x^4)^3 = 2^3x^{12} = 8x^{12}$

34 $(3e^2)^3 = 3^3 e^6 = 27e^6$

35 $(5n^4)^2 = 5^2 n^8 = 25n^8$

36 $(2c^5)^4 = 2^4 c^{20} = 16c^{20}$

$$\frac{(n^2a^3)^2}{(n^3a^2)^3} = \frac{n^4a^6}{n^9a^6} = \frac{1}{n^5}$$

31

$$\frac{(yx^4)^3}{(y^2x^2)^2} = \frac{y^3x^{12}}{y^4x^4} = \frac{x^8}{y}$$

32

$$\frac{(v^5c^4)^2}{(v^3c^2)^3} = \frac{v^{10}c^8}{v^6c^6} = v^4c^2$$

Now multiplication

Example $(x^2b)^3 \times (x^4b^2)^2$

$= x^6b^3 \times x^8b^4$ Expand

$= x^{14}b^7$ Simplify

33 $(x^3y^2)^4 \times (xy^5)^2$

$= x^{12}y^8 \times x^2y^{10} = x^{14}y^{18}$

34 $(b^2k)^3 \times (b^2k^2)^4$

$= b^6k^3 \times b^8k^8 = b^{14}k^{11}$

35 $(u^6v^3)^2 \times (uv^2)^3$

$= u^{12}v^6 \times u^3v^6 = u^{15}v^{12}$

36 $(a^2h^3)^5 \times (2h^2)^2$

$= a^{10}h^{15} \times 4h^4 = 4a^{10}h^{19}$

Indices - The Zero Index

When a number or a term (letter) is raised to a power of zero, the answer is 1. Note that this doesn't apply to zero itself, the answer for 0^0 is undefined.

Rule: When you raise a number or letter to the power of 0. the answer is 1.

$$a^0 = 1 \qquad a \neq 0$$

Here are some examples of this rule.

Example Evaluate x^0.

$$x^0 = 1$$

Example Evaluate 2^0.

$$2^0 = 1$$

Example Evaluate $(2x)^0$.

$$(2x)^0 = 1$$

Here are some examples where working out can be shown.

Example Evaluate $2x^0$.

$$2x^0 = 2 \times 1$$
$$= 2$$

Example Evaluate $(2^3)^0$.

$$(2n^0)^4 = (2 \times 1)^4$$
$$= 2^4 = 16$$

Example Evaluate $2x^0 + 8$.

$$2x^0 + 8 = 2 \times 1 + 8$$
$$= 10$$

The first sheet starts with showing you how to see how a power of zero can equal 1. After this questions involving the zero index begin. Remember the questions are best solved by replacing everything with a zero power to the number '1'. You can strike out the term and write '1' above it if that makes it easier to work with.

Indices - The Zero Index (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator to find these values.

Example $5^3 = 125$

Calc: 5 x■ 3 =

1 $7^3 =$ ____ 2 $7^2 =$ ____

3 $7^1 =$ ____ 4 $7^0 =$ ____

5 $9^3 =$ ____ 6 $9^2 =$ ____

7 $9^1 =$ ____ 8 $9^0 =$ ____

9 $4^3 =$ ____ 10 $4^2 =$ ____

11 $4^1 =$ ____ 12 $4^0 =$ ____

13 Look at Q.4, Q.8 and Q.12

The answers were all ____

Now use your calculator to complete these divisions.

14 $7^4 \div 1 =$ ____

Calc: 7 x■ 4 ▶ ÷ 1 =

15 $7^4 \div 7^0 =$ ____

compare

$\therefore 7^0 =$ ____

16 $10^3 \div 1 =$ ____

17 $10^3 \div 10^0 =$ ____

compare

$\therefore 10^0 =$ ____

Now use your division skills with index laws. No calculator

18 $3^5 \div 3^0 =$ $3^{\square - \square} = 3^{\square}$

19 $5^7 \div 5^0 =$ $\square^{\square - \square} = \square^{\square}$

When you divide a number (not 0) by '1', the number is also the answer.

$\therefore 3^0 = 5^0 =$ ____

Answer these divisions in index form, then as numbers.

Example

Index Form: $7^4 \div 7^4 = 7^0$ Number: $= 1$

20 $5^2 \div 5^2 =$ $\square^{\square} =$ ____

21 $4^8 \div 4^8 =$ ____ = ____

22 $\frac{10^3}{10^3} =$ ____ = ____

23 $14^5 \div 14^5 =$ ____ = ____

24 $\frac{9^{11}}{9^{11}} =$ ____ = ____

Algebra is answered the same way.

25 $x^7 \div x^7 =$ $\square^{\square} =$ ____

26 $\frac{m^4}{m^4} =$ ____ = ____

27 $y^8 \div y^8 =$ ____ = ____

28 $\frac{n^{13}}{n^{13}} =$ ____ = ____

Multiply these answering in index form, then as numbers.

Example

Index Form: $5^3 \times 5^0 = 5^3$ Number: $= 125$

Calc: 5 x■ 3 =

29 $4^6 \times 4^0 =$ $\square^{\square} =$ ____

30 $2^9 \times 2^0 =$ ____ = ____

31 $3^7 \times 3^0 =$ ____ = ____

Algebra same, but leave in index form

32 $v^7 \times v^0 =$ $\square^{\square}$

33 $k^9 \times k^0 =$ ____

34 $n^3 \times n^0 =$ ____

Remember with brackets you multiply the powers. Expand these.

Example

Index Form: $(7^3)^0 = 7^0$ Number: $= 1$

35 $(5^6)^0 =$ $\square^{\square} =$ ____

36 $(2^4)^0 =$ ____ = ____

37 $(3^0)^6 =$ ____ = ____

38 $(x^0)^6 =$ ____ = ____

39 $(a^0)^3 =$ ____ = ____

40 $(q^5)^0 =$ ____ = ____

These have co-efficient and so are a little harder.

Example

$x^0 = 1$

$(3x^0)^3 = (3\times1)^3$

$= (3)^3$

Calc: 3 x■ 3 =

$= 27$

41 $(5n^0)^4 = (\square \times \square)^4$

$= \square^4 =$ ____

42 $(8p^0)^3 = (\square \times \square)^3$

$= \square^3 =$ ____

43 $(2h^0)^9 = (\square \times \square)^9$

$= \square^9 =$ ____

When the '0' is outside, answer is 1

44 $(2h^3)^0 =$ ____

45 $(8k^5)^0 =$ ____

46 $(a^2b^5c^3)^0 =$ ____

Use your calculator to find these values.

Example $5^3 = 125$

Calc: 5 x■ 3 =

1 $7^3 = 343$ 2 $7^2 = 49$

3 $7^1 = 7$ 4 $7^0 = 1$

5 $9^3 = 729$ 6 $9^2 = 81$

7 $9^1 = 9$ 8 $9^0 = 1$

9 $4^3 = 64$ 10 $4^2 = 16$

11 $4^1 = 4$ 12 $4^0 = 1$

13 Look at Q.4, Q.8 and Q.12

The answers were all 1

Now use your calculator to complete these divisions.

14 $7^4 \div 1 =$ 2 401

Calc: 7 x■ 4 ◯ ÷ 1 =

15 $7^4 \div 7^0 =$ 2 401

compare

$\therefore 7^0 =$ 1

16 $10^3 \div 1 =$ 1 000

17 $10^3 \div 10^0 =$ 1 000

compare

$\therefore 10^0 =$ 1

Now use your division skills with index laws. No calculator

18 $3^5 \div 3^0 = 3^{5-0} = 3^5$

19 $5^7 \div 5^0 = 5^{7-0} = 5^7$

When you divide a number (not 0) by '1', the number is also the answer.

$\therefore 3^0 = 5^0 =$ 1

Answer these divisions in index form, then as numbers.

Example $7^4 \div 7^4 = 7^0 = 1$ (Index Form, Number)

20 $5^2 \div 5^2 = 5^0 = 1$

21 $4^8 \div 4^8 = 4^0 = 1$

22 $\frac{10^3}{10^3} = 10^0 = 1$

23 $14^5 \div 14^5 = 14^0 = 1$

24 $\frac{9^{11}}{9^{11}} = 9^0 = 1$

Algebra is answered the same way.

25 $x^7 \div x^7 = x^0 = 1$

26 $\frac{m^4}{m^4} = m^0 = 1$

27 $y^8 \div y^8 = y^0 = 1$

28 $\frac{n^{13}}{n^{13}} = n^0 = 1$

Multiply these answering in index form, then as numbers.

Example $5^3 \times 5^0 = 5^3 = 125$ (Index Form, Number)

Calc: 5 x■ 3 =

29 $4^6 \times 4^0 = 4^6 = 4\,096$

30 $2^9 \times 2^0 = 2^9 = 512$

31 $3^7 \times 3^0 = 3^7 = 2\,187$

Algebra same, but leave in index form

32 $v^7 \times v^0 = v^7$

33 $k^9 \times k^0 = k^9$

34 $n^3 \times n^0 = n^3$

Remember with brackets you multiply the powers. Expand these.

Example $(7^3)^0 = 7^0 = 1$ (Index Form, Number)

35 $(5^6)^0 = 5^0 = 1$

36 $(2^4)^0 = 2^0 = 1$

37 $(3^0)^6 = 3^0 = 1$

38 $(x^0)^6 = x^0 = 1$

39 $(a^0)^3 = a^0 = 1$

40 $(q^5)^0 = q^0 = 1$

These have co-efficient and so are a little harder.

Example $x^0 = 1$

$(3x^0)^3 = (3\times1)^3$

$= (3)^3$

Calc: 3 x■ 3 = $= 27$

41 $(5n^0)^4 = (5 \times 1)^4$

$= 5^4 = 625$

42 $(8p^0)^3 = (8 \times 1)^3$

$= 8^3 = 512$

43 $(2h^0)^9 = (2 \times 1)^9$

$= 2^9 = 512$

When the '0' is outside, answer is 1

44 $(2h^3)^0 = 1$

45 $(8k^5)^0 = 1$

46 $(a^2b^5c^3)^0 = 1$

Indices - The Zero Index (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Date Due:

Use your calculator for these

1 $2^5 =$ 32

2 $3^4 =$ 81

3 $9^0 =$ 1

4 $7^0 =$ 1

Simplify, index form first then number

5 $5^3 \times 5^0 =$ $5^{3} =$ 125

Add powers — Calculator

6 $3^5 \times 3^0 =$ $3^{5} =$ 243

Anything to power of 0 is '1'. Simplify

7 $x^5 \times x^0 =$ x^{5}

8 $n^2 \times n^0 =$ n^{2}

9 $k^8 \times k^0 =$ k^{8}

Add powers when you multiply indices

Anything to power of 0 is '1'. Simplify

10 $\frac{10^5}{10^5} =$ $10^{0} =$ 1

Minus powers

11 $\frac{8^8}{8^8} =$ $8^{0} =$ 1

12 $\frac{3^{12}}{3^{12}} =$ $3^{0} =$ 1

Indices - Substitution

Substitution means that you swap the letters in an algebraic expression or formula, for numbers. Because this topic is indices, these substitutions all have powers in the expressions.

Some examples of this.

Example Evaluate $2x^2$ when $x = 6$.

$2x^2 = 2 \times 6^2$ ← Replace the x with 6. Note that there is a $\times$. When numbers/letters are beside each other then they are multiplied.

$= 72$ ← Use your calculator to solve.

Example Evaluate $2y^3 - 8y$, when $y = 4$.

$2y^3 - 8y = 2 \times 4^3 - 8 \times 4$

$= 96$

Example Evaluate $2y^3 - 8y$, when $y = -6$.

$2y^3 - 8y = 2 \times (-6)^3 - 8 \times (-6)$

$= -384$

When you have a negative number to substitute, always put the number in brackets.

Example Evaluate $ay^3 - a^2y$, when a = 3 and $y = 4$.

$ay^3 - a^2y = 3 \times 4^3 - 3^2 \times 4$

$= 156$

You can also have two numbers to substitute

The second page of these worksheets is the plotting of an indice. These are to the power of 2, and the curve they make is called a parabola. Notice what a negative sign and a number in front of the x^2 term does.

Indices - Substitution (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator to evaluate these when $a = 5$.

Example $a^3 = 5^3 = 125$

Calc: 5 x^3 =

1 $a^4 =$ 5 ^{4} = ____

2 $2a^3 =$ ____ × ____ $^{\square}$ = ____

3 $3a^3 + 7 =$ ____ × ____ $^{\square}$ + ____

= ____

4 $3a^2 + 7a =$ ____

= ____

Evaluate these using $n = 8$.

5 $n^3 - 10 =$ ____ = ____

6 $4n^2 - n =$ ____

= ____

7 $-n^2 =$ ____ = ____ Calc: - 8 x^2 =

8 $(-n)^2 =$ ____ = ____

Calc: (- 8) x^2 =

Evaluate these using $y = -3$. Make sure you use brackets.

9 $y^2 - 12 =$ ____ = ____

Calc: (- 3) x^2 - 1 2 =

10 $20 - y^3 =$ ____ = ____

11 $3y^4 =$ ____ = ____

12 $4y^2 + 3y =$ ____

= ____

13 $4y^2 \times 3y =$ ____

= ____

Evaluate these using $a = 4$ and $x = 3$.

14 $ax^2 =$ ____ × ____ $^{\square}$ = ____

15 $a^2 + x^2 =$ ____ $^{\square}$ + ____ $^{\square}$ = ____

16 $a^2 - x^2 =$ ____ $^{\square}$ - ____ $^{\square}$ = ____

17 $ax^2 + ax =$ ____

= ____

18 $20x^2 \div a^2 =$ ____

= ____

* 19 $\dfrac{20x^5}{ax} =$ ____ / ____ = ____

∗ Brackets required

A table of values is often used to construct a graph. Complete these tables.

20 $b = a^2 + 2$

a	0	1	2	3	4	5
b						

Calc: 1 x^2 + 2 =

Calc: 0 x^2 + 2 =

21 $y = 2x^2 + 5$

x	0	1	2	3	4	5
y						

22 $y = -3x^2 - 7$

x	0	1	2	3	4	5
y						

A frequent use of substitution is using a formula, such as with science. Substitute the values into the formulae to solve these questions.

The surface area of a cube is found using $SA = 6l^2$. Find the SA:

23 When $l = 15$.

$SA = 6l^2$

$= 6 \times$ ____ ^{2}

$SA =$ ____ u^2

24 When $l = 30$.

25 When $l = 8$.

Power loss in a wire is found using $P = I^2R$. Find the loss, when:

26 $I = 2$ and $R = 0.5$

$P = I^2R$

$=$ ____ $^2 \times$ ____

$P =$ ____ W

27 $I = 10$ and $R = 6$.

28 $I = 8$ and $R = 3$.

Kinetic Energy is found using $KE = \frac{1}{2}mv^2$. Find the energy, when:

29 $m = 80$, $v = 15$.

$KE = \frac{1}{2}mv^2$

$= \frac{1}{2} \times$ ____ $\times$ ____ ^{2}

$KE =$ ____ J

30 $m = 65$, $v = 18$.

31 $m = 90$, $v = 25$.

Indices - Substitution (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Complete the tables and then plot the points on the number plane below them.

1 $y = x^2 - 4$ ○

x	-4	-3	-2	-1	0	1	2	3	4
y	12								

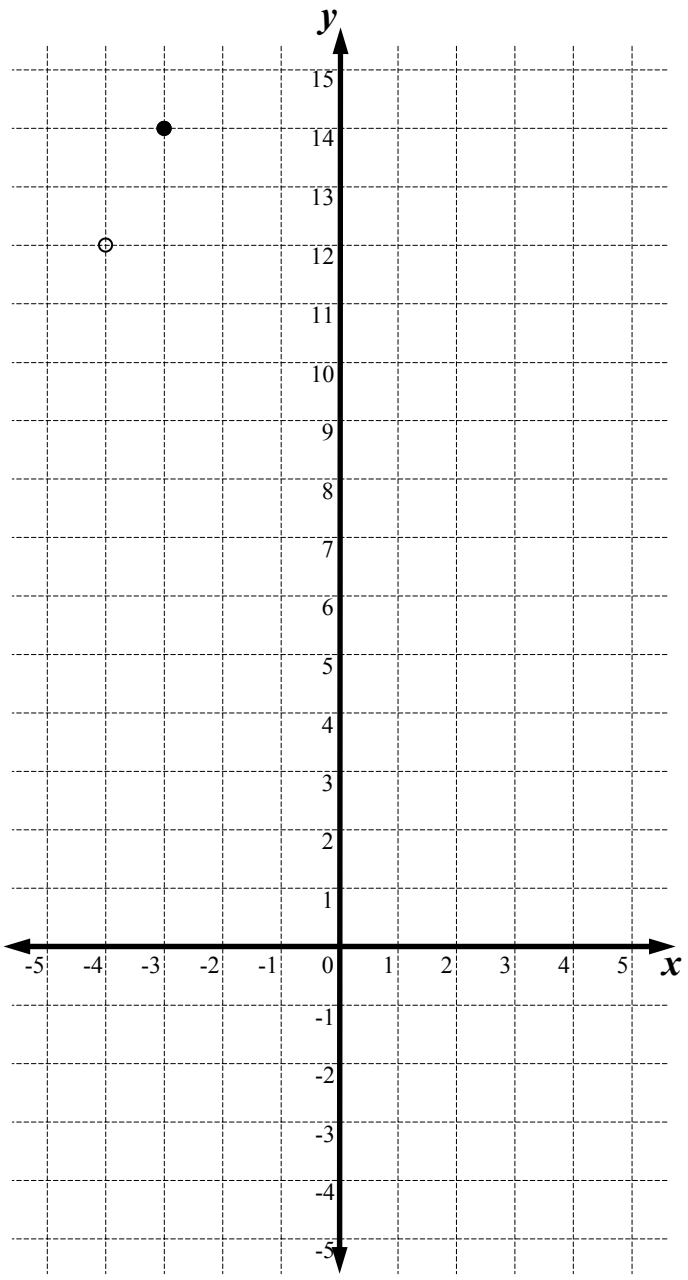
Calc: (- 4) x^2 - 4 =

Use the replay key to change '-4' to '-3' and so on.

2 $y = 2x^2 - 4$ ●

x	-3	-2	-1	0	1	2	3
y	14						

Calc: 2 × (- 3) x^2 - 4 =



3 $y = -x^2 + 6$ ○

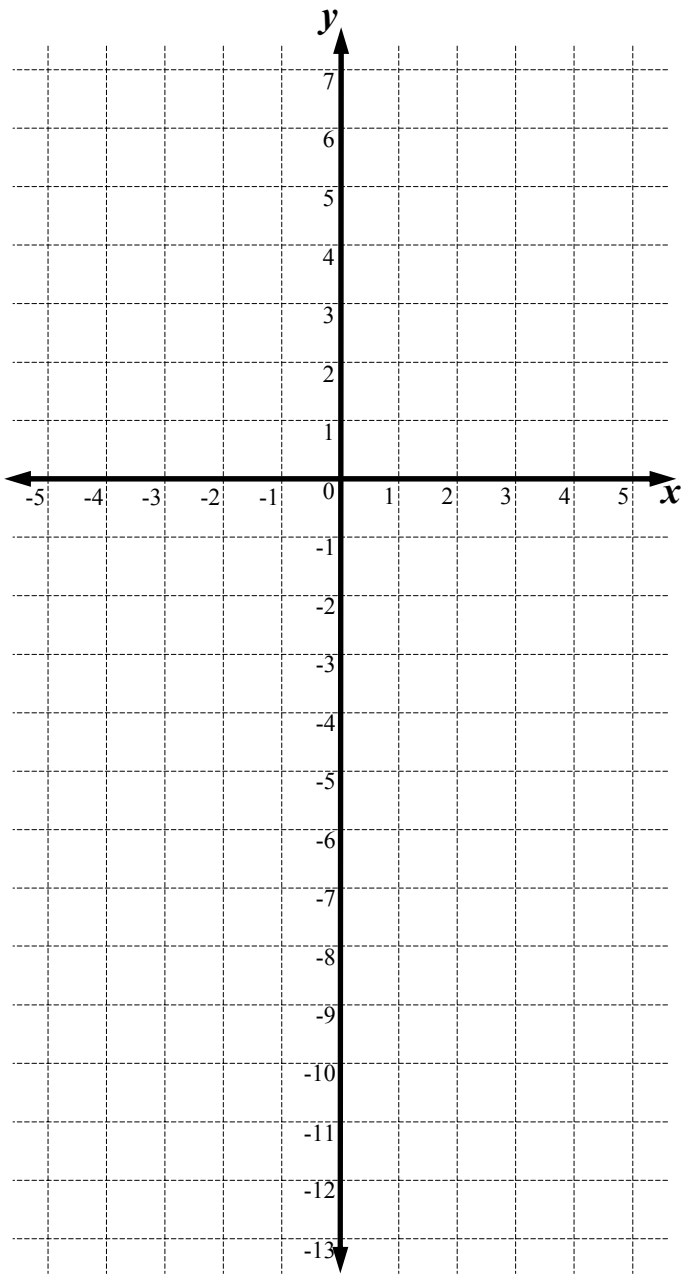
x	-4	-3	-2	-1	0	1	2	3	4
y	-10								

Calc: - (- 4) x^2 + 6 =

4 $y = -2x^2 + 6$ ●

x	-3	-2	-1	0	1	2	3
y	-12						

Calc: - 2 × (- 3) x^2 + 6 =



Indices - Substitution (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator to evaluate these when $a = 5$.

Example $a^3 = 5^3 = 125$

Calc: 5 x^3 =

1 $a^4 = 5^4 = 625$

2 $2a^3 = 2 \times 5^3 = 250$

3 $3a^3 + 7 = 3 \times 5^3 + 7$

$= 382$

4 $3a^2 + 7a = 3 \times 5^2 + 7 \times 5$

$= 110$

Evaluate these using $n = 8$.

5 $n^3 - 10 = 8^3 - 10 = 502$

6 $4n^2 - n = 4 \times 8^2 - 8$

$= 248$

7 $-n^2 = -8^2 = -64$ Calc: - 8 x^2 =

8 $(-n)^2 = (-8)^2 = 64$

Calc: (- 8) x^2 =

Evaluate these using $y = -3$. Make sure you use brackets.

9 $y^2 - 12 = (-3)^2 - 12 = -3$

Calc: (- 3) x^2 - 1 2 =

10 $20 - y^3 = 20 - (-3)^2 = 47$

11 $3y^4 = 3 \times (-3)^4 = 243$

12 $4y^2 + 3y = 4 \times (-3)^2 + 3 \times (-3)$

$= 27$

13 $4y^2 \times 3y = 4 \times (-3)^2 \times 3 \times (-3)$

$= -324$

Evaluate these using $a = 4$ and $x = 3$.

14 $ax^2 = 4 \times 3^2 = 36$

15 $a^2 + x^2 = 4^2 + 3^2 = 25$

16 $a^2 - x^2 = 4^2 - 3^2 = 7$

17 $ax^2 + ax = 4 \times 3^2 + 4 \times 3$

$= 48$

18 $20x^2 \div a^2 = 20 \times 3^2 \div 4^2$

$= 11.25$

* 19 $\dfrac{20x^5}{ax} = \dfrac{20 \times 3^5}{4 \times 3} = 405$

* Brackets required

A table of values is often used to construct a graph. Complete these tables.

20 $b = a^2 + 2$

a	0	1	2	3	4	5
b	2	3	6	11	18	27

Calc: 1 x^2 + 2 =

Calc: 0 x^2 + 2 =

21 $y = 2x^2 + 5$

x	0	1	2	3	4	5
y	5	7	13	23	37	55

22 $y = -3x^2 - 7$

x	0	1	2	3	4	5
y	-7	-10	-19	-34	-55	-82

A frequent use of substitution is using a formula, such as with science. Substitute the values into the formulae to solve these questions.

The surface area of a cube is found using $SA = 6l^2$. Find the SA:

23 When $l = 15$.

$SA = 6l^2$

$= 6 \times 15^2$

$SA = 1\,350\ u^2$

24 When $l = 30$.

$SA = 6l^2$

$= 6 \times 30^2$

$SA = 5\,400\ u^2$

25 When $l = 8$.

$SA = 6l^2$

$= 6 \times 8^2$

$SA = 384\ u^2$

Power loss in a wire is found using $P = I^2R$. Find the loss, when:

26 $I = 2$ and $R = 0.5$

$P = I^2R$

$= 2^2 \times 0.5$

$P = 2$ W

27 $I = 10$ and $R = 6$.

$P = I^2R$

$= 10^2 \times 6$

$P = 600$ W

28 $I = 8$ and $R = 3$.

$P = I^2R$

$= 8^2 \times 3$

$P = 192$ W

Kinetic Energy is found using $KE = \frac{1}{2}mv^2$. Find the energy, when:

29 $m = 80$, $v = 15$.

$KE = \frac{1}{2}mv^2$

$= \frac{1}{2} \times 80 \times 15^2$

$KE = 9\,000$ J

30 $m = 65$, $v = 18$.

$KE = \frac{1}{2}mv^2$

$= \frac{1}{2} \times 65 \times 18^2$

$KE = 10\,530$ J

31 $m = 90$, $v = 25$.

$KE = \frac{1}{2}mv^2$

$= \frac{1}{2} \times 90 \times 25^2$

$KE = 28\,125$ J

$= 1\,008$

Indices - Find A Word

Look for words in the list at the bottom of the grid. Once you find a word cross it off the list.

A letter could be used more than once so don’t colour it in too dark (using a texta for example) so that you can still read it.

Indices - Find a Word

Indices Review

This a review of the Indices topic.

Indices - Topic Review

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your power key to evaluate these indices.

1 $8^4 =$ _____

2 $2^9 =$ _____

3 $5^{-1} =$ _____ Decimal

4 $9^0 =$ _____

Write these indices in expanded form

5 $e^3 =$ _____

6 $5^4 =$ _____

7 $n^6 =$ _____

Write the indice that has a:

8 Base 'a' and an index of '5'
$=$ _____

9 Index of '4' and a base 'm'
$=$ _____

10 Index of '0' and a base '5'
$=$ _____

Multiply these indices

11 $c^2 \times c^3 =$ _____

12 $a \times a^5 =$ _____

13 $b^4 \times b^2 =$ _____

14 $2^7 \times 2^5 =$ _____ Leave as indice

15 $n^5 \times n \times n^2 =$ _____

16 $5 \times 5^3 \times 5^2 =$ _____ Leave as indice

17 $k^5 \times k \times k^3 =$ _____

18 $e^3 \times e^0 \times e^2 =$ _____

19 $n \times n^0 \times n =$ _____

Multiply these indices

20 $ae \times a =$ _____

21 $xy^2 \times x^2 =$ _____

22 $n^3p^2 \times n^4p^2 =$ _____

23 $a^3b^2c \times a^2c =$ _____

21 $w^3n^3e^2 \times w^4ne^5 =$ _____

These include coefficients. Multiply.

22 $6n^2 \times n =$ _____

22 $3a^3 \times a^3 =$ _____

22 $t \times 9t^5 =$ _____

22 $d^2 \times 7d^2 =$ _____

23 $b^2 \times 4c^2b =$ _____

24 $3ab \times ba^2 =$ _____

25 $y^2 \times 7a^3y =$ _____

26 $2p^3d^2 \times 3p =$ _____

27 $4yu^2 \times 2u =$ _____

28 $6h^7v^4 \times 5h^2 =$ _____

29 $5ac^2 \times 2ac =$ _____

30 $2u^3v^2 \times 6uv^4 =$ _____

31 $4e^4k \times 3e^2k^3 =$ _____

Divide these indices.

32 $u^4 \div u^2 =$ _____

33 $a^5 \div a =$ _____

34 $7^5 \div 7^2 =$ _____ Leave as indice

35 $\frac{p^9}{p^2} =$ _____

36 $\frac{u^5}{u^2} =$ _____

These require '1 over' answers.

37 $\frac{n^2}{n^4} =$ _____

38 $\frac{v^4}{v^5} =$ _____

39 $\frac{a}{a^5} =$ _____

40 $\frac{g^3}{g^6} =$ _____

41 $\frac{n^2}{2n^5} =$ _____

42 $\frac{c^5}{5c^5} =$ _____

These divisions can be simplified.

43 $\frac{4x^2}{2x^5} =$ _____

44 $\frac{3e^4}{9e} =$ _____

45 $\frac{6x}{8x} =$ _____

46 $\frac{5u^5}{10u^3} =$ _____

47 $\frac{6y^7}{4y^2} =$ _____

48 $\frac{6n^4}{2n} =$ _____

Multiply first then divide.

49 $\frac{a^2 \times a^3}{a} = \frac{\square}{\square} =$ _____

50 $\frac{h^4 \times h}{h^7} = \frac{\square}{\square} =$ _____

51 $\frac{k^3 \times k^2}{k \times k^4} = \frac{\square}{\square} =$ _____

52 $\frac{3a^2 \times a}{a^3 \times 4a^3} = \frac{\square}{\square} =$ _____

53 $\frac{4g^3 \times g^4}{g \times 2g^2} = \frac{\square}{\square} =$ _____

54 $\frac{2n \times 3n^5}{6n^3 \times n^3} = \frac{\square}{\square} =$ _____

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these.

55 $(d^4)^2 =$ ____ 56 $(x^2)^6 =$ ____

57 $(g^3)^5 =$ ____ 58 $(h^2)^6 =$ ____

59 $(2n^3)^2 =$ ____

60 $(3k^5)^2 =$ ____

Simplify these. Calculator required.

61 $(5m^3)^4 =$ ____

62 $(2d)^9 =$ ____

63 $(8a^6)^3 =$ ____

Simplify these.

64 $(xv^3)^4 =$ ____

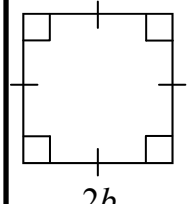
65 $(q^2w^3)^3 =$ ____

66 $(3gk^3)^3 =$ ____

67 $(2e^5c^3)^5 =$ ____

Find the area of these.

68

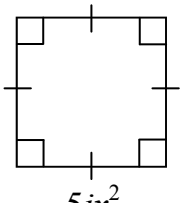


$A = l^2$

$= \square^2$

$A = \square$ units^2

69



Simplify these.

70 $(m^3)^4 \times (m^2)^3 = \square \times \square$

$=$ ____

71 $(ac^2)^5 \times (a^3c^2)^4$

$= \square \times \square$

$=$ ____

72 $(2x^3y^2)^3 \times (3xy^2)^2$

$= \square \times \square$

$=$ ____

Simplify these.

73 $\dfrac{(e^5k^4)^2}{(e^2k)^3} = \dfrac{\square}{\square} =$ ____

74 $\dfrac{(a^3n^4)^3}{(a^5n)^2} = \dfrac{\square}{\square} =$ ____

Simplify these, involving zero index.

75 $\dfrac{a^3}{a^3} = \square = \square$

76 $h^5 \div h^5 = \square = \square$

77 $\dfrac{v^{11}}{v^{11}} = \square = \square$

78 $b^3 \times b^0 = \square$

79 $y^5 \times y^0 = \square$

80 $(b^0)^3 = \square = \square$

81 $(v^0)^4 = \square = \square$

82 $(q^2)^0 = \square = \square$

83 $(2c^4)^0 = \square$

84 $(2a^0k^2)^2 = \square$

Evaluate these.

85 $2v^0 = \square \times \square = \square$

86 $h^0 + 7 = \square + \square = \square$

87 $2a^0 + 3 =$ ____

88 $3q^0 + 5 =$ ____

Evaluate, given $a = 6$.

89 $a^{\square} = \square$

90 $a^3 + 8 =$ ____

91 $3a^3 \div 12 =$ ____

$=$ ____

92 $5a^4 + 7a^2 =$ ____

____

Evaluate, given $x = 2$ and $y = -3$.

93 $x^2y =$ ____

94 $xy^2 =$ ____

95 $a^7 + 7y =$ ____

$=$ ____

Complete the tables.

96 $y = x^2 + 5$

x	0	1	2	3	4	5
y						

97 $y = 2x^2 - 10$

Indices - Topic Review

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your power key to evaluate these indices.

1 $8^4 = 4\,096$ 2 $2^9 = 512$

3 $5^{-1} = 0.2$ Decimal 4 $9^0 = 1$

Write these indices in expanded form

5 $e^3 = e \times e \times e$

6 $5^4 = 5 \times 5 \times 5 \times 5$

7 $n^6 = n \times n \times n \times n \times n \times n$

Write the indice that has a:

8 Base 'a' and an index of '5' $= a^5$

9 Index of '4' and a base 'm' $= m^4$

10 Index of '0' and a base '5' $= 5^0$

Multiply these indices

11 $c^2 \times c^3 = c^5$

12 $a \times a^5 = a^6$

13 $b^4 \times b^2 = b^6$

14 $2^7 \times 2^5 = 2^{12}$ Leave as indice

15 $n^5 \times n \times n^2 = n^8$

16 $5 \times 5^3 \times 5^2 = 5^6$ Leave as indice

17 $k^5 \times k \times k^3 = k^9$

18 $e^3 \times e^0 \times e^2 = e^5$

19 $n \times n^0 \times n = n^2$

Multiply these indices

20 $ae \times a = a^2e$

21 $xy^2 \times x^2 = x^3y^2$

22 $n^3p^2 \times n^4p^2 = n^7p^4$

23 $a^3b^2c \times a^2c = a^5b^2c^2$

21 $w^3n^3e^2 \times w^4ne^5 = w^7n^4e^7$

These include coefficients. Multiply.

22 $6n^2 \times n = 6n^3$

22 $3a^3 \times a^3 = 3a^6$

22 $t \times 9t^5 = 9t^6$

22 $d^2 \times 7d^2 = 7d^4$

23 $b^2 \times 4c^2b = 4b^3c^2$

24 $3ab \times ba^2 = 3a^3b^2$

25 $y^2 \times 7a^3y = 7a^3y^3$

26 $2p^3d^2 \times 3p = 6p^4d^2$

27 $4yu^2 \times 2u = 8u^3y$

28 $6h^7v^4 \times 5h^2 = 30h^9v^4$

29 $5ac^2 \times 2ac = 10a^2c^3$

30 $2u^3v^2 \times 6uv^4 = 12u^4v^6$

31 $4e^4k \times 3e^2k^3 = 12e^6k^4$

Divide these indices.

32 $u^4 \div u^2 = u^2$

33 $a^5 \div a = a^4$

34 $7^5 \div 7^2 = 7^3$ Leave as indice

35 $\frac{p^9}{p^2} = p^7$ 36 $\frac{u^5}{u^2} = u^3$

These require '1 over' answers.

37 $\frac{n^2}{n^4} = \frac{1}{n^2}$ 38 $\frac{v^4}{v^5} = \frac{1}{v}$

39 $\frac{a}{a^5} = \frac{1}{a^4}$ 40 $\frac{g^3}{g^6} = \frac{1}{g^3}$

41 $\frac{n^2}{2n^5} = \frac{1}{2n^3}$ 42 $\frac{c^5}{5c^5} = \frac{1}{5}$

These divisions can be simplified.

43 $\frac{4x^2}{2x^5} = \frac{2}{x^3}$ 44 $\frac{3e^4}{9e} = \frac{e^3}{3}$

45 $\frac{6x}{8x} = \frac{3}{4}$ 46 $\frac{5u^5}{10u^3} = \frac{u^2}{2}$

47 $\frac{6y^7}{4y^2} = \frac{3y^5}{2}$ 48 $\frac{6n^4}{2n} = 3n^3$

Multiply first then divide.

49 $\frac{a^2 \times a^3}{a} = \frac{a^5}{a} = a^4$

50 $\frac{h^4 \times h}{h^7} = \frac{h^5}{h^7} = \frac{1}{h^2}$

51 $\frac{k^3 \times k^2}{k \times k^4} = \frac{k^5}{k^5} = k^0 = 0$

52 $\frac{3a^2 \times a}{a^3 \times 4a^3} = \frac{3a^3}{4a^6} = \frac{3}{4a^3}$

53 $\frac{4g^3 \times g^4}{g \times 2g^2} = \frac{4g^7}{2g^3} = 2g^4$

54 $\frac{2n \times 3n^5}{6n^3 \times n^3} = \frac{6n^6}{6n^6} = 1$

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these.

55 $(d^4)^2 = d^8$ 56 $(x^2)^6 = x^{12}$

57 $(g^3)^5 = g^{15}$ 58 $(h^2)^6 = h^{12}$

59 $(2n^3)^2 = 4n^6$

60 $(3k^5)^2 = 9k^{10}$

Simplify these. Calculator required.

61 $(5m^3)^4 = 625m^{12}$

62 $(2d)^9 = 512d^9$

63 $(8a^6)^3 = 512a^{18}$

Simplify these.

64 $(xv^3)^4 = xv^{12}$

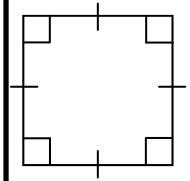
65 $(q^2w^3)^3 = q^6w^9$

66 $(3gk^3)^3 = 27g^3k^9$

67 $(2e^5c^3)^5 = 32e^{25}c^{15}$

Find the area of these.

68



$A = l^2$

$= (2b)^2$

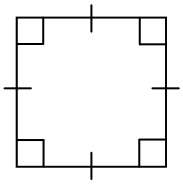
$A = 4b^2$ units^2

69

$A = l^2$

$= (5jx^2)^2$

$A = 25j^2x^4$ units^2



Simplify these.

70 $(m^3)^4 \times (m^2)^3 = m^{12} \times m^6$

$= m^{18}$

71 $(ac^2)^5 \times (a^3c^2)^4$

$= a^5c^{10} \times a^{12}c^8$

$= a^{17}c^{18}$

72 $(2x^3y^2)^3 \times (3xy^2)^2$

$= 8x^9y^6 \times 9x^2y^4$

$= 72x^{11}y^{10}$

Simplify these.

73 $\dfrac{(e^5k^4)^2}{(e^2k)^3} = \dfrac{e^{10}k^8}{e^6k^3} = e^4k^5$

74 $\dfrac{(a^3n^4)^3}{(a^5n)^2} = \dfrac{a^9n^{12}}{a^{10}n^2} = \dfrac{n^{10}}{a}$

Simplify these, involving zero index.

75 $\dfrac{a^3}{a^3} = a^0 = 1$

76 $h^5 \div h^5 = h^0 = 1$

77 $\dfrac{v^{11}}{v^{11}} = v^0 = 1$

78 $b^3 \times b^0 = b^3$

79 $y^5 \times y^0 = y^5$

80 $(b^0)^3 = b^0 = 1$

81 $(v^0)^4 = v^0 = 1$

82 $(q^2)^0 = q^0 = 1$

83 $(2c^4)^0 = 1$

84 $(2a^0k^2)^2 = 4k^4$

Evaluate these.

85 $2v^0 = 2 \times 1 = 2$

86 $h^0 + 7 = 1 + 7 = 8$

87 $2a^0 + 3 = 2 \times 1 + 3 = 5$

88 $3q^0 + 5 = 3 \times 1 + 5 = 8$

Evaluate, given $a = 6$.

89 $a^2 = 6^2 = 36$

90 $a^3 + 8 = 6^3 + 8 = 224$

91 $3a^3 \div 12 = 3 \times 6^3 \div 12$

$= 54$

92 $5a^4 + 7a^2 = 5 \times 6^4 + 7 \times 6^2$

$= 6\,732$

Evaluate, given $x = 2$ and $y = -3$.

93 $x^2y = 2^2 \times (-3) = -12$

94 $xy^2 = 2 \times (-3)^2 = 18$

95 $a^7 + 7y = 2^7 + 7 \times (-3)$

$= 107$

Complete the tables.

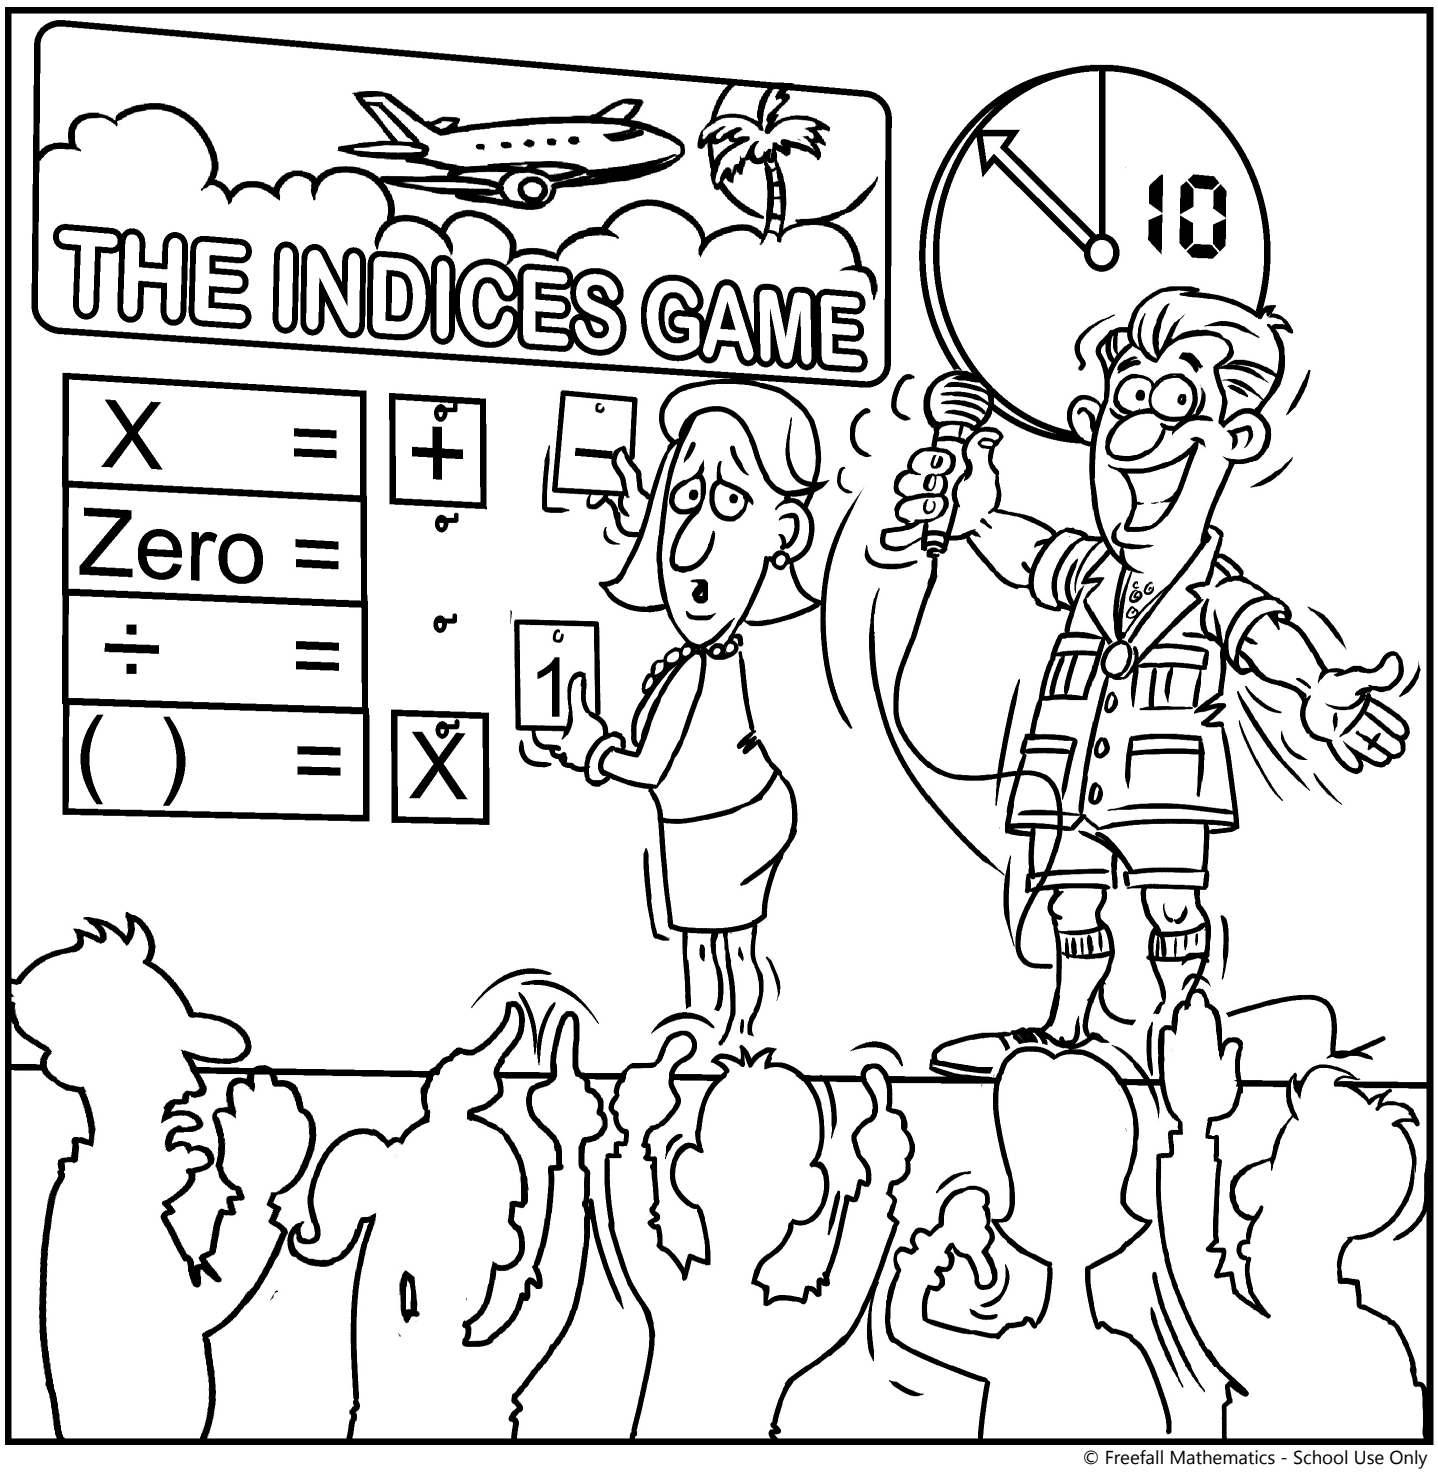
96 $y = x^2 + 5$

x	0	1	2	3	4	5
y	5	6	9	14	21	30

97 $y = 2x^2 - 10$

x	0	1	2	3	4	5
y	-10	-8	-2	8	22	40

Indices



© Freefall Mathematics - School Use Only

Indices - Power Key Applications (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your power key to evaluate (find the value for) these.

Example $5^4 = 625$

Calc: 5 $x^{\blacksquare}$ 4 =

1 $3^3 =$ ____ 2 $2^5 =$ ____

3 $5^2 =$ ____ 4 $7^3 =$ ____

5 $4^4 =$ ____ 6 $3^5 =$ ____

7 $9^5 =$ ____

8 $15^4 =$ ____

9 $10^1 =$ ____ 10 $10^2 =$ ____

11 $10^3 =$ ____

12 $10^4 =$ ____

13 $10^5 =$ ____

14 $10^6 =$ ____

15 $1^1 =$ ____ 16 $1^2 =$ ____

17 $1^3 =$ ____ 18 $1^4 =$ ____

Name the base and the index in these.

Example 5^4 — 5 (Base), 4 (Index)

Base is the larger number out front

Index is the small number (the power)

19 6^7 Base ____ Index ____

20 9^8 Base ____ Index ____

21 7^6 Index ____ Base ____

22 13^5 Index ____ Base ____

Given the base and index, write the indices and evaluate.

Example Base 9, index 4.

$9^4 = 6\,561$

23 Base 4, index 6.

____ = ____

Calc: 4 $x^{\blacksquare}$ 6 =

24 Base 2, index 8.

____ = ____

25 Index 4, base 5.

____ = ____

26 Base 9, index 4.

____ = ____

27 Index 5, base 10.

____ = ____

Use guess, check and revise to find the correct index for these.

28 $2^{\square} = 128$ 29 $3^{\square} = 27$

30 $7^{\square} = 823\,543$

31 $5^{\square} = 48\,828\,125$

32 $13^{\square} = 28\,561$

33 $10^{\square} = 10\,000\,000$

34 $20^{\square} = 8\,000$

35 $2^{\square} = 262\,144$

36 $3^{\square} = 177\,147$

Use guess, check and revise to find the correct base for these.

37 $\square^3 = 64$ 38 $\square^5 = 243$

39 $\square^7 = 128$ 40 $\square^3 = 729$

41 $\square^4 = 83\,521$

42 $\square^9 = 19\,683$

43 $\square^4 = 10\,000$

44 $\square^6 = 64\,000\,000$

45 $\square^3 = 1$ 46 $\square^8 = 1$

Blend the two skills by finding both the base and the index!

47 $2^{\square} = 256 = \square^4$

48 $9^{\square} = 531\,441 = \square^{12}$

49 $\square^4 = 4\,096 = 2^{\square}$

50 $\square^5 = 1\,048\,576 = 2^{\square}$

51 $4^{\square} = 16\,777\,216 = \square^6$

Use '<' or '>' to make these true. Hint: Point the '<' or '>' to the smallest number.

52 4^5 ____ 2^9

53 7^4 ____ 4^7

Indices - Power Key Applications (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your power key to evaluate these indices, answer these as a fraction.

Example $5^{-2} = \frac{1}{25}$

Calc: 5 $x^{\blacksquare}$ - 2 = S⇔D

1 $3^{-3} =$ ☐/☐ 2 $2^{-5} =$ ☐/☐

3 $5^{-3} =$ ☐/☐ 4 $4^{-4} =$ ☐/☐

5 $2^{-3} =$ ☐/☐ 6 $3^{-5} =$ ☐/☐

7 $10^{-3} =$ ☐/☐

8 $10^{-5} =$ ☐/☐

A negative power means '1 over', so rewrite as a fraction, then evaluate.

Rewrite as '1 over' Use your calculator

9 $2^{-4} = \frac{1}{2^4} =$ ☐/☐

Calc: 1 $\frac{\blacksquare}{\square}$ 2 $x^{\blacksquare}$ 4 =

10 $5^{-3} = \frac{1}{5^3} =$ ☐/☐

Calc: 1 $\frac{\blacksquare}{\square}$ 5 $x^{\blacksquare}$ 3 =

11 $3^{-3} = \frac{1}{\square} = \frac{1}{\square}$

12 $6^{-2} =$ ☐/☐ = ☐/☐

13 $10^{-3} =$ ☐/☐ = ☐/☐

14 $6^{-5} =$ ☐/☐ = ☐/☐

15 $2^{-8} =$ ☐/☐ = ☐/☐

16 $3^{-6} =$ ☐/☐ = ☐/☐

17 $4^{-5} =$ ☐/☐ = ☐/☐

Remove the fraction by writing these as negative indices. No calculator required!

Example $\frac{1}{2^5} = 2^{-5}$

18 $\frac{1}{2^3} =$ ☐☐

19 $\frac{1}{7^2} =$ ☐☐

20 $\frac{1}{5^8} =$ ☐☐

Use your power key to complete these tables.

21

Indice	3^5	3^4	3^3	3^2	3^1	3^0	3^{-1}	3^{-2}	3^{-3}	3^{-4}
Number/ Fraction	☐	☐	☐	☐	☐	☐	☐/☐	☐/☐	☐/☐	☐/☐

22 What is the value of 3^0 in the above table? ☐

23

Indice	5^5	5^4	5^3	5^2	5^1	5^0	5^{-1}	5^{-2}	5^{-3}
Number/ Fraction							☐/☐	☐/☐	☐/☐

24 What is the value of 5^0 in the above table? ☐

Use patterns for these tables. For the first table, use your calculator for 2^6, then divide by 2 each time. For the second table use your calculator for 10^4, then divide by 10 each time. Only use the power key once!

25

Indice	2^6	2^5	2^4	2^3	2^2	2^1	2^0	2^{-1}	2^{-2}	2^{-3}	2^{-4}
Number/ Fraction											

÷ 2 ÷ 2 and so on, using the pattern to complete the boxes

26 What is the value of 2^0 in the above table? ☐

27 What is the value of any number to the power of zero? ☐

28

Indice	10^4	10^3	10^2	10^1	10^0	10^{-1}	10^{-2}	10^{-3}
Number/ Fraction								

÷ 10 ÷ 10 and so on, using the pattern to complete

Indices - Multiplying Indices (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Rewrite in expanded form.

Example $5^4 = 5 \times 5 \times 5 \times 5$

1 $3^5 = \square \times \square \times \square \times \square \times \square$

2 $15^3 =$

3 $9^4 =$

4 $1^6 =$

Now algebraic indices - same process

5 $y^4 = \square \times \square \times \square \times \square$

6 $a^5 =$

7 $k^6 =$

8 $b^2 =$

Use expansion to answer these in index form. No calculator.

Example $5^2 \times 5^4 = \overbrace{5 \times 5}^{5^2} \times \overbrace{5 \times 5 \times 5 \times 5}^{5^4} = 5^6$

9 $7^2 \times 7^2 = \square \times \square \times \square \times \square$

$7^2 \times 7^2 = \square^{\square}$

10 $3^3 \times 3^2 =$

$3^3 \times 3^2 = \square^{\square}$

11 $4^2 \times 4^4 =$

$4^2 \times 4^4 = \square^{\square}$

Now algebraic indices - same process

12 $x^2 \times x^3 =$

$x^2 \times x^3 = \square^{\square}$

13 $a \times a^3 =$

$a \times a^3 = \square^{\square}$

You can multiply indices by adding the indexes. Multiply these, leave answer in index form

Example $5^2 \times 5^4 = 5^{2+4} = 5^6$

14 $7^4 \times 7^2 = \square^{\square+\square} = \square^{\square}$

15 $9^3 \times 9^5 = \square^{\square+\square} = \square^{\square}$

No power - it's like there is a '1' there

16 $4^6 \times 4 = \square^{\square+\square} = \square^{\square}$

17 $5 \times 5^2 = \square^{\square+\square} = \square^{\square}$

18 $7 \times 7 = \square^{\square+\square} = \square^{\square}$

19 $3^9 \times 3^7 = \square^{\square+\square} = \square^{\square}$

Now algebraic indices - same process

20 $x^3 \times x^3 = \square^{\square+\square} = \square^{\square}$

21 $n^5 \times n = \square^{\square+\square} = \square^{\square}$

22 $a \times a^3 = \square^{\square+\square} = \square^{\square}$

23 $h^8 \times h^4 = \square^{\square+\square} = \square^{\square}$

Forget the middle step, answer only. Triples are just the same.

24 $5^8 \times 5^4 = \square^{\square}$

25 $7^3 \times 7^9 = \square^{\square}$

26 $7^3 \times 7^9 \times 7^2 = \square^{\square}$

27 $3 \times 3^6 \times 3^3 = \square^{\square}$

28 $e^4 \times e^3 \times e^5 = \square^{\square}$

29 $k \times k^5 \times k = \square^{\square}$

30 $h^2 \times h \times h^7 = \square^{\square}$

We now have unlike terms. At last, maths questions that have two correct answers! Simplify.

Example $a^2 \times b^2 \times a^4 \times b = a^6b^3$ *or* b^3a^6

31 $a^6 \times b =$ ____ *or* ____

32 $c^4 \times b^5 =$ ____ *or* ____

33 $k^9 \times t^3 =$ ____ *or* ____

Just one answer from now on

34 $x^3 \times a^5 \times x^2 \times a =$

35 $y^2 \times c^3 \times y^4 \times y^5 =$

36 $a^5 \times b^2 \times a \times b =$

37 $d \times d^2 \times c \times d^5 =$

Less '×' signs - but the same process

38 $bc \times b^2 =$ ____ *or* ____

39 $ay \times y^3 =$ ____ *or* ____

40 $g^3k \times k^3g^2 =$

41 $ab \times ab =$

42 $abc \times abc =$

43 $b^2ac^3 \times acb =$

44 $c^4a^2b^3 \times b^4c^3a^6 =$

45 $ab^3c \times a^2b \times ab^2 =$

Which of these is true?

46 $m^3 \times m^2 =$ ○ m^6 ○ m^5

47 $e^6 \times e =$ ○ e^6 ○ e^7 ○ e^0 ○ e

48 $a^2 \times a^5b =$ ○ $a^{10}b$ ○ a^7b^5 ○ a^2b^5 ○ a^7b

Indices - Multiplying Indices (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Coefficients are numbers in front of algebraic terms. Multiply the coefficients, but add the powers.

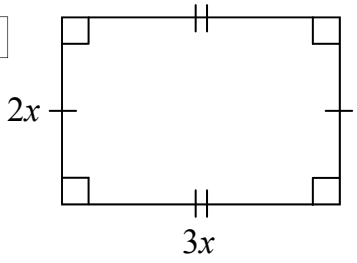
Example $2x \times 3x^2 = 6x^3$

Simplify these.

1. $2a^5 \times a^2 =$ _____
2. $c^2 \times 4c =$ _____
3. $a^3b^2 \times 3a^2 =$ _____
4. $5x^4y^2 \times xy =$ _____
5. $4n^3 \times 5n^2 =$ _____
6. $6j^7 \times 4j =$ _____
7. $2h^3 \times 9ah^2 =$ _____
8. $3s^2 \times 4sv^3 =$ _____
9. $2e^2h \times 8h^2e^4 =$ _____
10. $3x^2 \times 2x^3 \times 4y^2 =$ _____

The area of a rectangle is found by multiplying the two sides. Find the area of these.

11.

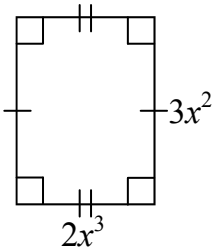


A = lb

= ____ × ____

A = ____ units^2

12.

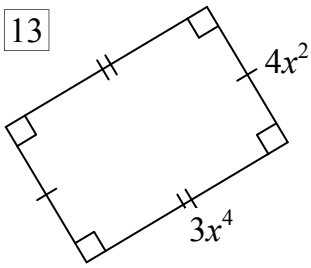


A = lb

= ____ × ____

A = ____ units^2

13.

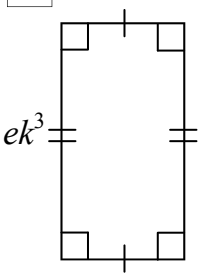


A = lb

= ____ × ____

A = ____ units^2

14.

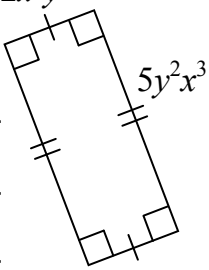


_____

_____

_____

15.



_____

_____

_____

When you square a term you multiply it by itself. Square these terms.

Example

$(3x)^2 = 3x \times 3x = 9x^2$

16. $(4y)^2 =$ ____ × ____ = ____
17. $(2a)^2 =$ ____ × ____ = ____
18. $(2a^2)^2 =$ ____ × ____ = ____
19. $(3a^3)^2 =$ ____ × ____ = ____
20. $(5a^2b)^2 =$ ____ × ____

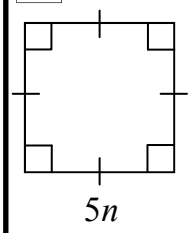
= ____

21. $(2x^3y^5)^2 =$ ____ × ____

= ____

The area of a square is found by squaring the sides. Find the area of these squares.

22.

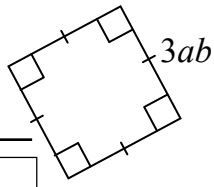


A = l^2

= ____ × ____

A = ____ units^2

23.



A = l^2

= ____ × ____

A = ____ units^2

Indices - Dividing Indices (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Rewrite in expanded form.

Example $5^4 = 5 \times 5 \times 5 \times 5$

1 $7^5 = \square \times \square \times \square \times \square \times \square$

2 $4^6 =$

3 $3^4 =$

4 $2^3 =$

Now algebraic indices - same process

5 $k^3 = \square \times \square \times \square$

6 $b^4 =$

7 $m^5 =$

8 $c^2 =$

Use expansion and cancellation to answer these in index form.

Example

$5^5 \div 5^2 = \dfrac{\cancel{5} \times \cancel{5} \times 5 \times 5 \times 5}{\cancel{5} \times \cancel{5}}$

Cancel bottom with top

$= 5 \times 5 \times 5 = 5^3$

9 $3^6 \div 3^3 =$

10 $\dfrac{y^6}{y^2} =$

11 $a^3 \div a =$

Use expansion and cancellation to answer these, write a '1' on the top line when fully cancelled

Example

$5^2 \div 5^5 = \dfrac{\cancel{5} \times \cancel{5}^{\,1}}{\cancel{5} \times \cancel{5} \times 5 \times 5 \times 5}$

Cancel bottom with top

$= \dfrac{1}{5 \times 5 \times 5} = \dfrac{1}{5^3}$

12 $7^3 \div 7^5 =$

13 $k \div k^5 =$

14 $\dfrac{n^2}{n^4} =$

You can divide indices by subtracting the indexes. Divide these, bigger power - smaller

Example $5^7 \div 5^4 = 5^{7-4} = 5^3$

15 $3^5 \div 3^2 = \square^{\square - \square} = \square^{\square}$

16 $4^9 \div 4^4 = \square^{\square - \square} = \square^{\square}$

No power - it's like there is a '1' there

17 $8^6 \div 8 = \square^{\square - \square} = \square^{\square}$

18 $\dfrac{3^5}{3} = \square^{\square - \square} = \square^{\square}$

19 $6^8 \div 6 = \square^{\square - \square} = \square^{\square}$

Now algebraic indices - same process

20 $x^3 \div x = \square^{\square - \square} = \square^{\square}$

21 $\dfrac{n^7}{n^3} = \square^{\square - \square} = \square^{\square}$

22 $b^8 \div b^6 = \square^{\square - \square} = \square^{\square}$

23 $\dfrac{h^9}{h^4} = \square^{\square - \square} = \square^{\square}$

These will require a '1' up top, as the denominator is larger. Bigger power - smaller power.

Example

$\dfrac{h^4}{h^9} = \dfrac{1}{h^{9-4}} = \dfrac{1}{h^5}$

24 $\dfrac{a^3}{a^7} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

25 $5^5 \div 5^7 = \dfrac{5^5}{5^7} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

26 $\dfrac{n}{n^6} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

27 $\dfrac{e^3}{e^6} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

28 $b^2 \div b^9 = \dfrac{b^2}{b^9} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

29 $\dfrac{q^4}{q^5} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

30 $c \div c^4 = \dfrac{c}{c^4} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

31 $\dfrac{y^6}{y^8} = \dfrac{\square}{\square^{\square - \square}} = \dfrac{\square}{\square}$

Indices - Dividing Indices (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these, larger power minus the smaller power. Use '1 over' when the larger power is the denominator (bottom).

Examples

$\frac{h^{\cancel{9}\,5}}{\cancel{h^4}} = h^5$ $\qquad \frac{\cancel{h^3}}{h^{\cancel{7}\,4}} = \frac{1}{h^4}$

1 $\frac{n^3}{n^5} =$ $\qquad$ 2 $\frac{n^5}{n^3} =$

3 $\frac{a^7}{a^2} =$ $\qquad$ 4 $\frac{a^2}{a^7} =$

5 $\frac{x}{x^4} =$ $\qquad$ 6 $\frac{x^4}{x} =$

7 $\frac{y^5}{y^4} =$ $\qquad$ 8 $\frac{y^4}{y^5} =$

9 $\frac{b^2}{b^9} =$ $\qquad$ 10 $\frac{b^9}{b^2} =$

11 $\frac{c^5}{c^8} =$ $\qquad$ 12 $\frac{k^2}{k^7} =$

13 $\frac{p^9}{p^8} =$ $\qquad$ 14 $\frac{u}{u^2} =$

Two different bases now

Examples

$\frac{\cancel{b^2}\,\cancel{e^2}}{b^{\cancel{3}}\,e^{\cancel{4}\,2}} = \frac{1}{be^2}$ $\qquad \frac{b^{5\,4}\,\cancel{e^2}}{\cancel{be^3}} = b^4e^2$

15 $\frac{ab^9}{b^7} =$ $\qquad$ 16 $\frac{b^9}{ab^7} =$

17 $\frac{x^2y^9}{y^7} =$ $\qquad$ 18 $\frac{x^2y^9}{xy^7} =$

19 $\frac{a^2n^9}{a^2n^8} =$ $\qquad$ 20 $\frac{a^5n^3}{a^2n^9} =$

21 $\frac{bc}{b^2c} =$ $\qquad$ 22 $\frac{c^5b^2}{b^2c^3} =$

23 $\frac{s^4v}{v^2s^2} =$ $\qquad$ 24 $\frac{h^5t^9}{ht^8} =$

25 $\frac{xy^2}{x^2y} =$ $\qquad$ 26 $\frac{c^2f^2}{cf^7} =$

27 $\frac{a^4e}{e^2a^3} =$ $\qquad$ 28 $\frac{u^5v^9}{u^2v^3} =$

Simplify these fractions by dividing by the HCF, or use a calculator.

Examples

Divide both numbers by 5

$\frac{2}{4} = \frac{1}{2}$ $\qquad \frac{10}{15} = \frac{2}{3}$

Divide both numbers by 2

29 $\frac{4}{6} =$ $\qquad$ 30 $\frac{8}{10} =$

31 $\frac{6}{9} =$ $\qquad$ 32 $\frac{2}{8} =$

33 $\frac{10}{12} =$ $\qquad$ 34 $\frac{5}{10} =$

35 $\frac{9}{12} =$ $\qquad$ 36 $\frac{8}{12} =$

Simplify the improper fractions the result will be whole numbers.

Example $\frac{10}{5} = 2$

37 $\frac{10}{2} =$ $\qquad$ 38 $\frac{6}{3} =$

39 $\frac{12}{4} =$ $\qquad$ 40 $\frac{9}{3} =$

41 $\frac{15}{5} =$ $\qquad$ 42 $\frac{12}{3} =$

43 $\frac{8}{2} =$ $\qquad$ 44 $\frac{14}{7} =$

This time the fractions result remains an improper fraction. Simplify these.

Example

Divide both numbers by 5

$\frac{15}{10} = \frac{3}{2}$

or

Calc: 15 ■/□ 10 =

If your calculator says '1½' after trying the above, Press: Shift, Mode, Down arrow, 2.

45 $\frac{12}{8} =$ $\qquad$ 46 $\frac{8}{6} =$

47 $\frac{9}{6} =$ $\qquad$ 48 $\frac{15}{9} =$

Now its numbers and letters. Simplify these.

49 $\frac{6x^2}{x} =$ $\qquad$ 50 $\frac{x^2}{6x} =$

51 $\frac{x}{6x^2} =$ $\qquad$ 52 $\frac{3x}{6x^2} =$

53 $\frac{6x^2}{3x} =$ $\qquad$ 54 $\frac{6x^2}{3x^2} =$

55 $\frac{9x^2}{6x} =$ $\qquad$ 56 $\frac{9x}{6x^2} =$

Rewrite as fractions and then simplify.

Example

$5a \div 15a^2 = \frac{5a}{15a^2} = \frac{1}{3a}$

57 $2y \div 8y^2 =$ $\qquad =$

58 $8y^3 \div 6y =$ $\qquad =$

59 $9y^2 \div 12y^5 =$ $\qquad =$

Indices - Further Multiplying and Dividing

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these by multiplying first and then dividing.

Example $\dfrac{v^4 \times v^3}{v^6 \times v} = \dfrac{v^{12}}{v^7} = v^5$

1 $\dfrac{a^5 \times a^4}{a^6} = \dfrac{\quad}{\quad} = \quad$

2 $\dfrac{n^3}{n^7 \times n^2} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

3 $\dfrac{g^5}{g^2 \times g^4} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

4 $\dfrac{p^5}{p^3 \times p^4} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

5 $\dfrac{d^3 \times d^5}{d \times d^4} = \dfrac{\quad}{\quad} = \quad$

6 $\dfrac{c^5 \times c^4}{c^3 \times c^2} = \dfrac{\quad}{\quad} = \quad$

7 $\dfrac{ab \times b^2}{a^2 \times a^3} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

8 $\dfrac{mx^5 \times m^2}{m^4 \times xm} =$ _____

9 $\dfrac{xy^5 \times y^2}{x^4 \times x^2 y} =$ _____

10 $\dfrac{cn^3 \times cn^2}{c^2 \times cn^2} =$ _____

11 $\dfrac{ac^3 \times a^2}{a^3 c^4 \times c^2} =$ _____

12 $\dfrac{w^2 n^5 \times w^2}{nw \times w^3} =$ _____

13 $\dfrac{k^2 y \times y^2 k^4}{y^3 \times y^2 k^4} =$ _____

14 $\dfrac{q^3 n^2 \times n^4}{qn^6 \times n^4 q^3} =$ _____

15 $\dfrac{b^2 d^3 \times b^2 d}{bd^2 \times b^2 d^2} =$ _____

16 $\dfrac{s^2 u^5 \times u^3 s^2}{s^4 u^3} =$ _____

These feature coefficients. Simplify these.

Example

$\dfrac{v^4 x^5 \times 5v^3}{4vx^3 \times 3xv} = \dfrac{5v^7 x^5}{12v^2 x^4} = \dfrac{5v^5 x}{12}$

17 $\dfrac{3h^2 c \times 3h^4}{2h^3 \times c^3} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

18 $\dfrac{5a^2 y^2 \times 2y^4}{7y^4 \times a^3} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

19 $\dfrac{2j^2 k \times 4k^2}{3j^4} =$ _____ $=$ _____

20 $\dfrac{5m^2 e^3 \times m^2}{2m^4 \times e^4 m} =$ _____ $=$ _____

These feature coefficients which can be simplified. Simplify these.

Examples

a) $\dfrac{3v^4 x^5 \times v^3}{2vx^3 \times 6xv} = \dfrac{3v^7 x^5}{12v^2 x^4} = \dfrac{v^5 x}{4}$

b) $\dfrac{3a^2 b^3 \times 4a^3}{2a^3 \times ab} = \dfrac{12a^5 b^3}{2a^4 b} = 6ab^2$

21 $\dfrac{3ve^3 \times 5e}{2e^3 v^5} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

22 $\dfrac{2n^2 w \times 6n^4}{3n^3} = \dfrac{\quad}{\quad} = \quad$

23 $\dfrac{2x^2 y^3 \times 5y^4}{10x \times 2y^3} = \dfrac{\quad}{\quad} = \dfrac{\quad}{\quad}$

24 $\dfrac{6h^2 q \times 3q^2}{2hq^4 \times h^2 q^2} =$ _____ $=$ _____

25 $\dfrac{5y^2 x^5 \times 4y^2}{y^4 x^3 \times 10x^2} =$ _____ $=$ _____

Indices - Brackets and Indices (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Simplify these by expanding first, then adding powers. Leave your answer in index form.

Example $(5^4)^3 = 5^4 \times 5^4 \times 5^4 = 5^{12}$ (4 + 4 + 4 = 12)

1 $(7^3)^2 =$ ☐ × ☐ = ☐

2 $(3^5)^3 =$ ☐ × ☐ × ☐

= ☐

3 $(9^5)^4 =$ ☐ × ☐ × ☐ × ☐

= ☐

Now letters - same process

4 $(y^2)^4 =$ ☐ × ☐ × ☐ × ☐

= ☐

5 $(x^6)^5 =$

=

6 $(k^3)^3 =$

=

Brackets means you multiply the indexes. Simplify these. Leave answer in index form.

$(m^6)^4 = m^{6 \times 4} = m^{24}$

7 $(8^3)^4 =$ ☐^☐×☐ = ☐^☐

8 $(4^3)^5 =$ ☐^☐×☐ = ☐^☐

9 $(y^2)^3 =$ ☐^☐×☐ = ☐^☐

10 $(x^5)^3 =$

11 $(n^8)^2 =$

12 $(k^6)^5 =$

Simplify these. Leave your answer in index form.

13 $(8^2)^3 =$

14 $(5^4)^2 =$

15 $(y^7)^2 =$

16 $(k^3)^2 =$

17 $(m^3)^2 =$

18 $(a^6)^3 =$

19 $(10^4)^3 =$

20 $(h^5)^5 =$

Use your power key to evaluate these.

Example $5^4 = 625$ Calc: 5 $x^{\blacksquare}$ 4 =

21 $2^4 =$

22 $3^6 =$

23 $8^4 =$

24 $2^8 =$

25 $4^5 =$

26 $10^2 =$

27 $10^4 =$

28 $10^3 =$

Simplify these by expanding first, then multiplying. Use your calculator to calculate the numbers with powers.

Example $(2x^4)^3 = 2x^4 \times 2x^4 \times 2x^4 = 2^3x^{12} = 8x^{12}$

29 $(3h^5)^2 =$ ☐ × ☐ = $3^{\square} h^{\square}$ = ☐

30 $(5a^7)^3 =$ ☐ × ☐ × ☐ = $5^{\square} a^{\square}$ = ☐

31 $(2n^6)^4 =$ ☐ × ☐ × ☐ × ☐ = $2^{\square} n^{\square}$ = ☐

32 $(3k^4)^3 =$

33 $(4c^5)^4 =$

Slide the power outside the brackets onto the number inside and multiply the two indexes for the power on the letter.

Example $(2x^4)^3 = 2^3x^{12} = 8x^{12}$

34 $(3e^2)^3 = 3^{\square} e^{\square} =$ ☐

35 $(5n^4)^2 = 5^{\square} n^{\square} =$ ☐

36 $(2c^5)^4 = 2^{\square} c^{\square} =$ ☐

37 $(3x^3)^4 = 3^{\square} x^{\square} =$ ☐

38 $(6v^5)^3 =$ ☐ = ☐

39 $(10a^8)^2 =$ ☐

= ☐

40 $(10y^5)^4 =$ ☐

= ☐

Indices - Brackets and Indices (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Rewrite these without the brackets.

Example $(5v^4)^3 = 125v^{12}$

$5^3 = 125$ $3 \times 4 = 12$

1 $(4g^5)^5 =$

2 $(3n^2)^4 =$

3 $(2j^7)^3 =$

4 $(10c^{10})^2 =$

5 $(2b^4)^9 =$

6 $(5g^6)^4 =$

7 $(10m^2)^3 =$

8 $(9x^3)^4 =$

9 $(2h^8)^{12} =$

10 $(10u^6)^5 =$

Multiple bases look harder but the process is the same, no calculator required. Expand.

Example $(ab^4c^2)^5 = a^5b^{20}c^{10}$

$1 \times 5 = 5$ $4 \times 5 = 20$ $2 \times 5 = 10$

11 $(x^3y^2)^4 =$

12 $(a^6k^2)^3 =$

13 $(a^3b)^5 =$

14 $(g^3n^6)^2 =$

15 $(c^{10}e^2)^8 =$

16 $(abc)^3 =$

17 $(a^4b^2c)^5 =$

18 $(a^2bc^3)^7 =$

These include co-efficients (numbers out front). Expand these, calculator required.

Example $(5v^4x^2)^3 = 125v^{12}x^6$

19 $(3me^5)^2 =$

20 $(5w^3x^2)^3 =$

21 $(2r^2d^2)^8 =$

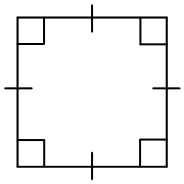
22 $(3q^6e^4)^4 =$

23 $(4q^5xk^4)^5 =$

24 $(10x^2ny^3)^3 =$

Find the area of these squares.

25



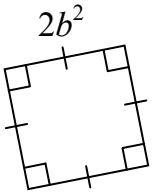
$3a$

$A = l^2$

$= (3a)^2$

$A =$ ☐ units^2

26



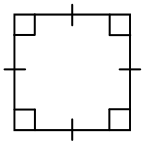
$2b^2$

$A = l^2$

$= (2b^2)^2$

$A =$ ☐ units^2

27



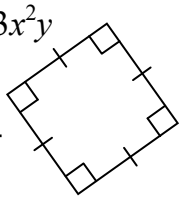
a^2b^3

$A = l^2$

=

$A =$ ☐ units^2

28



$3x^2y$

These are two step questions. Expand and simplify these.

Example

$$\frac{(v^3x)^3}{(v^2x^2)^4} = \frac{v^9x^3}{v^8x^8} = \frac{v}{x^5}$$

Expand Simplify

29

$$\frac{(a^5b^2)^4}{(a^2b^3)^2} = \frac{a^{\square}\,b^{\square}}{a^{\square}\,b^{\square}} = \frac{\square}{\square}$$

30

$$\frac{(n^2a^3)^2}{(n^3a^2)^3} = \frac{n^{\square}\,a^{\square}}{n^{\square}\,a^{\square}} = \frac{\square}{\square}$$

31

$$\frac{(yx^4)^3}{(y^2x^2)^2} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

32

$$\frac{(v^5c^4)^2}{(v^3c^2)^3} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

Now multiplication

Example $(x^2b)^3 \times (x^4b^2)^2$

$= x^6b^3 \times x^8b^4$ Expand

$= x^{14}b^7$ Simplify

36 $(a^2h^3)^5 \times (2h^2)^2$

$=$ $=$

Indices - The Zero Index (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator to find these values.

Example $5^3 = 125$

Calc: 5 x■ 3 =

1 $7^3 =$ ____ 2 $7^2 =$ ____

3 $7^1 =$ ____ 4 $7^0 =$ ____

5 $9^3 =$ ____ 6 $9^2 =$ ____

7 $9^1 =$ ____ 8 $9^0 =$ ____

9 $4^3 =$ ____ 10 $4^2 =$ ____

11 $4^1 =$ ____ 12 $4^0 =$ ____

13 Look at Q.4, Q.8 and Q.12

The answers were all ____

Now use your calculator to complete these divisions.

14 $7^4 \div 1 =$ ____

Calc: 7 x■ 4 ▶ ÷ 1 =

15 $7^4 \div 7^0 =$ ____

compare

$\therefore 7^0 =$ ____

16 $10^3 \div 1 =$ ____

17 $10^3 \div 10^0 =$ ____

compare

$\therefore 10^0 =$ ____

Now use your division skills with index laws. No calculator

18 $3^5 \div 3^0 =$ $3^{\square - \square} = 3^{\square}$

19 $5^7 \div 5^0 =$ $\square^{\square - \square} = \square^{\square}$

When you divide a number (not 0) by '1', the number is also the answer.

$\therefore 3^0 = 5^0 =$ ____

Answer these divisions in index form, then as numbers.

Example

Index Form: $7^4 \div 7^4 = 7^0$ Number: $= 1$

20 $5^2 \div 5^2 =$ $\square^{\square} =$ ____

21 $4^8 \div 4^8 =$ ____ = ____

22 $\frac{10^3}{10^3} =$ ____ = ____

23 $14^5 \div 14^5 =$ ____ = ____

24 $\frac{9^{11}}{9^{11}} =$ ____ = ____

Algebra is answered the same way.

25 $x^7 \div x^7 =$ $\square^{\square} =$ ____

26 $\frac{m^4}{m^4} =$ ____ = ____

27 $y^8 \div y^8 =$ ____ = ____

28 $\frac{n^{13}}{n^{13}} =$ ____ = ____

Multiply these answering in index form, then as numbers.

Example

Index Form: $5^3 \times 5^0 = 5^3$ Number: $= 125$

Calc: 5 x■ 3 =

29 $4^6 \times 4^0 =$ $\square^{\square} =$ ____

30 $2^9 \times 2^0 =$ ____ = ____

31 $3^7 \times 3^0 =$ ____ = ____

Algebra same, but leave in index form

32 $v^7 \times v^0 =$ $\square^{\square}$

33 $k^9 \times k^0 =$ ____

34 $n^3 \times n^0 =$ ____

Remember with brackets you multiply the powers. Expand these.

Example

Index Form: $(7^3)^0 = 7^0$ Number: $= 1$

35 $(5^6)^0 =$ $\square^{\square} =$ ____

36 $(2^4)^0 =$ ____ = ____

37 $(3^0)^6 =$ ____ = ____

38 $(x^0)^6 =$ ____ = ____

39 $(a^0)^3 =$ ____ = ____

40 $(q^5)^0 =$ ____ = ____

These have co-efficient and so are a little harder.

Example

$x^0 = 1$

$(3x^0)^3 = (3\times1)^3$

$= (3)^3$

Calc: 3 x■ 3 =

$= 27$

41 $(5n^0)^4 = (\square \times \square)^4$

$= \square^4 =$ ____

42 $(8p^0)^3 = (\square \times \square)^3$

$= \square^3 =$ ____

43 $(2h^0)^9 = (\square \times \square)^9$

$= \square^9 =$ ____

When the '0' is outside, answer is 1

44 $(2h^3)^0 =$ ____

45 $(8k^5)^0 =$ ____

46 $(a^2b^5c^3)^0 =$ ____

Indices - The Zero Index (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Anything (except 0) with the power of zero is 1. Evaluate.

Example $5m^0 + 7$

$= 5 \times 1 + 7 = 12$

1 $2v^0 =$ ☐ × ☐ = ☐

2 $8h^0 =$ ☐ × ☐ = ☐

3 $h^0 + 7 =$ ☐ =

Indices - Substitution (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator to evaluate these when $a = 5$.

Example $a^3 = 5^3 = 125$

Calc: 5 x^3 =

1 $a^4 =$ 5 ^{4} = ____

2 $2a^3 =$ ____ × ____ $^{\square}$ = ____

3 $3a^3 + 7 =$ ____ × ____ $^{\square}$ + ____

= ____

4 $3a^2 + 7a =$ ____

= ____

Evaluate these using $n = 8$.

5 $n^3 - 10 =$ ____ = ____

6 $4n^2 - n =$ ____

= ____

7 $-n^2 =$ ____ = ____ Calc: - 8 x^2 =

8 $(-n)^2 =$ ____ = ____

Calc: (- 8) x^2 =

Evaluate these using $y = -3$. Make sure you use brackets.

9 $y^2 - 12 =$ ____ = ____

Calc: (- 3) x^2 - 1 2 =

10 $20 - y^3 =$ ____ = ____

11 $3y^4 =$ ____ = ____

12 $4y^2 + 3y =$ ____

= ____

13 $4y^2 \times 3y =$ ____

= ____

Evaluate these using $a = 4$ and $x = 3$.

14 $ax^2 =$ ____ × ____ $^{\square}$ = ____

15 $a^2 + x^2 =$ ____ $^{\square}$ + ____ $^{\square}$ = ____

16 $a^2 - x^2 =$ ____ $^{\square}$ - ____ $^{\square}$ = ____

17 $ax^2 + ax =$ ____

= ____

18 $20x^2 \div a^2 =$ ____

= ____

* 19 $\dfrac{20x^5}{ax} =$ ____ / ____ = ____

∗ Brackets required

A table of values is often used to construct a graph. Complete these tables.

20 $b = a^2 + 2$

a	0	1	2	3	4	5
b						

Calc: 1 x^2 + 2 =

Calc: 0 x^2 + 2 =

21 $y = 2x^2 + 5$

x	0	1	2	3	4	5
y						

22 $y = -3x^2 - 7$

x	0	1	2	3	4	5
y						

A frequent use of substitution is using a formula, such as with science. Substitute the values into the formulae to solve these questions.

The surface area of a cube is found using $SA = 6l^2$. Find the SA:

23 When $l = 15$.

$SA = 6l^2$

$= 6 \times$ ____ ^{2}

$SA =$ ____ u^2

24 When $l = 30$.

25 When $l = 8$.

Power loss in a wire is found using $P = I^2R$. Find the loss, when:

26 $I = 2$ and $R = 0.5$

$P = I^2R$

$=$ ____ $^2 \times$ ____

$P =$ ____ W

27 $I = 10$ and $R = 6$.

28 $I = 8$ and $R = 3$.

Kinetic Energy is found using $KE = \frac{1}{2}mv^2$. Find the energy, when:

29 $m = 80$, $v = 15$.

$KE = \frac{1}{2}mv^2$

$= \frac{1}{2} \times$ ____ $\times$ ____ ^{2}

$KE =$ ____ J

30 $m = 65$, $v = 18$.

31 $m = 90$, $v = 25$.

Indices - Substitution (Sheet 2)

Numbers of Any Magnitude - Rounding to Nearest 10/100/1 000

When large amounts are involved, it is often easier to round off and make the number easier to handle. For example the annual budget of a hospital might be in the hundreds of millions of dollars, so there is no need for tens or hundreds. That level of accuracy isn't required.

Rounding uses half of the rounding amount to undertake the rounding. So when rounding to the nearest:

- 10, use 5 as the cut-off. 5 or more round up, less than 5 round down
- 100, use 50 as the cut-off. 50 or more round up, less than 50 round down
- 1 000, use 500 as the cut-off. 500 or more round up, less than 500 round down

Note that it is possible to round a number down to zero. For example:

- 4 rounded to the nearest 10, is zero. (It is less than 5)
- 38 rounded to the nearest 100, is zero. (It is less than 50)
- 410 rounded to the nearest 1 000, is zero. (It is less than 500)

Examples

Round to the nearest 10

a) 76 80
6 is more than 5 so up

b) 197 200
7 is more than 5 so up

c) 143 140
3 is less than 5 so down

Round to the nearest 100

a) 352 400
52 is more than 50 so up

b) 42 0
42 is less than 50 so down

c) 377 966 378 000
66 is more than 50 so up

Round to the nearest 1 000

a) 352 0
352 is less than 500 so down

b) 13 866 14 000
866 is more than 500 so up

c) 399 602 400 000
602 is more than 500 so up

Numbers of Any Magnitude - Rounding (Nearest 10)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers to the nearest 10. So if the last digit is 5 or more, round them up.

Examples

47 = 50 273 = 270

1 17 = 2 82 =

3 38 = 4 24 =

5 67 = 6 11 =

7 6 = 8 4 =

Now larger numbers

9 167 =

10 204 =

11 477 =

12 597 =

13 2 036 =

14 1 997 =

15 3 598 =

Calculate these and write the answer, then the answer rounded to the nearest 10.

16 47×28 = Actual

= Rounded

17 $53^2 \times 87$ =

=

18 $36^2 \div (9 \times 6)$ =

=

19 $(9 + 13)^2 \times (8 + 9)^2$

= =

Use the fraction key or bracket both the numerator (top) & denominator

20 $\dfrac{(15 \times 23)^3}{5^2 \times 3}$ =

Bracket denominator

=

Use the $x^{\square}$ key

21 $\dfrac{9^5 \times 4^3}{2^4 \times 3^3}$ =

Use the $x^{\square}$ key =

22 $\dfrac{5^4 \times 6^3}{10^3 \times 3^3}$ = =

Its investigation time. Perform the same operation twice, but the first is rounded after the calculation, the second, before.

23 127×58 = Actual

= Rounded

24 127×58 = 130 × 60 Round the numbers

= Actual

25 232×67 =

= Rounded

26 232×67 = × Round the numbers

=

= Rounded

30 $2\,322 \times 4$

= ×

=

This time its addition. Round at the end and compare it with rounding at the start.

31 $301 + 494 + 727 + 83$

= Actual = Rounded

32 $309 + 496 + 727 + 83$

= + + +

Round all the numbers to the nearest 10

=

33 $777 + 438 + 219 + 867$

= Actual = Rounded

34 $777 + 438 + 219 + 867$

= + + +

=

Numbers of Any Magnitude - Rounding (Nearest 100/1 000)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers to the nearest 100. If the last two digits are 50 or more, round up

Examples

326 = 300 4 976 = 5 000

1 435 =

2 153 =

3 18 = 4 61 =

5 888 =

6 950 =

Now larger numbers

7 23 478 =

8 5 809 =

9 179 981 =

10 197 090 =

Perform these calculations and give the answer, then the answer rounded to nearest 100

11 76×38 = Actual

= Rounded

12 $24^2 \times 14^2$ =

=

13 $90^2 \div 15^2$ =

=

14 $32^3 + 8^3$ =

=

Round these numbers to the nearest 1 000. If the last three digits are 500 or more, round up

Examples

577 = 1 000 403 = 0

15 1 875 =

16 7 077 =

17 8 498 =

18 3 702 =

19 5 555 =

Now larger numbers

20 87 206 =

21 109 703 =

22 4 528 119 =

23 2 149 944 =

24 7 999 566 =

Calculate the answer then the rounded answer to the nearest thousand.

Use the power key $x^{\blacksquare}$ to answer these

25 $3^6 \times 2^9$ =

Actual

= Rounded to nearest 1 000

26 $5^4 + 6^{10}$ =

=

27 $8^{11} \div 2^6$ =

=

Match answers with questions. The answers have been rounded to the nearest 1 000.

28 7^4 • • 16 000

29 5^6 • • 4 000

30 6^6 • • 66 000

31 4^8 • • 20 000

32 3^9 • • 2 000

33 9^4 • • 47 000

34 4^6 • • 7 000

Perform the calculation and write the answer three times. Rounded to 10, 100 then 1 000

35 $927 \times 43 \times 8^4$ Unrounded Answer Not Required

=

Round to the Nearest 10

=

7 6 = 10 8 4 = 0

Now larger numbers

9 167 = 170

10 204 = 200

11 477 = 480

12 597 = 600

13 2 036 = 2 040

14 1 997 = 2 000

15 3 598 = 3 600

Calculate these and write the answer, then the answer rounded to the nearest 10.

16 47×28 = 1 316 Actual

= 1 320 Rounded

17 $53^2 \times 87$ = 244 383

= 244 380

18 $36^2 \div (9 \times 6)$ = 24

= 20

19 $(9 + 13)^2 \times (8 + 9)^2$

= 139 876 = 139 880

Use the fraction key or bracket both the numerator (top) & denominator

20 $\frac{(15 \times 23)^3}{5^2 \times 3}$ = 547 515

Bracket denominator

= 547 520

Use the $\frac{x}{}$ key

21 $\frac{9^5 \times 4^3}{2^4 \times 3^3}$ = 8 748

Use the $x^{\square}$ key = 8 750

22 $\frac{5^4 \times 6^3}{10^3 \times 3^3}$ = 5 = 10

Its investigation time. Perform the same operation twice, but the first is rounded after the calculation, the second, before.

23 127×58 = 7 366 Actual

= 7 370 Rounded

24 127×58 = 130 × 60 Round the numbers

= 7 800 Actual

25 232×67 = 15 544

= 15 540 Rounded

26 232×67 = 230 × 70 Round the numbers

= 16 100

27 $4\,096 \times 156$ = 638 976 Actual

= 638 980 Rounded

28 $4\,096 \times 156$

= 4 100 × 160

= 656 000

29 $2\,322 \times 4$ = 9 288 Actual

= 9 290 Rounded

30 $2\,322 \times 4$

= 2 320 × 0

= 0

This time its addition. Round at the end and compare it with rounding at the start.

31 $301 + 494 + 727 + 83$

= 1 605 Actual = 1 610 Rounded

32 $309 + 496 + 727 + 83$

= 310 + 500 + 730 + 80 Round all the numbers to the nearest 10

= 1 620

33 $777 + 438 + 219 + 867$

= 2 301 Actual = 2 300 Rounded

34 $777 + 438 + 219 + 867$

= 780 + 440 + 220 + 870

= 2 310

Numbers of Any Magnitude - Rounding (Nearest 100/1 000)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers to the nearest 100. If the last two digits are 50 or more, round up

Examples

$326 =$ 300 $4\,976 =$ 5 000

1 $435 =$ 400

2 $153 =$ 200

3 $18 =$ 0 4 $61 =$ 100

5 $888 =$ 900

6 $950 =$ 1 000

Now larger numbers

7 $23\,478 =$ 23 500

8 $5\,809 =$ 5 800

9 $179\,981 =$ 180 000

10 $197\,090 =$ 197 100

Perform these calculations and give the answer, then the answer rounded to nearest 100

11 $76 \times 38 =$ 2 888 Actual

$=$ 2 900 Rounded

12 $24^2 \times 14^2 =$ 112 896

$=$ 112 900

13 $90^2 \div 15^2 =$ 36

$=$ 0

14 $32^3 + 8^3 =$ 33 280

$=$ 33 300

Round these numbers to the nearest 1 000. If the last three digits are 500 or more, round up

Examples

$577 =$ 1 000 $403 =$ 0

15 $1\,875 =$ 2 000

16 $7\,077 =$ 7 000

17 $8\,498 =$ 8 000

18 $3\,702 =$ 4 000

19 $5\,555 =$ 6 000

Now larger numbers

20 $87\,206 =$ 87 000

21 $109\,703 =$ 110 000

22 $4\,528\,119 =$ 4 528 000

23 $2\,149\,944 =$ 2 150 000

24 $7\,999\,566 =$ 8 000 000

Calculate the answer then the rounded answer to the nearest thousand.

Use the power key $x^{\blacksquare}$ to answer these

25 $3^6 \times 2^9 =$ 373 248 Actual

$=$ 373 000 Rounded to nearest 1 000

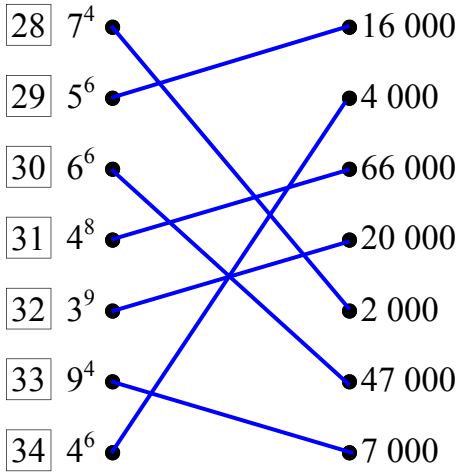
26 $5^4 + 6^{10} =$ 60 466 801

$=$ 60 467 000

27 $8^{11} \div 2^6 =$ 134 217 728

$=$ 134 218 000

Match answers with questions. The answers have been rounded to the nearest 1 000.



Perform the calculation and write the answer three times. Rounded to 10, 100 then 1 000

35 $927 \times 43 \times 8^4$ Unrounded Answer Not Required

$=$ 163 270 660

Round to the Nearest 10

$=$ 163 270 700

Round to the Nearest 100

$=$ 163 271 000

Round to the Nearest 1 000

36 $17 \times 11 \times 13 \times 7^3$

$=$ 833 830

$=$ 833 800

$=$ 834 000

37 $3^6 \times 13^4 \div (43 - 16)$

$=$ 771 150

$=$ 771 100

$=$ 771 000

Numbers of Any Magnitude - Rounding Decimals

Rounding is used to shorten decimal answers to a level of accuracy required. Often when answering questions, you are asked to give your answer to a specific number of decimal places. This isn't done by just chopping the decimal off at the number of places required, this method is followed:

- Look at the decimal behind the decimal place asked for. For example if rounding to 2 d.p. (2 decimal places) look at the digit in the 3rd decimal place.
- If this digit is 5 or more then add 1 to the digit in front of it, this means that when increasing a 3 for example, it would become a 4. But it also means that if it is a 9 it will become a 0 and will add 1 to the digit in front of it.
- If the digit is less than 5 the digit is unchanged and the number is just 'chopped' at the required decimal place.
- If there isn't a number in the decimal place asked for, then zeros are added to the number until the decimal place has a zero in the position.

The first sheet involves rounding to the nearest whole number and rounding to 1 decimal place.

The second sheet involves rounding to 2 and 3 decimal places.

The third sheet is all 4 on the one sheet.

Examples of rounding
0.54862
To 1 d.p. : 0.54862 → 0.5 (as 4 < 5)
To 2 d.p. : 0.54862 → 0.55 (as 8 > 5)
To 3 d.p. : 0.54862 → 0.549 (as 6 > 5)
To nearest whole number:
0.54862 → 1 (as 5 = 5)

Example: Whole numbers
65 (adding zeros)
To 1 d.p. : 65.0
To 2 d.p. : 65.00
To 3 d.p. : 65.000

Example:
71.5
To 1 d.p. : 71.5
To 2 d.p. : 71.50
To 3 d.p. : 71.500

Numbers of Any Magnitude - Rounding Decimals - 0 & 1 d.p. (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these decimals to the nearest whole number. Look at the first decimal digit.

Examples

$3.8 =$ 4 (0.8 more than 0.5)

$7.37 =$ 7 (0.3 less than 0.5)

1 $1.7 =$ ☐

2 $8.3 =$ ☐

3 $6.2 =$ ☐

4 $5.8 =$ ☐

5 $0.6 =$ ☐

6 $0.2 =$ ☐

These have more than 1 decimal place

7 $11.53 =$ ☐ ← Whole number answer

8 $2.07 =$ ☐

9 $15.72 =$ ☐

10 $23.6081 =$ ☐

11 $49.1189 =$ ☐

12 $7.067 =$ ☐

Find these, write the answer, then write the answer rounded to the nearest whole number.

13 $3.7 \times 8.4 =$ ☐ Actual

Whole number answer → $=$ ☐ Rounded

14 $5.16 \times 13.7 =$ ☐ Actual

$=$ ☐ Rounded

15 $7.59 \times 37.8 =$ ☐

$=$ ☐

Its estimation time. Change these to whole numbers to estimate the answer.

Example 3.8×5.2

$\approx 4 \times 5 = 20$

16 $2.9 \times 6.7 \approx$ ☐ (Round 2.9) $\times$ ☐ (Round 6.7) $=$ ☐

17 $5.3 \times 9.8 \approx$ ☐ $\times$ ☐ $=$ ☐

18 $7.8 \div 1.9 \approx$ ☐ $\div$ ☐ $=$ ☐

19 $8.3 \times 4.1 \approx$ ☐ $\times$ ☐ $=$ ☐

20 $9.2 \div 2.7 \approx$ ☐ $\div$ ☐ $=$ ☐

Round these decimals to 1 decimal place. (1 d.p.)

Examples

$3.82 =$ 3.8 (Less than 5)

$7.97 =$ 8.0 (More than 5)

21 $3.16 =$ ☐.☐

22 $8.52 =$ ☐.☐

23 $16.78 =$ ☐

24 $-0.61 =$ ☐

25 $4.95 =$ ☐

Match the decimal with its answer when rounded to 1 d.p.

Use a Ruler!

26	5.26 ●	●6.3
27	6.25 ●	●6.5
28	2.56 ●	●5.6
29	5.62 ●	●5.3
30	6.52 ●	●2.6

These decimals have more decimal places. Round them to 1 decimal place. (1 d.p.)

Examples

Ignore the 5 & 2 (Less than 5): $3.8352 =$ 3.8

Ignore the 2 (More than 5): $7.362 =$ 7.4

Look at the arrowed digit for rounding

31 $9.0671 =$ ☐.☐

32 $0.7155 =$ ☐

33 $48.96051 =$ ☐

34 $145.27 =$ ☐

35 $59.962 =$ ☐

36 $0.3815 =$ ☐

37 $-12.629 =$ ☐

38 $8.0188 =$ ☐

39 $152.3826 =$ ☐

40 $45.56621 =$ ☐

Complete the calculations and give the answer as a whole number and a decimal to 1 d.p.

41 $2.3^3 \times 0.7^2 + 1.8$

$=$ ☐ To 1 d.p. $=$ ☐ Whole Number

42 $1.13^4 \times 3.57^3$

$=$ ☐ To 1 d.p. $=$ ☐ Whole Number

43 $\dfrac{8^2 + 9^3}{4^6 - 2^7} + 0.8$

$=$ ☐ To 1 d.p. $=$ ☐ Whole Number

Numbers of Any Magnitude - Rounding Decimals - 2 & 3 d.p. (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these decimals to 2 decimal places. Look at the third decimal digit to decide.

Examples

$5.783 = 5.78$ (3 is less than 5)

$0.7283 = 0.73$ (8 is more than 5)

1 $2.916 =$ ☐.☐☐

2 $42.053 =$ ☐

3 $-8.198 =$ ☐

4 $207.371 =$ ☐

5 $1.897 =$ ☐

When a decimal has less than 2 decimal places, add zeros. Write these to 2 d.p.

Examples

$2.6 = 2.60$ (Add a zero)

$14 = 14.00$ (Add two zeros)

6 $8 =$ ☐.☐☐

7 $4.3 =$ ☐

8 $113.7 =$ ☐

9 $344 =$ ☐

These have more decimal places. Use the arrow to help to get you rounding to 2 d.p.

10 $0.1642 =$ ☐.☐☐

11 $0.3884 =$ ☐

12 $17.744823 =$ ☐

13 $5.096273 =$ ☐

14 $83.25199 =$ ☐

15 $-11.99716 =$ ☐

Round these to 2 d.p.

16 $61.37285 =$ ☐

17 $0.115099 =$ ☐

18 $4.797003 =$ ☐

19 $97.98221 =$ ☐

20 $19.99534 =$ ☐

Calculate these and write the answer to 2 d.p.

21 $0.9^2 \times 9.4 =$ ☐ Rounded to 2 d.p.

22 $1.75^3 + 5.2^2 =$ ☐

23 $\dfrac{31.9 + 54.2}{4.7^2} =$ ☐

24 $(-0.762)^5 =$ ☐

Round these to 3 d.p. Use the arrow to help you get started.

Examples

$0.78367 = 0.784$ (6 is more than 5)

$0.21842 = 0.218$ (4 is less than 5)

25 $0.778321 =$ ☐.☐☐☐

26 $6.01596 =$ ☐

27 $-38.09951 =$ ☐

28 $0.047177 =$ ☐

29 $3.141592654 =$ ☐

30 $1.414213562 =$ ☐

Calculate these and write the answer to 3 d.p.

31 $\sqrt{15} =$ ☐.☐☐☐ Rounded to 3 d.p.

32 $\sqrt{624} =$ ☐

33 $\sqrt{5.2^2 - 3.1^2} =$ ☐

34 $\sqrt{24^2 + 17.7^2} =$ ☐

35 $\dfrac{14^3 - 11^3}{5^2} =$ ☐

Match the left hand side with its answer on the right, when rounded to 3 d.p.

Use a Ruler!

36	0.2	0.002
37	0.12^3	0.003

Numbers of Any Magnitude - Rounding Decimals 0-3 d.p. (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers to the nearest tenth (1 d.p.)

Example

Look at the digit to the right of the one to be rounded. If it is 5 or more round it up, if < 5 the digit is unchanged

1.1627 → 1.2

1. 0.87
2. 0.43
3. 0.90347
4. 0.05956
5. 18.374
6. 22.128
7. 67
8. 56.942
9. 129.988
10. 99.953

Round these numbers to the nearest hundredth (2 d.p.)

Example

Look at the digit to the right of the one to be rounded. If it is 5 or more round it up, if < 5 the digit is unchanged

1.1627 → 1.16

11. 0.278
12. 0.805
13. 0.4246
14. 0.9793
15. 2.2183
16. 73.2
17. 4.95829
18. 9.99811
19. 67.9942
20. 83
21. 99.9961

Round these numbers to the nearest thousandth (3 d.p.)

Example

Look at the digit to the right of the one to be rounded. If it is 5 or more round it up, if < 5 the digit is unchanged

1.1627 → 1.163

22. 2.7674
23. 0.8436
24. 8.0302
25. 6.9969
26. 6.9996
27. 0.7
28. 0.70
29. 0.707
30. 4
31. 9.9999

Round these numbers to the nearest unit (0 d.p.)

Example

Look at the digit to the right of the one to be rounded. If it is 5 or more round it up, if < 5 the digit is unchanged

1.1627 → 1

32. 4.7
33. 9.3
34. 18.78
35. 249.499
36. 7 101.835
37. 83.5004
38. 999.278
39. 999.872
40. 0.808
41. 0.080
42. 9 999.5

Round these numbers to the decimal place given in the brackets

43. 29.6751 [2]
44. 1 361.54 [1]
45. 0.4296 [0]

Numbers of Any Magnitude - Rounding Decimals - 0 & 1 d.p. (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these decimals to the nearest whole number. Look at the first decimal digit.

Examples

3.8 = 4 (0.8 more than 0.5)

7.37 = 7 (0.3 less than 0.5)

1 1.7 = 2

2 8.3 = 8

3 6.2 = 6

4 5.8 = 6

5 0.6 = 1

6 0.2 = 0

These have more than 1 decimal place

7 11.53 = 12 ← Whole number answer

8 2.07 = 2

9 15.72 = 16

10 23.6081 = 24

11 49.1189 = 49

12 7.067 = 7

Find these, write the answer, then write the answer rounded to the nearest whole number.

13 3.7 × 8.4 = 31.08 (Actual)

Whole number answer → = 31 (Rounded)

14 5.16 × 13.7 = 70.692 (Actual)

= 71 (Rounded)

15 7.59 × 37.8 = 286.902

= 287

Its estimation time. Change these to whole numbers to estimate the answer.

Example 3.8 × 5.2

≈ 4 × 5 = 20

16 2.9 × 6.7 ≈ 3 × 7 = 21 (Round 2.9, Round 6.7)

17 5.3 × 9.8 ≈ 5 × 10 = 50

18 7.8 ÷ 1.9 ≈ 8 ÷ 2 = 4

19 8.3 × 4.1 ≈ 8 × 4 = 32

20 9.2 ÷ 2.7 ≈ 9 ÷ 3 = 3

Round these decimals to 1 decimal place. (1 d.p.)

Examples

3.82 = 3.8 (Less than 5)

7.97 = 8.0 (More than 5)

21 3.16 = 3.2

22 8.52 = 8.5

23 16.78 = 16.8

24 -0.61 = -0.6

25 4.95 = 5.0

Match the decimal with its answer when rounded to 1 d.p.

Use a Ruler!

26	5.26	6.3
27	6.25	6.5
28	2.56	5.6
29	5.62	5.3
30	6.52	2.6

These decimals have more decimal places. Round them to 1 decimal place. (1 d.p.)

Examples

3.8352 = 3.8 (Ignore the 5 & 2; Less than 5)

7.362 = 7.4 (Ignore the 2; More than 5)

Look at the arrowed digit for rounding

31 9.0671 = 9.1

32 0.7155 = 0.8

33 48.96051 = 49.0

34 145.27 = 145.3

35 59.962 = 60.0

36 0.3815 = 0.4

37 -12.629 = -12.6

38 8.0188 = 8.0

39 152.3826 = 152.4

40 45.56621 = 45.6

Complete the calculations and give the answer as a whole number and a decimal to 1 d.p.

41 $2.3^3 \times 0.7^2 + 1.8$

= 7.8 (To 1 d.p.) = 8 (Whole Number)

42 $1.13^4 \times 3.57^3$

= 74.2 (To 1 d.p.) = 74 (Whole Number)

43 $\frac{8^2 + 9^3}{4^6 - 2^7} + 0.8$

= 1.0 (To 1 d.p.) = 1 (Whole Number)

Numbers of Any Magnitude - Rounding Decimals - 2 & 3 d.p. (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these decimals to 2 decimal places. Look at the third decimal digit to decide.

Examples

5.783 = 5.78 (3 is less than 5)

0.7283 = 0.73 (8 is more than 5)

1 2.916 = 2.92

2 42.053 = 42.05

3 -8.198 = -8.20

4 207.371 = 207.37

5 1.897 = 1.90

When a decimal has less than 2 decimal places, add zeros. Write these to 2 d.p.

Examples

2.6 = 2.60 (Add a zero)

14 = 14.00 (Add two zeros)

6 8 = 8.00

7 4.3 = 4.30

8 113.7 = 113.70

9 344 = 344.00

These have more decimal places. Use the arrow to help to get you rounding to 2 d.p.

10 0.1642 = 0.16

11 0.3884 = 0.39

12 17.744823 = 17.74

13 5.096273 = 5.10

14 83.25199 = 83.25

15 -11.99716 = -12.00

Round these to 2 d.p.

16 61.37285 = 61.37

17 0.115099 = 0.12

18 4.797003 = 4.80

19 97.98221 = 97.98

20 19.99534 = 20.00

Calculate these and write the answer to 2 d.p.

21 $0.9^2 \times 9.4$ = 7.61 (Rounded to 2 d.p.)

22 $1.75^3 + 5.2^2$ = 32.40

23 $\frac{31.9 + 54.2}{4.7^2}$ = 3.90

24 $(-0.762)^5$ = -0.26

Round these to 3 d.p. Use the arrow to help you get started.

Examples

0.78367 = 0.784 (6 is more than 5)

0.21842 = 0.218 (4 is less than 5)

25 0.778321 = 0.778

26 6.01596 = 6.016

27 -38.09951 = -38.100

28 0.047177 = 0.047

29 3.141592654 = 3.142

30 1.414213562 = 1.414

Calculate these and write the answer to 3 d.p.

31 $\sqrt{15}$ = 3.873 (Rounded to 3 d.p.)

32 $\sqrt{624}$ = 24.980

33 $\sqrt{5.2^2 - 3.1^2}$ = 4.175

34 $\sqrt{24^2 + 17.7^2}$ = 29.821

35 $\frac{14^3 - 11^3}{5^2}$ = 56.520

Match the left hand side with its answer on the right, when rounded to 3 d.p.

Use a Ruler!

36 0.2 — 0.200

37 0.12^3 — 0.002

38 $\frac{3}{1\,004}$ — 0.003

39 $3^2 \div 9^4$ — 0.001

40 $\sqrt{0.08}$ — 0.283

Round these to the nearest whole number, 1 d.p., 2 d.p. and 3 d.p.

41 0.7

Whole	1 d.p.	2 d.p.	3 d.p.
1	0.7	0.70	0.700

Whole	1 d.p.	2 d.p.	3 d.p.
5	4.8	4.82	4.817

43 0.0957

Whole	1 d.p.	2 d.p.	3 d.p.
0	0.1	0.10	0.096

44 9.9997

Whole	1 d.p.	2 d.p.	3 d.p.
10	10.0	10.00	10.000

Numbers of Any Magnitude - Rounding Decimals 0-3 d.p. (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers to the nearest tenth (1 d.p.)

Look at the digit to the right of the one to be rounded. If it is 5 or more round up, if < 5 the digit is unchanged

Example: 1.1627 → 1.2

1	0.87	0.9
2	0.43	0.4
3	0.90347	0.9
4	0.05956	0.1
5	18.374	18.4
6	22.128	22.1
7	67	67.0
8	56.942	56.9
9	129.988	130.0
10	99.953	100

Round these numbers to the nearest hundredth (2 d.p.)

Look at the digit to the right of the one to be rounded. If it is 5 or more round up, if < 5 the digit is unchanged

Example: 1.1627 → 1.16

11	0.278	0.28
12	0.805	0.81
13	0.4246	0.42
14	0.9793	0.98
15	2.2183	2.22
16	73.2	73.20
17	4.95829	4.96
18	9.99811	10.00
19	67.9942	67.99
20	83	83.00
21	99.9961	100.00

Round these numbers to the nearest thousandth (3 d.p.)

Look at the digit to the right of the one to be rounded. If it is 5 or more round up, if < 5 the digit is unchanged

Example: 1.1627 → 1.163

22	2.7674	2.767
23	0.8436	0.844
24	8.0302	8.030
25	6.9969	6.997
26	6.9996	7.000
27	0.7	0.700
28	0.70	0.700
29	0.707	0.707
30	4	4.000
31	9.9999	10.000

Round these numbers to the nearest unit (0 d.p.)

Look at the digit to the right of the one to be rounded. If it is 5 or more round up, if < 5 the digit is unchanged

Example: 1.1627 → 1

32	4.7	5
33	9.3	9
34	18.78	19
35	249.499	249
36	7 101.835	7 102
37	83.5004	84
38	999.278	999
39	999.872	1 000
40	0.808	1
41	0.080	0
42	9 999.5	1 000

Round these numbers to the decimal place given in the brackets

43	29.6751	[2]	29.68
44	1 361.54	[1]	1 361.5
45	0.4296	[0]	0
46	9.1	[3]	9.100
47	19.9971	[2]	20.00
48	6.0606	[3]	6.061
49	86	[2]	86.00

Numbers of Any Magnitude - Counting Significant Figures

Significant figures are the digits in an answer that are considered relevant in the accuracy of the answer. This sheet deals with counting the number of significant figures in whole numbers and decimals.

The first sheet deals with whole numbers and decimals larger than 1. With whole numbers all digits are significant except zeros at the end of the number, which (due to the possibility of rounding), could be significant.

Examples

45 - 2 significant figures
2 008 - 4 significant figures because the zeros are 'bookended' by non-zero digits
3 100 - 2 or 3 or 4 significant figures because the zeros are not 'bookended' by non-zero digits, so they might or might not be significant. Or possibly significant.

Decimals are easier, especially when they are greater than 1. These are the last 4 questions on the first sheet. With these, all the digits are significant. Just count the digits.

Examples

95.3 - 3 significant figures
10.500 - 5 significant figures
300.00 - Also 5 significant figures. Note that 300 has 1 or 2 or 3 sig. fig., but 300.00 has 5. The reason being that the two decimal places indicate an accuracy of measurement.

The second worksheet deals with decimals less than 1. So '0.__'. With these you don't count the leading zeros. So until you hit a non-zero digit, the digits aren't significant.

Examples

0.005 - 1 significant figure, the first 3 digits are leading zeros and aren't significant
0.10007 - 5 significant figures, bookended zeros are included as they are significant
0.00500 - 3 significant figures, the trailing zeros are considered significant. Note that looking at the decimal you would consider the last two zeros as irrelevant. But their presence indicates the accuracy of the measurement.

Numbers of Any Magnitude - Counting Significant Figures (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Break these numbers up into 'significant' and 'possible' significant figures.

Examples 0's at end are possible

2 300 = 2 3 0 0

Significant Possible

0's between non-zero digits are significant

2 003 = 2 0 0 3

Significant

Combination of the two

2 030 = 2 0 3 0

Significant Possible

1 460 = ☐☐☐

2 5 000 = ☐☐☐☐

3 4 705 = ☐☐☐☐

4 71 070 = ☐☐☐☐☐

5 93 600 = ☐☐☐☐☐

6 35 206 000

☐☐☐☐☐☐☐☐

7 409 100

☐☐☐☐☐☐

8 1 480 050

☐☐☐☐☐☐☐

Now count the significant figures. Use the word 'or' between the possible sig figs.

Examples

2 300 = 2 3 0 0

2 3 4

There are 2 or 3 or 4 sig figs.

2 003 = 2 0 0 3

4

There are 4 sig figs.

2 030 = 2 0 3 0

3 4

There are 3 or 4 sig figs.

9 8 030 = ☐☐☐☐ (☐ ☐)

There are ☐ or ☐ sig figs.

10 3 400 = ☐☐☐☐ (☐ ☐ ☐)

There are ☐ or ☐ or ☐ sig figs.

11 5 043 = ☐☐☐☐ (☐)

There are ☐ sig figs.

12 70 900

☐☐☐☐☐

There are ☐ sig figs

13 8 619 000

☐☐☐☐☐☐☐

There are ☐ sig figs

14 406 100

☐☐☐☐☐☐

There are ☐ sig figs

15 9 005 020

☐☐☐☐☐☐☐

There are ☐ sig figs

16 120 000

☐☐☐☐☐☐

There are ☐ sig figs

17 27 000 050

☐☐☐☐☐☐☐☐

There are ☐ sig figs

If a decimal is larger than 1, all the digits in the decimal are significant. Count those sig figs.

Examples

23.00 There are 4 sig figs.

2.0030 There are 5 sig figs.

2000.30 There are 6 sig figs.

18 1.0 There are ☐ sig figs

19 5.100 There are ☐ sig figs

20 75.03 There are ☐ sig figs

21 195.00 There are ☐ sig figs

Numbers of Any Magnitude - Counting Significant Figures (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Break these decimals up into 'ignore' and 'significant' figures.

Examples Ignore all leading 0's

$0.007 =$ 0 . 0 0 7

Ignore Significant

0's between non-zero digits are significant

$0.4003 =$ 0 . 4 0 0 3

Ignore Significant

0's to the right are also significant

$0.0600 =$ 0 . 0 6 0 0

Ignore Significant

1 $0.88 =$.

2 $0.027 =$.

3 $0.050 =$.

4 0.010200

.

5 0.000775

.

6 0.009003

.

7 0.50010

.

8 $0.400 =$.

Now underline and then count the significant figures. Ignore all the leading zeros.

Examples

$0.007 =$ 0 . 0 0 7

There is 1 sig fig. 1

$0.4003 =$ 0 . 4 0 0 3

4

There are 4 sig figs.

$0.600 =$ 0 . 6 0 0

3

There are 3 sig figs.

9 $0.020 =$.

There are sig figs.

10 $0.170 =$.

There are sig figs.

11 $0.003 =$.

There is sig fig.

12 $0.900 =$.

13 0.027300

.

14 0.006038

.

Perform these calculations and then give the number of sig figs that are in the answer.

15 $0.32^2 =$ Answer Sig Fig

16 $40.04 \div 50 =$ Answer

Sig Fig

17 $0.02^2 \div 0.5^3$

$=$

18 0.16×0.48^2

$=$

19 $0.2^7 =$

Convert these fractions to decimals and give the number of significant figures in the answer.

20 $\frac{8}{125} =$

21 $\frac{401}{5\,000} =$

22 $\frac{9}{12\,500} =$

23 $\frac{63}{900} =$

24 $\frac{5\,253}{12\,500} =$

25 $\frac{6}{48\,000} =$

26 $\frac{3\,113}{50\,000} =$

Numbers of Any Magnitude - Counting Significant Figures (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Break these numbers up into 'significant' and 'possible' significant figures.

Examples 0's at end are possible

2 300 = 2 3 0 0 (Significant: 2 3; Possible: 0 0)

0's between non-zero digits are significant

2 003 = 2 0 0 3 (Significant: 2 0 0 3)

Combination of the two

2 030 = 2 0 3 0 (Significant: 2 0 3; Possible: 0)

1 460 = 4 6 0 (Significant: 4 6; Possible: 0)

2 5 000 = 5 0 0 0 (Significant: 5; Possible: 0 0 0)

3 4 705 = 4 7 0 5 (Significant: 4 7 0 5)

4 71 070 = 7 1 0 7 0 (Significant: 7 1 0 7; Possible: 0)

5 93 600 = 9 3 6 0 0 (Significant: 9 3 6; Possible: 0 0)

6 35 206 000

3 5 2 0 6 0 0 0 (Significant: 3 5 2 0 6; Possible: 0 0 0)

7 409 100

4 0 9 1 0 0 (Significant: 4 0 9 1; Possible: 0 0)

8 1 480 050

1 4 8 0 0 5 0 (Significant: 1 4 8 0 0 5; Possible: 0)

Now count the significant figures. Use the word 'or' between the possible sig figs.

Examples

2 300 = 2 3 0 0 (2 3 4)

There are 2 or 3 or 4 sig figs.

2 003 = 2 0 0 3 (4)

There are 4 sig figs.

2 030 = 2 0 3 0 (3 4)

There are 3 or 4 sig figs.

9 8 030 = 8 0 3 0 (3 4)

There are 3 or 4 sig figs.

10 3 400 = 3 4 0 0 (2 3 4)

There are 2 or 3 or 4 sig figs.

11 5 043 = 5 0 4 3 (4)

There are 4 sig figs.

12 70 900

7 0 9 0 0 (3 4 5)

There are 3 or 4 or 5 sig figs

13 8 619 000

8 6 1 9 0 0 0 (4 5 6 7)

There are 4 or 5 or 6 or 7 sig figs

14 406 100

4 0 6 1 0 0 (5 6)

There are 4 or 5 or 6 sig figs

15 9 005 020

9 0 0 5 0 2 0 (6 7)

There are 6 or 7 sig figs

16 120 000

1 2 0 0 0 0 (2 3 4 5 6)

There are 2 or 3 or 4 or 5 or 6 sig figs

17 27 000 050

2 7 0 0 0 0 5 0 (7 8)

There are 7 or 8 sig figs

If a decimal is larger than 1, all the digits in the decimal are significant. Count those sig figs.

Examples

23.00 There are 4 sig figs.

2.0030 There are 5 sig figs.

2000.30 There are 6 sig figs.

18 1.0 There are 2 sig figs

19 5.100 There are 4 sig figs

20 75.03 There are 4 sig figs

21 195.00 There are 5 sig figs

Numbers of Any Magnitude - Counting Significant Figures (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Break these decimals up into 'ignore' and 'significant' figures.

Examples Ignore all leading 0's

0.007 = 0 . 0 0 7
Ignore Significant

0's between non-zero digits are significant

0.4003 = 0 . 4 0 0 3
Ignore Significant

0's to the right are also significant

0.0600 = 0 . 0 6 0 0
Ignore Significant

1 0.88 = 0 . 8 8
Ignore Significant

2 0.027 = 0 . 0 2 7
Ignore Significant

3 0.050 = 0 . 0 5 0
Ignore Significant

4 0.010200

0 . 0 1 0 2 0 0
Ignore Significant

5 0.000775

0 . 0 0 0 7 7 5
Ignore Significant

6 0.009003

0 . 0 0 9 0 0 3
Ignore Significant

7 0.50010

0 . 5 0 0 1 0
Ignore Significant

8 0.400 = 0 . 4 0 0
Ignore Significant

Now underline and then count the significant figures. Ignore all the leading zeros.

Examples

0.007 = 0 . 0 0 7
There is 1 sig fig. 1

0.4003 = 0 . 4 0 0 3
4
There are 4 sig figs.

0.600 = 0 . 6 0 0
3
There are 3 sig figs.

9 0.020 = 0 . 0 2 0
2

There are 2 sig figs.

10 0.170 = 0 . 1 7 0
3

There are 3 sig figs.

11 0.003 = 0 . 0 0 3
1

There is 1 sig fig.

12 0.900 = 0 . 9 0 0
3

There are 3 significant figures

13 0.027300

0 . 0 2 7 3 0 0
5

There are 5 significant figures

14 0.006038

0 . 0 0 6 0 3 8
4

There are 4 significant figures

Perform these calculations and then give the number of sig figs that are in the answer.

15 0.32^2 = 0.1024 (Answer) 4 (Sig Fig)

16 40.04 ÷ 50 = 0.8008 (Answer)
Sig Fig 4

17 $0.02^2 \div 0.5^3$
= 0.0032 2

18 0.16×0.48^2
= 0.036864 5

19 0.2^7 = 0.0000128
3

Convert these fractions to decimals and give the number of significant figures in the answer.

20 $\frac{8}{125}$ = 0.064 2

21 $\frac{401}{5\,000}$ = 0.0802 3

22 $\frac{9}{12\,500}$ = 0.00072 2

23 $\frac{63}{900}$ = 0.07 1

24 $\frac{5\,253}{12\,500}$ = 0.42024 5

25 $\frac{6}{48\,000}$ = 0.000125 3

26 $\frac{3\,113}{50\,000}$ = 0.06226 4

Numbers of Any Magnitude - Significant Figures and Rounding

Significant figures is a way of rounding answers without specifying decimal places. This type of rounding can be used for both numbers or decimals. The first sheet deals with whole numbers (and some decimals greater than 1). The second sheet deals with decimals, which are less than 1.

When you write a number to 1 significant figure, it has only 1 non-zero digit (unless it is 0). All the other digits become '0'.

When you write a number to 2 significant figures, it has only 2 non-zero digits (unless one or both of them are 0). All the other digits become '0'.

Examples of rounding Large Numbers
16 233
To 1 sig.fig. : 16233 → 20 000 (as 6 > 5)

When rounding to 1 sig. fig, use the second digit to round up or down

Examples of rounding Large Numbers
16 233
To 2 sig.fig. : 16233 → 16 000 (as 2 < 5)

When rounding to 2 sig. fig, use the third digit to round up or down

With decimals, the second worksheet, the leading zeros aren't considered significant figures. The first non-zero digit in a decimal is the first significant figure.

Examples of rounding Decimals
0.00073
To 1 sig.fig. : 0.00073 → 0.0007 (as 3 < 5)

When rounding to 1 sig. fig, use the digit after the first significant figure to round up or down. Ignore the leading zeros.

Examples of rounding Decimals
0.0007375
To 2 sig.fig. : 0.0007375 → 0.00074 (as 7 > 5)

When rounding to 2 sig. fig, use the digit after the second significant figure to round up or down. Ignore the leading zeros.

Significant Figures and Rounding - 1 & 2 Sig.Fig. (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers/decimals to 1 significant figure.

Examples $473 = 500$

7 more than 5 - Round up

$2\,372 = 2\,000$

3 less than 5 - Round down

1 $46 =$ ____ 2 $1.9 =$ ____

3 $5\,800 =$ ____

4 $3\,193 =$ ____

5 $81 =$ ____ 6 $6.6 =$ ____

7 $97\,100 =$ ____

8 $637\,522 =$ ____

Calculate these and give two answers. The actual answer, then rounded to 1 sig. fig.

9 $34^2 + 19^2 =$ ____ Actual

$=$ ____ 1 sig. fig.

10 $31^4 =$ ____ Actual

$=$ ____ 1 sig. fig.

11 $\sqrt{28\,224} =$ ____ Actual $=$ ____ 1 sig. fig.

12 $\dfrac{89 \times 116}{20} =$ ____ Actual

$=$ ____ 1 sig. fig.

13 $227^2 =$ ____ Actual

$=$ ____ 1 sig. fig.

Calculate the area of the rectangles and give the answer to 1 significant fig.

14

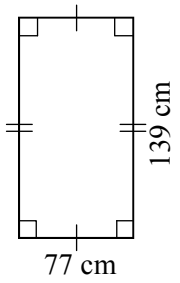
$A = lb$

$=$ ____ $\times$ ____

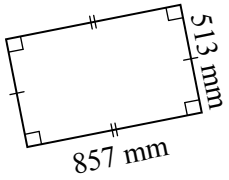
Multiply sides, in any order

$A =$ ____ cm^2

Answer to 1 sig fig



15



$A = lb$

$=$

$A =$ ____ mm^2

Answer to 1 sig fig

Write these to 2 significant figures.

Examples $473 = 470$

3 less than 5 - Round down

$2\,372 = 2\,400$

7 more than 5 - Round up

16 $386 =$ ____

17 $5 =$ ____ 18 $9 =$ ____

19 $25\,677 =$ ____

20 $507\,311 =$ ____

21 $89.7 =$ ____

22 $472.8 =$ ____

23 $3\,777\,529 =$ ____

24 $70\,813 =$ ____

Perform the calculations and answer to 1 and 2 sig. fig.

25 $516 \times 85 =$ ____ Actual

____ 1 sig. fig. ____ 2 sig. fig.

26 $84^3 =$ ____ Actual

____ 1 sig. fig. ____ 2 sig. fig.

27 $15^3 + 37^4 =$ ____ Actual

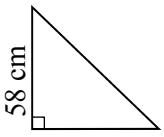
____ 1 sig. fig. ____ 2 sig. fig.

28 $\sqrt{59\,049} =$ ____ Actual

____ 1 sig. fig. ____ 2 sig. fig.

Find the area of these triangles answering to 2 sig. fig.

29



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ ____ $\times$ ____

0 . 5 × 6 3 × 5 8 =

$A =$ ____ cm^2

2 sig. fig.

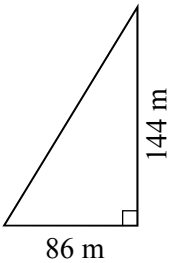
30

$A = \frac{1}{2}bh$

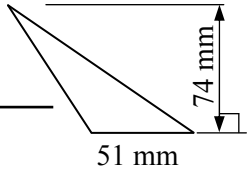
$= \frac{1}{2} \times$ ____ $\times$ ____

$A =$ ____ m^2

2 sig. fig.



31



2 sig. fig.

Significant Figures and Rounding Decimals - 1 & 2 Sig.Fig. (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these decimals to 1 significant figure.

Examples $0.0382 =$ 0.04

8 more than 5 - Round up

$0.0000539 =$ 0.00005

3 less than 5 - Round down

1 $0.0647 =$ ____

2 $0.00231 =$ ____

3 $0.000037 =$ ____

4 $0.00095 =$ ____

*careful

5 $0.849 =$ ____

6 $0.972 =$ ____

7 $0.000033 =$ ____

8 $0.00451388 =$ ____

Perform the calculation and write the answer, then the answer rounded to 1 significant figure.

9 $8 \div 6\,400$

____ Decimal - Actual

$=$ ____ 1 sig. fig.

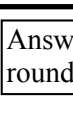
10 $\frac{125}{500\,000} =$ ____ Decimal - Actual

Use the S⇔D key $=$ ____ 1 sig. fig.

11 $\frac{21}{3\,360\,000}$

$=$ ____ Decimal - Actual

$=$ ____ 1 sig. fig.



Answer these as decimals and round to 1 significant figure.

12 $3 \div 1\,290 =$ ____ 1 sig. fig.

13 $\frac{83}{938\,508} =$ ____

14 $9 \div 9\,396 =$ ____

*careful

15 $37 \div 8\,771 =$ ____

16 $\frac{116}{117\,229} =$ ____

17 $\frac{3}{84\,080} =$ ____

18 $2^3 \div 2^{17} =$ ____

Round these decimals to 2 significant figures.

Examples $0.0382 =$ 0.038

2 less than 5 - Round down

$0.0000539 =$ 0.000054

9 more than 5 - Round up

19 $0.4531 =$ ____

20 $0.01039 =$ ____

21 $0.000317 =$ ____

22 $0.000997 =$ ____

*careful

23 $0.02007 =$ ____

24 $0.975 =$ ____

25 $0.068033 =$ ____

26 $0.000566 =$ ____

Calculate these, write the full answer first, then rounded to 2 significant figures.

27 $4 \div 3\,200 =$ ____ Decimal - Actual

$=$ ____ 2 sig. fig.

28 $141 \div 200\,000$

$=$ ____ Decimal - Actual $=$ ____ 2 sig. fig.

29 $281 \div 3\,125$

$=$ ____ Decimal - Actual $=$ ____ 2 sig. fig.

Calculate and write as decimals to both 1 & 2 significant figures.

30 $12 \div 4\,133$

$=$ ____ 1 sig. fig. $=$ ____ 2 sig. fig.

31 $2^7 \div 7^7$

$=$ ____ 1 sig. fig. $=$ ____ 2 sig. fig.

32 $\frac{499}{50\,000}$

$=$ ____ 1 sig. fig. $=$ ____ 2 sig. fig.

33 $5^2 \div 14^5$

$=$ ____ 1 sig. fig. $=$ ____ 2 sig. fig.

34 $\frac{179}{2\,500}$

$=$ ____ 1 sig. fig. $=$ ____ 2 sig. fig.

Significant Figures and Rounding - 1 & 2 Sig.Fig. (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers/decimals to 1 significant figure.

Examples $473 = 500$ (7 more than 5 - Round up)

$2\,372 = 2\,000$ (3 less than 5 - Round down)

1 $46 = 50$ 2 $1.9 = 2$

3 $5\,800 = 6\,000$

4 $3\,193 = 3\,000$

5 $81 = 80$ 6 $6.6 = 7$

7 $97\,100 = 100\,000$

8 $637\,522 = 600\,000$

Calculate these and give two answers. The actual answer, then rounded to 1 sig. fig.

9 $34^2 + 19^2 =$ 1 517 (Actual)

$=$ 2 000 (1 sig. fig.)

10 $31^4 =$ 923 521 (Actual)

$=$ 900 000 (1 sig. fig.)

11 $\sqrt{28\,224} =$ 168 (Actual) $=$ 200 (1 sig. fig.)

12 $\frac{89 \times 116}{20} =$ 516.2 (Actual)

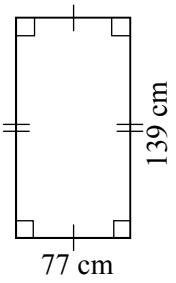
$=$ 500 (1 sig. fig.)

13 $227^2 =$ 51 529 (Actual)

$=$ 50 000 (1 sig. fig.)

Calculate the area of the rectangles and give the answer to 1 significant fig.

14



$A = lb$

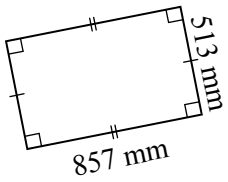
$= 139 \times 77$

Multiply sides, in any order

$A = 10\,000$ cm^2

Answer to 1 sig fig

15



$A = lb$

$= 857 \times 513$

$A = 400\,000$ mm^2

Answer to 1 sig fig

Write these to 2 significant figures.

Examples $473 = 470$ (3 less than 5 - Round down)

$2\,372 = 2\,400$ (7 more than 5 - Round up)

16 $386 = 390$

17 $5 = 5.0$ 18 $9 = 9.0$

19 $25\,677 = 26\,000$

20 $507\,311 = 510\,000$

21 $89.7 = 90$

22 $472.8 = 470$

23 $3\,777\,529 = 3\,800\,000$

24 $70\,813 = 71\,000$

Perform the calculations and answer to 1 and 2 sig. fig.

25 $516 \times 85 =$ 43 860 (Actual)

40 000 (1 sig. fig.) 44 000 (2 sig. fig.)

26 $84^3 =$ 592 704 (Actual)

600 000 (1 sig. fig.) 590 000 (2 sig. fig.)

27 $15^3 + 37^4 =$ 1 877 536 (Actual)

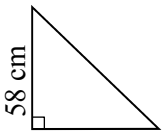
2 000 000 (1 sig. fig.) 1 900 000 (2 sig. fig.)

28 $\sqrt{59\,049} =$ 243 (Actual)

200 (1 sig. fig.) 240 (2 sig. fig.)

Find the area of these triangles answering to 2 sig. fig.

29



$A = \frac{1}{2}bh$

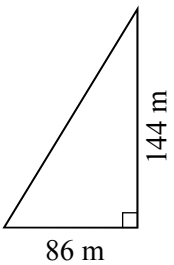
$= \frac{1}{2} \times 63 \times 58$

0 . 5 × 6 3 × 5 8 =

$A = 1\,800$ cm^2

2 sig. fig.

30



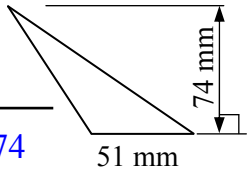
$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 86 \times 144$

$A = 6\,200$ m^2

2 sig. fig.

31



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times 51 \times 74$

$A = 1\,900$ mm^2

2 sig. fig.

Significant Figures and Rounding Decimals - 1 & 2 Sig.Fig. (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these decimals to 1 significant figure.

Examples $0.0382 =$ 0.04

8 more than 5 - Round up

$0.0000539 =$ 0.00005

3 less than 5 - Round down

1. $0.0647 =$ 0.06
2. $0.00231 =$ 0.002
3. $0.000037 =$ 0.00004
4. $0.00095 =$ 0.001 *careful
5. $0.849 =$ 0.8
6. $0.972 =$ 1
7. $0.000033 =$ 0.00003
8. $0.00451388 =$ 0.005

Perform the calculation and write the answer, then the answer rounded to 1 significant figure.

9. $8 \div 6\,400$ = 0.00125 Decimal - Actual = 0.001 1 sig. fig.
10. $\frac{125}{500\,000}$ = 0.00025 Decimal - Actual Use the S⇔D key = 0.0003 1 sig. fig.
11. $\frac{21}{3\,360\,000}$ = 0.00000625 Decimal - Actual = 0.000006 1 sig. fig.

Answer these as decimals and round to 1 significant figure.

12. $3 \div 1\,290 =$ 0.002 1 sig. fig.
13. $\frac{83}{938\,508} =$ 0.00009
14. $9 \div 9\,396 =$ 0.001 *careful
15. $37 \div 8\,771 =$ 0.004
16. $\frac{116}{117\,229} =$ 0.001
17. $\frac{3}{84\,080} =$ 0.00004
18. $2^3 \div 2^{17} =$ 0.00006

Round these decimals to 2 significant figures.

Examples $0.0382 =$ 0.038

2 less than 5 - Round down

$0.0000539 =$ 0.000054

9 more than 5 - Round up

19. $0.4531 =$ 0.45
20. $0.01039 =$ 0.010

Numbers of Any Magnitude - Units of Time

This sheet deals with the changing from one time unit to another. Time is measured in: Milliseconds (msec), seconds (s or sec), minutes (min), hours (h), days, weeks, years, decades, centuries, millennia and other units. In business and especially in the construction industry units such as years have to be broken into smaller units like weeks or even days, so that accurate scheduling can occur.

Column 1 in the first worksheet asks you to allocate the correct unit that should be used in a specific case. It may be that there are two answers, choose the most appropriate one.

Column 2 asks you to convert time periods to days, and later to hours. These are commonly used units and you should ensure that you remember key conversions which are:

Key Conversions:

60 seconds in 1 minute
60 minutes in 1 hour
24 hours in 1 day
7 days in 1 week
52 weeks in 1 year
12 months in 1 year
365 days in 1 year (366 for a leap year)

Column 3 features a mixture of time units and specifies what unit to convert them to.

The 2nd worksheet is more calculator focused. Starting with converting from hours to minutes and the reverse. The calculator's Degrees/minutes/seconds button is used to answer these questions, there are examples at the top of the column.

The last column features basic operations with a calculator, remember that when using the button on the calculator that if the question is minutes only, you have to enter a '0' for hours. You can't enter minutes only.

Milliseconds are 1 thousandth of a second. So conversion between milliseconds and seconds will involve multiplying and dividing by 1 000. Note that you can answer these questions without a calculator by moving the decimal place 3 places also.

Numbers of Any Magnitude - Units of Time/Conversions (Sheet 1)

Use each of these words once to answer the questions. What is the most appropriate time unit to use to measure …….

Wordlist:	seconds	days
years	hours	decade
centuries	millennia	milliseconds
minutes	weeks	Cross them out

1 A person's age _____

2 The time that humans have lived in cities _____

3 A 10 year period _____

4 The time to cook a meal _____

5 The time taken for a pierced balloon to 'pop' _____

6 The time you are allowed to borrow a book from the library _____

7 The amount of time that you sleep daily _____

8 The time a tourist might spend visiting a foreign city _____

9 The time humans have used coal for heating. _____

10 The time taken to cross the street. _____

Convert these larger time periods to days. One year is 365 days, ignoring leap years.

11 2 years = ____ × 365

= ____ days

12 1 decade = ____ × 365

= ____ days

13 17 years = _____

= _____

14 3 centuries = _____

= _____

Convert these times to times measured in hours. 1 day is 24 hours in duration.

15 5 days = ____ × 24

= ____ hours

16 3 weeks = ____ × ____ × ____

= ____ hours

17 July = _____

= _____

18 1 year = _____

= _____

Match the right side with the left.

19

1 year ●	● 3 days
3 weeks ●	● 52 weeks
72 hours ●	● 576 hours
24 days ●	● 21 days

Convert these units of time to the different unit on the right hand side.

20 2 weeks = ____ days

21 1 year = ____ weeks

22 3 days = ____ hours

23 ½ hour = ____ min

24 104 weeks = ____ years

25 6 min = ____ seconds

26 2 h = ____ min

27 1 leap year = ____ days

28 4 weeks = ____ days

29 3 decades = ____ years

30 9 min = ____ seconds

31 24 months = ____ years

32 4 centuries = ____ decades

33 ½ year = ____ months

34 5 days = ____ hours

35 2 fortnights = ____ weeks

36 300 s = ____ min

37 156 weeks = ____ years

38 September = ____ days

39 2 millennia = ____ years

40 March + May = ____ days

Numbers of Any Magnitude - Units of Time/Conversions (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Rewrite the calculator displays in h and min.

1  ____ h ____ m

Hours Minutes

2  ____ h ____ m

3  ____ h ____ m

4  ____ h ____ m

Convert the following times from minutes to hours and minutes.

Example

Convert 211 minutes to hours/minutes.

Calc: 0 ° ’ ’’ 2 1 1 ° ’ ’’ =

Display: 

3 h 31 min

5 193 min ____ h ____ min

6 185 min ____ h ____ min

7 247 min ____ h ____ min

8 744 min _____

9 490 min _____

10 333 min _____

11 296 min _____

12 575 min _____

13 1 541 min _____

Now backwards. Change times in hours/minutes to minutes.

Example

Convert 4 h 19 min to minutes.

Calc: 4 ° ’ ’’ 1 9 ° ’ ’’ × 6 0 =

Display: 

259 min

14 3 h 38 min _____ min

15 1 h 43 min _____ min

16 2 h 27 min _____ min

17 6 h 6 min _____ min

18 7 h 25 min _____

19 1 h 19 min _____

20 4 h 53 min _____

21 5 h _____

22 2 h 48 min _____

Now use ×, +, ÷ and - with these time operations.

Example 47 min × 4

Calc: 0 ° ’ ’’ 4 7 ° ’ ’’ × 4 =

If no hours, enter ‘0’ in hours

Display: 

3 h 8 min

23 8 × 23 min ____ h ____ min

24 7 × 1 h 16 min

____ h ____ min

25 19 h 57 min ÷ 9

____ h ____ min

26 2 h 38 min + 1 h 43 min

____ h ____ min

27 5 h 19 min - 2 h 56 min

____ h ____ min

28 54 min × 6 + 3 h 7 min ÷ 11 + 1 h 27 min

____ h ____ min

There are 1 000 milliseconds in a second. Change these times to milliseconds by: × by 1 000.

29 2 sec _____ msec

30 3.2 sec _____ msec

31 0.08 sec _____

32 0.076 sec _____

33 4.4 sec _____

34 0.55 sec _____

35 0.00007 sec _____

Change these times from milliseconds to seconds by ÷ by 1 000.

36 700 msec _____ sec

37 95 msec _____ sec

38 7 100 msec _____

39 0.2 msec _____

40 40 msec _____

41 999 msec _____

42 635.7 msec _____

Numbers of Any Magnitude - Units of Time/Conversions (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use each of these words once to answer the questions. What is the most appropriate time unit to use to measure …….

Wordlist: ~~seconds~~ ~~days~~ ~~years~~ ~~hours~~ ~~decade~~ ~~centuries~~ ~~millennia~~ ~~milliseconds~~ ~~minutes~~ ~~weeks~~

Cross them out

1 A person's age **years**

2 The time that humans have lived in cities **millennia**

3 A 10 year period **decade**

4 The time to cook a meal **minutes**

5 The time taken for a pierced balloon to 'pop' **milliseconds**

6 The time you are allowed to borrow a book from the library **weeks**

7 The amount of time that you sleep daily **hours**

8 The time a tourist might spend visiting a foreign city **days**

9 The time humans have used coal for heating. **centuries**

10 The time taken to cross the street. **seconds**

Convert these larger time periods to days. One year is 365 days, ignoring leap years.

11 2 years = 2 × 365
= 730 days

12 1 decade = 10 × 365
= 3 650 days

13 17 years = 17 × 365
= 6 205 days

14 3 centuries = 300 × 365
= 109 500 days

Convert these times to times measured in hours. 1 day is 24 hours in duration.

15 5 days = 5 × 24
= 120 hours

16 3 weeks = 3 × 7 × 24
= 504 hours

17 July = 31 × 24
= 744 hours

18 1 year = 365 × 24
= 8 760 hours

Match the right side with the left.

19

1 year	3 days
3 weeks	52 weeks
72 hours	576 hours
24 days	21 days

Convert these units of time to the different unit on the right hand side.

20 2 weeks = 14 days

21 1 year = 52 weeks

22 3 days = 72 hours

23 ½ hour = 30 min

24 104 weeks = 2 years

25 6 min = 360 seconds

26 2 h = 120 min

27 1 leap year = 366 days

28 4 weeks = 28 days

29 3 decades = 30 years

30 9 min = 540 seconds

31 24 months = 2 years

32 4 centuries = 40 decades

33 ½ year = 6 months

34 5 days = 120 hours

35 2 fortnights = 4 weeks

36 300 s = 5 min

37 156 weeks = 3 years

38 September = 30 days

39 2 millennia = 2 000 years

40 March + May = 62 days
31 31

Numbers of Any Magnitude - Units of Time/Conversions (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Rewrite the calculator displays in h and min.

1  3 h 43 m

Hours Minutes

2  5 h 23 m

3  6 h 54 m

4  8 h 19 m

Convert the following times from minutes to hours and minutes.

Example

Convert 211 minutes to hours/minutes.

Calc: 0 ° ’ ’’ 2 1 1 ° ’ ’’ =

Display: 

3 h 31 min

5 193 min — 3 h 13 min

6 185 min — 3 h 5 min

7 247 min — 4 h 7 min

8 744 min — 12 h 24 min

9 490 min — 8 h 10 min

10 333 min — 5 h 33 min

11 296 min — 4 h 56 min

12 575 min — 9 h 35 min

13 1 541 min — 25 h 41 min

Now backwards. Change times in hours/minutes to minutes.

Example

Convert 4 h 19 min to minutes.

Calc: 4 ° ’ ’’ 1 9 ° ’ ’’ × 6 0 =

Display: 

259 min

14 3 h 38 min — 218 min

15 1 h 43 min — 103 min

16 2 h 27 min — 147 min

17 6 h 6 min — 366 min

18 7 h 25 min — 445 min

19 1 h 19 min — 79 min

20 4 h 53 min — 293 min

21 5 h — 300 min

22 2 h 48 min — 168 min

Now use ×, +, ÷ and - with these time operations.

Example 47 min × 4

Calc: 0 ° ’ ’’ 4 7 ° ’ ’’ × 4 =

If no hours, enter ‘0’ in hours

Display: 

3 h 8 min

23 8 × 23 min — 3 h 4 min

24 7 × 1 h 16 min — 8 h 52 min

25 19 h 57 min ÷ 9 — 2 h 13 min

26 2 h 38 min + 1 h 43 min — 4 h 21 min

27 5 h 19 min - 2 h 56 min — 2 h 23 min

28 54 min × 6 + 3 h 7 min ÷ 11 + 1 h 27 min — 7 h 8 min

There are 1 000 milliseconds in a second. Change these times to milliseconds by: × by 1 000.

29 2 sec — 2 000 msec

30 3.2 sec — 3 200 msec

31 0.08 sec — 80 msec

32 0.076 sec — 76 msec

33 4.4 sec — 4 400 msec

34 0.55 sec — 550 msec

35 0.00007 sec — 0.07 msec

Change these times from milliseconds to seconds by ÷ by 1 000.

36 700 msec — 0.7 sec

37 95 msec — 0.095 sec

38 7 100 msec — 7.1 sec

39 0.2 msec — 0.0002 sec

40 40 msec — 0.04 sec

41 999 msec — 0.999 sec

42 635.7 msec — 0.6357 sec

Numbers of Any Magnitude - Scientific Notation (Positive Index)

Scientific Notation is a method of writing very large or very small numbers, without writing all the digits. For example distance of the Earth from the Sun, or the number of molecules in a sample of fluid. The sheets in this sub-topic deal with large numbers, the next sheets deals with decimals.

To convert to scientific notation, you count the number of times you 'hop' the decimal place to the left to get behind the first digit, that number of hops becomes the index on the 10.

Example:

$7\,0\,0\,0\,0\,0\,0\,0 = 7 \times 10^{7}$

7 hops

Note above how much smaller the number is to write. It converts large numbers into more easy to handle sizes.

The front leading digit can be a decimal, for example, you can have:

$$310\,000 = 3.1 \times 10^5 \qquad 312\,000 = 3.12 \times 10^5$$

And like decimals, these leading numbers can be rounded. To the nearest whole number, or a specific decimal place.

Sheets 1 and 2 focus on converting numbers to scientific notation format.

Sheet 3 deals mainly with comparing and multiplying numbers in scientific notation format. When you compare numbers, you have to compare two parts.

The power on the base of 10. The larger the power, the larger the number.

For example: 3.12×10^5 is larger than 3.12×10^4, because the power of 5 is more than the power of 4.

The larger the leading numbers, the larger the number.

For example: 4.12×10^5 is larger than 3.12×10^5, because 4.12 is larger than 3.12.

So there are two things to look at. But the power is the first decider.

The last part of sheet 3 outlines how you can multiply numbers in scientific notation format. You can multiply the leading numbers and using your indice skills, add the powers.

So $3 \times 10^5 \times 2 \times 10^3 = 2 \times 3 \times 10^5 \times 10^3 = 6 \times 10^{5+3} = 6 \times 10^8$

Scientific Notation (Non-Calc) - Positive Index - No Rounding (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these numbers into scientific notation format. By hopping the decimal point to be behind the first digit.

Example Convert 4 000.

$4\,000 = 4 \times 10^{3}$

3 places

1 $6\,000 = 6 \times 10^{\square}$

2 $5\,000\,000 = 5 \times 10^{\square}$

3 $70\,000 = 7 \times 10^{\square}$

4 $30\,000\,000 = 3 \times 10^{\square}$

Now you do the hopping, use a pencil

5 $80\,000 = 8 \times 10^{\square}$

6 $1\,000 = 1 \times 10^{\square}$

7 $9\,000\,000 = 9 \times 10^{\square}$

Now the first number and the index

8 $40\,000 = \square \times 10^{\square}$

9 $7\,000\,000 = \square \times 10^{\square}$

10 $30\,000 = \square \times 10^{\square}$

Now the lot, the base is always 10.

11 $300\,000 = \square \times \square^{\square}$

12 $50\,000\,000\,000\,000\,000 = \square \times \square^{\square}$

13 $20\,000\,000\,000\,000 = \square \times \square^{\square}$

14 $600\,000 = \square \times \square^{\square}$

15 $8\,000 = \square \times \square^{\square}$

16 $100\,000\,000 = \square \times \square^{\square}$

17 $20\,000 =$ _____

18 $900\,000\,000 =$ _____

19 $100\,000 =$ _____

20 $4\,000\,000 =$ _____

Any additional non-zero digits are written to the right of the decimal point. Convert these.

Examples

$320 = 3.2 \times 10^{2}$

$570\,000 = 5.7 \times 10^{5}$

21 $75\,000 = \square.\square \times \square^{\square}$

22 $8\,800\,000 = \square.\square \times \square^{\square}$

23 $950\,000\,000 =$ _____

24 $7\,700\,000\,000 =$ _____

25 $4\,500 =$ _____

26 $61\,000\,000 =$ _____

Now there are two decimal places

27 $62\,800\,000 = \square.\square\square \times \square^{\square}$

28 $593\,000\,000\,000\,000 = \square.\square\square \times \square^{\square}$

29 $40\,700\,000\,000 = \square.\square\square \times \square^{\square}$

30 $712\,000\,000 = \square.\square\square \times \square^{\square}$

31 $21\,400 =$ _____

32 $807 =$ _____

33 $9\,090\,000 =$ _____

34 $5\,770\,000\,000\,000\,000\,000 =$ _____

35 $81\,600\,000\,000\,000 =$ _____

These have more than 3 leading significant digits. Include all of them. Convert these.

Examples

$170\,600 = 1.706 \times 10^{5}$

$8\,167\,200\,000 = 8.1672 \times 10^{9}$

36 $88\,760 = \square.\square\square\square \times \square^{\square}$

37 $13\,676\,000\,000 = \square.\square\square\square\square \times \square^{\square}$

38 $50\,255\,800\,000\,000 =$ _____

39 $14\,950\,000 =$ _____

40 $3\,006\,520\,000\,000 =$ _____

41 $804\,370\,000 =$ _____

Scientific Notation (Non-Calc) - Positive Index - Rounding (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers shown in scientific notation format, to 1 decimal place.

Examples

$4.35 \times 10^9 = 4.4 \times 10^9$

as 5 is 5 or more, round up

$2.9712 \times 10^{14} = 3.0 \times 10^{14}$

as 7 > 5 round up

$3.4218 \times 10^5 = 3.4 \times 10^5$

as 2 < 5 round down

1 4.16×10^5

= ☐.☐ × ☐☐

2 3.71×10^8

= ☐.☐ × ☐☐

3 9.093×10^6

= ☐.☐ × ☐☐

4 1.7504×10^{11} =

5 6.022×10^{23} =

6 5.074×10^{14} =

7 5.9528×10^9 =

8 7.97×10^3 =

Convert and then round to 1 d.p.

9 3 170 000

= ☐.☐☐ × ☐☐

= ☐.☐ × ☐☐

10 856 000

= ☐.☐☐ × ☐☐

Scientific Notation (Non-Calc) - Positive Index (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

These have a decimal point. Move it to be behind the first digit to express in scientific notation, rounding to 1 d.p.

Examples

$46\,789.7 = 4.7 \times 10^4$

$789\,523.78 = 7.9 \times 10^5$

1 976.4

$= \square.\square \times \square^{\square}$

2 575 009.135

$= \square.\square \times \square^{\square}$

3 4 096 216.88

$= \square.\square \times \square^{\square}$

4 1 143 215.9216

$=$ _____

5 198.636

$=$ _____

6 509 159 608.2816

$=$ _____

7 76 682.0053

$=$ _____

Point the < or > to the smallest numbers, which are expressed in scientific notation.

8 5.3×10^4 ☐ 2.4×10^4

9 8.01×10^9 ☐ 8.10×10^9

10 5.32×10^5 ☐ 5.32×10^7

11 7×10^9 ☐ 7.6×10^8

Rewrite these in ascending order. That means smallest to largest.

12 5.3×10^4, 2.7×10^4, 3.8×10^4, 5.9×10^4.

$=$ _____ (Smallest) , _____ , _____ , _____ (Largest) .

13 8.2×10^7, 8.2×10^5, 8.2×10^6, 8.2×10^3.

$=$ _____ , _____ , _____ , _____ .

14 3.3×10^6, 3.11×10^6, 3.1×10^6, 3.33×10^6.

$=$ _____ , _____ , _____ , _____ .

15 6.7×10^8, 4.02×10^5, 5.8×10^7, 5.89×10^8.

$=$ _____ , _____ , _____ , _____ .

Rewrite these two in descending order, that's largest to smallest.

16 4×10^{11}, 5.6×10^{10}, 2.9×10^{11}, 1.4×10^{12}.

$=$ _____ (Largest) , _____ , _____ , _____ (Smallest) .

17 1.7×10^9, 7.01×10^8, 1.71×10^9, 7.1×10^8.

$=$ _____ , _____ , _____ , _____ .

You can multiply numbers in scientific notation. Multiply the leading numbers and **ADD** the indexes. Multiply these.

Example $2 \times 10^7 \times 3 \times 10^4 = 2 \times 3 \times 10^7 \times 10^4 = 6 \times 10^{11}$.

18 $2 \times 10^2 \times 4 \times 10^5 =$ $\square \times \square \times \square^{\square} \times \square^{\square} = \square \times \square^{\square}$

19 $3 \times 10^8 \times 3 \times 10^6 =$ $\square \times \square \times \square^{\square} \times \square^{\square} = \square \times \square^{\square}$

20 $1 \times 10^7 \times 7 \times 10^4 =$ $\square \times \square \times \square^{\square} \times \square^{\square} = \square \times \square^{\square}$

With these, when you multiply you will get a two digit leading number. Change this back to a decimal and add 1 (+1) to the power.

Example $2 \times 10^7 \times 7 \times 10^4$

$= 2 \times 7 \times 10^7 \times 10^4$

$= 14 \times 10^{11} = 1.4 \times 10^{12}$

21 $3 \times 10^6 \times 5 \times 10^3$

$= \square \times \square \times \square^{\square} \times \square^{\square}$

$= \square \times \square^{\square}$

$= \square.\square \times \square^{\square}$

22 $7 \times 10^8 \times 4 \times 10^9$

$= \square \times \square \times \square^{\square} \times \square^{\square}$

$= \square \times \square^{\square}$

$= \square.\square \times \square^{\square}$

Scientific Notation (Non-Calc) - Positive Index - No Rounding (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these numbers into scientific notation format. By hopping the decimal point to be behind the first digit.

Example Convert 4 000.

$4\,000 = 4 \times 10^{3}$

3 places

1 $6\,00 = 6 \times 10^{2}$

2 $5\,000\,000 = 5 \times 10^{6}$

3 $70\,000 = 7 \times 10^{4}$

4 $3\,000\,000\,00 = 3 \times 10^{7}$

Now you do the hopping, use a pencil

5 $80\,000 = 8 \times 10^{4}$

6 $1\,000 = 1 \times 10^{3}$

7 $9\,000\,000 = 9 \times 10^{6}$

Now the first number and the index

8 $40\,000 = 4 \times 10^{4}$

9 $7\,000\,000 = 7 \times 10^{6}$

10 $30\,000 = 3 \times 10^{4}$

Now the lot, the base is always 10.

11 $300\,000 = 3 \times 10^{5}$

12 $50\,000\,000\,000\,000 = 5 \times 10^{13}$

13 $20\,000\,000\,000 = 2 \times 10^{10}$

14 $600\,000 = 6 \times 10^{5}$

15 $8\,000 = 8 \times 10^{3}$

16 $100\,000\,000 = 1 \times 10^{8}$

17 $20\,000 = 2 \times 10^{4}$

18 $900\,000\,000 = 9 \times 10^{8}$

19 $100\,000 = 1 \times 10^{5}$

20 $4\,000\,000 = 4 \times 10^{6}$

Any additional non-zero digits are written to the right of the decimal point. Convert these.

Examples

$320 = 3.2 \times 10^{2}$

$570\,000 = 5.7 \times 10^{5}$

21 $75\,000 = 7.5 \times 10^{4}$

22 $8\,800\,000 = 8.8 \times 10^{6}$

23 $950\,000\,000 = 9.5 \times 10^{8}$

24 $7\,700\,000\,000 = 7.7 \times 10^{9}$

25 $4\,500 = 4.5 \times 10^{3}$

26 $61\,000\,000 = 6.1 \times 10^{7}$

Now there are two decimal places

27 $62\,800\,000 = 6.28 \times 10^{7}$

28 $593\,000\,000\,000\,000 = 5.93 \times 10^{14}$

29 $40\,700\,000\,000 = 4.07 \times 10^{10}$

30 $712\,000\,000 = 7.12 \times 10^{8}$

31 $21\,400 = 2.14 \times 10^{4}$

32 $807 = 8.07 \times 10^{2}$

33 $9\,090\,000 = 9.09 \times 10^{6}$

34 $5\,770\,000\,000\,000\,000\,000 = 5.77 \times 10^{18}$

35 $81\,600\,000\,000\,000 = 8.16 \times 10^{13}$

These have more than 3 leading significant digits. Include all of them. Convert these.

Examples

$170\,600 = 1.706 \times 10^{5}$

$8\,167\,200\,000 = 8.1672 \times 10^{9}$

36 $88\,760 = 8.8760 \times 10^{4}$

37 $13\,676\,000\,000 = 1.36760 \times 10^{10}$

38 $50\,255\,800\,000\,000 = 5.02558 \times 10^{13}$

39 $14\,950\,000 = 1.495 \times 10^{7}$

40 $3\,006\,520\,000\,000 = 3.00652 \times 10^{12}$

41 $804\,370\,000 = 8.0437 \times 10^{8}$

Scientific Notation (Non-Calc) - Positive Index - Rounding (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers shown in scientific notation format, to 1 decimal place.

Examples

$4.35 \times 10^9 = 4.4 \times 10^9$ as 5 is 5 or more, round up

$2.9712 \times 10^{14} = 3.0 \times 10^{14}$ as 7 > 5 round up

$3.4218 \times 10^5 = 3.4 \times 10^5$ as 2 < 5 round down

1 4.16×10^5

$= 4.2 \times 10^5$ (5)

2 3.71×10^8

$= 3.7 \times 10^8$ (8)

3 9.093×10^6

$= 9.1 \times 10^6$ (6)

4 $1.7504 \times 10^{11} = 1.8 \times 10^{11}$

5 $6.022 \times 10^{23} = 6.0 \times 10^{23}$

6 $5.074 \times 10^{14} = 5.1 \times 10^{14}$

7 $5.9528 \times 10^9 = 6.0 \times 10^9$

8 $7.97 \times 10^3 = 8.0 \times 10^3$

Convert and then round to 1 d.p.

9 3 170 000

$= 3.17 \times 10^6$ (6)

$= 3.2 \times 10^6$ (6)

10 856 000

$= 8.56 \times 10^5$ (5)

$= 8.6 \times 10^5$ (5)

11 40 720 000 $= 4.072 \times 10^7$

$= 4.1 \times 10^7$

12 271 000 $= 2.71 \times 10^5$

$= 2.7 \times 10^5$

13 859 400 000 $= 8.594 \times 10^8$

$= 8.6 \times 10^8$

Now go straight to the rounded answer

14 5 183 000

$= 5.2 \times 10^6$ (6)

15 70 494

$= 7.0 \times 10^4$ (4)

16 8 153

$= 8.2 \times 10^3$ (3)

17 1 777 803 225 431 650

$= 1.8 \times 10^{15}$ (15)

18 38 910 583 004

$= 3.9 \times 10^{10}$ (10)

Round these numbers shown in scientific notation format, to 2 decimal places.

19 5.316×10^7

$= 5.32 \times 10^7$ (7)

20 7.706×10^4

$= 7.71 \times 10^4$ (4)

21 8.073×10^{12}

$= 8.07 \times 10^{12}$ (12)

22 1.60371×10^{19}

$= 1.60 \times 10^{19}$

23 4.04938×10^{13}

$= 4.05 \times 10^{13}$

Convert these numbers to scientific notation format, rounding to 2 decimal places.

24 2 337 000

$= 2.34 \times 10^6$ (6)

25 49 993 414

$= 5.00 \times 10^7$ (7)

26 5 660 177 400 812

$= 5.66 \times 10^{12}$ (12)

27 914 731 422

$= 9.15 \times 10^8$ (8)

28 349 961

$= 3.50 \times 10^5$

29 79 965 223 000

$= 8.00 \times 10^{10}$

Now to 3 decimal places

30 107 463 020

$= 1.075 \times 10^8$ (8)

31 50 962 851 000

$= 5.096 \times 10^{10}$ (10)

32 177 966

$= 1.780 \times 10^5$

Convert to scientific notation and round to 1 decimal place. These last two are different.

33 9 960 000

$= 10.0 \times 10^6$

$= 1.0 \times 10^7$

34 99 543 100 080

$= 10.0 \times 10^{10}$

$= 1.0 \times 10^{11}$

Scientific Notation (Non-Calc) - Positive Index (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

These have a decimal point. Move it to be behind the first digit to express in scientific notation, rounding to 1 d.p.

Examples

$46\,789.7 = 4.7 \times 10^4$

$789\,523.78 = 7.9 \times 10^5$

1 976.4

$= 9.8 \times 10^{2}$

2 575 009.135

$= 5.8 \times 10^{5}$

3 4 096 216.88

$= 4.1 \times 10^{6}$

4 1 143 215.9216

$= 1.1 \times 10^6$

5 198.636

$= 2.0 \times 10^2$

6 509 159 608.2816

$= 5.1 \times 10^8$

7 76 682.0053

$= 7.7 \times 10^4$

Point the < or > to the smallest numbers, which are expressed in scientific notation.

8 5.3×10^4 [>] 2.4×10^4

9 8.01×10^9 [<] 8.10×10^9

10 5.32×10^5 [<] 5.32×10^7

11 7×10^9 [>] 7.6×10^8

Rewrite these in ascending order. That means smallest to largest.

12 5.3×10^4, 2.7×10^4, 3.8×10^4, 5.9×10^4.

$= 2.7 \times 10^4$ (Smallest), 3.8×10^4, 5.3×10^4, 5.9×10^4 (Largest).

13 8.2×10^7, 8.2×10^5, 8.2×10^6, 8.2×10^3.

$= 8.2 \times 10^3$, 8.2×10^5, 8.2×10^6, 8.2×10^7.

14 3.3×10^6, 3.11×10^6, 3.1×10^6, 3.33×10^6.

$= 3.1 \times 10^6$, 3.11×10^6, 3.3×10^6, 3.33×10^6.

15 6.7×10^8, 4.02×10^5, 5.8×10^7, 5.89×10^8.

$= 4.02 \times 10^5$, 5.8×10^7, 5.89×10^8, 6.7×10^8.

Rewrite these two in descending order, that's largest to smallest.

16 4×10^{11}, 5.6×10^{10}, 2.9×10^{11}, 1.4×10^{12}.

$= 1.4 \times 10^{12}$ (Largest), 4×10^{11}, 2.9×10^{11}, 5.6×10^{10} (Smallest).

17 1.7×10^9, 7.01×10^8, 1.71×10^9, 7.1×10^8.

$= 1.71 \times 10^9$, 1.7×10^9, 7.1×10^8, 7.01×10^8.

You can multiply numbers in scientific notation. Multiply the leading numbers and **ADD** the indexes. Multiply these.

Example $2 \times 10^7 \times 3 \times 10^4 = 2 \times 3 \times 10^7 \times 10^4 = 6 \times 10^{11}$.

18 $2 \times 10^2 \times 4 \times 10^5 = 2 \times 4 \times 10^{2} \times 10^{5} = 8 \times 10^{7}$

19 $3 \times 10^8 \times 3 \times 10^6 = 3 \times 3 \times 10^{8} \times 10^{6} = 9 \times 10^{14}$

20 $1 \times 10^7 \times 7 \times 10^4 = 1 \times 7 \times 10^{7} \times 10^{4} = 7 \times 10^{11}$

With these, when you multiply you will get a two digit leading number. Change this back to a decimal and add 1 (+1) to the power.

Example $2 \times 10^7 \times 7 \times 10^4$

$= 2 \times 7 \times 10^7 \times 10^4$

$= 14 \times 10^{11} = 1.4 \times 10^{12}$

21 $3 \times 10^6 \times 5 \times 10^3$

$= 3 \times 5 \times 10^{6} \times 10^{3}$

$= 15 \times 10^{9}$

$= 1.5 \times 10^{10}$

22 $7 \times 10^8 \times 4 \times 10^9$

$= 7 \times 4 \times 10^{8} \times 10^{9}$

$= 28 \times 10^{17}$

$= 2.8 \times 10^{18}$

Scientific Notation (Non-Calc) - Positive Index (Homework Strip)

10. $113\,800\,000 = 1.138 \times 10^{8}$

Numbers of Any Magnitude - Scientific Notation (Negative Index)

Scientific Notation is a method of writing very large or very small numbers, without writing all the digits. For example distance of the Earth from the Sun, or the thickness of a human hair. The sheets in this sub-topic deal with decimals, which have a negative index.

To convert to scientific notation, you count the number of times you 'hop' the decimal place to the right to get behind the first non-zero digit, that number of hops becomes the index on the 10, but because you are hopping to the right, it is negative.

Example: Convert 0.0007 to scientific notation format.

$0.0007 = 7 \times 10^{-4}$

4 hops

Note above how much smaller the number is to write. It converts very small decimals into more easy to handle sizes.

The front leading digit can be a decimal, for example, you can have:

$$0.0063 = 6.3 \times 10^{-3} \qquad 0.0003025 = 3.025 \times 10^{-4}$$

And like decimals, these leading numbers can be rounded. To the nearest whole number, or a specific decimal place.

Sheets 1 and 2 focus on converting numbers to scientific notation format. The last column on the second sheet deals with comparing decimals in scientific notation format. When you compare them, you have to compare two parts.

The power on the base of 10. The larger the power, the larger the number. However remember that with negative numbers the smaller the number part the larger the number.

So, -3 is larger than -7. So 10^{-4} is larger than 10^{-8}. This can be tricky to remember.

For example: 3.12×10^{-5} is larger than 3.12×10^{-15}.

The larger the leading numbers, the larger the number.

For example: 4.12×10^{-5} is larger than 3.12×10^{-5}, because 4.12 is larger than 3.12.

So there are two things to look at. But the power is the first decider.

Scientific Notation (Non-Calc) - Negative Index - No Rounding (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these decimals into scientific notation format. By hopping the decimal point to be behind the first non-zero digit.

Example Convert 0.0007

$0.0007 = 7 \times 10^{-4}$ (4 places)

1 $0.05 = 5 \times 10^{-}$

2 $0.00002 = 2 \times 10^{\square}$

3 $0.009 = 9 \times 10^{\square}$

Now you do the hopping, use a pencil

4 $0.0006 = 6 \times 10^{\square}$

5 $0.00000003 = 3 \times 10^{\square}$

6 $0.00008 = 8 \times 10^{\square}$

Now the first number and the index

7 $0.04 = \square \times 10^{\square}$

8 $0.00005 = \square \times 10^{\square}$

9 $0.000000001 = \square \times 10^{\square}$

Now fill all the boxes

10 $0.00000003 = \square \times \square$

11 $0.000000008 = \square \times \square$

12 $0.00007 = \square \times \square$

13 $0.0004 = \square \times \square$

14 $0.000000000006 = \square \times \square$

15 0.0003 = _____

16 0.0000008 = _____

17 0.009 = _____

18 0.000000004 = _____

Convert these to scientific notation format, the leading numbers to 1 decimal place.

Examples

$0.0083 = 8.3 \times 10^{-3}$

$0.000000096 = 9.6 \times 10^{-8}$

19 $0.0043 = \square.\square \times \square$

20 $0.18 = \square.\square \times \square$

21 $0.00000000092 = \square.\square \times \square$

22 $0.0000058 = \square.\square \times \square$

23 $0.00000000000016 = \square.\square \times \square$

24 0.00033 = _____

25 0.00000075 = _____

26 0.000048 = _____

27 0.00000000096 = _____

These have 3 or more decimal places. Include all the significant digits. Convert these.

28 0.0168 $= \square.\square\square \times \square$

29 0.00000517 $= \square.\square\square \times \square$

30 0.0008818 $= \square.\square\square\square \times \square$

31 0.0000007046 $= \square.\square\square\square \times \square$

32 0.00000000011931 $= \square.\square\square\square\square \times \square$

33 0.00000404 $= \square.\square\square \times \square$

34 0.000217 = _____

35 0.00000004176 = _____

36 0.005705 = _____

37 0.0000119 = _____

38 0.000000627 = _____

39 0.000003012 = _____

40 0.006776 = _____

Scientific Notation (Non-Calc) - Negative Index - Rounding (Sheet 2)

Scientific Notation (Non-Calc) - Negative Index - No Rounding (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these decimals into scientific notation format. By hopping the decimal point to be behind the first non-zero digit.

Example Convert 0.0007

$0.0007 = 7 \times 10^{-4}$ (4 places)

1 $0.05 = 5 \times 10^{-2}$

2 $0.00002 = 2 \times 10^{-5}$

3 $0.009 = 9 \times 10^{-3}$

Now you do the hopping, use a pencil

4 $0.0006 = 6 \times 10^{-4}$

5 $0.00000003 = 3 \times 10^{-7}$

6 $0.00008 = 8 \times 10^{-5}$

Now the first number and the index

7 $0.04 = 4 \times 10^{-2}$

8 $0.00005 = 5 \times 10^{-5}$

9 $0.000000001 = 1 \times 10^{-9}$

Now fill all the boxes

10 $0.0000003 = 3 \times 10^{-7}$

11 $0.000000008 = 8 \times 10^{-9}$

12 $0.00007 = 7 \times 10^{-5}$

13 $0.0004 = 4 \times 10^{-4}$

14 $0.0000000000006 = 6 \times 10^{-11}$

15 $0.0003 = 3 \times 10^{-4}$

16 $0.0000008 = 8 \times 10^{-7}$

17 $0.009 = 9 \times 10^{-3}$

18 $0.000000004 = 4 \times 10^{-9}$

Convert these to scientific notation format, the leading numbers to 1 decimal place.

Examples

$0.0083 = 8.3 \times 10^{-3}$

$0.000000096 = 9.6 \times 10^{-8}$

19 $0.0043 = 4.3 \times 10^{-3}$

20 $0.18 = 1.8 \times 10^{-1}$

21 $0.00000000092 = 9.2 \times 10^{-10}$

22 $0.0000058 = 5.8 \times 10^{-6}$

23 $0.00000000000016 = 1.6 \times 10^{-13}$

24 $0.00033 = 3.3 \times 10^{-4}$

25 $0.00000075 = 7.5 \times 10^{-7}$

26 $0.000048 = 4.8 \times 10^{-5}$

27 $0.00000000096 = 9.6 \times 10^{-10}$

These have 3 or more decimal places. Include all the significant digits. Convert these.

28 $0.0168 = 1.68 \times 10^{-2}$

29 $0.00000517 = 5.17 \times 10^{-6}$

30 $0.0008818 = 8.818 \times 10^{-4}$

31 $0.0000007046 = 7.046 \times 10^{-7}$

32 $0.00000000011931 = 1.1931 \times 10^{-10}$

33 $0.00000404 = 4.04 \times 10^{-6}$

34 $0.000217 = 2.17 \times 10^{-4}$

35 $0.00000004176 = 4.176 \times 10^{-8}$

36 $0.005705 = 5.705 \times 10^{-4}$

37 $0.0000119 = 1.19 \times 10^{-5}$

38 $0.000000627 = 6.27 \times 10^{-7}$

39 $0.000003012 = 3.012 \times 10^{-6}$

40 $0.006776 = 6.776 \times 10^{-3}$

Scientific Notation (Non-Calc) - Negative Index - Rounding (Sheet 2)

Converting to Scientific Notation - Calculator

To convert to scientific notation you use the calculator's Scientific Notation function. With the Casio fx-82 AU Plus, use one of these choices:

Calculator Key Use:

To Put into 'Sci' Mode (0 d.p.):	Calc:	Shift Mode 7 1	Example: 5×10^4 or 3×10^{-2}
To Put into 'Sci' Mode (1 d.p.):	Calc:	Shift Mode 7 2	Example: 5.5×10^4
To Put into 'Sci' Mode (2 d.p.):	Calc:	Shift Mode 7 3	Example: 3.35×10^{-4}
To Put into 'Sci' Mode (3 d.p.):	Calc:	Shift Mode 7 4	Example: 3.355×10^{-4}

Remember to take the calculator out of Scientific Notation mode by doing the following:

To return Calculator to Normal Mode:

To leave 'Sci'Mode:	Calc:	Shift Mode 8 2

Converting to Scientific Notation - Calculator

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator's 'Sci' Mode to convert these numbers into scientific notation format.

Put into 'Sci' Mode (0 d.p.):
Calc: Shift Mode 7 1

1 $8\,000 = \square \times 10^{\square}$

Calc: 8 0 0 0 =

2 $60\,000\,000 = \square \times \square^{\square}$

3 $400\,000 = \square \times \square^{\square}$

4 $20\,000 =$

5 $9\,000\,000 =$

Put into 'Sci' Mode (1 d.p.):
Calc: Shift Mode 7 2

6 $0.014 =$

Converting to Scientific Notation - Calculator

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator's 'Sci' Mode to convert these numbers into scientific notation format.

Put into 'Sci' Mode (0 d.p.):
Calc: Shift Mode 7 1

1 8 000 = 8 × 10^3

Calc: 8 0 0 0 =

2 60 000 000 = 6 × 10^7

3 400 000 = 4 × 10^5

4 20 000 = 2×10^4

5 9 000 000 = 9×10^6

Put into 'Sci' Mode (1 d.p.):
Calc: Shift Mode 7 2

6 0.014 = 1.4×10^{-2}

7 0.00035 = 3.5×10^{-4}

8 0.0000073 = 7.3×10^{-6}

9 0.026 = 2.6×10^{-2}

10 0.0058 = 5.8×10^{-3}

Put into 'Sci' Mode (2 d.p.):
Calc: Shift Mode 7 3

11 217 000 = 2.17×10^5

12 0.0000615 = 6.15×10^{-5}

13 1 540 = 1.54×10^3

14 0.00000808 = 8.08×10^6

15 81 900 = 8.19×10^4

To Cancel: Shift Mode 8 2

Rewrite these in Scientific Notation, rounded to 3 decimal places.

Put into 'Sci' Mode (3 d.p.):
Calc: Shift Mode 7 4

16 786 537 = 2×10^4

17 0.000000055188 = 5.519×10^{-8}

18 406 333 157 = 4.063×10^8

19 0.012345 = 1.235×10^{-2}

20 772 976 807 000 = 7.730×10^{11}

To Cancel: Shift Mode 8 2

Give the answer to these in scientific notation form. Rounded to 2 decimal places.

Put into 'Sci' Mode (2 d.p.):
Calc: Shift Mode 7 3

21 0.00005^3 = 1.25×10^{-13}

22 95^6 = 7.35×10^{11}

23 $\sqrt{0.0009}$ = 3.00×10^{-2}

24 $\frac{82^4}{0.3^3}$ = 1.67×10^9

25 $\frac{(72 \div 0.08)}{(0.06 \times 0.42)}$ = 3.57×10^4

To Cancel: Shift Mode 8 2

Compare these by answering them in scientific notation to 1 decimal place, then point the < or > to the smallest.

Calc: Shift Mode 7 2

26 40^3 < 800^2

6.4×10^4 Sci. Not. 1 dp — 6.4×10^5 Sci. Not. 1 dp

27 $\frac{5}{25^5}$ < $\frac{(3 \div 19)}{38^3}$

5.1×10^{-7} Sci. Not. 1 dp — 2.9×10^{-6} Sci. Not. 1 dp

28 0.4^{12} > 0.3^{11}

1.7×10^{-5} Sci. Not. 1 dp — 1.8×10^{-6} Sci. Not. 1 dp

29 112^4 < 782^3

1.6×10^8 Sci. Not. 1 dp — 4.8×10^8 Sci. Not. 1 dp

Rewrite these five in descending order, using scientific notation (to 1 d.p.) to guide you. Descending order means highest to lowest.

30 4^9 — 10^5 — 9^7 — 6^8 — 3^{12}

2.6×10^5 Sci. Not. 1 dp — 1×10^5 Sci. Not. 1 dp — 4.8×10^6 Sci. Not. 1 dp — 1.7×10^6 Sci. Not. 1 dp — 5.3×10^5 Sci. Not. 1 dp

Descending Order: 9^7, 6^8, 3^{12}, 4^9, 10^5.

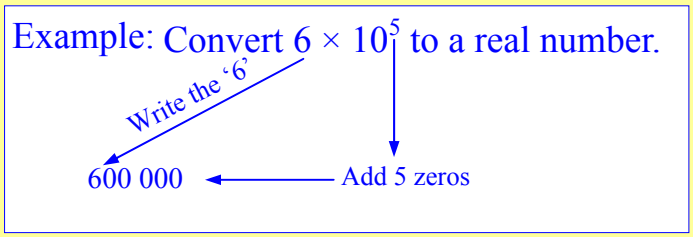
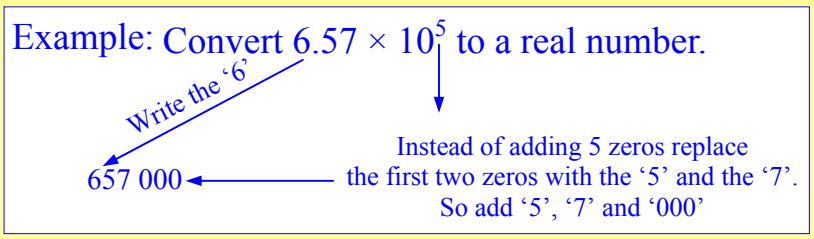
Tick the largest

Scientific Notation - Converting to Real Numbers

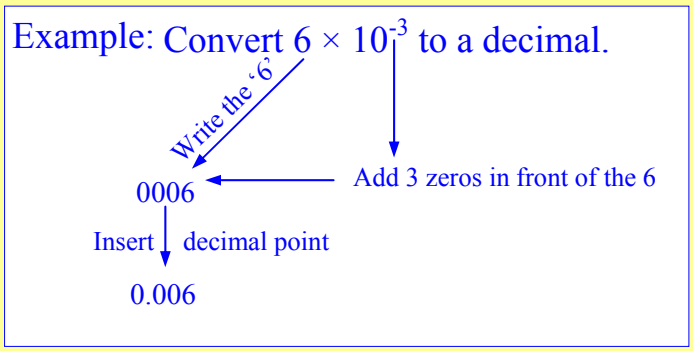
To convert from scientific notation to real numbers, you look at the power on the '10' and add that many zeros to the number.



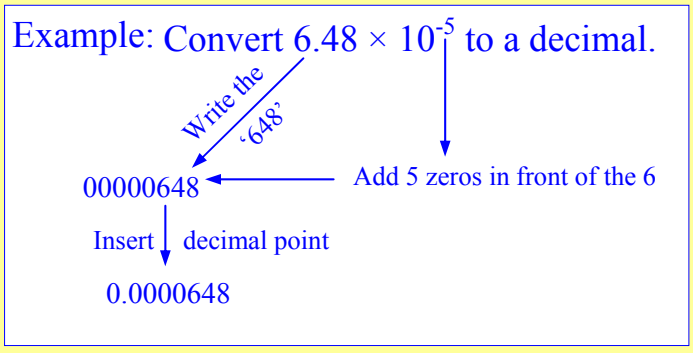
When there is a decimal present in the number in scientific notation, replace the zeros with those numbers.



When there is a negative power on the 10, a decimal will result. These are easier, all you do is write the same number of zeros as the power (positive) in front of the leading number.



When there is a decimal in the scientific notation, answer in the same way.



Scientific Notation (Non-Calc) - Convert to Real Numbers (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these numbers from scientific notation format to real numbers.

Example Convert 5×10^4

50 000 ← Add 4 zeros

1 $7 \times 10^5 = 7$ _____

2 $3 \times 10^2 = 3$ _____

3 $2 \times 10^4 =$ _____

4 $9 \times 10^7 =$ _____

5 $6 \times 10^3 =$ _____

6 $4 \times 10^6 =$ _____

These have 1 decimal place, so add one less zero by replacing the first zero with a number

Example Convert 5.6×10^4

56 000 ← Add 4 digits '6' then 3 'zeros'

7 $8.5 \times 10^3 = 8\,5$ _____

8 $1.6 \times 10^4 = 1\,6$ _____

9 $4.7 \times 10^6 =$ _____

10 $9.2 \times 10^2 =$ _____

11 $3.3 \times 10^5 =$ _____

12 1.5×10^8

$=$ _____

13 4.3×10^7

$=$ _____

14 2.1×10^9

$=$ _____

15 5.9×10^{12}

$=$ _____

These have varying decimal places. Convert these to real numbers.

16 $6.35 \times 10^3 = 6\,3\,5$ _____

17 4.237×10^7

$= 4\,2\,3\,7$ _____

18 9.0951×10^9

$= 9\,0\,9\,5\,1$ _____

19 3.417×10^6

$= 3$ _____

20 7.0051×10^8

$=$ _____

21 6.045×10^5

$=$ _____

22 1.22241×10^9

$=$ _____

23 2.0202×10^6

$=$ _____

The next two have decimal answers

24 $5.096 \times 10^2 =$ _____

25 $3.4426 \times 10^3 =$ _____

Convert these decimals from scientific notation format to decimal form.

Example Convert 2×10^{-5}

0.00002 ← Add 5 zeros in front Put a '.' after 1st zero

26 $4 \times 10^{-3} = .\,\square\,\square\,4$ _____

27 $7 \times 10^{-5} = .\,\square\,\square\,\square\,\square\,7$ _____

28 $8 \times 10^{-2} = .\,\square\,8$ _____

29 $3 \times 10^{-4} = .\,\square\,\square\,\square\,3$ _____

30 5×10^{-7}

$=$ _____

31 9×10^{-5}

$=$ _____

32 8×10^{-6}

$=$ _____

33 1×10^{-9}

$=$ _____

34 3×10^{-2}

$=$ _____

34 6×10^{-4}

$=$ _____

Rewrite as decimals. These have more non-zero digits.

Example Convert 2.47×10^{-3}

0.00247 ← Add 3 zeros in front Put a '.' after 1st zero

35 5.2×10^{-4}

$=$ _____

36 4.18×10^{-6}

$=$ _____

37 5.497×10^{-2}

$=$ _____

38 2.4×10^{-9}

$=$ _____

39 3.007×10^{-5}

$=$ _____

40 1.115×10^{-6}

$=$ _____

Scientific Notation (Calculator) - Convert to Real Numbers (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these numbers from scientific notation format to real numbers.

Example Convert 5.26×10^3

Calc: 5 . 2 6 ×10^x 3 = 5 260

1 2×10^4 =

Calc: 2 ×10^x 4 =

2 4×10^6 =

3 7×10^4 =

4 8×10^7 =

5 1.3×10^4 =

6 9.7×10^6 =

7 1.1×10^9

=

8 4.047×10^8

=

9 7.1338×10^6

=

10 3.377×10^7

=

The next 4 have decimal answers

11 4.031×10^2 =

12 9.73706×10^4

=

13 4.00788×10^3

=

14 7.8842×10^2

=

Convert these from scientific notation format to decimals.

Example Convert 5.26×10^{-3}

Calc: 5 . 2 6 ×10^x - 3 =

Answer: 0.00526

15 3×10^{-4} =

Calc: 3 ×10^x - 4 =

16 7×10^{-2} =

17 3×10^{-4} =

18 9×10^{-1} =

19 4×10^{-5} =

20 1×10^{-3} =

21 2.3×10^{-4} =

22 7.7×10^{-2} =

23 3.25×10^{-5}

=

24 4.024×10^{-3}

=

25 1.5×10^{-9}

=

26 3.079×10^{-3}

=

27 8.113×10^{-5}

=

28 9.3059×10^{-4}

=

Use your calculator to answer these as numbers or decimals.

29 $3 \times 10^4 \times 5 \times 10^{-2}$

Calc: 3 ×10^x 4 × 5 ×10^x - 2 =

=

30 $8 \times 10^{-9} \div 2 \times 10^{-2}$

=

31 $(4 \times 10^{-3})^2$

=

32 $1.6 \times 10^8 \div 8 \times 10^3$

=

33 $\dfrac{1.05 \times 10^8}{3.5 \times 10^6}$ =

Calculate these and write the answer underneath. Then use <, > or = in the square box.

*With < & > 'point' to the smallest

34 $\dfrac{1.8 \times 10^8}{6 \times 10^2}$ ☐ $(3 \times 10^2)^2$

35 $\dfrac{4 \times 10^3}{2 \times 10^5}$ ☐ $\dfrac{1 \times 10^2}{2 \times 10^4}$

36 $(1 \times 10^3)^2$ ☐ $(1 \times 10^2)^3$

37 $(2 \times 10^2)^2$ ☐ $(4 \times 10^2)^2$

Scientific Notation (Non-Calc) - Convert to Real Numbers (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these numbers from scientific notation format to real numbers.

Example Convert 5×10^4

50 000 ← Add 4 zeros

1 $7 \times 10^5 = 7\,0\,0\,0\,0\,0$

2 $3 \times 10^2 = 3\,0\,0$

3 $2 \times 10^4 =$ 20 000

4 $9 \times 10^7 =$ 90 000 000

5 $6 \times 10^3 =$ 6 000

6 $4 \times 10^6 =$ 4 000 000

These have 1 decimal place, so add one less zero by replacing the first zero with a number

Example Convert 5.6×10^4

56 000 ← Add 4 digits '6' then 3 'zeros'

7 $8.5 \times 10^3 = 8\,5\,0\,0$

8 $1.6 \times 10^4 = 1\,6\,0\,0\,0$

9 $4.7 \times 10^6 =$ 4 700 000

12. $9.4 \times 10^{-4} = 0.00094$
13. $7.16 \times 10^{-2} = 0.0716$

Numbers of Any Magnitude - Prefixes (Large Numbers)

A prefix is used at the front of a ‘base’ unit to change the unit to larger or small units. For example, using the base ‘byte’:

Base Unit: Byte
1 000 × Base Unit = kB (kilobyte)
1 000 000 × Base Unit = MB (megabyte)
1 000 000 000 × Base Unit = GB (gigabyte)
1 000 000 000 000 × Base Unit = TB (terabyte)

So each increase sees the unit multiplied by 1 000. So to convert from one unit to another is done by:

To move to a larger unit: Divide (÷) by 1 000
To move to a smaller unit: Multiply (÷) by 1 000

The first sheet deals with base units and prefixes of ‘kilo’ and ‘Mega’.

The second sheet deals with prefixes of ‘Mega’, ‘Giga’ and ‘Tera’

Numbers of Any Magnitude - Prefixes ‘Kilo’ & ‘Mega’ (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these base units into ‘Kilo’ units. Divide by 1 000 to make the conversion.

Example Convert 3 400 m to km

3 400 ÷ 1 000 = 3.4 km

1 8 500 g = _____ kg

2 43 700 L = _____ kL

3 780 m = _____ km

4 347 500 B = _____ kB

5 220 g = _____ kg

6 4 020 m = _____ km

Ben walks 320 m to the shops, then returns home. His mum forgot that she needs bread so he repeats the trip.

6 How far has Ben walked for the two return trips, in metres.

7 Convert this distance to km.

Jo’s phone downloads at 780 B per second. She downloads a document which takes 5 minutes to download.

8 Convert 5 mins to seconds.

9 How large is the file she downloaded? Answer in B.

10 Convert the file from B to kB.

Convert these ‘Kilo’ units into ‘Mega’ units. Divide by 1 000 to make the conversion.

Example Convert 400 kB to MB

400 ÷ 1 000 = 0.4 MB

11 9 800 kL = _____ ML

12 176 300 kB = _____ MB

13 13 140 kHz = _____ MHz

*Hertz (Hz) is a measure of frequency.

14 490 kL = _____ ML

Josh has taken 527 photos this year. If the average photo is 970 kB. Find:

15 The total size of the folder holding the images in kB.

16 Convert the folder’s size to MB.

An irrigation pump discharges 1.4kL of water per minute. Find the amount:

17 Pumped in an hour, in kL.

18 Pumped in a day. (24 hrs)

19 Pumped annually. (365 days)

20 Convert the amount pumped annually from kL to ML.

To go backwards, multiply by 1000. Mega→Kilo = × 1 000 Kilo→Base unit = × 1 000

Example Convert 3.2 MB to kB

3.2 × 1 000 = 3 200 kB

21 5.4 MB = _____ kB

22 9 km = _____ m

23 4.76 kg = _____ g

24 0.56 ML = _____ kL

25 2.09 km = _____ m

26 1.7 MB = _____ kB

A farm’s diesel storage tank holds 8.2 kL of fuel.

27 Find the volume of fuel in the tank is it is 55% full. (kL)

$\frac{\square}{100} \times \square = \square$

28 Convert the volume to L.

29 Calculate the value of the fuel if diesel costs $1.68/L.

Show the $ sign and cents to 2 d.p.

Karl is training for the 800 m state championship. He runs the 800 m twice each weekday and once on Saturday and Sunday.

30 Calculate the distance Karl runs in a week in m, then km.

Numbers of Any Magnitude - Prefixes ‘Mega’, ‘Giga’ & ‘Tera’ (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these ‘Giga’ units into ‘Mega’ units. Multiply by 1 000 to make the conversion.

Example Convert 1.4 GB to MB

1.4 × 1 000 = 1 400 MB

1 3 GB = _____ MB

2 5.6 GW = _____ MW

*Watt (W) is a measure of power.

3 0.64 GL = _____ ML

4 22.07 GB = _____ MB

5 0.034 GL = _____ ML

6 14.8 GB = _____ MB

Chen has 8 files that average 390 MB each. He wants to store them on a DVD which holds 4.7 GB.

7 Convert 4.7 GB to MB.

8 How much memory in MB will the 8 files need?

9 Calculate how much space in MB is left on the DVD?

Ainslie has 2.2 GB available on a USB drive. She wants to put music on the drive that average 4 MB per song.

10 Convert 2.2 GB to MB.

11 How many 4 MB songs fit?

Convert these ‘Mega’ units into ‘Giga’ units. Divide by 1 000 to make the conversion.

Example Convert 720 MB to GB

720 ÷ 1 000 = 0.72 GB

12 4 000 MB = _____ GB

13 125 000 MB = _____ GB

14 280 MB = _____ GB

15 1 080 ML = _____ GL

16 48 MW = _____ GW

17 68 700 ML = _____ GL

David’s PC has 3 old Hard Drives which are 260 MB, 720 MB and 650 MB.

18 Find the total storage (MB).

19 Convert the total storage to GB.

Anthia shoots wedding videos. Once edited the videos average 850 MB in size. She keeps a back up of all the videos and she has 167 of them.

20 Calculate how much space in MB is used by the 167 videos.

21 Convert the storage to GB.

Convert these ‘Giga’ units into ‘Tera’ units. Divide by 1 000 to make the conversion.

Example Convert 480 GB to TB

480 ÷ 1 000 = 0.48 TB

22 6 000 GB = _____ TB

23 300 GB = _____ TB

24 1 020 GB = _____ TB

25 89.2 GB = _____ TB

26 770 GB = _____ TB

27 0.5 GB = _____ TB

Raj has a 64 GB USB drive. His PC has a 4 TB hard drive.

28 Convert 64 GB into TB.

29 How many full USB drives would the hard drive hold?

Convert these ‘Tera’ units into ‘Giga’ units. Multiply by 1 000 to make the conversion.

Example Convert 3.2 TB to GB

3.2 × 1 000 = 3 200 GB

30 5 TB = _____ GB

31 1.7 TB = _____ GB

32 0.06 TB = _____ GB

33 2.85 TB = _____ GB

34 10.6 TB = _____ GB

35 0.0083 TB = _____ GB

Numbers of Any Magnitude - Prefixes ‘Kilo’ & ‘Mega’ (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these base units into ‘Kilo’ units. Divide by 1 000 to make the conversion.

Example Convert 3 400 m to km

3 400 ÷ 1 000 = 3.4 km

1 8 500 g = 8.5 kg

2 43 700 L = 43.7 kL

3 780 m = 0.78 km

4 347 500 B = 347.5 kB

5 220 g = 0.22 kg

6 4 020 m = 4.02 km

Ben walks 320 m to the shops, then returns home. His mum forgot that she needs bread so he repeats the trip.

6 How far has Ben walked for the two return trips, in metres.

4 × 320 = 1 280 m

7 Convert this distance to km.

1 280 ÷ 1 000 = 1.28 km

Jo’s phone downloads at 780 B per second. She downloads a document which takes 5 minutes to download.

8 Convert 5 mins to seconds.

5 × 60 = 300

9 How large is the file she downloaded? Answer in B.

300 × 780 = 234 000 B

10 Convert the file from B to kB.

234 000 ÷ 1 000 = 234 kB

Convert these ‘Kilo’ units into ‘Mega’ units. Divide by 1 000 to make the conversion.

Example Convert 400 kB to MB

400 ÷ 1 000 = 0.4 MB

11 9 800 kL = 9.8 ML

12 176 300 kB = 176.3 MB

13 13 140 kHz = 13.14 MHz

*Hertz (Hz) is a measure of frequency.

14 490 kL = 0.49 ML

Josh has taken 527 photos this year. If the average photo is 970 kB. Find:

15 The total size of the folder holding the images in kB.

527 × 970 = 511 190 kB

16 Convert the folder’s size to MB.

511 190 ÷ 1 000 = 511.19 MB

An irrigation pump discharges 1.4kL of water per minute. Find the amount:

17 Pumped in an hour, in kL.

1.4 × 60 = 84 kL

18 Pumped in a day. (24 hrs)

84 × 24 = 2 016 kL

19 Pumped annually. (365 days)

2 016 × 365 = 735 840 kL

20 Convert the amount pumped annually from kL to ML.

735 840 ÷ 1 000 = 735.84 ML

To go backwards, multiply by 1000. Mega→Kilo = × 1 000 Kilo→Base unit = × 1 000

Example Convert 3.2 MB to kB

3.2 × 1 000 = 3 200 kB

21 5.4 MB = 5 400 kB

22 9 km = 9 000 m

23 4.76 kg = 4 760 g

24 0.56 ML = 560 kL

25 2.09 km = 2 090 m

26 1.7 MB = 1 700 kB

A farm’s diesel storage tank holds 8.2 kL of fuel.

27 Find the volume of fuel in the tank is it is 55% full. (kL)

$\frac{55}{100} \times 8.2 = 4.51$ kL

28 Convert the volume to L.

4.51 × 1 000 = 4 510 L

29 Calculate the value of the fuel if diesel costs $1.68/L.

4 510 × 1.68 = $7 576.80

Show the $ sign and cents to 2 d.p.

Karl is training for the 800 m state championship. He runs the 800 m twice each weekday and once on Saturday and Sunday.

30 Calculate the distance Karl runs in a week in m, then km.

(10 + 2) × 800 = 9 600 m

9 600 ÷ 1 000 = 9.6 km

Numbers of Any Magnitude - Prefixes ‘Mega’, ‘Giga’ & ‘Tera’ (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these ‘Giga’ units into ‘Mega’ units. Multiply by 1 000 to make the conversion.

Example Convert 1.4 GB to MB

1.4 × 1 000 = 1 400 MB

1 3 GB = 3 000 MB

2 5.6 GW = 5 600 MW

*Watt (W) is a measure of power.

3 0.64 GL = 640 ML

4 22.07 GB = 22 070 MB

5 0.034 GL = 34 ML

6 14.8 GB = 14 800 MB

Chen has 8 files that average 390 MB each. He wants to store them on a DVD which holds 4.7 GB.

7 Convert 4.7 GB to MB.

4.7 × 1 000 = 4 700 MB

8 How much memory in MB will the 8 files need?

8 × 390 = 3 120 MB

9 Calculate how much space in MB is left on the DVD?

4 700 - 3 120 = 1 580 MB

Ainslie has 2.2 GB available on a USB drive. She wants to put music on the drive that average 4 MB per song.

10 Convert 2.2 GB to MB.

2.2 × 1 000 = 2 200 MB

11 How many 4 MB songs fit?

2 200 ÷ 4 = 550 songs

Convert these ‘Mega’ units into ‘Giga’ units. Divide by 1 000 to make the conversion.

Example Convert 720 MB to GB

720 ÷ 1 000 = 0.72 GB

12 4 000 MB = 4 GB

13 125 000 MB = 125 GB

14 280 MB = 0.28 GB

15 1 080 ML = 1.08 GL

16 48 MW = 0.048 GW

17 68 700 ML = 68.7 GL

David’s PC has 3 old Hard Drives which are 260 MB, 720 MB and 650 MB.

18 Find the total storage (MB).

260 + 720 + 650 = 1 630 MB

19 Convert the total storage to GB.

1 630 ÷ 1 000 = 1.63 GB

Anthia shoots wedding videos. Once edited the videos average 850 MB in size. She keeps a back up of all the videos and she has 167 of them.

20 Calculate how much space in MB is used by the 167 videos.

850 × 167 = 141 950 MB

21 Convert the storage to GB.

141 950 ÷ 1 000 = 141.95 GB

Convert these ‘Giga’ units into ‘Tera’ units. Divide by 1 000 to make the conversion.

Example Convert 480 GB to TB

480 ÷ 1 000 = 0.48 TB

22 6 000 GB = 6 TB

23 300 GB = 0.3 TB

24 1 020 GB = 1.02 TB

25 89.2 GB = 0.0892 TB

26 770 GB = 0.77 TB

27 0.5 GB = 0.0005 TB

Raj has a 64 GB USB drive. His PC has a 4 TB hard drive.

28 Convert 64 GB into TB.

64 ÷ 1 000 = 0.064 TB

29 How many full USB drives would the hard drive hold?

4 ÷ 0.064 = 62 USBs (62.5)

Convert these ‘Tera’ units into ‘Giga’ units. Multiply by 1 000 to make the conversion.

Example Convert 3.2 TB to GB

3.2 × 1 000 = 3 200 GB

30 5 TB = 5 000 GB

31 1.7 TB = 1 700 GB

32 0.06 TB = 60 GB

33 2.85 TB = 2 850 GB

34 10.6 TB = 10 600 GB

35 0.0083 TB = 8.3 GB

Now convert your answer to kB

Numbers of Any Magnitude - Prefixes (Small Numbers)

A prefix is used at the front of a ‘base’ unit to change the unit to larger or small units. For example, using the base ‘metre’:

Base Unit: Metre
Base Unit ÷ 100 = cm (centimetre)
Base Unit ÷ 1 000 = mm (millimetre)
Base Unit ÷ 1 000 000 = μm (micrometre or micron)

We use the measurement ‘centi’, mainly with length, centimetres. These are 100th of a metre. Europe frequently uses centi with volume measurements, such as cL (centilitres).

Remember:

To move to a larger unit: Divide
To move to a smaller unit: Multiply

The first sheet deals with length units and prefixes of ‘kilo’, ‘centi’ and ‘milli.’ The top of each column tells you how to convert. You can do this by moving the decimal point, or using a calculator.

The second sheet deals with prefixes of ‘milli’ and ‘micro.’ There are examples at the top of the column also.

Numbers of Any Magnitude - Prefixes & Length milli/centi/kilo (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these lengths from mm to cm. There are 10 mm in 1 cm.

Divide by 10 or move 1 place left

1	20 mm	cm
2	50 mm	
3	130 mm	
4	55 mm	
5	92 mm	
6	200 mm	
7	18.6 mm	
8	2 020 mm	
9	435 mm	
10	0.95 mm	
11	5.47 mm	
12	906.2 mm	

Now the reverse. Convert these lengths from cm to mm. There are 10 mm in 1 cm.

Multiply by 10 or move 1 place right

13	5 cm	mm
14	18 cm	
15	6.3 cm	
16	74.8 cm	
17	356.7 cm	
18	8.12 cm	
19	0.4 cm

Numbers of Any Magnitude - Prefixes ‘milli’ & ‘micro’ (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these base units into ‘milli’ units. Multiply by 1 000 to make the conversion.

Example Convert 2.5 m to mm

2.5 × 1 000 = 2 500 mm

1 5 A = _____ mA

*Amps (A) is a measure of electrical current

2 80 g = _____ mg

3 3.08 L = _____ mL

4 0.005 m = _____ mm

5 15.7 g = _____ mg

6 A ceiling is 2.4 m above the floor. Convert the length to mm.

_____ × 1 000 = _____ mm

7 The active ingredient in a antibiotic weighs 0.8 g. Convert this weight to mg.

8 The current across a circuit is 0.0033 A. Convert this to mA.

9 Three boxes have heights: 0.42 m, 0.715 m and 0.505 m. How high are they when stacked on top of each other. Answer in m, then in mm.

10 A standard door is 2.04 m high. Convert the height to mm.

To convert ‘milli’ units to the base unit, divide by 1 000. Change these to ‘milli’ units.

Example Convert 960 mm to m

960 ÷ 1 000 = 0.96 m

11 3 000 mL = _____ L

12 28 900 mg = _____ g

13 31 430 mm = _____ m

14 4 620 mL = _____ L

15 86 mΩ = _____ Ω

*Ohms (Ω) is a measure of electrical resistance

16 A bottle of soft drink contains 1 250 mL of product. Convert this to L.

_____ ÷ 1 000 = _____ L

17 Ceiling fan blades are usually 300 mm below the ceiling. Convert this to m.

18 Two swimmers touch the wall 230 ms apart. Convert this time to seconds.

19 A medicine has 308 mg, 182 mg, 780 mg and 2 750 mg of different active ingredients. Find the total weight in mg, then convert this to g.

Micro is 1 millionth. Convert ‘micro’ to ‘milli’ by dividing by 1 000. Hey … I know mu!

Example Convert 4 440 µm to mm

4 440 ÷ 1 000 = 4.44 mm

20 34 000 µm = _____ mm

21 87 µg = _____ mg

22 8 803 µs = _____ ms

23 40.5 µg = _____ mg

24 A human hair thickness is 120 µm. Convert this to mm.

_____ ÷ 1 000 = _____ mm

25 A dust mite is 275 µm in length. Convert this to mm.

To convert ‘milli’ units to ‘micro’ units, multiply by 1 000. Micrometres can also be called microns.

Example Convert 0.74 mm to µm

0.74 × 1 000 = 740 µm

26 8 mm = _____ µm

27 0.06 mg = _____ µg

28 0.0037 ms = _____ µs

29 5.7 mm = _____ µm

30 A red blood cell is 0.008 mm in diameter. Convert this to µm.

31 The width of an eye of a needle is 1.2 mm Convert to µm.

72	0.06 km	60 m

Numbers of Any Magnitude - Prefixes ‘milli’ & ‘micro’ (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these base units into ‘milli’ units. Multiply by 1 000 to make the conversion.

Example Convert 2.5 m to mm

2.5 × 1 000 = 2 500 mm

1 5 A = 5 000 mA

*Amps (A) is a measure of electrical current

2 80 g = 80 000 mg

3 3.08 L = 3 080 mL

4 0.005 m = 5 mm

5 15.7 g = 15 700 mg

6 A ceiling is 2.4 m above the floor. Convert the length to mm.

2.4 × 1 000 = 2 400 mm

7 The active ingredient in a antibiotic weighs 0.8 g. Convert this weight to mg.

0.8 × 1 000 = 800 mg

8 The current across a circuit is 0.0033 A. Convert this to mA.

0.0033 × 1 000 = 3.3 mA

9 Three boxes have heights: 0.42 m, 0.715 m and 0.505 m. How high are they when stacked on top of each other. Answer in m, then in mm.

Height = 0.42 + 0.715 + 0.505

Height = 1.64 m

1.64 × 1 000 = 1 640 mm

10 A standard door is 2.04 m high. Convert the height to mm.

2.04 × 1 000 = 2 040 mm

To convert ‘milli’ units to the base unit, divide by 1 000. Change these to ‘milli’ units.

Example Convert 960 mm to m

960 ÷ 1 000 = 0.96 m

11 3 000 mL = 3 L

12 28 900 mg = 28.9 g

13 31 430 mm = 31.43 m

14 4 620 mL = 4.62 L

15 86 mΩ = 0.086 Ω

*Ohms (Ω) is a measure of electrical resistance

16 A bottle of soft drink contains 1 250 mL of product. Convert this to L.

1 250 ÷ 1 000 = 1.25 L

17 Ceiling fan blades are usually 300 mm below the ceiling. Convert this to m.

300 ÷ 1 000 = 0.3 m

18 Two swimmers touch the wall 230 ms apart. Convert this time to seconds.

230 ÷ 1 000 = 0.23 s

19 A medicine has 308 mg, 182 mg, 780 mg and 2 750 mg of different active ingredients. Find the total weight in mg, then convert this to g.

Weight = 182 + 780 + 2 750

Weight = 3 712 mg

3 712 ÷ 1 000 = 3.712 g

Micro is 1 millionth. Convert ‘micro’ to ‘milli’ by dividing by 1 000. Hey … I know mu!

Example Convert 4 440 µm to mm

4 440 ÷ 1 000 = 4.44 mm

20 34 000 µm = 34 mm

21 87 µg = 0.087 mg

22 8 803 µs = 8.803 ms

23 40.5 µg = 0.0405 mg

24 A human hair thickness is 120 µm. Convert this to mm.

120 ÷ 1 000 = 0.12 mm

25 A dust mite is 275 µm in length. Convert this to mm.

275 ÷ 1 000 = 0.275 mm

To convert ‘milli’ units to ‘micro’ units, multiply by 1 000. Micrometres can also be called microns.

Example Convert 0.74 mm to µm

0.74 × 1 000 = 740 µm

26 8 mm = 8 000 µm

27 0.06 mg = 60 µg

28 0.0037 ms = 3.7 µs

29 5.7 mm = 5 700 µm

30 A red blood cell is 0.008 mm in diameter. Convert this to µm.

0.008 × 1 000 = 8 µm

31 The width of an eye of a needle is 1.2 mm Convert to µm.

1.2 × 1 000 = 1 200 µm

Date Due:

Convert base units to milli by × 1 000

1 2 m = 2 000 mm

2 0.75 g = 750 mg

3 0.007 s = 7 ms

4 A standard door is 0.82 m Wide. Convert the width to mm.

0.82 × 1 000 = 820 mm

Convert milli to base units by ÷ 1 000

5 5 500 mm = 5.5 m

6 95 mg = 0.095 g

7 375 mL = 0.375 L

John can fill a bucket by pouring 5 1 250 mL bottles into it.

8 Calculate the volume of the 5 bottles in mL.

1 250 × 5 = 6 250 mL

9 Convert the volume to L.

6 250 ÷ 1 000 = 6.25 L

Numbers of Any Magnitude - Error in Measurement

If I measure an object that is 19 cm wide, then it is 19 cm wide!!! Unfortunately when it comes to measurement that isn't the case. You could measure the width using different instruments for example, a laser device ….. a ruler. You would get different results. Also a friend could measure the same object using a different instrument, or even the same ruler, and get a different result. So measurement is never exact.

The Limit of Reading is the smallest unit to which you can measure. So if your ruler is marked in centimetres only, then the L.O.R. is cm. If you can measure to the nearest millimetre then the L.O.R. is mm.

When you read past the halfway point between the divisions on your ruler, you move up, just like rounding a decimal. You use 0.5 as a guide with rounding and you do the same with measurement errors.

Limit of Reading is the smallest unit you can measure on a device

Error = $\pm$ half of the Limit of Reading

Example

A vet's scales measures the weight of a cow as being 665 kg rounded to the nearest 5 kg.

The limit of reading is 5 kg. So that means the error is $\pm$ half that.

Error = $\pm$ 2.5 kg

In the above example, the error was $\pm$2.5 kg. You can calculate the limits on what the actual weight of the cow is, by applying the error.

Lower limit = 665 - 2.5 = 662.5 kg

Upper limit = 665 + 2.5 = 667.5 kg

Numbers of Any Magnitude - Error in Measurement (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

The error in measurement is half of the limit of reading. Find the error in these measurements.

Example Find the error with measurements made to the nearest:

a) cm ±0.5 cm *c*) 10 kg ±5 kg

b) g ±0.5 g *d*) 5 s ±2.5 s

1 Nearest kg = ± _____ kg

2 Nearest 5 g = ± _____ g

3 Nearest 10 mL = ± _____ mL

4 Nearest 50 m = _____

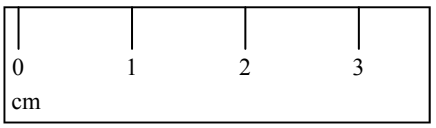
5 Nearest 25 g = _____

6 Nearest 10 cm = _____

7 Nearest 2 mm = _____

These two rulers have different limits of reading, write the limit of reading and the error.

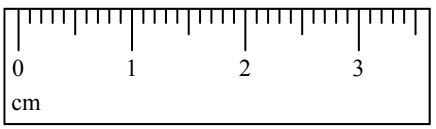
8



Limit of Reading: _____ To the nearest

Error: ± _____

9



Limit of Reading: _____ To the nearest

Error: ± _____

Find the upper and lower limits of these measurements.

Example A parcel weighs 425 g measured to the nearest 5 g.

Error: ± 2.5 g

Lower Limit : 425 - 2.5 = 422.5 g

Upper Limit : 425 + 2.5 = 427.5 g

10 A section of road to be repaired is measured as 870 m long, to the nearest 10 m.

Error: _____ Use '±' and units

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

11 A window has a width of 176 cm, to the nearest cm.

Error: _____ Use '±' and units

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

12 A horse weighs 485 kg, measured to the nearest 5 kg.

Error: _____

Lower Limit : _____

Upper Limit : _____

13 A measuring cylinder contains 115 mL measured to the nearest mL.

Error: _____

Lower Limit : _____

Upper Limit : _____

With decimals, you will add a decimal place.

Example Find the error with measurements made to the nearest:

a) 0.1 cm ±0.05 cm *c*) 0.01 m

b) 0.5 g ±0.25 g ±0.005 m

15 A basket ball hoop is 304.8 cm from the ground, measured to the nearest 0.1 cm.

Error: _____ 0.1 ÷ 2 Use '±' and units

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

16 A solution is made by adding 5.72 g of copper sulphate, measured to the nearest 0.01 g.

Error: _____

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

17 A chocolate bar is manufactured to weigh 91.0 g, measured to the nearest 0.5 g.

Error: _____

Lower Limit : _____ = _____

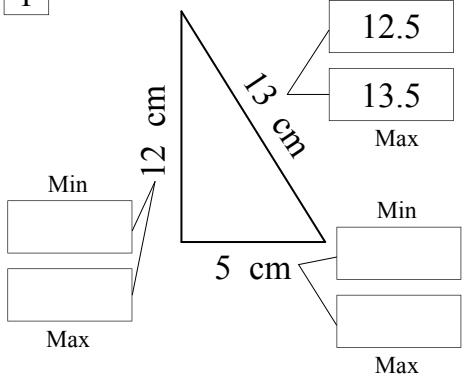
Upper Limit : _____ = _____

Numbers of Any Magnitude - Further Errors Perimeter/Area (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

These triangles are measured to the nearest cm. Find the lower and upper limits for each side, then the minimum and maximum perimeter.

1



$P_{MIN} =$ ☐ + ☐ + ☐

Add all the minimum values

$P_{MIN} =$ ☐

Include the units

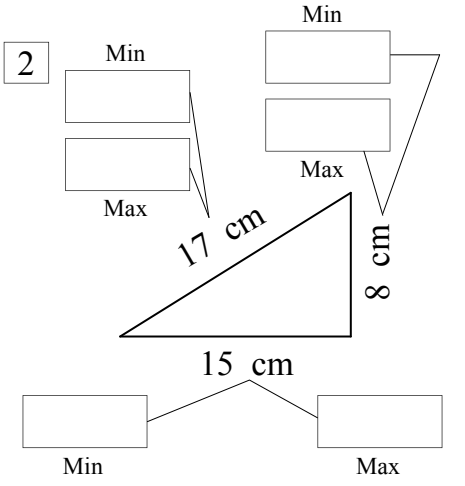
$P_{MAX} <$ ☐ + ☐ + ☐

Add all the maximum values

$P_{MAX} <$ ☐

Include the units

2



$P_{MIN} =$ ☐ + ☐ + ☐

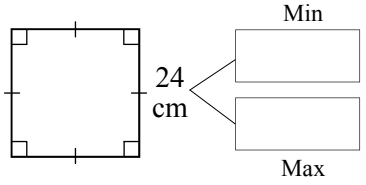
$P_{MIN} =$ ☐

$P_{MAX} <$ ☐ + ☐ + ☐

$P_{MAX} <$ ☐

Squares are easier, get the min and max side length and ×4! Calculate the minimum and maximum perimeter. Lengths are measured to the nearest cm

3



$P_{MIN} =$ ☐ × ☐

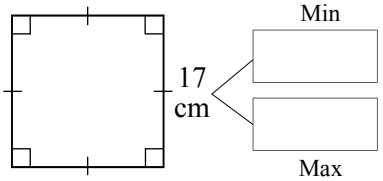
$P_{MIN} =$ ☐

Include the units

$P_{MAX} <$ ☐ × ☐

$P_{MAX} <$ ☐

4



$P_{MIN} =$ ☐

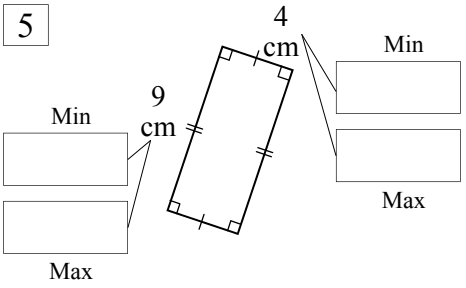
$P_{MIN} =$ ☐

$P_{MAX} <$ ☐

$P_{MAX} <$ ☐

Rectangles, × each side by 2

5



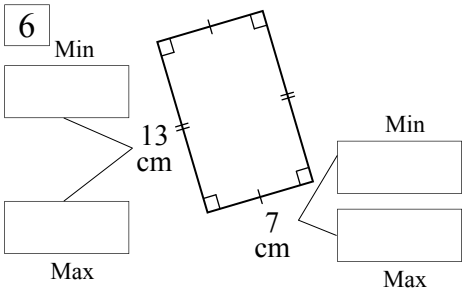
$P_{MIN} =$ ☐ × 2 + ☐ × 2

$P_{MIN} =$ ☐

$P_{MAX} <$ ☐ × ☐ + ☐ × ☐

$P_{MAX} <$ ☐

6



$P_{MIN} =$ ☐ × ☐ + ☐ × ☐

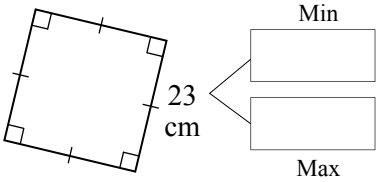
$P_{MIN} =$ ☐

$P_{MAX} <$ ☐

$P_{MAX} <$ ☐

Now find the area, by squaring or multiplying the two sides. All measurements are measured to the nearest cm.

7



$A_{MIN} =$ ☐ ^{2}

Area is found by squaring the min side length

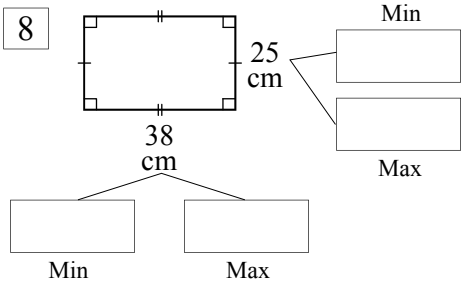
$A_{MIN} =$ ☐

Area units are cm^2, write square units

$A_{MAX} <$ ☐

$A_{MAX} <$ ☐

8



$A_{MIN} =$ ☐ × ☐

$A_{MIN} =$ ☐

$A_{MAX} =$ ☐ × ☐

$A_{MAX} =$ ☐

Numbers of Any Magnitude - Error in Measurement (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

The error in measurement is half of the limit of reading. Find the error in these measurements.

Example Find the error with measurements made to the nearest:

a) cm ±0.5 cm *c*) 10 kg ±5 kg

b) g ±0.5 g *d*) 5 s ±2.5 s

1 Nearest kg = ± 0.5 kg

2 Nearest 5 g = ± 2.5 g

3 Nearest 10 mL = ± 5 mL

4 Nearest 50 m = ±25 m

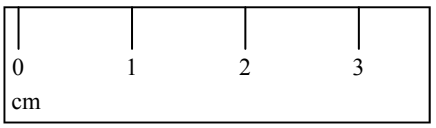
5 Nearest 25 g = ±12.5 g

6 Nearest 10 cm = ±5 cm

7 Nearest 2 mm = ±1 mm

These two rulers have different limits of reading, write the limit of reading and the error.

8

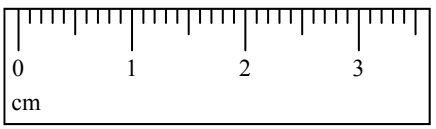


Limit of Reading: cm

To the nearest

Error: ± 0.5 cm

9



Limit of Reading: mm

To the nearest

Error: ± 0.5 mm

Find the upper and lower limits of these measurements.

Example A parcel weighs 425 g measured to the nearest 5 g.

Error: ± 2.5 g

Lower Limit : 425 - 2.5 = 422.5 g

Upper Limit : 425 + 2.5 = 427.5 g

10 A section of road to be repaired is measured as 870 m long, to the nearest 10 m.

Error: ± 5 m

Use '±' and units

Lower Limit : 870 - 5 = 865 m

Upper Limit : 870 + 5 = 875 m

11 A window has a width of 176 cm, to the nearest cm.

Error: ± 0.5 cm

Use '±' and units

Lower Limit : 176 - 0.5 = 175.5 cm

Upper Limit : 176 + 0.5 = 176.5 cm

12 A horse weighs 485 kg, measured to the nearest 5 kg.

Error: ± 2.5 kg

Lower Limit : 485 - 2.5 = 482.5 kg

Upper Limit : 485 + 2.5 = 487.5 kg

13 A measuring cylinder contains 115 mL measured to the nearest mL.

Error: ± 0.5 mL

Lower Limit : 115 - 0.5 = 114.5 mL

Upper Limit : 115 + 0.5 = 115.5 mL

With decimals, you will add a decimal place.

Example Find the error with measurements made to the nearest:

a) 0.1 cm ±0.05 cm *c*) 0.01 m

b) 0.5 g ±0.25 g ±0.005 m

15 A basket ball hoop is 304.8 cm from the ground, measured to the nearest 0.1 cm.

Error: ± 0.05 cm ← 0.1 ÷ 2

Use '±' and units

Lower Limit : 304.8 - 0.05

= 304.75 cm

Upper Limit : 304.8 + 0.05

= 304.85 cm

16 A solution is made by adding 5.72 g of copper sulphate, measured to the nearest 0.01 g.

Error: ±0.005 g

Lower Limit : 5.72 - 0.005

= 5.715 g

Upper Limit : 5.72 + 0.005

= 5.725 g

17 A chocolate bar is manufactured to weigh 91.0 g, measured to the nearest 0.5 g.

Error: ± 0.25 g

Lower Limit : 91 - 0.25

= 90.75 g

Upper Limit : 91 + 0.25

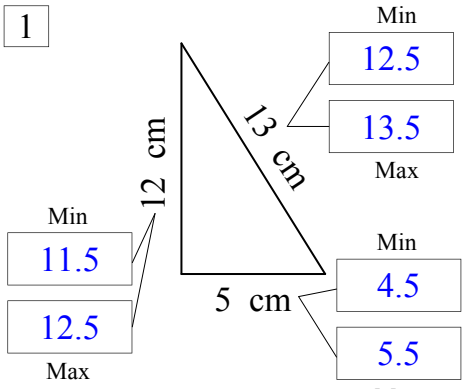
= 91.25 g

Numbers of Any Magnitude - Further Errors Perimeter/Area (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

These triangles are measured to the nearest cm. Find the lower and upper limits for each side, then the minimum and maximum perimeter.

1



P_{MIN} = 4.5 + 11.5 + 12.5

Add all the minimum values

P_{MIN} = 28.5 cm

Include the units

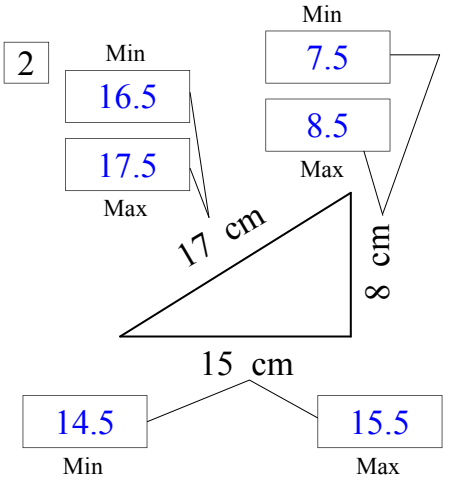
P_{MAX} < 5.5 + 12.5 + 13.5

Add all the maximum values

P_{MAX} < 31.5 cm

Include the units

2



P_{MIN} = 14.5 + 16.5 + 7.5

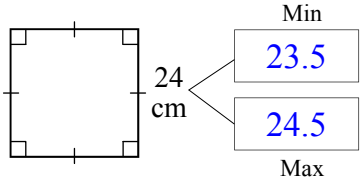
P_{MIN} = 38.5 cm

P_{MAX} < 15.5 + 17.5 + 8.5

P_{MAX} < 41.5 cm

Squares are easier, get the min and max side length and ×4! Calculate the minimum and maximum perimeter. Lengths are measured to the nearest cm

3



P_{MIN} = 23.5 × 4

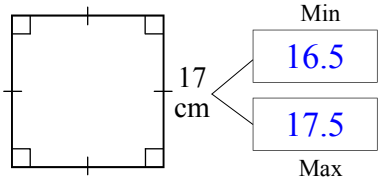
P_{MIN} = 94 cm

Include the units

P_{MAX} < 24.5 × 4

P_{MAX} < 98 cm

4



P_{MIN} = 16.5 × 4

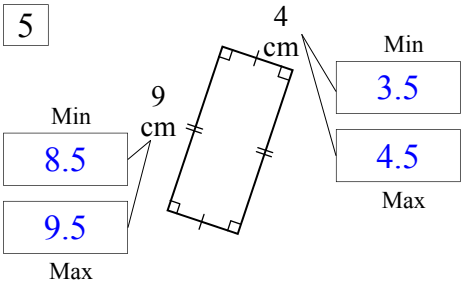
P_{MIN} = 66 cm

P_{MAX} < 17.5 × 4

P_{MAX} < 70 cm

Rectangles, × each side by 2

5



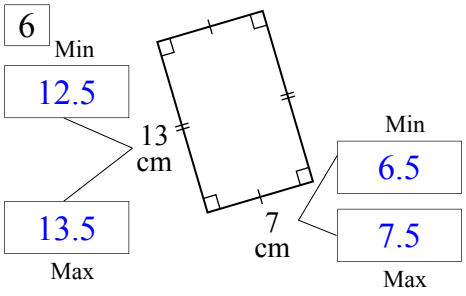
P_{MIN} = 8.5 × 2 + 3.5 × 2

P_{MIN} = 24 cm

P_{MAX} < 9.5 × 2 + 4.5 × 2

P_{MAX} < 28 cm

6



P_{MIN} = 12.5 × 2 + 6.5 × 2

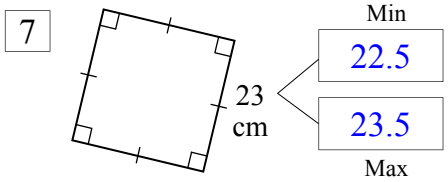
P_{MIN} = 38 cm

P_{MAX} < 13.5 × 2 + 7.5 × 2

P_{MAX} < 42 cm

Now find the area, by squaring or multiplying the two sides. All measurements are measured to the nearest cm.

7



A_{MIN} = 22.5^2

Area is found by squaring the min side length

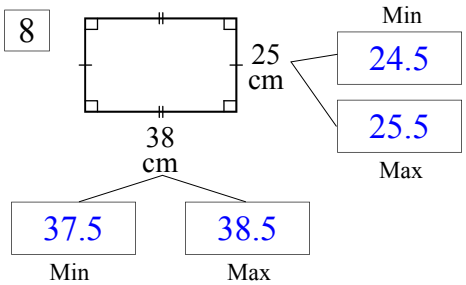
A_{MIN} = 506.25 cm^2

Area units are cm^2, write square units

A_{MAX} < 23.5^2

A_{MAX} < 552.25 cm^2

8



A_{MIN} = 24.5 × 37.5

A_{MIN} = 918.75 cm^2

A_{MAX} = 25.5 × 38.5

A_{MAX} = 981.75 cm^2

Numbers of Any Magnitude - Error in Measurement (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Date Due: _____

Find the error in measurements that are made to the nearest ….

1 metre = ± _____ m

2 10 g = ± _____ g

3 5 mL = ± _____

4 2 kg = _____

5 50 g = _____

Find the upper and lower limits.

6 A Boeing 747 is 71 m long measured to the nearest metre.

Error: _____ Use '±' and units

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

7 The amount of petrol in a tank is 7 460 L measured to the nearest 20 L.

Error: _____ Use '±' and units

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

Date Due: _____

Find the error in measurements that are made to the nearest ….

1 metre = ± _____ m

2 10 g = ± _____ g

3 5 mL = ± _____

4 2 kg = _____

5 50 g = _____

Find the upper and lower limits.

6 A Boeing 747 is 71 m long measured to the nearest metre.

Error: _____ Use '±' and units

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

7 The amount of petrol in a tank is 7 460 L measured to the nearest 20 L.

Error: _____ Use '±' and units

Numbers of Any Magnitude - Error in Measurement (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Date Due:

Find the error in measurements that are made to the nearest ….

1 metre = ± 0.5 m

2 10 g = ± 5 g

3 5 mL = ± 2.5 mL

4 2 kg = ± 1 kg

5 50 g = ± 25 g

Find the upper and lower limits.

6 A Boeing 747 is 71 m long measured to the nearest metre.

Error: ± 0.5 m Use '±' and units

Lower Limit: 71 - 0.5 = 70.5 m

Upper Limit: 71 + 0.5 = 71.5 m

7 The amount of petrol in a tank is 7 460 L measured to the nearest 20 L.

Error: ± 10 L Use '±' and units

Lower Limit: 7 460 - 10 = 7 450 L

Upper Limit: 7 460 + 10 = 7 470 L

Numbers of Any Magnitude - Find A Word

Look for words in the list at the bottom of the grid. Once you find a word cross it off the list.

A letter could be used more than once so don’t colour it in too dark (using a texta for example) so that you can still read it.

Round these numbers to the nearest 10

1 75 = 80

2 423 = 420

3 5 796 = 5 800

Round these numbers to the nearest 100

4 386 = 400

5 67 890 = 67 900

6 23 = 0

Round these numbers to the nearest 1 000

7 13 170 = 13 000

8 199 727 = 200 000

9 473 = 0

Round these decimals to the nearest whole number

10 8.2 = 8 11 5.7 = 6

12 4.49 = 4 13 0.67 = 1

Perform the calculations and round to the nearest whole number

14 $148 \div 52$ = 3 (Whole Number)

15 78.6×93.9 = 7 381

Round these decimals to 1 decimal place (1 d.p.)

16 63.317 = 63.3

17 0.1178 = 0.1

18 0.66666666 = 0.7

19 9.98 = 10.0

Perform the calculations and round to the nearest decimal place

20 $27 \div 73$ = 0.4 (1 d.p.)

21 $\sqrt{157}$ = 12.5

22 $\frac{24^2 - 7^3}{9^2}$ = 2.9

Round these to 1, 2 and 3 decimal places

		1 d.p.	2 d.p.	3 d.p.
23	0.3275	0.3	0.33	0.328
24	2.9530	3.0	2.95	2.953

How many significant figures are in these numbers and decimals?

25 45 — 2 sig.fig.

26 0.0003 — 1 sig.fig.

27 0.07100 — 4 sig. fig.

28 7 760 — 3 or 4 sig. fig.

29 8 001 — 4 sig. fig.

30 8 100 — 2 or 3 or 4 sig. fig.

Round these to 1 significant figure

31 1 567 — 2 000

32 63 — 60

33 0.007539 — 0.008

34 29 555 030 — 30 000 000

35 0.0000662 — 0.00007

Perform the calculations and express the answer to 1 significant figure

36 147^2 = 20 000 (1 significant figure)

37 $8^9 \div 2^9$ = 300 000

38 $\frac{(26 + 37)}{(34 - 21)}$ = 5

Round these to 2 significant figures

39 275 — 280

40 7 896 — 7 900

41 0.01313 — 0.013

What word describes a time period of

42 7 days — week

43 60 minutes — hour

44 10 years — decade

45 24 hours — day

46 1 000 years — millennium

Convert these time periods

47 3 weeks = 21 days

48 1 year = 52 weeks

49 4 days = 96 hours

50 ½ hour = 30 min

51 156 weeks = 3 years

52 4 min = 240 seconds

53 5 h = 300 min

61 0.5 sec = 500 msec

62 0.06 sec = 60 msec

Change these times from milliseconds to seconds

63 2000 msec = 2 sec

64 30 msec = 0.03 msec

65 120 msec = 0.12 msec

Rewrite these numbers in scientific notation format

66 3 000 = 3×10^{3}

67 4 000 000 = 4×10^{6}

68 37 000 = 3.7×10^{4}

69 80 600 000 = 8.06×10^{7}

70 64 700 = 6.47×10^{3}

71 194 000 = 1.94×10^{5}

Rewrite these decimals in scientific notation format

72 0.006 = 6×10^{-3}

73 0.00002 = 2×10^{-5}

74 0.00037 = 3.7×10^{-4}

75 0.0811 = 8.11×10^{-2}

76 0.108 = 1.08×10^{-1}

Convert these to numbers

77 5×10^{4} = 50 000

78 3×10^{2} = 300

79 4.6×10^{3} = 4 600

80 1.02×10^{6} = 1 020 000

Convert these to decimals

81 6×10^{-2} = 0.06

82 2×10^{-5} = 0.00002

83 3.7×10^{-1} = 0.37

84 9.09×10^{-6} = 0.00000909

Rank these prefixes from largest (1) to smallest (6)

85

Mega	3
Milli	5
Tera	1
Micro	6
Giga	2
Kilo	4

Change these units to the specified unit

86 4 000 m = 4 [km]

87 3 L = 3 000 [mL]

88 45 mg = 0.045 [g]

89 0.7 km = 700 [m]

90 53 mm = 5.3 [cm]

Change these digital units to the unit specified

91 4 TB = 4 000 [GB]

92 5 000 kB = 5 [MB]

93 60 GB = 60 000 [MB]

94 0.3 GB = 300 [MB]

95 3.2 MB = 3 200 [kB]

What is the error in measurements rounded to the nearest…..

96 cm = ± 0.5 cm

97 10 mL = ± 5 mL

98 15 sec = ± 7.5 sec

99 100 kg = ± 50 kg

What is the error, lower and upper limits of this measurement

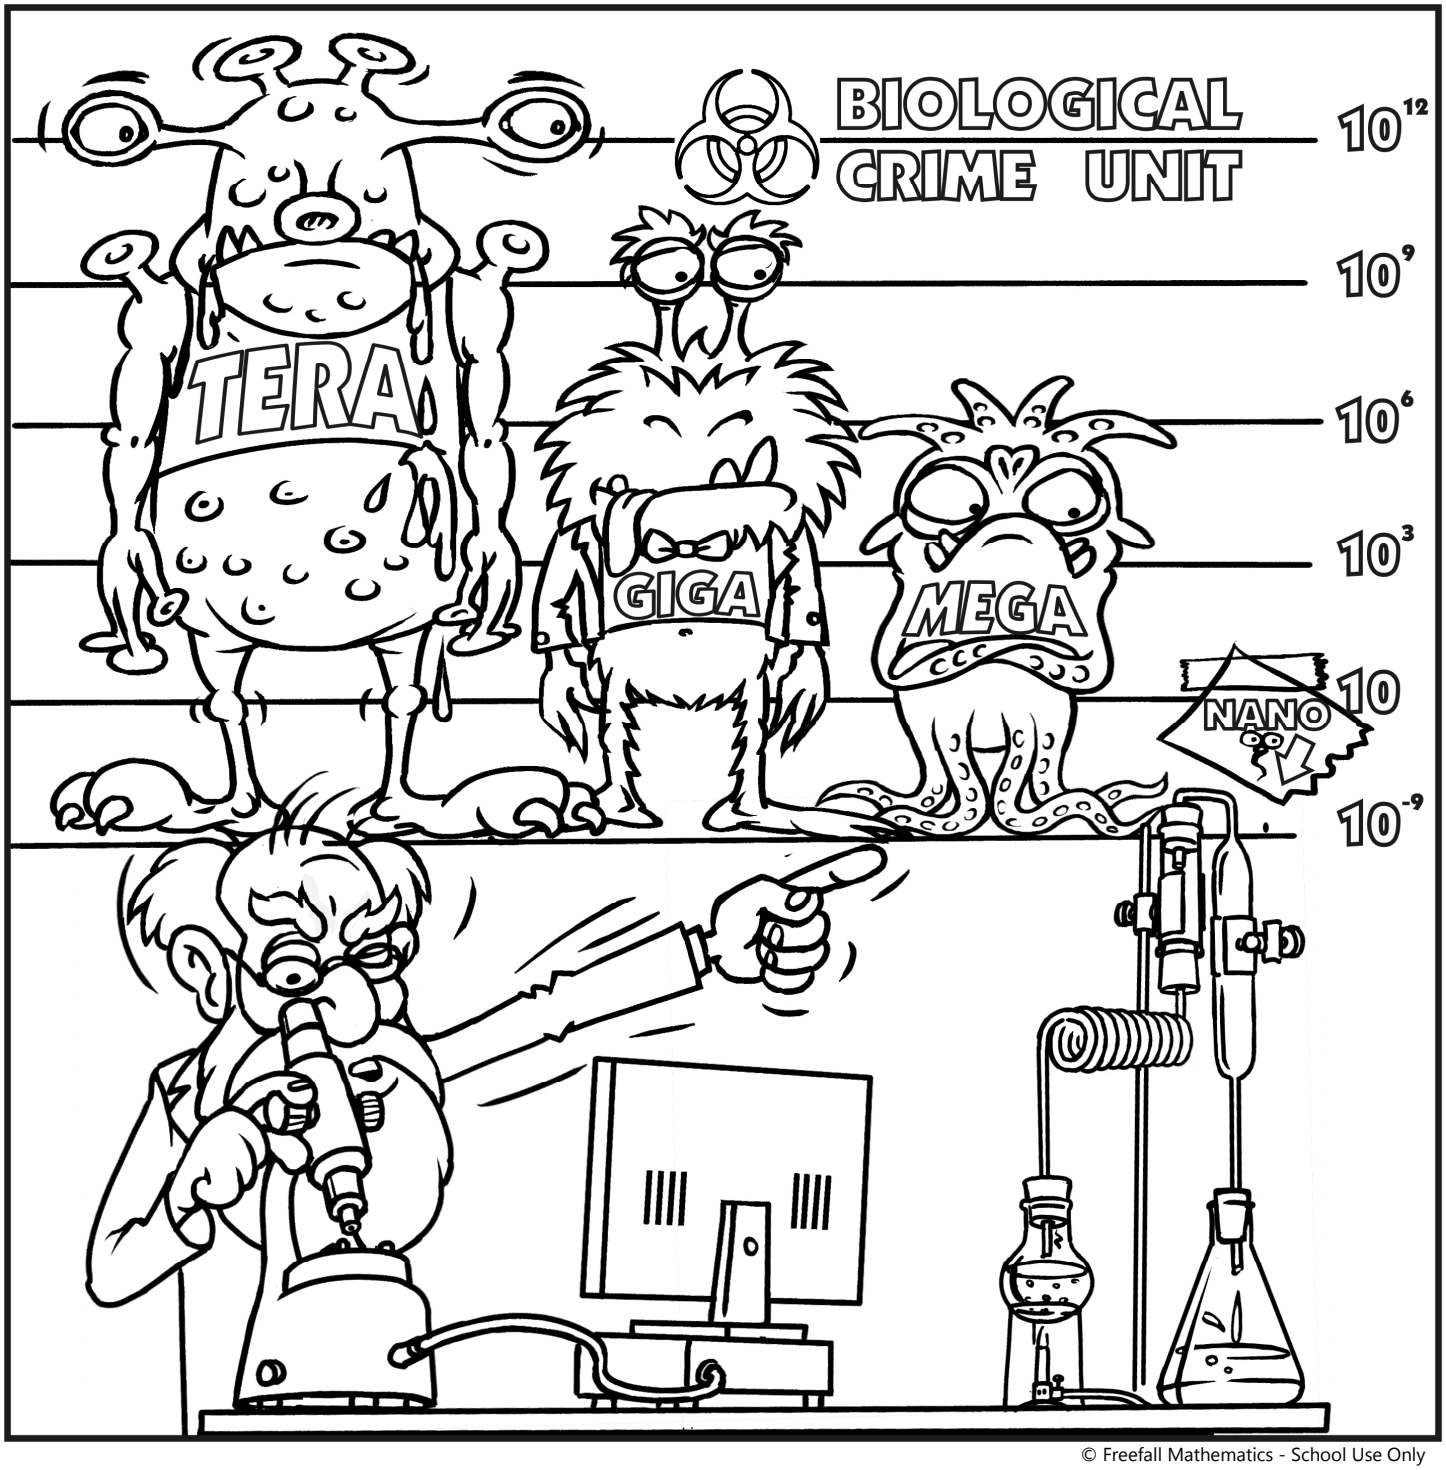
100 A car weighs 1 075 kg measured to the nearest 5 kg.

Error: ± 2.5 kg

Lower Limit : 1 075 - 2.5 = 1 072.5 kg

Upper Limit : 1 075 + 2.5 = 1 077.5 kg

Numbers of Any Magnitude



© Freefall Mathematics - School Use Only

Numbers of Any Magnitude - Prefix Table

Prefix	Scientific Notation		Numerical Value	Value in Words
Tera	1×10^{12}	LARGEST	1 000 000 000 000	1 trillion
Giga	1×10^{9}		1 000 000 000	1 billion
Mega	1×10^{6}		1 000 000	1 million
Kilo	1×10^{3}		1 000	1 thousand
Milli	1×10^{-3}		$\frac{1}{1\ 000}$	1 thousandth
Micro	1×10^{-6}		$\frac{1}{1\ 000\ 000}$	1 millionth
Nano	1×10^{-9}	SMALLEST	$\frac{1}{1\ 000\ 000\ 000}$	1 billionth
Pico	1×10^{-12}		$\frac{1}{1\ 000\ 000\ 000\ 000}$	1 trillionth

Prefix	Scientific Notation		Numerical Value	Value in Words
Tera	1×10^{12}	LARGEST	1 000 000 000 000	1 trillion
Giga	1×10^{9}		1 000 000 000	1 billion
Mega	1×10^{6}		1 000 000	1 million
Kilo	1×10^{3}		1 000	1 thousand
Milli	1×10^{-3}		$\frac{1}{1\ 000}$	1 thousandth
Micro	1×10^{-6}		$\frac{1}{1\ 000\ 000}$	1 millionth
Nano	1×10^{-9}	SMALLEST	$\frac{1}{1\ 000\ 000\ 000}$	1 billionth
Pico	1×10^{-12}		$\frac{1}{1\ 000\ 000\ 000\ 000}$	1 trillionth

Numbers of Any Magnitude - Rounding (Nearest 10)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers to the nearest 10. So if the last digit is 5 or more, round them up.

Examples

47 = 50 273 = 270

1 17 = 2 82 =

3 38 = 4 24 =

5 67 = 6 11 =

7 6 = 8 4 =

Now larger numbers

9 167 =

10 204 =

11 477 =

12 597 =

13 2 036 =

14 1 997 =

15 3 598 =

Calculate these and write the answer, then the answer rounded to the nearest 10.

16 47×28 = Actual

= Rounded

17 $53^2 \times 87$ =

=

18 $36^2 \div (9 \times 6)$ =

=

19 $(9 + 13)^2 \times (8 + 9)^2$

= =

Use the fraction key or bracket both the numerator (top) & denominator

20 $\dfrac{(15 \times 23)^3}{5^2 \times 3}$ =

Bracket denominator

=

Use the $x^{\square}$ key

21 $\dfrac{9^5 \times 4^3}{2^4 \times 3^3}$ =

Use the $x^{\square}$ key =

22 $\dfrac{5^4 \times 6^3}{10^3 \times 3^3}$ = =

Its investigation time. Perform the same operation twice, but the first is rounded after the calculation, the second, before.

23 127×58 = Actual

= Rounded

24 127×58 = 130 × 60 Round the numbers

= Actual

25 232×67 =

= Rounded

26 232×67 = × Round the numbers

=

27 $4\,096 \times 156$ = Actual

= Rounded

28 $4\,096 \times 156$

= ×

=

29 $2\,322 \times 4$ = Actual

= Rounded

30 $2\,322 \times 4$

= ×

=

This time its addition. Round at the end and compare it with rounding at the start.

31 $301 + 494 + 727 + 83$

= Actual = Rounded

32 $309 + 496 + 727 + 83$

= + + +

Round all the numbers to the nearest 10

=

33 $777 + 438 + 219 + 867$

= Actual = Rounded

34 $777 + 438 + 219 + 867$

= + + +

=

Numbers of Any Magnitude - Rounding (Nearest 100/1 000)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers to the nearest 100. If the last two digits are 50 or more, round up

Examples

326 = 300 4 976 = 5 000

1 435 =

2 153 =

3 18 = 4 61 =

5 888 =

6 950 =

Now larger numbers

7 23 478 =

8 5 809 =

9 179 981 =

10 197 090 =

Perform these calculations and give the answer, then the answer rounded to nearest 100

11 76×38 = Actual

= Rounded

12 $24^2 \times 14^2$ =

=

13 $90^2 \div 15^2$ =

=

14 $32^3 + 8^3$ =

=

Round these numbers to the nearest 1 000. If the last three digits are 500 or more, round up

Examples

577 = 1 000 403 = 0

15 1 875 =

16 7 077 =

17 8 498 =

18 3 702 =

19 5 555 =

Now larger numbers

20 87 206 =

21 109 703 =

22 4 528 119 =

23 2 149 944 =

24 7 999 566 =

Calculate the answer then the rounded answer to the nearest thousand.

Use the power key $x^{\blacksquare}$ to answer these

25 $3^6 \times 2^9$ =

Actual

= Rounded to nearest 1 000

26 $5^4 + 6^{10}$ =

=

27 $8^{11} \div 2^6$ =

=

Match answers with questions. The answers have been rounded to the nearest 1 000.

28 7^4 • • 16 000

29 5^6 • • 4 000

30 6^6 • • 66 000

31 4^8 • • 20 000

32 3^9 • • 2 000

33 9^4 • • 47 000

34 4^6 • • 7 000

Perform the calculation and write the answer three times. Rounded to 10, 100 then 1 000

35 $927 \times 43 \times 8^4$ Unrounded Answer Not Required

=

Round to the Nearest 10

=

Round to the Nearest 100

=

Round to the Nearest 1 000

36 $17 \times 11 \times 13 \times 7^3$

=

=

=

37 $3^6 \times 13^4 \div (43 - 16)$

=

=

=

Numbers of Any Magnitude - Rounding Decimals - 0 & 1 d.p. (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these decimals to the nearest whole number. Look at the first decimal digit.

Examples

$3.8 =$ 4 (0.8 more than 0.5)

$7.37 =$ 7 (0.3 less than 0.5)

1 $1.7 =$ ☐

2 $8.3 =$ ☐

3 $6.2 =$ ☐

4 $5.8 =$ ☐

5 $0.6 =$ ☐

6 $0.2 =$ ☐

These have more than 1 decimal place

7 $11.53 =$ ☐ ← Whole number answer

8 $2.07 =$ ☐

9 $15.72 =$ ☐

10 $23.6081 =$ ☐

11 $49.1189 =$ ☐

12 $7.067 =$ ☐

Find these, write the answer, then write the answer rounded to the nearest whole number.

13 $3.7 \times 8.4 =$ ☐ Actual

Whole number answer → $=$ ☐ Rounded

14 $5.16 \times 13.7 =$ ☐ Actual

$=$ ☐ Rounded

15 $7.59 \times 37.8 =$ ☐

$=$ ☐

Its estimation time. Change these to whole numbers to estimate the answer.

Example 3.8×5.2

$\approx 4 \times 5 = 20$

16 $2.9 \times 6.7 \approx$ ☐ (Round 2.9) $\times$ ☐ (Round 6.7) $=$ ☐

17 $5.3 \times 9.8 \approx$ ☐ $\times$ ☐ $=$ ☐

18 $7.8 \div 1.9 \approx$ ☐ $\div$ ☐ $=$ ☐

19 $8.3 \times 4.1 \approx$ ☐ $\times$ ☐ $=$ ☐

20 $9.2 \div 2.7 \approx$ ☐ $\div$ ☐ $=$ ☐

Round these decimals to 1 decimal place. (1 d.p.)

Examples

$3.82 =$ 3.8 (Less than 5)

$7.97 =$ 8.0 (More than 5)

21 $3.16 =$ ☐.☐

22 $8.52 =$ ☐.☐

23 $16.78 =$ ☐

24 $-0.61 =$ ☐

25 $4.95 =$ ☐

Match the decimal with its answer when rounded to 1 d.p.

Use a Ruler!

26	5.26 ●	●6.3
27	6.25 ●	●6.5
28	2.56 ●	●5.6
29	5.62 ●	●5.3
30	6.52 ●	●2.6

These decimals have more decimal places. Round them to 1 decimal place. (1 d.p.)

Examples

Ignore the 5 & 2 (Less than 5): $3.8352 =$ 3.8

Ignore the 2 (More than 5): $7.362 =$ 7.4

Look at the arrowed digit for rounding

31 $9.0671 =$ ☐.☐

32 $0.7155 =$ ☐

33 $48.96051 =$ ☐

34 $145.27 =$ ☐

35 $59.962 =$ ☐

36 $0.3815 =$ ☐

37 $-12.629 =$ ☐

38 $8.0188 =$ ☐

39 $152.3826 =$ ☐

40 $45.56621 =$ ☐

Complete the calculations and give the answer as a whole number and a decimal to 1 d.p.

41 $2.3^3 \times 0.7^2 + 1.8$

$=$ ☐ To 1 d.p. $=$ ☐ Whole Number

42 $1.13^4 \times 3.57^3$

$=$ ☐ To 1 d.p. $=$ ☐ Whole Number

43 $\dfrac{8^2 + 9^3}{4^6 - 2^7} + 0.8$

$=$ ☐ To 1 d.p. $=$ ☐ Whole Number

Numbers of Any Magnitude - Rounding Decimals - 2 & 3 d.p. (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these decimals to 2 decimal places. Look at the third decimal digit to decide.

Examples

$5.783 = 5.78$ (3 is less than 5)

$0.7283 = 0.73$ (8 is more than 5)

1 $2.916 =$ ☐.☐☐

2 $42.053 =$ ☐

3 $-8.198 =$ ☐

4 $207.371 =$ ☐

5 $1.897 =$ ☐

When a decimal has less than 2 decimal places, add zeros. Write these to 2 d.p.

Examples

$2.6 = 2.60$ (Add a zero)

$14 = 14.00$ (Add two zeros)

6 $8 =$ ☐.☐☐

7 $4.3 =$ ☐

8 $113.7 =$ ☐

9 $344 =$ ☐

These have more decimal places. Use the arrow to help to get you rounding to 2 d.p.

10 $0.1642 =$ ☐.☐☐

11 $0.3884 =$ ☐

12 $17.744823 =$ ☐

13 $5.096273 =$ ☐

14 $83.25199 =$ ☐

15 $-11.99716 =$ ☐

Round these to 2 d.p.

16 $61.37285 =$ ☐

17 $0.115099 =$ ☐

18 $4.797003 =$ ☐

19 $97.98221 =$ ☐

20 $19.99534 =$ ☐

Calculate these and write the answer to 2 d.p.

21 $0.9^2 \times 9.4 =$ ☐ Rounded to 2 d.p.

22 $1.75^3 + 5.2^2 =$ ☐

23 $\dfrac{31.9 + 54.2}{4.7^2} =$ ☐

24 $(-0.762)^5 =$ ☐

Round these to 3 d.p. Use the arrow to help you get started.

Examples

$0.78367 = 0.784$ (6 is more than 5)

$0.21842 = 0.218$ (4 is less than 5)

25 $0.778321 =$ ☐.☐☐☐

26 $6.01596 =$ ☐

27 $-38.09951 =$ ☐

28 $0.047177 =$ ☐

29 $3.141592654 =$ ☐

30 $1.414213562 =$ ☐

Calculate these and write the answer to 3 d.p.

31 $\sqrt{15} =$ ☐.☐☐☐ Rounded to 3 d.p.

32 $\sqrt{624} =$ ☐

33 $\sqrt{5.2^2 - 3.1^2} =$ ☐

34 $\sqrt{24^2 + 17.7^2} =$ ☐

35 $\dfrac{14^3 - 11^3}{5^2} =$ ☐

Match the left hand side with its answer on the right, when rounded to 3 d.p.

Use a Ruler!

36	0.2	0.002
37	0.12^3	0.003
38	$\dfrac{3}{1\,004}$	0.001
39	$3^2 \div 9^4$	0.200
40	$\sqrt{0.08}$	0.283

Round these to the nearest whole number, 1 d.p., 2 d.p. and 3 d.p.

41 0.7

Whole	1 d.p.	2 d.p.	3 d.p.
☐	☐	☐	☐

Numbers of Any Magnitude - Rounding Decimals 0-3 d.p. (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers to the nearest tenth (1 d.p.)

Example

Look at the digit to the right of the one to be rounded. If it is 5 or more round it up, if < 5 the digit is unchanged

1.1627 → 1.2

1. 0.87
2. 0.43
3. 0.90347
4. 0.05956
5. 18.374
6. 22.128
7. 67
8. 56.942
9. 129.988
10. 99.953

Round these numbers to the nearest hundredth (2 d.p.)

Example

Look at the digit to the right of the one to be rounded. If it is 5 or more round it up, if < 5 the digit is unchanged

1.1627 → 1.16

11. 0.278
12. 0.805
13. 0.4246
14. 0.9793
15. 2.2183
16. 73.2
17. 4.95829
18. 9.99811
19. 67.9942
20. 83
21. 99.9961

Round these numbers to the nearest thousandth (3 d.p.)

Example

Look at the digit to the right of the one to be rounded. If it is 5 or more round it up, if < 5 the digit is unchanged

1.1627 → 1.163

22. 2.7674
23. 0.8436
24. 8.0302
25. 6.9969
26. 6.9996
27. 0.7
28. 0.70
29. 0.707
30. 4
31. 9.9999

Round these numbers to the nearest unit (0 d.p.)

Example

Look at the digit to the right of the one to be rounded. If it is 5 or more round it up, if < 5 the digit is unchanged

1.1627 → 1

32. 4.7
33. 9.3
34. 18.78
35. 249.499
36. 7 101.835
37. 83.5004
38. 999.278
39. 999.872
40. 0.808
41. 0.080
42. 9 999.5

Round these numbers to the decimal place given in the brackets

43. 29.6751 [2]
44. 1 361.54 [1]
45. 0.4296 [0]
46. 9.1 [3]
47. 19.9971 [2]
48. 6.0606 [3]
49. 86 [2]
50. 56.0438 [1]
51. 11.4099 [0]
52. 8.8997 [3]
53. 5.9949 [2]

Round each decimal to 1, 2 and 3 decimal places

54. 0.1919 [1] _____ [2] _____ [3] _____
55. 3.8225 [1] _____ [2] _____ [3] _____
56. 26.9527 [1] _____ [2] _____ [3] _____
57. 0.3235 [1] _____ [2] _____ [3] _____
58. 9.9994 [1] _____ [2] _____ [3] _____

Numbers of Any Magnitude - Counting Significant Figures (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Break these numbers up into 'significant' and 'possible' significant figures.

Examples 0's at end are possible

2 300 = 2 3 0 0

Significant Possible

0's between non-zero digits are significant

2 003 = 2 0 0 3

Significant

Combination of the two

2 030 = 2 0 3 0

Significant Possible

1 460 = ☐☐☐

2 5 000 = ☐☐☐☐

3 4 705 = ☐☐☐☐

4 71 070 = ☐☐☐☐☐

5 93 600 = ☐☐☐☐☐

6 35 206 000

☐☐☐☐☐☐☐☐

7 409 100

☐☐☐☐☐☐

8 1 480 050

☐☐☐☐☐☐☐

Now count the significant figures. Use the word 'or' between the possible sig figs.

Examples

2 300 = 2 3 0 0

2 3 4

There are 2 or 3 or 4 sig figs.

2 003 = 2 0 0 3

4

There are 4 sig figs.

2 030 = 2 0 3 0

3 4

There are 3 or 4 sig figs.

9 8 030 = ☐☐☐☐ (☐ ☐)

There are ☐ or ☐ sig figs.

10 3 400 = ☐☐☐☐ (☐ ☐ ☐)

There are ☐ or ☐ or ☐ sig figs.

11 5 043 = ☐☐☐☐ (☐)

There are ☐ sig figs.

12 70 900

☐☐☐☐☐

There are ☐ sig figs

13 8 619 000

☐☐☐☐☐☐☐

There are ☐ sig figs

14 406 100

☐☐☐☐☐☐

There are ☐ sig figs

15 9 005 020

☐☐☐☐☐☐☐

There are ☐ sig figs

16 120 000

☐☐☐☐☐☐

There are ☐ sig figs

17 27 000 050

☐☐☐☐☐☐☐☐

There are ☐ sig figs

If a decimal is larger than 1, all the digits in the decimal are significant. Count those sig figs.

Examples

23.00 There are 4 sig figs.

2.0030 There are 5 sig figs.

2000.30 There are 6 sig figs.

18 1.0 There are ☐ sig figs

19 5.100 There are ☐ sig figs

20 75.03 There are ☐ sig figs

21 195.00 There are ☐ sig figs

Numbers of Any Magnitude - Counting Significant Figures (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Break these decimals up into 'ignore' and 'significant' figures.

Examples Ignore all leading 0's

$0.007 =$ 0 . 0 0 7

Ignore Significant

0's between non-zero digits are significant

$0.4003 =$ 0 . 4 0 0 3

Ignore Significant

0's to the right are also significant

$0.0600 =$ 0 . 0 6 0 0

Ignore Significant

1 $0.88 =$.

2 $0.027 =$.

3 $0.050 =$.

4 0.010200

.

5 0.000775

.

6 0.009003

.

7 0.50010

.

8 $0.400 =$.

Now underline and then count the significant figures. Ignore all the leading zeros.

Examples

$0.007 =$ 0 . 0 0 7

There is 1 sig fig. 1

$0.4003 =$ 0 . 4 0 0 3

4

There are 4 sig figs.

$0.600 =$ 0 . 6 0 0

3

There are 3 sig figs.

9 $0.020 =$.

There are sig figs.

10 $0.170 =$.

There are sig figs.

11 $0.003 =$.

There is sig fig.

12 $0.900 =$.

13 0.027300

.

14 0.006038

.

Perform these calculations and then give the number of sig figs that are in the answer.

15 $0.32^2 =$ Answer Sig Fig

16 $40.04 \div 50 =$ Answer

Sig Fig

17 $0.02^2 \div 0.5^3$

$=$

18 0.16×0.48^2

$=$

19 $0.2^7 =$

Convert these fractions to decimals and give the number of significant figures in the answer.

20 $\frac{8}{125} =$

21 $\frac{401}{5\,000} =$

22 $\frac{9}{12\,500} =$

23 $\frac{63}{900} =$

24 $\frac{5\,253}{12\,500} =$

25 $\frac{6}{48\,000} =$

26 $\frac{3\,113}{50\,000} =$

Significant Figures and Rounding - 1 & 2 Sig.Fig. (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers/decimals to 1 significant figure.

Examples $473 = 500$

7 more than 5 - Round up

$2\,372 = 2\,000$

3 less than 5 - Round down

1 $46 =$ ____ 2 $1.9 =$ ____

3 $5\,800 =$ ____

4 $3\,193 =$ ____

5 $81 =$ ____ 6 $6.6 =$ ____

7 $97\,100 =$ ____

8 $637\,522 =$ ____

Calculate these and give two answers. The actual answer, then rounded to 1 sig. fig.

9 $34^2 + 19^2 =$ ____ Actual

$=$ ____ 1 sig. fig.

10 $31^4 =$ ____ Actual

$=$ ____ 1 sig. fig.

11 $\sqrt{28\,224} =$ ____ Actual $=$ ____ 1 sig. fig.

12 $\dfrac{89 \times 116}{20} =$ ____ Actual

$=$ ____ 1 sig. fig.

13 $227^2 =$ ____ Actual

$=$ ____ 1 sig. fig.

Calculate the area of the rectangles and give the answer to 1 significant fig.

14

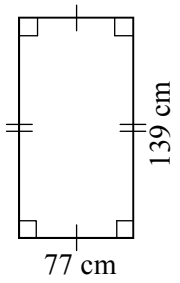
$A = lb$

$=$ ____ $\times$ ____

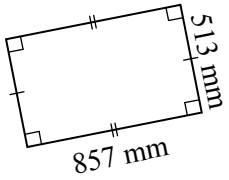
Multiply sides, in any order

$A =$ ____ cm^2

Answer to 1 sig fig



15



$A = lb$

$=$

$A =$ ____ mm^2

Answer to 1 sig fig

Write these to 2 significant figures.

Examples $473 = 470$

3 less than 5 - Round down

$2\,372 = 2\,400$

7 more than 5 - Round up

16 $386 =$ ____

17 $5 =$ ____ 18 $9 =$ ____

19 $25\,677 =$ ____

20 $507\,311 =$ ____

21 $89.7 =$ ____

22 $472.8 =$ ____

23 $3\,777\,529 =$ ____

24 $70\,813 =$ ____

Perform the calculations and answer to 1 and 2 sig. fig.

25 $516 \times 85 =$ ____ Actual

____ 1 sig. fig. ____ 2 sig. fig.

26 $84^3 =$ ____ Actual

____ 1 sig. fig. ____ 2 sig. fig.

27 $15^3 + 37^4 =$ ____ Actual

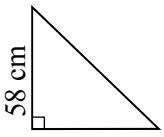
____ 1 sig. fig. ____ 2 sig. fig.

28 $\sqrt{59\,049} =$ ____ Actual

____ 1 sig. fig. ____ 2 sig. fig.

Find the area of these triangles answering to 2 sig. fig.

29



$A = \frac{1}{2}bh$

$= \frac{1}{2} \times$ ____ $\times$ ____

Significant Figures and Rounding Decimals - 1 & 2 Sig.Fig. (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these decimals to 1 significant figure.

Examples $0.0382 =$ 0.04

8 more than 5 - Round up

$0.0000539 =$ 0.00005

3 less than 5 - Round down

1 $0.0647 =$ ____

2 $0.00231 =$ ____

3 $0.000037 =$ ____

4 $0.00095 =$ ____

*careful

5 $0.849 =$ ____

6 $0.972 =$ ____

7 $0.000033 =$ ____

8 $0.00451388 =$ ____

Perform the calculation and write the answer, then the answer rounded to 1 significant figure.

9 $8 \div 6\,400$

____ Decimal - Actual

$=$ ____ 1 sig. fig.

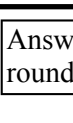
10 $\frac{125}{500\,000} =$ ____ Decimal - Actual

Use the S⇔D key $=$ ____ 1 sig. fig.

11 $\frac{21}{3\,360\,000}$

$=$ ____ Decimal - Actual

$=$ ____ 1 sig. fig.



Answer these as decimals and round to 1 significant figure.

12 $3 \div 1\,290 =$ ____ 1 sig. fig.

13 $\frac{83}{938\,508} =$ ____

14 $9 \div 9\,396 =$ ____

*careful

15 $37 \div 8\,771 =$ ____

16 $\frac{116}{117\,229} =$ ____

17 $\frac{3}{84\,080} =$ ____

18 $2^3 \div 2^{17} =$ ____

Round these decimals to 2 significant figures.

Examples $0.0382 =$ 0.038

2 less than 5 - Round down

$0.0000539 =$ 0.000054

9 more than 5 - Round up

19 $0.4531 =$ ____

20 $0.01039 =$ ____

21 $0.000317 =$ ____

22 $0.000997 =$ ____

*careful

23 $0.02007 =$ ____

24 $0.975 =$ ____

25 $0.068033 =$ ____

26 $0.000566 =$ ____

Calculate these, write the full answer first, then rounded to 2 significant figures.

27 $4 \div 3\,200 =$ ____ Decimal - Actual

$=$ ____ 2 sig. fig.

28 $141 \div 200\,000$

$=$ ____ Decimal - Actual $=$ ____ 2 sig. fig.

29 $281 \div 3\,125$

$=$ ____ Decimal - Actual $=$ ____ 2 sig. fig.

Calculate and write as decimals to both 1 & 2 significant figures.

30 $12 \div 4\,133$

$=$ ____ 1 sig. fig. $=$ ____ 2 sig. fig.

31 $2^7 \div 7^7$

$=$ ____ 1 sig. fig. $=$ ____ 2 sig. fig.

32 $\frac{499}{50\,000}$

$=$ ____ 1 sig. fig. $=$ ____ 2 sig. fig.

33 $5^2 \div 14^5$

$=$ ____ 1 sig. fig. $=$ ____ 2 sig. fig.

34 $\frac{179}{2\,500}$

$=$ ____ 1 sig. fig. $=$ ____ 2 sig. fig.

Numbers of Any Magnitude - Units of Time/Conversions (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use each of these words once to answer the questions. What is the most appropriate time unit to use to measure …….

Wordlist:	seconds	days
years	hours	decade
centuries	millennia	milliseconds
minutes	weeks	Cross them out

1 A person's age _____

2 The time that humans have lived in cities _____

3 A 10 year period _____

4 The time to cook a meal _____

5 The time taken for a pierced balloon to 'pop' _____

6 The time you are allowed to borrow a book from the library _____

7 The amount of time that you sleep daily _____

8 The time a tourist might spend visiting a foreign city _____

9 The time humans have used coal for heating. _____

10 The time taken to cross the street. _____

Convert these larger time periods to days. One year is 365 days, ignoring leap years.

11 2 years = ____ × 365

= ____ days

12 1 decade = ____ × 365

= ____ days

13 17 years = _____

= _____

14 3 centuries = _____

= _____

Convert these times to times measured in hours. 1 day is 24 hours in duration.

15 5 days = ____ × 24

= ____ hours

16 3 weeks = ____ × ____ × ____

= ____ hours

17 July = _____

= _____

18 1 year = _____

= _____

Match the right side with the left.

19

1 year ●	● 3 days
3 weeks ●	● 52 weeks
72 hours ●	● 576 hours
24 days ●	● 21 days

Convert these units of time to the different unit on the right hand side.

20 2 weeks = ____ days

21 1 year = ____ weeks

22 3 days = ____ hours

23 ½ hour = ____ min

24 104 weeks = ____ years

25 6 min = ____ seconds

26 2 h = ____ min

27 1 leap year = ____ days

28 4 weeks = ____ days

29 3 decades = ____ years

30 9 min = ____ seconds

31 24 months = ____ years

32 4 centuries = ____ decades

33 ½ year = ____ months

34 5 days = ____ hours

35 2 fortnights = ____ weeks

36 300 s = ____ min

37 156 weeks = ____ years

38 September = ____ days

39 2 millennia = ____ years

40 March + May = ____ days

Numbers of Any Magnitude - Units of Time/Conversions (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Rewrite the calculator displays in h and min.

1  ____ h ____ m

Hours Minutes

2  ____ h ____ m

3  ____ h ____ m

4  ____ h ____ m

Convert the following times from minutes to hours and minutes.

Example

Convert 211 minutes to hours/minutes.

Calc: 0 ° ’ ’’ 2 1 1 ° ’ ’’ =

Display: 

3 h 31 min

5 193 min ____ h ____ min

6 185 min ____ h ____ min

7 247 min ____ h ____ min

8 744 min _____

9 490 min _____

10 333 min _____

11 296 min _____

12 575 min _____

13 1 541 min _____

Now backwards. Change times in hours/minutes to minutes.

Example

Convert 4 h 19 min to minutes.

Calc: 4 ° ’ ’’ 1 9 ° ’ ’’ × 6 0 =

Display: 

259 min

14 3 h 38 min _____ min

15 1 h 43 min _____ min

16 2 h 27 min _____ min

17 6 h 6 min _____ min

18 7 h 25 min _____

19 1 h 19 min _____

20 4 h 53 min _____

21 5 h _____

22 2 h 48 min _____

Now use ×, +, ÷ and - with these time operations.

Example 47 min × 4

Calc: 0 ° ’ ’’ 4 7 ° ’ ’’ × 4 =

If no hours, enter ‘0’ in hours

Display: 

3 h 8 min

23 8 × 23 min ____ h ____ min

24 7 × 1 h 16 min

____ h ____ min

25 19 h 57 min ÷ 9

____ h ____ min

26 2 h 38 min + 1 h 43 min

____ h ____ min

27 5 h 19 min - 2 h 56 min

____ h ____ min

28 54 min × 6 + 3 h 7 min ÷ 11 + 1 h 27 min

____ h ____ min

There are 1 000 milliseconds in a second. Change these times to milliseconds by: × by 1 000.

29 2 sec _____ msec

30 3.2 sec _____ msec

31 0.08 sec _____

32 0.076 sec _____

33 4.4 sec _____

34 0.55 sec _____

35 0.00007 sec _____

Change these times from milliseconds to seconds by ÷ by 1 000.

36 700 msec _____ sec

37 95 msec _____ sec

38 7 100 msec _____

39 0.2 msec _____

40 40 msec _____

41 999 msec _____

42 635.7 msec _____

Scientific Notation (Non-Calc) - Positive Index - No Rounding (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these numbers into scientific notation format. By hopping the decimal point to be behind the first digit.

Example Convert 4 000.

$4\,000 = 4 \times 10^{3}$

3 places

1 $6\,000 = 6 \times 10^{\square}$

2 $5\,000\,000 = 5 \times 10^{\square}$

3 $70\,000 = 7 \times 10^{\square}$

4 $30\,000\,000 = 3 \times 10^{\square}$

Now you do the hopping, use a pencil

5 $80\,000 = 8 \times 10^{\square}$

6 $1\,000 = 1 \times 10^{\square}$

7 $9\,000\,000 = 9 \times 10^{\square}$

Now the first number and the index

8 $40\,000 = \square \times 10^{\square}$

9 $7\,000\,000 = \square \times 10^{\square}$

10 $30\,000 = \square \times 10^{\square}$

Now the lot, the base is always 10.

11 $300\,000 = \square \times \square^{\square}$

12 $50\,000\,000\,000\,000\,000 = \square \times \square^{\square}$

13 $20\,000\,000\,000\,000 = \square \times \square^{\square}$

14 $600\,000 = \square \times \square^{\square}$

15 $8\,000 = \square \times \square^{\square}$

16 $100\,000\,000 = \square \times \square^{\square}$

17 $20\,000 =$ _____

18 $900\,000\,000 =$ _____

19 $100\,000 =$ _____

20 $4\,000\,000 =$ _____

Any additional non-zero digits are written to the right of the decimal point. Convert these.

Examples

$320 = 3.2 \times 10^{2}$

$570\,000 = 5.7 \times 10^{5}$

21 $75\,000 = \square.\square \times \square^{\square}$

22 $8\,800\,000 = \square.\square \times \square^{\square}$

23 $950\,000\,000 =$ _____

24 $7\,700\,000\,000 =$ _____

25 $4\,500 =$ _____

26 $61\,000\,000 =$ _____

Now there are two decimal places

27 $62\,800\,000 = \square.\square\square \times \square^{\square}$

28 $593\,000\,000\,000\,000 = \square.\square\square \times \square^{\square}$

29 $40\,700\,000\,000 = \square.\square\square \times \square^{\square}$

30 $712\,000\,000 = \square.\square\square \times \square^{\square}$

31 $21\,400 =$ _____

32 $807 =$ _____

33 $9\,090\,000 =$ _____

34 $5\,770\,000\,000\,000\,000\,000 =$ _____

35 $81\,600\,000\,000\,000 =$ _____

These have more than 3 leading significant digits. Include all of them. Convert these.

Examples

$170\,600 = 1.706 \times 10^{5}$

$8\,167\,200\,000 = 8.1672 \times 10^{9}$

36 $88\,760 = \square.\square\square\square \times \square^{\square}$

37 $13\,676\,000\,000 = \square.\square\square\square\square \times \square^{\square}$

38 $50\,255\,800\,000\,000 =$ _____

39 $14\,950\,000 =$ _____

40 $3\,006\,520\,000\,000 =$ _____

41 $804\,370\,000 =$ _____

Scientific Notation (Non-Calc) - Positive Index - Rounding (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Round these numbers shown in scientific notation format, to 1 decimal place.

Examples

$4.35 \times 10^9 = 4.4 \times 10^9$

as 5 is 5 or more, round up

$2.9712 \times 10^{14} = 3.0 \times 10^{14}$

as 7 > 5 round up

$3.4218 \times 10^5 = 3.4 \times 10^5$

as 2 < 5 round down

1 4.16×10^5

= ☐.☐ × ☐☐

2 3.71×10^8

= ☐.☐ × ☐☐

3 9.093×10^6

= ☐.☐ × ☐☐

4 1.7504×10^{11} =

5 6.022×10^{23} =

6 5.074×10^{14} =

7 5.9528×10^9 =

8 7.97×10^3 =

Convert and then round to 1 d.p.

9 3 170 000

= ☐.☐☐ × ☐☐

= ☐.☐ × ☐☐

10 856 000

= ☐.☐☐ × ☐☐

= ☐.☐ × ☐☐

Scientific Notation (Non-Calc) - Positive Index (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

These have a decimal point. Move it to be behind the first digit to express in scientific notation, rounding to 1 d.p.

Examples

$46\,789.7 = 4.7 \times 10^4$

$789\,523.78 = 7.9 \times 10^5$

1 976.4

$= \square.\square \times \square^{\square}$

2 575 009.135

$= \square.\square \times \square^{\square}$

3 4 096 216.88

$= \square.\square \times \square^{\square}$

4 1 143 215.9216

$=$ _____

5 198.636

$=$ _____

6 509 159 608.2816

$=$ _____

7 76 682.0053

$=$ _____

Point the < or > to the smallest numbers, which are expressed in scientific notation.

8 5.3×10^4 ☐ 2.4×10^4

9 8.01×10^9 ☐ 8.10×10^9

10 5.32×10^5 ☐ 5.32×10^7

11 7×10^9 ☐ 7.6×10^8

Rewrite these in ascending order. That means smallest to largest.

12 5.3×10^4, 2.7×10^4, 3.8×10^4, 5.9×10^4.

$=$ _____ (Smallest) , _____ , _____ , _____ (Largest) .

13 8.2×10^7, 8.2×10^5, 8.2×10^6, 8.2×10^3.

$=$ _____ , _____ , _____ , _____ .

14 3.3×10^6, 3.11×10^6, 3.1×10^6, 3.33×10^6.

$=$ _____ , _____ , _____ , _____ .

15 6.7×10^8, 4.02×10^5, 5.8×10^7, 5.89×10^8.

$=$ _____ , _____ , _____ , _____ .

Rewrite these two in descending order, that's largest to smallest.

16 4×10^{11}, 5.6×10^{10}, 2.9×10^{11}, 1.4×10^{12}.

$=$ _____ (Largest) , _____ , _____ , _____ (Smallest) .

17 1.7×10^9, 7.01×10^8, 1.71×10^9, 7.1×10^8.

$=$ _____ , _____ , _____ , _____ .

You can multiply numbers in scientific notation. Multiply the leading numbers and **ADD** the indexes. Multiply these.

Example $2 \times 10^7 \times 3 \times 10^4 = 2 \times 3 \times 10^7 \times 10^4 = 6 \times 10^{11}$.

18 $2 \times 10^2 \times 4 \times 10^5 =$ $\square \times \square \times \square^{\square} \times \square^{\square} = \square \times \square^{\square}$

19 $3 \times 10^8 \times 3 \times 10^6 =$ $\square \times \square \times \square^{\square} \times \square^{\square} = \square \times \square^{\square}$

20 $1 \times 10^7 \times 7 \times 10^4 =$ $\square \times \square \times \square^{\square} \times \square^{\square} = \square \times \square^{\square}$

With these, when you multiply you will get a two digit leading number. Change this back to a decimal and add 1 (+1) to the power.

Example $2 \times 10^7 \times 7 \times 10^4$

$= 2 \times 7 \times 10^7 \times 10^4$

$= 14 \times 10^{11} = 1.4 \times 10^{12}$

21 $3 \times 10^6 \times 5 \times 10^3$

$= \square \times \square \times \square^{\square} \times \square^{\square}$

$= \square \times \square^{\square}$

$= \square.\square \times \square^{\square}$

22 $7 \times 10^8 \times 4 \times 10^9$

$= \square \times \square \times \square^{\square} \times \square^{\square}$

$= \square \times \square^{\square}$

$= \square.\square \times \square^{\square}$

Scientific Notation (Non-Calc) - Negative Index - No Rounding (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these decimals into scientific notation format. By hopping the decimal point to be behind the first non-zero digit.

Example Convert 0.0007

$0.0007 = 7 \times 10^{-4}$ (4 places)

1 $0.05 = 5 \times 10^{-}$

2 $0.00002 = 2 \times 10^{\square}$

3 $0.009 = 9 \times 10^{\square}$

Now you do the hopping, use a pencil

4 $0.0006 = 6 \times 10^{\square}$

5 $0.00000003 = 3 \times 10^{\square}$

6 $0.00008 = 8 \times 10^{\square}$

Now the first number and the index

7 $0.04 = \square \times 10^{\square}$

8 $0.00005 = \square \times 10^{\square}$

9 $0.000000001 = \square \times 10^{\square}$

Now fill all the boxes

10 $0.00000003 = \square \times \square$

11 $0.000000008 = \square \times \square$

12 $0.00007 = \square \times \square$

13 $0.0004 = \square \times \square$

14 $0.000000000006 = \square \times \square$

15 0.0003 = _____

16 0.0000008 = _____

17 0.009 = _____

18 0.000000004 = _____

Convert these to scientific notation format, the leading numbers to 1 decimal place.

Examples

$0.0083 = 8.3 \times 10^{-3}$

$0.000000096 = 9.6 \times 10^{-8}$

19 $0.0043 = \square.\square \times \square$

20 $0.18 = \square.\square \times \square$

21 $0.00000000092 = \square.\square \times \square$

22 $0.0000058 = \square.\square \times \square$

23 $0.00000000000016 = \square.\square \times \square$

24 0.00033 = _____

25 0.00000075 = _____

26 0.000048 = _____

27 0.00000000096 = _____

These have 3 or more decimal places. Include all the significant digits. Convert these.

28 0.0168 $= \square.\square\square \times \square$

29 0.00000517 $= \square.\square\square \times \square$

30 0.0008818 $= \square.\square\square\square \times \square$

31 0.0000007046 $= \square.\square\square\square \times \square$

32 0.00000000011931 $= \square.\square\square\square\square \times \square$

33 0.00000404 $= \square.\square\square \times \square$

34 0.000217 = _____

35 0.00000004176 = _____

36 0.005705 = _____

37 0.0000119 = _____

38 0.000000627 = _____

39 0.000003012 = _____

40 0.006776 = _____

Scientific Notation (Non-Calc) - Negative Index - Rounding (Sheet 2)

Use < or > with these. Point the < to the smallest decimal. 10^{-3} is larger than 10^{-4}.

31 4.3×10^{-7} ☐ 9.4×10^{-7}

32 1.17×10^{-3} ☐ 1.71×10^{-3}

33 3.33×10^{-3} ☐ 3.33×10^{-6}

Rank these, 1 for the largest, 3 for the smallest.

34 4×10^{-2} ☐ 7×10^{-3} ☐ 5×10^{-2} ☐

35 1×10^{-6} ☐ 9×10^{-4} ☐ 6×10^{-7} ☐

Converting to Scientific Notation - Calculator

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Use your calculator's 'Sci' Mode to convert these numbers into scientific notation format.

Put into 'Sci' Mode (0 d.p.):
Calc: Shift Mode 7 1

1 $8\,000 = \square \times 10^{\square}$

Calc: 8 0 0 0 =

2 $60\,000\,000 = \square \times \square^{\square}$

3 $400\,000 = \square \times \square^{\square}$

4 $20\,000 =$ ____

5 $9\,000\,000 =$ ____

Put into 'Sci' Mode (1 d.p.):
Calc: Shift Mode 7 2

6 $0.014 =$ ____

7 $0.00035 =$ ____

8 $0.0000073 =$ ____

9 $0.026 =$ ____

10 $0.0058 =$ ____

Put into 'Sci' Mode (2 d.p.):
Calc: Shift Mode 7 3

11 $217\,000 =$ ____

12 $0.0000615 =$ ____

13 $1\,540 =$ ____

14 $0.00000808 =$ ____

15 $81\,900 =$ ____

To Cancel: Shift Mode 8 2

Rewrite these in Scientific Notation, rounded to 3 decimal places.

Put into 'Sci' Mode (3 d.p.):
Calc: Shift Mode 7 4

16 $786\,537 =$ ____

17 0.000000055188
$=$ ____

18 $406\,333\,157$
$=$ ____

19 $0.012345 =$ ____

20 $772\,976\,807\,000$
$=$ ____

To Cancel: Shift Mode 8 2

Give the answer to these in scientific notation form. Rounded to 2 decimal places.

Put into 'Sci' Mode (2 d.p.):
Calc: Shift Mode 7 3

21 $0.00005^3 =$ ____

22 $95^6 =$ ____

23 $\sqrt{0.0009} =$ ____

24 $\dfrac{82^4}{0.3^3} =$ ____

25 $\dfrac{(72 \div 0.08)}{(0.06 \times 0.42)}$
$=$ ____

To Cancel: Shift Mode 8 2

Compare these by answering them in scientific notation to 1 decimal place, then point the < or > to the smallest.

Calc: Shift Mode 7 2

26 $40^3 \square 800^2$

Sci. Not. 1 dp ____ Sci. Not. 1 dp ____

27 $\dfrac{5}{25^5} \square \dfrac{(3 \div 19)}{38^3}$

Scientific Notation (Non-Calc) - Convert to Real Numbers (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these numbers from scientific notation format to real numbers.

Example Convert 5×10^4

50 000 ← Add 4 zeros

1 $7 \times 10^5 = 7$ _____

2 $3 \times 10^2 = 3$ _____

3 $2 \times 10^4 =$ _____

4 $9 \times 10^7 =$ _____

5 $6 \times 10^3 =$ _____

6 $4 \times 10^6 =$ _____

These have 1 decimal place, so add one less zero by replacing the first zero with a number

Example Convert 5.6×10^4

56 000 ← Add 4 digits '6' then 3 'zeros'

7 $8.5 \times 10^3 = 8\,5$ _____

8 $1.6 \times 10^4 = 1\,6$ _____

9 $4.7 \times 10^6 =$ _____

10 $9.2 \times 10^2 =$ _____

11 $3.3 \times 10^5 =$ _____

12 1.5×10^8

$=$ _____

13 4.3×10^7

$=$ _____

14 2.1×10^9

$=$ _____

15 5.9×10^{12}

$=$ _____

These have varying decimal places. Convert these to real numbers.

16 $6.35 \times 10^3 = 6\,3\,5$ _____

17 4.237×10^7

$= 4\,2\,3\,7$ _____

18 9.0951×10^9

$= 9\,0\,9\,5\,1$ _____

19 3.417×10^6

$= 3$ _____

20 7.0051×10^8

$=$ _____

21 6.045×10^5

$=$ _____

22 1.22241×10^9

$=$ _____

23 2.0202×10^6

$=$ _____

The next two have decimal answers

24 $5.096 \times 10^2 =$ _____

25 $3.4426 \times 10^3 =$ _____

Convert these decimals from scientific notation format to decimal form.

Example Convert 2×10^{-5}

0.00002 ← Add 5 zeros in front Put a '.' after 1st zero

26 $4 \times 10^{-3} = .\,\square\,\square\,4$ _____

27 $7 \times 10^{-5} = .\,\square\,\square\,\square\,\square\,7$ _____

28 $8 \times 10^{-2} = .\,\square\,8$ _____

29 $3 \times 10^{-4} = .\,\square\,\square\,\square\,3$ _____

30 5×10^{-7}

$=$ _____

31 9×10^{-5}

$=$ _____

32 8×10^{-6}

$=$ _____

33 1×10^{-9}

$=$ _____

34 3×10^{-2}

$=$ _____

34 6×10^{-4}

$=$ _____

Rewrite as decimals. These have more non-zero digits.

Example Convert 2.47×10^{-3}

0.00247 ← Add 3 zeros in front Put a '.' after 1st zero

35 5.2×10^{-4}

$=$ _____

36 4.18×10^{-6}

$=$ _____

37 5.497×10^{-2}

$=$ _____

38 2.4×10^{-9}

$=$ _____

39 3.007×10^{-5}

$=$ _____

40 1.115×10^{-6}

$=$ _____

Scientific Notation (Calculator) - Convert to Real Numbers (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these numbers from scientific notation format to real numbers.

Example Convert 5.26×10^3

Calc: 5 . 2 6 ×10^x 3 = 5 260

1 2×10^4 =

Calc: 2 ×10^x 4 =

2 4×10^6 =

3 7×10^4 =

4 8×10^7 =

5 1.3×10^4 =

6 9.7×10^6 =

7 1.1×10^9

=

8 4.047×10^8

=

9 7.1338×10^6

=

10 3.377×10^7

=

The next 4 have decimal answers

11 4.031×10^2 =

12 9.73706×10^4

=

13 4.00788×10^3

=

14 7.8842×10^2

=

Convert these from scientific notation format to decimals.

Example Convert 5.26×10^{-3}

Calc: 5 . 2 6 ×10^x - 3 =

Answer: 0.00526

15 3×10^{-4} =

Calc: 3 ×10^x - 4 =

16 7×10^{-2} =

17 3×10^{-4} =

18 9×10^{-1} =

19 4×10^{-5} =

20 1×10^{-3} =

21 2.3×10^{-4} =

22 7.7×10^{-2} =

23 3.25×10^{-5}

=

24 4.024×10^{-3}

=

25 1.5×10^{-9}

=

26 3.079×10^{-3}

=

27 8.113×10^{-5}

=

28 9.3059×10^{-4}

=

Use your calculator to answer these as numbers or decimals.

29 $3 \times 10^4 \times 5 \times 10^{-2}$

Calc: 3 ×10^x 4 × 5 ×10^x - 2 =

=

30 $8 \times 10^{-9} \div 2 \times 10^{-2}$

=

31 $(4 \times 10^{-3})^2$

=

32 $1.6 \times 10^8 \div 8 \times 10^3$

=

33 $\dfrac{1.05 \times 10^8}{3.5 \times 10^6}$ =

Calculate these and write the answer underneath. Then use <, > or = in the square box.

*With < & > 'point' to the smallest

34 $\dfrac{1.8 \times 10^8}{6 \times 10^2}$ ☐ $(3 \times 10^2)^2$

35 $\dfrac{4 \times 10^3}{2 \times 10^5}$ ☐ $\dfrac{1 \times 10^2}{2 \times 10^4}$

36 $(1 \times 10^3)^2$ ☐ $(1 \times 10^2)^3$

37 $(2 \times 10^2)^2$ ☐ $(4 \times 10^2)^2$

Numbers of Any Magnitude - Prefixes ‘Kilo’ & ‘Mega’ (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these base units into ‘Kilo’ units. Divide by 1 000 to make the conversion.

Example Convert 3 400 m to km

3 400 ÷ 1 000 = 3.4 km

1 8 500 g = _____ kg

2 43 700 L = _____ kL

3 780 m = _____ km

4 347 500 B = _____ kB

5 220 g = _____ kg

6 4 020 m = _____ km

Ben walks 320 m to the shops, then returns home. His mum forgot that she needs bread so he repeats the trip.

6 How far has Ben walked for the two return trips, in metres.

7 Convert this distance to km.

Jo’s phone downloads at 780 B per second. She downloads a document which takes 5 minutes to download.

8 Convert 5 mins to seconds.

9 How large is the file she downloaded? Answer in B.

10 Convert the file from B to kB.

Convert these ‘Kilo’ units into ‘Mega’ units. Divide by 1 000 to make the conversion.

Example Convert 400 kB to MB

400 ÷ 1 000 = 0.4 MB

11 9 800 kL = _____ ML

12 176 300 kB = _____ MB

13 13 140 kHz = _____ MHz

*Hertz (Hz) is a measure of frequency.

14 490 kL = _____ ML

Josh has taken 527 photos this year. If the average photo is 970 kB. Find:

15 The total size of the folder holding the images in kB.

16 Convert the folder’s size to MB.

An irrigation pump discharges 1.4kL of water per minute. Find the amount:

17 Pumped in an hour, in kL.

18 Pumped in a day. (24 hrs)

19 Pumped annually. (365 days)

20 Convert the amount pumped annually from kL to ML.

To go backwards, multiply by 1000. Mega→Kilo = × 1 000 Kilo→Base unit = × 1 000

Example Convert 3.2 MB to kB

3.2 × 1 000 = 3 200 kB

21 5.4 MB = _____ kB

22 9 km = _____ m

23 4.76 kg = _____ g

24 0.56 ML = _____ kL

25 2.09 km = _____ m

26 1.7 MB = _____ kB

A farm’s diesel storage tank holds 8.2 kL of fuel.

27 Find the volume of fuel in the tank is it is 55% full. (kL)

$\frac{\square}{100} \times \square = \square$

28 Convert the volume to L.

29 Calculate the value of the fuel if diesel costs $1.68/L.

Show the $ sign and cents to 2 d.p.

Karl is training for the 800 m state championship. He runs the 800 m twice each weekday and once on Saturday and Sunday.

30 Calculate the distance Karl runs in a week in m, then km.

Numbers of Any Magnitude - Prefixes ‘Mega’, ‘Giga’ & ‘Tera’ (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these ‘Giga’ units into ‘Mega’ units. Multiply by 1 000 to make the conversion.

Example Convert 1.4 GB to MB

1.4 × 1 000 = 1 400 MB

1 3 GB = _____ MB

2 5.6 GW = _____ MW

*Watt (W) is a measure of power.

3 0.64 GL = _____ ML

4 22.07 GB = _____ MB

5 0.034 GL = _____ ML

6 14.8 GB = _____ MB

Chen has 8 files that average 390 MB each. He wants to store them on a DVD which holds 4.7 GB.

7 Convert 4.7 GB to MB.

8 How much memory in MB will the 8 files need?

9 Calculate how much space in MB is left on the DVD?

Ainslie has 2.2 GB available on a USB drive. She wants to put music on the drive that average 4 MB per song.

10 Convert 2.2 GB to MB.

11 How many 4 MB songs fit?

Convert these ‘Mega’ units into ‘Giga’ units. Divide by 1 000 to make the conversion.

Example Convert 720 MB to GB

720 ÷ 1 000 = 0.72 GB

12 4 000 MB = _____ GB

13 125 000 MB = _____ GB

14 280 MB = _____ GB

15 1 080 ML = _____ GL

16 48 MW = _____ GW

17 68 700 ML = _____ GL

David’s PC has 3 old Hard Drives which are 260 MB, 720 MB and 650 MB.

18 Find the total storage (MB).

19 Convert the total storage to GB.

Anthia shoots wedding videos. Once edited the videos average 850 MB in size. She keeps a back up of all the videos and she has 167 of them.

20 Calculate how much space in MB is used by the 167 videos.

21 Convert the storage to GB.

Convert these ‘Giga’ units into ‘Tera’ units. Divide by 1 000 to make the conversion.

Example Convert 480 GB to TB

480 ÷ 1 000 = 0.48 TB

22 6 000 GB = _____ TB

23 300 GB = _____ TB

24 1 020 GB = _____ TB

25 89.2 GB = _____ TB

26 770 GB = _____ TB

27 0.5 GB = _____ TB

Raj has a 64 GB USB drive. His PC has a 4 TB hard drive.

28 Convert 64 GB into TB.

29 How many full USB drives would the hard drive hold?

Convert these ‘Tera’ units into ‘Giga’ units. Multiply by 1 000 to make the conversion.

Example Convert 3.2 TB to GB

3.2 × 1 000 = 3 200 GB

30 5 TB = _____ GB

31 1.7 TB = _____ GB

32 0.06 TB = _____ GB

33 2.85 TB = _____ GB

34 10.6 TB = _____ GB

35 0.0083 TB = _____ GB

Numbers of Any Magnitude - Prefixes & Length milli/centi/kilo (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these lengths from mm to cm. There are 10 mm in 1 cm.

Divide by 10 or move 1 place left

1	20 mm	cm
2	50 mm	
3	130 mm	
4	55 mm	
5	92 mm	
6	200 mm	
7	18.6 mm	
8	2 020 mm	
9	435 mm	
10	0.95 mm	
11	5.47 mm	
12	906.2 mm	

Now the reverse. Convert these lengths from cm to mm. There are 10 mm in 1 cm.

Multiply by 10 or move 1 place right

13	5 cm	mm
14	18 cm	
15	6.3 cm	
16	74.8 cm	
17	356.7 cm	
18	8.12 cm	
19	0.4 cm	
20	0.566 cm	
21	155 cm	
22	829.3 cm	
23	1.002 cm	
24	19.91 cm	

Convert these lengths from cm to m. There are 100 cm in 1 m.

Divide by 100 or 2 places left

25	200 cm	m
26	600 cm	
27	150 cm	
28	370 cm	
29	12 cm	
30	86.5 cm	
31	7 300 cm	
32	56.05 cm	
33	3 cm	
34	6.7 cm	
35	8 002 cm	
36	27.08 cm	

Convert these lengths from m to cm

Multiply by 100 or 2 places right

37	3 m	cm
38	7 m	
39	2.2 m	
40	5.9 m	
41	0.3 m	
42	0.75 m

Numbers of Any Magnitude - Prefixes ‘milli’ & ‘micro’ (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

Convert these base units into ‘milli’ units. Multiply by 1 000 to make the conversion.

Example Convert 2.5 m to mm

2.5 × 1 000 = 2 500 mm

1 5 A = _____ mA

*Amps (A) is a measure of electrical current

2 80 g = _____ mg

3 3.08 L = _____ mL

4 0.005 m = _____ mm

5 15.7 g = _____ mg

6 A ceiling is 2.4 m above the floor. Convert the length to mm.

_____ × 1 000 = _____ mm

7 The active ingredient in a antibiotic weighs 0.8 g. Convert this weight to mg.

8 The current across a circuit is 0.0033 A. Convert this to mA.

9 Three boxes have heights: 0.42 m, 0.715 m and 0.505 m. How high are they when stacked on top of each other. Answer in m, then in mm.

10 A standard door is 2.04 m high. Convert the height to mm.

To convert ‘milli’ units to the base unit, divide by 1 000. Change these to ‘milli’ units.

Example Convert 960 mm to m

960 ÷ 1 000 = 0.96 m

11 3 000 mL = _____ L

12 28 900 mg = _____ g

13 31 430 mm = _____ m

14 4 620 mL = _____ L

15 86 mΩ = _____ Ω

*Ohms (Ω) is a measure of electrical resistance

16 A bottle of soft drink contains 1 250 mL of product. Convert this to L.

_____ ÷ 1 000 = _____ L

17 Ceiling fan blades are usually 300 mm below the ceiling. Convert this to m.

18 Two swimmers touch the wall 230 ms apart. Convert this time to seconds.

19 A medicine has 308 mg, 182 mg, 780 mg and 2 750 mg of different active ingredients. Find the total weight in mg, then convert this to g.

Micro is 1 millionth. Convert ‘micro’ to ‘milli’ by dividing by 1 000. Hey … I know mu!

Example Convert 4 440 µm to mm

4 440 ÷ 1 000 = 4.44 mm

20 34 000 µm = _____ mm

21 87 µg = _____ mg

22 8 803 µs = _____ ms

23 40.5 µg = _____ mg

24 A human hair thickness is 120 µm. Convert this to mm.

_____ ÷ 1 000 = _____ mm

25 A dust mite is 275 µm in length. Convert this to mm.

To convert ‘milli’ units to ‘micro’ units, multiply by 1 000. Micrometres can also be called microns.

Example Convert 0.74 mm to µm

0.74 × 1 000 = 740 µm

26 8 mm = _____ µm

27 0.06 mg = _____ µg

28 0.0037 ms = _____ µs

29 5.7 mm = _____ µm

30 A red blood cell is 0.008 mm in diameter. Convert this to µm.

31 The width of an eye of a needle is 1.2 mm Convert to µm.

Numbers of Any Magnitude - Error in Measurement (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

The error in measurement is half of the limit of reading. Find the error in these measurements.

Example Find the error with measurements made to the nearest:

a) cm ±0.5 cm *c*) 10 kg ±5 kg

b) g ±0.5 g *d*) 5 s ±2.5 s

1 Nearest kg = ± _____ kg

2 Nearest 5 g = ± _____ g

3 Nearest 10 mL = ± _____ mL

4 Nearest 50 m = _____

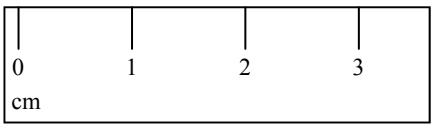
5 Nearest 25 g = _____

6 Nearest 10 cm = _____

7 Nearest 2 mm = _____

These two rulers have different limits of reading, write the limit of reading and the error.

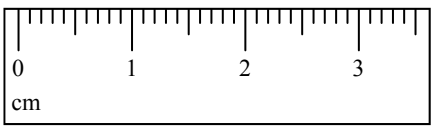
8



Limit of Reading: _____ To the nearest

Error: ± _____

9



Limit of Reading: _____ To the nearest

Error: ± _____

Find the upper and lower limits of these measurements.

Example A parcel weighs 425 g measured to the nearest 5 g.

Error: ± 2.5 g

Lower Limit : 425 - 2.5 = 422.5 g

Upper Limit : 425 + 2.5 = 427.5 g

10 A section of road to be repaired is measured as 870 m long, to the nearest 10 m.

Error: _____ Use '±' and units

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

11 A window has a width of 176 cm, to the nearest cm.

Error: _____ Use '±' and units

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

12 A horse weighs 485 kg, measured to the nearest 5 kg.

Error: _____

Lower Limit : _____

Upper Limit : _____

13 A measuring cylinder contains 115 mL measured to the nearest mL.

Error: _____

Lower Limit : _____

Upper Limit : _____

With decimals, you will add a decimal place.

Example Find the error with measurements made to the nearest:

a) 0.1 cm ±0.05 cm *c*) 0.01 m

b) 0.5 g ±0.25 g ±0.005 m

15 A basket ball hoop is 304.8 cm from the ground, measured to the nearest 0.1 cm.

Error: _____ 0.1 ÷ 2 Use '±' and units

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

16 A solution is made by adding 5.72 g of copper sulphate, measured to the nearest 0.01 g.

Error: _____

Lower Limit : _____ - _____ = _____

Upper Limit : _____ + _____ = _____

17 A chocolate bar is manufactured to weigh 91.0 g, measured to the nearest 0.5 g.

Error: _____

Lower Limit : _____ = _____

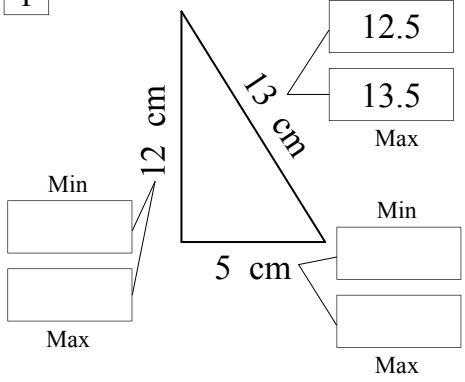
Upper Limit : _____ = _____

Numbers of Any Magnitude - Further Errors Perimeter/Area (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 3 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-0-7

These triangles are measured to the nearest cm. Find the lower and upper limits for each side, then the minimum and maximum perimeter.

1



$P_{MIN} =$ ☐ + ☐ + ☐

Add all the minimum values

$P_{MIN} =$ ☐

Include the units

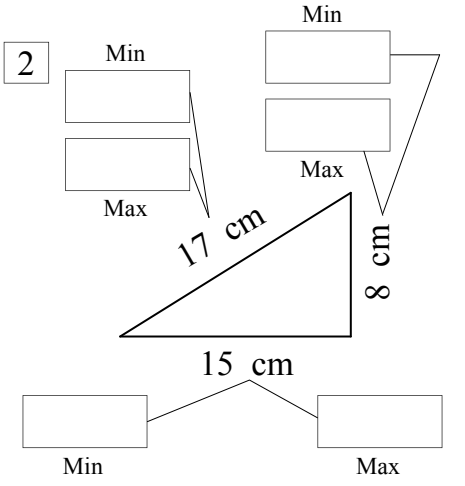
$P_{MAX} <$ ☐ + ☐ + ☐

Add all the maximum values

$P_{MAX} <$ ☐

Include the units

2



$P_{MIN} =$ ☐ + ☐ + ☐

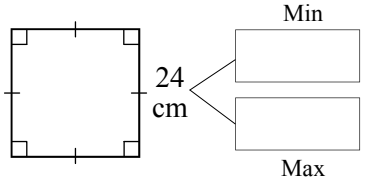
$P_{MIN} =$ ☐

$P_{MAX} <$ ☐ + ☐ + ☐

$P_{MAX} <$ ☐

Squares are easier, get the min and max side length and ×4! Calculate the minimum and maximum perimeter. Lengths are measured to the nearest cm

3



$P_{MIN} =$ ☐ × ☐

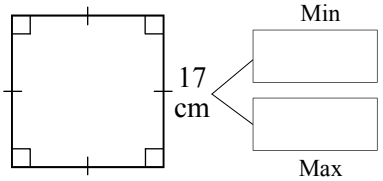
$P_{MIN} =$ ☐

Include the units

$P_{MAX} <$ ☐ × ☐

$P_{MAX} <$ ☐

4



$P_{MIN} =$ ☐

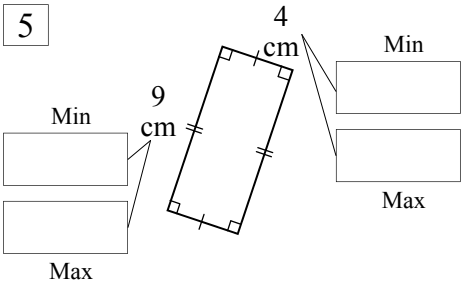
$P_{MIN} =$ ☐

$P_{MAX} <$ ☐

$P_{MAX} <$ ☐

Rectangles, × each side by 2

5



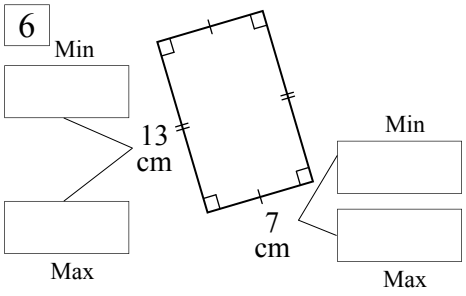
$P_{MIN} =$ ☐ × 2 + ☐ × 2

$P_{MIN} =$ ☐

$P_{MAX} <$ ☐ × ☐ + ☐ × ☐

$P_{MAX} <$ ☐

6



$P_{MIN} =$ ☐ × ☐ + ☐ × ☐

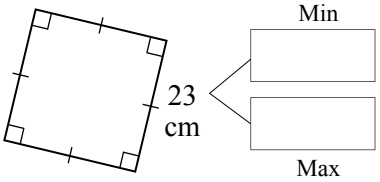
$P_{MIN} =$ ☐

$P_{MAX} <$ ☐

$P_{MAX} <$ ☐

Now find the area, by squaring or multiplying the two sides. All measurements are measured to the nearest cm.

7



$A_{MIN} =$ ☐ ^{2}

Area is found by squaring the min side length

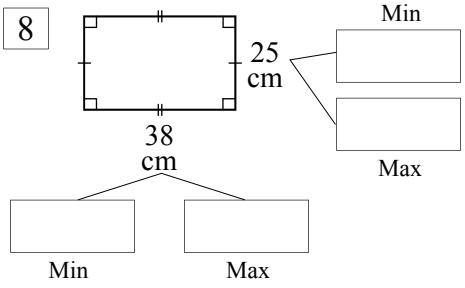
$A_{MIN} =$ ☐

Area units are cm^2, write square units

$A_{MAX} <$ ☐

$A_{MAX} <$ ☐

8



$A_{MIN} =$ ☐ × ☐

$A_{MIN} =$ ☐

$A_{MAX} =$ ☐ × ☐

$A_{MAX} =$ ☐

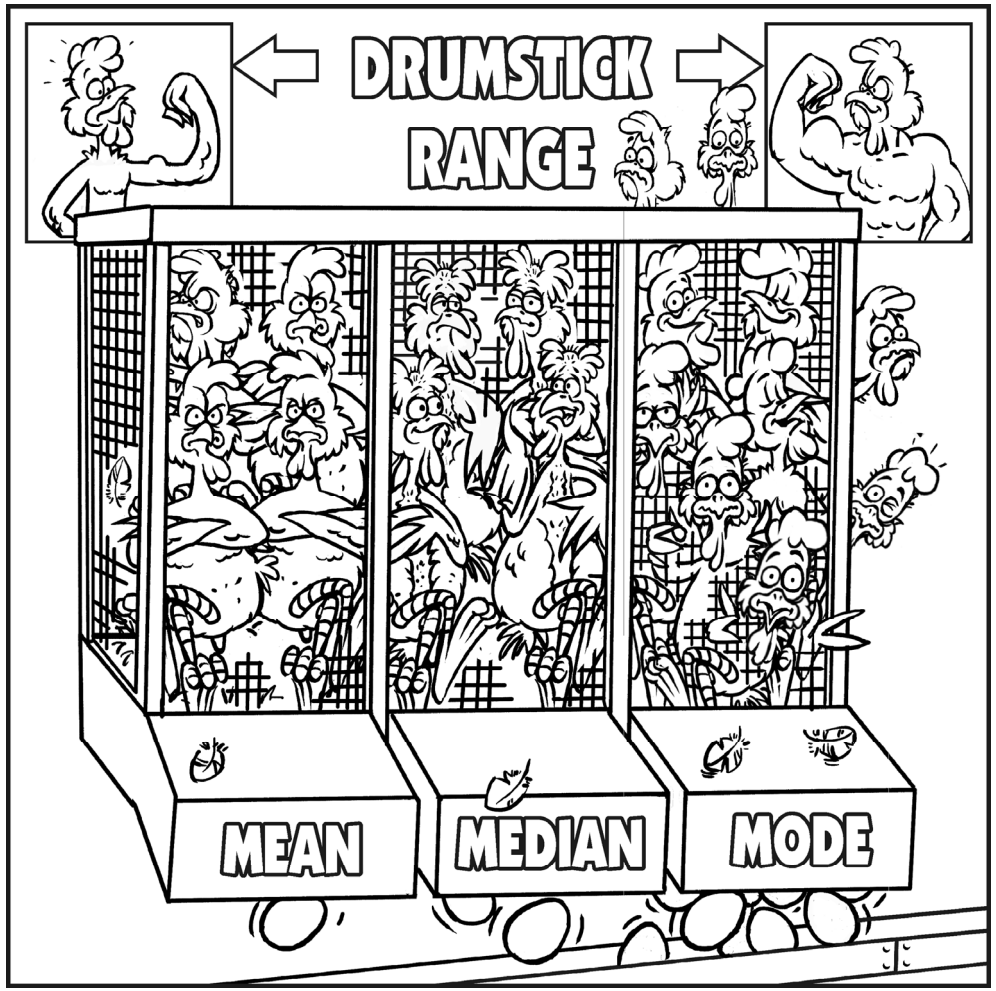
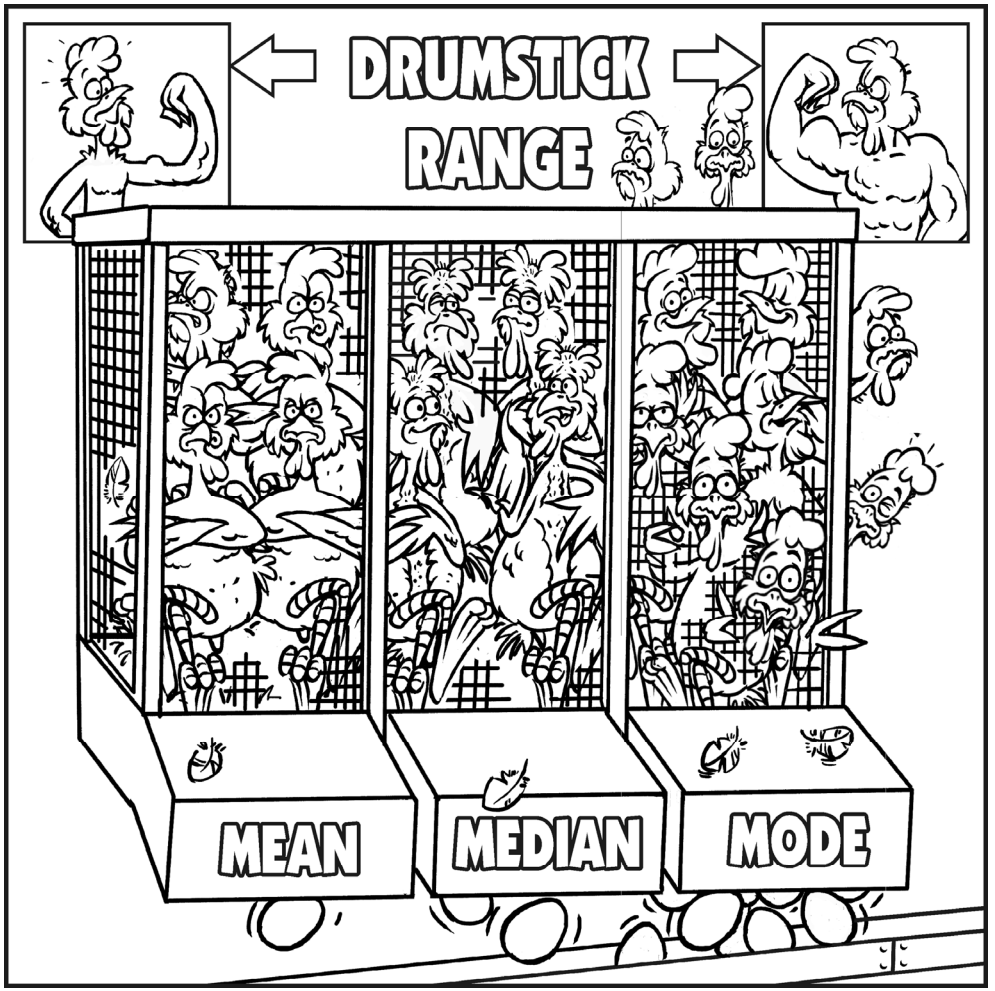
DATA ANALYSIS

Data Analysis



© Freefall Mathematics - School Use Only

Data Analysis



© Freefall Mathematics - School Use Only

Data Analysis - Dot Plots

Dot Plots represent data with dots! Amazing! The beauty of a dot plot is it is simple. There is one axis which shows the score, or category and then dots are stacked above them. Dot plots can also be plotted sideways just like a column graph. Two critical features are:

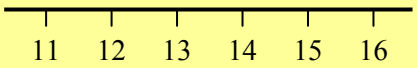
- The dots have to have the same height, for example a column of four dots shouldn't be as high as a column of five dots, so be careful as you plot them.
- If you have a vertical scale then use it effectively. Because dot plots are supposed to be fast to read, a vertical scale can be included so that you don't have to count all the dots in a column.

Example

Data: 15, 12, 13, 11, 16, 15, 16, 12, 12, 15,
11, 13, 12, 11, 15, 16, 12, 13, 15, 11.

STEP 1

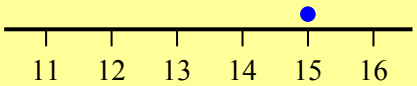
Circle the lowest score and the highest score in the data set.



STEP 2

Number the axis from lowest to highest, note there is no 14 score, but it is still included on the axis.

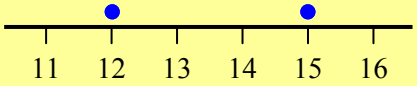
Data: ~~15~~, 12, 13, 11, 16, 15, 16, 12, 12, 15,
11, 13, 12, 11, 15, 16, 12, 13, 15, 11.



STEP 3

Cross out the first score and place the dot above the number on the axis.

Data: ~~15~~, ~~12~~, 13, 11, 16, 15, 16, 12, 12, 15,
11, 13, 12, 11, 15, 16, 12, 13, 15, 11.



STEP 4

And so on until all the scores are represented with dots

Data Analysis - Frequency Tables

The frequency of something is how often it occurs. So a Frequency Table records how many times scores in a data set occur. There are three columns to a frequency table, when the data is not already entered. These are the 'Score', 'Tally' and 'Frequency'. Score can be replaced with a title when the data is categorical (which means not numbers), for example 'Car Type' or 'Holiday Type', it can also just be called '*x*'. The frequency column is regularly written just as '*f*'. Note the use of Σf at the bottom of the frequency column. Σ means 'the sum of' so Σf means add all the frequency column up.

Example

Data: 6, 7, 5, 4, 6, 7, 10, 5, 6, 4, 9, 6, 5, 7, 6.

Score	Tally	Frequency
4		
5		
6		
7		
8		
9		
10		
		$\Sigma f =$

STEP 1

Circle the lowest score and the highest score in the data set.

STEP 2

In the score column of the table write in the lowest score at the top, increasing down the column until the highest score.

!

Note that there is no score of '8' in the data set. The number '8' is still included in the score column anyway.

Data: ~~6~~, 7, 5, 4, 6, 7, 10, 5, 6, 4, 9, 6, 5, 7, 6.

Score	Tally	Frequency
4		
5		
6	|	
7		
8		
9		
10		
		$\Sigma f =$

STEP 3

Data is now entered number by number Cross out the 6 and put a mark in the Tally column, then the 7 and so on.

!

Don't count all the 4's then all the 5's. This method is more likely to cause mistakes in large data sets. It also doesn't effectively use the Tally process.

Score	Tally	Frequency
4	||	2
5	|||	3
6	||||	5
7	|||	3
8		0
9	|	1
10	|	1
		$\Sigma f =$ 15

The 5th score is a cross stroke

STEP 4

Now change the Tally into numbers in the Frequency column.

STEP 5

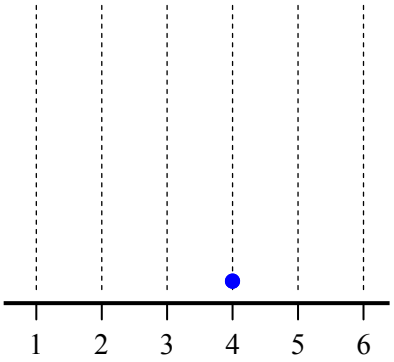
Total the Frequency column to get Σf it has to equal the number of scores in the data set. If it doesn't ….start searching!

Data Analysis - Dot Plots and Frequency Tables (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Display the data in a dot plot.

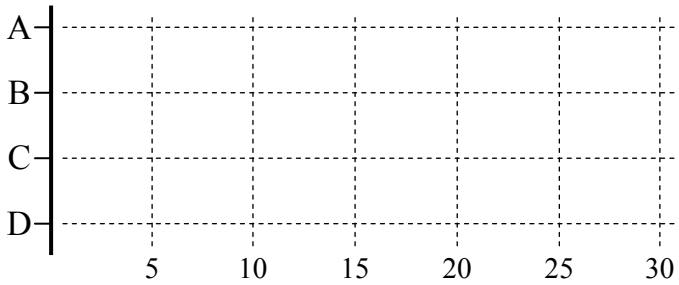
1 Data: 4, 5, 3, 3, 6, 1, 2, 4, 2, 3, 5, 6, 2, 3, 4, 4, 1, 2, 5, 6, 2, 3, 3, 2, 5, 2, 1, 4, 6, 3, 2.



2 An artificial sweetener is comparing itself with three other brands. Graph the results.

Data: BBBDA BABBC ABBBC
BDBAB ABBDB BCBBD
BCABB ABCBD BBADB

sideways! → Artificial Sweetener Preference



3 How many people were sampled? _____

4 How many people preferred Brand B? _____

5 How many people preferred Brand C? _____

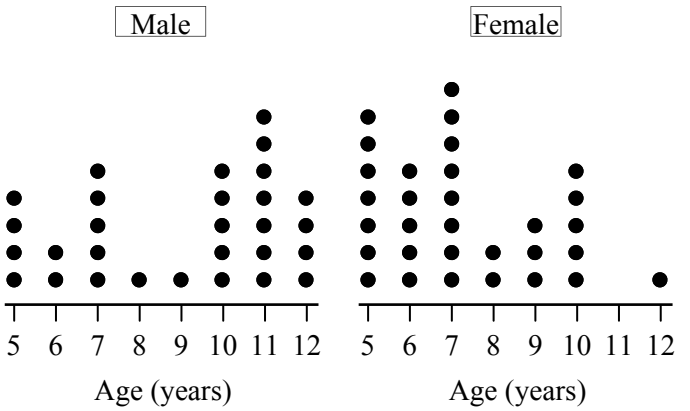
6 What percentage of people prefer Brand B?

Question 4 Ans. → ☐ / ☐ Question 3 Ans. → × 100 = ☐ Round to 1 d.p.

7 What percentage of people prefer Brand C?

Question 5 Ans. → ☐ / ☐ Question 3 Ans. → × 100 = ☐ Round to 1 d.p.

A waterslide at a theme park records the ages of the first 60 children who use the slide, the results are shown in two Dot plots. One male, one female.



8 How many children were male? _____

9 How many children were 7 years old? _____

10 How many children were 11 or older? _____

11 How many more 10 year olds used the slide compared to 6 year olds? _____

12 Are these true or false? There were more ...

(T) (F) Girls using the waterslide

(T) (F) 7 y.o. boys using the slide than 10 y.o. girls

(T) (F) Older male children than female.

13 What percentage of 9 y.o.'s were male?

Male 9 y.o. here → ☐ / ☐ Total 9 y.o. here → × 100 = ☐ Show the % sign

14 What percentage of 5 y.o.'s were female?

☐ / ☐ × 100 = ☐ Round to 1 d.p.

15 What percentage of females were 10 y.o.?

Total females here → ☐ / ☐ × ☐ = ☐ Round to 1 d.p.

16 What percentage of 5 - 7 y.o.'s were male?

☐ / ☐ × ☐ = ☐ Round to 1 d.p.

Data Analysis - Dot Plots and Frequency Tables (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the frequency column and total for Σf, then answer the questions.

15 How many homes had operational smoke detectors? 31 + 10 + 9 = 50

16 What percentage (to 1 d.p.) of homes had inoperative or no smoke detectors?

$$\%\ \text{No S.D} = \frac{20}{70} \times 100 = 28.6\%$$

Round to 1 d.p.

17 What percentage (to 1 d.p.) of homes had Dual-powered smoke detectors?

$$\%\ \text{Dual Powered} = \frac{9}{70} \times 100 = 12.9\%$$

Round to 1 d.p.

Data Analysis - Ordered Stem and Leaf Plots

Stem and leaf plots separate data into its units component and its tens (and above) component. They then display the 'units' on the right in the leaf section and the 'tens' on left in a stem column. The effect is to break the data up into classes and also display a simple column graph (on its side) of numbers showing the way the data is spread.

Numbers have their units removed so:

- 23 becomes 'a 2' and 'a 3'
- 15 becomes 'a 1' and 'a 5'
- 9 (is seen as 09) becomes 'a 0' and 'a 9'

Stem	Leaf
0	9
1	5
2	3

In a plot this looks like the plot shown above. But what about larger numbers?

- 106 becomes 'a 10' and 'a 6'
- 117 becomes 'a 11' and 'a 7'
- 125 becomes 'a 12' and 'a 5'
- 120 becomes 'a 12' and 'a 0'
- 110 becomes 'a 11' and 'a 0'

Stem	Leaf
10	6
11	70
12	50

Because the units have two digits in front, both digits are shown in the Stem column.

When all data has been entered into the plot, the plot then has to be rewritten in order. The stem stays the same, but the leaf is put into ascending order.

Stem	Leaf
10	6
11	70
12	50

Leaf in order

Stem	Leaf
10	6
11	07
12	05

Back-to-back stem and leaf plots are used to display 2 different groups of data together in the one plot. The groups are displayed separately but share a common stem. One group is displayed on the left hand side, the other on the R.H.S.

The L.H.S has its leaf in ascending order (going up) with larger numbers to the left, while the R.H.S. leaf has its numbers ascending, as with single leaf stem and leaf plots, up to the right.

Leaf	Stem	Leaf
711	8	0338
80	9	55559
77632	10	2234477
88221	11	0777

Left hand side leaf increases to the left

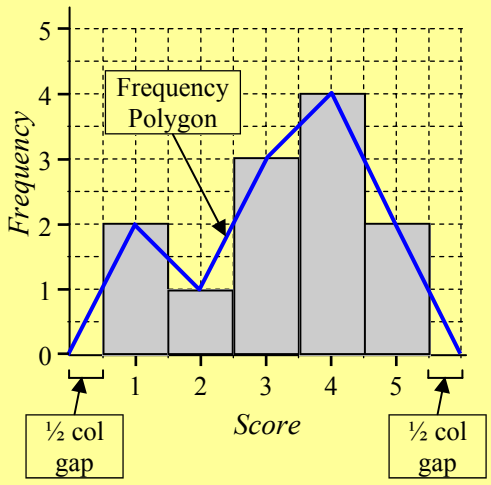
Stem is shared

Right hand side leaf increases to the right

Data Analysis - Frequency Histograms and Frequency Polygons

Frequency Histograms are very similar to column graphs, the difference being that:

- A half-column gap is left between the first column and the vertical axis.
- The columns touch each other, there is no gap between them.
- A half-column gap is left after the last column.



Frequency Polygons are similar to line graphs, they:

- Always start and finish at the horizontal axis.
- They inter-connect the centres of the top of columns.

Because a half-column gap is required, it makes sense to use columns that are '2 grids' wide so that the grids help you to draw the graph. You shouldn't make a column '1 grid wide' and the gap '½ a grid wide' because your columns won't use the grid lines, it will be harder to create and use.

Data Analysis - The Mean

The Mean is the mathematical term for "Average". So when you find the mean you are finding the average. The mean is found by adding all the scores then dividing the total by the number of scores. As a formula it is written:

The short way of writing the mean is $\bar{x}$. *'x bar'*

$$\bar{x} = \frac{\Sigma x}{n}$$

Σx means the sum of x. So the total of all the scores in the data set.

n means the number of scores in the data set.

Example - Round to 1 decimal place.

Data: 14, 19, 35

$$\bar{x} = \frac{68}{3} = 22.7$$

14 + 19 + 35 = 68

Three scores

Round to 1 d.p.

Calculator Steps:

6 8 ÷ 3 =

Calculator Screen:

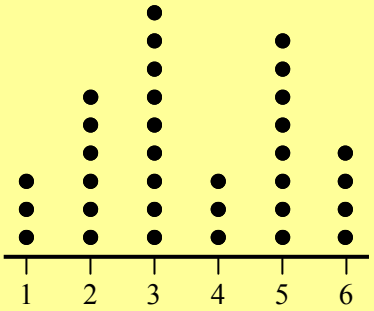
22.6666666….

Column 1 also includes questions involving units. These questions have to be in the same units so look at the question and check what units the answer must have, then change all the data to those units first. Then add and divide for the mean.

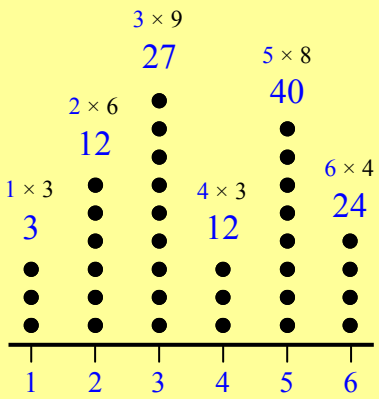
Column 2 features dot plots, the value for *fx* is found by multiplying the score and the frequency directly on the plot. You then add up the columns and divide by the number of dots.

Example - Dot Plots

STEP 1 Here is a dot plot, find the mean.



STEP 2 Calculate *fx* for each column by multiplying *f* & *x*.



STEP 3 Calculate Σfx by adding all the column *fx* together.

3 + 12 + 27 + 12 + 40 + 24

$\Sigma fx =$ 118

STEP 4 Calculate Σf by counting all the dots.

3 + 6 + 9 + 3 + 8 + 4

$\Sigma f =$ 33

STEP 5 Find $\bar{x}$ to 2 d.p.

$$\bar{x} = \frac{\Sigma fx}{\Sigma f}$$

$$\bar{x} = \frac{118}{33}$$

$\bar{x} = 3.58$ (2 d.p.)

The second sheet features Stem and Leaf plots, remember that the scores are found by joining the tens column with the units column, an example is below.

Example - Stem and Leaf Plots

Tens	Units
0	3 5
1	0 5 6
2	2 2

$\bar{x} = \frac{93}{7} = 13.3$

$3 + 5 + 10 + 15 + 16 + 22 + 22 = 93$

Seven scores.

Round to 1 d.p.

Back-to-back stem and leaf plots are also featured at the base of the column. These data sets can have the mean calculated for each half of the plot or for the entire plot.

Frequency tables display grouped data similar to a dot plot, except the data is in a table. The formula for the calculation is:

$$\bar{x} = \frac{\Sigma fx}{\Sigma f}$$

Where: $\bar{x}$ is the mean of the scores
Σfx is the sum of the fx column
Σf is the sum of the f column

Example - Finding the mean from a frequency table

STEP 1 Frequency table, find the mean.

Score (x)	*Frequency (f)*
0	6
2	2
4	5
6	8
8	15
10	7

STEP 2 Add an fx column and 'total' boxes at the base.

Score (x)	*Frequency (f)*	*fx*
0	6	
2	2	
4	5	
6	8	
8	15	
10	7	

STEP 3 Multiply the f and the x to get fx.

Score (x)		*Frequency (f)*		*fx*
0	×	6	=	0
2	×	2	=	4
4	×	5	=	20
6	×	8	=	48
8	×	15	=	120
10	×	7	=	70

STEP 4 Add the f column for Σf and the fx column for Σfx.

Score (x)	*Frequency (f)*	*fx*
0	6	0
2	2	4
4	5	20
6	8	48
8	15	120
10	7	70
	$\Sigma f = 43$	$\Sigma fx = 262$

STEP 5 Calculate the mean. (1 d.p.)

$$\bar{x} = \frac{\Sigma fx}{\Sigma f} = \frac{262}{43} = 6.1 \text{ (1 d.p.)}$$

Data Analysis - The Mean - Data Sets & Dot Plots (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate the mean. Add the scores and divide by the number of scores. Answers are whole numbers

1 27, 38, 24, 31, 44, 56, 50, 19, 26.

Add the scores

$\bar{x} = \frac{\square}{9} = \square$ Divide total by 9

Nine scores = 9

2 73, 86, 41, 29, 56. $\bar{x} = \frac{\square}{\square} = \square$

3 -6, 2, -14. $\bar{x} = \frac{\square}{\square} = \square$

4 16 773, 24 919. $\bar{x} = \frac{\square}{\square} = \square$

5 235, 306, 113, 176, 290, 218, 440.

$\square = \frac{\square}{\square} = \square$

This time you get a decimal answer. Round your answer to 1 decimal place.

6 94, 38, 77, 24, 83, 19.

$\square = \frac{\square}{\square} = \square$ (1 d.p.)

7 55, 78, 11, 107.

8 9, 5.4, 4.3, 6, 7, 3.

9 187, 553, 213.

10 57.17, -44.88.

Find the average height of these students. Find the average height in m (2 d.p.), then in cm.

11 1.75 m, 1.8 m, 1.73 m, 1.55 m, 1.77 m.

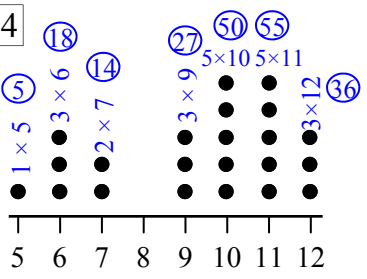
$\square = \frac{\square}{\square} = \square$ m $= \square$ cm

12 1.6 m, 1.74 m, 1.82 m, 1.77 m, 1.83 m, 1.8 m.

13 Find the average height for the 11 students.

Find the mean (1 d.p.) for the data displayed in these dot plots. Find dots × score, add for a total. Then divide the total by the total number of dots.

14



Age (years)

5 + 18 + 14 +...

$\bar{x} = \frac{\square}{\square}$ All Dots

$\bar{x} = \square$ (1 d.p.)

$$\bar{x} = \frac{302}{7} = 43.1$$

Data Analysis - Further Mean - Time Applications

The mean is found by adding all the separate times, then dividing the total by the number of times. This sheet uses the DMS key of your calculator, it also requires your skills to understand 24 hour time, so this sheet should be considered more challenging.

Example Find the average time of these times.
1 h 19 m, 2h 33m, 44m.

STEP 1 Add the times.

Calc: 1 º ’ ’’ 1 9 º ’ ’’ + 2 º ’ ’’ 3 3 º ’ ’’ + 0 º ’ ’’ 4 4 º ’ ’’ = 4h 36m

STEP 2 Divide the total by the number of times (÷3)

Leave the previous answer on the screen and ÷3

Calc: ÷ 3 = 1h 32m

The 2nd column of the sheet starts with 24 hour time revision. Remember that when you reach 1 pm, you add 12 hours. So that means:

1 pm = 1300 h, 1.26 pm = 1326 h, 8 pm = 2000h, 10.16 pm = 2216. and so on.

You need 24 hour time to perform calculations with subtraction. For example if you work between 9.38 am and 4.45 pm, how do you work out the time you have worked?

9.38 am becomes 0938 h

4.45 pm becomes 1645 h

Perform a subtraction: 1645 h - 0938 h Calc: 1 6 º ’ ’’ 4 5 º ’ ’’ - 9 º ’ ’’ 3 8 º ’ ’’ = 7h 7m

If you have the hours worked each day, you can calculate the average working hours. Just add all the daily hours and divide by the number of days.

Data Analysis - Further Mean - Time Applications

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the average of these times using your calculator's DMS key.

Don't forget!

1 1h 22m, 1h 47m, 54m.

Calc: 1 °’’’ 2 2 °’’’ + 1 °’’’ 4 7 °’’’ + 0 °’’’ 5 4 °’’’ =

Write the total in the top box then:

Calc: ÷ 3 = $\bar{x} = \frac{\square\text{ h }\square\text{ m}}{3} = \square\text{ h }\square\text{ m}$

2 2h 43m, 1h 53m, 2h 16m, 1h 36m.

$\bar{x} = \frac{\square\text{ h }\square\text{ m}}{\square} = \square\text{ h }\square\text{ m}$

3 57m, 1h 38m, 39m.

57m = 0h 57m!

$\bar{x} = \frac{\square\text{ h }\square\text{ m}}{\square} = \square\text{ h }\square\text{ m}$

4 23m, 1h 38m, 2h 47m, 48m, 56m, 1h 52m.

$\bar{x} = \frac{\square}{\square} = \square$

These are the same, except the answer is required in both h/min and converted to minutes alone.

5 1h 13m, 2h 6m, 52m, 97m.

97m = 0h 97m!

$\bar{x} = \frac{\square\text{ h }\square\text{ m}}{\square} = \square\text{ h }\square\text{ m} = \square\text{ m}$

Calc: × 6 0 =

6 2h 31m, 1h 11m, 67m, 3h 19 m, 43m, 87m.

$\bar{x} = \frac{\square}{\square} = \square = \square$

7 Find the average running time in minutes for these three movies: 1h 19m, 1h 47m, 1h 33m.

8 Find the average running time in minutes for these five movies:

1h 46m, 2h 13m, 86m, 1h 55m, 115m.

Convert these times to 24 hour time format.

Examples:

5.17 am = 0517 h

3 + 12 = 15

3.43 pm = 1543 h

9 5 am = ☐☐☐☐ h

10 7 pm = ☐☐☐☐ h

11 9.23 pm = ☐☐☐☐ h

12 8.08 pm = ☐☐☐☐

13 11.37 pm = ☐☐☐☐

14 2.41 pm = ☐☐☐☐

Find the time difference between these times, use 24 hour time format to make the subtraction.

14 6.25 am until 3.08 pm

☐☐☐☐ h - ☐☐☐☐ h = ☐ h ☐☐ m

3.08 pm in 24 h — 6.25 am in 24 h

Calc: 1 5 °’’’ 8 °’’’ - 6 °’’’ 2 5 °’’’ =

15 11.44 am until 7.17 pm

☐☐☐☐ h - ☐☐☐☐ h = ☐ h ☐☐ m

7.17 pm in 24 h — 11.44 am in 24 h

Dave works the following times for 5 days. Find the average daily hours he works.

16 Monday: 8.47 am until 5.28 pm

☐☐☐☐ h - ☐☐☐☐ h = ☐ h ☐☐ m

5.28 pm in 24 h — 8.47 am in 24 h

17 Tuesday: 9.53 am until 6.42 pm

☐☐☐☐ h - ☐☐☐☐ h = ☐ h ☐☐ m

18 Wednesday: 7.36 am until 4.15 pm

☐☐☐☐ h - ☐☐☐☐ h = ☐ h ☐☐ m

19 Thursday: 2.39 pm until 11.05 pm

Careful! 2 pm times

20 Friday: 3.48 pm until 10.08 pm

21 Calculate Dave's average hours for the week.

$\bar{x} = \frac{\square}{\square} = \square$

$\bar{x} = \frac{5\text{ h }48\text{ m}}{4} = 1\text{ h }27\text{ m} = 87\text{ m}$

Calc: × 6 0 =

6 2h 31m, 1h 11m, 67m, 3h 19 m, 43m, 87m.

$\bar{x} = \frac{10\text{h }18\text{m}}{6} = 1\text{h }43\text{m} = 103\text{ m}$

7 Find the average running time in minutes for these three movies: 1h 19m, 1h 47m, 1h 33m.

$\bar{x} = \frac{4\text{h }39\text{m}}{3} = 1\text{h }33\text{m} = 93\text{m}$

8 Find the average running time in minutes for these five movies:

1h 46m, 2h 13m, 86m, 1h 55m, 115m.

$\bar{x} = \frac{9\text{h }15\text{m}}{5} = 1\text{h }51\text{m} = 111\text{m}$

Convert these times to 24 hour time format.

Examples: 3 + 12 = 15

5.17 am = 0517 h 3.43 pm = 1543 h

9 5 am = 0500 h

10 7 pm = 1900 h

11 9.23 pm = 2123 h

12 8.08 pm = 2008h

13 11.37 pm = 2337h

14 2.41 pm = 1441h

Find the time difference between these times, use 24 hour time format to make the subtraction.

14 6.25 am until 3.08 pm

1508 h - 0625 h = 8 h 43 m

3.08 pm in 24 h 6.25 am in 24 h

Calc: 1 5 °’’’ 8 °’’’ - 6 °’’’ 2 5 °’’’ =

15 11.44 am until 7.17 pm

1917 h - 1124 h = 7 h 53 m

7.17 pm in 24 h 11.44 am in 24 h

Dave works the following times for 5 days. Find the average daily hours he works.

16 Monday: 8.47 am until 5.28 pm

1728 h - 0847 h = 8 h 41 m

5.28 pm in 24 h 8.47 am in 24 h

17 Tuesday: 9.53 am until 6.42 pm

1842 h - 0953 h = 8 h 49 m

18 Wednesday: 7.36 am until 4.15 pm

1615 h - 0736 h = 8 h 39 m

19 Thursday: 2.39 pm until 11.05 pm

Careful! 2 pm times

2305h - 1439h = 8h 26m

20 Friday: 3.48 pm until 10.08 pm

2208h - 1548h = 6h 20m

21 Calculate Dave's average hours for the week.

$\bar{x} = \frac{40\text{h }55\text{m}}{5} = 8\text{h }11\text{m}$

$= 114 \text{ m}$

Data Analysis - Mean - Problems

The Mean is the mathematical term for "Average". So when you find the mean you are finding the average. The mean is found by adding all the scores then dividing the total by the number of scores. As a formula it is written:

The short way of writing the mean is $\bar{x}$. *'x bar'*

$$\bar{x} = \frac{\Sigma x}{n}$$

Σx means the sum of x. So the total of all the scores in the data set.

n means the number of scores in the data set.

Example

Tilly installs glass splash-backs in kitchens. Working a 5 day week, the number of installations is shown in the table below. If she is paid $485 per splash-back, calculate:

- The amount earned each day, by completing the table
- The average amount Tilly earns daily

Day	Splash-backs Installed	Amount Earned
Mon	2	$970
Tues	3	$1 455
Wed	3	$1 455
Thur	5	$2 425
Fri	4	$1 940

485 × 2

Tilly works 5 days, so to find the average amount earned, divide the amount earned by 5.

$$\bar{x} = \frac{8\ 245}{5}$$

Total of Amount earned column

$$= \$1\ 649$$

Remember the $ sign

Data Analysis - Mean - Problems

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the mean for these, round to 1 d.p. if required.

1 James' biology experiment results in three bean sprouts at heights of: 11.5 cm, 14.3 cm and 17.1 cm. Find the average height for the sprouts.

$\bar{x} = \frac{\square}{\square} = \square$ cm

2 Jo earns the following amounts over 5 weekends:
$124, $85, $110.80, $96.50 and $135. Find the average amount she earns.

$\bar{x} = \frac{\square}{\square} = \square$

3 Chloe earns $17.60 per hour, working a 4 day week. Calculate the earnings for each day she works.

M: 6 h $6 \times 17.60 = \square$

T: 7 h $\square$

W: 4 h $\square$

F: 9 h $\square$

4 Calculate Chloe's average daily wage.

$\bar{x} = \frac{\square}{\square} = \square$

5 Sam supplies Holland blinds, he makes different profits on each width. Find the profit for sales of each width in the weekly table of sales below.

Width (mm)	Profit rate	Quantity	Profit
900	$42	18	
1 200	$68	7	
1 800	$95	9	
2 400	$76	5	

6 Find total sold and total profit.

Total number of Blinds sold: _____

Total Weekly Profit: _____

7 Find the average profit made per blind sold for the week.

_____

8 Below is Sam's results for the second week. Complete the table to calculate the profit made on each size.

Width (mm)	Profit rate	Quantity	Profit
900	$42	4	
1 200	$68	8	
1 800	$95	12	
2 400	$76	8	

9 Find total sold and total profit.

Total number of Blinds sold: _____

Total Weekly Profit: _____

10 Find the average profit made per blind sold for the second week.

_____

11 Has the average blind profit increased or decreased in the second week? Explain why.

_____

_____

_____

_____

_____

12 David is a real estate agent who has sold three properties this week. Calculate David's total weekly sales.

2 Hillside Dr	$807 700
15/9 Botany St	$795 000
9 Seaview Crt	$2 675 000
TOTAL	

13 Calculate the average sales price for the three properties.

_____

_____

14 Calculate the average sales price just for the first two properties.

_____

_____

15 Explain why the answer to Q.13 is much higher than Q.14.

_____

_____

_____

_____

16 Geoff is managing the digging and walling of a train tunnel. He records the rate of progress below.

Day	Distance Completed
Mon	6.3 m
Tues	3.5 m
Wed	4.9 m
Thur	2.5 m
Fri	9.3 m
Sat	7.7 m

Calculate the average distance completed per day.

_____

Data Analysis - Mean - Problems

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the mean for these, round to 1 d.p. if required.

1 James' biology experiment results in three bean sprouts at heights of: 11.5 cm, 14.3 cm and 17.1 cm. Find the average height for the sprouts.

$\bar{x} = \frac{42.9}{3} = 14.3$ cm

2 Jo earns the following amounts over 5 weekends:
$124, $85, $110.80, $96.50 and $135. Find the average amount she earns.

$\bar{x} = \frac{551.30}{5} = \$110.26$

3 Chloe earns $17.60 per hour, working a 4 day week. Calculate the earnings for each day she works.

M: 6 h $6 \times 17.60 = \$105.60$

T: 7 h $7 \times 17.60 = \$123.20$

W: 4 h $4 \times 17.60 = \$70.40$

F: 9 h $9 \times 17.60 = \$158.40$

4 Calculate Chloe's average daily wage.

$\bar{x} = \frac{457.60}{4} = \$114.40$

5 Sam supplies Holland blinds, he makes different profits on each width. Find the profit for sales of each width in the weekly table of sales below.

Width (mm)	Profit rate	Quantity	Profit
900	$42	18	$756
1 200	$68	7	$476
1 800	$95	9	$855
2 400	$76	5	$380

6 Find total sold and total profit.

Total number of Blinds sold: 39 blinds

Total Weekly Profit: $2 467

7 Find the average profit made per blind sold for the week.

$\bar{x} = \frac{2\,467}{39} = \$63.26$

8 Below is Sam's results for the second week. Complete the table to calculate the profit made on each size.

Width (mm)	Profit rate	Quantity	Profit
900	$42	4	$168
1 200	$68	8	$544
1 800	$95	12	$1 140
2 400	$76	8	$608

9 Find total sold and total profit.

Total number of Blinds sold: 33 blinds

Total Weekly Profit: $2 460

10 Find the average profit made per blind sold for the second week.

$\bar{x} = \frac{2\,460}{33} = \$74.55$

11 Has the average blind profit increased or decreased in the second week? Explain why.

The profit per blind has increased even though there was less profit and less sales. Because the quantity of higher profit blind sales increased, the average profit per blind increased.

12 David is a real estate agent who has sold three properties this week. Calculate David's total weekly sales.

2 Hillside Dr	$807 700
15/9 Botany St	$795 000
9 Seaview Crt	$2 675 000
TOTAL	$4 277 700

13 Calculate the average sales price for the three properties.

$\bar{x} = \frac{4\,277\,700}{3}$

$\bar{x} = \$1\,425\,900$

14 Calculate the average sales price just for the first two properties.

$\bar{x} = \frac{1\,602\,700}{2}$

$\bar{x} = \$801\,350$

15 Explain why the answer to Q.13 is much higher than Q.14.

The Seaview Crt house was very Expensive and pushed the average price up. By removing it the average price drops down.

16 Geoff is managing the digging and walling of a train tunnel. He records the rate of progress below.

Day	Distance Completed
Mon	6.3 m
Tues	3.5 m
Wed	4.9 m
Thur	2.5 m
Fri	9.3 m
Sat	7.7 m

Calculate the average distance completed per day.

$\bar{x} = \frac{34.2}{6} = 5.7$ m

Data Analysis - Range and Mode

The range of a data set is found by subtracting the smallest score from the largest score. So look through the data for the largest score, circle it if you like, then find the smallest score.

Example

Data: 15 , 33 , 21 , 18 , 11 , 15 .

Data: 15 , (33) , 21 , 18 , (11) , 15 .

Find the largest and the smallest scores. Circle them if you like.

Range = 33 - 11 = 22

Subtract them for the range.

Negative numbers can also occur in data sets, the same method is used but when you subtract then the two minus signs become a plus sign.

Example - Negative numbers

Data: -8 , 11 , -3 , 12 , -5 , 7.

Data: (-8) , 11 , -3 , (12) , -5 , 7.

Find the largest and the smallest scores. If circling them helps you, do it!

Range = 12 - -8 = 20

12 - - 8 becomes 12 + 8 which = 20.

Data can also be assembled in Stem and Leaf Plots

Example

Tens	Units
0	5 5 7 8
1	0 0 3 3
2	8 8 9

The smallest score is '05' which is 5

The largest score is '29' which is 29.

Range = 29 - 5 = 24

Calculate the range by the same method.

The mode is the score that occurs the most frequently in a data set. Note that the word 'mode' is similar to the word 'most'. If the data contains no numbers that are repeated then there is 'No Mode', note that you write 'No Mode' not Mode = 0. If one number occurs the most then the mode is that number. If two numbers occur the most and with the same frequency then list both numbers (this is called Bi-modal). However if there are three modes (or more) then the data set is said to have "No Mode". So it is either No mode, a single score, or two scores.

15, 17, 16, 3.	17, 3, 17, 3, 9, 9, 6.	17, 15, 17, 15, 17.	17, 11, 17, 15, 11.
Mode = No Mode	Mode = No Mode	Mode = 17.	Mode = 11, 17.
No score occurs more than once	3, 9, 17 occur the most … No Mode	17 occurs more frequently than 15	Bi-Modal as 11 and 17 both occur twice

Data Analysis - Range (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Circle the smallest and largest numbers. Subtract them and you have the range.

1 40 , 53 , 19 , 21 , 33 , 10 .

Range = ☐ - ☐ = ☐

2 71 , 66 , 57 , 42 , 42 , 25 .

Range = ☐ - ☐ = ☐

3 13, 38, 23, 46, 27, 19, 54, 62, 83, 50, 39, 44, 23, 11, 6, 79.

Range = ☐ - ☐ = ☐

4 812, 776, 909, 694, 552, 773, 833, 905, 541, 890.

Range =

Watch out when you subtract negative numbers, - - = + !

5 10, 3, -4, 17, 0, 8, -9, 6, 11.

Range = ☐ - ☐ = ☐

6 52, -37, 65, 24, 39, -7, 19.

7 38, 12, 19, 0, 58, -21, 83, 9, 41, -65, 42, -33, 91, 50, -18.

Find the range for these temperatures.

8 Overnight Minimum: -1°C
Maximum: 11°C

Range =

9 Overnight Minimum: -7°C
Maximum: 17°C

Range =

Now find the range of these Stem & Leaf Plots.

Data Analysis - Range (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Circle the smallest and largest numbers. Subtract them and you have the range.

1 40, (53), 19, 21, 33, (10)

Range = 53 - 10 = 43

2 (71), 66, 57, 42, 42, (25), 3

Range = 71 - 25 = 46

3 13, 38, 23, 46, 27, 19, 54, 62, (83), 50, 39, 44, 23, 11, (6), 79.

Range = 83 - 6 = 77

4 812, 776, (909), 694, 552, 773, 833, 905, (541), 890.

Range = 909 - 541 = 368

Watch out when you subtract negative numbers, - - = + !

5 10, 3, -4, (17), 0, 8, (-9), 6, 11.

Range = 17 - -9 = 26

6 52, (-37), (65), 24, 39, -7, 19.

Range = 65 - (-37) = 102

7 38, 12, 19, 0, 58, -21, 83, 9, 41, (-65), 42, -33, (91), 50, -18.

Range = 91 - (-65) = 156

Find the range for these temperatures.

8 Overnight Minimum: -1°C
Maximum: 11°C

Range = 11 - (-1) = 12°C

9 Overnight Minimum: -7°C
Maximum: 17°C

Range = 17 - (-7) = 24°C

Now find the range of these Stem & Leaf Plots.

10

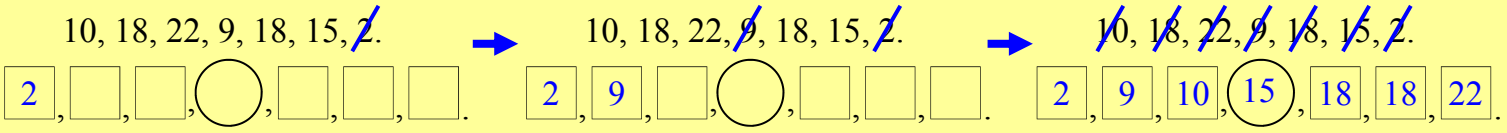
Data Analysis - The Median - Introduction

The Median is the middle score in a data set. That is if there are an odd number of scores. Just imagine a see-saw pivoting on the median. Write the scores in order from lowest to highest and circle the middle number … that is the median.

Example - Finding the Median (Odd Number of Scores)

Data: 10, 18, 22, 9, 18, 15, 2.



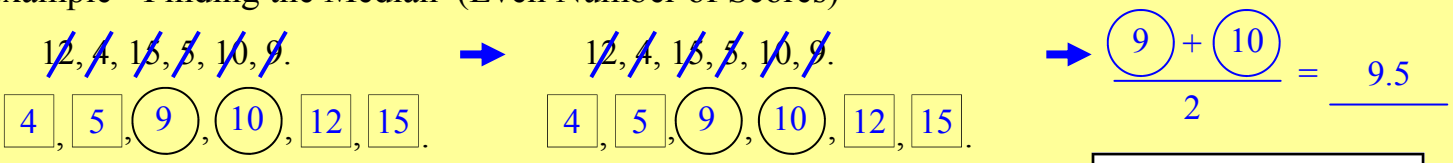
Find the smallest number in the data set and write it down first, then strike out the number to avoid mistakes.

Find the next smallest number and write it down.

Repeat the process until all the data is in ascending order. The middle score (circled) is the Median.

The above is for an odd number of scores. If there are an even number of scores then the Median is halfway between the two middle scores. So find the two middle scores and average them to find the Median.

Example - Finding the Median (Even Number of Scores)



Write the data in ascending order as with odd numbered data sets.

This time there are two middle numbers. Find the average, that is the median.

Calculator Steps:

9 + 1 0 = ÷ 2 =

Data can also be displayed in Ordered Stem and Leaf plots, Dot Plots and Frequency Tables. This is an introduction sheet and so it just asks you to write the scores down in a row, then find the median, just like a data set. So the method above is used for all questions, whether data sets, Stem and Leaf Plots, Dot Plots or Frequency Tables.

Data Analysis - The Median - Introduction (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Rewrite these numbers in order into the circle and squares. The median is in the circle.

1 3, 5, 10, 12, 19, 23, 34.

□, □, □, ○, □, □, □.

Median = □

2 6, 14, 14, 22, 37.

□, □, ○, □, □.

Median = □

3 7, 7, 12, 16, 18, 21, 26.

□, □, □, ○, □, □, □.

Median = □

Now the numbers have to be put in order as well. Low to high.

4 12, 8, 19, 36, 17.

□, □, ○, □, □.

Median = □

5 84, 36, 55, 58, 65.

□, □, ○, □, □.

Median = □

6 66, 86, 99, 92, 49, 62, 57.

□, □, □, ○, □, □, □.

Median = □

This time circle the middle number yourself. Count the numbers to make sure you have rewritten all of them.

7 11, 14, 24, 16, 19.

Rewrite numbers in order, there are 5.

Median = □

8 8, 2, 7, 3, 4, 7, 8, 2, 9.

Median = □

9 4, 8, 2, 4, 6, 7, 13, 15, 9, 3, 5.

Median = □

Find the mean for these.

10 12 and 26. Mean = □

Calc: 1 2 + 2 6 = ÷ 2 =

11 25 and 37. Mean = □

12 13 and 18. Mean = □

These have an even number of scores. You have to find the average of the 2 middle scores.

13 11, 24, 28, 36.

□, ○, ○, □.

Add then ÷ 2

Median = □

14 46, 21, 11, 35.

□, ○, ○, □.

Median = □

15 22, 19, 34, 15, 18, 24.

□, □, ○, ○, □, □.

Median = □

16 8, 19, 14, 6, 11, 15.

□, □, ○, ○, □, □.

Median = □

17 82, 71, 48, 55.

Median = □

18 23, 11, 14, 40, 28, 32.

Median = □

19 104, 111, 86, 123, 92, 88.

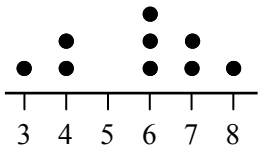
Median = □

20 8, 13, 12, 6, 13, 18, 7, 12.

Median = □

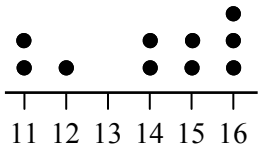
Write these dot plots out as numbers and find the median.

21



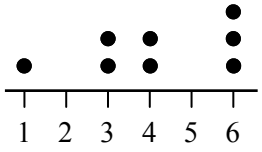
Median = □

22



Median = □

23



Median = □

Median = 92

Data Analysis - The Median

Crossing off the first and last score, then the 2nd and 2nd last score ….. and so on. This is the manual way to find the median. But the faster way, especially with larger amounts of data is to use the formula:

$$\text{Median Position} = \frac{n+1}{2}$$

Where n = number of scores in a data set. Note the answer can be a whole number or end with 0.5.

Data Sets

Example - Odd number of scores

Data: 1, 5, 7, 10, 14, 19, 23.

There are 7 scores

$$\text{Position} = \frac{7+1}{2} = 4^{th} \text{ score.}$$

So for the data above, the median is the 4th score.

Data: 1, 5, 7, 10, 14, 19, 23.

Median = 10

Example - Even number of scores

Data: 1, 5, 7, 10, 14, 19, 23, 37, 37, 40.

There are 10 scores

$$\text{Position} = \frac{10+1}{2} = 5.5^{th} \text{ score.}$$

So for the data above, the median is the 5.5th score. In other words it is between the 5th and 6th scores.

Data: 1, 5, 7, 10, 14, 19, 23, 37, 37, 40.

$$\text{Median} = \frac{14+19}{2} = 16.5$$

Stem & Leaf Plots

Example Stem & Leaf (Odd)

Tens	Units
8	4 6
9	0 2 6 6
10	1 3 3 5 8
11	3 3 8 9

There are 15 scores

$$\text{Position} = \frac{15+1}{2} = 8^{th} \text{ score.}$$

Median = 103

Example Stem & Leaf (Even)

Tens	Units
0	1 7
1	0 0 5
2	1 8 8 8 9
3	3 3

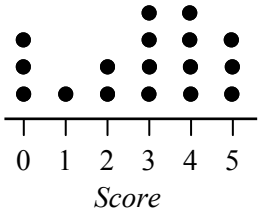
There are 12 scores

$$\text{Position} = \frac{12+1}{2} = 6.5^{th} \text{ score.}$$

$$\text{Median} = \frac{21+28}{2} = 24.5$$

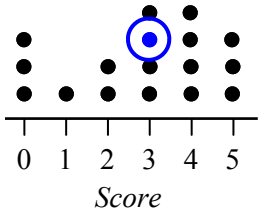
Dot Plots

Example Dot Plots (Odd)



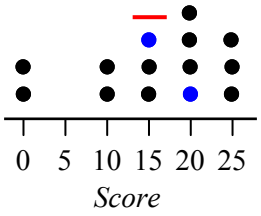
There are 17 scores (dots)

$$\text{Position} = \frac{17+1}{2} = 9^{th} \text{ score.}$$



Median = 3

Example Dot Plots (Even)



There are 14 scores (dots)

$$\text{Position} = \frac{14+1}{2} = 7.5^{th} \text{ score.}$$

The 7.5^{th} score is between the 7th and 8th score. Red line above.

$$\text{Median} = \frac{15+20}{2} = 17.5$$

Frequency Tables

Example Frequency Tables (odd)

Score	*f*	
2	1	2
4	3	4, 4, 4
6	2	6, 6
8	4	8, 8, 8, 8
10	3	10, 10, 10
$\Sigma f =$	13	

Write the scores out

Add the *f* column

$$\text{Position} = \frac{13+1}{2} = 7^{th} \text{ score.}$$

Median = 8

Example Frequency Tables (even)

Score	*f*	
2	1	2
4	3	4, 4, 4
6	3	6, 6, 6
8	4	8, 8, 8, 8
10	3	10, 10, 10
$\Sigma f =$	14	

Write the scores out

Add the *f* column

$$\text{Position} = \frac{14+1}{2} = 7.5^{th} \text{ score.}$$

Median = 8

Data Analysis - The Median (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the position of the median and the median itself, the data is in ascending order.

1 3, 4, 7, 12, 12, 15, 18, 25, 26, 30, 38, 38, 45, 48, 55, 63, 70.

Position = $\frac{\square + 1}{2}$ (Count the scores)

$= \square^{th}$ score.

The median is $\square$

2 63, 82, 83, 87, 88, 94, 96, 98, 99, 100, 104, 110, 115, 122, 122, 127, 129, 135, 142, 154, 179.

Position = $\frac{\square + 1}{2}$

$= \square^{th}$ score.

The median is $\square$

3 0, 2, 3, 4, 12, 13, 13, 18, 23, 24, 29, 29, 30, 31, 37, 39, 42, 46, 55, 57, 59, 94, 123, 128, 152.

Position =

Median = $\square$

4 105, 127, 185, 209, 234, 276, 362, 368, 391, 412, 419, 438, 446, 502, 535, 572, 590, 590, 612, 616, 623, 655, 662, 720, 739, 750, 750, 773, 781, 782, 810, 834, 880, 881.

Position =

Median = $\frac{\square + \square}{2}$

$= \square$

Arrange the data in ascending order then find both the position of the median and its value. Strike out the numbers as you go.

5 53, 26, 40, 45, 52, 31, 76, 42, 50, 64, 39, 43, 24, 33, 60, 59, 78, 25, 10, 18, 32, 40, 57, 62, 20, 25, 55, 19, 28.

10,

Position = Median =

Find the position and value for the median in the stem and leaf plots.
For Q.8, 9 place the data in the raw and ordered S&L plots first.

Tea

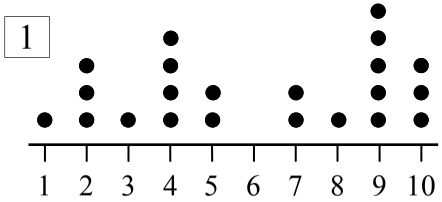
Position = $\frac{\square + 1}{2}$ = $\square^{th}$ score.

The median is _____

Date Due: _____

Find the median for these.

1



Position = $\frac{\square + 1}{2}$ = $\square^{th}$ score.

The median is _____

2

Coffee	Tens	Tea
6 2 2	0	5 7 7
9 3 1	1	0 1 4 7
7 4 0	2	3 3 8

Coffee

Position = $\frac{\square + 1}{2}$ = $\square^{th}$ score.

The median is _____

Tea

Position = $\frac{\square + 1}{2}$ = $\square^{th}$ score.

The median is _____

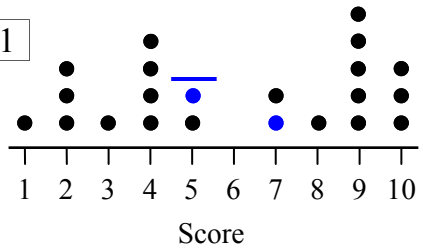
Data Analysis - The Median (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Date Due:

Find the median for these.

1



Position = $\frac{22 + 1}{2}$ = 11.5 th score.

The median is 6

2

Coffee	Tens	Tea
6 2 2	0	5 7 7
9 (3) 1	1	0 1 | 4 7
7 4 0	2	3 3 8

Coffee

Position = $\frac{9 + 1}{2}$ = 5 th score.

The median is 13

Tea

Position = $\frac{10 + 1}{2}$ = 5.5 th score.

The median is 12.5

Data Analysis - Mode, Median, Range and Mean.

These sheets are review sheets and so the method of finding the Mode, Mean, Range and Median won't be outlined below. But here is a reminder:

Mode - Is the score that occurs the most, there can be 1 mode, 2 modes (bi-modal) or No Mode. Write "No Mode" not "0" if there is no mode. If there are 3 or modes then the data is considered to have no mode.

Mean - Is the average of the scores. So add the scores then divide by the number of scores.

Range - Is the highest score minus the lowest score. If the lowest score is negative then when you subtract the two negative signs change to a plus '+'.

Median - Is the middle score when the scores are arranged in ascending order. If there are an odd number of scores it is the middle score. If there are an even number of scores then the median is the average of the two middle scores. So add them and divide by two.

Data Analysis - Mode, Median, Range and Mean. (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate the mode, range, median and mean, for the data below. Round to 1 d.p. if required.

Data Analysis - Mode, Median, Range and Mean. (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

A hot dog stall compares its sale figures for two locations. The dot plots show the number of hot dogs sold per hour, over a 14 hour time period.

Calculate the range, mode, median and mean for both locations. Round your answer to 1 d.p., if required.

1

Location 1		Location 2	
Mode =	No mode	Mode =	18
Range =	19 - 14	Range =	19 - 16
=	5	=	3
Median =	$^{17+17}/_{2}$	Median =	$^{18+18}/_{2}$
=	17	=	18
Mean =	$^{237}/_{14}$	Mean =	$^{246}/_{14}$
=	16.9	=	17.6

2 Which stand was more profitable? Would you use the range, mode, median or mean to support your answer?

Location 2 is more profitable. You would use the mean to support this because it shows that the average number of sales is 0.7 more per hour at Location 2. Median also indicates a higher middle score suggesting a higher sale rate.

3 Location 2 has more consistent sales. Use the range and the mode (from both locations) to support this.

Location 2 has a mode of 18, while Location 1 has no mode due to being more evenly Distributed (less consistent). The range of 5 at location 1 shows wider spread, while the range of 3 at Location1 shows more consistent sales.

Calculate the mode, range, median and mean, for the frequency tables below.

4

Score	*f*	*fx*
10	3	30
20	5	100
30	2	60
40	3	120
50	1	50
$\Sigma f =$	14	$\Sigma fx = 360$

Write the scores out to find the median

10, 10, 10

20, 20, 20, 20, 20

30, 30

40, 40, 40

50

Mode = 20

Range = 50 - 10

= 40

Median = 20

=

Mean = $^{360}/_{14}$

= 25.7

Steve is selling units in a proposed unit block. He has sold 5 standard units and one penthouse suite.

5 Find the mean, mode, range and median for the 5 standard units, prices (in $) are below.

677 000, 732 000, 775 000, 790 000, 815 000.

Mode = No mode Median = $775 000

Range = 815 000 - 677 000 = $138 000

Mean = $^{3\ 789\ 000}/_{5}$ = $757 800

6 Find the mean, mode, range and median for the 5 standard units and the penthouse, prices (in $) are below.

677 000, 732 000, 775 000, 790 000, 815 000, 3 750 000.

Mode = No mode

Mean = $^{7\ 539\ 000}/_{6}$ = $1 256 500

Range = 3 750 000 - 677 000 = $3 073 000

Median = $^{775\ 000+790\ 000}/_{2}$ = $782 500

7 Discuss the effect of the penthouse's sale on the range, mean and median.

The range has substantially increased due to the penthouses high price. The mean has also increased substantially but the median has only increased by $7 500. So the median is less affected by the large price, or outlier.

$\bar{x} = \frac{2\,234}{10}$

$= 223.4$

15 Emily earns $24.75 per hour. In one week she works 19 hours, in the next she works 27 hours. Calculate her pay for each week.

1st Week: Pay = 24.75×19

Pay = $470.25

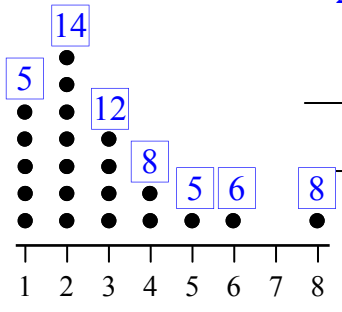
2nd Week: Pay = 24.75×27

Pay = $668.25

16 Calculate Emily's average weekly wage.

Av. weekly wage = $\frac{470.25 + 668.25}{2} = \$569.25$

17



Children in a Family

$\bar{x} = \frac{58}{21}$

$= 2.8$ kids!

Find the median for these.

18 4, 14, 20, 25, 31. Median is 20.

19 9, 14, 25, 25, 35, 44, 48, 55.

Median = $\frac{25 + 35}{2} = 30$

20 107, 83, 144, 110, 95, 77, 149, 86.

77, 83, 86, 95, 107, 110, 144, 149.

Median = $\frac{95 + 107}{2} = 101$

21

Tens	Units
0	4 8

6	2	6, 6
	$\Sigma f = 13$	→ Median is the 7th score

Median is 4

23 Tina auctioned 4 houses on the weekend. Prices are listed. Find the median house price.

$802 000, $915 000, $766 000, $1 877 000.

$766 000, $802 000, $915 000, $1 877 000.

Median = $\frac{802\,000 + 915\,000}{2} = \$858\,500$

24 Describe why the median house price is preferred to the mean house price.

The median removes the effect of very cheap and expensive houses. So it gives a better sample of an 'middle' price. The mean would be affected.

Data Analysis

Data Analysis - The Mean - Data Sets & Dot Plots (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate the mean. Add the scores and divide by the number of scores. Answers are whole numbers

1 27, 38, 24, 31, 44, 56, 50, 19, 26.

Add the scores

$\bar{x} = \frac{\square}{9} = \square$ Divide total by 9

Nine scores = 9

2 73, 86, 41, 29, 56. $\bar{x} = \frac{\square}{\square} = \square$

3 -6, 2, -14. $\bar{x} = \frac{\square}{\square} = \square$

4 16 773, 24 919. $\bar{x} = \frac{\square}{\square} = \square$

5 235, 306, 113, 176, 290, 218, 440.

$\square = \frac{\square}{\square} = \square$

This time you get a decimal answer. Round your answer to 1 decimal place.

6 94, 38, 77, 24, 83, 19.

$\square = \frac{\square}{\square} = \square$ (1 d.p.)

7 55, 78, 11, 107.

8 9, 5.4, 4.3, 6, 7, 3.

9 187, 553, 213.

10 57.17, -44.88.

Find the average height of these students. Find the average height in m (2 d.p.), then in cm.

11 1.75 m, 1.8 m, 1.73 m, 1.55 m, 1.77 m.

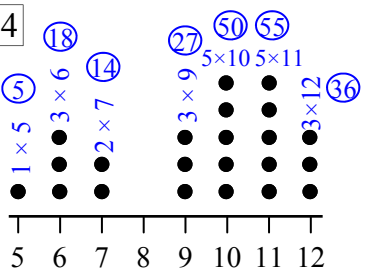
$\square = \frac{\square}{\square} = \square$ m $= \square$ cm

12 1.6 m, 1.74 m, 1.82 m, 1.77 m, 1.83 m, 1.8 m.

13 Find the average height for the 11 students.

Find the mean (1 d.p.) for the data displayed in these dot plots. Find dots × score, add for a total. Then divide the total by the total number of dots.

14



Age (years)

5 + 18 + 14 +...

$\bar{x} = \frac{\square}{\square}$ All Dots

$\bar{x} = \square$ (1 d.p.)

15

Data Analysis - Further Mean - Time Applications

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the average of these times using your calculator's DMS key.

Don't forget!

1 1h 22m, 1h 47m, 54m.

Calc: 1 °’’’ 2 2 °’’’ + 1 °’’’ 4 7 °’’’ + 0 °’’’ 5 4 °’’’ =

Write the total in the top box then:

Calc: ÷ 3 = $\bar{x} = \frac{\square\text{ h }\square\text{ m}}{3} = \square\text{ h }\square\text{ m}$

2 2h 43m, 1h 53m, 2h 16m, 1h 36m.

$\bar{x} = \frac{\square\text{ h }\square\text{ m}}{\square} = \square\text{ h }\square\text{ m}$

3 57m, 1h 38m, 39m.

57m = 0h 57m!

$\bar{x} = \frac{\square\text{ h }\square\text{ m}}{\square} = \square\text{ h }\square\text{ m}$

4 23m, 1h 38m, 2h 47m, 48m, 56m, 1h 52m.

$\bar{x} = \frac{\square}{\square} = \square$

These are the same, except the answer is required in both h/min and converted to minutes alone.

5 1h 13m, 2h 6m, 52m, 97m.

97m = 0h 97m!

$\bar{x} = \frac{\square\text{ h }\square\text{ m}}{\square} = \square\text{ h }\square\text{ m} = \square\text{ m}$

Calc: × 6 0 =

6 2h 31m, 1h 11m, 67m, 3h 19 m, 43m, 87m.

$\bar{x} = \frac{\square}{\square} = \square = \square$

7 Find the average running time in minutes for these three movies: 1h 19m, 1h 47m, 1h 33m.

8 Find the average running time in minutes for these five movies:

1h 46m, 2h 13m, 86m, 1h 55m, 115m.

Convert these times to 24 hour time format.

Examples:

5.17 am = 0517 h

3 + 12 = 15

3.43 pm = 1543 h

9 5 am = ☐☐☐☐ h

10 7 pm = ☐☐☐☐ h

11 9.23 pm = ☐☐☐☐ h

12 8.08 pm = ☐☐☐☐

13 11.37 pm = ☐☐☐☐

14 2.41 pm = ☐☐☐☐

Find the time difference between these times, use 24 hour time format to make the subtraction.

14 6.25 am until 3.08 pm

☐☐☐☐ h - ☐☐☐☐ h = ☐ h ☐☐ m

3.08 pm in 24 h — 6.25 am in 24 h

Calc: 1 5 °’’’ 8 °’’’ - 6 °’’’ 2 5 °’’’ =

15 11.44 am until 7.17 pm

☐☐☐☐ h - ☐☐☐☐ h = ☐ h ☐☐ m

7.17 pm in 24 h — 11.44 am in 24 h

Dave works the following times for 5 days. Find the average daily hours he works.

16 Monday: 8.47 am until 5.28 pm

☐☐☐☐ h - ☐☐☐☐ h = ☐ h ☐☐ m

5.28 pm in 24 h — 8.47 am in 24 h

17 Tuesday: 9.53 am until 6.42 pm

☐☐☐☐ h - ☐☐☐☐ h = ☐ h ☐☐ m

18 Wednesday: 7.36 am until 4.15 pm

☐☐☐☐ h - ☐☐☐☐ h = ☐ h ☐☐ m

19 Thursday: 2.39 pm until 11.05 pm

Careful! 2 pm times

20 Friday: 3.48 pm until 10.08 pm

21 Calculate Dave's average hours for the week.

$\bar{x} = \frac{\square}{\square} = \square$

Data Analysis - Mean - Problems

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the mean for these, round to 1 d.p. if required.

1 James' biology experiment results in three bean sprouts at heights of: 11.5 cm, 14.3 cm and 17.1 cm. Find the average height for the sprouts.

$\bar{x} = \frac{\square}{\square} = \square$ cm

2 Jo earns the following amounts over 5 weekends:
$124, $85, $110.80, $96.50 and $135. Find the average amount she earns.

$\bar{x} = \frac{\square}{\square} = \square$

3 Chloe earns $17.60 per hour, working a 4 day week. Calculate the earnings for each day she works.

M: 6 h $6 \times 17.60 = \square$

T: 7 h $\square$

W: 4 h $\square$

F: 9 h $\square$

4 Calculate Chloe's average daily wage.

$\bar{x} = \frac{\square}{\square} = \square$

5 Sam supplies Holland blinds, he makes different profits on each width. Find the profit for sales of each width in the weekly table of sales below.

Width (mm)	Profit rate	Quantity	Profit
900	$42	18	
1 200	$68	7	
1 800	$95	9	
2 400	$76	5	

6 Find total sold and total profit.

Total number of Blinds sold: _____

Total Weekly Profit: _____

7 Find the average profit made per blind sold for the week.

_____

8 Below is Sam's results for the second week. Complete the table to calculate the profit made on each size.

Width (mm)	Profit rate	Quantity	Profit
900	$42	4	
1 200	$68	8	
1 800	$95	12	
2 400	$76	8	

9 Find total sold and total profit.

Total number of Blinds sold: _____

Total Weekly Profit: _____

10 Find the average profit made per blind sold for the second week.

_____

11 Has the average blind profit increased or decreased in the second week? Explain why.

_____

_____

_____

12 David is a real estate agent who has sold three properties this week. Calculate David's total weekly sales.

2 Hillside Dr	$807 700
15/9 Botany St	$795 000
9 Seaview Crt	$2 675 000
TOTAL	

13 Calculate the average sales price for the three properties.

_____

_____

14 Calculate the average sales price just for the first two properties.

_____

_____

15 Explain why the answer to Q.13 is much higher than Q.14.

_____

_____

_____

_____

16 Geoff is managing the digging and walling of a train tunnel. He records the rate of progress below.

Day	Distance Completed
Mon	6.3 m
Tues	3.5 m
Wed	4.9 m
Thur	2.5 m
Fri	9.3 m
Sat	7.7 m

Calculate the average distance completed per day.

_____

Data Analysis - Range (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Circle the smallest and largest numbers. Subtract them and you have the range.

1 40 , 53 , 19 , 21 , 33 , 10 .

Range = ☐ - ☐ = ☐

2 71 , 66 , 57 , 42 , 42 , 25 .

Range = ☐ - ☐ = ☐

3 13, 38, 23, 46, 27, 19, 54, 62, 83, 50, 39, 44, 23, 11, 6, 79.

Range = ☐ - ☐ = ☐

4 812, 776, 909, 694, 552, 773, 833, 905, 541, 890.

Range =

Watch out when you subtract negative numbers, - - = + !

5 10, 3, -4, 17, 0, 8, -9, 6, 11.

Range = ☐ - ☐ = ☐

6 52, -37, 65, 24, 39, -7, 19.

7 38, 12, 19, 0, 58, -21, 83, 9, 41, -65, 42, -33, 91, 50, -18.

Find the range for these temperatures.

8 Overnight Minimum: -1°C
Maximum: 11°C

Range =

9 Overnight Minimum: -7°C
Maximum: 17°C

Range =

Now find the range of these Stem & Leaf Plots.

10

Tens	Units	
0	0 7 7	0,7,7
1	8 9	18,19

Data Analysis - The Median - Introduction (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Rewrite these numbers in order into the circle and squares. The median is in the circle.

1 3, 5, 10, 12, 19, 23, 34.

□, □, □, ○, □, □, □.

Median = □

2 6, 14, 14, 22, 37.

□, □, ○, □, □.

Median = □

3 7, 7, 12, 16, 18, 21, 26.

□, □, □, ○, □, □, □.

Median = □

Now the numbers have to be put in order as well. Low to high.

4 12, 8, 19, 36, 17.

□, □, ○, □, □.

Median = □

5 84, 36, 55, 58, 65.

□, □, ○, □, □.

Median = □

6 66, 86, 99, 92, 49, 62, 57.

□, □, □, ○, □, □, □.

Median = □

This time circle the middle number yourself. Count the numbers to make sure you have rewritten all of them.

7 11, 14, 24, 16, 19.

Rewrite numbers in order, there are 5.

Median = □

8 8, 2, 7, 3, 4, 7, 8, 2, 9.

Median = □

9 4, 8, 2, 4, 6, 7, 13, 15, 9, 3, 5.

Median = □

Find the mean for these.

10 12 and 26. Mean = □

Calc: 1 2 + 2 6 = ÷ 2 =

11 25 and 37. Mean = □

12 13 and 18. Mean = □

These have an even number of scores. You have to find the average of the 2 middle scores.

13 11, 24, 28, 36.

□, ○, ○, □.

Add then ÷ 2

Median = □

14 46, 21, 11, 35.

□, ○, ○, □.

Median = □

15 22, 19, 34, 15, 18, 24.

□, □, ○, ○, □, □.

Median = □

16 8, 19, 14, 6, 11, 15.

□, □, ○, ○, □, □.

Median = □

17 82, 71, 48, 55.

Median = □

18 23, 11, 14, 40, 28, 32.

Median = □

19 104, 111, 86, 123, 92, 88.

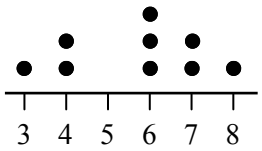
Median = □

20 8, 13, 12, 6, 13, 18, 7, 12.

Median = □

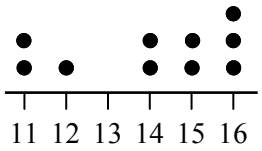
Write these dot plots out as numbers and find the median.

21



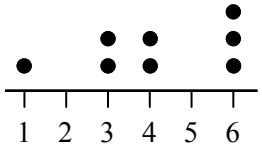
Median = □

22



Median = □

23



Median = □

Data Analysis - The Median (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the position of the median and the median itself, the data is in ascending order.

1 3, 4, 7, 12, 12, 15, 18, 25, 26, 30, 38, 38, 45, 48, 55, 63, 70.

Position = $\frac{\square + 1}{2}$ (Count the scores)

$= \square^{th}$ score.

The median is $\square$

2 63, 82, 83, 87, 88, 94, 96, 98, 99, 100, 104, 110, 115, 122, 122, 127, 129, 135, 142, 154, 179.

Position = $\frac{\square + 1}{2}$

$= \square^{th}$ score.

The median is $\square$

3 0, 2, 3, 4, 12, 13, 13, 18, 23, 24, 29, 29, 30, 31, 37, 39, 42, 46, 55, 57, 59, 94, 123, 128, 152.

Position =

Median = $\square$

4 105, 127, 185, 209, 234, 276, 362, 368, 391, 412, 419, 438, 446, 502, 535, 572, 590, 590, 612, 616, 623, 655, 662, 720, 739, 750, 750, 773, 781, 782, 810, 834, 880, 881.

Position =

Median = $\frac{\square + \square}{2}$

$= \square$

Arrange the data in ascending order then find both the position of the median and its value. Strike out the numbers as you go.

5 53, 26, 40, 45, 52, 31, 76, 42, 50, 64, 39, 43, 24, 33, 60, 59, 78, 25, 10, 18, 32, 40, 57, 62, 20, 25, 55, 19, 28.

10,

Position = Median =

Find the position and value for the median in the stem and leaf plots.
For Q.8, 9 place the data in the raw and ordered S&L plots first.

DATA ANALYSIS

EXTENSION

Data Analysis - Introduction to Quartiles

Data can be broken up into quartiles. This breaking up of data allows groups within that data to be analysed. Why would you do this? Imagine a shopping centre wanting to target customers. Customers could be divided into:

- Lower 25% - People who are not going to respond to marketing
- Next 25% - People who respond with significant marketing
- Next 25% - People who respond with a small amount of marketing
- Upper 25% - People who respond without marketing

So by splitting data up, you can allocate resources more effectively, target specific groups or simply understand your data better.

Splitting data up into quartiles requires you to find three dividing points, these are called Q_1, Q_2 and Q_3. Note that Q_2 is the median, which you already know how to locate. Q_1 and Q_2 are like medians also, but just of the lower and upper halves of the data.

Example - Finding Q_1, Q_2 and Q_3

A test out of 30 was taken and the 10 students results are shown:

Data: 9, 14, 16, 19, 20, 23, 23, 25, 26, 28.

Data: 9, 14, 16, 19, 20, 23, 23, 25, 26, 28.
10 scores

Median Location = $\frac{10 + 1}{2}$ = 5.5th score

STEP 1 Locate the Median.

Data: 9, 14, 16, 19, 20, | 23, 23, 25, 26, 28.

STEP 2 Mark the median. The 5.5th score is between the 5th and 6th score.

Data: 9, 14, 16, 19, 20, | 23, 23, 25, 26, 28.
5 scores 5 scores

Q_1 Location = $\frac{5 + 1}{2}$ = 3rd score

Q_3 Location will be the same as Q_1. (above median)

STEP 3 Locate the position of Q_1 and Q_3. Note that both are identical in their position above and below the median.

Data: 9, 14, (16), 19, 20, | 23, 23, (25), 26, 28.

Q_1 = 16 Q_3 = 25

Q_2 = 21.5

Calc: 20+23=÷2=

STEP 4 Mark Q_1 and Q_3. Note how the data is split up into 4 equal parts, called quartiles.

STEP 5 Write down the values for Q_1, Q_2 and Q_3. You only have to calculate Q_2 in this case.

Data Analysis - Introduction to Quartiles (Sheet 1)

Data Analysis - Quartiles - Data Sets

Data can be broken up into quartiles. This breaking up of data allows groups within that data to be analysed. Why would you do this? By splitting data up, you can allocate resources more effectively, target specific groups or simply understand your data better.

Splitting data up into quartiles requires you to find three dividing points, these are called Q_1, Q_2 and Q_3. Note that Q_2 is the median, which you already know how to locate. Q_1 and Q_2 are like medians also, but just of the lower and upper halves of the data.

Example - Finding Q_1, Q_2 and Q_3

A test out of 30 was taken and the 10 students results are shown:

Data: 9, 14, 16, 19, 20, 23, 23, 25, 26, 28.

Data: 9, 14, 16, 19, 20, 23, 23, 25, 26, 28.

10 scores

Median Location = $\frac{10 + 1}{2}$ = 5.5th score

STEP 1 Locate the Median.

Data: 9, 14, 16, 19, 20, | 23, 23, 25, 26, 28.

STEP 2 Mark the median. The 5.5th score is between the 5th and 6th score.

Data: 9, 14, 16, 19, 20, | 23, 23, 25, 26, 28.

5 scores 5 scores

Q_1 Location = $\frac{5 + 1}{2}$ = 3rd score

Q_3 Location will be the same as Q_1. (above median)

STEP 3 Locate the position of Q_1 and Q_3. Note that both are identical in their position above and below the median.

Data: 9, 14, (16), 19, 20, | 23, 23, (25), 26, 28.

Q_1 = 16 Q_3 = 25

Q_2 = 21.5

Calc: 20+23=÷2=

STEP 4 Mark Q_1 and Q_3. Note how the data is split up into 4 equal parts, called quartiles.

STEP 5 Write down the values for Q_1, Q_2 and Q_3. You only have to calculate Q_2 in this case.

Later exercises require you to rewrite the raw data in ascending order, you then repeat the above process on the ordered data.

Data Analysis - Quartiles - Stem & Leaf, Dot Plots

Stem and leaf plots are solved the same way as a data set. The added bonus with S & L and dot plots is the data is already in ascending order.

Example - Find Q_1, Q_2 and Q_3 in the stem and leaf plot

STEP 1 Count the scores...9.
Add 1 and divide by 2.
Locate the Median (Q_2).

Tens	Units
8	4 5 9
9	3 (7)
10	1 1 6
11	5

STEP 2 Locate Q_1 and Q_3.
$(4 + 1) \div 2 = 2.5$th
Between 2nd and 3rd

Tens	Units
8	4 5 | 9
9	3 (7)
10	1 1 | 6
11	5

STEP 3 Solve

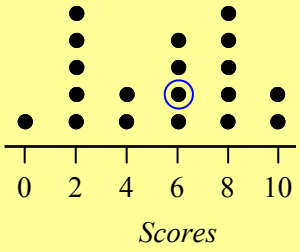
$Q_1 =$ 87

$Q_2 =$ 97

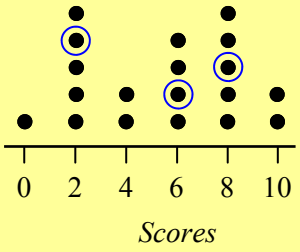
$Q_3 =$ 103.5

Example - Find Q_1, Q_2 and Q_3 in the dot plot

STEP 1 Count the dots...19.
Add 1 and divide by 2.
Locate the Median (Q_2).



STEP 2 Locate Q_1 and Q_3.
$(9 + 1) \div 2 = 5^{th}$



STEP 3 Solve

$Q_1 =$ 2

$Q_2 =$ 6

$Q_3 =$ 8

Data Analysis - Quartiles - Data Sets (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the median, Q_2, in these data sets.

Examples

14, 20, (28), 36, 50. $Q_2 =$ 28

Calc: 2 4 + 3 3 = ÷ 2 =

15, 18, 24, | 33, 38, 38. $Q_2 =$ 28.5

1 8, 13, 18, 23, 37. $Q_2 =$

2 1, 3, 4, 4, 6, 7, 8, 8. $Q_2 =$

3 29, 36, 44, 70. $Q_2 =$

4 44, 44, 52, 77, 93, 98. $Q_2 =$

Now you are given the median, Q_2, find Q_1 and Q_3 in these data sets.

Example

Q_1 location $= \frac{2+1}{2} = 1.5$th

1.5th means between 1st and 2nd

14, 20, (28), 36, 50.

2 scores 2 scores

14, | 20, (28), 36, | 50. $Q_1 =$ 17 $Q_3 =$ 43

5 8, 13, 18, | 23, 37, 42. Q_1 Q_3

6 11, 16, (27), 33, 33. Q_1 Q_3

7 36, 39, 47, 54, 63, 70, | 70, 74, 79, 83, 88, 89. Q_1 Q_3

8 5, 6, 8, 10, 13, 17, (18), 18, 19, 23, 23, 41, 55. Q_1 Q_3

Keep going with the same process, but this time record Q_1, Q_2 and Q_3. Q_2 is marked for you.

9 2, 2, 3, 4, 5, 5, 6, 6, | 7, 7, 7, 8, 8, 10, 10, 10. $Q_1 =$ $Q_2 =$ $Q_3 =$

10 Data: 24, 31, 34, 40, 40, 46, 49, 50, 51, 53, 55, 56, 58, 62, (64), 65, 68, 71, 77, 78, 82, 84, 87, 89, 92, 95, 95, 95, 97.

$Q_1 =$ $Q_2 =$ $Q_3 =$

Now do it all yourself. Find Q_2 first, then Q_1 and Q_3.

11 76, 83, 94, 104, 155, 176, 183. $Q_1 =$ $Q_2 =$ $Q_3 =$

12 1, 1, 1, 3, 3, 4, 5, 5, 7, 7, 7, 8, 8, 8, 9, 9, 10. $Q_1 =$ $Q_2 =$ $Q_3 =$

13 Data: 15, 17, 17, 21, 24, 26, 33, 36, 38, 48, 52, 63, 65, 68, 74, 75, 81, 85, 93, 94. $Q_1 =$ $Q_2 =$ $Q_3 =$

14 28, 36, 42, 55, 62, 68, 77, 78, 78, 85, 92. $Q_1 =$ $Q_2 =$ $Q_3 =$

Just the same, except this time the data has to be put into ascending order first. So rewrite the data on the line below, lowest to highest. Then find Q_2, Q_1 & Q_3.

15 17, 11, 9, 16, 22, 8, 13, 26, 16, 30, 15.

8,

There are 11 scores, make sure you have written 11 scores

$Q_1 =$ $Q_2 =$ $Q_3 =$

16 4, 9, 2, 4, 6, 11, 15, 8, 7, 6, 10, 3, 16.

$Q_1 =$ $Q_2 =$ $Q_3 =$

17 470, 233, 114, 330, 276, 195, 308, 222, 411.

$Q_1 =$ $Q_2 =$ $Q_3 =$

18 3, 2, 5, 7, 8, 2, 6, 10, 2, 8, 11, 0, 16, 14.

$Q_1 =$ $Q_2 =$ $Q_3 =$

Data Analysis - Quartiles - Stem & Leaf / Dot Plots (Sheet 2)

Data Analysis - Quartiles - Data Sets (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the median, Q_2, in these data sets.

Examples

14, 20, (28), 36, 50. $Q_2 =$ 28

Calc: 2 4 + 3 3 = ÷ 2 =

15, 18, 24, | 33, 38, 38. $Q_2 =$ 28.5

1 8, 13, (18), 23, 37. $Q_2 =$ 18

2 1, 3, 4, 4, | 6, 7, 8, 8. $Q_2 =$ 5

3 29, 36, | 44, 70. $Q_2 =$ 40

4 44, 44, 52, | 77, 93, 98. $Q_2 =$ 64.5

Now you are given the median, Q_2, find Q_1 and Q_3 in these data sets.

Example

Q_1 location $= \frac{2+1}{2} = 1.5$th

1.5th means between 1st and 2nd

14, 20, (28), 36, 50.

2 scores 2 scores

14, | 20, (28), 36, | 50. $Q_1 =$ 17 $Q_3 =$ 43

5 8, (13), 18, | 23, (37), 42. Q_1 13 Q_3 37

6 11, | 16, (27), 33, | 33. Q_1 13.5 Q_3 33

7 36, 39, 47, | 54, 63, 70, | 70, 74, 79, | 83, 88, 89.

Q_1 50.5 Q_3 81

8 5, 6, 8, | 10, 13, 17, (18), 18, 19, 23, | 23, 41, 55.

Q_1 9 Q_3 23

Keep going with the same process, but this time record Q_1, Q_2 and Q_3. Q_2 is marked for you.

9 2, 2, 3, 4, | 5, 5, 6, 6, | 7, 7, 7, 8, | 8, 10, 10, 10.

$Q_1 =$ 4.5 $Q_2 =$ 6.5 $Q_3 =$ 8

10 Data: 24, 31, 34, 40, 40, 46, 49, | 50, 51, 53, 55, 56, 58, 62, (64), 65, 68, 71, 77, 78, 82, 84, | 87, 89, 92, 95, 95, 95, 97.

$Q_1 =$ 49.5 $Q_2 =$ 64 $Q_3 =$ 85.5

Now do it all yourself. Find Q_2 first, then Q_1 and Q_3.

11 76, (83), 94, (104), 155, (176), 183.

$Q_1 =$ 83 $Q_2 =$ 104 $Q_3 =$ 176

12 1, 1, 1, 3, | 3, 4, 5, 5, (7), 7, 7, 7, 8, 8, | 8, 9, 9, 10.

$Q_1 =$ 3 $Q_2 =$ 7 $Q_3 =$ 8

13 Data: 15, 17, 17, 21, 24, | 26, 33, 36, 38, 48, | 52, 63, 65, 68, 74, | 75, 81, 85, 93, 94.

$Q_1 =$ 25 $Q_2 =$ 50 $Q_3 =$ 74.5

14 28, 36, (42), 55, 62, (68), 77, 78, (78), 85, 92.

$Q_1 =$ 42 $Q_2 =$ 68 $Q_3 =$ 78

Just the same, except this time the data has to be put into ascending order first. So rewrite the data on the line below, lowest to highest. Then find Q_2, Q_1 & Q_3.

15 ~~17, 11, 9, 16, 22, 8, 13, 26, 16, 30, 15.~~

Data Analysis - 5-Number Summary/IQR - Data Sets

A 5-number summary is the same as finding quartiles. The only difference is you include the lower extreme value (Min) and the upper extreme value (Max) along with Q_1, Q_2 and Q_3.

The interquartile range is the range for the middle 50% of scores. This is found by subtracting Q_3 from Q_1.

$$IQR = Q_3 - Q_1$$

Example - Find the 5 number summary and IQR for this data set.

Data: 9, 14, 16, 19, 20, 23, 23, 25, 26, 28.

Data: 9, 14, 16, 19, 20, 23, 23, 25, 26, 28.

10 scores

Median Location = $\frac{10 + 1}{2}$ = 5.5th score

STEP 1

Locate the Median (Q_2).

Data: 9, 14, 16, 19, 20, 23, 23, 25, 26, 28.

STEP 2

Mark the median. The 5.5th score is between the 5th and 6th score.

Data: 9, 14, 16, 19, 20, 23, 23, 25, 26, 28.

5 scores 5 scores

Q_1 Location = $\frac{5 + 1}{2}$ = 3rd score

Q_3 Location will be the same as Q_1. (above median)

STEP 3

Locate the position of Q_1 and Q_3. Note that both are identical in their position above and below the median.

Data: 9, 14, 16, 19, 20, 23, 23, 25, 26, 28.

STEP 4

Mark Q_1 and Q_3. Note how the data is split up into 4 equal parts, called quartiles.

Min 9

Q_1 16

Q_2 21.5

Q_3 25

Max 28

STEP 5

5 number summary includes the lower extreme and upper extreme values along with Q_1,Q_2 & Q_3.

STEP 6

Calculate the interquartile range. IQR = Q_3 - Q_1

IQR = Q_3 25 - Q_1 16 = 9

Data Analysis - 5-Number Summary/IQR - Stem & Leaf/Dot Plots

Example - Find the 5 number summary and IQR for this stem and leaf plot.

Tens	Units
5	2 5 9
6	6 7

6	6 7 |
7	0 3 (3)
8	2 8

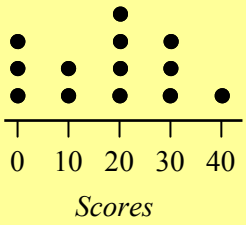
Min 52
Q_1 59
Q_2 68.5
Q_3 73
Max 88

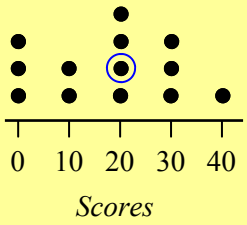
IQR = Q_3 73 - Q_1 59 = 14

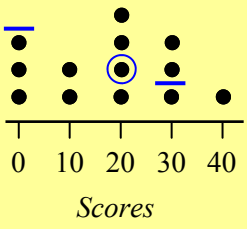
STEP 3 Write the 5 number summary

STEP 4 Calculate the IQR

Example - Find the 5 number summary and IQR for this dot plot.

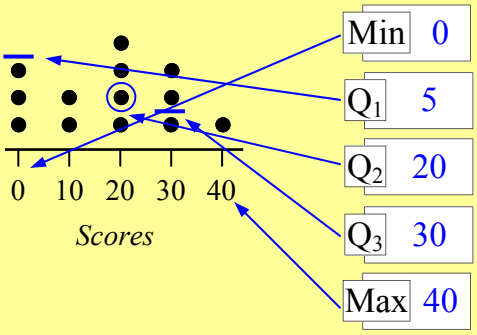






STEP 1 Locate the Median (Q_2).

STEP 2 Locate Q_1 and Q_3.



Min 0
Q_1 5
Q_2 20
Q_3 30
Max 40

IQR = Q_3 30 - Q_1 5 = 25

STEP 3 Write the 5 number summary

STEP 4 Calculate the IQR

Data Analysis - 5-Number Summary/IQR - Data Sets (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the 5-number summary for these data sets.

Example 12, 16, 19, 20, 28, 36, 44, 49, 50.

12, 16, 19, 20, 28, 36, 44, 49, 50.

Min 12 | Q_1 17.5 | Q_2 28 | Q_3 46.5 | Max 50

1 28, 34, 41, 55, 64, 64, 72, 77, 79, 85, 93.

Min | Q_1 | Q_2 | Q_3 | Max

2 3, 5, 7, 13, 18, 23, 27, 29, 36, 44, 52, 60, 67.

Min | Q_1 | Q_2 | Q_3 | Max

3 82, 106, 120, 127, 145, 145, 163, 178, 191.

Min | Q_1 | Q_2 | Q_3 | Max

4 4, 7, 13, 22, 26, 30, 32, 36, 38, 41, 48, 48.

Min | Q_1 | Q_2 | Q_3 | Max

Find the 5-number summary and calculate the IQR.
The IQR = Q_3 - Q_1.

5 15, 28, 34, 41, 56, 62, 73, 77, 81, 85.

Min | Q_1 | Q_2 | Q_3 | Max

IQR = Q_3 (Not Max) - Q_1 (Not Min) =

6 63, 66, 75, 81, 88, 90, 93, 97, 100.

7 0, 0, 3, 3, 4, 5, 5, 5, 6, 6, 7, 7, 8, 8, 8, 10, 10.

8 23, 28, 34, 39, 43, 47, 49, 54, 60, 67, 74, 81.

This time organise the data in ascending order, lowest to highest. Then find a 5-number summary and the IQR.

9 35, 11, 26, 45, 22, 36, 53, 38, 40, 19.

11,

There are 10 scores, make sure you have written 10 scores

Min | Q_1 | Q_2 | Q_3 | Max

IQR = (Not Max) - (Not Min) =

10 108, 117, 94, 103, 125, 107, 129, 105, 100.

Min | Q_1 | Q_2 | Q_3 | Max

IQR = - =

11 40, 27, 17, 33, 5, 21, 40, 38.

12 17, 11, 8, 15, 3, 14, 10, 12, 7, 19, 15, 16.

13 7, 8, 2, 5, 1, 6, 2, 6, 3, 9, 2, 4, 5, 0.

14 856, 955, 778, 915, 713, 798, 808, 930.

Data Analysis - 5-Number Summary/IQR - Data Sets (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the 5-number summary for these data sets.

Example 12, 16, 19, 20, 28, 36, 44, 49, 50.

12, 16, | 19, 20, 28, 36, 44, | 49, 50.

Min 12 | Q_1 17.5 | Q_2 28 | Q_3 46.5 | Max 50

1 28, 34, 41, 55, 64, 64, 72, 77, 79, 85, 93.

Min 28 | Q_1 41 | Q_2 64 | Q_3 79 | Max 93

2 3, 5, 7, | 13, 18, 23, 27, 29, 36, 44, | 52, 60, 67.

Min 3 | Q_1 10 | Q_2 27 | Q_3 48 | Max 67

3 82, 106, | 120, 127, 145, 145, 163, | 178, 191.

Min 82 | Q_1 113 | Q_2 145 | Q_3 170.5 | Max 191

4 4, 7, 13, | 22, 26, 30, | 32, 36, 38, | 41, 48, 48.

Min 4 | Q_1 17.5 | Q_2 31 | Q_3 39.5 | Max 48

Find the 5-number summary and calculate the IQR.
The IQR = Q_3 - Q_1.

5 15, 28, 34, 41, 56, | 62, 73, 77, 81, 85.

Min 15 | Q_1 34 | Q_2 59 | Q_3 77 | Max 85

IQR = Q_3 77 (Not Max) - Q_1 34 (Not Min) = 43

6 63, 66, | 75, 81, 88, 90, 93, | 97, 100.

Min = 63, Q_1 = 70.5, Q_2 = 88, Q_3 = 95, Max = 100.

IQR = 95 - 70.5 = 14.5

7 0, 0, 3, 3, | 4, 5, 5, 5, 6, 6, 7, 7, 8, | 8, 8, 10, 10.

Min = 0, Q_1 = 3.5, Q_2 = 6, Q_3 = 8, Max = 10.

IQR = 8 - 3.5 = 4.5

8 23, 28, 34, | 39, 43, 47, | 49, 54, 60, | 67, 74, 81.

Min = 23, Q_1 = 36.5, Q_2 = 48, Q_3 = 63.5, Max = 81.

IQR = 63.5 - 36.5 = 27

This time organise the data in ascending order, lowest to highest. Then find a 5-number summary and the IQR.

9 ~~35, 11, 26, 45, 22, 36, 53, 38, 40, 19.~~

11, 19, 22, 26, 35, | 36, 38, 40, 45, 53.

There are 10 scores, make sure you have written 10 scores

Min 11 | Q_1 22 | Q_2 35.5 | Q_3 40 | Max 53

IQR = 40 (Not Max) - 22 (Not Min) = 18

10 ~~108, 117, 94, 103, 125, 107, 129, 105, 100.~~

94, 100, | 103, 105, 107, 108, 117, | 125, 129.

Min 94 | Q_1 101.5 | Q_2 107 | Q_3 121 | Max 129

IQR = 121 - 101.5 = 19.5

11 ~~40, 27, 17, 33, 5, 21, 40, 38.~~

5, 17, | 21, 27, | 33, 38, | 40, 40.

Min = 5, Q_1 = 19, Q_2 = 30, Q_3 = 39, Max = 40.

IQR = 39 - 19 = 20

12 ~~17, 11, 8, 15, 3, 14, 10, 12, 7, 19, 15, 16.~~

3, 7, 8, | 10, 11, 12, | 14, 15, 15, | 16, 17, 19.

Min = 3, Q_1 = 9, Q_2 = 13, Q_3 = 15.5, Max = 19.

IQR = 15.5 - 9 = 6.5

13 ~~7, 8, 2, 5, 1, 6, 2, 6, 3, 9, 2, 4, 5, 0.~~

0, 1, 2, 2, 2, 3, 4, | 5, 5, 6, 6, 7, 8, 9.

Min = 0, Q_1 = 2, Q_2 = 4.5, Q_3 = 6, Max = 9.

IQR = 6 - 2 = 4

14 ~~856, 955, 778, 915, 713, 798, 808, 930.~~

713, 778, | 798, 808, | 856, 915, | 930, 955.

Min = 713, Q_1 = 788, Q_2 = 832, Q_3 = 922.5

Max = 955. IQR = 922.5 - 788 = 134.5

Data Analysis - 5-No. Summary/IQR - Stem & Leaf / Dot Plots (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find a 5-number summary and the IQR for these.

1

Data Analysis - 5-Number Summary/IQR - Frequency Tables

To find a 5-number summary for frequency tables, convert the table to a data set by writing the data out beside the table. Then use the same skills as a data set.

Example - Find the 5-number summary and IQR for the frequency table below.

x	f
0	3
5	4
10	2
15	6
20	4
$\Sigma f =$	

x	f	
0	3	0, 0, 0
5	4	5, 5, 5, 5
10	2	10, 10
15	6	15, 15, 15, 15, 15, 15
20	4	20, 20, 20, 20
$\Sigma f =$	19	

STEP 1

Find Σf and write out the data beside the table

x	f	
0	3	0, 0, 0
5	4	5, 5, 5, 5
10	2	10, 10
15	6	15, 15, 15, 15, 15, 15
20	4	20, 20, 20, 20
$\Sigma f =$	19	

STEP 2

Use Σf to locate the median.

$$\text{Median} = \frac{19+1}{2} = 10^{\text{th}} \text{ score}$$

x	f	
0	3	0, 0, 0
5	4	5, 5, 5, 5
10	2	10, 10
15	6	15, 15, 15, 15, 15, 15
20	4	20, 20, 20, 20
$\Sigma f =$	19	

STEP 3

Locate the position of Q_1 and Q_3. Note that both are identical in their position above and below the median.

9 scores

$$Q_1 \text{ Location} = \frac{9+1}{2} = 5^{\text{th}} \text{ score}$$

Min = 0

Q_1 = 5

Q_2 = 15

Q_3 = 15

Max = 20

IQR = 20 - 0 = 20

STEP 4

Write down the values for Q_1, Q_2 and Q_3, record the upper and lower extreme values and calculate the IQR.

Data Analysis - 5-Number Summary/IQR - Frequency Tables

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

With Frequency Tables find Σf, write the scores out beside the frequency column and locate Q_2, the median. Then locate Q_1 and Q_3.

1

Score	*f*	
5	2	5, 5
6	4	6, 6, | 6, 6
7	3	7, 7, ⑦
8	5	8, 8, 8, 8, | 8
9	2	9, 9
10	1	10
$\Sigma f=$	17	

$Q_1 =$ $Q_2 =$ $Q_3 =$

$\Sigma f = 17 \rightarrow$ Median $= \frac{17+1}{2} = 9^{th}$

2

$Q_1 =$ $Q_2 =$ $Q_3 =$

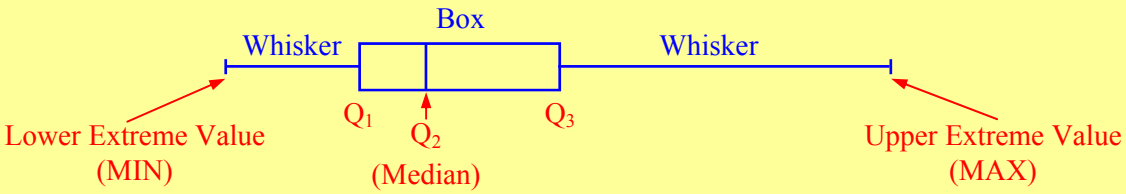
Q_3 11.5 Max 12

IQR = 11.5 - 9 = 2.5

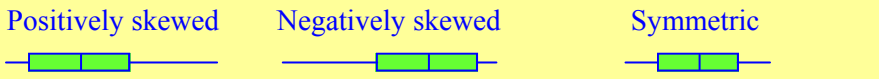
Data Analysis - Box and Whisker Plots

A Box and Whisker plot is a graphical representation of a 5-number summary. So if you know how to create a 5 number summary, box and whisker plots are just a drawing exercise.



Why do we need a box and whisker plot? They convert data into an easy to read, and an easy to compare graph. You can have box and whisker plots for 'before' and 'after' comparisons which allow you to quickly see what has changed, with quartile groups easily compared.

Box and Whisker plots are a graph, so when describing a graph, remember these three:



It is possible to have no Q_2 line in a box. It is also possible for plots to have one whisker and also no whiskers, but these are not featured on these sheets.

Example - Create a Box and Whisker plot for this data set.

Data: 9, 14, 16, 19, 20, 22, 23, 25, 26, 28.

STEP 1

Data: 9, 14, 16, 19, 20, 22, 23, 25, 26, 28.

Locate the Median (Q_2).

STEP 2

Data: 9, 14, (16), 19, 20, 22, 23, (25), 26, 28.

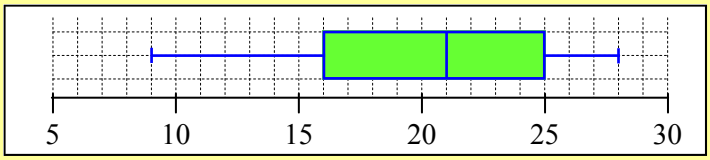
Locate Q_1 and Q_3.

STEP 3

Min	9	Q_1	16	Q_2	21	Q_3	25	Max	28

Create a 5-number summary

STEP 4



Create a Box and Whisker plot

This plot is negatively skewed.

Data Analysis - Box and Whisker Plots - Stem & Leaf/Dot Plots

Example - Create a box and whisker plot for the stem and leaf plot below.

Tens	Units
5	2 5 9
6	6 8
7	2 3 3
8	2 8

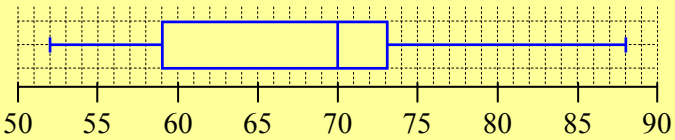
Tens	Units
5	2 5 9
6	6 8 |
7	2 3 3
8	2 8

Tens	Units
5	2 5 (9)
6	6 8 |
7	2 3 (3)
8	2 8

STEP 1 Locate the Median (Q_2).

STEP 2 Locate Q_1 and Q_3.

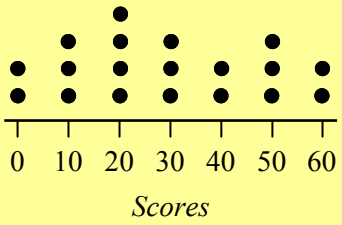
Tens	Units	
5	2 5 (9)	Min 52
6	6 8 |	Q_1 59
7	2 3 (3)	Q_2 70
8	2 8	Q_3 73
		Max 88

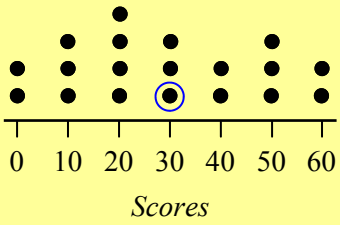


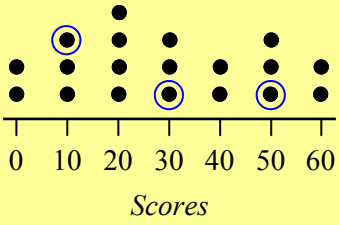
STEP 3 Write the 5 number summary

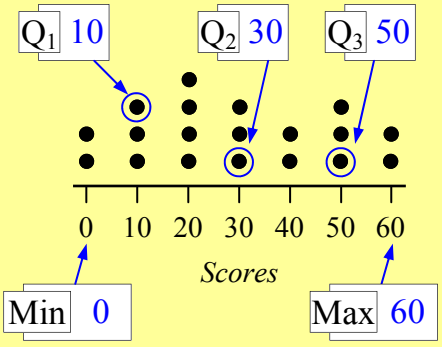
STEP 4 Create the box and whisker plot

Example - Create a box and whisker plot for the dot plot below.



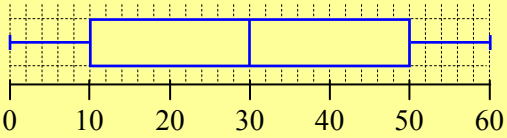






STEP 1 Locate the Median (Q_2).

STEP 2 Locate Q_1 and Q_3.



STEP 3 Write the 5 number summary

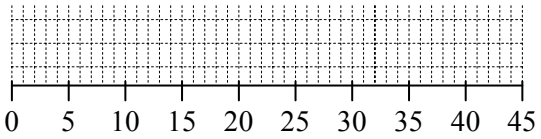
STEP 4 Create the box and whisker plot

Data Analysis - Box and Whisker Plots - Data Sets (Sheet 1)

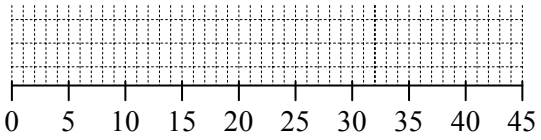
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Create box and whisker plots for these 5-number summaries. Then comment on the distribution.

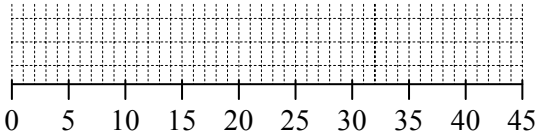
1 Min = 3, Q_1 = 26, Q_2 = 29, Q_3 = 34, Max = 41.



2 Min = 3, Q_1 = 15, Q_2 = 19, Q_3 = 23, Max = 35.

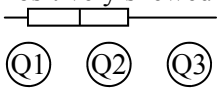


3 Min = 6, Q_1 = 12, Q_2 = 16, Q_3 = 19, Max = 42.

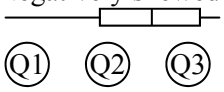


4 Pick which box and whisker plot is :

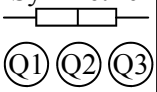
Positively skewed



Negatively skewed



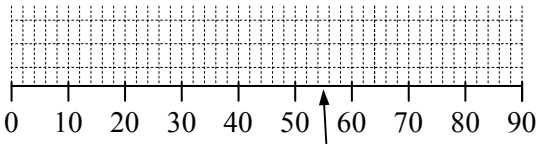
Symmetric



Now find the 5-number summaries for the data sets. Then plot them in a box and whisker plot.

5 4, 17, 25, 27, 38, 44, 55, 58, 76, 76, 84, 86, 88.

Min | Q_1 | Q_2 | Q_3 | Max



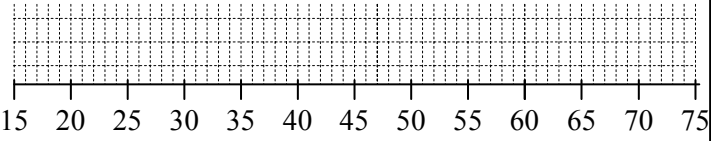
55 is between 54 and 56!

6 The above plot is: _____

Pos skew/neg skew/symmetric

7 16, 21, 35, 41, 47, 58, 62, 72.

Min | Q_1 | Q_2 | Q_3 | Max



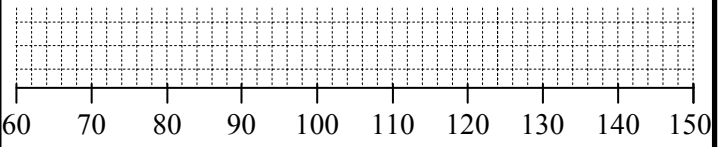
8 The above plot is: _____

Pos skew/neg skew/symmetric

Find the 5-number summaries, then plot them in a box and whisker plot. Finally, calculate the IQR.

9 62, 64, 68, 74, 86, 94, 107, 111, 126, 145.

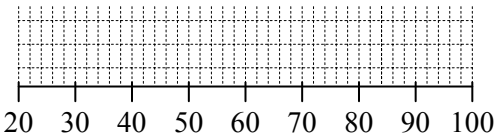
Min | Q_1 | Q_2 | Q_3 | Max



IQR = Q_3 (Not Max) - Q_1 (Not Min) = _____

10 24, 39, 49, 55, 63, 63, 67, 72, 78, 82, 86, 94.

Min | Q_1 | Q_2 | Q_3 | Max



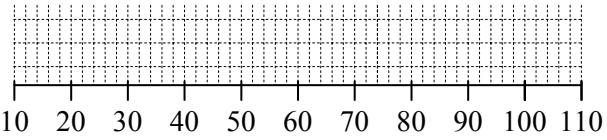
IQR = _____ - _____ = _____

Now rewrite the data in ascending order first.

11 72, 24, 66, 94, 11, 45, 52, 78, 60, 106, 18.

Count the scores to ensure you haven't missed any.

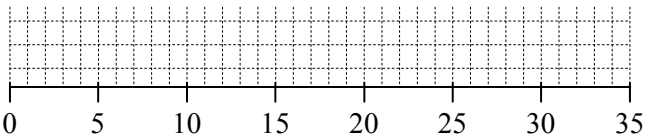
Min | Q_1 | Q_2 | Q_3 | Max



IQR = _____ - _____ = _____

12 14, 6, 21, 19, 2, 28, 11, 34, 30, 16, 25, 31, 7.

Min | Q_1 | Q_2 | Q_3 | Max



IQR = _____ - _____ = _____

Data Analysis - Box and Whisker Plots - Stem & Leaf Plots (Sheet 2)

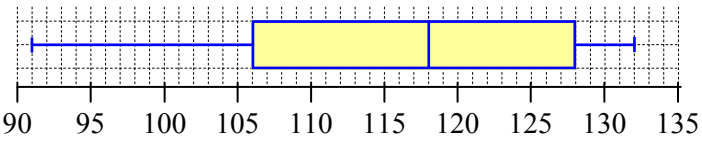
12	1 8 (8)
13	0 2 2

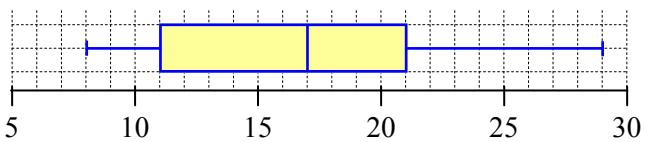
Min = 91
Q_1 = 106
Q_2 = 118
Q_3 = 128
Max = 132



3

Tens	Units
0	8 8
1	1 (1) 2 4 4 |
2	0 0 1 (1) 4 6 9

Min = 8
Q_1 = 11
Q_2 = 17
Q_3 = 21
Max = 29



4 Pick which box and whisker plot is :

Positively skewed — (Q1) (Q2) **(Q3)**

Negatively skewed — (Q1) **(Q2)** (Q3)

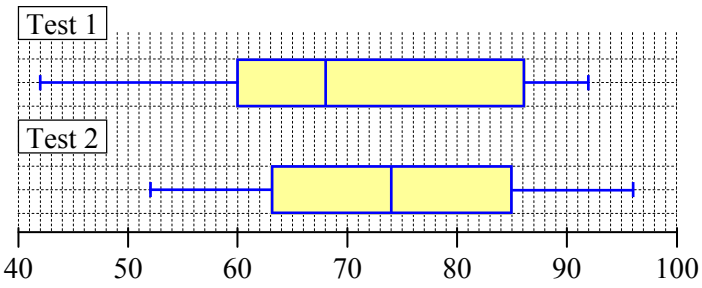
Symmetric — **(Q1)** (Q2) (Q3)

20 students sat Test 1, then the week after, Test 2. Construct B&W plots and calculate the IQR.

5

Test 1	Tens	Test 2
7 2	4	
6 3 0	5	2 3 8
6 6 5 4 4	6	3 3 | 3
8 2 2 0	7	1 1 2 2 | 6 8
9 7 6 | 6	8	3 4 4 | 6 8
2 2	9	5 6 6

	Test 1	Test 2
Min =	42	52
Q_1 =	60	63
Q_2 =	68	74
Q_3 =	86	85
Max =	92	96
IQR =	Q_3 86 - Q_1 60	85 - 63
IQR =	26	22



6 Comment on the distributions. Include the shape Eg. skew/symmetric and compare the IQR's and the consistency of the results.

Test 1 is negatively skewed, has a larger IQR and a larger range. Test 2 is symmetric has a lower IQR and range. Other points are: Test 2 has a higher median, lower and upper extremes.

Data Analysis - Box and Whisker Plots - Dot Plots (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Data Analysis - Box and Whisker Plots - Frequency Tables

To construct a Box and Whisker plot first find a 5-number summary for frequency tables. To achieve this, convert the table to a data set by writing the data out beside the table. Then use the same skills as if working with a data set.

Example - Construct a Box and Whisker plot for the frequency table below.

x	f
0	3
5	4
10	3
15	5
20	4
$\Sigma f =$	

x	f	
0	3	0, 0, 0
5	4	5, 5, 5, 5
10	3	10, 10, 10
15	5	15, 15, 15, 15, 15
20	4	20, 20, 20, 20
$\Sigma f =$	19	

STEP 1

Find Σf and write out the data beside the table

x	f	
0	3	0, 0, 0
5	4	5, 5, 5, 5
10	3	10, 10, 10
15	5	15, 15, 15, 15, 15
20	4	20, 20, 20, 20
$\Sigma f =$	19	

STEP 2

Use Σf to locate the median.

$$\text{Median} = \frac{19 + 1}{2} = 10^{\text{th}} \text{ score}$$

x	f	
0	3	0, 0, 0
5	4	5, 5, 5, 5
10	3	10, 10, 10
15	5	15, 15, 15, 15, 15
20	4	20, 20, 20, 20
$\Sigma f =$	19	

9 scores

STEP 3

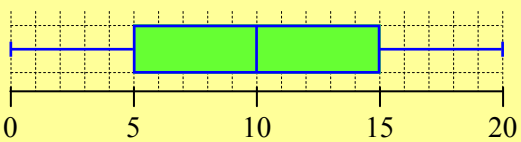
Locate the position of Q_1 and Q_3. Note that both are identical in their position above and below the median.

$$Q_1 \text{ Location} = \frac{9 + 1}{2} = 5^{\text{th}} \text{ score}$$

Min = 0 Q_1 = 5 Q_2 = 10 Q_2 = 15 Max = 20

STEP 4

Write down the values for Q_1, Q_2 and Q_3, record the upper and lower extreme values.



STEP 5

Create the Box and Whisker plot. Note the distribution shape.

○ Positive Skew ○ Negative Skew ● Symmetric

Data Analysis - Box and Whisker Plots - Frequency Tables

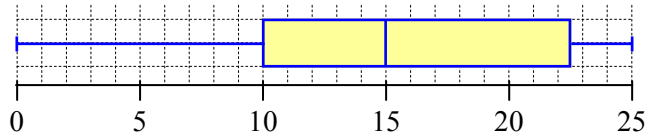
10	2	10, 10
15	5	15, 15, 15, 15, 15
20	3	20, 20, 20
25	4	25, 25, 25, 25
Σf=	17	

Min = 0
Q_1 = 10
Q_2 = 15
Q_3 = 22.5
Max = 25



4 From the 1st column pick which box & whisker plot is:

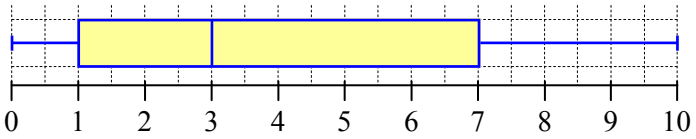
Positively skewed: Q1 Q2 Q3
Negatively skewed: Q1 Q2 Q3
Symmetric: Q1 Q2 Q3

5 Now find the IQR for the data as well.

x	*f*	
0	3	0, 0, 0
1	6	1, 1, 1, 1, 1, 1
2	2	2, 2
3	5	3, 3, 3, 3, 3
4	3	4, 4, 4
5	0	
6	2	6, 6
7	0	
8	1	8
9	3	9, 9, 9
10	3	10, 10, 10
Σf=	28	

Min = 0
Q_1 = 1
Q_2 = 3
Q_3 = 7
Max = 10

IQR = 7 - 1 = 6
Q_3 not Max Q_1 not Min



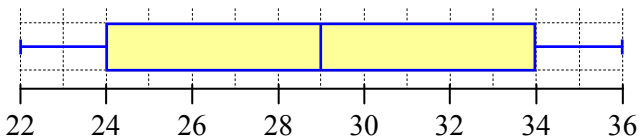
● Positive Skew ○ Negative Skew ○ Symmetric

6

Min = 22
Q_1 = 24
Q_2 = 29
Q_3 = 34
Max = 36

x	*f*	
22	4	22, 22, 22, 22
24	2	24, 24
26	3	26, 26, 26
28	2	28, 28
30	1	30
32	3	32, 32, 32
34	4	34, 34, 34, 34
36	3	36, 36, 36
Σf=	22	

IQR = 34 - 24 = 10



○ Positive Skew ○ Negative Skew ● Symmetric

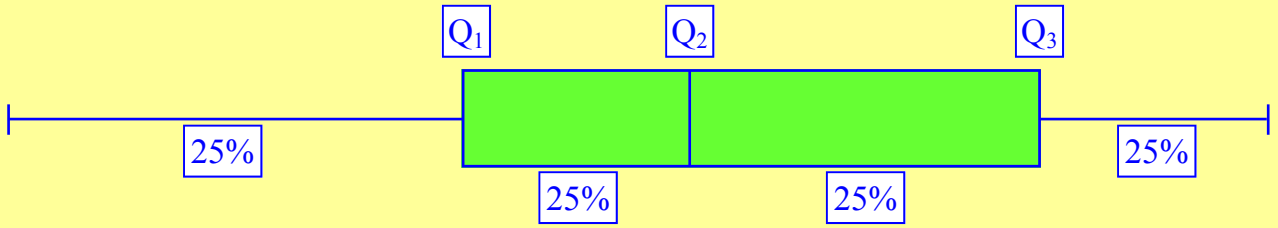
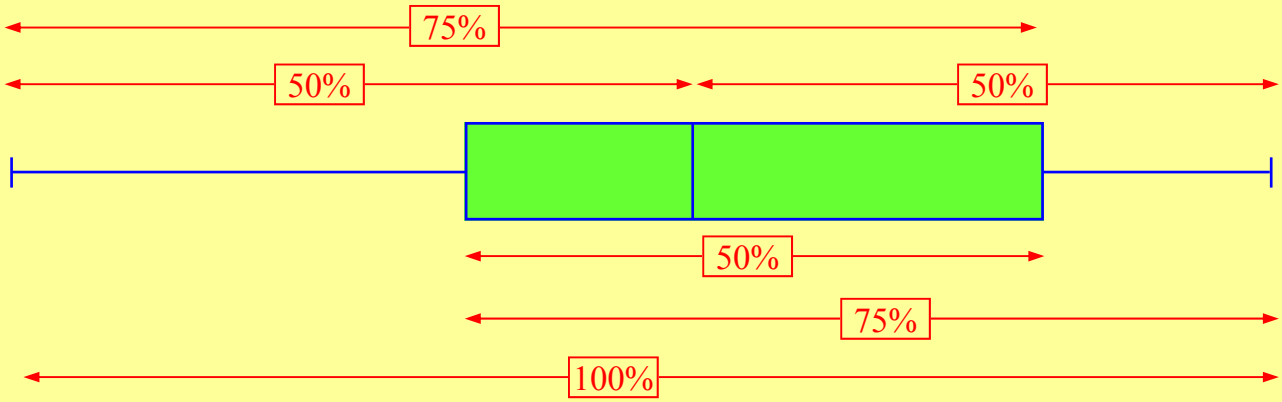
Data Analysis - Box and Whisker Applications

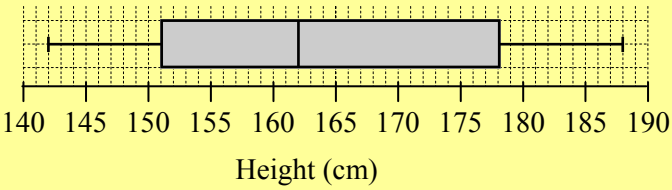
A box and whisker plot breaks data up into quarters, defined by the location of the quartiles.



So if 25% of scores lie between each quartile, you can find different percentages when you combine sections, here are some examples.



Example: The box and whisker plot is based on height measurements of 80 year 12 students.



Calculate the percentage of student with a height between:

a) 151 cm - 188 cm Answer 75%

Because 151 cm to 188 cm is three quarter, that means $3 \times 25\% = 75\%$

b) 162 cm - 178 cm Answer 25%

Because 162 cm to 178 cm is one quarter, that means = 25%

c) How many students have a height between 178 cm and 188 cm? Answer 20 students

Because 178 - 188 cm is one quarer, which is 25%. As there are 80 students:

$$\frac{25}{100} \times 80 = 20 \text{ students}$$

Data Analysis - Box and Whisker Applications

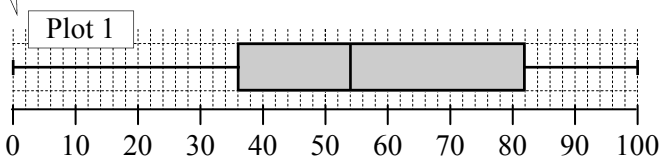
The box and whisker plot below displays results for a regional exam. Examine it & answer the questions.



1 The 1st 25% is between: 0 and ____

2 The 2nd 25% is between: ____ & ____

3 The 3rd 25% is between: ____ & ____

4 The 4th 25% is between: ____ & ____

5 The middle 50% is between: ____ & ____

6 The lower 50% is between: ____ & ____

7 The upper 50% is between: ____ & ____

What percentage of scores lie between:

8 54 and 82? ____ %

9 36 and 100? ____ % sign

10 0 and 54? ____

11 36 and 82? ____

If 86 000 people attempted the test, how many candidates achieved a mark between....

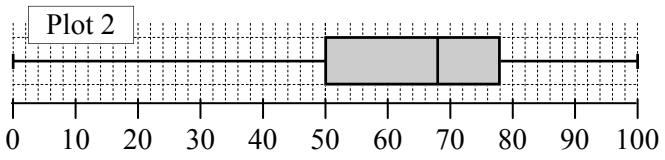
12 0 and 36? $\frac{25}{100} \times 86\,000 =$ ____ people

13 36 and 82? _____

14 0 and 82? _____

15 54 and 82? _____

The same test had the results below from another region.



What percentage of scores in Plot 2, lie between:

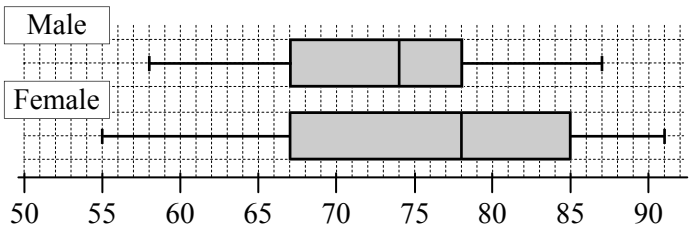
16 50 and 78? ____ %

17 68 and 100? ____

18 0 and 50? ____

19 50 and 100? ____

The ages of people living in a retirement complex is displayed in a double box and whisker plot below. The data has been sorted according to sex.



What percentage of male retirees are aged between:

20 58 and 67? ____ %

21 74 and 87? ____ % sign

What percentage of female retirees are aged between:

22 55 and 85? ____

23 67 and 78? ____

If there are 432 males and 584 females in the complex, calculate the number of ....

24 Females aged between 67 and 85?

$\frac{\square}{100} \times \square = \square$ females

25 Males aged between 67 and 87?

_____

26 Males aged between 67 and 78?

_____

27 Females aged between 67 and 78?

_____

28 Retirees aged between 67 and 78? Use Q26 & Q27

_____

Calculate how many males are older than 78. Then calculate the number of females over 78. How many more females are there than males?

29 _____

_____

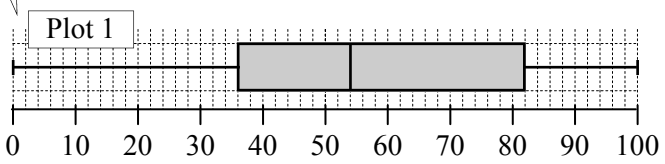
_____

_____

Data Analysis - Box and Whisker Applications

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The box and whisker plot below displays results for a regional exam. Examine it & answer the questions.



1 The 1st 25% is between: 0 and **36**

2 The 2nd 25% is between: **36** & **54**

3 The 3rd 25% is between: **54** & **82**

4 The 4th 25% is between: **82** & **100**

5 The middle 50% is between: **36** & **82**

6 The lower 50% is between: **0** & **54**

7 The upper 50% is between: **54** & **100**

What percentage of scores lie between:

8 54 and 82? **25** %

9 36 and 100? **75%** % sign

10 0 and 54? **50%**

11 36 and 82? **50%**

If 86 000 people attempted the test, how many candidates achieved a mark between....

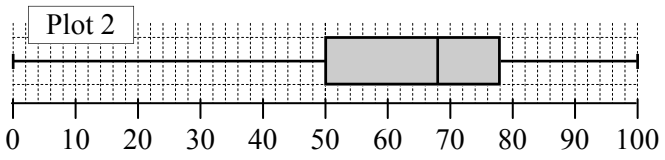
12 0 and 36? $\frac{25}{100} \times 86\,000 =$ **21 500** people

13 36 and 82? $\frac{50}{100} \times 86\,000 = 43\,000$ people

14 0 and 82? $\frac{75}{100} \times 86\,000 = 64\,500$ people

15 54 and 82? $\frac{25}{100} \times 86\,000 = 21\,500$ people

The same test had the results below from another region.



What percentage of scores in Plot 2, lie between:

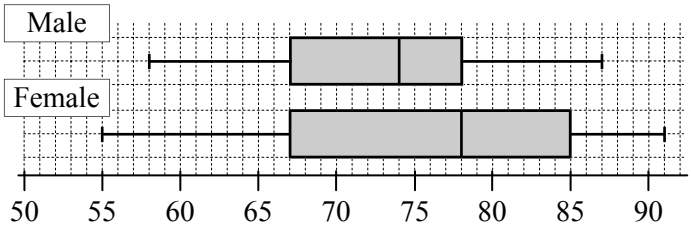
16 50 and 78? **50** %

17 68 and 100? **50%**

18 0 and 50? **25%**

19 50 and 100? **75%**

The ages of people living in a retirement complex is displayed in a double box and whisker plot below. The data has been sorted according to sex.



What percentage of male retirees are aged between:

20 58 and 67? **25** %

21 74 and 87? **50%** % sign

What percentage of female retirees are aged between:

22 55 and 85? **75%**

23 67 and 78? **25%**

If there are 432 males and 584 females in the complex, calculate the number of ....

24 Females aged between 67 and 85?

$\frac{50}{100} \times 584 =$ **292** females

25 Males aged between 67 and 87?

$\frac{75}{100} \times 432 = 324$ males

26 Males aged between 67 and 78?

$\frac{50}{100} \times 432 = 216$ males

27 Females aged between 67 and 78?

$\frac{25}{100} \times 584 = 146$ females

28 Retirees aged between 67 and 78? Use Q26 & Q27

$= 216 + 146 = 362$ retirees

Calculate how many males are older than 78. Then calculate the number of females over 78. How many more females are there than males?

29 $\frac{25}{100} \times 432 = 108$ males

$\frac{50}{100} \times 584 = 292$ females

Difference = 292 - 108 = 184

9	6 7
10	2 6 | 8
11	0 1 2 (2)
12	4 6
13	7 7 | 9
14	1 2 2

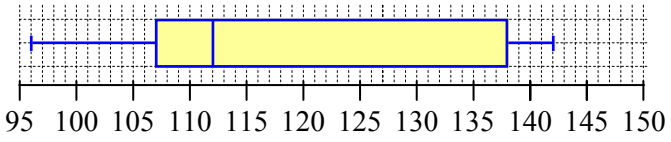
Min = 96

Q_1 = 107

Q_2 = 112

Q_3 = 138

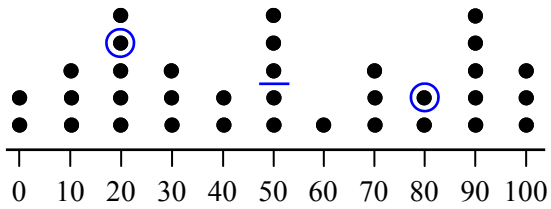
Max = 142.



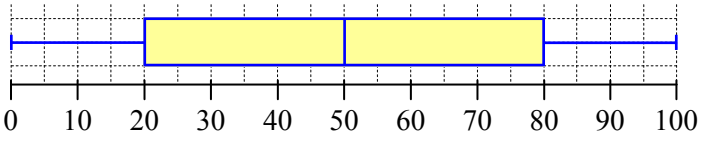
○ Positively skewed ● Negatively skewed ○ Symmetric

Find the 5-number summary, display the results in a box and whisker plot. Then find the IQR.

14



Min = 0, Q_1 = 20, Q_2 = 50, Q_3 = 80, Max = 100.



IQR = 80 - 20 = 60

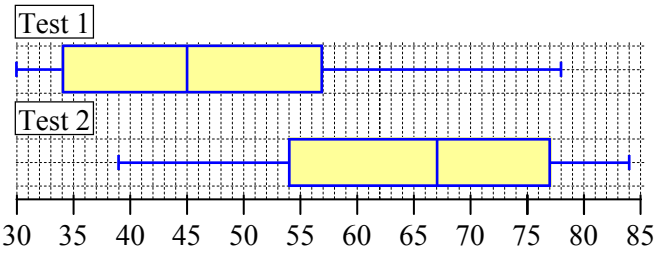
Find the 5-number summaries and display the results in parallel box and whisker plots. Then find the IQR.

16

Test 1	Tens	Test 2
(4) 1 1 0	3	9
8 (5) 5 5 2	4	4 4 9
(7) 3 1	5	2 | 6 7
9 8	6	0 0 6 (7) 7 8
8	7	2 3 5 | 9 9
	8	1 2 4

T_1: Min = 30, Q_1 = 34, Q_2 = 45, Q_3 = 57, Max = 78.

T_2: Min = 39, Q_1 = 54, Q_2 = 67, Q_3 = 77, Max = 84.



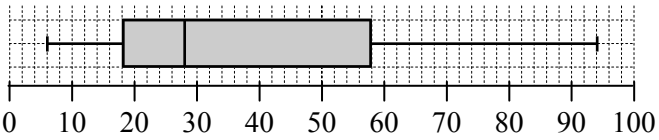
Test 1 IQR: = 57 - 34 = 23

Test 2 IQR: = 77 - 54 = 23

Compare the two box and whisker plots. Include comments about the distribution shape, median and IQR.

17 Test 1 is positively skewed, while Test 2 is negatively skewed. Both IQRs are 23, so the middle 50% was moved up in Test 2. The median in Test 2 is 67 compared with a median of 45 in Test 1. Test 2 has both higher lower Extreme and higher upper extreme values.

Use the box and whisker plot below to answer these.



What percentage of scores in the plot above, lie between:

18 28 and 94? 50%

19 6 and 58? 75%

Data Analysis - Quartiles - Data Sets (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the median, Q_2, in these data sets.

Examples

14, 20, (28), 36, 50. $Q_2 =$ 28

Calc: 2 4 + 3 3 = ÷ 2 =

15, 18, 24, | 33, 38, 38. $Q_2 =$ 28.5

1 8, 13, 18, 23, 37. $Q_2 =$

2 1, 3, 4, 4, 6, 7, 8, 8. $Q_2 =$

3 29, 36, 44, 70. $Q_2 =$

4 44, 44, 52, 77, 93, 98. $Q_2 =$

Now you are given the median, Q_2, find Q_1 and Q_3 in these data sets.

Example

Q_1 location $= \frac{2+1}{2} = 1.5$th

1.5th means between 1st and 2nd

14, 20, (28), 36, 50.

2 scores 2 scores

14, | 20, (28), 36, | 50. $Q_1 =$ 17 $Q_3 =$ 43

5 8, 13, 18, | 23, 37, 42. Q_1 Q_3

6 11, 16, (27), 33, 33. Q_1 Q_3

7 36, 39, 47, 54, 63, 70, | 70, 74, 79, 83, 88, 89. Q_1 Q_3

8 5, 6, 8, 10, 13, 17, (18), 18, 19, 23, 23, 41, 55. Q_1 Q_3

Keep going with the same process, but this time record Q_1, Q_2 and Q_3. Q_2 is marked for you.

9 2, 2, 3, 4, 5, 5, 6, 6, | 7, 7, 7, 8, 8, 10, 10, 10. $Q_1 =$ $Q_2 =$ $Q_3 =$

10 Data: 24, 31, 34, 40, 40, 46, 49, 50, 51, 53, 55, 56, 58, 62, (64), 65, 68, 71, 77, 78, 82, 84, 87, 89, 92, 95, 95, 95, 97.

$Q_1 =$ $Q_2 =$ $Q_3 =$

Now do it all yourself. Find Q_2 first, then Q_1 and Q_3.

11 76, 83, 94, 104, 155, 176, 183. $Q_1 =$ $Q_2 =$ $Q_3 =$

12 1, 1, 1, 3, 3, 4, 5, 5, 7, 7, 7, 8, 8, 8, 9, 9, 10. $Q_1 =$ $Q_2 =$ $Q_3 =$

13 Data: 15, 17, 17, 21, 24, 26, 33, 36, 38, 48, 52, 63, 65, 68, 74, 75, 81, 85, 93, 94. $Q_1 =$ $Q_2 =$ $Q_3 =$

14 28, 36, 42, 55, 62, 68, 77, 78, 78, 85, 92. $Q_1 =$ $Q_2 =$ $Q_3 =$

Just the same, except this time the data has to be put into ascending order first. So rewrite the data on the line below, lowest to highest. Then find Q_2, Q_1 & Q_3.

15 17, 11, 9, 16, 22, 8, 13, 26, 16, 30, 15.

8,

There are 11 scores, make sure you have written 11 scores

$Q_1 =$ $Q_2 =$ $Q_3 =$

16 4, 9, 2, 4, 6, 11, 15, 8, 7, 6, 10, 3, 16.

$Q_1 =$ $Q_2 =$ $Q_3 =$

17 470, 233, 114, 330, 276, 195, 308, 222, 411.

$Q_1 =$ $Q_2 =$ $Q_3 =$

18 3, 2, 5, 7, 8, 2, 6, 10, 2, 8, 11, 0, 16, 14.

$Q_1 =$ $Q_2 =$ $Q_3 =$

Data Analysis - Quartiles - Stem & Leaf / Dot Plots (Sheet 2)

Data Analysis - 5-Number Summary/IQR - Data Sets (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the 5-number summary for these data sets.

Example 12, 16, 19, 20, 28, 36, 44, 49, 50.

12, 16, 19, 20, 28, 36, 44, 49, 50.

Min 12 | Q_1 17.5 | Q_2 28 | Q_3 46.5 | Max 50

1 28, 34, 41, 55, 64, 64, 72, 77, 79, 85, 93.

Min | Q_1 | Q_2 | Q_3 | Max

2 3, 5, 7, 13, 18, 23, 27, 29, 36, 44, 52, 60, 67.

Min | Q_1 | Q_2 | Q_3 | Max

3 82, 106, 120, 127, 145, 145, 163, 178, 191.

Min | Q_1 | Q_2 | Q_3 | Max

4 4, 7, 13, 22, 26, 30, 32, 36, 38, 41, 48, 48.

Min | Q_1 | Q_2 | Q_3 | Max

Find the 5-number summary and calculate the IQR.
The IQR = Q_3 - Q_1.

5 15, 28, 34, 41, 56, 62, 73, 77, 81, 85.

Min | Q_1 | Q_2 | Q_3 | Max

IQR = Q_3 (Not Max) - Q_1 (Not Min) =

6 63, 66, 75, 81, 88, 90, 93, 97, 100.

7 0, 0, 3, 3, 4, 5, 5, 5, 6, 6, 7, 7, 8, 8, 8, 10, 10.

8 23, 28, 34, 39, 43, 47, 49, 54, 60, 67, 74, 81.

This time organise the data in ascending order, lowest to highest. Then find a 5-number summary and the IQR.

9 35, 11, 26, 45, 22, 36, 53, 38, 40, 19.

11,

There are 10 scores, make sure you have written 10 scores

Min | Q_1 | Q_2 | Q_3 | Max

IQR = (Not Max) - (Not Min) =

10 108, 117, 94, 103, 125, 107, 129, 105, 100.

Min | Q_1 | Q_2 | Q_3 | Max

IQR = - =

11 40, 27, 17, 33, 5, 21, 40, 38.

12 17, 11, 8, 15, 3, 14, 10, 12, 7, 19, 15, 16.

13 7, 8, 2, 5, 1, 6, 2, 6, 3, 9, 2, 4, 5, 0.

14 856, 955, 778, 915, 713, 798, 808, 930.

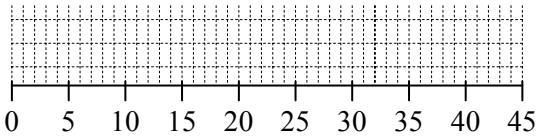
Data Analysis - Box and Whisker Plots - Data Sets (Sheet 1)

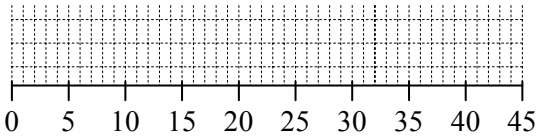
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Create box and whisker plots for these 5-number summaries. Then comment on the distribution.

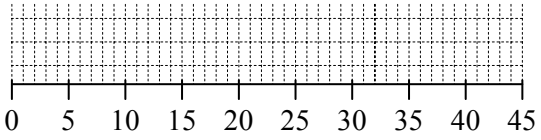
1 Min = 3, Q_1 = 26, Q_2 = 29, Q_3 = 34, Max = 41.



2 Min = 3, Q_1 = 15, Q_2 = 19, Q_3 = 23, Max = 35.

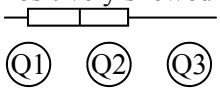


3 Min = 6, Q_1 = 12, Q_2 = 16, Q_3 = 19, Max = 42.

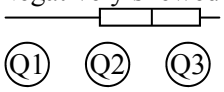


4 Pick which box and whisker plot is :

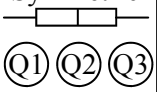
Positively skewed



Negatively skewed



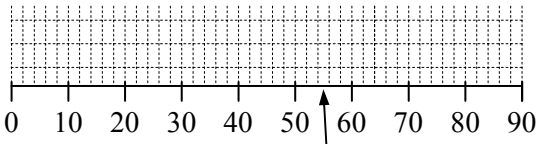
Symmetric



Now find the 5-number summaries for the data sets. Then plot them in a box and whisker plot.

5 4, 17, 25, 27, 38, 44, 55, 58, 76, 76, 84, 86, 88.

Min | Q_1 | Q_2 | Q_3 | Max



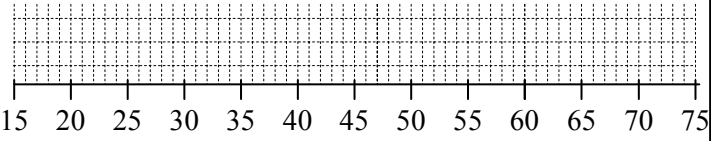
55 is between 54 and 56!

6 The above plot is: _____

Pos skew/neg skew/symmetric

7 16, 21, 35, 41, 47, 58, 62, 72.

Min | Q_1 | Q_2 | Q_3 | Max



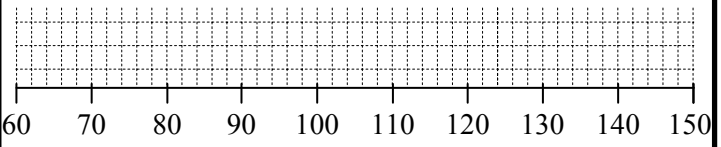
8 The above plot is: _____

Pos skew/neg skew/symmetric

Find the 5-number summaries, then plot them in a box and whisker plot. Finally, calculate the IQR.

9 62, 64, 68, 74, 86, 94, 107, 111, 126, 145.

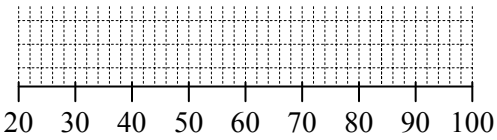
Min | Q_1 | Q_2 | Q_3 | Max



IQR = Q_3 (Not Max) - Q_1 (Not Min) = _____

10 24, 39, 49, 55, 63, 63, 67, 72, 78, 82, 86, 94.

Min | Q_1 | Q_2 | Q_3 | Max



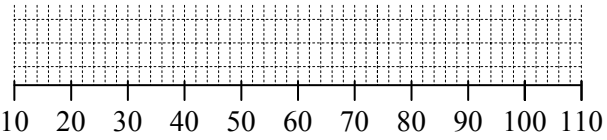
IQR = _____ - _____ = _____

Now rewrite the data in ascending order first.

11 72, 24, 66, 94, 11, 45, 52, 78, 60, 106, 18.

Count the scores to ensure you haven't missed any.

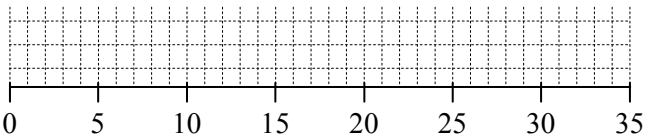
Min | Q_1 | Q_2 | Q_3 | Max



IQR = _____ - _____ = _____

12 14, 6, 21, 19, 2, 28, 11, 34, 30, 16, 25, 31, 7.

Min | Q_1 | Q_2 | Q_3 | Max



IQR = _____ - _____ = _____

Data Analysis - Box and Whisker Plots - Stem & Leaf Plots (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Create box and whisker plots for these stem and leaf plots. Then comment on the distribution.

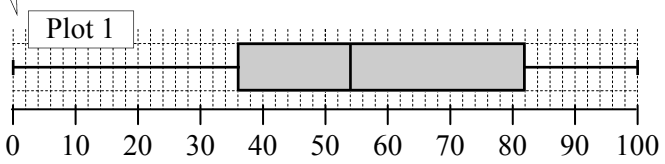
Data Analysis - Box and Whisker Applications

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The box and whisker plot below displays results for a regional exam. Examine it & answer the questions.



1 The 1st 25% is between: 0 and ____

2 The 2nd 25% is between: ____ & ____

3 The 3rd 25% is between: ____ & ____

4 The 4th 25% is between: ____ & ____

5 The middle 50% is between: ____ & ____

6 The lower 50% is between: ____ & ____

7 The upper 50% is between: ____ & ____

What percentage of scores lie between:

8 54 and 82? ____ %

9 36 and 100? ____ % sign

10 0 and 54? ____

11 36 and 82? ____

If 86 000 people attempted the test, how many candidates achieved a mark between....

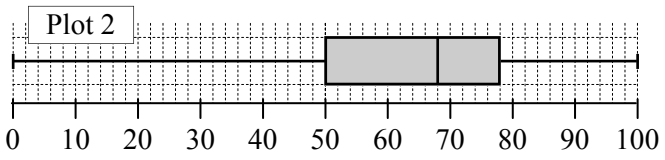
12 0 and 36? $\frac{25}{100} \times 86\,000 =$ ____ people

13 36 and 82? _____

14 0 and 82? _____

15 54 and 82? _____

The same test had the results below from another region.



What percentage of scores in Plot 2, lie between:

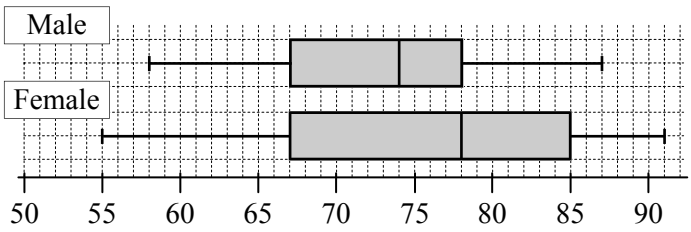
16 50 and 78? ____ %

17 68 and 100? ____

18 0 and 50? ____

19 50 and 100? ____

The ages of people living in a retirement complex is displayed in a double box and whisker plot below. The data has been sorted according to sex.



What percentage of male retirees are aged between:

20 58 and 67? ____ %

21 74 and 87? ____ % sign

What percentage of female retirees are aged between:

22 55 and 85? ____

23 67 and 78? ____

If there are 432 males and 584 females in the complex, calculate the number of ....

24 Females aged between 67 and 85?

$\frac{\square}{100} \times \square = \square$ females

25 Males aged between 67 and 87?

_____

26 Males aged between 67 and 78?

_____

27 Females aged between 67 and 78?

_____

28 Retirees aged between 67 and 78? Use Q26 & Q27

_____

Calculate how many males are older than 78. Then calculate the number of females over 78. How many more females are there than males?

29 _____

_____

_____

_____

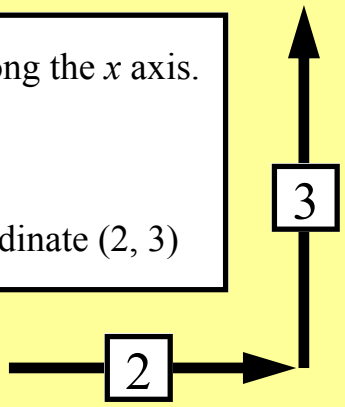
Cartesian Plane - Plotting Points - Positive Quadrant

This sheet involves the plotting of Cartesian co-ordinates. When plotting points on a number plane you are given 2 numbers, referred to as an ordered pair. The first number tells you how much you move across and the second number tells you how much you move up or down. This sheet only moves across to the right and up, negative numbers (not on this sheet) move to the left and down.

Move across first along the *x* axis.

Then move up.

Eg. To plot the co-ordinate (2, 3)



Note that the plane consists of an *x*-axis (horizontal or across) and a *y*-axis which is vertical (up and down). The plural of axis is axes (pronounced ak-seas). The co-ordinate (0, 0) is commonly referred to as the 'origin', the place where measurement starts from. Teachers often ask for the co-ordinates of the origin.

The first column asks you to locate the points and write in their co-ordinates. This is done by opening a bracket writing the *x* co-ordinate, writing a comma, then the *y* co-ordinate and close bracket. You should always place the co-ordinates in brackets.

The second column asks you to plot points. Once the group of points are plotted draw a line between points (in alphabetical order) to form a shape. Then write in the name of the shape plotted in the space provided.

The second sheet uses your skills in plotting points from the previous sheet. The series of points makes a pair of animals when lines are joined between the points. The way you attempt this exercise is, for the first animal:

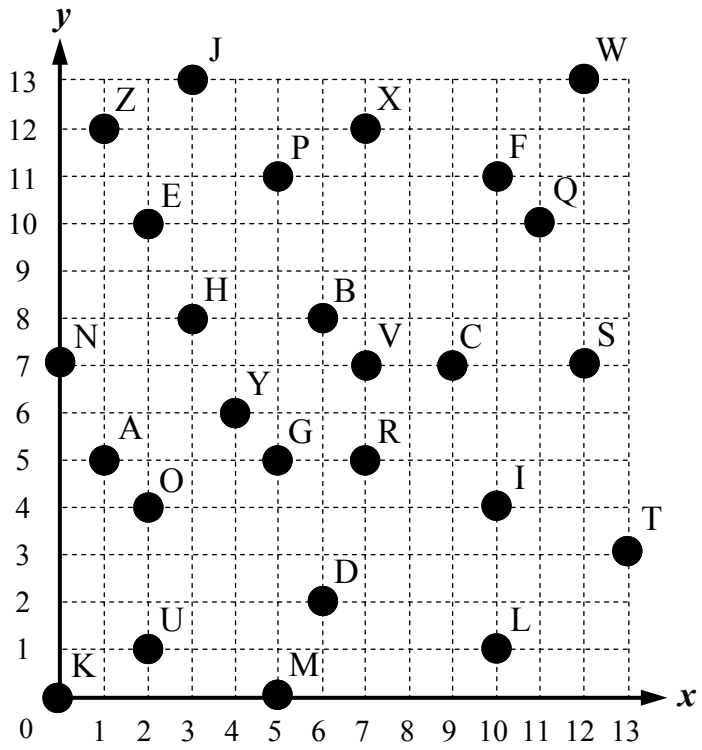
- Plot one point at a time and then draw a line between it and the previous point. Don't try to plot all the points and then draw the lines afterwards as the drawing is too complicated.
- When you reach stop, restart at the new position and start again, DON'T JOIN THE POINTS BETWEEN WHERE YOU STOPPED AND WHERE YOU RESTARTED.

For the next animal follow the same process except use 2 different colours.

Cartesian Plane - Plotting Points - Positive Quadrant (Sheet 1)

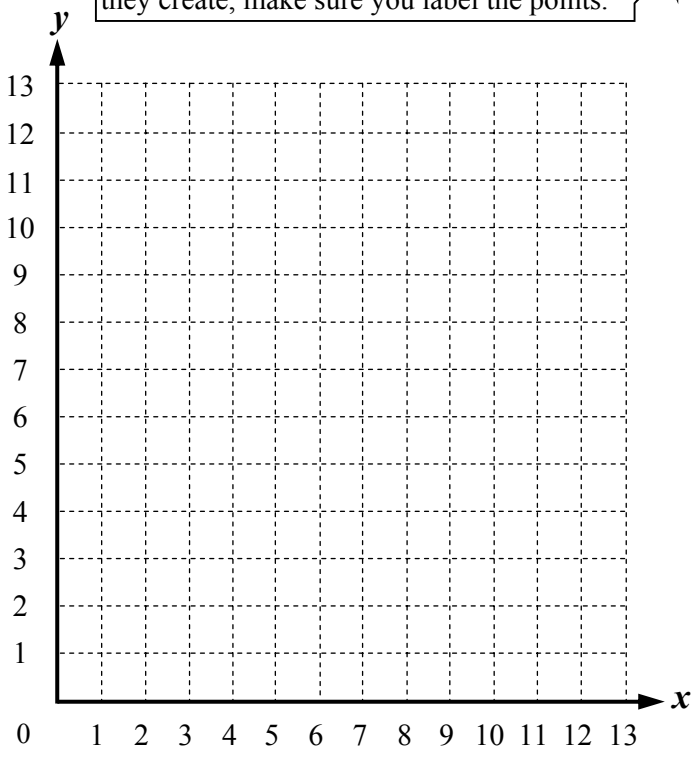
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Give the co-ordinates for the following points, place them in brackets separated by a comma



1	Point A (,)	14	Point N
2	Point B (,)	15	Point O
3	Point C	16	Point P
4	Point D	17	Point Q
5	Point E	18	Point R
6	Point F	19	Point S
7	Point G	20	Point T
8	Point H	21	Point U
9	Point I	22	Point V
10	Point J	23	Point W
11	Point K	24	Point X
12	Point L	25	Point Y
13	Point M	26	Point Z

Place the groups of points given below on the grid, join the points and name the shape they create, make sure you label the points.



27 Point A (10, 4) Point B (11, 2)
Point C (12, 4) Point D (11, 5)
Shape formed: _____

28 Point E (3, 5) Point F (0, 8)
Point G (5, 13) Point H (8, 10)
Shape formed: _____

29 Point J (5, 4) Point K (9, 6)
Point L (7, 8)
Shape formed: _____
Two word description

30 Point M (2, 3) Point N (8, 3)
Point O (6, 0) Point P (0, 0)
Shape formed: _____

31 Point R (10, 9) Point S (13, 13)
Point T (13, 9)

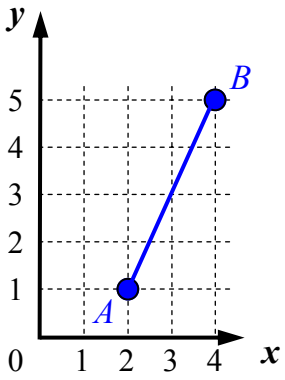
Cartesian Plane - Midpoint - Positive Quadrant

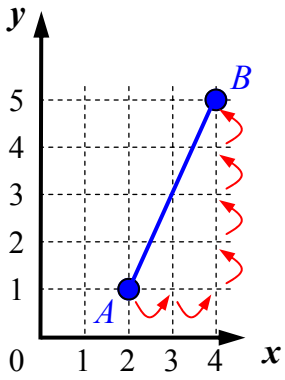
If you draw a line, halfway along that line is the midpoint. There are two common ways of finding the location of the midpoint. You can measure it's location on a number plane 'Graphically', or you can calculate its location 'Analytically'.

Graphical Solution

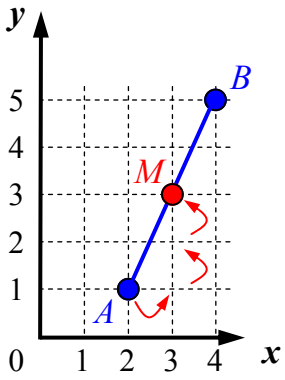
Example: Find the midpoint M on the interval joining A (2, 1) and B (4, 5)



Plot A and B and draw the interval AB



Count the 'hops' and halve them. Horizontal is 2 hops, so midpoint is 1 hop past the 2. So it is 3. Vertical is 4 hops, so midpoint is 2 hops above the 1. So it is 3 also.



Plot the midpoint and label it M.
There is a space in the question to record its coordinates, for the M above, it is (3, 3).

Analytical Method

It may be that the points aren't graphed, or the values are that large that graphing them isn't feasible. Or you just prefer using numbers, either way you can find the midpoint using this formula:

$$M(\bar{x}, \bar{y}) = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$$

Where one point is (x_1, y_1), and the other point is (x_2, y_2).

What does this mean? It means that you add the x-values and divide them by 2, for the x-coordinate of the midpoint. Then repeat for the y-values, for the y-coordinate of the midpoint. There is an example at the bottom of Column 1 on Sheet 2.

Cartesian Plane - Midpoint (Graphical) - Positive Quadrant (Sheet 1)

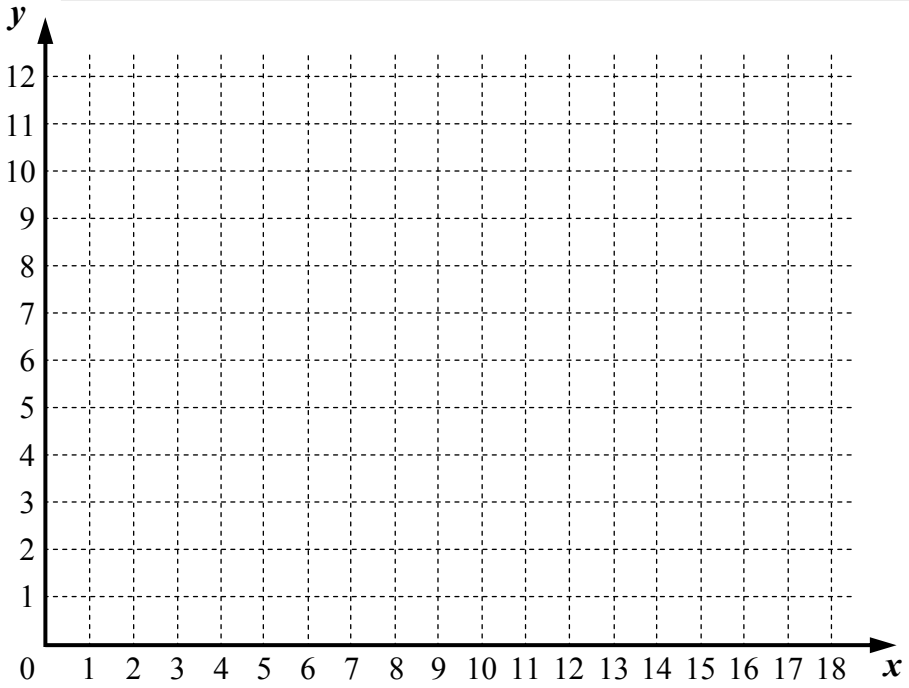
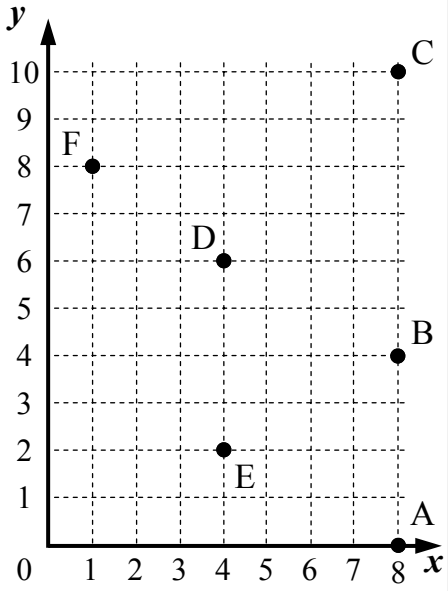
Plot the points and use a ruler to rule a line between the two points and find the midpoint. Plot the midpoint on the line record its co-ordinates. Write letters in pencil, as you may need to move them later!



This time the points are plotted, rule the line, find the midpoint and record all coordinates.



13 Construct DC and find 'M'

D: (☐ , ☐) C: (☐ , ☐)

Midpoint M: (☐ , ☐)

14 Construct FE and find 'M'

F: (☐ , ☐) E: (☐ , ☐)

Midpoint M: (☐ , ☐)

15 Construct FC and find 'M'

F: (☐ , ☐) C: (☐ , ☐)

Midpoint M: (☐ , ☐)

16 Construct BD and find 'M'

B: (☐ , ☐) D: (☐ , ☐)

Midpoint M: (☐ , ☐)

17 Construct AD and find 'M'

A: (☐ , ☐) D: (☐ , ☐)

Midpoint M: (☐ , ☐)

Steps: Plot the points on the number plane.
Rule a line in between the two points.
Plot the midpoint, call it 'M'.
Write the co-ordinate for the midpoint.

1 A (1, 12) and B (3, 4).

Midpoint: (☐ , ☐)

Label the midpoint 'M' on the number plane

2 Y (18, 10) and X (6, 12).

Midpoint: (☐ , ☐)

Find the average of these two numbers. Add them, press '=' and then divide '÷' by 2. $\bar{x}$ is the mean (pronounced *x*-bar).

1 22 and 38

$$\bar{x} = \frac{\square + \square}{2} = \square$$

Calc: 2 2 + 3 8 = ÷ 2 =

2 26 and 6

$$\bar{x} = \frac{\square + \square}{2} = \square$$

3 5 and 33

$$\bar{x} =$$

4 14 and 21

$$\bar{x} =$$

With halves use '½' not '.5'

Find the midpoint of the interval that joins these two points. Find two averages.

Example

Find the midpoint of the interval joining (2, 7) and (14, 15).

x_1 y_1 x_2 y_2

$$\bar{x} = \frac{2 + 14}{2} = 8$$

$$\bar{y} = \frac{7 + 15}{2} = 11$$

$$M(\bar{x}, \bar{y}) = (8, 11)$$

5 (5, 2) and (23, 14).

$$\bar{x} = \frac{\square + \square}{2} = \square$$

$$\bar{y} = \frac{\square + \square}{2} = \square$$

$$M(\bar{x}, \bar{y}) = (\square, \square)$$

6 (1, 14) and (19, 22).

$$\bar{x} = \frac{\square + \square}{2} = \square$$

$$\bar{y} = \frac{\square + \square}{2} = \square$$

$$M(\bar{x}, \bar{y}) = (\square, \square)$$

7 (14, 2) and (8, 6).

$$\bar{x} =$$

$$\bar{y} =$$

$$M(\bar{x}, \bar{y}) = (\square, \square)$$

8 (9, 17) and (3, 8).

9 (11, 2) and (12, 9).

10 (6, 0) and (11, 13).

Use the same method, but this time you have to get your information from a sketch.

11

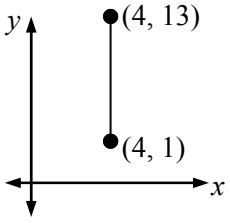
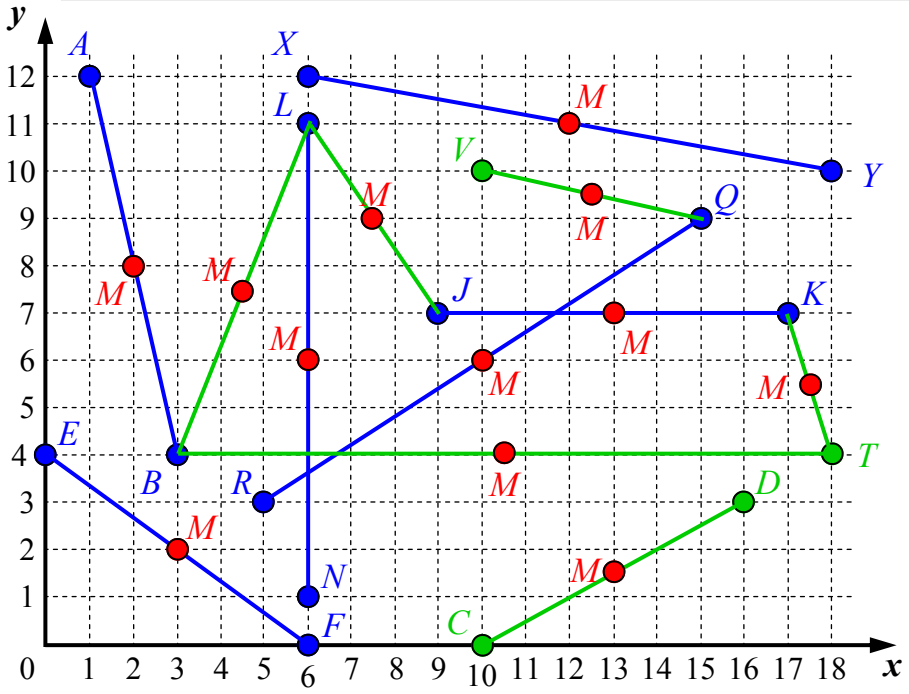
13



Cartesian Plane - Midpoint (Graphical) - Positive Quadrant (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot the points and use a ruler to rule a line between the two points and find the midpoint. Plot the midpoint on the line record its co-ordinates. Write letters in pencil, as you may need to move them later!



Steps: Plot the points on the number plane.
Rule a line in between the two points.
Plot the midpoint, call it 'M'.
Write the co-ordinate for the midpoint.

1 A (1, 12) and B (3, 4).

Midpoint: (2 , 8)

Label the midpoint 'M' on the number plane

2 Y (18, 10) and X (6, 12).

Midpoint: (12 , 11)

3 L (6, 11) and N (6, 1).

Midpoint: (6, 6)

4 E (0, 4) and F (6, 0).

Midpoint: (3, 2)

5 Q (15, 9) and R (5, 3).

Midpoint: (10, 6)

'QR' will cross previous line

6 J (9, 7) and K (17, 7).

Midpoint: (13, 7)

It is possible to have '½' in a co-ordinate. These all do! Approach these the same way.

Use a different colour for these lines

7 T (18, 4) and B (3, 4).

Midpoint: (10½, 4)

8 C (10, 0) and D (16, 3).

Midpoint: (13, 1½)

9 L (6, 11) and J (9, 7).

Midpoint: (7½, 9)

10 T (18, 4) and K (17, 7).

Midpoint: (17½, 5½)

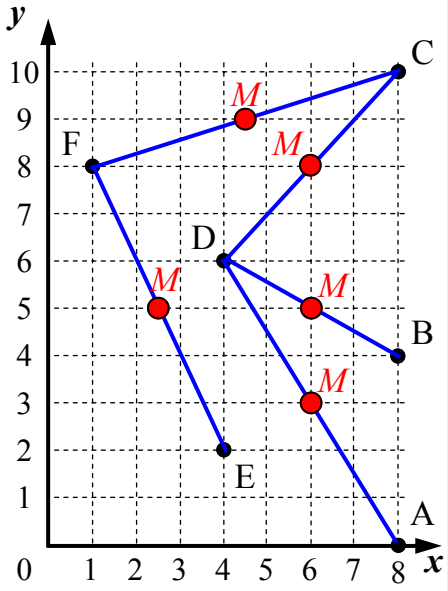
11 B (3, 4) and L (6, 11).

Midpoint: (4½, 7½)

12 V (10, 10) and Q (15, 9).

Midpoint: (12½, 9½)

This time the points are plotted, rule the line, find the midpoint and record all coordinates.



13 Construct DC and find 'M'

D: (4 , 6) C: (8 , 10)

Midpoint M: (6 , 8)

14 Construct FE and find 'M'

F: (1 , 8) E: (4 , 2)

Midpoint M: (2½ , 5)

15 Construct FC and find 'M'

F: (1 , 8) C: (8 , 10)

Midpoint M: (4½ , 9)

16 Construct BD and find 'M'

B: (8 , 4) D: (4 , 6)

Midpoint M: (6 , 5)

17 Construct AD and find 'M'

A: (8 , 0) D: (4 , 6)

Midpoint M: (6 , 3)

Cartesian Plane - Plotting Points - All Quadrants

This sheet involves the plotting of Cartesian co-ordinates. When plotting points on a number plane you are given two numbers. The first number tells you how much you move across and the second number tells you how much you move up or down. As the numbers are in order, across first, up/down second, these numbers can be referred to as 'ordered pairs', as their order is important. Positive numbers move across to the right if the first number, negative numbers move to the left if the first number. Positive numbers move up if the second number, negative numbers move down if the second number.

The first column asks you to locate the points and write in their co-ordinates. This is done by opening a bracket writing the *x* co-ordinate, a comma, then the *y* co-ordinate and close bracket. Always place co-ordinates in brackets.

The second column asks you to plot points. Draw filled in circles at the given location and label them with the letter supplied in each question.

Once you plot the point record down which quadrant it is in. Quadrants start with the 1st Quadrant (top right) and then moving anti-clockwise, are called II (2nd), III (3rd) and IV (4th). If the point is on the axis then record it by filling in the oval around the word 'Axis'.

Move across first along the *x* axis.
Negative to the left, Positive to the right.

Then move up or down in the *y* direction.
Negative is down, Positive is up.

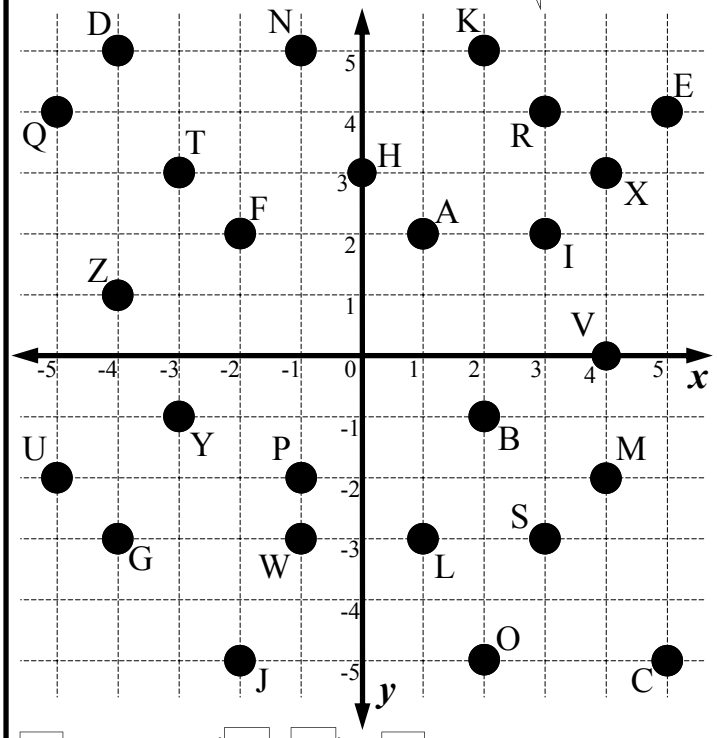
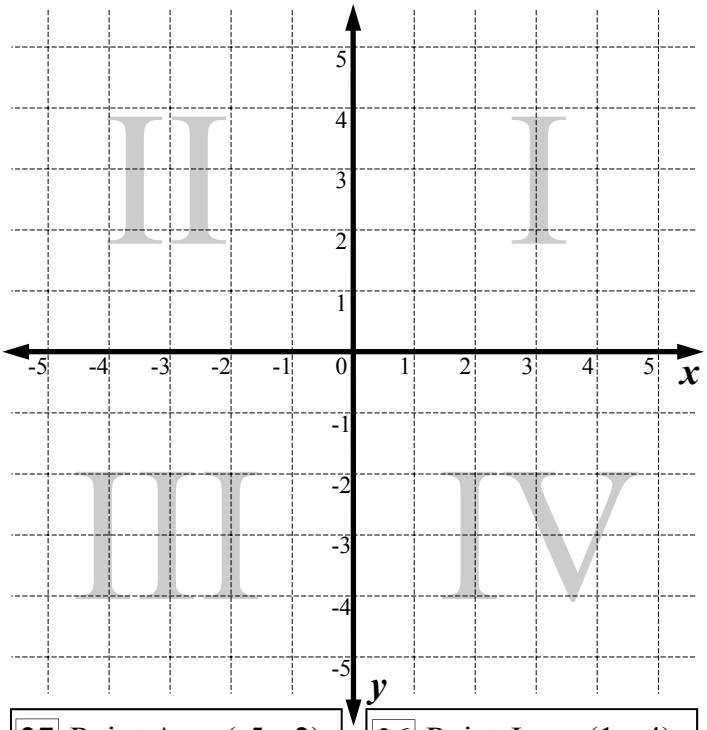
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Give the co-ordinates for the points on the number plane below.



1 Point A (,)
2 Point B
3 Point C
4 Point D
5 Point E
6 Point F
7 Point G
8 Point H
9 Point I
10 Point J
11 Point K
12 Point L
13 Point M
14 Point N
15 Point O
16 Point P
17 Point Q
18 Point R
19 Point S
20 Point T
21 Point U
22 Point V
23 Point W
24 Point X
25 Point Y
26 Point Z

Plot the following points on the number plane below, label each point and give the quadrant that the point lies in.



27 Point A (-5, -2) Quadrant I II III IV Axis
28 Point B (2, 4) Quadrant I II III IV Axis
29 Point C (4, 0) Quadrant I II III IV Axis
30 Point D (3, -3) Quadrant I II III IV Axis
31 Point E (-3, 5) Quadrant I II III IV Axis
32 Point F (0, 0) Quadrant I II III IV Axis
33 Point G (5, -5) Quadrant I II III IV Axis
34 Point H (-2, 4) Quadrant I II III IV Axis
35 Point I (1, 2) Quadrant I II III IV Axis
36 Point J (1, -4) Quadrant I II III IV Axis
37 Point K (-3, -4) Quadrant I II III IV Axis
38 Point L (-1, 0) Quadrant I II III IV Axis
39 Point M (-4, 2) Quadrant I II III IV Axis
40 Point N (3, -5) Quadrant I II III IV Axis
41 Point O (0, -3) Quadrant I II III IV Axis
42 Point P (-5, -5) Quadrant I II III IV Axis
43 Point R (-2, 1) Quadrant I II III IV Axis
44 Point S (2, -2) Quadrant I II III IV Axis

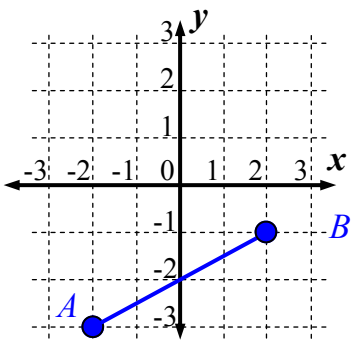
Cartesian Plane - Midpoint - All Quadrants

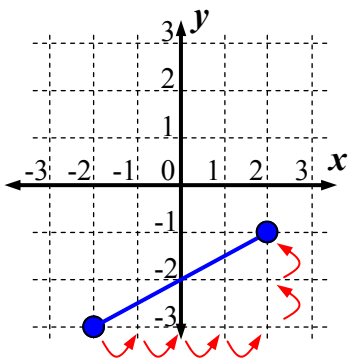
If you draw a line, halfway along that line is the midpoint. There are two common ways of finding the location of the midpoint. You can measure it's location on a number plane 'Graphically', or you can calculate its location 'Analytically'.

Graphical Solution

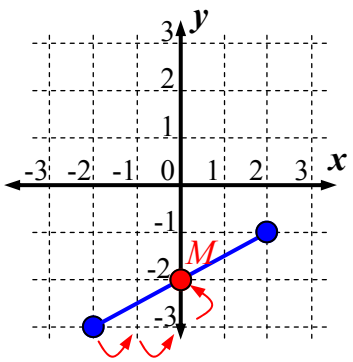
Example: Find the midpoint *M* on the interval joining *A* (-2, -3) and *B* (2, -1)



Plot *A* and *B* and draw the interval *AB*



Count the 'hops' and halve them. Horizontal is 4 hops, so midpoint is 2 hops right of the -2. So it is 0. Vertical is 2 hops, so midpoint is 1 hop above the -3. So it is -2.



Plot the midpoint and label it *M*.
There is a space in the question to record its coordinates, for the *M* above, it is (0, -2).

Analytical Method

It may be that the points aren't graphed, or the values are that large that graphing them isn't feasible. Or you just prefer using numbers, either way you can find the midpoint using this formula:

$$M(\bar{x}, \bar{y}) = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$$

Where one point is (x_1, y_1), and the other point is (x_2, y_2).

What does this mean? It means that you add the *x*-values and divide them by 2, for the *x* coordinate of the midpoint. Then repeat for the *y*-values, for the *y* coordinate of the midpoint. There is an example at the bottom of Column 1 on Sheet 2.

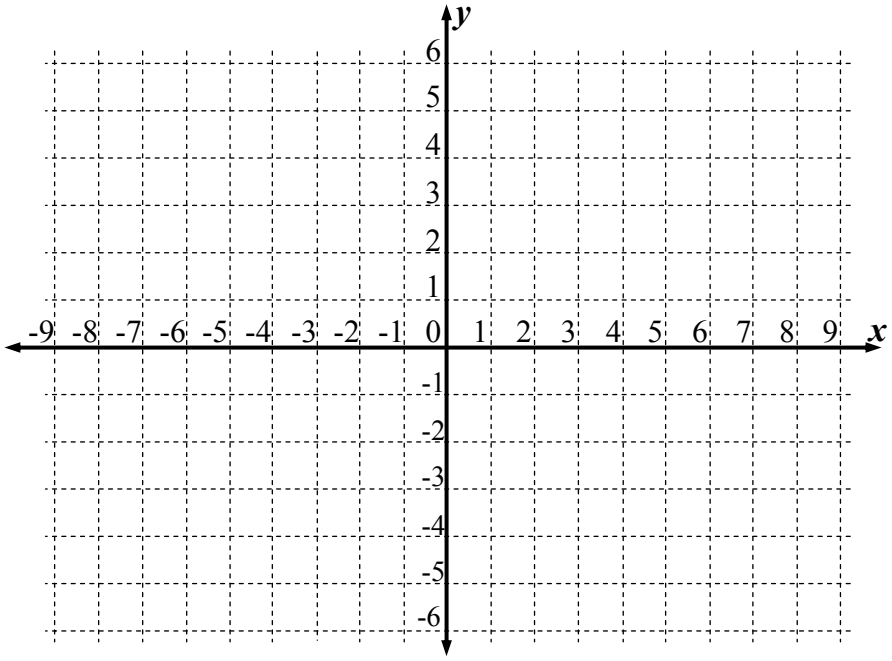
Plot the points and use a ruler to rule a line between the two points and find the midpoint. Plot the midpoint on the line record its co-ordinates. Write letters in pencil, as you may need to move them later!



Steps: Plot the points on the number plane.
Rule a line in between the two points.
Plot the midpoint, call it 'M'.
Write the co-ordinate for the midpoint.

1 *A* (-7, 5) and *H* (-3, 3).

Midpoint: (___ , ___)

Label the midpoint '*M*' on the number plane

2 *G* (8, -2) and *E* (2, -5).

Midpoint: (___ , ___)

3 *L* (-2, 6) and *F* (0, 4).

Midpoint: _____

4 *B* (7, 3) and *D* (-3, -1).

Midpoint: _____

5 *N* (-1, 2) and *P* (5, 6).

Midpoint: _____

6 *K* (-9, 3) and *H* (-3, 3).

Midpoint: _____

7 *C* (-9, -5) and *F* (0, 4).

Midpoint: _____

8 *J* (-6, -6) and *D* (-3, -1).

Midpoint: _____

9 *A* (-7, 5) and *F* (0, 4).

Midpoint: _____

10 *B* (7, 3) and *G* (8, -2).

Midpoint: _____

11 *G* (8, -2) and *D* (-3, -1).

Midpoint: _____

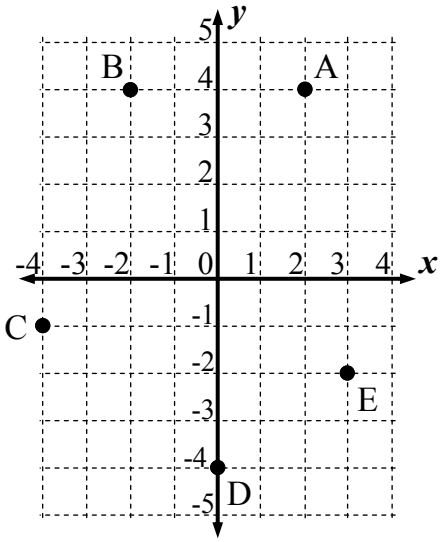
12 *C* (-9, -5) and *K* (-9, 3).

Midpoint: _____

13 *C* (-9, -5) and *E* (2, -5).

Midpoint: _____

This time the points are plotted, rule the line, find the midpoint and record all coordinates.



14 Construct *AB* and find '*M*'

A: (___ , ___) *B*: (___ , ___)

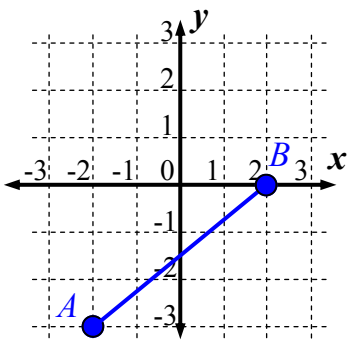
Cartesian Plane - Introduction to Gradient

Gradient is a measure of slope. So the larger the number, the steeper the interval is. A gradient of 5 is much steeper than a gradient of 1. Gradient is found creating a 'gradient triangle' and measuring the rise over the run, the vertical length over the horizontal. Gradient is given the symbol '*m*', it has nothing to do with the midpoint.

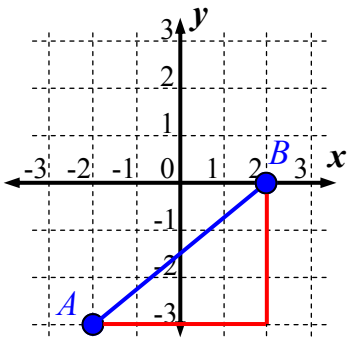
$$m = \frac{Rise}{Run} = \frac{Vertical\ Distance}{Horizontal\ Distance}$$

Here is an example of finding the gradient.

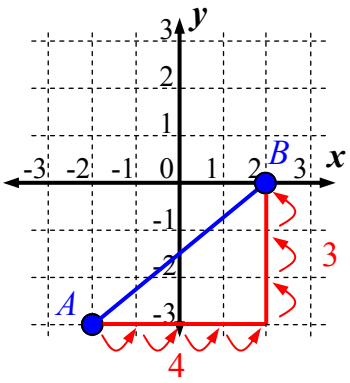
Example: Find the gradient of the interval joining *A* (-2, -3) and *B* (2, 0)



Plot *A* and *B* and draw the interval *AB*



Construct a gradient triangle, which is a right angle triangle which has AB as its hypotenuse.



Count and mark the rise and the run on the sides of the triangle.

$m = \frac{3}{4}$ ← Find the gradient by writing the rise over the run. Remember that the second sheet has all negative gradients

The process for finding the gradient is straight forward. The only issue is you can have positive and negative gradient. Positive Gradient (covered in the first sheet) 'Goes up to the right', Negative Gradient (covered in the second sheet) goes 'up to the left'.

Positive Gradient goes up to the right

Negative Gradient goes up to the left

Note that when two (or more) intervals have the same gradient, they are parallel.

Cartesian Plane - Introduction to Gradient (Positive) (Sheet 1)

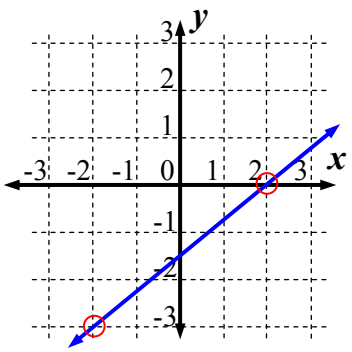
Cartesian Plane - Gradient

Gradient is a measure of slope. So the larger the number, the steeper the line is. A gradient of 5 is much steeper than a gradient of 1. Gradient is found creating a 'gradient triangle' and measuring the rise over the run, the vertical length over the horizontal. Gradient is given the symbol '*m*', it has nothing to do with the midpoint.

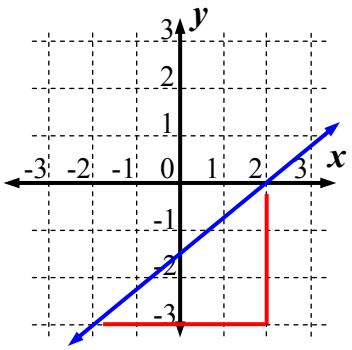
$$m = \frac{Rise}{Run} = \frac{Vertical\ Distance}{Horizontal\ Distance}$$

Here is an example of finding the gradient.

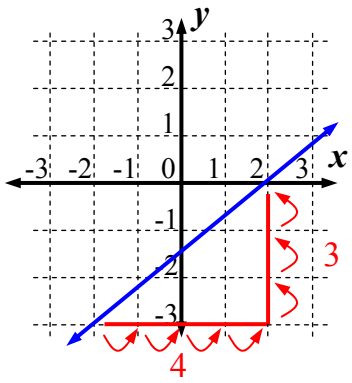
Example: Find the gradient of the line below.



Locate where the line cuts through exact coordinates. (in red)



Construct a gradient triangle, which is a right angle triangle with the line as the hypotenuse



Count and mark the rise and the run on the sides of the triangle.

$$m = \frac{3}{4}$$

Find the gradient by writing the rise over the run. Then finally, check if it is a positive or negative slope.

The process for finding the gradient is straight forward. The only issue is you can have positive and negative gradient. Positive Gradient 'Goes up to the right', Negative Gradient' goes 'up to the left'.

Positive Gradient goes up to the right

Negative Gradient goes up to the left

If the line is flat, it has a gradient of zero ($m = 0$). If the line is vertical (straight up and down), it has a gradient that is undefined (m = undef).

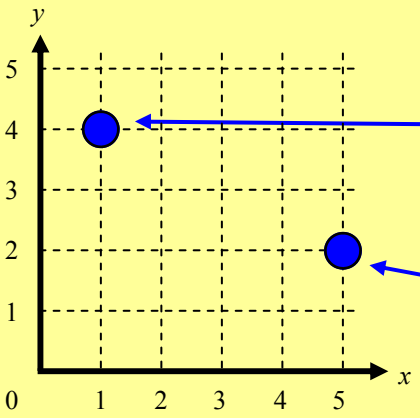
Cartesian Plane - Distance (Positive Quadrant)

This sheet uses Pythagoras Theorem to find the distance between two points. When two points are plotted on a cartesian plane a triangle can be created after a third point is plotted. The steps are shown below.

Example (1, 4) and (5, 2).

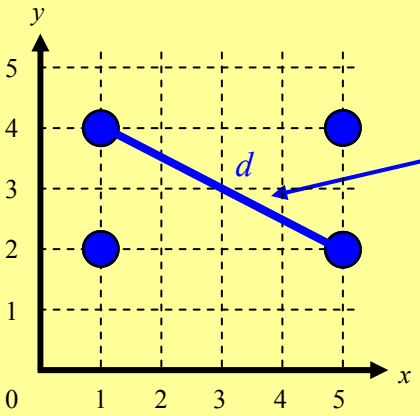


STEP 1

Plot point (1, 4). From the origin (0,0) move across 1 and up 4. Plot the point.

STEP 2

Plot point (5, 2). From the origin (0,0) move across 5 and up 2. Plot the point.

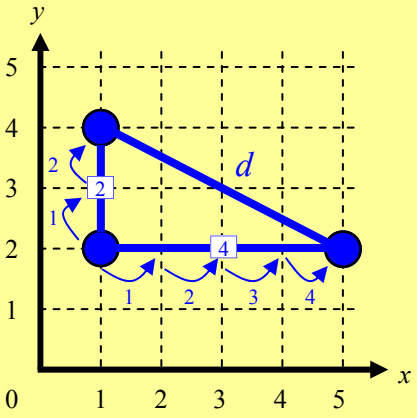


STEP 3

Draw a line between the two points, call its length '*d*'.

STEP 4

Now plot a point to form a right-angle triangle. It can be in either of the two positions shown. (Not both).



STEP 5

Construct the two short sides of the triangle.

STEP 6

Count off the lengths to find the length of both of the short sides. In the example one side is 2 units, the other is 4 units.

STEP 7

Now apply Pythagoras Theorem to the triangle to find the hypotenuse. Answer to 1 d.p. and the length is in 'units'.

$d^2 = 2^2 + 4^2$

$d^2 = 20$

$d = \sqrt{20}$

$d = 4.5$ units (1 d.p.)

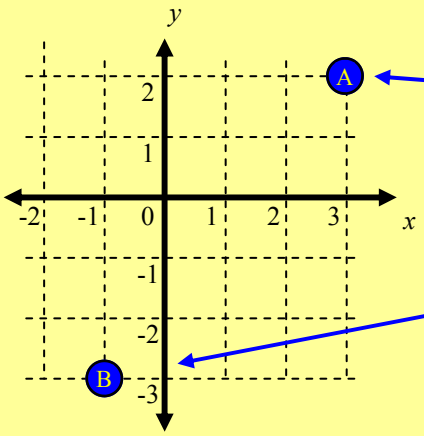
Cartesian Plane - Distance - All Quadrants

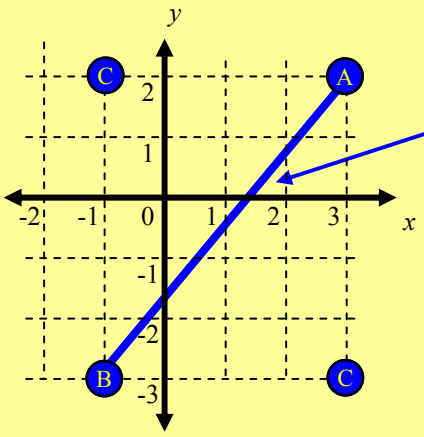
This sheet uses Pythagoras Theorem to find the distance between two points. When two points are plotted on a cartesian plane a right angle triangle can be created. It is assumed that the previous positive quadrant sheet is attempted prior to this sheet.

Example A (3, 2) and B (-1, -3). Label right angle C.



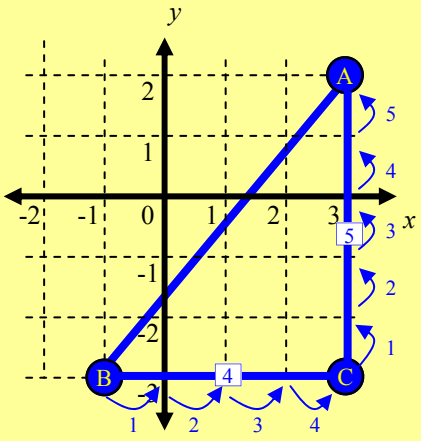
STEP 1 Plot point 'A', from the origin (0,0) move right, across 3, then up 2. Plot the point with an 'A' inside.

STEP 2 Plot point 'B', from the origin (0,0) move left across 1, to -1, and then down 3, to -3. Plot the point with an 'B' inside.



STEP 3 Draw a line between the two points

STEP 4 Now plot point 'C' to form a right-angle triangle. It can be in either of the two positions shown. Not both.



STEP 5 Construct the two short sides of the Triangle.

STEP 6 Count off the lengths to find the length of both of the short sides. In the example one side is 5 units, the other is 4 units.

STEP 7 Now apply Pythagoras Theorem to the triangle to find the hypotenuse. Answer to 1 d.p. and the length is in 'units'.

AC = 5

CB = 4

$AB^2 = 5^2 + 4^2$

$AB^2 = 41$

$AB = \sqrt{41}$

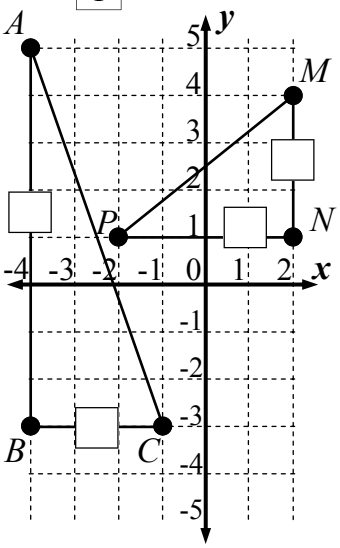
AB = 6.4 units (1 d.p.)

Cartesian Plane - Distance - All Quadrants (Sheet 1)

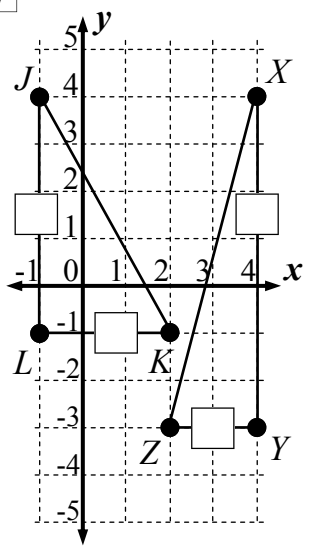
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Write the lengths of the short sides in the boxes provided on the number plane.

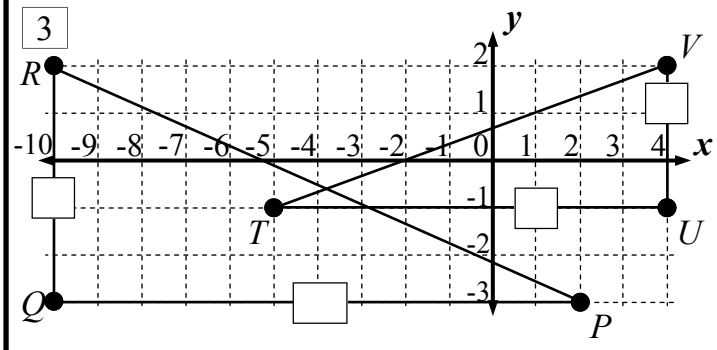
1



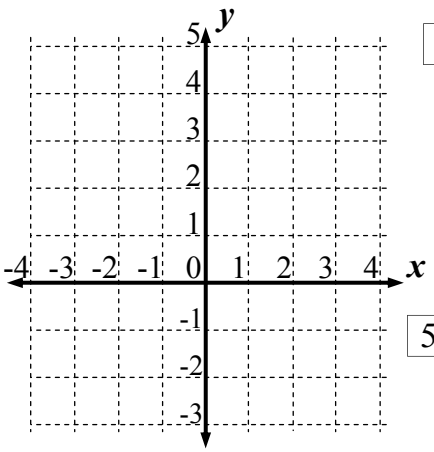
2



3



Plot the pair of points, then create a right angle triangle on the number plane. Find the two short side lengths. Plot Q4 and Q5 on the first number plane.



4 (4, 5) & (1, -3).

Vertical Length : 8

Horizontal Length : 3

5 (-3, 4) & (-1, -2).

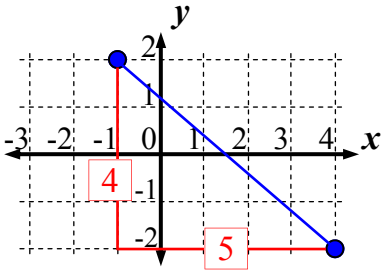
Vertical Length : 6

Horizontal Length : 2

6 (4, -2) & (-1, 2).

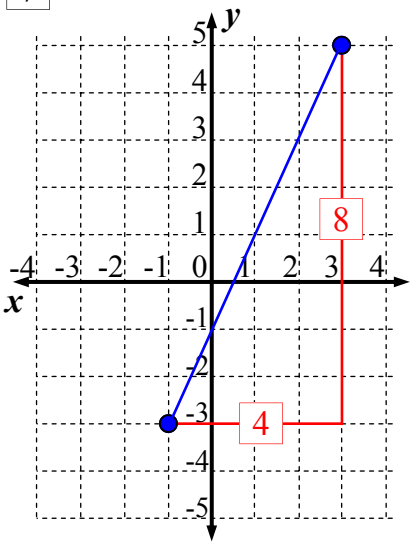
Vertical Length : 4

Horizontal Length : 5



Now use Pythagoras to calculate the distance between the two plotted points. Find the short side lengths first. Answer to 1 decimal place.

7



(3, 5) & (-1, -3).

Vertical Length : 8

Horizontal Length : 4

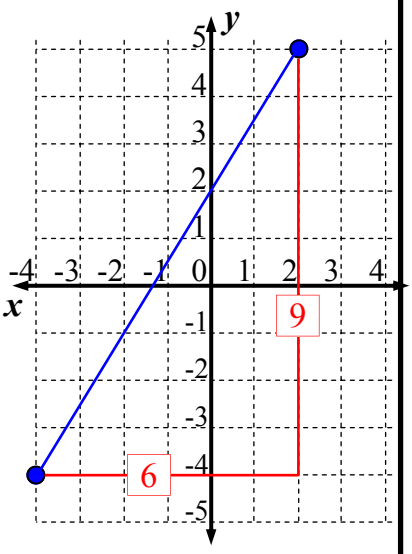
$d^2 = 8^2 + 4^2$

$d^2 = 80$

$d = \sqrt{80}$

$d = 8.9$ units

8 (-4, -4) & (2, 5).



Vertical Length : 9

Horizontal Length : 6

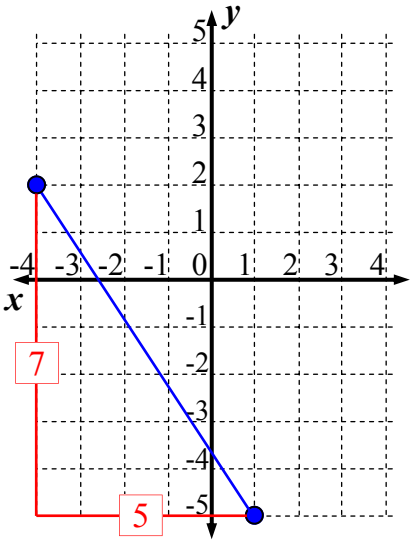
$d^2 = 6^2 + 9^2$

$d^2 = 117$

$d = \sqrt{117}$

$d = 10.8$ units

9



(-4, 2) & (1, -5).

Vertical Length : 7

Horizontal Length : 5

$d^2 = 7^2 + 5^2$

$d^2 = 74$

$d = \sqrt{74}$

$d = 8.6$ units

Cartesian Plane - Find A Word

Look for words in the list at the bottom of the grid. Once you find a word cross it off the list.

A letter could be used more than once so don’t colour it in too dark (using a texta for example) so that you can still read it.

Give the coordinates for the five plotted points.

1 A (0, 5)

2 B (5, 1)

3 C (3, 3)

4 D (2, 0)

5 E (6, 5)

Give the coordinates for the six plotted points.

6 A (1, 2)

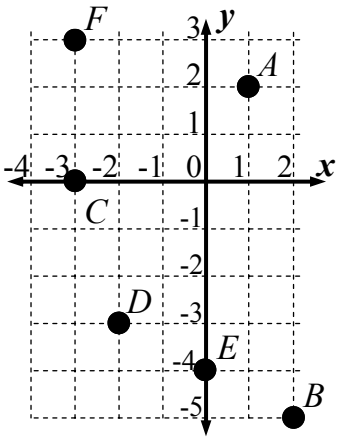
7 B (2, -5)

8 C (-3, -1)

9 D (-2, -3)

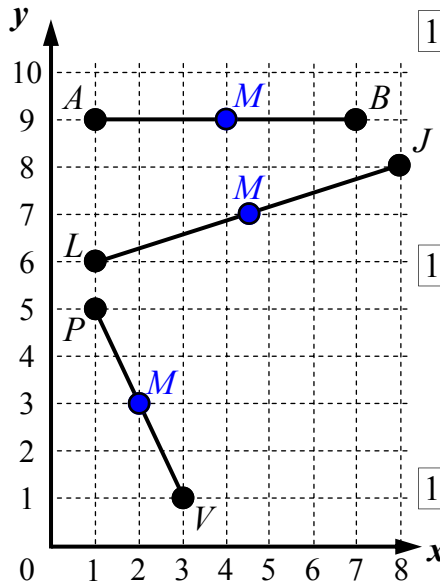
10 E (0, -4)

11 F (-3, 3)



12 Give the coordinates for the origin (0, 0)

Plot the midpoint 'M' on the intervals, give the coordinates



13 AB (4, 9) Midpoint Coordinates

14 LJ (4½, 7) Midpoint Coordinates

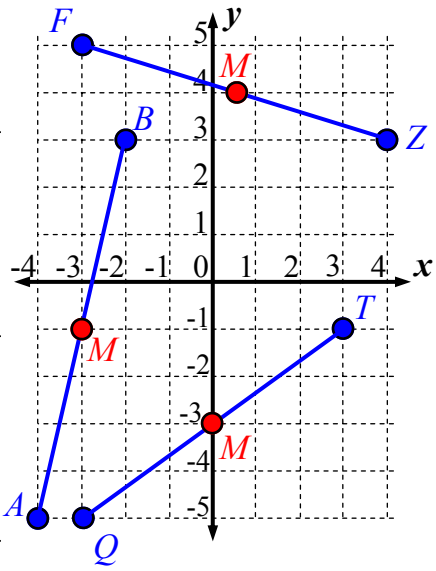
15 PV (2, 3) Midpoint Coordinates

Plot the points, find the midpoint coordinates.

16 A (-4, -5)
B (-2, 3)
(-3, -1)
Midpoint of AB

17 F (-3, 5)
Z (4, 3)
(½, 4)
Midpoint of FZ

18 T (3, -1)
Q (-3, -5)
(0, -3)
Midpoint of TQ



Calculate the coordinates of the midpoint for these intervals, use:

$$M(\bar{x}, \bar{y}) = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$$

19 (4, 6) and (10, 12)

$x_1\ y_1 \quad x_2\ y_2$

$\bar{x} = \frac{4 + 10}{2} = 7$ $\bar{y} = \frac{6 + 12}{2} = 9$

$M(\bar{x}, \bar{y}) = (7, 9)$

20 (-5, -2) and (9, 8)

$x_1\ y_1 \quad x_2\ y_2$

$\bar{x} = \frac{(-5) + 9}{2} = 2$ $\bar{y} = \frac{(-2) + 8}{2} = 3$

$M(\bar{x}, \bar{y}) = (2, 3)$

21 (-9, -8) and (-2, -2)

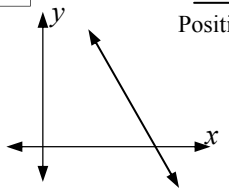
$x_1\ y_1 \quad x_2\ y_2$

$\bar{x} = \frac{(-9) + (-2)}{2} = -5\frac{1}{2}$ $\bar{y} = \frac{(-2) + (-8)}{2} = -5$

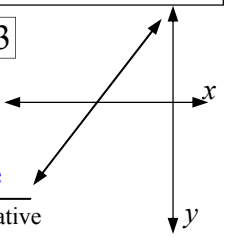
$M(\bar{x}, \bar{y}) = (-5\frac{1}{2}, -5)$

Do these lines have a positive or negative gradient?

22 Negative (Positive or negative)



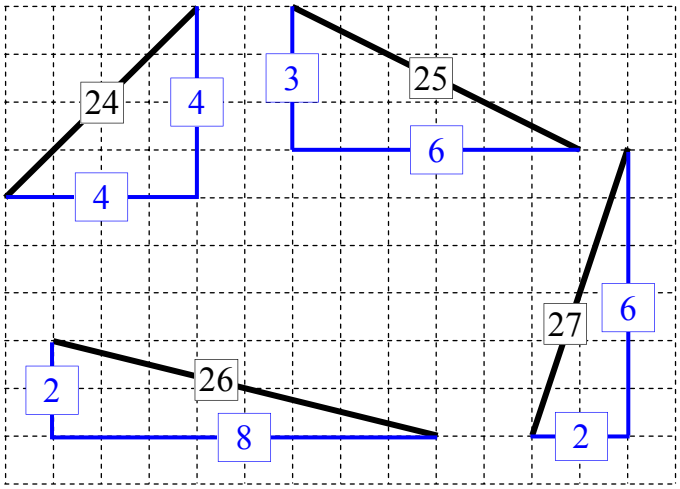
23 Positive (Positive or negative)



© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Record the triangle side lengths and calculate the gradient for the following intervals. Simplify when possible.

Use: $m = \frac{rise}{run}$



24 $m = \frac{4}{4} = 1$

25 $m = \frac{3}{6} = \frac{-1}{2}$

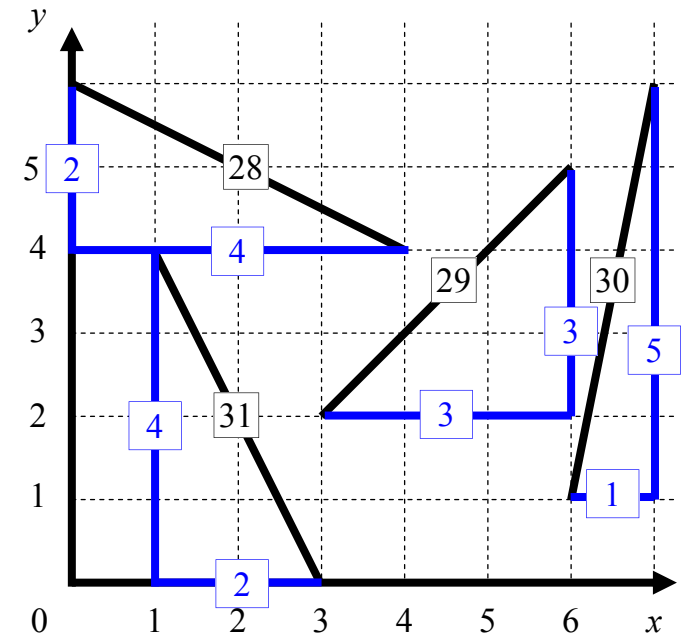
26 $m = \frac{2}{8} = \frac{-1}{4}$

27 $m = \frac{6}{2} = 3$

Calculate the gradient for the following intervals.

Use: $m = \frac{rise}{run}$

Simplify your answer where possible.



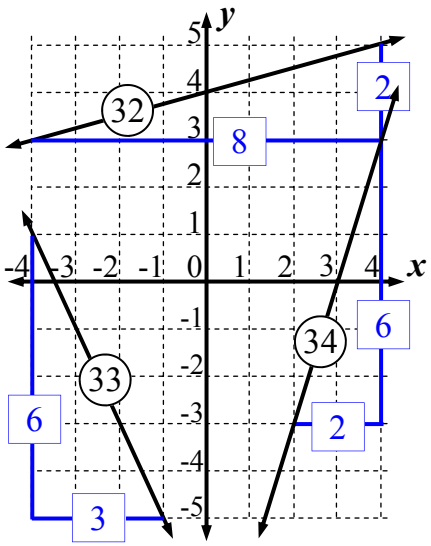
28 $m = \frac{2}{4} = \frac{-1}{2}$

29 $m = \frac{3}{3} = 1$

30 $m = \frac{5}{1} = 5$

31 $m = \frac{4}{2} = -2$

Calculate the gradient for the following lines. Simplify your answer where possible.



32 $m = \frac{2}{8} = \frac{1}{4}$

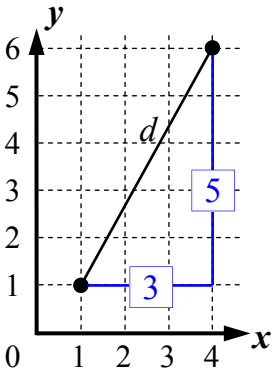
33 $m = \frac{6}{3} = -2$

34 $m = \frac{6}{2} = 3$

Calculate the distance between these two points. Use Pythagoras Theorem rounding to 1 d.p.

Use: $c^2 = a^2 + b^2$

35



$d^2 = 3^2 + 5^2$

$d^2 = 34$

$d = \sqrt{34}$

$d = 5.8$ units

36 (-3, 2) and (3, -2).

$d^2 = 4^2 + 6^2$

$d^2 = 52$

$d = \sqrt{52}$

$d = 7.2$ units

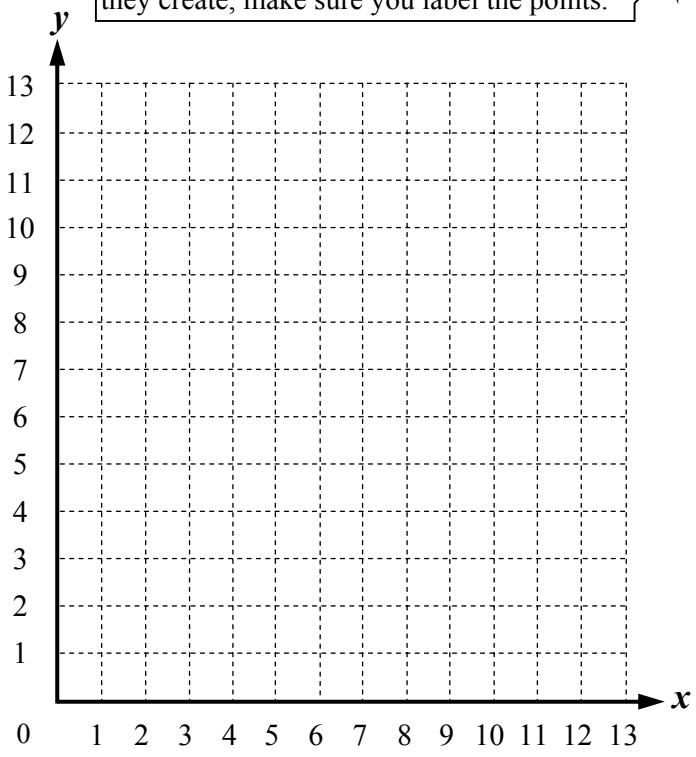
10	Point J	23	Point W
11	Point K	24	Point X
12	Point L	25	Point Y
13	Point M	26	Point Z

Place the groups of points given below on the grid, join the points and name the shape they create, make sure you label the points.



27 Point A (10, 4) Point B (11, 2)
Point C (12, 4) Point D (11, 5)
Shape formed: _____

28 Point E (3, 5) Point F (0, 8)
Point G (5, 13) Point H (8, 10)
Shape formed: _____

29 Point J (5, 4) Point K (9, 6)
Point L (7, 8)
Shape formed: _____
Two word description

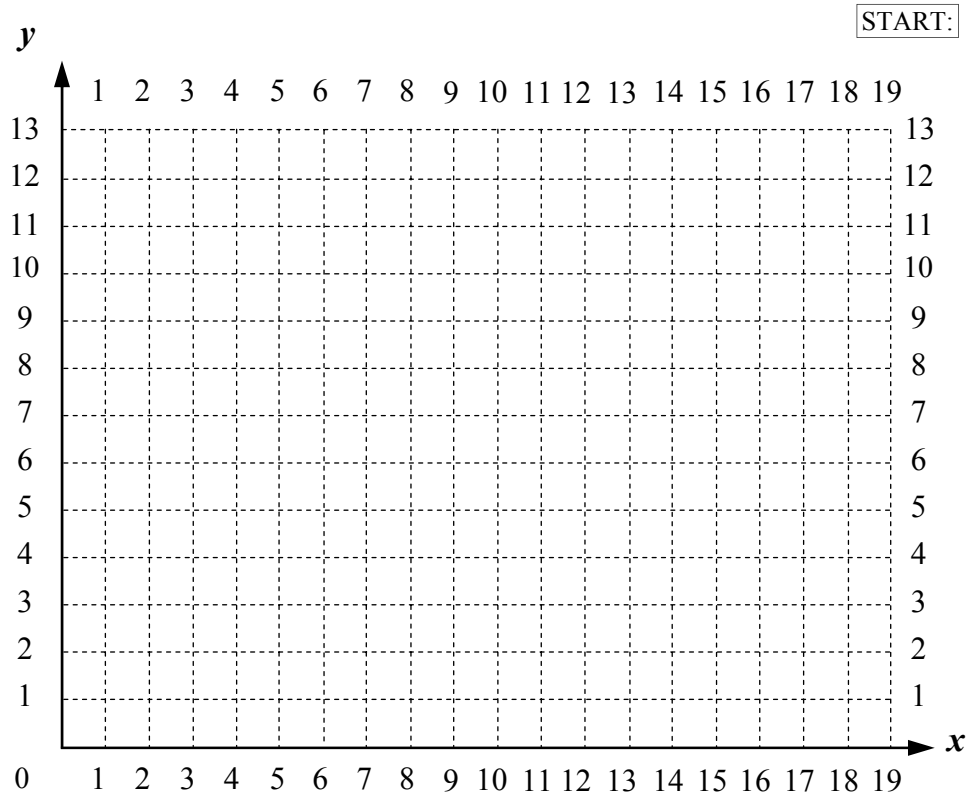
30 Point M (2, 3) Point N (8, 3)
Point O (6, 0) Point P (0, 0)
Shape formed: _____

31 Point R (10, 9) Point S (13, 13)
Point T (13, 9)
Shape formed: _____
Two or three word description

Cartesian Plane - Drawing Animals - Positive Quadrant (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Join the points on the grid with the following co-ordinates and you will find an animal friend who has only one hand.

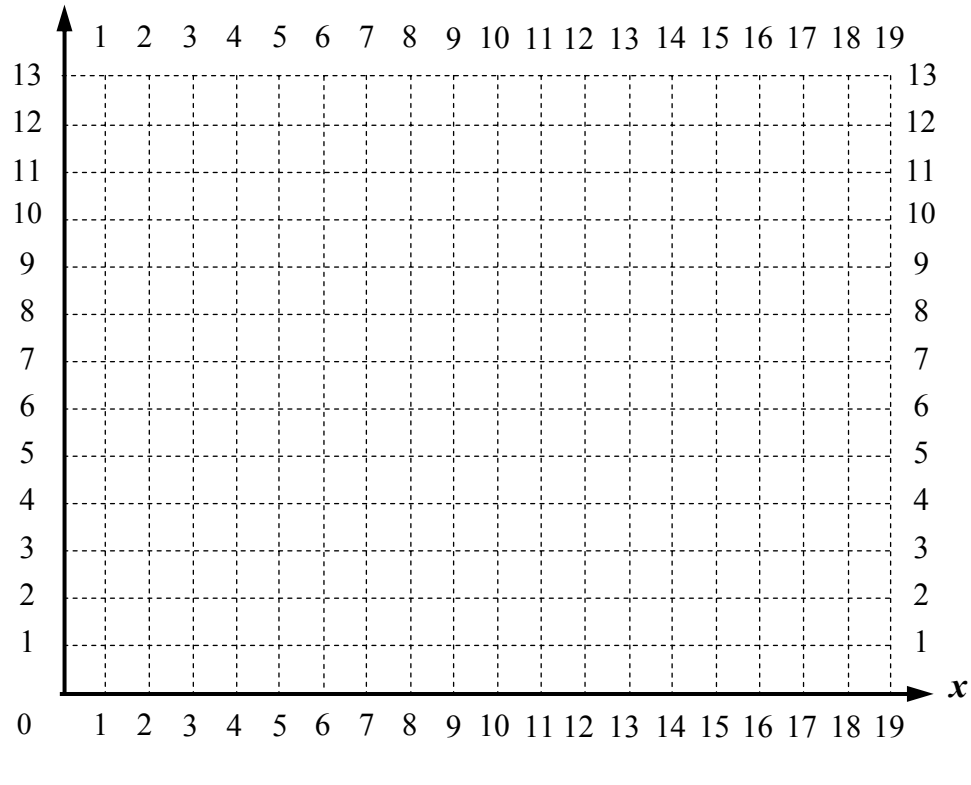


Co-ordinates:

START: (2, 12) , (3, 12) , (4, 11) , (5, 12) ,
(7, 12) , (8, 11) , (9, 12) , (10, 12) ,
(11, 11) , (11, 6) , (10, 3) , (9, 3) ,
(8, 7) , (8, 5) , (7, 7) , (7, 3) ,
(6, 2) , (4, 2) , (4, 3) , (5, 3) ,
(6, 4) , (5, 7) , (4, 5) , (4, 7) ,
(3, 3) , (2, 3) , (1, 6) , (1, 11) ,
(2, 12) STOP!

START:
(11, 10) , (12, 11) , (16, 12) , (18, 10) ,
(19, 7) , (18, 9) , (18, 3) , (15, 3) ,
(16, 4) , (16, 6) , (14, 5) , (11, 5) ,
(11, 4) , (13, 4) , (13, 1) , (12, 2) ,
(9, 2) , (8, 3) , (7, 6) , STOP!

Join the points and this time you will find a friend with which you will have to be very patient.



Co-ordinates:

START: (1, 11) , (2, 10) , (2, 9) , (1, 8) ,
(1, 7) , (2, 6) , (2, 5) , (3, 3) ,
(5, 1) , (7, 0) , (13, 0) , (16, 3) ,
(17, 5) , (15, 3) , (12, 2) , (8, 2) ,
(6, 3) , (4, 5) , (3, 6) , (4, 7) ,
(4, 8) , (3, 9) , (3, 10) , (4, 11) ,
STOP!

START:
(11, 6) , (12, 6) , (11, 7) , (10, 6) ,
(11, 5) , (12, 5) , (14, 6) , (14, 7) ,
(12, 9) , (10, 9) , (8, 7) , (8, 5) ,
(10, 3) , (12, 3) , (14, 4) , (15, 6) ,
(15, 7) , (14, 9) , (13, 10) , (10, 10) ,
(8, 9) , (7, 7) , (8, 3) , (11, 2) ,
(12, 2) , (15, 3) , (17, 6) , (17, 7) ,
(15, 11) , (12, 12) , (10, 12) , (7, 11) ,

17 Construct AD and find 'M'

A: (☐ , ☐) D: (☐ , ☐)

Midpoint M: (☐ , ☐)

Steps: Plot the points on the number plane.
Rule a line in between the two points.
Plot the midpoint, call it 'M'.
Write the co-ordinate for the midpoint.

1 A (1, 12) and B (3, 4).

Midpoint: (☐ , ☐)

Label the midpoint 'M' on the number plane

2 Y (18, 10) and X (6, 12).

Midpoint: (☐ , ☐)

3 L (6, 11) and N (6, 1).

Midpoint: _____

4 E (0, 4) and F (6, 0).

Midpoint: _____

5 Q (15, 9) and R (5, 3).

Midpoint: _____

'QR' will cross previous line

6 J (9, 7) and K (17, 7).

Midpoint: _____

It is possible to have '½' in a co-ordinate. These all do! Approach these the same way.

Use a different colour for these lines

7 T (18, 4) and B (3, 4).

Midpoint: _____

8 C (10, 0) and D (16, 3).

Midpoint: _____

9 L (6, 11) and J (9, 7).

Midpoint: _____

10 T (18, 4) and K (17, 7).

Midpoint: _____

11 B (3, 4) and L (6, 11).

Midpoint: _____

12 V (10, 10) and Q (15, 9).

Midpoint: _____

Cartesian Plane - Midpoint (Analytical) - Positive Quadrant (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the average of these two numbers. Add them, press '=' and then divide '÷' by 2. $\bar{x}$ is the mean (pronounced *x*-bar).

1 22 and 38

$$\bar{x} = \frac{\square + \square}{2} = \square$$

Calc: 2 2 + 3 8 = ÷ 2 =

2 26 and 6

$$\bar{x} = \frac{\square + \square}{2} = \square$$

3 5 and 33

$$\bar{x} =$$

4 14 and 21

$$\bar{x} =$$

With halves use '½' not '.5'

Find the midpoint of the interval that joins these two points. Find two averages.

Example

Find the midpoint of the interval joining (2, 7) and (14, 15).

x_1 y_1 x_2 y_2

$$\bar{x} = \frac{2 + 14}{2} = 8$$

$$\bar{y} = \frac{7 + 15}{2} = 11$$

$$M(\bar{x}, \bar{y}) = (8, 11)$$

5 (5, 2) and (23, 14).

$$\bar{x} = \frac{\square + \square}{2} = \square$$

$$\bar{y} = \frac{\square + \square}{2} = \square$$

$$M(\bar{x}, \bar{y}) = (\square, \square)$$

6 (1, 14) and (19, 22).

$$\bar{x} = \frac{\square + \square}{2} = \square$$

$$\bar{y} = \frac{\square + \square}{2} = \square$$

$$M(\bar{x}, \bar{y}) = (\square, \square)$$

7 (14, 2) and (8, 6).

$$\bar{x} =$$

$$\bar{y} =$$

$$M(\bar{x}, \bar{y}) = (\square, \square)$$

8 (9, 17) and (3, 8).

9 (11, 2) and (12, 9).

10 (6, 0) and (11, 13).

Use the same method, but this time you have to get your information from a sketch.

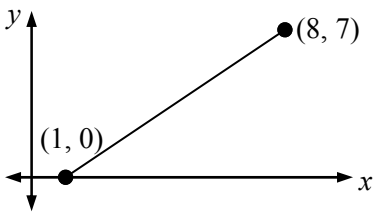
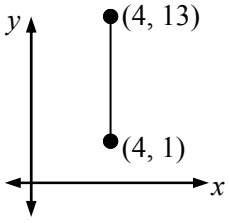
12



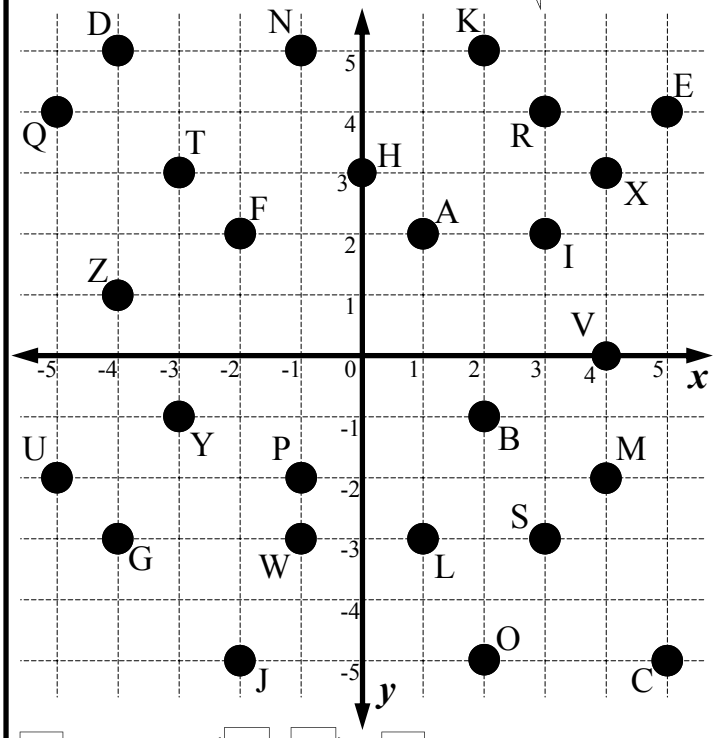
13



Cartesian Plane - Plotting Points - All Quadrants (Sheet 1)

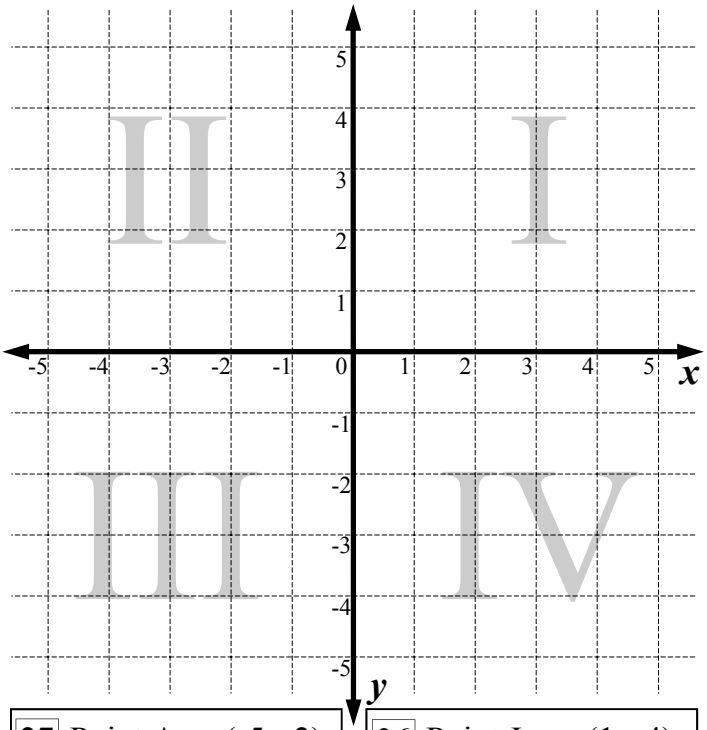
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Give the co-ordinates for the points on the number plane below.



1 Point A (,)
2 Point B
3 Point C
4 Point D
5 Point E
6 Point F
7 Point G
8 Point H
9 Point I
10 Point J
11 Point K
12 Point L
13 Point M
14 Point N
15 Point O
16 Point P
17 Point Q
18 Point R
19 Point S
20 Point T
21 Point U
22 Point V
23 Point W
24 Point X
25 Point Y
26 Point Z

Plot the following points on the number plane below, label each point and give the quadrant that the point lies in.



27 Point A (-5, -2) Quadrant I II III IV Axis
28 Point B (2, 4) Quadrant I II III IV Axis
29 Point C (4, 0) Quadrant I II III IV Axis
30 Point D (3, -3) Quadrant I II III IV Axis
31 Point E (-3, 5) Quadrant I II III IV Axis
32 Point F (0, 0) Quadrant I II III IV Axis
33 Point G (5, -5) Quadrant I II III IV Axis
34 Point H (-2, 4) Quadrant I II III IV Axis
35 Point I (1, 2) Quadrant I II III IV Axis
36 Point J (1, -4) Quadrant I II III IV Axis
37 Point K (-3, -4) Quadrant I II III IV Axis
38 Point L (-1, 0) Quadrant I II III IV Axis
39 Point M (-4, 2) Quadrant I II III IV Axis
40 Point N (3, -5) Quadrant I II III IV Axis
41 Point O (0, -3) Quadrant I II III IV Axis
42 Point P (-5, -5) Quadrant I II III IV Axis
43 Point R (-2, 1) Quadrant I II III IV Axis
44 Point S (2, -2) Quadrant I II III IV Axis

17 Construct *EA* and find '*M*'

E: (___ , ___) *A*: (___ , ___)

Midpoint *M*: (___ , ___)

18 Construct *DE* and find '*M*'

D: (___ , ___) *E*: (___ , ___)

Midpoint *M*: (___ , ___)

Cartesian Plane - Midpoint (Analytical) - All Quadrants (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the average of these two numbers. Add them, press '=' and then divide by 2. Always write negatives in brackets.

1 -6 and -12

$$\bar{x} = \frac{(\square) + (\square)}{2} = \square$$

Calc: [−](-) 6 + [−](-) 1 2 = ÷ 2 =

2 -7 and 21

$$\bar{x} = \frac{(\square) + \square}{2} = \square$$

3 6 and -12

$\bar{x} =$

4 -4 and -9

$\bar{x} =$

With halves use '½' not '.5'

Find the midpoint of the interval that joins these two points. Find two averages.

Example

Find the midpoint of the interval joining (-4, -3) and (8, -11).

x_1 y_1 x_2 y_2

$$\bar{x} = \frac{(-4) + 8}{2} = 2$$

$$\bar{y} = \frac{(-3) + (-11)}{2} = -7$$

$M(\bar{x}, \bar{y}) = (2, -7)$

5 (2, -3) and (-6, 9).

$$\bar{x} = \frac{\square + (\square)}{2} = \square$$

$$\bar{y} = \frac{(\square) + \square}{2} = \square$$

$M(\bar{x}, \bar{y}) = (\square, \square)$

6 (-1, -6) and (-3, 10).

$$\bar{x} = \frac{(\square) + (\square)}{2} = \square$$

$$\bar{y} = \frac{(\square) + \square}{2} = \square$$

$M(\bar{x}, \bar{y}) = (\square, \square)$

7 (7, -5) and (-3, 9).

$\bar{x} =$

$\bar{y} =$

$M(\bar{x}, \bar{y}) = (\square, \square)$

8 (-9, -2) and (-1, -9).

9 (3, 8) and (-3, -6).

10 (0, -5) and (-10, 8).

Use the same method, but this time get your information from a sketch. Label points (x_1, y_1)…

11

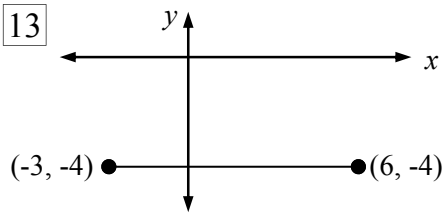
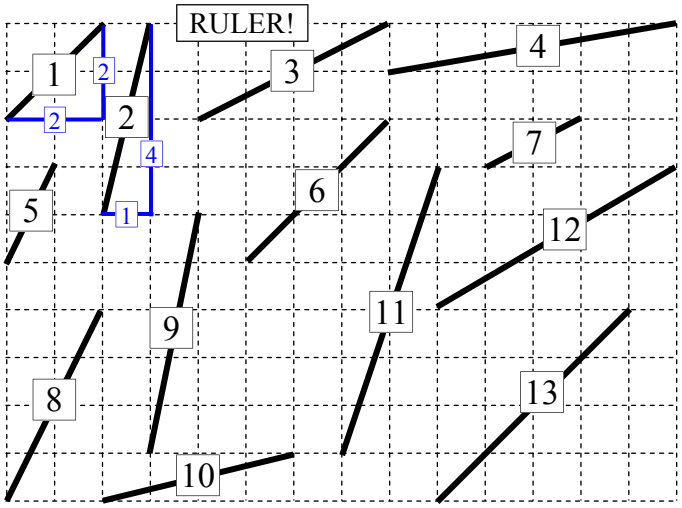
13



Cartesian Plane - Introduction to Gradient (Positive) (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

RULER!



Create 'gradient triangles' for the above intervals. Then write the 'rise' and the 'run' on each triangle. The first two are done. Find the gradient for each.

1 $m = \frac{\square}{\square} = \square$

2 $m = \frac{\square}{\square} = \square$

3 $m = \frac{\square}{\square} = \frac{\square}{\square}$

4 $m = \frac{\square}{\square}$

Calc: 2 ▪ 4 =

5 $m = \frac{\square}{\square} = \square$

6 $m = \frac{\square}{\square} = \square$

7 $m = \frac{\square}{\square}$

8 $m = \frac{\square}{\square} = \square$

9 $m = \frac{\square}{\square} = \square$

10 $m = \frac{\square}{\square}$

11 $m = \frac{\square}{\square} = \square$

12 $m = \frac{\square}{\square}$

13 $m = \frac{\square}{\square} = \square$

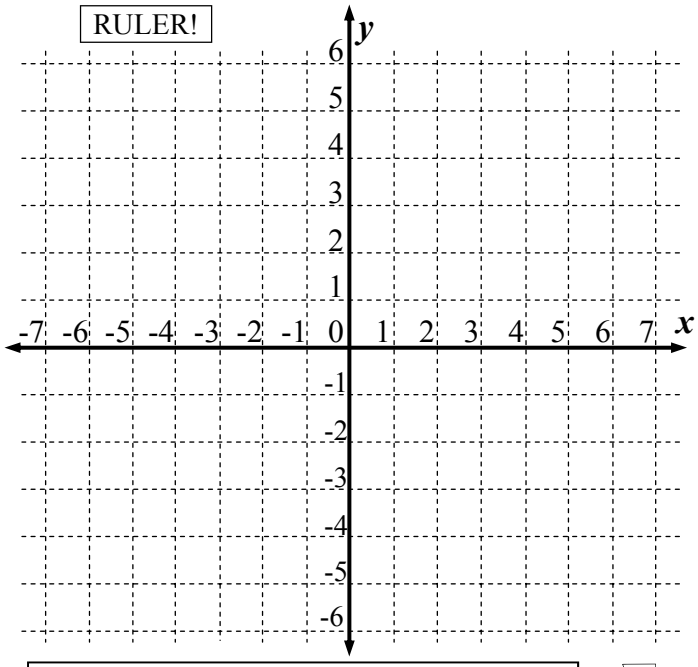
14 Which of the intervals are parallel (have the same gradient)?

a) Q3 || Q□

b) Q5 || Q□

c) Q1 || Q□ || Q□

RULER!



Plot the coordinates, then join them with an interval. Calculate the gradient for the interval by creating a gradient triangle. Use a ruler.

15 *A* (1, 2) and *B* (2, 6). $m = \frac{\square}{\square} = \square$

16 *C* (1, -2) and *D* (7, 4). $m = \frac{\square}{\square} = \square$

17 *E* (-7, -5) and *F* (-5, 3). $m = \frac{\square}{\square} = \square$

18 *G* (-7, 4) and *H* (-3, 6). $m = \frac{\square}{\square} = \frac{\square}{\square}$

19 *J* (-2, -6) and *K* (6, -2). $m = \frac{\square}{\square} = \frac{\square}{\square}$

20 *Q* (-5, -3) and *R* (-1, 1). $m = \frac{\square}{\square} = \square$

21 Which of the intervals are parallel? Use the letters on the interval to complete these:

GH || □ (2 letters) *AB* || □ *CD* || □

Investing Money - Simple Interest

Simple Interest is called simple interest because at the end of each year no interest is paid, it is only paid when the total time period of the investment is reached.

$$I = Prn$$

There are 4 variables in the formula, these are:

I = Interest earned on the investment (or payable on a loan)
P = Principal, the amount invested (or borrowed if a loan)
r = interest rate applied to the investment (or loan), expressed as a decimal (not a percentage)
n = the term, which is the time period the investment (or loan) is over

To find the interest payable, multiply the Principal, rate (as a decimal) and term. There is an example below. As you are dealing with money remember to round your answer to 2 decimal places (2 d.p.)

Example: Find the interest earned when \$5 100 is invested for 6 years at 7% p.a.

$r = 7 \div 100 = 0.07$	Convert 7% to a decimal by ÷ 100
$I = Prn$	Write the formula
$= 5\ 100 \times 0.07 \times 6$	Substitute values into formula
$I =$ \$2 142	Answer with '\$' sign and cents to 2 decimal places (if needed)

The second step, if required is finding the account balance (A). Which is the amount you have in the account after the interest is paid. The account balance is found by adding the principal and the interest together. So:

$$A = P + I$$

In the example above. The account balance would be:

$$A = P + I = 5\ 100 + 2\ 142 = \$7\ 242$$

Investing Money - Simple Interest (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Convert these interest rates from percentages to decimals. Divide by 100 to get a decimal.

Example:

16% = 16 ÷ 100 = 0.16

1 9% = ☐ ÷ 100 = ☐

2 5% = ☐ ÷ ☐ = ☐

3 10% = ☐ ÷ ☐ = ☐

Answer only, from now on.

4 14.5% = ☐

5 12.7% = ☐

6 4.92% = ☐

7 0.5% = ☐

8 7¼% = ☐

Calc: SHIFT 7 1 4 ÷ 1 0 0 S⇔D =

9 6¾% = ☐

Simple interest is found using $I = Prn$, but first convert the rate R to a decimal. Find I.

Example: Find the interest earned:

P = \$950, R = 8% p.a., n = 5 years

$r = 8 \div 100 = 0.08$

$I = Prn$

$= 950 \times 0.08 \times 5$

I = \$380

P = \$8 300, R = 6% p.a., n = 4 years

10 r = ☐ ÷ 100 = ☐

$I = Prn$

= ☐ × ☐ × ☐

P r n

I = ☐

Show the '$' sign

P = \$970, R = 4.5% p.a., n = 2 years

11 r = ☐ ÷ ☐ = ☐

$I = Prn$

= ☐ × ☐ × ☐

I = ☐ ← Cents are always 2 d.p.

P = \$5 400, R = 6.04% p.a., n = 7 yrs

12 r = ☐

$I = Prn$

= ☐

I = ☐

The next three have smaller interest rates, but you still have to ÷ 100, as they are percentages

P = \$820, R = 0.15%/week, n = 9 wks

13 r = ☐

$I = Prn$

= ☐

I = ☐

P = \$11 600, R = 0.4%/mth, n = 8 mths

14

Convert R to r (% to decimal)

Write Simple Interest Formula

Make the Substitution

Show 'I =', the '$' sign and cents to 2 d.p.

P = \$450, R = 0.05%/wk, n = 19 weeks

15

Round to 2 d.p. NOT nearest 5c.

P = \$47 130, R = 8.4% p.a., n = 6 years

16

R r

Keep going, but do less work. Use 3 lines not 4, Convert R to r, in the substitution line.

P = \$1 720, R = 4% p.a., n = 5 yrs

17 $I = Prn$ *Use r not R*

= ☐ × ☐ × ☐

I =

P = \$9 050, R = 3.75% p.a., n = 4 yrs

18 $I = Prn$ *Use r not R*

= ☐ × ☐ × ☐

I =

P = \$180, R = 6.25% p.a., n = 4.5 yrs

19

P = \$57 000, R = 4.02% p.a., n = 9 yrs

20

P = \$685.12, R = 13.07% p.a., n = 3 yrs

21

Investing Money - Simple Interest - Account Balance (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The account balance 'A' is what is in your account after the interest is paid. Calculate A.

Example: P = \$1 300, I = \$275.20

$A = P + I = 1\,300 + 275.20$

$A = \$1\,575.20$

$P = \$1\,150$, $I = \$662.30$

1 $A =$ ☐ + ☐

$A =$ ☐

Show '$' sign and cents to 2 decimal places

$P = \$580$, $I = \$39.65$

2 $A =$ ☐ + ☐

$A =$ ☐

$P = \$56\,970$, $I = \$4\,076.10$

3 $A =$

$A =$

$P = \$8\,030.62$, $I = \$1\,510.18$

4

$P = \$3\,877$, $I = \$772.92$

5

Jen has \$458.08 in her bank account and receives \$14.32 interest. Find her new account balance.

6

Neil has \$2 504.24 in the bank. He then receives interest of \$83.19. Calculate his account balance.

7

Calculate the interest earned then add it to the principal to find the account balance.

Example:

$P = \$1\,400$, $R = 7\%$ p.a., $n = 5$ years

$I = Prn$

$= 1\,400 \times 0.07 \times 5$

$I = \$490$

$A = 1\,400 + 490 = \$1\,890$

$P = \$4\,200$, $R = 5.2\%$ p.a., $n = 3$ yrs

8 $I = Prn$ *Use r not R*

$=$ ☐ × ☐ × ☐

$I =$ ☐

Show '$' sign and cents to 2 decimal places

$A =$ ☐ + ☐

$A =$ ☐

$P = \$19\,050$, $R = 4.8\%$ p.a., $n = 4$ yrs

9 $I = Prn$

$=$ ☐ × ☐ × ☐

$I =$ ☐

$A =$ ☐ + ☐

$A =$ ☐

$P = \$1\,150$, $R = 5.25\%$ p.a., $n = 6$ yrs

10

Interest rates are smaller as the period is shorter. Find the interest and account balance.

$P = \$79\,500$

$R = 0.05\%$ per week $n = 38$ weeks

Remember to convert R to r (% to a decimal)

11

$P = \$10\,200$

$R = 0.7\%$ per month $n = 9$ months

12

Jason invests \$840 in an account for 7 months which pays 0.45% per month. Calculate:

13 The interest Jason has earned

14 His account balance once the interest has been credited.

Investing Money - Simple Interest - Worded Questions (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Answer these. Always use the '$' sign and round cents, if there are any, to 2 d.p.

Eli invests $3 500 for 7 years at 5.4% p.a.

1 Convert 5.4% to a decimal.

2 Calculate the interest earned

$I = Prn$

3 His account balance after the interest has been paid.

Russell invests $950 for 8 months at 0.86% per month.

4 Convert 0.86% to a decimal.

5 Calculate the interest Russell earns on his investment.

6 His account balance after the interest is deposited.

Olivia has $13 600 to invest. She goes to two banks and is offered:
Bank 1: 6.05% p.a. on a 2 year term
Bank 2: 5.75% p.a. on a 2 year term

7 Calculate the interest earned if Bank 1 was chosen.

8 Calculate the interest earned if Bank 2 was chosen.

9 Calculate the extra interest earned if Olivia uses Bank 1.

Jiang li wants $38 000 in 3 years time to travel overseas. She invests $29 500 now earning 8.05% p.a.

10 Calculate the interest earned

11 Her account balance.

12 The additional amount req'd.

Yousef's investment of $17 000 for 4 years at 5.6% p.a. is about to mature. If he chooses to re-invest for 6 months he will earn 0.47%/month.

13 Calculate the interest earned from Yousef's first investment.

14 Calculate the account balance after the interest is paid.

Yousef chooses to reinvest all of his account balance for the 6 months

15 Convert 0.47% to a decimal.

16 Calculate the interest earned from Yousef's 2nd investment.

17 Calculate the account balance after the interest is paid.

Yousef is going to live off the money (in Q.17) while he completes a course for 1 year.

18 Convert the amount in Q.17 to a weekly amount.

Investing Money - Simple Interest (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Convert these interest rates from percentages to decimals. Divide by 100 to get a decimal.

Example:

16% = 16 ÷ 100 = 0.16

1 9% = 9 ÷ 100 = 0.09

2 5% = 5 ÷ 100 = 0.05

3 10% = 10 ÷ 100 = 0.1

Answer only, from now on.

4 14.5% = 0.145

5 12.7% = 0.127

6 4.92% = 0.0492

7 0.5% = 0.005

8 7¼% = 0.0725

Calc: SHIFT 7 1 4 ÷ 1 0 0 S⇔D =

9 6¾% = 0.0675

Simple interest is found using $I = Prn$, but first convert the rate R to a decimal. Find I.

Example: Find the interest earned:

P = \$950, R = 8% p.a., n = 5 years

$r = 8 \div 100 = 0.08$

$I = Prn$

$= 950 \times 0.08 \times 5$

I = \$380

P = \$8 300, R = 6% p.a., n = 4 years

10 r = 6 ÷ 100 = 0.06

$I = Prn$

$=$ 8 300 (P) × 0.06 (r) × 4 (n)

I = \$1 992

Show the '$' sign

P = \$970, R = 4.5% p.a., n = 2 years

11 r = 4.5 ÷ 100 = 0.045

$I = Prn$

$=$ 970 × 0.045 × 2

I = \$87.30 ← Cents are always 2 d.p.

P = \$5 400, R = 6.04% p.a., n = 7 yrs

12 $r = 6.04 \div 100 = 0.0604$

$I = Prn$

$=$ 5 400 × 0.0604 × 7

I = \$2 283.12

The next three have smaller interest rates, but you still have to ÷ 100, as they are percentages

P = \$820, R = 0.15%/week, n = 9 wks

13 $r = 0.15 \div 100 = 0.0015$

$I = Prn$

$=$ 820 × 0.0015 × 9

I = \$11.07

P = \$11 600, R = 0.4%/mth, n = 8 mths

14 $r = 0.4 \div 100 = 0.004$

Convert R to r (% to decimal)

$I = Prn$

Write Simple Interest Formula

$= 11\,600 \times 0.004 \times 8$

Make the Substitution

I = \$371.20

Show 'I =', the '$' sign and cents to 2 d.p.

P = \$450, R = 0.05%/wk, n = 19 weeks

Investing Money - Simple Interest - Account Balance (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The account balance 'A' is what is in your account after the interest is paid. Calculate A.

Example: P = \$1 300, I = \$275.20

$A = P + I = 1\,300 + 275.20$

$A = \$1\,575.20$

$P = \$1\,150$, $I = \$662.30$

1 $A =$ 1 150 + 662.30

$A =$ \$1 812.30

Show '\$' sign and cents to 2 decimal places

$P = \$580$, $I = \$39.65$

2 $A =$ 580 + 39.65

$A =$ \$619.65

$P = \$56\,970$, $I = \$4\,076.10$

3 $A = 56\,970 + 4\,076.10$

$A = \$61\,046.10$

$P = \$8\,030.62$, $I = \$1\,510.18$

4 $A = 8\,030.62 + 1\,510.18$

$A = \$9\,540.80$

$P = \$3\,877$, $I = \$772.92$

5 $A = 3\,877 + 772.92$

$A = \$4\,649.92$

Jen has \$458.08 in her bank account and receives \$14.32 interest. Find her new account balance.

6 $A = 458.08 + 14.32$

$A = \$472.40$

Neil has \$2 504.24 in the bank. He then receives interest of \$83.19. Calculate his account balance.

7 $A = 2\,504.24 + 83.19$

$A = \$2\,587.43$

Calculate the interest earned then add it to the principal to find the account balance.

Example:

$P = \$1\,400$, $R = 7\%$ p.a., $n = 5$ years

$I = Prn$

$= 1\,400 \times 0.07 \times 5$

$I = \$490$

$A = 1\,400 + 490 = \$1\,890$

$P = \$4\,200$, $R = 5.2\%$ p.a., $n = 3$ yrs

8 $I = Prn$ *Use r not R*

$=$ 4 200 × 0.052 × 3

$I =$ \$655.20

Show '\$' sign and cents to 2 decimal places

$A =$ 4 200 + 655.20

$A =$ \$4 855.20

$P = \$19\,050$, $R = 4.8\%$ p.a., $n = 4$ yrs

9 $I = Prn$

$=$ 19 050 × 0.048 × 4

$I =$ \$3 657.60

$A =$ 19 050 + 3 657.60

$A =$ \$22 707.60

$P = \$1\,150$, $R = 5.25\%$ p.a., $n = 6$ yrs

10 $I = Prn$

$= 1\,150 \times 0.0525 \times 6$

$I = \$362.25$

$A = 1\,150 + 362.25$

$A = \$1\,512.25$

Interest rates are smaller as the period is shorter. Find the interest and account balance.

$P = \$79\,500$

$R = 0.05\%$ per week $n = 38$ weeks

Remember to convert R to r (% to a decimal)

11 $I = Prn$

$= 79\,500 \times 0.0005 \times 38$

$I = \$1\,510.50$

$A = 79\,500 + 1\,510.50$

$A = \$81\,101.50$

$P = \$10\,200$

$R = 0.7\%$ per month $n = 9$ months

12 $I = Prn$

$= 10\,200 \times 0.007 \times 9$

$I = \$642.60$

$A = 10\,200 + 642.60$

$A = \$10\,842.60$

Jason invests \$840 in an account for 7 months which pays 0.45% per month. Calculate:

13 The interest Jason has earned

$I = Prn$

$= 840 \times 0.0045 \times 7$

$I = \$26.46$

14 His account balance once the interest has been credited.

$A = 840 + 26.46$

$A = \$866.46$

Investing Money - Simple Interest - Worded Questions (Sheet 3)

Answer these. Always use the '$' sign and round cents, if there are any, to 2 d.p.

Eli invests $3 500 for 7 years at 5.4% p.a.

1 Convert 5.4% to a decimal.

$r = 5.4 \div 100 = 0.054$

2 Calculate the interest earned

$I = Prn$

$= 3\ 500 \times 0.054 \times 7$

$I = \$1\ 323$

3 His account balance after the interest has been paid.

$A = 3\ 500 + 1\ 323$

$A = \$4\ 823$

Russell invests $950 for 8 months at 0.86% per month.

4 Convert 0.86% to a decimal.

$r = 0.86 \div 100 = 0.0086$

5 Calculate the interest Russell earns on his investment.

$I = Prn$

$= 950 \times 0.0086 \times 8$

$I = \$65.36$

6 His account balance after the interest is deposited.

$A = 950 + 65.36$

$A = \$1\ 015.36$

Olivia has $13 600 to invest. She goes to two banks and is offered:
Bank 1: 6.05% p.a. on a 2 year term
Bank 2: 5.75% p.a. on a 2 year term

7 Calculate the interest earned if Bank 1 was chosen.

$I = Prn$

$= 13\ 600 \times 0.0605 \times 2$

$I = \$1\ 645.60$

8 Calculate the interest earned if Bank 2 was chosen.

$I = Prn$

$= 13\ 600 \times 0.0575 \times 2$

$I = \$1\ \ 564$

9 Calculate the extra interest earned if Olivia uses Bank 1.

$Extra = 1\ 645.60 - 1\ \ 564$

$Extra = \$81.60$

Jiang li wants $38 000 in 3 years time to travel overseas. She invests $29 500 now earning 8.05% p.a.

10 Calculate the interest earned

$I = Prn$

$= 29\ 500 \times 0.0805 \times 3$

$I = \$7\ 124.25$

11 Her account balance.

$A = 29\ 500 + 7\ 124.25$

$A = \$36\ 624.25$

12 The additional amount req'd.

$Amount = 38\ 000 - 36\ 624.25$

$Amount = \$1\ 375.75$

Yousef's investment of $17 000 for 4 years at 5.6% p.a. is about to mature. If he chooses to re-invest for 6 months he will earn 0.47%/month.

13 Calculate the interest earned from Yousef's first investment.

$I = Prn$

$= 17\ 000 \times 0.056 \times 4$

$I = \$3\ 808$

14 Calculate the account balance after the interest is paid.

$A = 17\ 000 + 3\ 808$

$A = \$20\ 808$

Yousef chooses to reinvest all of his account balance for the 6 months

15 Convert 0.47% to a decimal.

$r = 0.47 \div 100 = 0.0047$

16 Calculate the interest earned from Yousef's 2nd investment.

$I = Prn$

$= 20\ 808 \times 0.0047 \times 6$

$I = \$586.79$

17 Calculate the account balance after the interest is paid.

$A = 20\ 808 + 586.79$

$A = \$21\ 394.79$

Yousef is going to live off the money (in Q.17) while he completes a course for 1 year.

18 Convert the amount in Q.17 to a weekly amount.

$Weekly = 21\ 394.79 \div 52$

$Weekly = \$411.44$

Investing Money - Simple Interest - Changing the Term

Simple Interest is called simple interest because at the end of each year no interest is paid, it is only paid when the total time period of the investment is reached.

$$I = Prn$$

n = the term, which is the time period the investment (or loan) is over

The term can be any period, but because the interest rate is usually an annual (yearly) rate the term should also be in years. So when you have an investment period of days, weeks or months, these have to be converted to years using fractions.

To convert to years:

Number of Days	Number of Weeks	Number of Months
365	52	12
Period in Days	Period in Weeks	Period in Months

Note that the denominators (bottom numbers) don't change if the period is longer than a year. For example if a period is 15 months (more than 1 year), you still use 12, not 24.

Example: Find the interest earned when \$5 100 is invested for 17 months at 7% p.a.

$r = 7 \div 100 = 0.07$ ← Convert 7% to a decimal by ÷ 100

$I = Prn$ ← Write the formula

$= 5\,100 \times 0.07 \times \frac{17}{12}$ ← Substitute values into formula Changing 17 months into a fraction of a year.

$I = \$505.75$

Answer with '\$' sign and cents to 2 decimal places (if needed)

Investing Money - Simple Interest - Changing the Term (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Write these time periods as fractions of a year. Don't simplify the fractions.

Examples:

5 months = $\frac{5}{12}$ 13 weeks = $\frac{13}{52}$

1 25 weeks = $\frac{\square}{\square}$

2 9 months = $\frac{\square}{\square}$

3 117 days = $\frac{\square}{\square}$

4 14 weeks = $\frac{\square}{\square}$

5 15 months = $\frac{\square}{\square}$

Calculate the interest earned on these investments.

P = \$1 040, R = 8% p.a., n = 9 weeks

6 r = $\square$ ÷ 100 = $\square$

Convert the rate to a decimal

$I = Prn$

= $\square$ × $\square$ × $\frac{\square}{\square}$

P r n

Calc: 1 0 4 0 × 0 . 0 8 × 9 ab/c 5 2 =

I = $\square$

Show the '\$' sign and write cents to 2 d.p.

P = \$4 260, R = 9% p.a., n = 7 months

7 r = $\square$ ÷ $\square$ = $\square$

$I = Prn$

= $\square$ × $\square$ × $\frac{\square}{\square}$

I = $\square$

P = \$1 095, R = 5.6% p.a., n = 220 days

8 r = $\square$ ÷ $\square$ = $\square$

$I = Prn$

= $\square$ × $\square$ × $\frac{\square}{\square}$

I = $\square$

P = \$7 176, R = 3.2% p.a., n = 85 wks.

9 r =

$I = Prn$

=

I =

Complete these calculations, rounding to 2 decimal places.

10 $I = 5\,000 \times 0.046 \times \frac{19}{12}$

I = $\square$

11 $I = 83\,560 \times 0.105 \times \frac{96}{365}$

I = $\square$

P = \$2 500, R = 6.3% p.a., n = 177 days

Date Due:

Write these times as fractions of a year

1 43 weeks = $\frac{43}{52}$ ← How many weeks in a year

2 220 days = $\frac{220}{365}$ ← How many days in a year

Calculate the Interest earned

P = \$26 000, R = 9% p.a., n = 37 weeks

3 $r = 9 \div 100 = 0.09$

Convert the rate R to a decimal

$I = Prn$

$= 26\,000 \times 0.09 \times \frac{37}{52}$

P r n

$I =$ \$1 665

P = \$18 000, R = 6% p.a., n = 8 months

4 $r = 6 \div 100 = 0.06$

$I = Prn$

$= 18\,000 \times 0.06 \times \frac{8}{12}$

$I =$ \$720

Investing Money - Simple Interest - Finding the Term 'n'

Imagine you are saving for something and know how much you need. You can invest an amount now, and later, after the investment has had the interest paid have the amount that you need. The problem is how long do you invest it for?

These sheets deal with finding how long to invest. The answers are all whole years. There are two methods used.

Guess and Check: This means you pick a period of time, put the number into the simple interest formula and see if it gets the answer. If the answer is too low increase the time. Too high, decrease it, until you get the answer.

Example: An investment of \$9 000 at 6% p.a., results in interest of \$4 320. Find the period.

$I = Prn$ ← Simple Interest Formula

Convert rate

$4\,320 = 9\,000 \times 0.06 \times n$ ← Substitute the values, remember to use the interest rate r as a decimal

Interest | Principal | to a decimal

Tried $n =$ ☐ ☐ ☐ ☐

○ Low ○ Low ○ Low ○ Low

○ High ○ High ○ High ○ High

← Try a value of 'n'. Work out $9\,000 \times 0.06 \times$ (the value). If it = 4 320 that's n! If it is less than 4 320 increase n. If it is more than 4 320 decrease n. Keep going until you get 4 320.

$n =$ ☐ years

Algebraic: This method uses equation solving skills. It has the advantage of getting the answer straight away. But you have to know how to solve an equation.

Example: An investment of \$9 000 at 6% p.a., results in interest of \$4 320. Find the period.

17 Interest of \$1 386 is earned from a \$3 300 investment at 7% p.a.

$1\,386 = 3\,300 \times 0.07 \times n$ ← Simple Interest Formula. Substitute the values, remember to use the interest rate r as a decimal

Interest | Principal | Rate (decimal)

$1\,386 = 231 \times n$ ← Multiply P and r

$\div 231$ $\div 231$ ← Divide both sides by the number with n. That gives you your answer.

$n = \frac{1\,386}{231} = 6$ years

Investing Money - Simple Interest - Guess & Check for Term '*n*' (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use 'Guess and Check' to find the value of '*n*' for these. Use the back arrow.

1 $2\,160 = 6\,000 \times 0.09 \times n$

Try '*n*' = 3 ____ (Compare to 2 160)

$6000 \times 0.09 \times 3$

Try '*n*' = 5 ____ (Compare to 2 160)

$6000 \times 0.09 \times 5$

Try '*n*' = ____ ____

2 $336 = 1\,200 \times 0.04 \times n$

Try '*n*' = 5 ____ (Compare to 336)

$1\,200 \times 0.04 \times 5$

Try '*n*' = 9 ____ (Compare to 336)

$1\,200 \times 0.04 \times 9$

Try '*n*' = ____ ____

Keep trying '*n*' values until you get 336

3 $2\,805 = 8\,500 \times 0.03 \times n$

Keep trying '*n*' values until you get 2 805

Tried *n* = ____ ____ ____ ○Low ○Low ○Low ○High ○High ○High $n =$ ____

4 $1\,100 = 1\,250 \times 0.11 \times n$

Keep trying '*n*' values until you get 1 100

Tried *n* = ____ ____ ____ ○Low ○Low ○Low ○High ○High ○High $n =$ ____

5 $6\,600 = 44\,000 \times 0.05 \times n$

Tried *n* = ____ ____ ____ ○Low ○Low ○Low ○High ○High ○High $n =$ ____

6 $934.40 = 730 \times 0.08 \times n$

Tried *n* = ____ ____ ____ ○Low ○Low ○Low ○High ○High ○High $n =$ ____

These are done the same way but this time you first need to build the calculation line. Find '*n*'.

7 An investment of $800 at 7% p.a., results in interest of $224.

____ = ____ × ____ × *n*

Interest | Principal | Convert rate to a decimal

Tried *n* = ____ ____ ____ ____ ○Low ○Low ○Low ○Low ○High ○High ○High ○High

$n =$ ____ years

8 Interest of $9 984 is earned from a $9 600 investment at 8% p.a.

____ = ____ × ____ × *n*

Interest | Principal | Rate (decimal)

Tried *n* = ____ ____ ____ ____ ○Low ○Low ○Low ○Low ○High ○High ○High ○High

$n =$ ____ years

9 $1 450 is invested at 4% p.a. and earns interest of $464.

$I = P r$

____ = ____ × ____ × *n*

Tried *n* = ____ ____ ____ ____ ○Low ○Low ○Low ○Low ○High ○High ○High ○High

$n =$ ____ years

10 Interest of $1 137.50 is earned from a $3 250 investment at 5% p.a.

$I = P r$

____ = ____ × ____ × *n*

Tried *n* = ____ ____ ____ ____ ○Low ○Low ○Low ○Low ○High ○High ○High ○High

$n =$ ____ years

Now write the formula, make the substitution and find '*n*' by Guess and Check methods.

11 An investment of $800 at 7% p.a., results in interest of $224.

Write the formula $I = Prn$

____ = ____ × ____ × *n*

Substitute *I*, *P* and *r* (as a decimal)

$n =$ ____ years

12 Interest of $3 652 is earned from a $4 150 investment at 11% p.a.

____ = ____ × ____ × *n*

$n =$ ____ years

13 An investment of $930 at 6% p.a., results in interest of $167.40.

14 Interest of $1 430 is earned from a $2 200 investment at 13% p.a.

Investing Money - Simple Interest - Algebraic Solution Term 'n' (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find 'n' by solving these. Use the '÷' key or the fraction key.

1 $n = \frac{7\,500}{1\,250} =$ ☐

2 $n = \frac{9\,960}{830} =$ ☐

3 $n = \frac{587}{117.40} =$ ☐

4 $n = \frac{7\,994}{3\,997} =$ ☐

Create the division first, by dividing by the number next to the 'n'. Find the value of 'n'.

Example

$176.40 = 29.4 \times n$

(÷ 29.4) (÷ 29.4)

$n = \frac{176.40}{29.4} = 6$

5 $126 = 18 \times n$

(÷ 18) (÷ 18)

$n = \frac{\square}{\square} = \square$

6 $420 = 70 \times n$

(÷ 70) (÷ 70)

$n = \frac{\square}{\square} = \square$

7 $1\,101.10 = 100.10 \times n$

(÷ 100.10) (÷ 100.10)

$n = \frac{\square}{\square} = \square$

8 $2\,274.80 = 568.70 \times n$

(÷ 568.70) (÷ 568.70)

$n = \frac{\square}{\square} = \square$

9 $3\,080 = 440 \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

10 $414 = 138 \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

11 $1\,336.50 = 148.50 \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

1 extra step, perform a × first, then it's the same process. Find the value of 'n'.

Example

$1\,300 = 6\,500 \times 0.05 \times n$

Multiply these

$1\,300 = 325 \times n$

(÷ 325) (÷ 325)

$n = \frac{1\,300}{325} = 4$

12 $680 = 1\,700 \times 0.08 \times n$

$680 = \square \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

13 $2\,541 = 3\,850 \times 0.06 \times n$

$\square = \square \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

14 $4\,900 = 14\,000 \times 0.05 \times n$

$\square = \square \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

Get the numbers out of the sentence and solve for 'n', which is the term, in years.

15 Interest of $537.60 is earned from a $960 investment at 7% p.a.

☐ = ☐ × ☐ × n

Interest | Principal | Rate (decimal)

$\square = \square \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$ years

16 Interest of $3 354 is earned from a $4 300 investment at 13% p.a.

☐ = ☐ × ☐ × n

Interest | Principal | Rate (decimal)

$\square = \square \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$ years

17 Interest of $590 is earned from a $1 475 investment at 5% p.a.

☐ = ☐ × ☐ × n

Interest | Principal | Rate (decimal)

$\square = \square \times n$

( ) ( )

$n = \frac{\square}{\square} = \square$ years

Investing Money - Simple Interest - Further Finding the Term (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the term 'n' by solving these. Follow the example.

Example

Interest of \$1 752 is earned from a \$7 300 investment at 4% p.a., find the term of the investment.

$I = Prn$ — Write Formula

$1752 = 7\,300 \times 0.04 \times n$ — Substitute Values (Decimal)

$1\,752 = 292 \times n$ — Simplify The '×'

$\div 292$ $\div 292$

$n = \frac{1\,752}{292} = 6$ years — Divide and solve

1 Interest of \$120 is earned from a \$500 investment at 4% p.a., find the term of the investment.

2 An investment of \$3 250 at 7% p.a., results in interest of \$2 275 being paid. Find the term of the investment.

3 Interest of \$620.40 is received from a \$940 investment at 6% p.a., find the term of the investment.

4 An investment of \$1 700 at 8% p.a., results in interest of \$952 being paid. Find the term of the investment.

5 Interest of \$8 944 is earned from an \$8 600 investment at 13% p.a., find the term of the investment.

6 An investment of \$4 850 at 11% p.a., results in interest of \$4 801.50 being paid. Find the investment's term.

This time you want a total amount in the future, follow the steps to find the term.

David has \$9 000 in the bank but he needs \$12 600 for a future trip.

7 How much interest does he have to earn to have an account balance of \$12 600?

$I =$ [ ] - [ ]

$I =$ [ ]

8 If David's investment pays interest at 5% p.a., find the term of the investment to achieve the interest.

Skye has \$26 000 in the bank but she needs \$36 400 for a home deposit.

9 How much interest does she have to earn to have an account balance of \$36 400?

$I =$

$I =$

10 If Skye earns interest at 8% p.a., find the term of the investment needed to get the deposit.

Investing Money - Simple Interest - Guess & Check for Term 'n' (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use 'Guess and Check' to find the value of 'n' for these. Use the back arrow.

1 $2\,160 = 6\,000 \times 0.09 \times n$

Try 'n' = 3 → 1 620 (Compare to 2 160)
$6000 \times 0.09 \times 3$

Try 'n' = 5 → 2 700 (Compare to 2 160)
$6000 \times 0.09 \times 5$

Try 'n' = 4 → 2 160

2 $336 = 1\,200 \times 0.04 \times n$

Try 'n' = 5 → 240 (Compare to 336)
$1\,200 \times 0.04 \times 5$

Try 'n' = 9 → 432 (Compare to 336)
$1\,200 \times 0.04 \times 9$

Try 'n' = 7 → 336

Keep trying 'n' values until you get 336

3 $2\,805 = 8\,500 \times 0.03 \times n$

Keep trying 'n' values until you get 2 805

Tried n =	3	7	13
	Low	Low	Low
	High	High	High

n = 11

4 $1\,100 = 1\,250 \times 0.11 \times n$

Keep trying 'n' values until you get 1 100

Tried n =	5	9	7
	Low	Low	Low
	High	High	High

n = 8

5 $6\,600 = 44\,000 \times 0.05 \times n$

Tried n =	5	2	4
	Low	Low	Low
	High	High	High

n = 3

6 $934.40 = 730 \times 0.08 \times n$

Tried n =	4	8	14
	Low	Low	Low
	High	High	High

n = 16

These are done the same way but this time you first need to build the calculation line. Find 'n'.

7 An investment of \$800 at 7% p.a., results in interest of \$224.

224	=	800	×	0.07	× n
Interest		Principal		Convert rate to a decimal	

Tried n =	2	6	5	
	Low	Low	Low	Low
	High	High	High	High

n = 4 years

8 Interest of \$9 984 is earned from a \$9 600 investment at 8% p.a.

9 984	=	9 600	×	0.08	× n
Interest		Principal		Rate (decimal)	

Tried n =	8	10	12	14
	Low	Low	Low	Low
	High	High	High	High

n = 13 years

9 \$1 450 is invested at 4% p.a. and earns interest of \$464.

I	=	P		r	
464	=	1 450	×	0.04	× n

Tried n =	5	7	9	
	Low	Low	Low	Low
	High	High	High	High

n = 8 years

10 Interest of \$1 137.50 is earned from a \$3 250 investment at 5% p.a.

I	=	P		r	
1 137.50	=	3 250	×	0.05	× n

Tried n =	4	6	8	
	Low	Low	Low	Low
	High	High	High	High

n = 7 years

Now write the formula, make the substitution and find 'n' by Guess and Check methods.

11 An investment of \$800 at 7% p.a., results in interest of \$224.

$I = Prn$

Write the formula $I = Prn$

$224 = 800 \times 0.07 \times n$

Substitute I, P and r (as a decimal)

n = 4 years

12 Interest of \$3 652 is earned from a \$4 150 investment at 11% p.a.

$I = Prn$

$3\,652 = 4\,150 \times 0.11 \times n$

n = 8 years

13 An investment of \$930 at 6% p.a., results in interest of \$167.40.

$I = Prn$

$167.40 = 930 \times 0.06 \times n$

$n = 3$ years

14 Interest of \$1 430 is earned from a \$2 200 investment at 13% p.a.

$I = Prn$

$1\,430 = 2\,200 \times 0.13 \times n$

$n = 5$ years

Investing Money - Simple Interest - Algebraic Solution Term '*n*' (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find '*n*' by solving these. Use the '÷' key or the fraction key.

1 $n = \frac{7\,500}{1\,250} =$ 6

2 $n = \frac{9\,960}{830} =$ 12

3 $n = \frac{587}{117.40} =$ 5

4 $n = \frac{7\,994}{3\,997} =$ 2

Create the division first, by dividing by the number next to the '*n*'. Find the value of '*n*'.

Example

$176.40 = 29.4 \times n$

÷ 29.4 ÷ 29.4

$n = \frac{176.40}{29.4} =$ 6

5 $126 = 18 \times n$

÷ 18 ÷ 18

$n = \frac{126}{18} =$ 7

6 $420 = 70 \times n$

÷ 70 ÷ 70

$n = \frac{420}{70} =$ 6

7 $1\,101.10 = 100.10 \times n$

÷ 100.10 ÷ 100.10

$n = \frac{1\,101.10}{100.10} =$ 11

8 $2\,274.80 = 568.70 \times n$

÷ 568.70 ÷ 568.70

$n = \frac{2\,274.80}{568.70} =$ 4

9 $3\,080 = 440 \times n$

÷ 440 ÷ 440

$n = \frac{3\,080}{440} =$ 7

10 $414 = 138 \times n$

÷ 138 ÷ 138

$n = \frac{414}{138} =$ 3

11 $1\,336.50 = 148.50 \times n$

÷ 148.50 ÷ 148.50

$n = \frac{1\,336.50}{148.50} =$ 9

1 extra step, perform a × first, then it's the same process. Find the value of '*n*'.

Example

$1\,300 = 6\,500 \times 0.05 \times n$

Multiply these

$1\,300 = 325 \times n$

÷ 325 ÷ 325

$n = \frac{1\,300}{325} =$ 4

12 $680 = 1\,700 \times 0.08 \times n$

$680 =$ 136 $\times n$

÷ 136 ÷ 136

$n = \frac{680}{136} =$ 5

13 $2\,541 = 3\,850 \times 0.06 \times n$

$2\,541 =$ 231 $\times n$

÷ 231 ÷ 231

$n = \frac{2\,541}{231} =$ 11

14 $4\,900 =$ 14 000 $\times 0.05 \times n$

4 900 $=$ 700 $\times n$

÷ 700 ÷ 700

$n = \frac{4\,900}{700} =$ 7

Get the numbers out of the sentence and solve for '*n*', which is the term, in years.

15 Interest of $537.60 is earned from a $960 investment at 7% p.a.

537.60 = 960 × 0.07 × *n*

Interest | Principal | Rate (decimal)

537.60 = 67.2 × *n*

÷ 67.2 ÷ 67.2

$n = \frac{537.60}{67.2} =$ 8 years

16 Interest of $3 354 is earned from a $4 300 investment at 13% p.a.

3 354 = 4 300 × 0.13 × *n*

Interest | Principal | Rate (decimal)

3 354 = 559 × *n*

÷ 559 ÷ 559

$n = \frac{3\,354}{559} =$ 6 years

17 Interest of $590 is earned from a $1 475 investment at 5% p.a.

590 = 1 475 × 0.05 × *n*

Interest | Principal | Rate (decimal)

590 = 73.75 × *n*

÷ 73.75 ÷ 73.75

$n = \frac{590}{73.75} =$ 8 years

Investing Money - Simple Interest - Further Finding the Term (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the term 'n' by solving these. Follow the example.

Example

Interest of \$1 752 is earned from a \$7 300 investment at 4% p.a., find the term of the investment.

$I = Prn$ — Write Formula

Decimal

$1752 = 7\,300 \times 0.04 \times n$ — Substitute Values

$1\,752 = 292 \times n$ — Simplify The '×'

$\div 292 \quad \div 292$

$n = \frac{1\,752}{292} = 6$ years — Divide and solve

1 Interest of \$120 is earned from a \$500 investment at 4% p.a., find the term of the investment.

$I = Prn$

$120 = 500 \times 0.04 \times n$

$120 = 20 \times n$

$\div 20 \quad \div 20$

$n = \frac{120}{20} = 6$ years

2 An investment of \$3 250 at 7% p.a., results in interest of \$2 275 being paid. Find the term of the investment.

$I = Prn$

$2\,275 = 3\,250 \times 0.07 \times n$

$2\,275 = 227.5 \times n$

$\div 227.5 \quad \div 227.5$

$n = \frac{2\,275}{227.5} = 10$ years

3 Interest of \$620.40 is received from a \$940 investment at 6% p.a., find the term of the investment.

$I = Prn$

$620.40 = 940 \times 0.06 \times n$

$620.40 = 56.4 \times n$

$\div 56.4 \quad \div 56.4$

$n = \frac{620.40}{56.4} = 11$ years

4 An investment of \$1 700 at 8% p.a., results in interest of \$952 being paid. Find the term of the investment.

$I = Prn$

$952 = 1\,700 \times 0.08 \times n$

$952 = 136 \times n$

$\div 136 \quad \div 136$

$n = \frac{952}{136} = 7$ years

5 Interest of \$8 944 is earned from an \$8 600 investment at 13% p.a., find the term of the investment.

$I = Prn$

$8\,944 = 8\,600 \times 0.13 \times n$

$8\,944 = 1\,118 \times n$

$\div 1\,118 \quad \div 1\,118$

$n = \frac{8\,944}{1\,118} = 8$ years

6 An investment of \$4 850 at 11% p.a., results in interest of \$4 801.50 being paid. Find the investment's term.

$I = Prn$

$4\,801.50 = 4\,850 \times 0.11 \times n$

$4\,801.50 = 533.5 \times n$

$\div 533.5 \quad \div 533.5$

$n = \frac{4\,801.50}{533.5} = 9$ years

This time you want a total amount in the future, follow the steps to find the term.

David has \$9 000 in the bank but he needs \$12 600 for a future trip.

7 How much interest does he have to earn to have an account balance of \$12 600?

$I =$ 12 600 - 9 000

$I =$ \$3 600

8 If David's investment pays interest at 5% p.a., find the term of the investment to achieve the interest.

$I = Prn$

$3\,600 = 9\,000 \times 0.05 \times n$

$3\,600 = 450 \times n$

$\div 450 \quad \div 450$

$n = \frac{3\,600}{450} = 8$ years

Skye has \$26 000 in the bank but she needs \$36 400 for a home deposit.

9 How much interest does she have to earn to have an account balance of \$36 400?

$I =$ 36 400 - 26 000

$I =$ \$10 400

10 If Skye earns interest at 8% p.a., find the term of the investment needed to get the deposit.

$I = Prn$

$10\,400 = 26\,000 \times 0.08 \times n$

$10\,400 = 2\,080 \times n$

$\div 2\,080 \quad \div 2\,080$

$n = \frac{10\,400}{2\,080} = 5$ years

Investing Money - Simple Interest - Finding the Term (Homework Strip)

Investing Money - Simple Interest - Finding the Principal '*P*'

Imagine you are saving for something and know how much you need. You can invest an amount now, and later, after the investment has had the interest paid have the amount that you need. The problem is how much do you need to invest now?

These sheets deal with finding how much to invest. There are two methods used.

Guess and Check: This means you an amount, put the number into the simple interest formula and see if it gets the answer. If the answer is too low increase the amount. Too high, decrease it, until you get the answer.

Example: An investment for 3 years at 4% p.a., results in interest of $660. Find the principal.

$I = Prn$ ← Simple Interest Formula

Convert rate

660 = $P \times$ 0.04 $\times$ 3

Interest | to a decimal | Period

← Substitute the values, remember to use the interest rate *r* as a decimal

Tried $P =$			
	○ Low ○ High	○ Low ○ High	○ Low ○ High

← Try a value of '*P*'. Work out (the value) × 9 000 × 0.06
If it = 660 that's *P*!
If it is less than 660 increase *P*.
If it is more than 660 decrease *P*.
Keep going until you get 660.

$P =$

Algebraic: This method uses equation solving skills. It has the advantage of getting the answer straight away. But you have to know how to solve an equation.

Example: An investment of $9 000 at 6% p.a., results in interest of $4 320. Find the period.

17 Interest of $1 386 is earned from a $3 300 investment at 7% p.a.

1 386 = 3 300 × 0.07 × *n*

Interest | Principal | Rate (decimal)

← Simple Interest Formula
Substitute the values, remember to use the interest rate *r* as a decimal

1 386 = 231 × *n*

← Multiply *P* and *r*

÷ 231 ÷ 231

← Divide both sides by the number with *n*.
That gives you your answer.

$n = \frac{1\,386}{231} =$ 6 years

Investing Money - Simple Interest - Guess & Check Principal (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use 'Guess and Check' to find the value of 'P' for these. Use the back arrow. All values are in thousands.

1 $3\,360 = 0.07 \times 8 \times P$

Try 'P' = 3 000 ____ / $0.07 \times 8 \times 3\,000$ — Compare to 3 360

Try 'P' = 5 000 ____ / $0.07 \times 8 \times 5\,000$ — Compare to 3 360

Try 'P' = 7 000 ____ / $0.07 \times 8 \times 7\,000$ — Compare to 3 360

$P =$ ____

2 $1\,440 = 0.04 \times 3 \times P$

Try 'P' = 3 000 ____ / $0.04 \times 3 \times 3\,000$ — Compare to 1 440

Try 'P' = 7 000 ____ / $0.04 \times 3 \times 7\,000$ — Compare to 1 440

Try 'P' = 11 000 ____ / $0.04 \times 3 \times 11\,000$ — Compare to 1 440

$P =$ ____

Keep trying 'P' values until you get 1 440

3 $12\,870 = 0.11 \times 9 \times P$

Try 'P' = 5 000 ____ / $0.11 \times 9 \times 5\,000$ — Compare to 12 870

Try 'P' = 10 000 ____ / $0.11 \times 9 \times 10\,000$ — Compare to 12 870

Try 'P' = 15 000 ____ / $0.11 \times 9 \times 15\,000$ — Compare to 12 870

$P =$ ____

Keep trying 'P' values until you get 12 870

Build the calculation line. But use $I = rnP$, so that the P is the last number on your calc. Find 'P'.

4 An investment at 6% p.a. for 5 years, results in interest of $2 400.

____ = ____ × ____ × P

Interest | Rate (decimal) | Term

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

$P =$ $

5 An investment yields interest of $2 880 after 8 years, at 12% p.a.

____ = ____ × ____ × P

I | r | n

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

$P =$ ____

6 An investment at 11% p.a. for 2 years, results in interest of $5 280.

____ = ____ × ____ × P

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

$P =$ ____

7 An investment at 9% p.a. for 7 years, results in interest of $10 080.

____ = ____ × ____ × P

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

$P =$ ____

Now write the formula, with P at the end. Make the substitution and find 'P'. (whole thousands)

8 An investment at 6% p.a. for 8 years, results in interest of $6 240.

____

Write the formula $I = rnP$, with P at the end

____ = ____ × ____ × P

Substitute I, then r (as a decimal) and then n.

$P =$ ____

Show the $ sign

9 An investment at 10% p.a. for 4 years, results in interest of $1 200.

____

____ = ____ × ____ × P

$P =$ ____

10 An investment yields interest of $3 780 after 7 years, at 3% p.a.

____

____

____

11 An investment yields interest of $1 980 after 3 years, at 6% p.a.

____

____

____

Investing Money - Simple Interest - Algebraic Sol Principal 'P' (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find 'P' by solving these. Use the '÷' key or the fraction key.

1 $P = \dfrac{120}{0.6} =$ ☐

2 $P = \dfrac{868}{0.62} =$ ☐

3 $P = \dfrac{4\ 200}{0.48} =$ ☐

4 $P = \dfrac{111.60}{0.72} =$ ☐

Create the division first, by dividing by the number next to the 'P'. Find the value of 'P'.

Example

$176.40 = P \times 0.42$

÷ 0.42 ÷ 0.42

$P = \dfrac{176.40}{0.42} = 420$

5 $240 = P \times 0.48$

÷ 0.48 ÷ 0.48

$P = \dfrac{\square}{\square} = \square$

6 $975 = P \times 0.65$

÷ 0.65 ÷ 0.65

$P = \dfrac{\square}{\square} = \square$

7 $4\ 968 = P \times 0.54$

÷ 0.54 ÷ 0.54

$P = \dfrac{\square}{\square} = \square$

8 $1\ 344 = P \times 0.24$

÷ 0.24 ÷ 0.24

$P = \dfrac{\square}{\square} = \square$

9 $459.20 = P \times 0.56$

÷ ÷

$P = \dfrac{\square}{\square} = \square$

10 $2\ 343 = P \times 0.33$

÷ ÷

$P = \dfrac{\square}{\square} = \square$

11 $2\ 196 = P \times 0.72$

÷ ÷

$P = \dfrac{\square}{\square} = \square$

Multiply r and n first, then it's the same division process. Find the value of 'P'.

Example

$279.60 = P \times 0.03 \times 8$

Multiply these

$279.60 = P \times 0.24$

÷ 0.24 ÷ 0.24

$P = \dfrac{279.60}{0.24} = 1\ 165$

12 $195 = P \times 0.06 \times 5$

$195 = P \times \square$

÷ ÷

$P = \dfrac{\square}{\square} = \square$

13 $484.20 = P \times 0.04 \times 3$

$484.20 = P \times \square$

÷ ÷

$P = \dfrac{\square}{\square} = \square$

Substitute into the formula to find the value of 'P'.

14 Interest of \$86 is earned from a 5 year investment at 4% p.a.

☐ $= P \times$ ☐ $\times$ ☐

Interest Rate (decimal) Term

☐ $= P \times$ ☐

÷ ÷

$P = \dfrac{\square}{\square} =$ \$ ☐

$ sign

15 Interest of \$14 016 is earned from a 4 year investment at 12% p.a.

☐ $= P \times$ ☐ $\times$ ☐

☐ $= P \times$ ☐

÷ ÷

$P = \dfrac{\square}{\square} = \square$

$ sign

16 Interest of \$799.20 is earned from a 6 year investment at 9% p.a.

☐ $= P \times$ ☐ $\times$ ☐

☐ $= P \times$ ☐

÷ ÷

$P = \dfrac{\square}{\square} = \square$
