17 Interest of \$457.20 is earned from a 3 year investment at 6% p.a.

☐ $= P \times$ ☐ $\times$ ☐

☐ $= P \times$ ☐

÷ ÷

$P = \dfrac{\square}{\square} = \square$

Investing Money - Simple Interest - Further Finding Principal (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the amount invested, the Principal 'P' by solving these. Remember the $ sign.

Example

Interest of $374.50 is earned from a 5 year investment at 7% p.a., find the principal invested.

$I = Prn$ — Write Formula

Decimal: 0.07

$374.50 = P \times 0.07 \times 5$ — Substitute Values

$374.50 = P \times 0.35$ — Simplify The '×'

$\div 0.35$ $\div 0.35$

$P = \frac{374.50}{0.35} = \$1\,070$ — Divide and solve

1 Interest of $914.40 is earned from a 3 year investment at 8% p.a., find the principal invested.

2 Interest of $8 127 is earned from a 7 year investment at 6% p.a., find the principal invested.

3 A 5 year investment which has an interest rate of 4% p.a. yields interest of $1 150. Find the amount invested.

$I = Prn$

$1\,150 = P \times 0.04 \times 5$

$1\,150 = P \times 0.2$

4 Interest of $8 658 is earned from a 6 year investment at 13% p.a., find the principal invested.

5 A 2 year investment which has an interest rate of 9% p.a. yields interest of $129.60. Find the amount invested.

This time find the account balance. So find the principal then add it to the interest.

6 Interest of $1 545 is earned from a 5 year investment at 6% p.a., find the principal invested.

7 What will be the account balance at the end of the investment?

$A =$ [ ] + [ ]

Principal Interest

$A =$ [ ]

8 Interest of $321.60 is earned from a 4 year investment at 12% p.a., find the principal invested.

9 What will be the account balance at the end of the investment?

$A =$ [ ] + [ ]

$A =$ [ ]

Investing Money - Simple Interest - Guess & Check Principal (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use 'Guess and Check' to find the value of 'P' for these. Use the back arrow. All values are in thousands.

1 $3\,360 = 0.07 \times 8 \times P$

Try 'P' = 3 000	1 680	$0.07 \times 8 \times 3\,000$	Compare to 3 360
Try 'P' = 5 000	2 800	$0.07 \times 8 \times 5\,000$	Compare to 3 360
Try 'P' = 7 000	3 920	$0.07 \times 8 \times 7\,000$	Compare to 3 360

$P =$ 6 000

2 $1\,440 = 0.04 \times 3 \times P$

Try 'P' = 3 000	360	$0.04 \times 3 \times 3\,000$	Compare to 1 440
Try 'P' = 7 000	840	$0.04 \times 3 \times 7\,000$	Compare to 1 440
Try 'P' = 11 000	1 320	$0.04 \times 3 \times 11\,000$	Compare to 1 440

$P =$ 12 000

Keep trying 'P' values until you get 1 440

3 $12\,870 = 0.11 \times 9 \times P$

Try 'P' = 5 000	4 950	$0.11 \times 9 \times 5\,000$	Compare to 12 870
Try 'P' = 10 000	9 900	$0.11 \times 9 \times 10\,000$	Compare to 12 870
Try 'P' = 15 000	14 850	$0.11 \times 9 \times 15\,000$	Compare to 12 870

$P =$ 13 000

Keep trying 'P' values until you get 12 870

Build the calculation line. But use $I = rnP$, so that the P is the last number on your calc. Find 'P'.

4 An investment at 6% p.a. for 5 years, results in interest of \$2 400.

2 400 (Interest) = 0.06 (Rate (decimal)) × 5 (Term) × P

Tried $P =$	3 000	● Low ○ High
Tried $P =$	6 000	● Low ○ High
Tried $P =$	9 000	○ Low ● High

$P =$ \$8 000

5 An investment yields interest of \$2 880 after 8 years, at 12% p.a.

2 880 (I) = 0.12 (r) × 8 (n) × P

Tried $P =$	2 000	● Low ○ High
Tried $P =$	2 500	● Low ○ High
Tried $P =$	3 500	○ Low ● High

$P =$ 3 000

6 An investment at 11% p.a. for 2 years, results in interest of \$5 280.

5 280 = 0.11 × 2 × P

Tried $P =$	10 000	● Low ○ High
Tried $P =$	20 000	● Low ○ High

$P =$ \$24 000

7 An investment at 9% p.a. for 7 years, results in interest of \$10 080.

10 080 = 0.09 × 7 × P

Tried $P =$	10 000	● Low ○ High
Tried $P =$	20 000	○ Low ● High

$P =$ \$16 000

Now write the formula, with P at the end. Make the substitution and find 'P'. (whole thousands)

8 An investment at 6% p.a. for 8 years, results in interest of \$6 240.

$I = rnP$

Write the formula $I = rnP$, with P at the end

6 240 = 0.06 × 8 × P

Substitute I, then r (as a decimal) and then n.

$P =$ \$13 000

Show the \$ sign

9 An investment at 10% p.a. for 4 years, results in interest of \$1 200.

$I = rnP$

1 200 = 0.10 × 4 × P

$P =$ \$3 000

10 An investment yields interest of \$3 780 after 7 years, at 3% p.a.

$I = rnP$

$3\,780 = 0.03 \times 7 \times P$

$P =$ \$18 000

11 An investment yields interest of \$1 980 after 3 years, at 6% p.a.

$I = rnP$

$1\,980 = 0.06 \times 3 \times P$

$P =$ \$11 000

Investing Money - Simple Interest - Algebraic Sol Principal 'P' (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find 'P' by solving these. Use the '÷' key or the fraction key.

1 $P = \dfrac{120}{0.6} =$ 200

2 $P = \dfrac{868}{0.62} =$ 1 400

3 $P = \dfrac{4\,200}{0.48} =$ 8 750

4 $P = \dfrac{111.60}{0.72} =$ 155

Create the division first, by dividing by the number next to the 'P'. Find the value of 'P'.

Example

$176.40 = P \times 0.42$

÷ 0.42 ÷ 0.42

$P = \dfrac{176.40}{0.42} =$ 420

5 $240 = P \times 0.48$

÷ 0.48 ÷ 0.48

$P = \dfrac{240}{0.48} =$ 500

6 $975 = P \times 0.65$

÷ 0.65 ÷ 0.65

$P = \dfrac{975}{0.65} =$ 1 500

7 $4\,968 = P \times 0.54$

÷ 0.54 ÷ 0.54

$P = \dfrac{4\,968}{0.54} =$ 9 200

8 $1\,344 = P \times 0.24$

÷ 0.24 ÷ 0.24

$P = \dfrac{1\,344}{0.24} =$ 5 600

9 $459.20 = P \times 0.56$

÷ 0.56 ÷ 0.56

$P = \dfrac{459.20}{0.56} =$ 820

10 $2\,343 = P \times 0.33$

÷ 0.33 ÷ 0.33

$P = \dfrac{2\,343}{0.33} =$ 7 100

11 $2\,196 = P \times 0.72$

÷ 0.72 ÷ 0.72

$P = \dfrac{2\,196}{0.72} =$ 3 050

Multiply r and n first, then it's the same division process. Find the value of 'P'.

Example

$279.60 = P \times 0.03 \times 8$

Multiply these

$279.60 = P \times 0.24$

÷ 0.24 ÷ 0.24

$P = \dfrac{279.60}{0.24} =$ 1 165

12 $195 = P \times 0.06 \times 5$

$195 = P \times$ 0.3

÷ 0.3 ÷ 0.3

$P = \dfrac{195}{0.3} =$ 650

13 $484.20 = P \times 0.04 \times 3$

$484.20 = P \times$ 0.12

÷ 0.12 ÷ 0.12

$P = \dfrac{484.20}{0.12} =$ 4 035

Substitute into the formula to find the value of 'P'.

14 Interest of \$86 is earned from a 5 year investment at 4% p.a.

86 $= P \times$ 0.04 $\times$ 5

Interest; Rate (decimal); Term

86 $= P \times$ 0.2

÷ 0.2 ÷ 0.2

$P = \dfrac{86}{0.2} =$ \$430 ($ sign)

15 Interest of \$14 016 is earned from a 4 year investment at 12% p.a.

14 016 $= P \times$ 0.12 $\times$ 4

14 016 $= P \times$ 0.48

÷ 0.48 ÷ 0.48

$P = \dfrac{14\,016}{0.48} =$ \$29 200 ($ sign)

16 Interest of \$799.20 is earned from a 6 year investment at 9% p.a.

799.20 $= P \times$ 0.09 $\times$ 6

799.20 $= P \times$ 0.54

÷ 0.54 ÷ 0.54

$P = \dfrac{799.20}{0.54} =$ \$1 480

17 Interest of \$457.20 is earned from a 3 year investment at 6% p.a.

457.20 $= P \times$ 0.06 $\times$ 3

457.20 $= P \times$ 0.18

÷ 0.18 ÷ 0.18

$P = \dfrac{457.20}{0.18} =$ \$2 540

Investing Money - Simple Interest - Further Finding Principal (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the amount invested, the Principal 'P' by solving these. Remember the $ sign.

Example

Interest of $374.50 is earned from a 5 year investment at 7% p.a., find the principal invested.

$I = Prn$ — Write Formula

$374.50 = P \times 0.07 \times 5$ — Substitute Values (Decimal)

$374.50 = P \times 0.35$ — Simplify The '×'

$\div 0.35$ $\div 0.35$

$P = \frac{374.50}{0.35} = \$1\,070$ — Divide and solve

1 Interest of $914.40 is earned from a 3 year investment at 8% p.a., find the principal invested.

$I = Prn$

$914.40 = P \times 0.08 \times 3$

$914.40 = P \times 0.24$

$\div 0.24$ $\div 0.24$

$P = \frac{914.40}{0.24} = \$3\,810$

2 Interest of $8 127 is earned from a 7 year investment at 6% p.a., find the principal invested.

$I = Prn$

$8\,127 = P \times 0.06 \times 7$

$8\,127 = P \times 0.42$

$\div 0.42$ $\div 0.42$

$P = \frac{8\,127}{0.42} = \$19\,350$

3 A 5 year investment which has an interest rate of 4% p.a. yields interest of $1 150. Find the amount invested.

$I = Prn$

$1\,150 = P \times 0.04 \times 5$

$1\,150 = P \times 0.2$

$\div 0.2$ $\div 0.2$

$P = \frac{1\,150}{0.2} = \$5\,750$

4 Interest of $8 658 is earned from a 6 year investment at 13% p.a., find the principal invested.

$I = Prn$

$8\,658 = P \times 0.13 \times 6$

$8\,658 = P \times 0.78$

$\div 0.78$ $\div 0.78$

$P = \frac{8\,658}{0.78} = \$11\,100$

5 A 2 year investment which has an interest rate of 9% p.a. yields interest of $129.60. Find the amount invested.

$I = Prn$

$129.60 = P \times 0.13 \times 6$

$\div 0.78$ $\div 0.78$

$P = \frac{8\,658}{0.78} = \$11\,100$

This time find the account balance. So find the principal then add it to the interest.

6 Interest of $1 545 is earned from a 5 year investment at 6% p.a., find the principal invested.

$I = Prn$

$1\,545 = P \times 0.06 \times 5$

$1\,545 = P \times 0.3$

$\div 0.3$ $\div 0.3$

$P = \frac{1\,545}{0.3} = \$5\,150$

7 What will be the account balance at the end of the investment?

$A =$ 5 150 (Principal) $+$ 1 545 (Interest)

$A =$ $6 695

8 Interest of $321.60 is earned from a 4 year investment at 12% p.a., find the principal invested.

$I = Prn$

$321.60 = P \times 0.12 \times 4$

$321.60 = P \times 0.48$

$\div 0.48$ $\div 0.48$

$P = \frac{321.60}{0.48} = \$670$

9 What will be the account balance at the end of the investment?

$A =$ 670 $+$ 321.60

$A =$ $991.60

Investing Money - Simple Interest - Repeated Use

Simple interest investments pay their interest at the end of the investment. So if the investment is for 3 years, the interest is paid at the end of that 3 year period. Compound interest investments pay interest during the investment. For example a 3 year investment might have interest credited after the first, second and third years.

This doesn't necessarily mean that you get your interest earlier. The interest is invested with the original principal. So this means that for the second year the principal is higher with an increase in the amount of interest earned. The third year will again see an increase in the Principal with an increase in interest.

So compound investments earn more interest, this sheet deals with calculating the final interest payment without using the Compound Interest formula, which is introduced in the next outcome.

The method is simple, you apply the simple interest formula multiple times. There is a short cut however and this is shown on Sheet 2. Here is an example.

Example: An investment of \$4 000 at 6% p.a., is compounded annually for 3 years.
Find the account balance, A, at the end of the investment.

First Application: Year 1	Second Application: Year 2	Third Application: Year 3
$I = Prn$	$I = Prn$	$I = Prn$
$= 4\,000 \times 0.06 \times 1$	$= 4\,240 \times 0.06 \times 1$	$= 4\,494.40 \times 0.06 \times 1$
$I = \$240$	$I = \$254.40$	$I = \$269.66$
$A = 4\,000 + 240$	$A = 4\,240 + 254.40$	$A = 4\,494.40 + 269.66$
$A = \$4\,240$	$A = \$4\,494.40$	$A = \$4\,764.06$

Note how the principal increases each year. Instead of being \$4 000 for three years, it increases each year. So the interest earned also increases.

As you can see, instead of earning \$240 every year, each year sees an increase in the amount of interest earned. So compound investments offer a better return than simple interest investments. As long as they are for a longer duration than 1 compound period.

Investing Money - Simple Interest - Repeated Use (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

When an investment compounds, interest is paid during the investment. Calculate the account balance for these.

Principal \$2 000,
Rate = 7% p.a.,
n = 3 yrs, compounding annually.

First Application: Year 1

1 $I = Prn$

$= \square \times \square \times 1$
Principal; Rate (decimal)

$I = \square$ Show '\$' sign

$A = \square + \square$
Principal; Interest (Q1)

$A = \square$

Second Application: Year 2

2 $I = Prn$

$= \square \times \square \times 1$
Principal (Use A-Yr 1); Rate (decimal)

$I = \square$

$A = \square + \square$
Principal (Use A-Yr 1); Interest (Q2)

$A = \square$

Third (Final) Application: Year 3

3 $I = Prn$

$= \square \times \square \times 1$
Principal (Use A-Yr 2); Rate (decimal)

$I = \square$

$A = \square + \square$
Principal (Use A-Yr 2); Interest (Q3)

$A = \square$

Compare the compounding investment (Q 1-3) to a standard simple interest investment.

4 $I = Prn$

$= \square \times \square \times 3$
\$2 000; Rate 7% p.a.

$I = \square$

$A = \square + \square$
Principal; Interest (Q4)

$A = \square$

5 Find the difference between your answer for 'A' in Q3 & Q4

Diff = (A (Q3)) - (A (Q4))

$= \square$

Now try a 2 year compounding investment. Find the account balance.

Principal \$920,
Rate = 8.4% p.a.,
n = 2 yrs, compounding annually

First Application: Year 1

6 $I = Prn$

$= \square \times \square \times 1$

$I = \square$

$A = \square + \square$

$A = \square$

Second (Final) Application: Year 2

7 $I = Prn$

$=$

$I =$

$A =$

$A =$

Compare the compounding investment (Q 6-7) to a standard simple interest investment.

8 $I = Prn$

$= \square \times \square \times 2$
\$920; Rate 8.4% p.a.

$I = \square$

$A = \square + \square$
Principal; Interest (Q8)

$A = \square$

9 Find the difference between your answer for 'A' in Q7 & Q8

Diff = (A (Q7)) - (A (Q8))

$= \square$

Now use a different approach to answering compound questions. Calculate these …..

10 *Principal* \$2 000,
Rate = 7% p.a., [1 + 0.07 = 1.07]
n = 3 yrs, compounding annually.

$A = 2\,000 \times 1.07 \times 1.07 \times 1.07$
Principal; Repeated 3 times as $n = 3$

$A = \square$

11 Is this the same as your answer in Q3? ○ Yes ○ No

12 *Principal* \$920,
Rate = 8.4% p.a., [1 + r = 1.084]
n = 2 yrs, compounding annually

$A = 920 \times 1.084 \times 1.084$
Principal; Repeated 2 times as $n = 2$

$A = \square$

13 Is this the same as your answer in Q7? ○ Yes ○ No

Investing Money - Simple Interest - Repeated Use (Sheet 2)

Investing Money - Simple Interest - Repeated Use (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

When an investment compounds, interest is paid during the investment. Calculate the account balance for these.

Principal $2 000,
Rate = 7% p.a.,
n = 3 yrs, compounding annually.

First Application: Year 1

1 $I = Prn$

= 2 000 (Principal) × 0.07 (Rate (decimal)) × 1

$I =$ $140 (Show '$' sign)

$A =$ 2 000 (Principal) + 140 (Interest (Q1))

$A =$ $2 140

Second Application: Year 2

2 $I = Prn$

= 2 140 (Principal (Use A-Yr 1)) × 0.07 (Rate (decimal)) × 1

$I =$ $149.80

$A =$ 2 140 (Principal (Use A-Yr 1)) + 149.80 (Interest (Q2))

$A =$ $2 289.80

Third (Final) Application: Year 3

3 $I = Prn$

= 2 289.80 (Principal (Use A-Yr 2)) × 0.07 (Rate (decimal)) × 1

$I =$ $160.29

$A =$ 2 289.80 (Principal (Use A-Yr 2)) + 160.29 (Interest (Q3))

$A =$ $2 450.09

Compare the compounding investment (Q 1-3) to a standard simple interest investment.

4 $I = Prn$

= 2 000 ($2 000) × 0.07 (Rate 7% p.a.) × 3

$I =$ $420

$A =$ 2 000 (Principal) + 420 (Interest (Q4))

$A =$ $2 420

5 Find the difference between your answer for 'A' in Q3 & Q4

Diff = 2 450.09 - 2 420

= $30.09

Now try a 2 year compounding investment. Find the account balance.

Principal $920,
Rate = 8.4% p.a.,
n = 2 yrs, compounding annually

First Application: Year 1

6 $I = Prn$

= 920 × 0.084 × 1

$I =$ $77.28

$A =$ 920 + 77.28

$A =$ $997.28

Second (Final) Application: Year 2

7 $I = Prn$

$= 997.28 \times 0.084 \times 1$

$I =$ $83.77

$A = 997.28 + 83.77$

$A =$ $1 081.05

Compare the compounding investment (Q 6-7) to a standard simple interest investment.

8 $I = Prn$

= 920 ($920) × 0.084 (Rate 8.4% p.a.) × 2

$I =$ $154.56

$A =$ 920 (Principal) + 154.56 (Interest (Q8))

$A =$ $1 074.56

9 Find the difference between your answer for 'A' in Q7 & Q8

Diff = 1 081.05 - 1 074.56

= $6.49

Now use a different approach to answering compound questions. Calculate these .....

10 *Principal* $2 000,
Rate = 7% p.a., [1 + 0.07 = 1.07]
n = 3 yrs, compounding annually.

$A = 2\,000 \times 1.07 \times 1.07 \times 1.07$ (Principal; Repeated 3 times as $n = 3$)

$A =$ $2 450.09

11 Is this the same as your answer in Q3? ● Yes ○ No

12 *Principal* $920,
Rate = 8.4% p.a., [1 + r = 1.084]
n = 2 yrs, compounding annually

$A = 920 \times 1.084 \times 1.084$ (Principal; Repeated 2 times as $n = 2$)

$A =$ $1 081.05

13 Is this the same as your answer in Q7? ● Yes ○ No

Investing Money - Simple Interest - Repeated Use (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use multiplication to find the account balance more quickly. Change the rate to "1.xx", where 'xx' is the rate as a decimal. Find the account balance, A.

1 Principal \$5 000, *Rate* = 6% p.a., n = 4 yrs, compounding annually.

$A = 5\,000 \times 1.06 \times 1.06 \times 1.06 \times 1.06$

$A =$ \$6 312.38

2 Principal \$3 100, *Rate* = 9% p.a., n = 5 yrs, compounding annually.

$A = 3\,100 \times 1.09 \times 1.09 \times 1.09 \times 1.09 \times 1.09$

$A =$ \$4 769.73

3 Principal \$665, *Rate* = 5% p.a., n = 4 yrs, compounding annually.

$A =$ 665 × 1.05 × 1.05 × 1.05 × 1.05

$A =$ \$808.31

Did you use 1.05? Not 0.05.

4 Principal \$10 444, *Rate* = 12% p.a., n = 3 yrs, compounding annually.

$A = 10\,444 \times 1.12 \times 1.12 \times 1.12$

$A =$ \$14 673.07

5 Principal \$850.70, *Rate* = 8.2% p.a., n = 2 yrs, compounding annually.

$A = 850.70 \times 1.082 \times 1.082$

$A =$ \$995.93

6 Principal \$72 310, *Rate* = 6.7% p.a., n = 4 yrs, compounding annually.

$A = 72\,310 \times 1.067 \times 1.067 \times 1.067 \times 1.067$

$A =$ \$93 725.13

7 Principal \$40 700, *Rate* = 11.6% p.a., n = 3 yrs, compounding annually.

$A = 40\,700 \times 1.116 \times 1.116 \times 1.116$

$A =$ \$56 570.11

Instead of using "1.xx"… n times, use powers to find A. Once you find A, find I by subtracting the principal from A.

8 Principal \$6 100, *Rate* = 4.8% p.a., n = 7 yrs, compounding annually.

$A = 6\,100 \times 1.048^7 =$ \$8 469.52

Calc: 6 1 0 0 × 1 • 0 4 8 $x^{\blacksquare}$ 7 =

$I =$ 8 469.52 - 6 100 = \$2 369.52

9 Principal \$7 040, *Rate* = 6.6% p.a., n = 4 yrs, compounding annually.

$A = 7\,040 \times 1.066^4 =$ \$9 090.79

$I =$ 9 090.79 - 7 040 = \$2 050.79

10 Principal \$370, *Rate* = 9% p.a., n = 2 yrs, compounding annually.

$A =$ 370 × 1.0 9 2 = \$439.60

$I =$ 439.60 - 370 = \$69.60

11 Principal \$24 112, *Rate* = 7.3% p.a., n = 8 yrs, compounding annually.

$A =$ 24 112 × 1.073 8 = \$42 367.32

$I =$ 42 367.32 - 24 112 = \$18 255.32

12 Principal \$1 770, *Rate* = 6.2% p.a., n = 5 yrs, compounding annually.

$A =$ 1 770 × 1.062 5 = \$2 391.09

$I =$ 2 391.09 - 1 770 = \$621.09

Yu invests \$5 000 at 8.3% p.a. for 6 years, compounded annually. Find his account balance and interest earned.

13

$A =$ 5 000 × 1.083 6 = \$8 067.53

$I =$ 8 067.53 - 5 000 = \$3 067.53

Investing Money - Compound Interest

Compound Interest is different from simple interest in two key ways:

- Interest is paid during the investment, rather than at the end of the investment only.
- Because interest is paid during the investment and re-invested, the account balance increases and so more interest is paid.

So compound interest offers you more interest on your investment because your account balance grows during the investment and the interest earned increases.

Another difference with compound interest is the formula. Rather than calculating the interest earned, the formula calculates the account balance. So to find the interest earned you have to subtract the principal from the account balance. This is the opposite to simple interest.

Compound Interest Formula: $A = P(1 + r)^n$

Where:
A = Account balance
P = Principal
r = Interest rate expressed as a decimal
n = Number of compound periods

Interest Calculation: $I = A - P$

Where:
I = Interest earned
A = Account balance
P = Principal

Example: Find the interest earned on an investment of \$9 000 at 6% p.a., for 3 years, compounded annually.

$A = P(1 + r)^n$ ← Compound Interest Formula

$= 9\,000 \times (1 + 0.06)^3$ ← Substitute the values, remember to use the interest rate r as a decimal

$A = \$10\,719.14$ ← Round to 2 decimal places

$I = 10\,719.14 - 9\,000$ ← Subtract 'P' from 'A' to find 'I'

$I = \$1\,719.14$

Investing Money - Compound Interest - Account Balance (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use your calculator to evaluate these to 2 d.p.

1 $450 \times (1+0.04)^4$

Investing Money - Compound Interest Comparisons

Compound Interest is different from simple interest in two key ways:

- Interest is paid during the investment, rather than at the end of the investment only.
- Because interest is paid during the investment and re-invested, the account balance increases and so more interest is paid.

This worksheet compares simple interest to compound interest, but also compound interest against itself, only with more compound periods. The result is that the more compound periods you have, the more interest you earn. Because the interest you earn is re-invested more regularly so the opportunity to earn 'interest on your interest' is greater.

Compound Interest Formula: $A = P(1 + r)^n$

Where:
A = Account balance
P = Principal
r = Interest rate expressed as a decimal
n = Number of compound periods

Interest Calculation: $I = A - P$

Where:
I = Interest earned
A = Account balance
P = Principal

Example: Find the interest earned on an investment of \$9 000 at 6% p.a., for 3 years, compounded annually.

$A = P(1 + r)^n$ ← Compound Interest Formula

$= 9\,000 \times (1 + 0.06)^3$ ← Substitute the values, remember to use the interest rate r as a decimal

$A = \$10\,719.14$ ← Round to 2 decimal places

$I = 10\,719.14 - 9\,000$ ← Subtract 'P' from 'A' to find 'I'

$I = \$1\,719.14$

Investing Money - Compound Interest Comparisons

Compare the two compound interest investments, which have the same annual rate.

Ben invests $3 000 at 7.2% p.a., for 3 years, compounded annually.

1 Convert 7.2% to a decimal

$r =$ 7.2 $\div 100 =$ 0.072

2 Find the account balance

$A = P(1 + r)^n$

$=$ 3 000 $\times (1 +$ 0.072 $)^{3}$

$A =$ $3 695.78 '$' sign and to 2 d.p.

Eve invests $3 000 at 0.6% per month, for 36 months, compounded monthly.

3 Convert 0.6% to a decimal

$r =$ 0.6 $\div 100 =$ 0.006

4 Find the account balance

$A = P(1 + r)^n$

$=$ 3 000 $\times (1 +$ 0.006 $)^{36}$

$A =$ $3 720.90

Calculate the difference in account balances. Who earns the most?

5 Account balance difference

$=$ 3 720.90 - 3 695.78

Largest A Smallest A

$=$ $25.12 ○ Ben earns the most ● Eve earns the most

If 3 years = 36 months and 0.6% per month = 7.2% p.a. Explain why there is a difference between Ben and Eve's account balance.

6 Ben has 3 compound periods

Eve has 36 compound periods.

More compound periods leads to larger interest amount earned.

This time compare a compound investment to a simple interest investment. Find the interest.

Rahj invests $900 at 8.2% p.a., for 5 years, compounded annually.

7 Find the interest earned

$A = P(1 + r)^n$

$= 900 (1 + 0.082)^5$

$A =$ $1 334.69

$I =$ 1 334.69 - 900

$I =$ $434.69

Justin invests $900 at 8.2% p.a., for 5 years, in a simple interest investment

8 $I = Prn$

$=$ 900 $\times$ 0.082 $\times$ 5

$I =$ $369

Calculate the difference in interest earned. Who earns the most?

9 Difference in interest earned

$=$ 434.69 - 369

$=$ $65.69 ● Rahj earns more ○ Justin earns more

Both investments above are for 5 years. Explain why one investment accrues more interest than the other.

10 Rahj earns compound interest, so he earns 'interest on his interest'. So he earns more than Justin, who just gets the interest at the end of the investment.

Ryan can choose from one of these three, 5 year investments:
Option1: Simple interest: 9% p.a.,
Option 2: Compound interest: 9% p.a. compounding annually.
Option 3: Compound interest: 0.75% per month, compounding monthly for 60 months.
He has $4 000 to invest.

11 Find the interest earned if he chooses Option 1.

$I = Prn$

$= 4\,000 \times 0.09 \times 5$

Investing Money - Graphing and Comparing Interest

These worksheets compare simple interest to compound interest, by graphing interest earned. When you perform normal interest calculations, the questions are individual and don't form a pattern. But the questions on these sheets are grouped in patterns to create answers that show a relationship.

Simple interest calculations result is a 'straight-line relationship'. So when the values are plotted on a graph you can draw a straight line through them. You will see the relationship between your answers forming a pattern and the nature of the graph.

Compound interest questions result in curves. The curve is only slight, but you will notice, especially as the interest rate and period increases that the curve becomes more pronounced.

The process of these sheets is to find the interest earned for 1 year, 2 years and 3 years. Then plot the points on a graph. All amounts are for $1 000 being invested.

INTEREST RATE* 10% *p.a.

P=\$1 000, R = 10%, n = 1

$I = Prn$

$= 1\,000 \times 0.1 \times 1$

I = \$100

First point uses n = 1

P=\$1 000, R = 10%, n = 2

$I = Prn$

$= 1\,000 \times 0.1 \times 2$

I = \$200

Second point uses n = 2

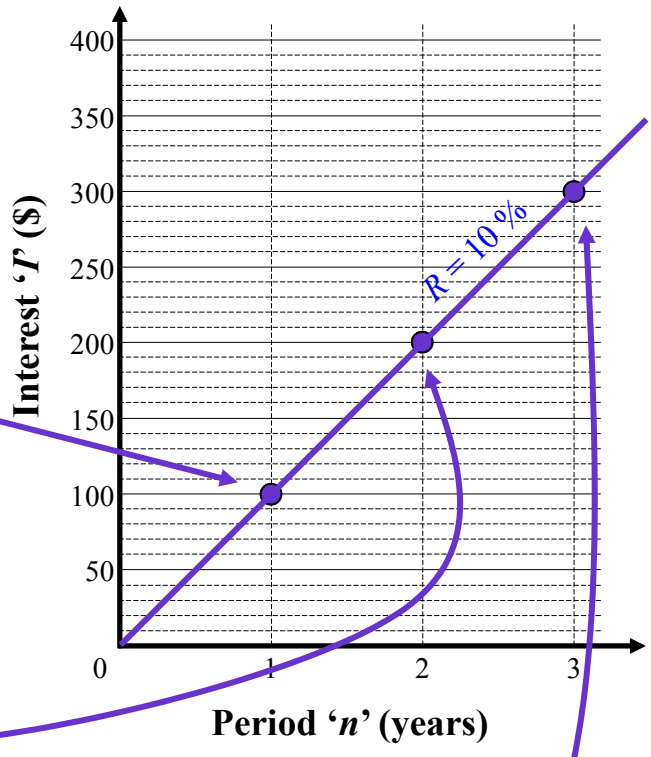
P=\$1 000, R = 10%, n = 3

$I = Prn$

$= 1\,000 \times 0.1 \times 3$

I = \$300

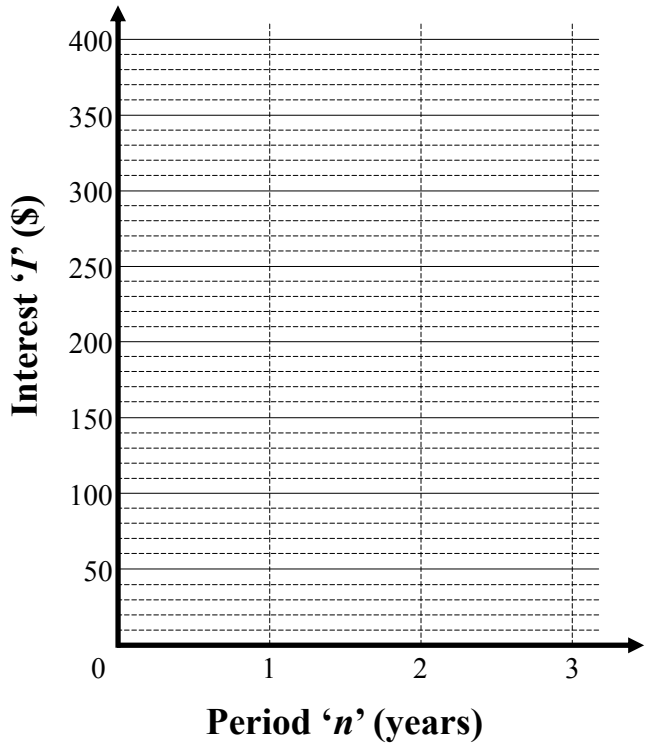
Third point uses n = 3



Investing Money - Graphing and Comparing Simple Interest (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate the interest earned on an investment of \$1 000. Use periods of 1 year, 2 years and 3 years. Use interest rates of 4% p.a., 8% p.a. and 12% p.a. Interest earned at time $n = 0$ is \$0. Calculate first, then graph. Plot the points in pencil first, then use a ruler as well as different coloured pens. If the lines aren't straight …. *PANIC!*



INTEREST RATE 4% p.a.

1 *Use* $P = 1\,000$, $r = 0.04$ *and* 'n' $= 1$.

$I = Prn$

$= \square \times \square \times \square$

$I = \square$

2 *Use* 'n' $= 2$.

$I = Prn$

3 *Use* 'n' $= 3$.

$I = Prn$

Plot the 4% line (own colour). Write '$R = 4\%$' on the line.

INTEREST RATE 8% p.a.

4 $I = Prn$

$= \square \times \square \times \square$

$I = \square$

5 *Use* 'n' $= 2$.

6 *Use* 'n' $= 3$.

Plot the 8% line (own colour). Write '$R = 8\%$' on the line.

INTEREST RATE 12% p.a.

7 $I = Prn$

$= \square \times \square \times \square$

$I = \square$

8 *Use* 'n' $= 2$.

9 *Use* 'n' $= 3$.

Plot the 12% line (own colour). Write '$R = 12\%$' on the line.

Use the graph to find these. Each vertical jump in interest is worth \$10. So count the jumps, then × 10!

10 The difference in interest earned after 3 years, between $R = 4\%$ p.a. and $R = 12\%$ p.a.

$= \square - \square$

I at $n=3$, $R=12\%$ | I at $n=3$, $R=4\%$

$= \square$

11 The difference in interest earned after 2 years, between $R = 8\%$ p.a. and $R = 12\%$ p.a.

$= \square - \square = \square$

12 The difference in interest earned after 1 year, between $R = 4\%$ p.a. and $R = 8\%$ p.a.

$= \square - \square = \square$

13 The difference in interest earned after 2 years, between $R = 4\%$ p.a. and $R = 12\%$ p.a.

$= \square - \square$

$= \square$

$I = Prn$

$= 1\,000 \times 0.08 \times 3$

$I =$ \$240

Plot the 8% line (own colour). Write '$R = 8\%$' on the line.

INTEREST RATE 12% p.a.

7 $I = Prn$

$= 1\,000 \times 0.12 \times 1$

$I =$ \$120

8 *Use* 'n' $= 2$.

$I = Prn$

$= 1\,000 \times 0.12 \times 2$

$I =$ \$240

9 *Use* 'n' $= 3$.

$I = Prn$

$= 1\,000 \times 0.12 \times 3$

$I =$ \$360

Plot the 12% line (own colour). Write '$R = 12\%$' on the line.

Use the graph to find these. Each vertical jump in interest is worth \$10. So count the jumps, then × 10!

10 The difference in interest earned after 3 years, between $R = 4\%$ p.a. and $R = 12\%$ p.a.

$= 360 - 120$

(I at $n=3$, $R=12\%$; I at $n=3$, $R=4\%$)

$=$ \$240

11 The difference in interest earned after 2 years, between $R = 8\%$ p.a. and $R = 12\%$ p.a.

$= 240 - 160 =$ \$80

12 The difference in interest earned after 1 year, between $R = 4\%$ p.a. and $R = 8\%$ p.a.

$= 80 - 40 =$ \$40

13 The difference in interest earned after 2 years, between $R = 4\%$ p.a. and $R = 12\%$ p.a.

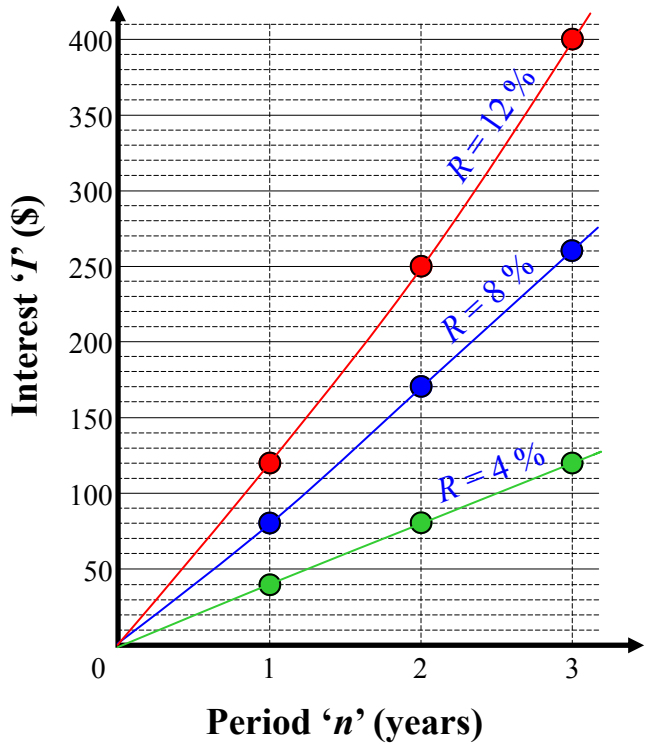
$= 240 - 80$

$=$ \$160

Investing Money - Graphing and Comparing Compound Interest (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate the compound interest earned on an investment of \$1 000. Use periods of 1 year, 2 years and 3 years. Use interest rates of 4% p.a., 8% p.a. and 12% p.a. Interest earned at time $n = 0$ is \$0. Calculate first, then graph. Plot the points in pencil first, then sketch curves using different coloured pens. Round '*A*' to the nearest \$10.



INTEREST RATE 4% p.a. Compounded Annually

1 *Use* $P = 1\,000$, $r = 0.04$ *and* 'n' $= 1$.

$A = P(1 + r)^n$

$= 1\,000 \times (1 + 0.04)^1$

$A =$ \$1 040

$I =$ 1 040 - 1 000

$I =$ \$40

2 *Use* 'n' $= 2$.

$A = P(1 + r)^n$

$= 1\,000 \times (1 + 0.04)^2$

$A =$ \$1 080

Round A to nearest \$10

$I =$ 1 080 - 1 000

$I =$ \$80

3 *Use* 'n' $= 3$.

$A = P(1 + r)^n$

$= 1\,000 \times (1 + 0.04)^3$

$A =$ \$1 120

Round A to nearest \$10

$I =$ 1 120 - 1 000

$I =$ \$120

Plot the 4% curve (own colour). Write '$R = 4\%$' on the curve.

INTEREST RATE 8% p.a. Compounded Annually

Use 'n' $= 1$.

4 $A = P(1 + r)^n$

$= 1\,000 \times (1 + 0.08)^1$

$A =$ \$1 080

$I =$ 1 080 - 1 000

$I =$ \$80

5 *Use* 'n' $= 2$.

$A = P(1 + r)^n$

$= 1\,000 \times (1 + 0.08)^2$

$A =$ \$1 170

Round A to nearest \$10

$I =$ 1 170 - 1 000

$I =$ \$170

6 *Use* 'n' $= 3$.

$A = P(1 + r)^n$

$= 1\,000 \times (1 + 0.08)^3$

$A =$ \$1 260

Round A to nearest \$10

$I =$ 1 260 - 1 000

$I =$ \$260

Plot the 8% curve (own colour). Write '$R = 8\%$' on the curve.

INTEREST RATE 12% p.a. Compounded Annually

7 *Use* 'n' $= 1$.

$A = P(1 + r)^n$

$= 1\,000 \times (1 + 0.12)^1$

$A =$ \$1 120

$I =$ 1 120 - 1 000

$I =$ \$120

8 *Use* 'n' $= 2$.

$A = P(1 + r)^n$

$= 1\,000 \times (1 + 0.12)^2$

$A =$ \$1 250

$I =$ 1 250 - 1 000

$I =$ \$250

9 *Use* 'n' $= 3$.

$A = P(1 + r)^n$

$= 1\,000 \times (1 + 0.12)^3$

$A =$ \$1 400

$I =$ 1 400 - 1 000

$I =$ \$400

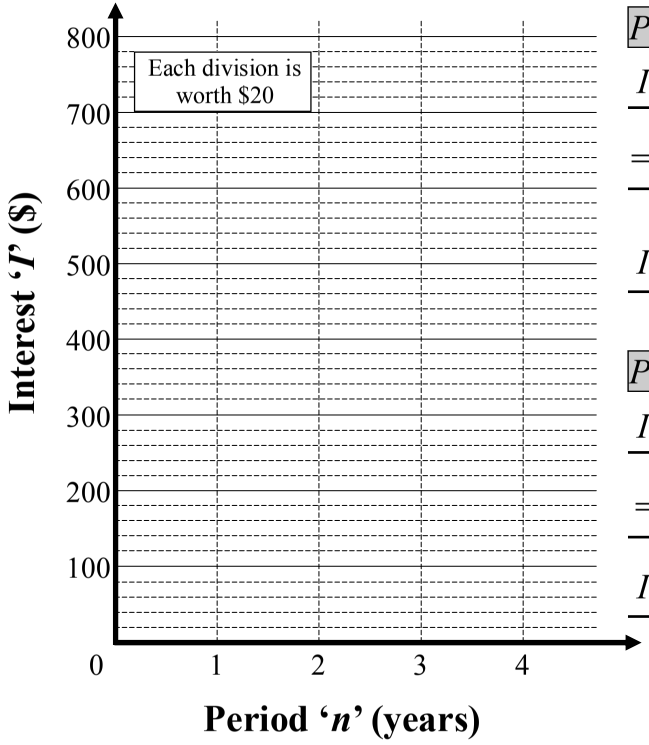
Plot the 12% curve (own colour). Write '$R = 12\%$' on the curve.

Investing Money - Graphing Simple Interest (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Date Due: _____

Calculate the simple interest earned on a $1 000 investment at 16% p.a. and plot the values on the graph. **Note that every vertical division on the graph is $20.**



$P = \$1\,000$, $R = 16\%$, $n = 1$

Investing Money - Interest Calculation Using Tables

You don't often have a table for calculating interest. But if you work in a bank, you want access to a fast method of calculating interest. Tables allow this, they also allow people who don't know how to calculate interest …… to calculate interest!

The process is to first find the 'multiplier'. This is the amount earned on a $1 investment. Of course people don't invest $1, but once you have this number, you multiply by the amount invested. Here is an example.

Example $4 200 at 8% (simple interest) for 6 years

First go across to the 8%

Then down to 6 years

Periods (n)	Simple Interest Earned ($) on a $1 Investment									
	$R = 1\ \%$	$R = 2\ \%$	$R = 3\ \%$	$R = 4\ \%$	$R = 5\ \%$	$R = 6\ \%$	$R = 7\ \%$	$R = 8\ \%$	$R = 9\ \%$	$R = 10\ \%$
1	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09	0.10
2	0.02	0.04	0.06	0.08	0.10	0.12	0.14	0.16	0.18	0.20
3	0.03	0.06	0.09	0.12	0.15	0.18	0.21	0.24	0.27	0.30
4	0.04	0.08	0.12	0.16	0.20	0.24	0.28	0.32	0.36	0.40
5	0.05	0.10	0.15	0.20	0.25	0.30	0.35	0.40	0.45	0.50
6	0.06	0.12	0.18	0.24	0.30	0.36	0.42	0.48	0.54	0.60
7	0.07	0.14	0.21	0.28	0.35	0.42	0.49	0.56	0.63	0.70
8	0.08	0.16	0.24	0.32	0.40	0.48	0.56	0.64	0.72	0.80
9	0.09	0.18	0.27	0.36	0.45	0.54	0.63	0.72	0.81	0.90
10	0.10	0.20	0.30	0.40	0.50	0.60	0.70	0.80	0.90	1.00

The multiplier from the table is 0.48

$I = 4\ 200 \times 0.48 \quad = \$2\ 016$ ← Multiply the amount invested by the multiplier

If you want to calculate the account balance

$A = 4\ 200 + 2\ 016$ ← Add the amount invested to the interest earned

$A = \$6\ 216$

The first worksheet is simple interest, the second is compound interest. You will require rounding with the compound interest sheet.

Investing Money - Interest Calculation Using Tables (Sheet 1)

10	0.1046	0.2190	0.3439	0.4802	0.6289	0.7908	0.9672	1.1589	1.3674	1.5937

Use the table to find the interest earned on these investments. These will require rounding.

1 $1 at 3% p.a. for 8 years

$I =$ $0.27 Round to 2 d.p.

2 $500 at 3% p.a. for 8 years

$I =$ $133.40

Use unrounded Q.1 answer × 500

3 $1 at 8% p.a. for 5 years

$I =$ $0.47

4 $920 at 8% p.a. for 5 years

$I =$ $431.76

Use unrounded Q.3 answer × 920

5 $1 at 6% p.a. for 10 years

$I =$ $0.79

6 $205 at 6% p.a. for 10 years

$I =$ $162.11

7 $1 at 2% p.a. for 7 years

$I =$ $0.15

8 $140.20 at 2% p.a. for 7 yrs

$I =$ $20.85

You can use the table the same way for other periods

9 $8 150 at 1% per month, for 3 months.

$I =$ $246.95

10 $66 117 at 2% per month, for 10 months.

$I =$ $14 479.62

11 $57.83 at 3% per month, for 6 months.

$I =$ $11.22

$A = P + I$

Now find the account balance by adding I and P, to get A!

12 $3 088 at 5% p.a. for 4 yrs

$I =$ $665.46

$A =$ 3 088 + 665.46

$A =$ $3 753.46

13 $119.25 at 7% p.a. for 8 yrs

$I =$ $85.65

$A =$ 119.25 + 85.65

$A =$ $204.90

14 $771 at 10% p.a. for 3 yrs

$I =$ $255.20

$A =$ 771 + 255.20

$A =$ $1 026.20

15 $340 200 at 4% p.a. for 4 yrs

$I =$ $57 799.98

$A =$ 340 200 + 57 799.98

$A =$ $397 999.98

16 $805.40 at 9% p.a. for 10 yrs

$I =$ $1 101.30

$A =$ 805.40 + 1 101.30

$A =$ $1 906.70

17 $7 111 at 6% p.a. for 2 yrs

$I =$ $878.92

$A =$ 7 111 + 878.92

$A =$ $7 989.92

Investing Money - Flat Rate Loans

When you want to buy something and don't have enough money to get it, you have two options, either save up for it and hold off the purchase, or take out a loan and get it now. When you take out a loan you pay interest to the finance company. The money you borrowed plus the interest is then paid back in repayments, or installments. The period of these installments could be weekly, monthly, fortnightly etc. You also frequently pay a loan fee and a deposit.

Example:

Fred buys a swimming pool which sells for $14 250. He takes out a flat rate loan, with these conditions:
- $160 loan stamp duty
- $2 137.50 deposit
- $345/month repayments for 4 years

Find the total of the repayments

Total = 4 × 12 × 345 ← Repayments are monthly for 4 years so, 4 × 12

Total = $16 560

Find the full amount paid

Total = 160 + 2 137.50 + 16 560 ← Full amount is stamp duty + deposit + repayments

Total = $18 857.50

Find amount Fred would save if he paid cash instead of taking out a loan

Total = 18 857.50 - 14 250 ← This is found by 'Full Amount Paid' - Selling Price

Total = $4 607.50

Investing Money - Introduction to Flat Rate Loans (Sheet 1)

Total = $7 444.60

15 How much would Lucy save if she paid cash, rather than use a loan?

Amount Saved = 7 444.60 - 4 150

Amount Saved = $3 294.60

Jasmine buys a car for $44 676 using a flat rate loan, with these conditions:
- $65 loan stamp duty
- $580 loan insurance
- 12% deposit
- $388.90/fortnight repayments for 5 years

16 Calculate the deposit paid.

Deposit = 0.12 × 44 676

Deposit = $5 361.12

17 Find the total of the repayments

Total = 5 × 26 × 388.90

Total = $50 557

18 Find the full amount paid

Total = 65 + 580 + 5 361.20 + 50 557

Total = $56 563.20

19 How much would Jasmine save if she paid cash, rather than use a loan?

Amount Saved = 56 563.20 - 44 676

Amount Saved = $11 887.20

3 How much would Ashley save if he paid cash, instead of the loan?

Amount Saved = 1 041.60 - 650

(Question 2; Cash Price)

Amount Saved = $391.60

Investing Money - Flat Rate Loans

When you want to buy something and don't have enough money to get it, you have two options, either save up for it and hold off the purchase, or take out a loan and get it now. When you take out a loan you pay interest to the finance company. The money you borrowed plus the interest is then paid back in repayments, or installments. The period could be weekly, monthly, fortnightly etc. These worksheets deal with repaying Flat Rate Loans, without deposits.

Example: Fred buys a swimming pool which sells for $14 250. He takes out a flat rate loan at 7% p.a. over 5 years. He repays the loan in monthly payments. Calculate the monthly repayment.

Solution:

Find the interest payable

$I = Prn$

$= 14\,250 \times 0.07 \times 5$ ← Remember to convert the interest rate to a decimal

$I = \$4\,987.50$

Find the total amount payable

$A = 14\,250 + 4\,987.50$ ← Add the interest to the amount borrowed

$A = \$19\,237.50$ ← This is the amount that has to be paid back

Find the monthly payment

$\text{Payment} = \dfrac{19\,237.50}{5 \times 12}$ ← Divide the amount payable by the number of months in 5 years. So use: (5×12)

Payment = $320.63/month

Investing Money - Flat Rate Loans - Monthly Payments (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Convert these amounts to monthly repayments. Either use your fraction key or ÷/brackets.

Example: Convert $2 712 into monthly payments over 5 years.

Payment = $\frac{2\ 712}{5 \times 12}$ = $45.20/mth

Calc: 2 7 1 2 ▪ 5 × 1 2 = S⇔D

1 $1 306.80 into monthly over 3 yrs

Payment = $\frac{\quad}{\quad \times \quad}$

Payment = /month

$ sign + cents to 2 d.p.

2 $950.40 into monthly over 4 yrs

Payment = $\frac{\quad}{\quad \times \quad}$

Payment = /month

3 $3 822 into monthly over 5 yrs

Payment = $\frac{\quad}{\quad \times \quad}$

Payment = /month

Investing Money - Flat Rate Loans (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Date Due:

Troy has bought a $40 500 speedboat using a flat rate loan over 4 years at 9% p.a. Calculate the monthly repayments over the 4 year period.

1 Convert 9% p.a. to a decimal

$r =$ 0.09

2 Find the interest payable

$I = Prn$

$= 40\,500 \times 0.09 \times 4$

(Amount borrowed) (9% decimal) (Years)

$I =$ $14 580

3 Calculate the amount owing

$A = 40\,500 + 14\,580$

(Amount borrowed) (Interest (Q2))

$A =$ $55 080

4 Convert to monthly payments

$$\text{Payment} = \frac{55\,080}{4 \times 12}$$

Payment = $1 147.50

Investing Money - Further Flat Rate Loans

This sheet involves flat rate loan calculations that include a deposit. This sheet covers a conceptually difficult process because students have to understand the function of a deposit and that it is not a borrowing. There is one additional step from the previous sheets, that is, the subtraction of a deposit from the sale price. But this means that a question is a four step process, five steps when the deposit is given as a percentage.

Example: Fred buys a swimming pool which sells for $14 250. He pays a $2 850 deposit. He takes out a flat rate loan at 7% p.a. over 5 years. He repays the loan in monthly payments. Calculate the monthly repayment.

Solution:

Find the Principal borrowed

$A = 14\,250 - 2\,850$ ← Subtract the deposit from the sale price, this is the Principal, which is the amount borrowed.

$A = \$11\,400$

Find the interest payable

$I = Prn$

$= 11\,400 \times 0.07 \times 5$ ← Remember to convert the interest rate to a decimal. The amount borrowed is the principal, not sale price

$I = \$3\,990$

Find the total amount payable

$A = 11\,400 + 3\,990$ ← Add the interest to the principal

$A = \$15\,390$ ← This is the amount that has to be paid back

Find the monthly payment

$\text{Monthly Payment} = \dfrac{15\,390}{5 \times 12}$ ← Divide the amount payable by the number of months in 5 years. (So Use 5×12)

$= \$256.50$

P = \$700, R = 6% p.a., n = 4 years

4 _____

P = \$1 420, R = 8.9% p.a., n = 7 years

5 _____

Calculate the simple interest earned and then the account balance.

An investment of \$47 000 at 4% p.a. for 5 years.

6 _____

An investment of \$6 112 at 1.5% per month for 8 months.

7 _____

Calculate the simple interest earned on these investments.

An investment of \$1 440 at 9% p.a. for 26 weeks.

8 _____

An investment of \$13 900 at 12% p.a. for 145 days.

9 _____

An investment of \$8 055 at 5.3% p.a. for 16 months.

10 _____

Use either 'Guess & Check' or algebraic methods to find the term of these investments

An investment of \$6 000 at 4% p.a. earns interest of \$720.

11 _____

An investment of \$430 at 7.4% p.a. earns interest of \$413.66.

12 _____

Use either 'Guess & Check' or algebraic methods to find the principal invested

An investment at 7% p.a., for 3 years earns interest of \$126. Find the amount invested.

13 _____

An investment has interest paid at the end of each year. Use $I = Prn$ twice to find the account balance at the end of a two year investment.

\$12 000 at 5.5% p.a. for 2 years.

14 _____

Find the account balance after the following compound interest investments have matured. Use $A = P(1 + r)^n$

An investment of \$2 000 at 9% p.a. for 5 years, compounded annually.

15 _____

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find A, the account balance, for this compound investment. (Continued)

An investment of $6 020 at 1.6% per month for 10 months, compounded monthly.

16

Calculate the interest earned from these compound investments.

An investment of $750 at 8% p.a. for 4 years, compounded annually.

17

An investment of $23 770 at 0.6% per month for 15 months, compounded monthly.

18

Compare the interest earned in these two investment options.
Option 1: $3 500 invested at 6% p.a. for 7 yrs, simple interest investment.
Option 2: $3 500 invested at 6% p.a. for 7 years, compound interest investment, compounding annually.

Calculate the interest earned if Option 1 is chosen. (Simple Interest)

19

Calculate the interest earned if Option 2 is chosen. (Compound Int.)

20

Which option offers the better return and calculate the difference between the two options.

21

Express in your own words, why compound interest investments result in higher interest returns.

22

Calculate the amount paid given the flat rate loan repayments.

23 $240/month for 8 months

24 $85.90/month for 5 years

25 $58.65/week for 2 years

Calculate the amount paid given the deposit and flat rate loan repayments.

Deposit of $430, repayments of $75.36 per month for 2 years.

26

Deposit of $1 715, repayments of $89.95 per week for 4 years.

27

A car costs $28 200. It is bought using a loan charging 8% p.a. simple interest, for 4 years. The repayments are monthly.

28 Calculate the interest payable

29 Calculate the total amount to be repaid.

30 Calculate the repayments.

Calculate the interest earned

35 $1 at 3% p.a. for 4 years

36 $300 at 8% p.a. for 2 years

37 $90 700 at 4% p.a. for 5 yrs

Calculate the interest earned and then the account balance

38 $700 at 7% p.a. for 3 years

39 $4 500 at 5% p.a. for 6 years

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Convert these interest rates to decimals.

1 9% = 0.09

2 12% = 0.12

3 8.4% = 0.084

Calculate the simple interest earned on these investments. Use: $I = Prn$

$P = \$700$, $R = 6\%$ p.a., $n = 4$ years

4 $I = Prn$

$= 700 \times 0.06 \times 4$

$I = \$168$

$P = \$1\,420$, $R = 8.9\%$ p.a., $n = 7$ years

5 $I = Prn$

$= 1\,420 \times 0.089 \times 7$

$I = \$884.66$

Calculate the simple interest earned and then the account balance.

An investment of \$47 000 at 4% p.a. for 5 years.

6 $I = Prn$

$= 47\,000 \times 0.04 \times 5$

$I = \$9\,400$

$A = 47\,000 + 9\,400$

$A = \$56\,400$

An investment of \$6 112 at 1.5% per month for 8 months.

7 $I = Prn$

$= 6\,112 \times 0.015 \times 8$

$I = \$733.44$

$A = 6\,112 + 733.44$

$A = \$6\,845.44$

Calculate the simple interest earned on these investments.

An investment of \$1 440 at 9% p.a. for 26 weeks.

8 $I = Prn$

$= 1\,440 \times 0.09 \times \frac{26}{52}$

$I = \$64.80$

An investment of \$13 900 at 12% p.a. for 145 days.

9 $I = Prn$

$= 13\,900 \times 0.12 \times \frac{145}{365}$

$I = \$662.63$

An investment of \$8 055 at 5.3% p.a. for 16 months.

10 $I = Prn$

$= 8\,055 \times 0.053 \times \frac{16}{12}$

$I = \$569.22$

Use either 'Guess & Check' or algebraic methods to find the term of these investments

An investment of \$6 000 at 4% p.a. earns interest of \$720.

11 $I = Prn$

$720 = 6\,000 \times 0.04 \times n$

$720 = 240 \times n$

$n = \frac{720}{240} = 3$ years

An investment of \$430 at 7.4% p.a. earns interest of \$413.66.

12 $I = Prn$

$413.66 = 430 \times 0.074 \times n$

$413.66 = 31.82 \times n$

$n = \frac{413.66}{31.82} = 13$ years

Use either 'Guess & Check' or algebraic methods to find the principal invested

An investment at 7% p.a., for 3 years earns interest of \$126. Find the amount invested.

13 $I = Prn$

$126 = P \times 0.07 \times 3$

$126 = P \times 0.21$

$P = \frac{126}{0.21} = \$600$

An investment has interest paid at the end of each year. Use $I = Prn$ twice to find the account balance at the end of a two year investment.

\$12 000 at 5.5% p.a. for 2 years.

14 $I = Prn$

$= 12\,000 \times 0.055 \times 1$

$I = \$660$

$A = 12\,000 + 660$

$A = \$12\,660$

$I = Prn$

$= 12\,660 \times 0.055 \times 1$

$I = \$696.30$

$A = 12\,660 + 696.30$

$A = \$13\,356.30$

Find the account balance after the following compound interest investments have matured. Use $A = P(1 + r)^n$

An investment of \$2 000 at 9% p.a. for 5 years, compounded annually.

15 $A = P(1 + r)^n$

$= 2\,000 \times (1 + 0.09)^5$

$A = \$3\,077.25$

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find A, the account balance, for this compound investment. (Continued)

An investment of \$6 020 at 1.6% per month for 10 months, compounded monthly.

16 $A = P(1 + r)^n$

$= 6\,020 \times (1 + 0.016)^{10}$

$A = \$7\,055.59$

Calculate the interest earned from these compound investments.

An investment of \$750 at 8% p.a. for 4 years, compounded annually.

17 $A = P(1 + r)^n$

$= 750 \times (1 + 0.08)^4$

$A = \$1\,020.37$

$I = 1\,020.37 - 750$

$I = \$270.37$

An investment of \$23 770 at 0.6% per month for 15 months, compounded monthly.

18 $A = P(1 + r)^n$

$= 23\,770 \times (1 + 0.006)^{15}$

$A = \$26\,001.53$

$I = 26\,001.53 - 23\,770$

$I = \$2\,231.53$

Compare the interest earned in these two investment options.
Option 1: \$3 500 invested at 6% p.a. for 7 yrs, simple interest investment.
Option 2: \$3 500 invested at 6% p.a. for 7 years, compound interest investment, compounding annually.

Calculate the interest earned if Option 1 is chosen. (Simple Interest)

19 $I = Prn$

$= 3\,500 \times 0.06 \times 7$

$I = \$1\,470$

Calculate the interest earned if Option 2 is chosen. (Compound Int.)

20 $A = P(1 + r)^n$

$= 3\,500 \times (1 + 0.06)^7$

$A = \$5\,262.71$

$I = 5\,262.71 - 3\,500$

$I = \$1\,762.71$

Which option offers the better return and calculate the difference between the two options.

21 *Compound is better.*

Difference = 1 762.71 - 1 470

Difference = \$292.71

Express in your own words, why compound interest investments result in higher interest returns.

22 *Compound investments pay interest during the investment. That means that your account balance increases and you receive interest on your interest. So you are paid more interest.*

Calculate the amount paid given the flat rate loan repayments.

23 \$240/month for 8 months

Amount = 240 × 8

Amount = \$1 920

24 \$85.90/month for 5 years

Amount = 85.90 × 12 × 5

Amount = \$5 154

25 \$58.65/week for 2 years

Amount = 58.65 × 52 × 2

Amount = \$6 099.60

Calculate the amount paid given the deposit and flat rate loan repayments.

Deposit of \$430, repayments of \$75.36 per month for 2 years.

26 Amount = 75.36 × 12 × 2 + 430

Amount = \$2 238.64

Deposit of \$1 715, repayments of \$89.95 per week for 4 years.

27 Amount = 89.95 × 52 × 4 + 1 715

Amount = \$20 424.60

A car costs \$28 200. It is bought using a loan charging 8% p.a. simple interest, for 4 years. The repayments are monthly.

28 Calculate the interest payable

$I = Prn$

$= 28\,200 \times 0.08 \times 4$

$I = \$9\,024$

29 Calculate the total amount to be repaid.

Amount = 28 200 + 9 024

Amount = \$37 224

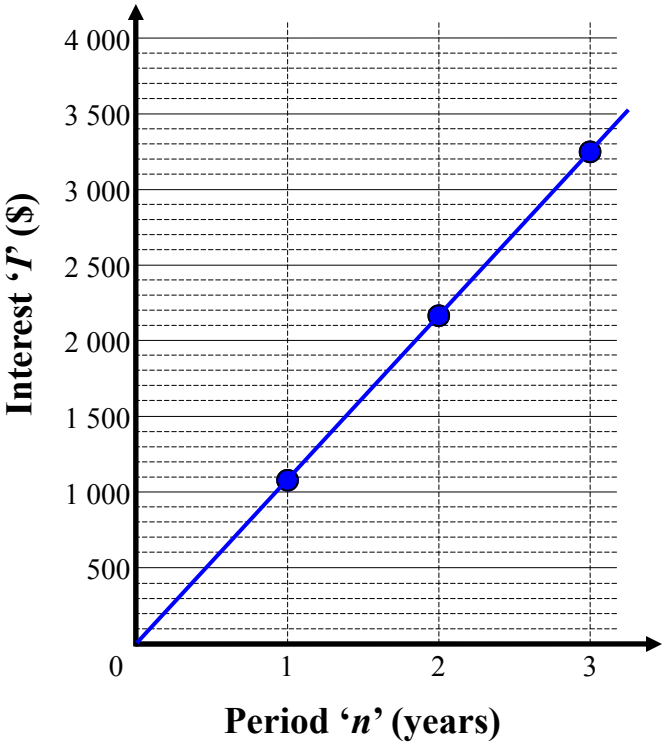
30 Calculate the repayments.

Amount = $\dfrac{37\,224}{4 \times 12}$

Amount = \$775.50

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

$9 000 is invested for 3 years in a simple interest account which pays 12% p.a. Plot the interest earned on the graph.



34 Plot the line representing the interest earned on the investment, on the graph above.

31 Calculate I for '$n = 1$'

$I = Prn$

$= 9\,000 \times 0.12 \times 1$

$I = \$1\,080$

32 Calculate I for '$n = 2$'

$I = Prn$

$= 9\,000 \times 0.12 \times 2$

$I = \$2\,160$

33 Calculate I for '$n = 3$'

$I = Prn$

$= 9\,000 \times 0.12 \times 3$

$I = \$3\,240$

Use the compound investment table below to answer the questions. All investments are compounded annually.

Periods (n)	Compound Interest Earned ($) on a $1 Investment									
	$R = 1\,\%$	$R = 2\,\%$	$R = 3\,\%$	$R = 4\,\%$	$R = 5\,\%$	$R = 6\,\%$	$R = 7\,\%$	$R = 8\,\%$	$R = 9\,\%$	$R = 10\,\%$

Investing Money - Simple Interest (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Convert these interest rates from percentages to decimals. Divide by 100 to get a decimal.

Example:

16% = 16 ÷ 100 = 0.16

1 9% = ☐ ÷ 100 = ☐

2 5% = ☐ ÷ ☐ = ☐

3 10% = ☐ ÷ ☐ = ☐

Answer only, from now on.

4 14.5% = ☐

5 12.7% = ☐

6 4.92% = ☐

7 0.5% = ☐

8 7¼% = ☐

Calc: SHIFT 7 1 4 ÷ 1 0 0 S⇔D =

9 6¾% = ☐

Simple interest is found using $I = Prn$, but first convert the rate R to a decimal. Find I.

Example: Find the interest earned:

P = \$950, R = 8% p.a., n = 5 years

$r = 8 \div 100 = 0.08$

$I = Prn$

$= 950 \times 0.08 \times 5$

I = \$380

P = \$8 300, R = 6% p.a., n = 4 years

10 r = ☐ ÷ 100 = ☐

$I = Prn$

= ☐ × ☐ × ☐

P r n

I = ☐

Show the '$' sign

P = \$970, R = 4.5% p.a., n = 2 years

11 r = ☐ ÷ ☐ = ☐

$I = Prn$

= ☐ × ☐ × ☐

I = ☐ ← Cents are always 2 d.p.

P = \$5 400, R = 6.04% p.a., n = 7 yrs

12 r = ☐

$I = Prn$

= ☐

I = ☐

The next three have smaller interest rates, but you still have to ÷ 100, as they are percentages

P = \$820, R = 0.15%/week, n = 9 wks

13 r = ☐

$I = Prn$

= ☐

I = ☐

P = \$11 600, R = 0.4%/mth, n = 8 mths

14

Convert R to r (% to decimal)

Write Simple Interest Formula

Make the Substitution

Show 'I =', the '$' sign and cents to 2 d.p.

P = \$450, R = 0.05%/wk, n = 19 weeks

15

Round to 2 d.p. NOT nearest 5c.

P = \$47 130, R = 8.4% p.a., n = 6 years

16

R r

Keep going, but do less work. Use 3 lines not 4, Convert R to r, in the substitution line.

P = \$1 720, R = 4% p.a., n = 5 yrs

17 $I = Prn$ *Use r not R*

= ☐ × ☐ × ☐

I =

P = \$9 050, R = 3.75% p.a., n = 4 yrs

18 $I = Prn$ *Use r not R*

= ☐ × ☐ × ☐

I =

P = \$180, R = 6.25% p.a., n = 4.5 yrs

19

P = \$57 000, R = 4.02% p.a., n = 9 yrs

20

P = \$685.12, R = 13.07% p.a., n = 3 yrs

21

Investing Money - Simple Interest - Account Balance (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The account balance 'A' is what is in your account after the interest is paid. Calculate A.

Example: P = \$1 300, I = \$275.20

$A = P + I = 1\,300 + 275.20$

$A = \$1\,575.20$

$P = \$1\,150$, $I = \$662.30$

1 $A =$ ☐ + ☐

$A =$ ☐

Show '$' sign and cents to 2 decimal places

$P = \$580$, $I = \$39.65$

2 $A =$ ☐ + ☐

$A =$ ☐

$P = \$56\,970$, $I = \$4\,076.10$

3 $A =$

$A =$

$P = \$8\,030.62$, $I = \$1\,510.18$

4

$P = \$3\,877$, $I = \$772.92$

5

Jen has \$458.08 in her bank account and receives \$14.32 interest. Find her new account balance.

6

Neil has \$2 504.24 in the bank. He then receives interest of \$83.19. Calculate his account balance.

7

Calculate the interest earned then add it to the principal to find the account balance.

Example:

$P = \$1\,400$, $R = 7\%$ p.a., $n = 5$ years

$I = Prn$

$= 1\,400 \times 0.07 \times 5$

$I = \$490$

$A = 1\,400 + 490 = \$1\,890$

$P = \$4\,200$, $R = 5.2\%$ p.a., $n = 3$ yrs

8 $I = Prn$ *Use r not R*

$=$ ☐ × ☐ × ☐

$I =$ ☐

Show '$' sign and cents to 2 decimal places

$A =$ ☐ + ☐

$A =$ ☐

$P = \$19\,050$, $R = 4.8\%$ p.a., $n = 4$ yrs

9 $I = Prn$

$=$ ☐ × ☐ × ☐

$I =$ ☐

$A =$ ☐ + ☐

$A =$ ☐

$P = \$1\,150$, $R = 5.25\%$ p.a., $n = 6$ yrs

10

Interest rates are smaller as the period is shorter. Find the interest and account balance.

$P = \$79\,500$

$R = 0.05\%$ per week $n = 38$ weeks

Remember to convert R to r (% to a decimal)

11

$P = \$10\,200$

$R = 0.7\%$ per month $n = 9$ months

12

Jason invests \$840 in an account for 7 months which pays 0.45% per month. Calculate:

13 The interest Jason has earned

14 His account balance once the interest has been credited.

Investing Money - Simple Interest - Worded Questions (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Answer these. Always use the '$' sign and round cents, if there are any, to 2 d.p.

Eli invests $3 500 for 7 years at 5.4% p.a.

1 Convert 5.4% to a decimal.

2 Calculate the interest earned

$I = Prn$

3 His account balance after the interest has been paid.

Russell invests $950 for 8 months at 0.86% per month.

4 Convert 0.86% to a decimal.

5 Calculate the interest Russell earns on his investment.

6 His account balance after the interest is deposited.

Olivia has $13 600 to invest. She goes to two banks and is offered:
Bank 1: 6.05% p.a. on a 2 year term
Bank 2: 5.75% p.a. on a 2 year term

7 Calculate the interest earned if Bank 1 was chosen.

8 Calculate the interest earned if Bank 2 was chosen.

9 Calculate the extra interest earned if Olivia uses Bank 1.

Jiang li wants $38 000 in 3 years time to travel overseas. She invests $29 500 now earning 8.05% p.a.

10 Calculate the interest earned

11 Her account balance.

12 The additional amount req'd.

Yousef's investment of $17 000 for 4 years at 5.6% p.a. is about to mature. If he chooses to re-invest for 6 months he will earn 0.47%/month.

13 Calculate the interest earned from Yousef's first investment.

14 Calculate the account balance after the interest is paid.

Yousef chooses to reinvest all of his account balance for the 6 months

15 Convert 0.47% to a decimal.

16 Calculate the interest earned from Yousef's 2nd investment.

17 Calculate the account balance after the interest is paid.

Yousef is going to live off the money (in Q.17) while he completes a course for 1 year.

18 Convert the amount in Q.17 to a weekly amount.

Investing Money - Simple Interest - Changing the Term (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Write these time periods as fractions of a year. Don't simplify the fractions.

Examples:

5 months = $\frac{5}{12}$ 13 weeks = $\frac{13}{52}$

1 25 weeks = $\frac{\square}{\square}$

2 9 months = $\frac{\square}{\square}$

3 117 days = $\frac{\square}{\square}$

4 14 weeks = $\frac{\square}{\square}$

5 15 months = $\frac{\square}{\square}$

Calculate the interest earned on these investments.

P = \$1 040, R = 8% p.a., n = 9 weeks

6 r = $\square$ ÷ 100 = $\square$

Convert the rate to a decimal

$I = Prn$

= $\square$ × $\square$ × $\frac{\square}{\square}$

P r n

Calc: 1 0 4 0 × 0 . 0 8 × 9 ab/c 5 2 =

I = $\square$

Show the '\$' sign and write cents to 2 d.p.

P = \$4 260, R = 9% p.a., n = 7 months

7 r = $\square$ ÷ $\square$ = $\square$

$I = Prn$

= $\square$ × $\square$ × $\frac{\square}{\square}$

I = $\square$

P = \$1 095, R = 5.6% p.a., n = 220 days

8 r = $\square$ ÷ $\square$ = $\square$

$I = Prn$

= $\square$ × $\square$ × $\frac{\square}{\square}$

I = $\square$

P = \$7 176, R = 3.2% p.a., n = 85 wks.

9 r =

$I = Prn$

=

I =

Complete these calculations, rounding to 2 decimal places.

10 $I = 5\,000 \times 0.046 \times \frac{19}{12}$

I = $\square$

11 $I = 83\,560 \times 0.105 \times \frac{96}{365}$

I = $\square$

P = \$2 500, R = 6.3% p.a., n = 177 days

12 $I = Prn$

= $\square$ × $\square$ × $\frac{\square}{\square}$

r as a decimal

I =

P = \$880, R = 13.25% p.a., n = 16 mths

13

Now find the interest and then the account balance.

P = \$700, R = 5% p.a., n = 12 weeks

14

A = $\square$ + $\square$

Principal Interest

A =

P = \$34 900, R = 11.6% p.a., n = 20 months.

15

A =

A =

Ben invests \$8 500 at 12.2% p.a. for 34 weeks. He wants \$10 000 for a new car. Calculate:

16 His interest and Acc. Bal.

17 The amount above or below \$10 000.

Use the words 'above' or 'below'.

Investing Money - Simple Interest - Changing the Term (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the interest earned and the account balance with these.

Tom invests $17 450 at 6.65% p.a. for 10 months.

1 Convert 6.65% to a decimal.

$r =$ ☐ ÷ ☐ = ☐

2 Calculate the interest earned

$I = Prn$

$= $ ☐ × ☐ × ☐/☐

$I =$

Show the '$' sign and write cents to 2 d.p.

3 Find his account balance after the interest has been paid.

$A =$ ☐ + ☐

$A =$

Josiah invests $4 200 in a term deposit at 8.35% p.a. for 195 days.

4 Convert 8.35% to a decimal.

5 Calculate the interest earned.

6 Find his account balance after the interest is credited.

Bailey is saving for a trip. He invests $11 200 for 15 months at 7.16% p.a.

7 Express 7.16% as a decimal.

8 Calculate the interest earned.

9 Find his account balance after the interest has been paid.

10 If the airfare is $2 120, how much spending money is left?

Julia has been left an inheritance. Her father gives her a choice, she can:
1 - Receive $19 000 now, and invest it at 4.35% p.a. for 75 weeks, or
2 - Receive $21 000 in 75 weeks time.
Which is the best financial option?

11 Calculate the interest earned on the $19 000 investment (1).

12 Find Julia's account balance after the interest has been paid.

13 Which option is the best? 1 or 2 and by how much?

Tayla won a prize of $2 000 and she invested it for 175 days at 4.3% p.a.

14 Calculate the interest Tayla earned on the $2 000 investment.

15 Find Tayla's account balance when the interest was deposited.

16 If she spends 75% of the money on a new laptop, how much did the laptop cost?

Cost $=$ ☐ × ☐/☐

Cost $=$ ☐

Wai received $765 for holiday work and $320 on his birthday. He invests all the money for 17 weeks at 3.3% p.a. Find the interest Wai earned.

17

Investing Money - Simple Interest - Guess & Check for Term '*n*' (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use 'Guess and Check' to find the value of '*n*' for these. Use the back arrow.

1 $2\,160 = 6\,000 \times 0.09 \times n$

Try '*n*' = 3 ____ (Compare to 2 160)

$6000 \times 0.09 \times 3$

Try '*n*' = 5 ____ (Compare to 2 160)

$6000 \times 0.09 \times 5$

Try '*n*' = ____ ____

2 $336 = 1\,200 \times 0.04 \times n$

Try '*n*' = 5 ____ (Compare to 336)

$1\,200 \times 0.04 \times 5$

Try '*n*' = 9 ____ (Compare to 336)

$1\,200 \times 0.04 \times 9$

Try '*n*' = ____ ____

Keep trying '*n*' values until you get 336

3 $2\,805 = 8\,500 \times 0.03 \times n$

Keep trying '*n*' values until you get 2 805

Tried *n* = ____ ____ ____ ○Low ○Low ○Low ○High ○High ○High $n =$ ____

4 $1\,100 = 1\,250 \times 0.11 \times n$

Keep trying '*n*' values until you get 1 100

Tried *n* = ____ ____ ____ ○Low ○Low ○Low ○High ○High ○High $n =$ ____

5 $6\,600 = 44\,000 \times 0.05 \times n$

Tried *n* = ____ ____ ____ ○Low ○Low ○Low ○High ○High ○High $n =$ ____

6 $934.40 = 730 \times 0.08 \times n$

Tried *n* = ____ ____ ____ ○Low ○Low ○Low ○High ○High ○High $n =$ ____

These are done the same way but this time you first need to build the calculation line. Find '*n*'.

7 An investment of $800 at 7% p.a., results in interest of $224.

____ = ____ × ____ × *n*

Interest | Principal | Convert rate to a decimal

Tried *n* = ____ ____ ____ ____ ○Low ○Low ○Low ○Low ○High ○High ○High ○High

$n =$ ____ years

8 Interest of $9 984 is earned from a $9 600 investment at 8% p.a.

____ = ____ × ____ × *n*

Interest | Principal | Rate (decimal)

Tried *n* = ____ ____ ____ ____ ○Low ○Low ○Low ○Low ○High ○High ○High ○High

$n =$ ____ years

9 $1 450 is invested at 4% p.a. and earns interest of $464.

$I = P r$

____ = ____ × ____ × *n*

Tried *n* = ____ ____ ____ ____ ○Low ○Low ○Low ○Low ○High ○High ○High ○High

$n =$ ____ years

10 Interest of $1 137.50 is earned from a $3 250 investment at 5% p.a.

$I = P r$

____ = ____ × ____ × *n*

Tried *n* = ____ ____ ____ ____ ○Low ○Low ○Low ○Low ○High ○High ○High ○High

$n =$ ____ years

Now write the formula, make the substitution and find '*n*' by Guess and Check methods.

11 An investment of $800 at 7% p.a., results in interest of $224.

Write the formula $I = Prn$

____ = ____ × ____ × *n*

Substitute *I*, *P* and *r* (as a decimal)

$n =$ ____ years

12 Interest of $3 652 is earned from a $4 150 investment at 11% p.a.

____ = ____ × ____ × *n*

$n =$ ____ years

13 An investment of $930 at 6% p.a., results in interest of $167.40.

14 Interest of $1 430 is earned from a $2 200 investment at 13% p.a.

Investing Money - Simple Interest - Algebraic Solution Term 'n' (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find 'n' by solving these. Use the '÷' key or the fraction key.

1 $n = \frac{7\,500}{1\,250} =$ ☐

2 $n = \frac{9\,960}{830} =$ ☐

3 $n = \frac{587}{117.40} =$ ☐

4 $n = \frac{7\,994}{3\,997} =$ ☐

Create the division first, by dividing by the number next to the 'n'. Find the value of 'n'.

Example

$176.40 = 29.4 \times n$

(÷ 29.4) (÷ 29.4)

$n = \frac{176.40}{29.4} = 6$

5 $126 = 18 \times n$

(÷ 18) (÷ 18)

$n = \frac{\square}{\square} = \square$

6 $420 = 70 \times n$

(÷ 70) (÷ 70)

$n = \frac{\square}{\square} = \square$

7 $1\,101.10 = 100.10 \times n$

(÷ 100.10) (÷ 100.10)

$n = \frac{\square}{\square} = \square$

8 $2\,274.80 = 568.70 \times n$

(÷ 568.70) (÷ 568.70)

$n = \frac{\square}{\square} = \square$

9 $3\,080 = 440 \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

10 $414 = 138 \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

11 $1\,336.50 = 148.50 \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

1 extra step, perform a × first, then it's the same process. Find the value of 'n'.

Example

$1\,300 = 6\,500 \times 0.05 \times n$

Multiply these

$1\,300 = 325 \times n$

(÷ 325) (÷ 325)

$n = \frac{1\,300}{325} = 4$

12 $680 = 1\,700 \times 0.08 \times n$

$680 = \square \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

13 $2\,541 = 3\,850 \times 0.06 \times n$

$\square = \square \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

14 $4\,900 = 14\,000 \times 0.05 \times n$

$\square = \square \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$

Get the numbers out of the sentence and solve for 'n', which is the term, in years.

15 Interest of $537.60 is earned from a $960 investment at 7% p.a.

☐ = ☐ × ☐ × n

Interest | Principal | Rate (decimal)

$\square = \square \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$ years

16 Interest of $3 354 is earned from a $4 300 investment at 13% p.a.

☐ = ☐ × ☐ × n

Interest | Principal | Rate (decimal)

$\square = \square \times n$

(÷) (÷)

$n = \frac{\square}{\square} = \square$ years

17 Interest of $590 is earned from a $1 475 investment at 5% p.a.

☐ = ☐ × ☐ × n

Interest | Principal | Rate (decimal)

$\square = \square \times n$

( ) ( )

$n = \frac{\square}{\square} = \square$ years

Investing Money - Simple Interest - Further Finding the Term (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the term 'n' by solving these. Follow the example.

Example

Interest of \$1 752 is earned from a \$7 300 investment at 4% p.a., find the term of the investment.

$I = Prn$ — Write Formula

$1752 = 7\,300 \times 0.04 \times n$ — Substitute Values (Decimal)

$1\,752 = 292 \times n$ — Simplify The '×'

$\div 292$ $\div 292$

$n = \frac{1\,752}{292} = 6$ years — Divide and solve

1 Interest of \$120 is earned from a \$500 investment at 4% p.a., find the term of the investment.

2 An investment of \$3 250 at 7% p.a., results in interest of \$2 275 being paid. Find the term of the investment.

3 Interest of \$620.40 is received from a \$940 investment at 6% p.a., find the term of the investment.

4 An investment of \$1 700 at 8% p.a., results in interest of \$952 being paid. Find the term of the investment.

5 Interest of \$8 944 is earned from an \$8 600 investment at 13% p.a., find the term of the investment.

6 An investment of \$4 850 at 11% p.a., results in interest of \$4 801.50 being paid. Find the investment's term.

This time you want a total amount in the future, follow the steps to find the term.

David has \$9 000 in the bank but he needs \$12 600 for a future trip.

7 How much interest does he have to earn to have an account balance of \$12 600?

$I =$ [ ] - [ ]

$I =$ [ ]

8 If David's investment pays interest at 5% p.a., find the term of the investment to achieve the interest.

Skye has \$26 000 in the bank but she needs \$36 400 for a home deposit.

9 How much interest does she have to earn to have an account balance of \$36 400?

$I =$

$I =$

10 If Skye earns interest at 8% p.a., find the term of the investment needed to get the deposit.

Investing Money - Simple Interest - Guess & Check Principal (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use 'Guess and Check' to find the value of 'P' for these. Use the back arrow. All values are in thousands.

1 $3\,360 = 0.07 \times 8 \times P$

Try 'P' = 3 000 ____ / $0.07 \times 8 \times 3\,000$ — Compare to 3 360

Try 'P' = 5 000 ____ / $0.07 \times 8 \times 5\,000$ — Compare to 3 360

Try 'P' = 7 000 ____ / $0.07 \times 8 \times 7\,000$ — Compare to 3 360

$P =$ ____

2 $1\,440 = 0.04 \times 3 \times P$

Try 'P' = 3 000 ____ / $0.04 \times 3 \times 3\,000$ — Compare to 1 440

Try 'P' = 7 000 ____ / $0.04 \times 3 \times 7\,000$ — Compare to 1 440

Try 'P' = 11 000 ____ / $0.04 \times 3 \times 11\,000$ — Compare to 1 440

$P =$ ____

Keep trying 'P' values until you get 1 440

3 $12\,870 = 0.11 \times 9 \times P$

Try 'P' = 5 000 ____ / $0.11 \times 9 \times 5\,000$ — Compare to 12 870

Try 'P' = 10 000 ____ / $0.11 \times 9 \times 10\,000$ — Compare to 12 870

Try 'P' = 15 000 ____ / $0.11 \times 9 \times 15\,000$ — Compare to 12 870

$P =$ ____

Keep trying 'P' values until you get 12 870

Build the calculation line. But use $I = rnP$, so that the P is the last number on your calc. Find 'P'.

4 An investment at 6% p.a. for 5 years, results in interest of $2 400.

____ = ____ × ____ × P

Interest | Rate (decimal) | Term

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

$P =$ $

5 An investment yields interest of $2 880 after 8 years, at 12% p.a.

____ = ____ × ____ × P

I | r | n

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

$P =$ ____

6 An investment at 11% p.a. for 2 years, results in interest of $5 280.

____ = ____ × ____ × P

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

$P =$ ____

7 An investment at 9% p.a. for 7 years, results in interest of $10 080.

____ = ____ × ____ × P

Tried $P =$ ____ ○ Low ○ High

Tried $P =$ ____ ○ Low ○ High

$P =$ ____

Now write the formula, with P at the end. Make the substitution and find 'P'. (whole thousands)

8 An investment at 6% p.a. for 8 years, results in interest of $6 240.

____

Write the formula $I = rnP$, with P at the end

____ = ____ × ____ × P

Substitute I, then r (as a decimal) and then n.

$P =$ ____

Show the $ sign

9 An investment at 10% p.a. for 4 years, results in interest of $1 200.

____

____ = ____ × ____ × P

$P =$ ____

10 An investment yields interest of $3 780 after 7 years, at 3% p.a.

____

____

____

Investing Money - Simple Interest - Algebraic Sol Principal 'P' (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find 'P' by solving these. Use the '÷' key or the fraction key.

1 $P = \dfrac{120}{0.6} =$ ☐

2 $P = \dfrac{868}{0.62} =$ ☐

3 $P = \dfrac{4\ 200}{0.48} =$ ☐

4 $P = \dfrac{111.60}{0.72} =$ ☐

Create the division first, by dividing by the number next to the 'P'. Find the value of 'P'.

Example

$176.40 = P \times 0.42$

÷ 0.42 ÷ 0.42

$P = \dfrac{176.40}{0.42} = 420$

5 $240 = P \times 0.48$

÷ 0.48 ÷ 0.48

$P = \dfrac{\square}{\square} = \square$

6 $975 = P \times 0.65$

÷ 0.65 ÷ 0.65

$P = \dfrac{\square}{\square} = \square$

7 $4\ 968 = P \times 0.54$

÷ 0.54 ÷ 0.54

$P = \dfrac{\square}{\square} = \square$

8 $1\ 344 = P \times 0.24$

÷ 0.24 ÷ 0.24

$P = \dfrac{\square}{\square} = \square$

9 $459.20 = P \times 0.56$

÷ ÷

$P = \dfrac{\square}{\square} = \square$

10 $2\ 343 = P \times 0.33$

÷ ÷

$P = \dfrac{\square}{\square} = \square$

11 $2\ 196 = P \times 0.72$

÷ ÷

$P = \dfrac{\square}{\square} = \square$

Multiply r and n first, then it's the same division process. Find the value of 'P'.

Example

$279.60 = P \times 0.03 \times 8$

Multiply these

$279.60 = P \times 0.24$

÷ 0.24 ÷ 0.24

$P = \dfrac{279.60}{0.24} = 1\ 165$

12 $195 = P \times 0.06 \times 5$

$195 = P \times \square$

÷ ÷

$P = \dfrac{\square}{\square} = \square$

13 $484.20 = P \times 0.04 \times 3$

$484.20 = P \times \square$

÷ ÷

$P = \dfrac{\square}{\square} = \square$

Substitute into the formula to find the value of 'P'.

14 Interest of \$86 is earned from a 5 year investment at 4% p.a.

☐ $= P \times$ ☐ $\times$ ☐

Interest Rate (decimal) Term

☐ $= P \times$ ☐

Investing Money - Simple Interest - Further Finding Principal (Sheet 3)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the amount invested, the Principal 'P' by solving these. Remember the $ sign.

Example

Interest of $374.50 is earned from a 5 year investment at 7% p.a., find the principal invested.

$I = Prn$ — Write Formula

Decimal: 0.07

$374.50 = P \times 0.07 \times 5$ — Substitute Values

$374.50 = P \times 0.35$ — Simplify The '×'

$\div 0.35$ $\div 0.35$

$P = \frac{374.50}{0.35} = \$1\,070$ — Divide and solve

1 Interest of $914.40 is earned from a 3 year investment at 8% p.a., find the principal invested.

2 Interest of $8 127 is earned from a 7 year investment at 6% p.a., find the principal invested.

3 A 5 year investment which has an interest rate of 4% p.a. yields interest of $1 150. Find the amount invested.

$I = Prn$

$1\,150 = P \times 0.04 \times 5$

$1\,150 = P \times 0.2$

4 Interest of $8 658 is earned from a 6 year investment at 13% p.a., find the principal invested.

5 A 2 year investment which has an interest rate of 9% p.a. yields interest of $129.60. Find the amount invested.

This time find the account balance. So find the principal then add it to the interest.

6 Interest of $1 545 is earned from a 5 year investment at 6% p.a., find the principal invested.

7 What will be the account balance at the end of the investment?

$A =$ [ ] + [ ]

Principal Interest

$A =$ [ ]

8 Interest of $321.60 is earned from a 4 year investment at 12% p.a., find the principal invested.

9 What will be the account balance at the end of the investment?

$A =$ [ ] + [ ]

$A =$ [ ]

Investing Money - Simple Interest - Repeated Use (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

When an investment compounds, interest is paid during the investment. Calculate the account balance for these.

Principal \$2 000,
Rate = 7% p.a.,
n = 3 yrs, compounding annually.

First Application: Year 1

1 $I = Prn$

$= \square \times \square \times 1$
Principal; Rate (decimal)

$I = \square$ Show '\$' sign

$A = \square + \square$
Principal; Interest (Q1)

$A = \square$

Second Application: Year 2

2 $I = Prn$

$= \square \times \square \times 1$
Principal (Use A-Yr 1); Rate (decimal)

$I = \square$

$A = \square + \square$
Principal (Use A-Yr 1); Interest (Q2)

$A = \square$

Third (Final) Application: Year 3

3 $I = Prn$

$= \square \times \square \times 1$
Principal (Use A-Yr 2); Rate (decimal)

$I = \square$

$A = \square + \square$
Principal (Use A-Yr 2); Interest (Q3)

$A = \square$

Compare the compounding investment (Q 1-3) to a standard simple interest investment.

4 $I = Prn$

$= \square \times \square \times 3$
\$2 000; Rate 7% p.a.

$I = \square$

$A = \square + \square$
Principal; Interest (Q4)

$A = \square$

5 Find the difference between your answer for 'A' in Q3 & Q4

Diff = (A (Q3)) - (A (Q4))

$= \square$

Now try a 2 year compounding investment. Find the account balance.

Principal \$920,
Rate = 8.4% p.a.,
n = 2 yrs, compounding annually

First Application: Year 1

6 $I = Prn$

$= \square \times \square \times 1$

$I = \square$

$A = \square + \square$

$A = \square$

Second (Final) Application: Year 2

7 $I = Prn$

$=$

$I =$

$A =$

$A =$

Compare the compounding investment (Q 6-7) to a standard simple interest investment.

8 $I = Prn$

$= \square \times \square \times 2$
\$920; Rate 8.4% p.a.

$I = \square$

$A = \square + \square$
Principal; Interest (Q8)

$A = \square$

9 Find the difference between your answer for 'A' in Q7 & Q8

Diff = (A (Q7)) - (A (Q8))

$= \square$

Now use a different approach to answering compound questions. Calculate these …..

10 *Principal* \$2 000,
Rate = 7% p.a., [1 + 0.07 = 1.07]
n = 3 yrs, compounding annually.

$A = 2\,000 \times 1.07 \times 1.07 \times 1.07$
Principal; Repeated 3 times as $n = 3$

$A = \square$

11 Is this the same as your answer in Q3? ○ Yes ○ No

12 *Principal* \$920,
Rate = 8.4% p.a., [1 + r = 1.084]
n = 2 yrs, compounding annually

$A = 920 \times 1.084 \times 1.084$
Principal; Repeated 2 times as $n = 2$

$A = \square$

13 Is this the same as your answer in Q7? ○ Yes ○ No

Investing Money - Simple Interest - Repeated Use (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use multiplication to find the account balance more quickly. Change the rate to "1.xx", where 'xx' is the rate as a decimal. Find the account balance, A.

1 Principal \$5 000, *Rate* = 6% p.a., n = 4 yrs, compounding annually.

$A = 5\,000 \times 1.06 \times 1.06 \times 1.06 \times 1.06$

$A =$

2 Principal \$3 100, *Rate* = 9% p.a., n = 5 yrs, compounding annually.

$A = 3\,100 \times 1.09 \times 1.09 \times 1.09 \times 1.09 \times 1.09$

$A =$

3 Principal \$665, *Rate* = 5% p.a., n = 4 yrs, compounding annually.

$A =$ ☐ × ☐ × ☐ × ☐ × ☐

$A =$

Did you use 1.05? Not 0.05.

4 Principal \$10 444, *Rate* = 12% p.a., n = 3 yrs, compounding annually.

$A =$

$A =$

5 Principal \$850.70, *Rate* = 8.2% p.a., n = 2 yrs, compounding annually.

$A =$

$A =$

6 Principal \$72 310, *Rate* = 6.7% p.a., n = 4 yrs, compounding annually.

$A =$

12 Principal \$1 770, *Rate* = 6.2% p.a., n = 5 yrs, compounding annually.

$A =$ ☐ × ☐☐ = ☐

$I =$ ☐ - ☐ = ☐

Yu invests \$5 000 at 8.3% p.a. for 6 years, compounded annually. Find his account balance and interest earned.

13

$A =$ ☐ × ☐☐ = ☐

$I =$ ☐ - ☐ = ☐

Investing Money - Compound Interest - Account Balance (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use your calculator to evaluate these to 2 d.p.

1 $450 \times (1+0.04)^4$

$=$ ☐ Round to 2 decimal places

Calc: 4 5 0 × (1 + 0 • 0 4) $x^{\blacksquare}$ 4 =

2 $3\,277 \times (1+0.11)^5$

$=$ ☐

3 $940.30 \times (1+0.055)^7$

$=$ ☐

4 $7\,500 \times (1+0.09)^2$

$=$ ☐

Use the compound interest formula to find the account balance for these investments.

Example: Find the account balance:

A \$650 investment, at 6% p.a., for 5 years, compounded annually.

$A = P(1+r)^n$

$= 650 \times (1+0.06)^5$

$A = \$869.85$

5 \$1 450 at 8% p.a., for 3 years, compounded annually.

$A = P(1+r)^n$

$=$ ☐ $\times$ (1 + ☐) ☐

Divide R by 100

$A =$ ☐

6 \$880 at 4% p.a., for 7 years, compounded annually.

$A = P(1+r)^n$

$=$ ☐ $\times$ (1 + ☐) ☐

$A =$ ☐

7 \$566 at 6% p.a., for 4 years, compounded annually.

$A = P(1+r)^n$

$=$ ☐ $\times$ (☐ + ☐) ☐

$A =$ ☐

8 \$275 at 7% p.a., for 3 years, compounded annually.

$A = P(1+r)^n$

$=$ ☐ $\times$ (☐ + ☐) ☐

$A =$ ☐

9 \$19 233 at 5.7% p.a., for 6 years, compounded annually.

$A = P(1+r)^n$

$=$

$A =$

10 \$7 055 at 4.9% p.a., for 5 years, compounded annually.

11 \$1 020 at 8.1% p.a., for 2 years, compounded annually.

12 \$385.20 at 11.3% p.a., for 7 years, compounded annually.

If the rate and compound period and term match, the process is the same. Find A.

13 \$15 000 at 0.7% per month, for 9 months, compounded monthly.

$A = P(1+r)^n$

$P = 15\,000$, $r = 0.7 \div 100$, $n = 9$

$=$ ☐ $\times$ (☐ + ☐) ☐

Divide R by 100

$A =$ ☐

14 \$6 120 at 0.12% per week, for 28 weeks, compounded weekly.

15 \$337 at 0.09% per week, for 47 weeks, compounded weekly.

16 \$706 at 0.3% per month, for 8 months, compounded monthly.

17 \$90 050 at 0.11% per week, for 4 weeks, compounded weekly.

Investing Money - Compound Interest - Calculating the Interest (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate the Account balance, then subtract the principal to find the Interest earned.

1 $2 676 at 5% p.a., for 3 years, compounded annually.

$A = P(1 + r)^n$

$= \square \times (\square + \square)^{\square}$

$A =$

$I =$ A - P

$I =$

2 $17 905 at 3.8% p.a., for 5 years, compounded annually.

$A = P(1 + r)^n$

$= \square \times (\square + \square)^{\square}$

$A =$

$I =$ -

$I =$

3 $6 650 at 8.8% p.a., for 9 years, compounded annually.

$A = P(1 + r)^n$

$A =$

$I =$

$I =$

4 $930 at 6.2% p.a., for 5 years, compounded annually.

$A =$

$A =$

Continued in the next column

$I =$

$I =$

5 $31 000 at 0.5% per month for 15 months, compounded monthly.

6 $76 000 at 0.17% per week for 9 weeks, compounded weekly.

7 $270 000 at 0.3% per month for 8 months, compounded monthly.

8 $4 706 at 0.13% per week for 42 weeks, compounded weekly.

9 Complete the table. All the investments are compounded annually.

A = principal invested × (1 + rate as decimal)^{term}

Principal Invested	*Annual Rate*	*Term (years)*	*Account Balance*	*Interest Earned*
$1 200	6%	2		
$440	5.5%	7		
$2 120	7.2%	4		
$90 300	3.9%	3		
$4 777	12%	5		
$610.90	6.6%	3		
$15 820	12%	4		
$90 000	10.5%	2		

Investing Money - Compound Interest Comparisons

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Compare the two compound interest investments, which have the same annual rate.

Ben invests $3 000 at 7.2% p.a., for 3 years, compounded annually.

1 Convert 7.2% to a decimal

$r =$ ☐ $\div 100 =$ ☐

2 Find the account balance

$A = P(1 + r)^n$

$= $ ☐ $\times ($ ☐ $+$ ☐ $)^{\square}$

$A =$ ☐ '$' sign and to 2 d.p.

Eve invests $3 000 at 0.6% per month, for 36 months, compounded monthly.

3 Convert 0.6% to a decimal

$r =$ ☐ $\div 100 =$ ☐

4 Find the account balance

$A = P(1 + r)^n$

$= $ ☐ $\times ($ ☐ $+$ ☐ $)^{\square}$

$A =$ ☐

Calculate the difference in account balances. Who earns the most?

5 Account balance difference

$=$ ☐ $-$ ☐

Largest A Smallest A

$=$ ☐ ○ Ben earns the most ○ Eve earns the most

If 3 years = 36 months and 0.6% per month = 7.2% p.a. Explain why there is a difference between Ben and Eve's account balance.

6

This time compare a compound investment to a simple interest investment. Find the interest.

Rahj invests $900 at 8.2% p.a., for 5 years, compounded annually.

7 Find the interest earned

$A = P(1 + r)^n$

$=$

$A =$

$I =$ ☐ $-$ ☐

$I =$ ☐

Justin invests $900 at 8.2% p.a., for 5 years, in a simple interest investment

8 $I = Prn$

$= $ ☐ $\times$ ☐ $\times$ ☐

$I =$ ☐

Calculate the difference in interest earned. Who earns the most?

9 Difference in interest earned

$=$ ☐ $-$ ☐

$=$ ☐ ○ Rahj earns more ○ Justin earns more

Both investments above are for 5 years. Explain why one investment accrues more interest than the other.

10

Ryan can choose from one of these three, 5 year investments:
Option1: Simple interest: 9% p.a.,
Option 2: Compound interest: 9% p.a. compounding annually.
Option 3: Compound interest: 0.75% per month, compounding monthly for 60 months.
He has $4 000 to invest.

11 Find the interest earned if he chooses Option 1.

$I = Prn$

$=$

$I =$

12 Find the interest earned if he chooses Option 2.

$A = P(1 + r)^n$

$=$

$A =$

13 Find the interest earned if he chooses Option 3.

$A = P(1 + r)^n$

$=$

$A =$

$I =$

$I =$

Rank the options with a '1' for best performer to '3' for worst performer.

14 Option 1: 'Simple' ☐

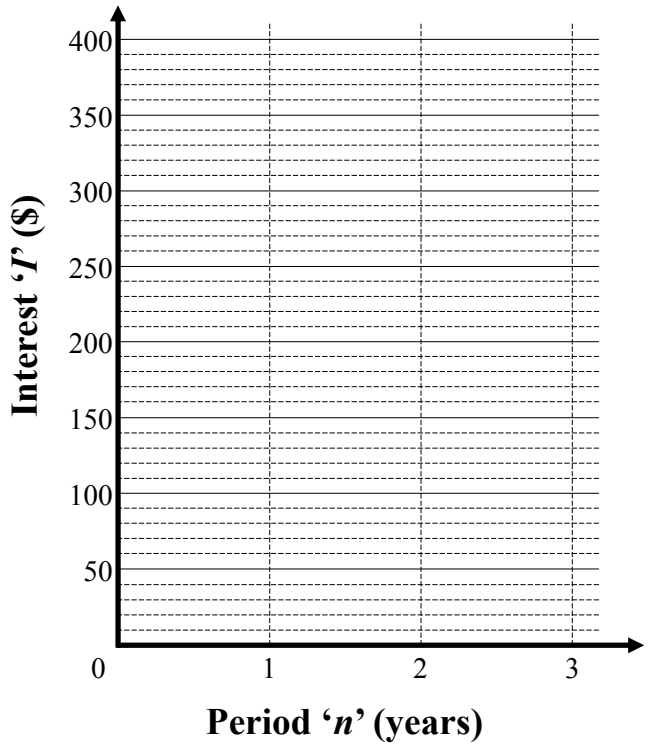
Option 2: '5 periods' ☐

Option 3: '60 periods' ☐

Investing Money - Graphing and Comparing Simple Interest (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate the interest earned on an investment of \$1 000. Use periods of 1 year, 2 years and 3 years. Use interest rates of 4% p.a., 8% p.a. and 12% p.a. Interest earned at time $n = 0$ is \$0. Calculate first, then graph. Plot the points in pencil first, then use a ruler as well as different coloured pens. If the lines aren't straight …. *PANIC!*



INTEREST RATE 4% p.a.

1 *Use* $P = 1\,000$, $r = 0.04$ *and* 'n' $= 1$.

$I = Prn$

$= \square \times \square \times \square$

$I = \square$

2 *Use* 'n' $= 2$.

$I = Prn$

3 *Use* 'n' $= 3$.

$I = Prn$

Plot the 4% line (own colour). Write '$R = 4\%$' on the line.

INTEREST RATE 8% p.a.

4 $I = Prn$

$= \square \times \square \times \square$

$I = \square$

5 *Use* 'n' $= 2$.

6 *Use* 'n' $= 3$.

Plot the 8% line (own colour). Write '$R = 8\%$' on the line.

INTEREST RATE 12% p.a.

7 $I = Prn$

$= \square \times \square \times \square$

$I = \square$

8 *Use* 'n' $= 2$.

9 *Use* 'n' $= 3$.

Plot the 12% line (own colour). Write '$R = 12\%$' on the line.

Use the graph to find these. Each vertical jump in interest is worth \$10. So count the jumps, then × 10!

10 The difference in interest earned after 3 years, between $R = 4\%$ p.a. and $R = 12\%$ p.a.

$= \square - \square$

I at $n=3$, $R=12\%$ | I at $n=3$, $R=4\%$

$= \square$

11 The difference in interest earned after 2 years, between $R = 8\%$ p.a. and $R = 12\%$ p.a.

$= \square - \square = \square$

12 The difference in interest earned after 1 year, between $R = 4\%$ p.a. and $R = 8\%$ p.a.

$= \square - \square = \square$

13 The difference in interest earned after 2 years, between $R = 4\%$ p.a. and $R = 12\%$ p.a.

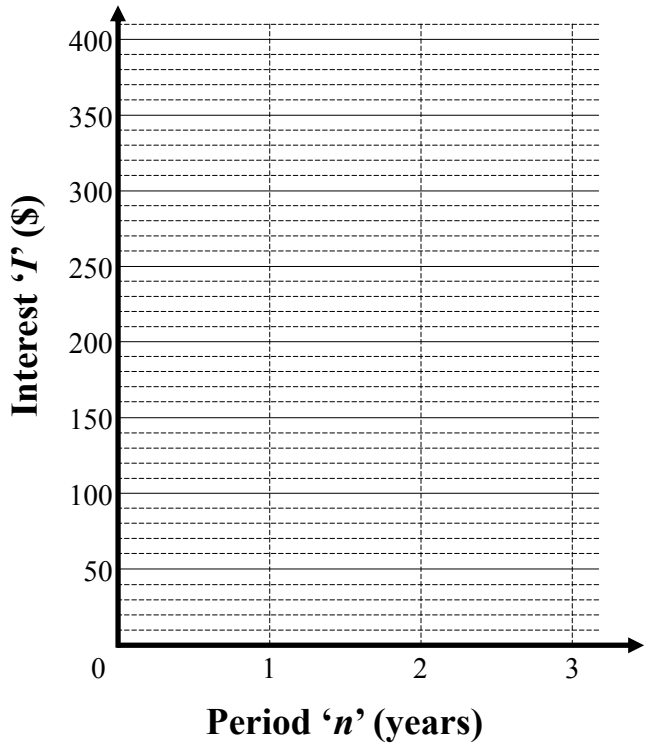
$= \square - \square$

$= \square$

Investing Money - Graphing and Comparing Compound Interest (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate the compound interest earned on an investment of \$1 000. Use periods of 1 year, 2 years and 3 years. Use interest rates of 4% p.a., 8% p.a. and 12% p.a. Interest earned at time $n = 0$ is \$0. Calculate first, then graph. Plot the points in pencil first, then sketch curves using different coloured pens. Round '*A*' to the nearest \$10.



INTEREST RATE 4% p.a. Compounded Annually

1 *Use* $P = 1\,000$, $r = 0.04$ *and* 'n' $= 1$.

$A = P(1 + r)^n$

$= \square \times (1 + \square)^{\square}$

$A = \square$

Calculate the size of these deposits, using your percentage of a quantity skills.

Example: 12% deposit on a $13 400 Jet-ski.

Deposit = 0.12 × 13 400

12% is 0.12 (decimal), 12 ÷ 100 on calculator

Deposit = $1 608

1 15% deposit on a $28 000 car.

Deposit = ☐ × ☐

Deposit = ☐ Show '$' sign

2 5% deposit on a $1 720 TV.

Deposit = 0.☐☐ × ☐

Deposit = ☐

3 8% deposit on a $3 050 cruise.

Deposit =

Deposit =

4 15% deposit on a $47 111 car.

5 20% deposit on a $860 hotel stay.

6 45% deposit on a $164 700 truck.

7 12.5% deposit on a $260 juicer.

Calculate the deposit, amount paid and the amount saved if cash was used for these loans.

Jonathan buys a $1 300 laptop using a flat rate loan, with these conditions:
- $36 loan stamp duty
- 15% deposit
- $11.80/week repayments for 3 years

8 Calculate the deposit paid.

9 Find the total of the repayments

10 Find the full amount paid

11 How much would Jonathan save if he paid cash, rather than use a loan?

Lucy buys a $4 150 wardrobe using a flat rate loan, with these conditions:
- $65 loan stamp duty
- 20% deposit
- $136.45/month repayments for 4 years

12 Calculate the deposit paid.

13 Find the total of the repayments

14 Find the full amount paid

15 How much would Lucy save if she paid cash, rather than use a loan?

Jasmine buys a car for $44 676 using a flat rate loan, with these conditions:
- $65 loan stamp duty
- $580 loan insurance
- 12% deposit
- $388.90/fortnight repayments for 5 years

16 Calculate the deposit paid.

17 Find the total of the repayments

18 Find the full amount paid

19 How much would Jasmine save if she paid cash, rather than use a loan?

Convert these interest rates to decimals.

1 9% = _____

2 12% = _____

3 8.4% = _____

Calculate the simple interest earned on these investments. Use: $I = Prn$

P = \$700, R = 6% p.a., n = 4 years

4 _____

P = \$1 420, R = 8.9% p.a., n = 7 years

5 _____

Calculate the simple interest earned and then the account balance.

An investment of \$47 000 at 4% p.a. for 5 years.

6 _____

An investment of \$6 112 at 1.5% per month for 8 months.

7 _____

Calculate the simple interest earned on these investments.

An investment of \$1 440 at 9% p.a. for 26 weeks.

8 _____

An investment of \$13 900 at 12% p.a. for 145 days.

9 _____

An investment of \$8 055 at 5.3% p.a. for 16 months.

10 _____

Use either 'Guess & Check' or algebraic methods to find the term of these investments

An investment of \$6 000 at 4% p.a. earns interest of \$720.

11 _____

An investment of \$430 at 7.4% p.a. earns interest of \$413.66.

12 _____

Use either 'Guess & Check' or algebraic methods to find the principal invested

An investment at 7% p.a., for 3 years earns interest of \$126. Find the amount invested.

13 _____

An investment has interest paid at the end of each year. Use $I = Prn$ twice to find the account balance at the end of a two year investment.

\$12 000 at 5.5% p.a. for 2 years.

14 _____

Find the account balance after the following compound interest investments have matured. Use $A = P(1 + r)^n$

An investment of \$2 000 at 9% p.a. for 5 years, compounded annually.

15 _____

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find A, the account balance, for this compound investment. (Continued)

An investment of $6 020 at 1.6% per month for 10 months, compounded monthly.

16

Calculate the interest earned from these compound investments.

An investment of $750 at 8% p.a. for 4 years, compounded annually.

17

An investment of $23 770 at 0.6% per month for 15 months, compounded monthly.

18

Compare the interest earned in these two investment options.
Option 1: $3 500 invested at 6% p.a. for 7 yrs, simple interest investment.
Option 2: $3 500 invested at 6% p.a. for 7 years, compound interest investment, compounding annually.

Calculate the interest earned if Option 1 is chosen. (Simple Interest)

19

Calculate the interest earned if Option 2 is chosen. (Compound Int.)

20

Which option offers the better return and calculate the difference between the two options.

21

Express in your own words, why compound interest investments result in higher interest returns.

22

Calculate the amount paid given the flat rate loan repayments.

23 $240/month for 8 months

24 $85.90/month for 5 years

25 $58.65/week for 2 years

Calculate the amount paid given the deposit and flat rate loan repayments.

Deposit of $430, repayments of $75.36 per month for 2 years.

26

Deposit of $1 715, repayments of $89.95 per week for 4 years.

27

A car costs $28 200. It is bought using a loan charging 8% p.a. simple interest, for 4 years. The repayments are monthly.

28 Calculate the interest payable

29 Calculate the total amount to be repaid.

30 Calculate the repayments.

INVESTING MONEY

EXTENSION

Investing Money - Compound Interest Changing Periods

Compound Interest investments aren't always compounded yearly and invested for years. The investments can be for daily, weekly, monthly even quarterly and the compound period may, or may not, match these periods.

Interest rates and time periods must match the compound period

So when you are given an investment duration that doesn't match the compound period you have to change the term and interest rate (if required) to match. Subsequently these questions are more difficult to answer as you have to manipulate numbers before using the compound interest formula.

Compound Interest Formula: $A = P(1 + r)^n$

Where:
A = Account balance
P = Principal
r = Interest rate expressed as a decimal
n = Number of compound periods

Interest Calculation: $I = A - P$

Where:
I = Interest earned
A = Account balance
P = Principal

Example: Find the interest earned on an investment of \$9 000 at 1% per month, for 3 years compounded monthly.

3 years = 3 × 12 (36 month periods), so n = 36 (not 3)
1% per month = 1 ÷ 100 = 0.01

$A = P(1 + r)^n$	Compound Interest Formula
$= 9\,000 \times (1 + 0.01)^{36}$	Substitute the values, remember to use the interest rate r as a decimal
$A = \$12\,876.92$	Round to 2 decimal places
$I = 12\,876.92 - 9\,000$	Subtract 'P' from 'A' to find 'I'
$I = \$3\,876.92$

Investing Money - Compound Interest Changing Rates

Compound Interest investments aren't always compounded yearly and invested for years. The investments can be for daily, weekly, monthly even quarterly and the interest rate has to match the compound period.

Interest rates must match the compound period

So when you are given an interest rate that doesn't match the compound period you have to change the interest rate to match. Subsequently these questions are more difficult to answer as you have to perform a calculation before using the compound interest formula.

Compound Interest Formula: $A = P(1 + r)^n$

Where:
A = Account balance
P = Principal
r = Interest rate expressed as a decimal
n = Number of compound periods

Interest Calculation: $I = A - P$

Where:
I = Interest earned
A = Account balance
P = Principal

Example: Find the interest earned on an investment of \$3 620 at 9% p.a., for 7 months, compounded monthly.

$r = 9 \div 12 \div 100$ ← First convert the rate to monthly (decimal)

$r = 0.0075$

$A = P(1 + r)^n$ ← Compound Interest Formula

$= 3\,620 \times (1 + 0.0075)^7$ ← Substitute the values, remember to use the interest rate r as a decimal

$A = \$3\,814.38$ ← Round to 2 decimal places

$I = 3\,814.38 - 3\,620$ ← Subtract 'P' from 'A' to find 'I'

$I = \$194.38$

Investing Money - Compound Interest Changing Rates (Sheet 1)

$r = 0.005$

13 $A = P(1 + r)^n$

$= 23\,000\,(1 + 0.005)^{15}$

$A = \$24\,786.70$

Convert the rates to weekly and calculate the account balance.

$2 500 is invested for 14 weeks and is compounded weekly at 7.8% p.a.

14 Find r as a decimal

$r =$ 7.8 ÷ 52 ÷ 100

$r =$ 0.0015

15 $A = P(1 + r)^n$

$= 2\,500 \times (1 + 0.0015)^{14}$

$A = \$2\,553.01$

$5 390 is invested for 40 weeks and is compounded weekly at 9.36% p.a.

16 $r = 9.36 \div 52 \div 100$

$r = 0.0018$

17 $A = P(1 + r)^n$

$= 5\,390 \times (1 + 0.0018)^{40}$

$A = \$5\,792.02$

$770 is invested for 8 weeks and is compounded weekly at 7.28% p.a.

18 $r = 7.28 \div 52 \div 100$

$r = 0.0014$

19 $A = P(1 + r)^n$

$= 770 \times (1 + 0.0014)^8$

$A = \$778.67$

Calculate the interest earned on the $770 investment.

20 $I =$ 778.67 - 770

$I = \$8.67$

Investing Money - Compound Interest Changing Rates (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Change the rates to a quarterly decimal and then calculate the account balance.

$650 is invested for 3 quarters and is compounded quarterly at 8% p.a.

1 $r = 8 \div 4 \div 100$

$r = 0.02$

2 $A = P(1 + r)^n$

$= 650 \times (1 + 0.02)^3$

$A = \$689.79$

$48 000 is invested for 7 quarters and is compounded quarterly at 13.6% p.a.

3 $r = 13.6 \div 4 \div 100$

$r = 0.034$

4 $A = P(1 + r)^n$

$= 48\,000 \times (1 + 0.034)^7$

$A = \$60\,657.57$

Now its daily, so divide the rate by 365. Find the daily rate then calculate the account balance.

$4 450 is invested for 95 days and is compounded daily at 10.95% p.a.

5 $r = 10.95 \div 365 \div 100$

$r = 0.0003$

6 $A = P(1 + r)^n$

$= 4\,450 \times (1 + 0.0003)^{95}$

$A = \$4\,578.63$

$11 250 is invested for 200 days and is compounded daily at 7.3% p.a.

7 $r = 7.3 \div 365 \div 100$

$r = 0.0002$

8 $A = P(1 + r)^n$

$= 11\,250 \times (1 + 0.0002)^{200}$

$A = \$11\,709.07$

Find the rate, the account balance and then the interest earned on these investments.

Eliza invests $5 000 for 18 weeks at 6.24% p.a., compounded weekly.

9 Convert 6.24% p.a. to weekly, express as a decimal.

$r = 6.24 \div 52 \div 100$

$r = 0.0012$

10 Find the account balance

$A = P(1 + r)^n$

$= 5\,000 \times (1 + 0.0012)^{18}$

$A = \$5\,109.11$

11 Calculate the interest earned

$I =$ 5 109.11 $- 5\,000$

$I =$ $109.11

12 Eliza needs $8 000 for a car. Calculate the amount she still requires after the investment matures.

$Amount = 8\,000 - 5\,109.11$

$Amount = \$2\,890.89$

Leung invests $7 200 for 15 months at 5.4% p.a., compounded monthly.

13 Convert 5.4% p.a. to monthly, express as a decimal.

$r = 5.4 \div 12 \div 100$

$r = 0.0045$

14 Find the account balance

$A = P(1 + r)^n$

$= 7\,200 \times (1 + 0.0045)^{15}$

$A = \$7\,701.61$

15 Calculate the interest earned

$I = 7\,701.61 - 7\,200$

$I = \$501.61$

Omar invests $14 900 for 300 days at 8.76% p.a., compounded daily.

16 Convert 8.76% p.a. to daily, expressing it as a decimal.

$r = 8.76 \div 365 \div 100$

$r = 0.00024$

17 Find the account balance

$A = P(1 + r)^n$

$= 14\,900 \times (1 + 0.00024)^{300}$

$A = \$16\,012.23$

18 Calculate the interest earned

$I = 16\,012.23 - 14\,900$

$I = \$1\,112.23$

Investing Money - Compound Interest - Calculating *P*

Compound Interest investments involve making an investment and getting your money back later with interest. If you are aiming to save for something in the future then you can determine how much to deposit now to get a future amount. Or in maths speak: Given A, what is P?

These questions are solved by substituting into the compound interest formula, but using division as the last step, as you are solving a one-step equation. An example is below.

Compound Interest Formula: $A = P(1 + r)^n$

Where:
A = Account balance
P = Principal
r = Interest rate expressed as a decimal
n = Number of compound periods

Example: Geoff wants $15 000 in three years time. An investment offers 5% p.a. for 3 years compounded annually. Calculate the amount Geoff needs to invest now.

$r = 5 \div 100$ ← First convert the rate to a decimal

$r = 0.05$

$A = P(1 + r)^n$ ← Compound Interest Formula

$15\,000 = P \times (1 + 0.05)^3$ ← Substitute the values, remember to use the interest rate r as a decimal

$15\,000 = P \times 1.157625$ ← Calculate the bracketed part

÷1.15... ÷1.15... ← Divide 'A' by the decimal

Calc: 1 5 0 0 0 ÷ Ans =

$P = \$12\,957.56$ ← Show the amount with a $ sign and to 2 d.p.

Investing Money - Compound Interest - Calculating P (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Solve these 1-step equations using division.

Example:

$1\,350 = P \times 1.2$

÷1.2 ÷1.2

$P = 1\,125$

1 $448 = P \times 1.6$

÷1.6 ÷1.6

$P =$ ____

2 $823.50 = P \times 1.35$

$P =$ ____

3 $4\,830 = P \times 1.15$

$P =$ ____

4 $39\,750 = P \times 1.06$

5 $20\,886 = P \times 1.77$

The next two have to be rounded to 2 d.p.

6 $15\,660 = P \times 1.033$

Round to 2 d.p.

7 $2\,200 = P \times 1.813$

Round to 2 d.p.

Find P, but first perform a calculation. Show the $ sign and round to 2 d.p.

Example:

$3\,500 = P \times (1 + 0.1)^4$

Calc: (1 + 0 • 1) $x^{\blacksquare}$ 4 =

$3\,500 = P \times 1.4641$

÷1.4641 ÷1.4641

$P = \$2\,390.55$

Round to 2 d.p. and show the $ sign

8 $5\,600 = P \times (1 + 0.15)^2$

Calc: (1 + 0 • 1 5) x^2 =

$5\,600 = P \times$ ____

÷1.3225 ÷1.3225

$P = \$$ ____

Round to 2 d.p.

9 $850 = P \times (1 + 0.04)^3$

$850 = P \times$ ____

÷1.12…. ÷1.12….

Calc: 8 5 0 ÷ Ans =

$P =$ ____

Round to 2 d.p. and show the $ sign

10 $4\,440 = P \times (1 + 0.06)^3$

$4\,440 = P \times$ ____

÷1.19…. ÷1.19….

$P =$ ____

11 $950 = P \times (1 + 0.05)^3$

$950 = P \times$ ____

÷1.15…. ÷1.15….

$P =$ ____

These are just the same, but this time you have to get the numbers from the question.

An investment is compounded yearly for 3 years at 10% p.a. The investment results in an account balance of $945. Find P.

12 $A = P(1 + r)^n$

____ $= P \times (1 +$ ____ $)^{\square}$

____ $= P \times$ ____

$P =$ ____

Round to 2 d.p. and show the $ sign

An investment for 2 years at 6% p.a. is compounded yearly. An investment results in an account balance of $11 000. Find P, the principal invested.

13 $A = P(1 + r)^n$

____ $= P \times (1 +$ ____ $)^{\square}$

____ $= P \times$ ____

$P =$ ____

An investment for 3 years at 8% p.a. is compounded yearly and results in an account balance of $38 200. Find P, the principal invested.

14 $A = P(1 + r)^n$

Investing Money - Compound Interest - Calculating P (Sheet 2)

Investing Money - Compound Interest - Calculating P (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Date Due: _____

An investment for 2 years at 5% p.a. is compounded yearly. If the investment results in an account balance of $3 000, find P, the principal invested.

1 Express 5% as a decimal.

2 $A = P(1 + r)^n$

$\square = P \times (1 + \square)^{\square}$

$\square = P \times \square$

$P =$

Lisa needs $5 000 for a trip she wants to take in three years time. An investment offers interest at 8% p.a. compounded annually for 3 years. Find the principal.

3 Express 8% as a decimal.

4 $A = P(1 + r)^n$

$\square = P \times (1 + \square)^{\square}$

$\square = P \times \square$

$P =$

Investing Money - Compound Interest - Guess & Check

Compound Interest investments involve making an investment and getting your money back later with interest. If you are aiming to save for something in the future then you can determine how much to deposit now, or how long you need to invest, or what rate you need to get that future amount. Or in maths speak: Given A, find P (or r or n)?

These questions are solved by substituting guessed values into the compound interest formula, then if the answer is too high, reduced the substituted value …. If the answer is too low, then increase it. It is important that you look at how close the answer is, because if it is 'way off' then the size of the change is larger. The more questions you do, the quicker you will get the answer.

Compound Interest Formula: $A = P(1 + r)^n$

Where:
A = Account balance
P = Principal
r = Interest rate expressed as a decimal
n = Number of compound periods

Example: Geoff wants \$13 230 in two years time. He has \$12 000 to invest, what interest rate is required for him to achieve the \$13 230?

$12\,000 \times (1 + r)^2$ ← Substitute the r values, until you get a number equal to 13 230.

$13\,738.80 = 12\,000 \times (1 + 0.07)^2$ ← USING $r = 0.07$, you are over the 13 230 required

$13\,230 = 12\,000 \times (1 + 0.05)^2$ ← USING $r = 0.05$, you get the 13 230 required

$\times\ 100$

Interest rate needed is 5% ← Multiply 0.05 by 100 to convert it to a percentage and you are done.

Investing Money - Compound Interest - Guess & Check *n* & *P* (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Change the power until you get the amount (2 d.p.) in the star. Use the calculator back button.

1 576.24 Number 2 - 9

$430 \times (1+0.05)$ ☐

Calc: 4 3 0 × (1 + 0 • 0 5) $x^{\blacksquare}$? =

2 13 109.11

$11\,450 \times (1+0.07)$ ☐

3 9 326.31

$5\,720 \times (1+0.13)$ ☐

You can find the investment term by guessing, checking and guessing again. Find '*n*'.

4 $784.50 = 620 \times (1+0.04)$ ☐

5 $15\,396.41 = 13\,300 \times (1+0.05)$ ☐

6 $6\,443.20 = 3\,750 \times (1+0.07)$ ☐

7 $1\,258.82 = 800 \times (1+0.12)$ ☐

8 $4\,637.10 = 4\,000 \times (1+0.03)$ ☐

9 $6\,059.45 = 5\,195 \times (1+0.08)$ ☐

10 $14\,363 = 13\,550 \times (1+0.06)$ ☐

These are the same, but you have to build the calculation line yourself. Find '*n*'.

An investment of $720 at 5% p.a. compounded annually, results in an account balance of $1 013.11. How many years was the investment term?

11 $1\,013.11 = 720 \times (1+0.05)$ ☐

The term was for ☐ years.

An investment of $400 at 3% p.a. compounded annually, results in an account balance of $450.20. How many years was the investment term?

12 *Remember use 3% as a decimal

The term was for ☐ years.

An investment of $4 000 at 8% p.a. compounded annually, results in an account balance of $7 403.72. How many years was the investment term?

13

An investment of $7 700 at 5% p.a. compounded annually, results in an account balance of $8 913.71. How many years was the investment term?

14

Find *P*. *P* will end with a '000' or '500'. **Put *P* last** in your calculator as it is easier go back and change.

15 $6\,928.42 = \square \times (1+0.08)^3$

Calc: (1 + 0 • 0 8) $x^{\blacksquare}$ 3 ▶ × ? =

16 $7\,737.38 = \square \times (1+0.12)^7$

17 $9\,363.60 = \square \times (1+0.02)^2$

18 $1\,966.19 = \square \times (1+0.07)^4$

19 $9\,124.90 = \square \times (1+0.04)^5$

Write the calculation line yourself. Find '*P*'. It ends with '000' or '500'.

A 7 year investment results in an account balance of $9 773.60. If the interest rate was 6% p.a. compounded annually, find the amount invested.

20 *Remember use 6% as a decimal

The principal was ☐

Show $ sign

Anna wants $9 680 to buy a car in 2 years. If an investment offers 10% p.a. compounded annually, calculate the amount she needs to invest now to achieve a $9 680 account balance.

21

Investing Money - Compound Interest - Guess & Check *r* (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Change the decimal until you get the amount (2 d.p.) in the star. Use calculator back key.

1 257.37

Decimal 0.01 to 0.15

$220 \times (1 + \square)^4$

Calc: 2 2 0 × (1 + 0 • ? ?) $x^{\blacksquare}$ 4 =

2 38 019.20

Investing Money - Depreciation - Straight Line Method

When you but a new product from a shop, as soon as you open the packet, it loses its value and this continues through the life of the product. Unless it becomes rare or sought after. This is called depreciation, but the loss in value changes in rate throughout the life of the product.

Straight line depreciation is used for taxation reasons. It allows businesses to deduct a certain amount of a product's worth from their taxable income. So it is a theoretical figure rather than an actual value of a product.

$$S = V_0 - Dn$$

There are 4 variables in the formula, these are:

S = Salvage Value (or book value), which is the amount the item is worth at a given time
V_0 = Initial purchase price, the amount you paid for the item (at $n = 0$)
D = the amount the product depreciates by each year (annual)
n = the term, the number of years the salvage value is required to be based on

Example: A fishing trawler is purchased for $345 000. It is depreciated at 8% p.a. Calculate the:

a) Annual depreciation, and

b) Salvage value after 6 years

STEP 1

FIND DEPRECIATION

8 ÷ 100

a) $D = 0.08 \times 345\,000$

$D = \$27\,600$

Show the $ sign

Calculate the Depreciation

Multiply the percentage by the purchase price of the product. You have to convert the percentage to a decimal first by dividing by 100.

STEP 2

USE $S = V_0 - Dn$

b) $S = V_0 - Dn$

$= 345\,000 - 27\,600 \times 6$

$S = \$179\,400$

Calculate the Salvage value

- Write the formula
- Make the substitution
- Write the answer. Show $ and round to 2 d.p. if cents are involved.

So after 6 years the trawler is worth $179 400. Of course if it has been immaculately kept, or the opposite, if it has been damaged, the salvage value is the same. So the salvage value is a tax-related value, not a genuine value. As real-life factors aren't considered in assigning the salvage value.

Investing Money - Depreciation - Straight Line Method (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Convert these percentages to decimals by ÷ 100, or move the d.p. twice to the left.

Example:

16% = 16 ÷ 100 = 0.16

1 6% = ☐ ÷ 100 = ☐

2 8% = ☐ ÷ ☐ = ☐

3 12% = ☐ ÷ ☐ = ☐

Answer only, from now on.

4 19% = ☐

5 12.7% = ☐

6 11.6% = ☐

7 5.05% = ☐

Find a percentage of these quantities. In Mathematics 'of' means times '×'.

Example: Find 19% of $350

0.19 × 350 = $66.50

Convert 19% to a decimal

Show '$' sign and round to 2 d.p.

8 Find 7% of $420

☐ × 420 = $☐☐.☐☐

9 Find 13% of $1 200

☐ × ☐ = $☐

10 Find 3% of $4 090

☐ × ☐ = ☐

Answer with a '$' sign and cents to 2 d.p.

11 Find 6.5% of $11 500

12 Find 9.2% of $30 900

Straight Line Depreciation uses: $S = V_0 - Dn$. Calculate D, then the salvage value S.

James buys a car with a sale price of $46 900. It depreciates by 15% each year. Calculate the:

13 Annual depreciation.

$D =$ 0.15 × 46 900

$D =$ $☐☐☐☐

14 Salvage value after 3 years.

$S = V_0 - Dn$

= 46 900 - ☐ × 3

$S =$ $☐

15 Salvage value after 5 years.

$S = V_0 - Dn$

= 46 900 - ☐ × 5

$S =$ ☐

Catherine buys a delivery van with a sale price of $29 550. It depreciates by 18% each year. Calculate the:

16 Annual depreciation.

$D =$ ☐ × ☐

% as a decimal × purchase price

$D =$ ☐ $ sign!

17 Salvage value after 2 years.

$S = V_0 - Dn$

= ☐ - ☐ × ☐

Purchase price | Depreciation | Years

$S =$ ☐

Jonathan buys a forklift with a sale price of $18 998. It depreciates by 12.5% each year. Calculate the:

18 Annual depreciation.

19 Salvage value after 6 years.

Formula

Substitute values

Show $ and cents to 2 d.p.

Daisy buys a new display cabinet for $1 115. The cabinet depreciates at 16.5% p.a. Calculate the:

20 Annual depreciation.

21 Salvage value after 3 years.

Bethany buys a laptop for $1 335. The laptop has an annual depreciation rate of 22.5% p.a. Calculate the:

22 Annual depreciation.

23 Salvage value after 4 years.

Investing Money - Depreciation - Declining Balance Method in Steps

When you depreciate a 'Capital purchase' you can use two methods, the Straight Line Method or the Declining Balance Method. This sheet uses the method learned in the Straight line Method and solves Declining Balance questions using this method. In other words, you can solve declining balance questions using the straight line method.

The method isn't outlined here because this is a stepped sheet with assistance through the entire process, but this is the Decling Balance Formula:

$$S = V_0 (1 - r)^n$$

There are 4 variables in the formula, these are:

S = Salvage Value (or book value), which is the amount the item is worth at a given time
V_0 = Initial purchase price, the amount you paid for the item (at $n = 0$)
r = the rate of depreciation p.a., as a decimal
n = the term, the number of years the salvage value is required to be based on

The decling balance formula is different because:

- Smaller and smaller amounts of depreciation are deducted each year. Not the same amount each year like straight line method.
- The item is never fully depreciated, it continues to be depreciated by smaller and smaller amounts every year, forever.
- The straight line method requires you to calculate the Depreciation amount ***THEN*** the Salvage Value.
- The declining balance method requires you to calculate the Salvage Value ***THEN*** the Depreciation amount (if required).

So the calculation process order is reversed in the declining balance method.

Investing Money - Depreciation - Declining Balance - Stepped (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate D, the depreciation then calculate S. Then redo this step again. D declines.

Jacqueline buys a car with a sale price of $27 100. It depreciates by 15% each year. Calculate the:

Year 1

1 Depreciation in the 1st year.

$D = 0.15 \times 27\,100$

% as a decimal × Purchase price

$D = \$$ ☐☐☐☐

2 Salvage value after 1 year.

$S = 27\,100 -$ ☐ (Q.1)

$S =$ ☐

This value is used in the next calculation

Year 2

3 Depreciation in the 2nd year.

$D = 0.15 \times$ ☐

% as a decimal × Q.2 answer

$D = \$$ ☐

4 Salvage value after 2 years.

$S =$ ☐ - ☐

Q.2 answer | Q.3 answer

$S =$ ☐

This value is used in the next calculation

Year 3

5 Depreciation in the 3rd year.

$D = 0.15 \times$ ☐

% as a decimal × Q.4 answer

$D = \$$ ☐

6 Salvage value after 3 years.

$S =$ ☐ - ☐

Q.4 answer | Q.5 answer

$S =$ ☐

This is S after 3 yr, declining balance method

This time a farmer has bought a cool room. Find S after 3 years using the D.B. method

A cool room (for storing apples), costs $17 000 and depreciates by 12% p.a. Calculate the:

Year 1

7 Depreciation in the 1st year.

$D =$ ☐ × ☐

% as a decimal × Purchase price

$D = \$$ ☐

8 Salvage value after 1 year.

$S =$ ☐ - ☐

Purchase price | Q.7 Depreciation

$S =$ ☐

Year 2

9 Depreciation in the 2nd year.

$D =$ ☐ × ☐

% as a decimal × Q.8 answer

$D = \$$ ☐

10 Salvage value after 2 years.

$S =$ ☐ - ☐

Q.8 answer | Q.9 answer

$S =$ ☐

Year 3

11 Depreciation in the 3rd year.

$D =$ ☐ × ☐

$D = \$$ ☐

12 Salvage value after 3 years.

$S =$ ☐ - ☐

$S =$ ☐

This is Salvage value after 3 years, using the declining balance method in 3 applications

Use the brackets keys and power key to evaluate these. Answer to 2 decimal places.

13 $450 \times (1 - 0.08)^4$

$=$ ☐ (Round to 2 decimal places)

Calc: 4 5 0 × (1 - 0 • 0 8) x▪ 4 =

14 $5\,500 \times (1 - 0.11)^5$

$=$ ☐

15 $38\,200 \times (1 - 0.18)^7$

$=$ ☐

16 $26\,000 \times (1 - 0.09)^3$

$=$ ☐

Now answer Columns 1 and 2 in one step. Don't get angry, its called learning! Find 'S' (2 d.p.)

A car with a sale price of $27 100 depreciates by 15% each year. Calculate S after 3 years.

17 $S = V_0 (1 - r)^n$

$=$ ☐ (1 - ☐) ☐

Purchase price | % decimal | years

$S =$ ☐

18 Is your Q.6 answer the same as your Q.17 answer?

○ Yes ○ Arrrrggghhhh!

Date Due:

A $16 550 van is depreciated by 12% p.a. Calculate the salvage value by the declining balance method in steps.

Year 1

1 Depreciation in the 1st year.

$D = 0.12 \times 16\,550$

$D = \$\ 1\,986$

2 Salvage value after 1 year.

$S = 16\,550 - 1\,986$ (Q.1)

$S = \$14\,564$

Year 2

3 Depreciation in the 2nd year.

$D = 0.12 \times 14\,564$ (Q.2)

$D = \$\ 1\,747.68$

4 Salvage value after 2 years.

$S =$ 14 564 (Q.2 answer) $-$ 1 747.68 (Q.3 answer)

$S = \$12\,816.32$

5 Calculate: $16\,550\,(1 - 0.12)^2$

$= \$12\,816.32$

Investing Money - Depreciation - Declining Balance Method

When you but a new product from a shop, as soon as you open the packet, it loses its value and this continues through the life of the product. Unless it becomes rare or sought after. This is called depreciation, but the loss in value changes in rate throughout the life of the product.

Declining balance depreciation is used for taxation reasons. It allows businesses to deduct a certain amount of a product's worth from their taxable income. So it is a theoretical figure rather than an actual value of a product.

$$S = V_0 (1 - r)^n$$

There are 4 variables in the formula, these are:

S = Salvage Value (or book value), which is the amount the item is worth at a given time
V_0 = Initial purchase price, the amount you paid for the item (at $n = 0$)
r = the rate of depreciation p.a., as a decimal
n = the term, the number of years the salvage value is required to be based on

Example: A fishing trawler is purchased for $345 000. It is depreciated at 8% p.a. Calculate the:

a) Salvage value after 4 years

b) The amount the trawler has depreciated over the 4 years.

STEP 1

FIND SALVAGE VALUE

a) $S = V_0 (1 - r)^n$

$= 345\,000 (1 - 0.08)^4$

Calc: 345000(1-0.08)x^4=

$S = \$247\,155.57$

Show the $ sign

Calculate the Salvage value

- Write the formula
- Make the substitution
- Write the answer. Show $ and round to 2 d.p. if cents are involved.

STEP 2

FIND THE DEPRECIATION

b) $D = 345\,000 - 247\,155.57$

$D = \$97\,844.43$

Show the $ sign

Calculate the Depreciation

Subtract the salvage value from the initial purchase price to calculate the amount the item has depreciated.

So after 6 years the trawler is worth $247 155.57. Of course if it has been immaculately kept, or the opposite, if it has been damaged, the calculated salvage value is the same. So the salvage value is a tax related value, not a genuine value. As real-life factors aren't considered in assigning the salvage value.

Investing Money - Reducing Balance Home Loans

When people buy a home, they will usually get a home loan. These loans are based on simple interest and usually every month the bank charges interest and requires a repayment. The repayment is usually larger than the interest payable, so this drops down the amount the person owes the bank each month.

The tables have 6 columns:

1st Column is the Period. Which for these worksheets in measured in months.
2nd Column is the Principal. Which is the amount owed to the bank.
3rd Column is the Interest. This is the interest payable on the amount borrowed
4th column is the Principal plus the interest. So it is Column 2 + Column 3.
5th Column is the repayment. The amount the borrower pays each month.
6th Column is the Principal + Interest - Repayment. So Column 4 - Column 5.

Investing Money - Reducing Balance Home Loans (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

A home loan charges simple interest on a monthly period. Repayments larger than the interest charged are made which not only pay the interest, but also reduce the principal. So each month the interest is slightly less and the principal reduces. Complete these home loan balance sheets for the first 4 months of the loan.

1 Home loan is for $180 000 at 7.2% p.a., with repayments of $1 750 per month.

Convert 5.4% p.a. to a monthly decimal: $r = 5.4 \div 12 \div 100 =$ 0.0045

Period (Months)	P (Principal)	I (Month's Interest)	$P + I$ (Principal + Interest)	R (Repayments)	$P + I - R$ (Col. 4 - Col. 5)
1	350 000	1 575 350 000 × r	351 575 350 000 + I	2 800	348 775
2	348 775	1 569.49	350 344.49	2 800	347 544.49
3	347 544.49	1 563.95	349 108.44	2 800	346 308.44
4	346 308.44	1 558.39	347 866.83	2 800	345 066.83

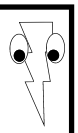
4 How much principal had been paid off the loan after the 4 month period?

Amount Paid Off = 350 000 - 345 066.83 = $4 933.17

Investing Money - Reducing Balance Home Loans (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete these home loan balance sheets for the first 4 months of these loans. At the end of each row, the last cell has the answer there, except it has two digits 'obscured'. Check your answer at the end of each row, if you don't have a match then you need to back track and find where you have made the mistake.



1 Home loan is for $295 000 at 6% p.a., with repayments of $2 100 per month.

Convert 6% p.a. to a monthly decimal: $r = 6 \div 12 \div 100 =$ 0.005

Period (Months)	P (Principal)	I (Month's Interest)	$P + I$ (Principal + Interest)	R (Repayments)	$P + I - R$ (Col. 4 - Col. 5)
1	295 000	1 475	296 475	2 100	294 375 29X X75
2	294 375	1 471.88	295 846.88	2 100	293 746.88 29X 74X.88
3	293 746.88	1 468.73	295 215.61	2 100	293 115.61 2X3 115.X1
4	293 115.61	1 465.58	294 581.19	2 100	292 481.19 292 X81.X9

2 How much principal had been paid off the loan after the 4 month period?

Amount Paid Off = 295 000 - 292 481.19 = $2 518.81

3 Home loan is for $520 000 at 6.6% p.a., with repayments of $3 800 per month.

Convert 6.6% p.a. to a monthly decimal: $r = 6.6 \div 12 \div 100 =$ 0.0055

Period	P	I	$P + I$	R	$P + I - R$
1	520 000	2 860	522 860	3 800	519 060 519 X6X
2	519 060	2 854.83	521 914.83	3 800	518 114.83 5X8 1X4.83
3	518 114.83	2 849.63	520 964.46	3 800	517 164.46 51X 164.X6
4	517 164.46	2 844.40	520 008.86	3 800	516 208.86 5X6 20X.86

4 How much principal had been paid off the loan after the 4 month period?

Amount Paid Off = 520 000 - 516 208.86 = $3 791.14

Investing Money - Introduction to Credit Cards

There are two different 'models' of Credit Cards. There are:

Type 1 - When you buy a product it is placed on a statement with all the other goods you buy. At the end of the month if you pay the statement balance in full, you pay no interest.

Type 2 - When you buy a product it is placed on a statement with all the other goods you buy. You are charged interest from the day you purchased the item, until you pay it back.

Type 1 is an excellent product so long as you pay it back at the end of each month, as there are no costs. These type of cards aren't covered in this course as there is no interest to calculate.

Type 2 results in the owner of the card paying interest on products. And sometimes this can lead a card user who has a 'Buy it Now' approach, being in debt and finding themselves in financial difficulty.

If you can't pay off an 'Interest Free period' credit card, credit is best avoided. Instead you should be patient, save up for the product then buy it with savings.

Credit card interest is 'Simple Interest' calculated monthly and billed usually near the end of the month. The purchase accrues interest from the day of purchase until, and including, the day you pay the bank back.

Example: A coffee machine costs $382. Interest is 17% p.a., for 24 days.

$I = Prn$ ← Simple Interest Formula

$= 382 \times 0.17 \times \frac{24}{365}$ ← Substitute values; Convert r to a decimal; Express days as a fraction over 365

$I = \$4.27$ ← Solve, showing the $ sign and round to the nearest cent

Investing Money - Introduction to Credit Cards (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate the interest payable on these credit card purchases.

Example Stove $1 850, 16% p.a. for 22 days.

$I = Prn$ ← Write formula

$= 1\,850 \times 0.16 \times \frac{22}{365}$ Substitute Values

$I = \$17.84$ ← Answer to nearest cent

1 Desk $495, 19% p.a. for 13 days.

$I = Prn$

$= \square \times \square \times \frac{\square}{365}$ (Days)

Item cost | Rate (decimal)

4 9 5 × 0 • 1 9 × 1 3 ÷ 3 6 5 =

$I =$ ____

Show the '$' sign and cents to 2 d.p.

2 Clothes $721, 15% p.a., 24 days.

$I =$ $1.40

Show the '$' sign and cents to 2 d.p.

Investing Money - Credit Cards

Credit cards use Simple Interest to calculate the interest payable. The interest is calculated from the day of the purchase until the payment due date, including the day the payment is made.

The interest calculation is done in two steps:

Step 1 - Calculate the number of days the interest will be calculated on.

Step 2 - Calculate the interest payable.

On these worksheets, both steps are below the statement area. Make sure you notice the 'Due Date' at the top right hand side of the statement.

Example: Interest Rate is 13% p.a. The date Due is 27th November

Date	Description	Amount	Balance
5/11	Clothing	$175	$175
19/11	Electricity	$288	$463
22/11	Groceries	$144	$607

Rewrite 1st purchase

$175 + $288 = $463

$463 + $144 = $607

5/11 Days: $27 - 5 + 1 =$ 23 days

Due date

Date of Purchase

+1 for extra day

5/11 Interest: $I = 175 \times 0.13 \times \frac{23}{365} =$ $1.43

Clothing Cost

13% as a decimal

23 days as a fraction of a year

Interest payable*

*This is the amount payable for the clothing purchase only

Convert these times to the specified periods.

1 1 year = ☐ months

2 2 years = ☐ weeks

3 5 years = ☐ months

Eve makes an investment of $9 000 for 4 years compounded monthly at 3% per month.
Use: $A = P(1 + r)^n$

4 Convert 3% to a decimal

5 Calculate the number of compound periods.

6 Calculate Eve's account balance

7 Calculate the interest Eve has earned.

Declan is investing $5 000 for 3 quarters at 10% p.a., compounded quarterly.
Use: $A = P(1 + r)^n$

8 Convert 10% p.a. to a quarterly decimal

9 Calculate Declan's account balance

10 Calculate the interest Declan has earned.

Use guess and check methods to find the term (power) for this compound investment. Answer in the box.

11 $7\,078.09 = 4\,130 \times (1 + 0.08)^{\square}$

An investment of $26 500 at 6% p.a. compounded annually, results in an account balance of $35 462.98. How many years was the investment term? Use G & C.

12

Use guess and check methods to find the rate as a decimal (2 d.p.) for this compound investment. Answer in the box.

13 $3\,587.04 = 2\,200 \times (1 + \square)^4$

An investment of $9 330 compounded annually for 6 years, results in an account balance of $14 001.81. What was the prevailing interest rate?

14

Solve to find the value of P.

15 $3\,780 = P \times 1.08$

16 $1\,190.04 = P \times (1 + 0.05)^3$

An investment for 3 years at 6% p.a. is compounded yearly and results in an account balance of $7 384.30. Find P, the principal invested.

17

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Glen buys a ute for $22 400. It is depreciated at 15% p.a. using the straight line depreciation method.

18 Calculate the yearly depreciation on the ute.

19 Calculate the salvage value after 4 years. Use:
$S = V_0 - Dn$

Kate buys a new laptop for $1 240. It is depreciated at 12% p.a. using the declining balance method.

20 Calculate the salvage value after 3 years. Use:
$S = V_0 (1 - r)^n$

21 Calculate the amount the laptop has depreciated by after the 3 year period.

Caitlyn has recorded her purchases on her credit card below. The card charges interest at 21% p.a. from the day of purchase until and including the day the balance is due.

23 Calculate the values in the balance column

Date	Description	Amount	Balance
4/3	Groceries	$258	
12/3	Restaurant	$105	

24 The balance is due on 28/3. Calculate the number of days interest is payable for:

4/3 purchase:

12/3 purchase:

25 Calculate the simple interest payable on each purchase. Use $I = Prn$, the interest rate is 21% p.a.

4/3 purchase:

12/3 purchase:

26 Calculate the amount due on 28/3.

22 Complete the home loan table below. The home loan is for $130 000 at an interest rate of 0.5% per month, with repayments of $1 400 per month. Use $I = Prn$ to calculate simple interest.

Period (Months)	P (Principal)	I (Month's Interest)	$P + I$ (Principal + Interest)	R (Repayments)	$P + I - R$
1	130 000			1 600	
2				1 600	
3				1 600	

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Convert these times to the specified periods.

1 1 year = 12 months

2 2 years = 104 weeks

3 5 years = 60 months

Eve makes an investment of $9 000 for 4 years compounded monthly at 3% per month.
Use: $A = P(1 + r)^n$

4 Convert 3% to a decimal

$3 \div 100 = 0.03$

5 Calculate the number of compound periods.

$4 \times 12 = 48$ months

6 Calculate Eve's account balance

$A = P(1 + r)^n$

$= 9\,000 \times (1 + 0.03)^4$

$A = \$10\,129.58$

7 Calculate the interest Eve has earned.

$I = 10\,129.58 - 9\,000 = \$1\,129.58$

Declan is investing $5 000 for 3 quarters at 10% p.a., compounded quarterly.
Use: $A = P(1 + r)^n$

8 Convert 10% p.a. to a quarterly decimal

$10 \div 4 \div 100 = 0.025$

9 Calculate Declan's account balance

$A = P(1 + r)^n$

$= 5\,000 \times (1 + 0.025)^3$

$A = \$5\,384.45$

10 Calculate the interest Declan has earned.

$I = 5\,384.45 - 5\,000 = \$384.45$

Use guess and check methods to find the term (power) for this compound investment. Answer in the box.

11 $7\,078.09 = 4\,130 \times (1 + 0.08)^{\boxed{7}}$

An investment of $26 500 at 6% p.a. compounded annually, results in an account balance of $35 462.98. How many years was the investment term? Use G & C.

12

$35\,462.98 = 26\,500 \times (1 + 0.06)^5$

The investment term was for 5 years.

Use guess and check methods to find the rate as a decimal (2 d.p.) for this compound investment. Answer in the box.

13 $3\,587.04 = 2\,200 \times (1 + \boxed{0.13})^4$

An investment of $9 330 compounded annually for 6 years, results in an account balance of $14 001.81. What was the prevailing interest rate?

14

$14\,001.81 = 9\,330 \times (1 + 0.07)^6$

$0.07 \times 100 = 7\%$ p.a.

Solve to find the value of P.

15 $3\,780 = P \times 1.08$

$\div 1.08$ $\div 1.08$

$P = 3\,500$

16 $1\,190.04 = P \times (1 + 0.05)^3$

$1\,190.04 = P \times 1.57625$

$\div 1.57...$ $\div 1.57...$

$P = 1\,028$

An investment for 3 years at 6% p.a. is compounded yearly and results in an account balance of $7 384.30. Find P, the principal invested.

17

$7\,384.30 = P \times (1 + 0.06)^3$

$7\,384.30 = P \times 1.191016$

$\div 1.19...$ $\div 1.19...$

$P = \$6\,200$

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Glen buys a ute for $22 400. It is depreciated at 15% p.a. using the straight line depreciation method.

18 Calculate the yearly depreciation on the ute.

$D = 0.15 \times 22\,400$

$D = \$3\,360$

19 Calculate the salvage value after 4 years. Use: $S = V_0 - Dn$

$S = V_0 - Dn$

$= 22\,400 - 3\,360 \times 4$

$S = \$8\,960$

Kate buys a new laptop for $1 240. It is depreciated at 12% p.a. using the declining balance method.

20 Calculate the salvage value after 3 years. Use: $S = V_0 (1 - r)^n$

$S = V_0 (1 - r)^n$

$= 1\,240 \times (1 - 0.12)^3$

$S = \$845.03$

21 Calculate the amount the laptop has depreciated by after the 3 year period.

$Dep.\ Amount = 1\,240 - 845.03$

$Dep.\ Amount = \$394.97$

Caitlyn has recorded her purchases on her credit card below. The card charges interest at 21% p.a. from the day of purchase until and including the day the balance is due.

23 Calculate the values in the balance column

Date	Description	Amount	Balance
4/3	Groceries	$258	$258
12/3	Restaurant	$105	$363

24 The balance is due on 28/3. Calculate the number of days interest is payable for:

4/3 purchase: $28 - 4 + 1 = 25$ days

12/3 purchase: $28 - 12 + 1 = 17$ days

25 Calculate the simple interest payable on each purchase. Use $I = Prn$, the interest rate is 21% p.a.

4/3 purchase: $I = 258 \times 0.21 \times \frac{25}{365}$

$I = \$3.71$

12/3 purchase: $I = 105 \times 0.21 \times \frac{17}{365}$

$I = \$1.03$

26 Calculate the amount due on 28/3.

$Amount\ Due = 363 + 3.71 + 1.03$

$Amount\ Due = \$367.74$

22 Complete the home loan table below. The home loan is for $130 000 at an interest rate of 0.5% per month, with repayments of $1 400 per month. Use $I = Prn$ to calculate simple interest.

Period (Months)	P (Principal)	I (Month's Interest)	$P + I$ (Principal + Interest)	R (Repayments)	$P + I - R$
1	130 000	650	130 650	1 600	129 050
2	129 050	645.25	129 695.25	1 600	128 095.25
3	128 095.25	640.48	128 735.73	1 600	127 135.73

Investing Money - Compound Interest Changing Periods (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Convert these periods to months.

1 1 year = ☐ months

2 2 years = ☐

3 ½ year = ☐

4 1½ years = ☐

Convert these periods to months and use the new number as the power to evaluate these.

$3 000 invested for **1 year compounded monthly** at 1.5% per month.

5 $A = 3\,000 \times (1 + 0.015)^{\square}$

3 0 0 0 × (1 + 0 • 0 1 5) x▪ 1 2 =

$A = \$$ ☐

Round to 2 d.p.

$1 140 invested for **2 years compounded monthly** at 0.3% per month.

6 $A = 1\,140 \times (1 + 0.003)^{\square}$

$A = \$$ ☐

$895 invested for **1½ years compounded monthly** at 0.5% per month.

7 $A = 895 \times (1 + 0.005)^{\square}$

$4 000 borrowed for 4 years compounded monthly at 1.8% per month.

8 $A = 4\,000 \times (1 + 0.018)^{\square}$

$600 borrowed for ½ a year compounded monthly at 2% per month.

9 $A = 600 \times (1 + 0.02)^{\square}$

Convert the periods to months and calculate the account balance.

Formula → Substitution → Answer $ sign

$5 000 invested for **1 year compounded monthly** at 1% per month.

10 $A = P(1 + r)^n$

$= \square \times (\square + \square)^{\square}$

$A =$ ☐

$750 invested for **2 years compounded monthly** at 0.5 % per month.

11 $A = P(1 + r)^n$

$=$

$A =$ ☐

$16 000 borrowed for 4 years compounded monthly at 3% per month.

12 $A = P(1 + r)^n$

$1 200 invested for ½ year compounded monthly at 0.7% per month.

13

$30 500 invested for 1½ years compounded monthly at 0.2% per month.

14

Now it is weekly. There are 52 weeks in a year, convert these terms to weeks, to find A.

$600 invested for **1 year compounded weekly** at 0.1% per week.

15 $A = P(1 + r)^n$

$= \square \times (\square + \square)^{\square}$

$A =$ ☐

$17 400 invested for 2 years compounded weekly at 0.2% per week.

16

$6 130 invested for 3 years compounded weekly at 0.1% per week.

17

Now biannually. That means compounded every 6 months, or, if you prefer, twice a year.

$4 085 invested for 5 years compounded biannually at 3.7% per 6 months.

18

Semiannually is the same as Biannually

$2 330 invested for 2 years compounded semiannually at 5.4% per 6 months.

19

Investing Money - Compound Interest Changing Periods (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Convert the periods to quarters and then calculate the account balance and interest earned.

Formula → Substitution → Answer $ sign

$27 500 invested for **1 year compounded quarterly** at 2% per quarter.

1 $A = P(1 + r)^n$

$= 27\,500 \times (1 + 0.02)$ ☐

$A =$ ☐

Now Calculate the Interest Earned

2 $I =$ ☐ $- 27\,500$

$I =$ ☐

$1 700 invested for **3 years compounded quarterly** at 3% per quarter.

3 ☐

Now Calculate the Interest Earned

4 $I =$ ☐ $- 1\,700$

$I =$ ☐

$3 120 invested for **5 years compounded quarterly** at 2.2% per quarter.

5 ☐

Now Calculate the Interest Earned

6 ☐

Find the interest earned and the account balance with these.

Bella is saving for a home deposit. She invests $25 400 for 3 years which is compounded monthly at 0.7% per month.

7 Express 0.7% as a decimal.

$r =$ ☐ $\div$ ☐ $=$ ☐

8 Calculate the number of compound periods in 3 years.

$n =$ ☐ $\times$ ☐ $=$ ☐

9 Find the account balance.

Dave has two investment options which both are 12.48% p.a.:

- 1.04% per month, compounded monthly
- 0.24% per week, compounded weekly

He has $5 000 to invest for 2 years.

10 Convert 1.04% to a decimal.

11 Convert 2 years to monthly compound periods.

12 Find the account balance for the 1.04% per month option.

13 Convert 0.24% to a decimal.

14 Convert 2 years to weekly compound periods.

15 Find the account balance for the 0.24% per week option.

16 Which option results in the best financial outcome?

○ 1.04% monthly ○ 0.24% weekly

17 By how much?

Georgie invests $3 000 for 4 years at 0.5% per month, compounded monthly.

18 Convert 0.5% to a decimal.

19 Find the account balance.

20 Calculate the interest earned

Investing Money - Compound Interest Changing Rates (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Change the rates to match the compound period. Then convert them to decimals.

1 10.8% p.a. to monthly

$r =$ ☐ %/month

÷ 10.8% by 12 to get monthly

$r =$ ☐.☐☐☐

÷ 100 to convert to a decimal

$A = \$$ ☐

$23 000 is invested for 15 months and is compounded monthly at 6% p.a.

12 Find r as a decimal

13

Convert the rates to weekly and calculate the account balance.

$2 500 is invested for 14 weeks and is compounded weekly at 7.8% p.a.

14 Find r as a decimal

$r =$ ☐ ÷ 52 ÷ ☐

$r =$ ☐

15

$5 390 is invested for 40 weeks and is compounded weekly at 9.36% p.a.

16

17

$770 is invested for 8 weeks and is compounded weekly at 7.28% p.a.

18

19

Calculate the interest earned on the $770 investment.

20

$I =$ ☐ - 770

$I =$

Investing Money - Compound Interest Changing Rates (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Change the rates to a quarterly decimal and then calculate the account balance.

\$650 is invested for 3 quarters and is compounded quarterly at 8% p.a.

1 $r = \square \div 4 \div \square$

$r = \square$

2 $A = P(1 + r)^n$

\$48 000 is invested for 7 quarters and is compounded quarterly at 13.6% p.a.

3

4

Now its daily, so divide the rate by 365. Find the daily rate then calculate the account balance.

\$4 450 is invested for 95 days and is compounded daily at 10.95% p.a.

5

6

\$11 250 is invested for 200 days and is compounded daily at 7.3% p.a.

7

8

Find the rate, the account balance and then the interest earned on these investments.

Eliza invests \$5 000 for 18 weeks at 6.24% p.a., compounded weekly.

9 Convert 6.24% p.a. to weekly, express as a decimal.

10 Find the account balance

11 Calculate the interest earned

$I = \square - 5\,000$

$I = \square$

12 Eliza needs \$8 000 for a car. Calculate the amount she still requires after the investment matures.

Leung invests \$7 200 for 15 months at 5.4% p.a., compounded monthly.

13 Convert 5.4% p.a. to monthly, express as a decimal.

14 Find the account balance

15 Calculate the interest earned

Omar invests \$14 900 for 300 days at 8.76% p.a., compounded daily.

16 Convert 8.76% p.a. to daily, expressing it as a decimal.

17 Find the account balance

18 Calculate the interest earned

Investing Money - Compound Interest - Calculating P (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Solve these 1-step equations using division.

Example:

$1\,350 = P \times 1.2$

÷1.2 ÷1.2

$P = 1\,125$

1 $448 = P \times 1.6$

÷1.6 ÷1.6

$P =$ ____

2 $823.50 = P \times 1.35$

$P =$ ____

3 $4\,830 = P \times 1.15$

$P =$ ____

4 $39\,750 = P \times 1.06$

5 $20\,886 = P \times 1.77$

The next two have to be rounded to 2 d.p.

6 $15\,660 = P \times 1.033$

Round to 2 d.p.

7 $2\,200 = P \times 1.813$

Round to 2 d.p.

Find P, but first perform a calculation. Show the $ sign and round to 2 d.p.

Example:

$3\,500 = P \times (1 + 0.1)^4$

Calc: (1 + 0 • 1) $x^{\blacksquare}$ 4 =

$3\,500 = P \times 1.4641$

÷1.4641 ÷1.4641

$P = \$2\,390.55$

Round to 2 d.p. and show the $ sign

8 $5\,600 = P \times (1 + 0.15)^2$

Calc: (1 + 0 • 1 5) x^2 =

$5\,600 = P \times$ ____

÷1.3225 ÷1.3225

$P = \$$ ____

Round to 2 d.p.

9 $850 = P \times (1 + 0.04)^3$

$850 = P \times$ ____

÷1.12…. ÷1.12….

Calc: 8 5 0 ÷ Ans =

$P =$ ____

Round to 2 d.p. and show the $ sign

10 $4\,440 = P \times (1 + 0.06)^3$

$4\,440 = P \times$ ____

÷1.19…. ÷1.19….

$P =$ ____

11 $950 = P \times (1 + 0.05)^3$

$950 = P \times$ ____

÷1.15…. ÷1.15….

$P =$ ____

These are just the same, but this time you have to get the numbers from the question.

An investment is compounded yearly for 3 years at 10% p.a. The investment results in an account balance of $945. Find P.

12 $A = P(1 + r)^n$

____ $= P \times (1 +$ ____ $)^{\square}$

____ $= P \times$ ____

$P =$ ____

Round to 2 d.p. and show the $ sign

An investment for 2 years at 6% p.a. is compounded yearly. An investment results in an account balance of $11 000. Find P, the principal invested.

13 $A = P(1 + r)^n$

____ $= P \times (1 +$ ____ $)^{\square}$

____ $= P \times$ ____

$P =$ ____

An investment for 3 years at 8% p.a. is compounded yearly and results in an account balance of $38 200. Find P, the principal invested.

14 $A = P(1 + r)^n$

Investing Money - Compound Interest - Calculating P (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find P, but first perform a calculation. Show the $ sign and round to 2 d.p.

Example:

An investment is compounded annually for 5 years at 7.8% p.a. Find the amount invested (P) when the account balance is $7 300.

$A = P(1 + r)^n$

$7\,300 = P \times (1 + 0.078)^5$

Calc: (1 + 0 • 0 7 8) $x^{\blacksquare}$ 5 =

$7\,300 = P \times 1.455\ldots$ (calc)

÷1.455.. ÷1.455..

Calc: 7 3 0 0 ÷ Ans =

$P = \$5\,014.52$

Round to 2 d.p. and show the $ sign

An investment is compounded annually for 4 years at 5% p.a. Find the principal when the account balance is $4 750.

1 $A = P(1 + r)^n$

$\square = P \times (1 + \square)^{\square}$

A | 5% decimal | years

$\square = P \times 1.\square\square\square\ldots$ (calc)

÷ 1.215 ... ÷ 1.215 ...

$P =$

$ sign and round to 2 d.p.

An investment is compounded annually for 3 years at 7% p.a. Find the principal when the account balance is $850.

2 $A = P(1 + r)^n$

$\square = P \times \square$

$\square = P \times \square$

$P =$

Ben needs $8 000 in 3 years. He chooses an investment which offers 7% p.a. compounded annually for 3 years. Find the amount he needs to invest (P) now to achieve the $8 000 account balance.

3 $A = P(1 + r)^n$

$\square = P \times \square$

$\square = P \times \square$

$P =$

Tilly needs $15 000 to buy a car in three years time. How much does she need to invest now to have a $15 000 account balance? The investment is 5% p.a. compounded annually for three years.

4

Ryan needs $9 000 for a trip he wants to take in two years time. An investment offers interest at 4.2% p.a. compounded annually for 2 years.

5 Express 4.2% as a decimal.

6 Calculate the amount Ryan has to invest for a $9 000 account balance in two years.

Josh needs $32 000 for a new car in 3 years time. An investment offers interest at 9.3% p.a. compounded annually for 3 years.

7 Express 9.3% as a decimal.

8 Calculate the amount Josh has to invest for a $32 000 account balance in three years.

Imogen needs $45 000 for a deposit for a home purchase in 4 years time. An investment offers interest at 5.8% p.a. compounded annually for 4 years.

9 Express 5.8% as a decimal.

10 Calculate the amount Imogen has to invest now to achieve a $45 000 account balance in four years time.

11 How much interest will Imogen earn on the investment?

Investing Money - Compound Interest - Guess & Check *n* & *P* (Sheet 1)

$5\,500 \times (1 + \square)^3$

Guess and check to find the decimal, '*r*'. The Answer will be between 0.01 and 0.15.

5 $1\,133.74 = 900 \times (1 + \square)^3$

6 $3\,221.02 = 2\,000 \times (1 + \square)^5$

7 $5\,445 = 4\,500 \times (1 + \square)^2$

8 $3\,040.13 = 1\,800 \times (1 + \square)^4$

9 $1\,402.81 = 750 \times (1 + \square)^6$

This time, find the decimal but then multiply it by 100 to express it as a percentage.

10 $795.68 = 750 \times (1 + \square)^2$

Interest rate = ☐ %

Multiply your top answer by 100

11 $4\,799.38 = 3\,400 \times (1 + \square)^4$

Interest rate = ☐ %

12 $9\,076.06 = 5\,150 \times (1 + \square)^5$

Interest rate = ☐

Show % sign

13 $3\,084.88 = 1\,800 \times (1 + \square)^7$

14 $912.53 = 600 \times (1 + \square)^3$

These are the same, but you have to build the calculation line yourself. Find '*r*' as a decimal then convert to a %.

An investment of $7 000 compounded annually for 4 years, results in an account balance of $8 837.34. What was the prevailing interest rate?

15

Interest rate = ☐ %

An investment of $3 850 compounded annually for 2 years, results in an account balance of $4 829.44. What was the prevailing interest rate?

16

Interest rate = ☐ %

An investment of $15 100 compounded annually for 7 years, results in an account balance of $19 870.57. What was the interest rate applied to the investment?

17

With these two, find the required interest rate to the **nearest whole percent**.

James has $40 000 to invest for 3 years. If he wants $50 000 after the 3 years, what annual interest rate is needed. Assume investments are compounded annually.

18

Helen needs $12 000 in 5 years. She is investing $6 000 in a compound investment which compounds annually. What annual interest rate is required for her to achieve the $12 000 account balance?

19

Investing Money - Depreciation - Straight Line Method (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Convert these percentages to decimals by ÷ 100, or move the d.p. twice to the left.

Example:

16% = 16 ÷ 100 = 0.16

1 6% = ☐ ÷ 100 = ☐

2 8% = ☐ ÷ ☐ = ☐

3 12% = ☐ ÷ ☐ = ☐

Answer only, from now on.

4 19% = ☐

5 12.7% = ☐

6 11.6% = ☐

7 5.05% = ☐

Find a percentage of these quantities. In Mathematics 'of' means times '×'.

Example: Find 19% of $350

0.19 × 350 = $66.50

Convert 19% to a decimal

Show '$' sign and round to 2 d.p.

8 Find 7% of $420

☐ × 420 = $☐☐.☐☐

9 Find 13% of $1 200

☐ × ☐ = $☐

10 Find 3% of $4 090

☐ × ☐ = ☐

Answer with a '$' sign and cents to 2 d.p.

11 Find 6.5% of $11 500

12 Find 9.2% of $30 900

Straight Line Depreciation uses: $S = V_0 - Dn$. Calculate D, then the salvage value S.

James buys a car with a sale price of $46 900. It depreciates by 15% each year. Calculate the:

13 Annual depreciation.

$D =$ 0.15 × 46 900

$D =$ $☐☐☐☐

14 Salvage value after 3 years.

$S = V_0 - Dn$

= 46 900 - ☐ × 3

$S =$ $☐

15 Salvage value after 5 years.

$S = V_0 - Dn$

= 46 900 - ☐ × 5

$S =$ ☐

Catherine buys a delivery van with a sale price of $29 550. It depreciates by 18% each year. Calculate the:

16 Annual depreciation.

$D =$ ☐ × ☐

% as a decimal × purchase price

$D =$ ☐ $ sign!

17 Salvage value after 2 years.

$S = V_0 - Dn$

= ☐ - ☐ × ☐

Purchase price | Depreciation | Years

$S =$ ☐

Jonathan buys a forklift with a sale price of $18 998. It depreciates by 12.5% each year. Calculate the:

18 Annual depreciation.

19 Salvage value after 6 years.

Formula

Substitute values

Show $ and cents to 2 d.p.

Daisy buys a new display cabinet for $1 115. The cabinet depreciates at 16.5% p.a. Calculate the:

20 Annual depreciation.

21 Salvage value after 3 years.

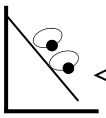
Bethany buys a laptop for $1 335. The laptop has an annual depreciation rate of 22.5% p.a. Calculate the:

22 Annual depreciation.

23 Salvage value after 4 years.

Investing Money - Depreciation - Graphing S/L Depreciation (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4



Straight line depreciation forms a straight line when graphed!!!! Calculate D, then find S and complete the table, then plot the values.

Yogi and Boo-Boo is a business that fabricates picnic baskets. A weaving machine costs \$8 000 and is depreciated at 15% p.a.

1 Calculate the annual depreciation.

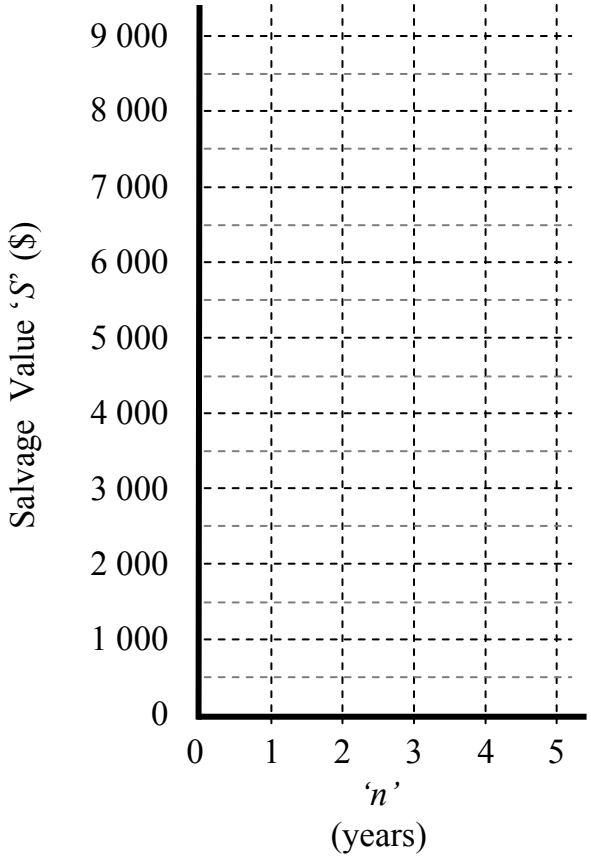
$D =$ [ ] $\times$ [ ] $=$ [ ]

[% as a decimal] [purchase price] [\$ sign]

2 Complete the table

	n Years	Salvage Value S \$
Initial Purchase Price →	0	8 000
Year 0 'S' value - D →	1	
Year 1 'S' value - D →	2	
Year 2 'S' value - D →	3	
Year 3 'S' value - D →	4	
Year 4 'S' value - D →	5	

3 Plot the points then use a ruler to construct a straight line.



A jet-ski hiring company has bought a new jet-ski for \$12 000. It is depreciated at 20% p.a.

4 Calculate the annual depreciation.

$D =$ [ ] $\times$ [ ] $=$ [ ]

5 Complete the table

Year n	Salvage Value S \$

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Calculate D, the depreciation then calculate S. Then redo this step again. D declines.

Jacqueline buys a car with a sale price of $27 100. It depreciates by 15% each year. Calculate the:

Year 1

1 Depreciation in the 1st year.

$D = 0.15 \times 27\,100$

% as a decimal × Purchase price

$D = \$$ ☐☐☐☐

2 Salvage value after 1 year.

$S = 27\,100 -$ ☐ (Q.1)

$S =$ ☐

This value is used in the next calculation

Year 2

3 Depreciation in the 2nd year.

$D = 0.15 \times$ ☐

% as a decimal × Q.2 answer

$D = \$$ ☐

4 Salvage value after 2 years.

$S =$ ☐ - ☐

Q.2 answer | Q.3 answer

$S =$ ☐

This value is used in the next calculation

Year 3

5 Depreciation in the 3rd year.

$D = 0.15 \times$ ☐

% as a decimal × Q.4 answer

$D = \$$ ☐

6 Salvage value after 3 years.

$S =$ ☐ - ☐

Q.4 answer | Q.5 answer

$S =$ ☐

This is S after 3 yr, declining balance method

This time a farmer has bought a cool room. Find S after 3 years using the D.B. method

A cool room (for storing apples), costs $17 000 and depreciates by 12% p.a. Calculate the:

Year 1

7 Depreciation in the 1st year.

$D =$ ☐ × ☐

% as a decimal × Purchase price

$D = \$$ ☐

8 Salvage value after 1 year.

$S =$ ☐ - ☐

Purchase price | Q.7 Depreciation

$S =$ ☐

Year 2

9 Depreciation in the 2nd year.

$D =$ ☐ × ☐

% as a decimal × Q.8 answer

$D = \$$ ☐

10 Salvage value after 2 years.

$S =$ ☐ - ☐

Q.8 answer | Q.9 answer

$S =$ ☐

Year 3

11 Depreciation in the 3rd year.

$D =$ ☐ × ☐

$D = \$$ ☐

12 Salvage value after 3 years.

$S =$ ☐ - ☐

$S =$ ☐

This is Salvage value after 3 years, using the declining balance method in 3 applications

Use the brackets keys and power key to evaluate these. Answer to 2 decimal places.

13 $450 \times (1 - 0.08)^4$

$=$ ☐ (Round to 2 decimal places)

Calc: 4 5 0 × (1 - 0 • 0 8) x▪ 4 =

14 $5\,500 \times (1 - 0.11)^5$

$=$ ☐

15 $38\,200 \times (1 - 0.18)^7$

$=$ ☐

16 $26\,000 \times (1 - 0.09)^3$

$=$ ☐

Now answer Columns 1 and 2 in one step. Don't get angry, its called learning! Find 'S' (2 d.p.)

A car with a sale price of $27 100 depreciates by 15% each year. Calculate S after 3 years.

17 $S = V_0 (1 - r)^n$

$=$ ☐ (1 - ☐) ☐

Purchase price | % decimal | years

$S =$ ☐

18 Is your Q.6 answer the same as your Q.17 answer?

○ Yes ○ Arrrrggghhhh!

A cool room costs $17 000 and depreciates by 12% p.a. Calculate the salvage value after 3 years.

19 $S = V_0 (1 - r)^n$

$=$ ☐ (1 - ☐) ☐

$S =$ ☐

20 Is your Q.12 answer the same as your Q.19 answer?

○ Yes ○ I decline to answer

Investing Money - Reducing Balance Home Loans (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

A home loan charges simple interest on a monthly period. Repayments larger than the interest charged are made which not only pay the interest, but also reduce the principal. So each month the interest is slightly less and the principal reduces. Complete these home loan balance sheets for the first 4 months of the loan.

1 Home loan is for $180 000 at 7.2% p.a., with repayments of $1 750 per month.

Convert 7.2% p.a. to a monthly decimal: $r = 7.2 \div 12 \div 100 =$ ☐.☐☐☐

Period (Months)	P (Principal)	I (Month's Interest)	$P + I$ (Principal + Interest)	R (Repayments)	$P + I - R$ (Col. 4 - Col. 5)
1	180 000	☐ 180 000 × 0.006	☐ 180 000 + 1 080	1 750	☐ 181 080 - 1 750
2	179 330	☐ 179 330 × 0.006	☐ 179 330 + 1 075.98	1 750	☐ 180 405.98 - 1 750
3	178 655.98	☐ 178 655.98 × 0.006	☐ 178 655.98 +1 071.94	1 750	☐ 179 727.92 - 1 750
4	177 977.92	☐ 177 977.92 × 0.006	☐ 177 977.92+1 067.87	1 750	☐ 179 045.79 - 1 750

2 How much principal had been paid off the loan after the 4 month period?

Amount Paid Off = ☐ (Amount borrowed) - ☐ (Period 4 Column 6) = ☐ (Show the $ sign)

3 Home loan is for $350 000 at 5.4% p.a., with repayments of $2 800 per month.

Convert 5.4% p.a. to a monthly decimal: $r = 5.4 \div 12 \div 100 =$ ☐

Period (Months)	P (Principal)	I (Month's Interest)	$P + I$ (Principal + Interest)	R (Repayments)	$P + I - R$ (Col. 4 - Col. 5)

Convert these times to the specified periods.

1 1 year = ☐ months

2 2 years = ☐ weeks

3 5 years = ☐ months

Eve makes an investment of $9 000 for 4 years compounded monthly at 3% per month.
Use: $A = P(1 + r)^n$

4 Convert 3% to a decimal

5 Calculate the number of compound periods.

6 Calculate Eve's account balance

7 Calculate the interest Eve has earned.

Declan is investing $5 000 for 3 quarters at 10% p.a., compounded quarterly.
Use: $A = P(1 + r)^n$

8 Convert 10% p.a. to a quarterly decimal

9 Calculate Declan's account balance

10 Calculate the interest Declan has earned.

Use guess and check methods to find the term (power) for this compound investment. Answer in the box.

11 $7\,078.09 = 4\,130 \times (1 + 0.08)^{\square}$

An investment of $26 500 at 6% p.a. compounded annually, results in an account balance of $35 462.98. How many years was the investment term? Use G & C.

12

Use guess and check methods to find the rate as a decimal (2 d.p.) for this compound investment. Answer in the box.

13 $3\,587.04 = 2\,200 \times (1 + \square)^4$

An investment of $9 330 compounded annually for 6 years, results in an account balance of $14 001.81. What was the prevailing interest rate?

14

Solve to find the value of P.

15 $3\,780 = P \times 1.08$

16 $1\,190.04 = P \times (1 + 0.05)^3$

An investment for 3 years at 6% p.a. is compounded yearly and results in an account balance of $7 384.30. Find P, the principal invested.

17

Glen buys a ute for $22 400. It is depreciated at 15% p.a. using the straight line depreciation method.

18 Calculate the yearly depreciation on the ute.

19 Calculate the salvage value after 4 years. Use:
$S = V_0 - Dn$

Kate buys a new laptop for $1 240. It is depreciated at 12% p.a. using the declining balance method.

20 Calculate the salvage value after 3 years. Use:
$S = V_0 (1 - r)^n$

21 Calculate the amount the laptop has depreciated by after the 3 year period.

Caitlyn has recorded her purchases on her credit card below. The card charges interest at 21% p.a. from the day of purchase until and including the day the balance is due.

23 Calculate the values in the balance column

Date	Description	Amount	Balance
4/3	Groceries	$258	
12/3	Restaurant	$105	

24 The balance is due on 28/3. Calculate the number of days interest is payable for:

4/3 purchase:

12/3 purchase:

25 Calculate the simple interest payable on each purchase. Use $I = Prn$, the interest rate is 21% p.a.

4/3 purchase:

12/3 purchase:

26 Calculate the amount due on 28/3.

22 Complete the home loan table below. The home loan is for $130 000 at an interest rate of 0.5% per month, with repayments of $1 400 per month. Use $I = Prn$ to calculate simple interest.

Period (Months)	P (Principal)	I (Month's Interest)	$P + I$ (Principal + Interest)	R (Repayments)	$P + I - R$
1	130 000			1 600	
2				1 600	
3				1 600

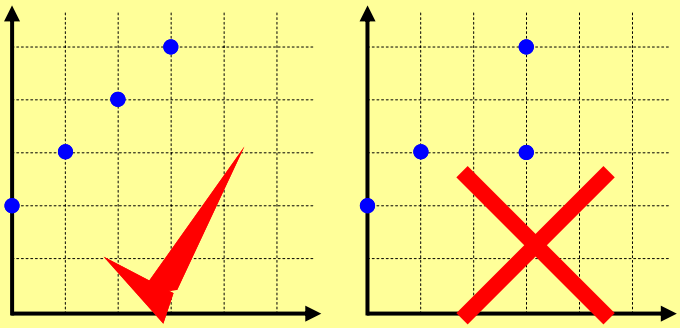
Linear Relationships - Plotting Points & Drawing Straight Lines

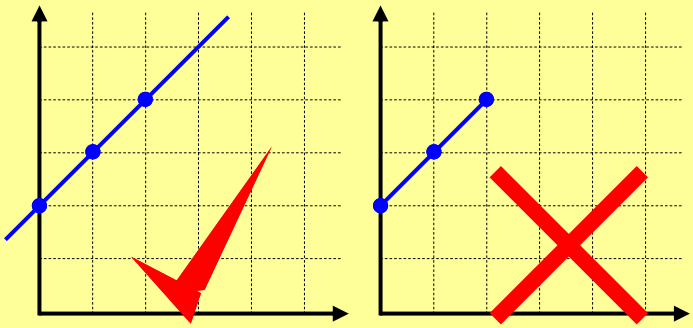
If you can plot points on a grid, drawing straight lines is just drawing a line through them. This sheet removes calculation from the process and just relies on you plotting points correctly and then drawing a line correctly.

There are three key features of drawing a straight line. These are:

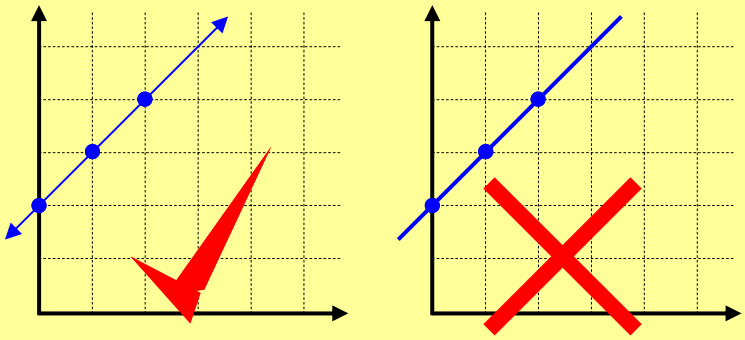
STEP 1 Make sure that your points are in a straight line.



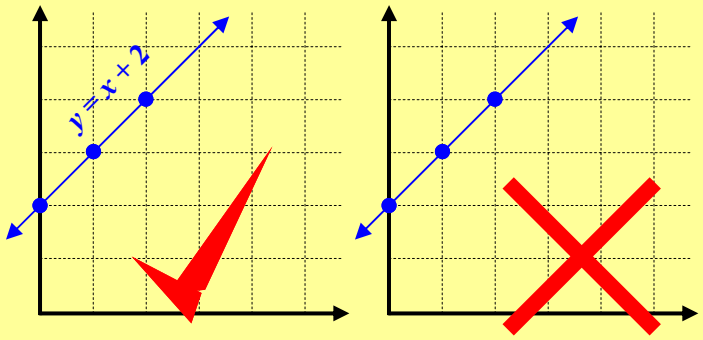
STEP 2 Draw a line the full size of the grid, not just between the first and last dot.



STEP 3 Put arrow heads on each end of the line.



STEP 4 Write the equation for the line on top of the line. Write it in pencil as another line may plot over it later and you will have to move the name.



Column 1 gives you the points to plot as ordered pairs (x co-ord, y co-ord). Plot the points then draw a line through them, keeping the above in mind. The second graph asks you to list all the points where an intersection of lines occurs.

Column 2 is the same except that rather than the points being given as ordered pairs they are in tables. The x value for the point is in the top row, the y value is in the bottom row.

The first worksheet deals with the positive quadrant only, the second worksheet deals with the full plane.

Linear Rel- Plotting Points & Drawing Straight Lines - + Quad (Sheet 1)

Linear Relationships - Plotting Straight Lines

Completing a table of values is just substitution but changing the value in steps. So you replace the x with 0 for the first value. Then replace x with 1 for the second value.

Example - Completing a table of values

$y = 3x + 2$

x	0	1	2	3	4
y	2	5	8	11	14

$y = 3 \times 0 + 2 = 2$

$y = 3 \times 1 + 2 = 5$

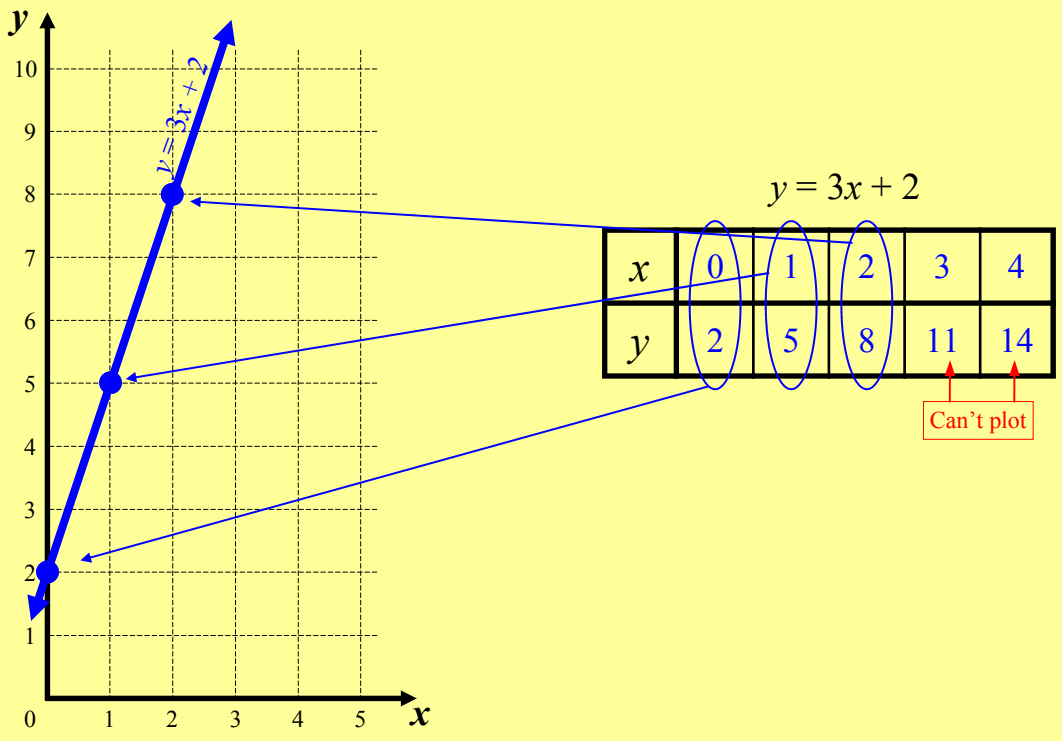
$y = 3 \times 2 + 2 = 8$

$y = 3 \times 3 + 2 = 11$

$y = 3 \times 4 + 2 = 14$

Notice that there is a pattern, the y-values are increasing by three. You should use this as a check, if the numbers aren't increasing or decreasing in a regular pattern, then you have made a mistake.

From the second column you are asked to complete a table and then plot the values, the x value goes across and the y value goes up. Because your number plane is a set size, it is possible that values in a table can't fit, because the numbers are too big. So you can't always plot the values in a table on the number plane.



Remember to always extend the line to the full size of the number plane, put arrowheads on the line and write the equation for the line, on the line. The 2nd worksheet is in all quadrants.

Linear Relationships - Plotting Straight Lines - Pos Quad (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete these table of values. There are hints below each box.

1 $y = x + 2$

x	0	1	2	3	4
y					

$0 + 2$ $1 + 2$ $2 + 2$ $3 + 2$ $4 + 2$

Linear Relationships - Further Straight Lines

This sheet deals with plotting straight lines with points being plotted in all quadrants. The most difficult aspect of this sheet is with the use of negative numbers. You have to remember that when you multiply numbers with a different sign that the answer is negative, or when the signs are both negative then the answer would be positive.

Example

$y = -2x + 3$

x	-4	-2	0	2	4
y	11	7	3	-1	-5

$-2 \times 4 + 3 = -8 + 3 = -5$

$-2 \times 2 + 3 = -4 + 3 = -1$

$-2 \times 0 + 3 = 0 + 3 = 3$

$-2 \times -2 + 3 = 4 + 3 = 7$

$-2 \times -4 + 3 = 8 + 3 = 11$

It is very easy to make a mistake with negative number operations. But remember that the y-values in the Table of Values increase or decrease in a pattern.

$y = -2x + 3$

x	-4	-2	0	2	4
y	11	7	3	-1	-5

-4 -4 -4 -4

The y-values decrease by 4, so if a point wasn't 4 less than the previous number, you know to check for an error.

IMPORTANT - It may be that you use the pattern to complete the table after you have used substitution for two values. If you do this the check system won't work.

Then plot the points and draw a line through them. Remember arrow heads and to label the line. Label the line in pencil so that you can rub it out later if another line gets in the way.

Important features of lines are:

Slope (or gradient) - is the line going up to the left or up to the right? Is the line more or less steep than the other lines?

y-intercept - where is the line cutting the y-axis, is this point visible in the line equation?

Linear Relationships - Further Straight Lines (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table of values then plot the points. Draw the line with arrow heads and the equation on the line. With values in the table that can't be plotted, construct the line with the points that you can plot.

1 $y = -2x$

x	-4	-2	0	2	4
y					

2 $y = x + 1$

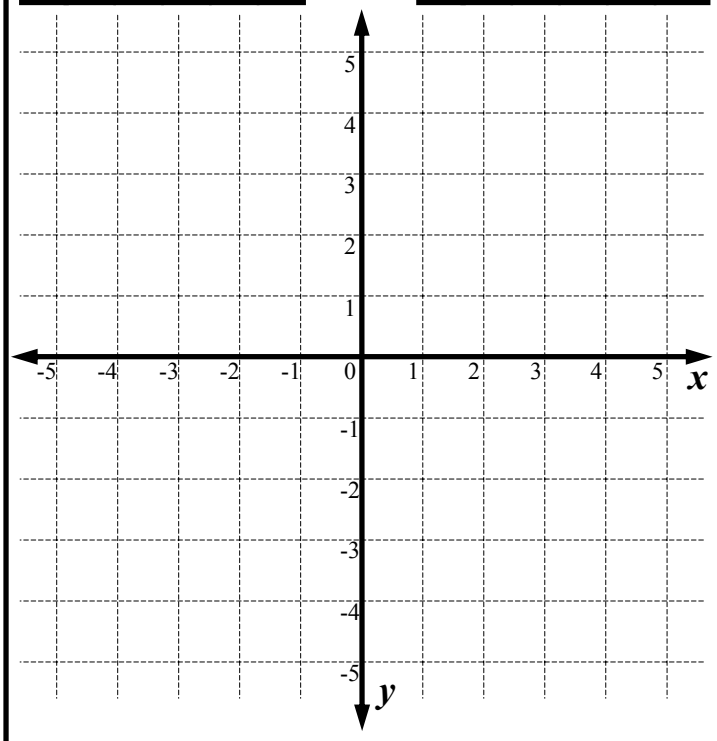
x	-4	-2	0	2	4
y					

3 $y = -\frac{1}{2}x + 1$

x	-4	-2	0	2	4
y					

4 $y = -2x - 5$

x	-4	-2	0	2	4
y					



5 Lines in Q.1 and Q.4 both have '-2' in front of the x. Look at the lines and describe a common feature. _____

6 Lines in Q.2 and Q.3 both have '+1' in the equation. Look at the lines, describe a common feature. _____

Use the top grid, in the next column for Q.7, 8 & 9. below

7 $y = 3x - 6$

x	-4	-2	0	2	4
y

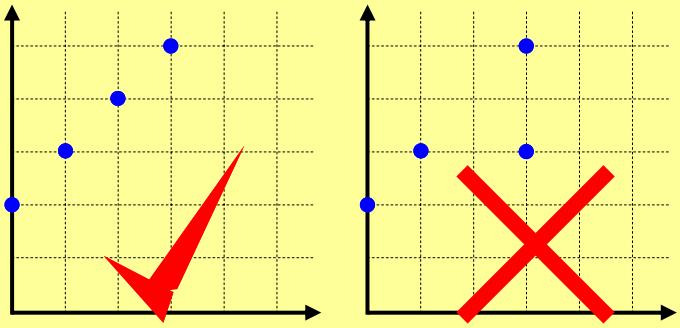
Linear Relationships - Cost Functions

A cost function is a linear relationship that reflects a business model. It might be sales, costs, customer satisfaction …. all can be plotted on a graph.

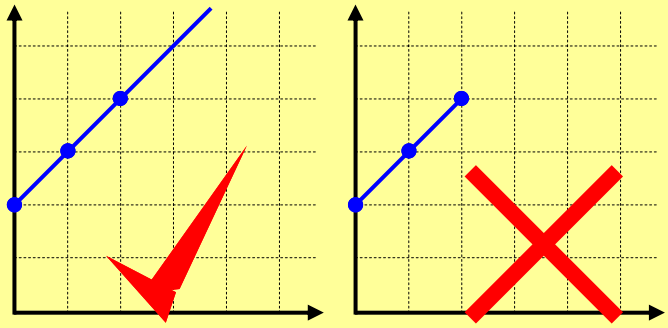
STEP 1

Make sure that your points are in a straight line.

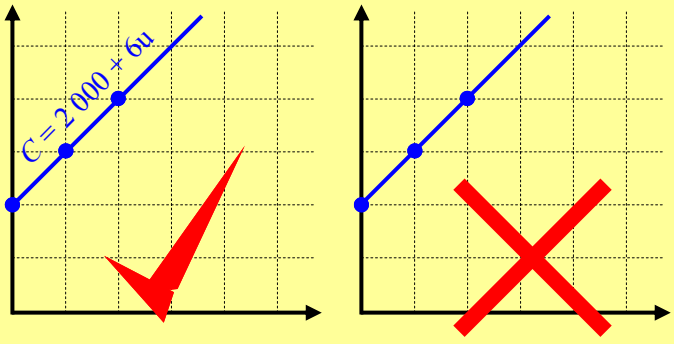


STEP 2

Draw a line the full size of the grid, not just between the first and last dot.



STEP 3



Write the equation for the line on top of the line. Write it in pencil as another line may plot over it later and you will have to move the name.

An important part of a cost function is the break even point. This is the point where one cost function becomes more efficient than the other. It also is the point where a loss, changes to a profit, when costs are plotted against revenue.

Linear Relationships - Cost Functions (Sheet 1)

11 Estimate the production cost for producing:

\$32 500 for 25 000 bottles

\$5 000 for 60 000 bottles

12 Estimate the bottles produced which gives revenue of:

≈ 3 300 bottles for \$30 000 in sales

≈ 55 000 bottles for \$50 000 in sales

13 Estimate how many bottles have to be sold for the company to break even? 50 000

14 Estimate the profit (or loss) on bottle production of:

15 000 Loss = 28 000 - 14 000 = \$14 000

80 000 Profit = 72 000 - 60 000 = \$12 000

Linear Relationships - Horizontal and Vertical Line Equations

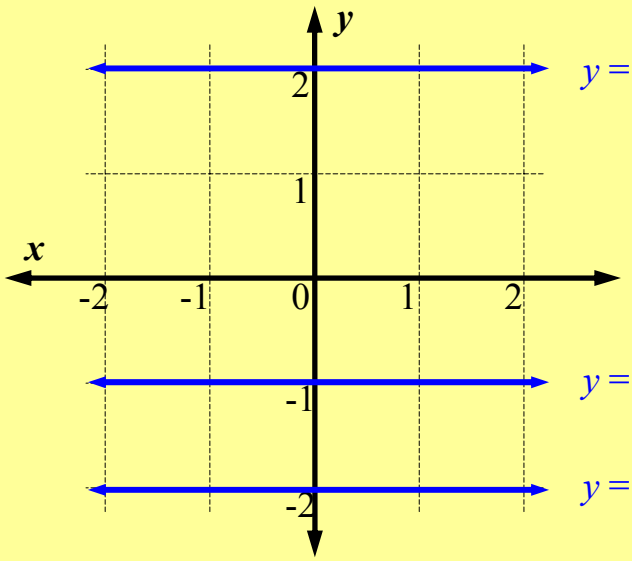
These lines are special because they are horizontal or vertical and only have one letter in them, instead of two. They are also unusual because they seem to be the opposite to what you think.

These lines are in the form:

$y = b$ where b is the number where the line cuts the y-axis

$x = a$ where a is the number where the line cuts the x-axis

Here are some examples, first $y = b$:



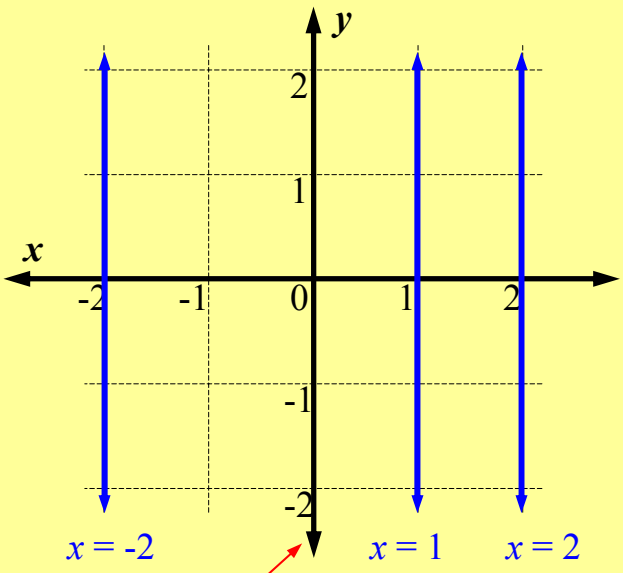
$y = 2$ (cuts the y-axis at 2)

$y = 0$ (cuts the y-axis at 0), so the equation for the x-axis is $y = 0$.

$y = -1$ (cuts the y-axis at -1)

$y = -2$ (cuts the y-axis at -2)

Here are some examples for $x = a$:



$x = -2$ $x = 1$ $x = 2$

$x = 0$ (cuts the x-axis at 0), so the equation for the y-axis is $x = 0$.

So these lines are simple to plot, the only problem is that they seem the opposite to what you would think.

Lines parallel to the y-axis aren't in the format '$y =$' they are '$x =$'. Likewise for the lines parallel to the x-axis, being '$y =$'.

If you can remember this, these are the easiest lines to plot.

Linear Relationships - Horizontal and Vertical Line Equations (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot these points on the number plane. Draw a line through the points and write the name of the line, on the line. Remember to extend line, arrowheads.

1 Points: (3 , 2), (3 , -4) and (3, 5) $x = 3$

Plot these points on the plane below

Write name on the line

$x = 3$ cuts the x-axis at: ☐

$x = 3$ is: ○ horizontal or ○ vertical

2 Points: (-2 , 1), (-2 , 3) and (-2, -5) $x = -2$

Write name on the line

$x = -2$ cuts the x-axis at: ☐

$x = -2$ is: ○ horizontal or ○ vertical

3 Points: (4 , -4), (0 , -4) and (-3, -4) $y = -4$

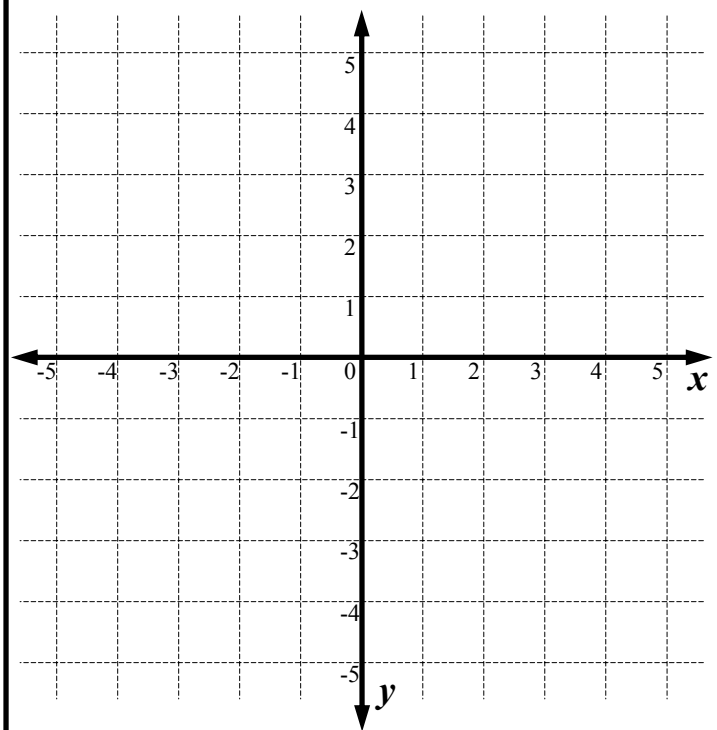
$y = -4$ cuts the y-axis at: ☐

$y = -4$ is: ○ horizontal or ○ vertical

4 Points: (-3 , 2), (-1 , 2) and (2, 2) $y = 2$

$y = 2$ cuts the y-axis at: ☐

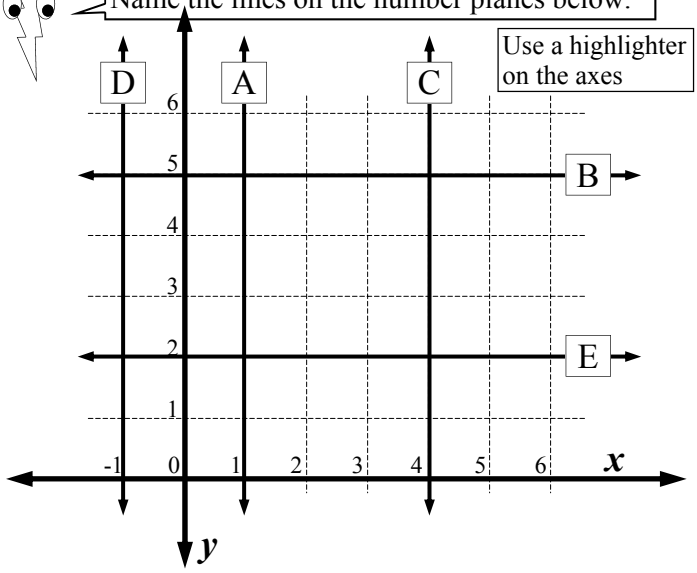
$y = 2$ is: ○ horizontal or ○ vertical



Check:
- ☐ Arrow heads on each line?
- ☐ Is the Equation written on each line?
- ☐ Is each line extended fully on the plane?

Name the lines on the number planes below.

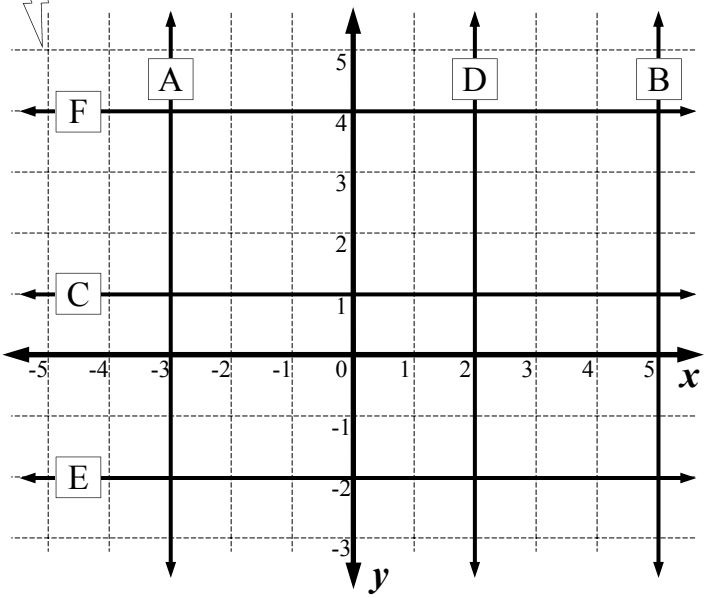
Use a highlighter on the axes



5 A _____ B _____

C _____ D _____ E _____

Now try these, use a highlighter on the axes.



6 A _____ B _____ C _____

D _____ E _____ F _____

Plot $y = -2$ and $x = 2$ on the plane.

Linear Relationships - Naming Straight Lines

This sheet deals with naming straight lines. The standard equation for a straight line is:

$$y = mx + b$$

Where: m = the gradient or slope of the line, and
b = the y-intercept, which is the point at which the line cuts or intersects the y-axis. (the y-axis is the vertical axis)

Examples

A line has a gradient of 2 and a y-intercept of 4.

$y = 2x + 4$

Replace the m with 2 and the b with 4

A line has a gradient of -4 and a y-intercept of 0.

$y = -4x$

Replace the m with -4 and don't write '+ 0'

A line has a gradient of 1 and a y-intercept of 3.

$y = x + 3$

m is 1 but don't write '1x' leave it as x

This sheet doesn't require the calculation of gradient, it is always given to you.

Linear Relationships - Naming Straight Lines (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Name the straight lines, given the gradient and the y-intercept. $y = mx + b$, m = gradient & b = y-int.

1 Gradient = 4, y-int = 1. $y =$ ☐ x + ☐

2 Gradient = -3, y-int = -6. $y =$ ☐ x - ☐

3 Gradient = -2, y-int = 5. $y =$ ☐

4 y-int = 3, Gradient = -4. ☐

5 y-int = 0, Gradient = -2. ☐

When the y-int = 0, you don't include it

6 Gradient = 1, y-int = 2. ☐

Don't include '1' or '-1' just 'x' or '-x'

7 y-int = -3, Gradient = -1. ☐

8 Gradient = ½, y-int = 0. ☐

9 Gradient = 2, y-int = -6. ☐

10 y-int = 0, Gradient = -1. ☐

This time you are given the equation, you need to find the gradient and y-intercept.

11 $y = 3x + 2$ $m =$ ☐ $b =$ ☐

12 $y = x - 7$ $b =$ ☐ $m =$ ☐

13 $y = -4x$ $b =$ ☐ $m =$ ☐

14 $y = ½x + 2$ $m =$ ☐ $b =$ ☐

15 $y = 10 - 2x$ $b =$ ☐ $m =$ ☐

If lines are parallel they have the same gradient. Find the equations of these lines.

16 Find the equation of the line with a y-int of 6 which is parallel to $y = 3x + 1$. $y =$ ☐ x + ☐

17 Find the equation of the line with a y-int of 4 which is parallel to $y = -2x - 3$. ☐

17 Find the equation of the line with a y-int of -3 which is parallel to $y = -3x$. ☐

18 Find the equation of the line with a y-int of 0 which is parallel to $y = 5x + 2$. ☐

You are given the gradient, read off the y-int and then construct the equation for the line. 'b' is where the line 'cuts' the y-axis. (vertical axis)

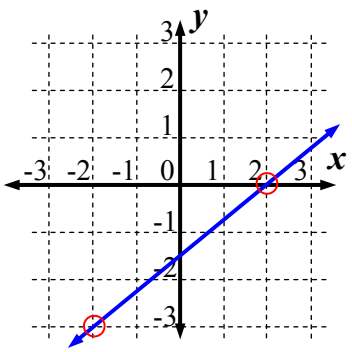
Cartesian Plane - Gradient

Gradient is a measure of slope. So the larger the number, the steeper the line is. A gradient of 5 is much steeper than a gradient of 1. Gradient is found creating a 'gradient triangle' and measuring the rise over the run, the vertical length over the horizontal. Gradient is given the symbol '*m*', it has nothing to do with the midpoint.

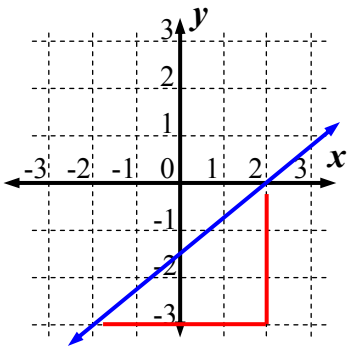
$$m = \frac{Rise}{Run} = \frac{Vertical\ Distance}{Horizontal\ Distance}$$

Here is an example of finding the gradient.

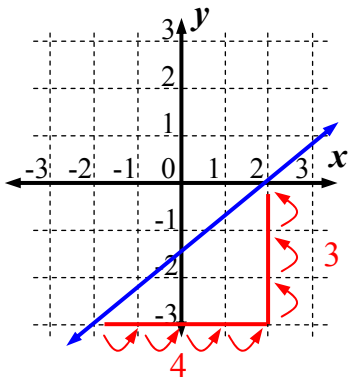
Example: Find the gradient of the line below.



Locate where the line cuts through exact coordinates. (in red)



Construct a gradient triangle, which is a right angle triangle with the line as the hypotenuse



Count and mark the rise and the run on the sides of the triangle.

$$m = \frac{3}{4}$$

Find the gradient by writing the rise over the run. Then finally, check if it is a positive or negative slope.

The process for finding the gradient is straight forward. The only issue is you can have positive and negative gradient. Positive Gradient 'Goes up to the right', Negative Gradient' goes 'up to the left'.

Positive Gradient goes up to the right

Negative Gradient goes up to the left

If the line is flat, it has a gradient of zero ($m = 0$). If the line is vertical (straight up and down), it has a gradient that is undefined (m = undef).

Cartesian Plane - Gradient (Sheet 1)

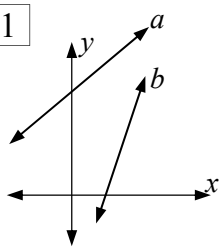
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

State whether the following have a positive or negative gradient.

Up to the left is -ve

Up to the right is +ve

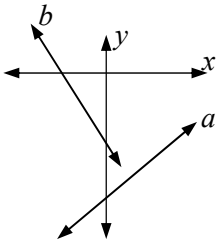
1



a) _____ Positive or Negative

b) _____ Positive or Negative

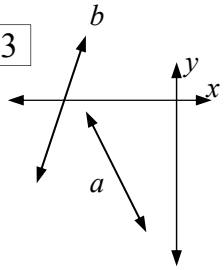
2



a) _____

b) _____

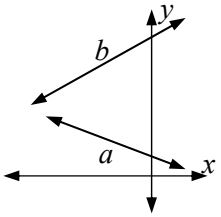
3



a) _____

b) _____

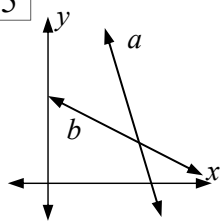
4



a) _____

b) _____

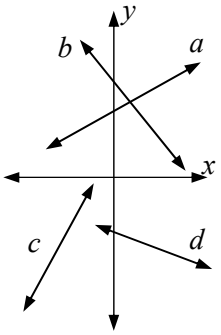
5



a) _____

b) _____

6



a) _____

b) _____

c) _____

d) _____

These lines have gradient triangles installed! Write the rise and run in the boxes on the triangles sides, then find the gradient. Make sure you remember to check for positive and negative gradient at the end.

Cartesian Plane - Gradient (Sheet 1)

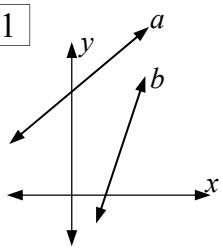
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

State whether the following have a positive or negative gradient.

Up to the left is -ve

Up to the right is +ve

1



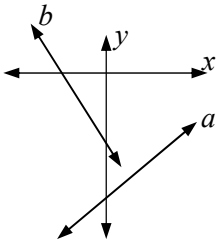
a) Positive

Positive or Negative

b) Positive

Positive or Negative

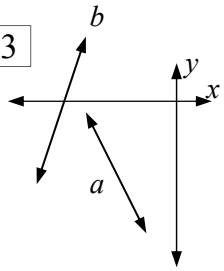
2



a) Positive

b) Negative

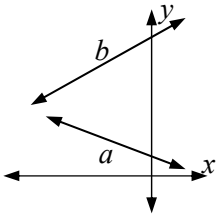
3



a) Negative

b) Positive

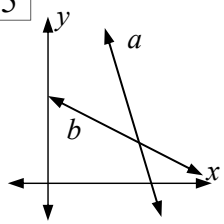
4



a) Negative

b) Positive

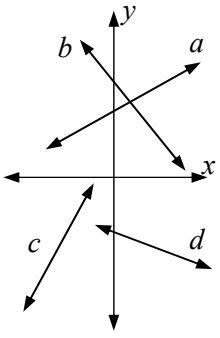
5



a) Negative

b) Negative

6



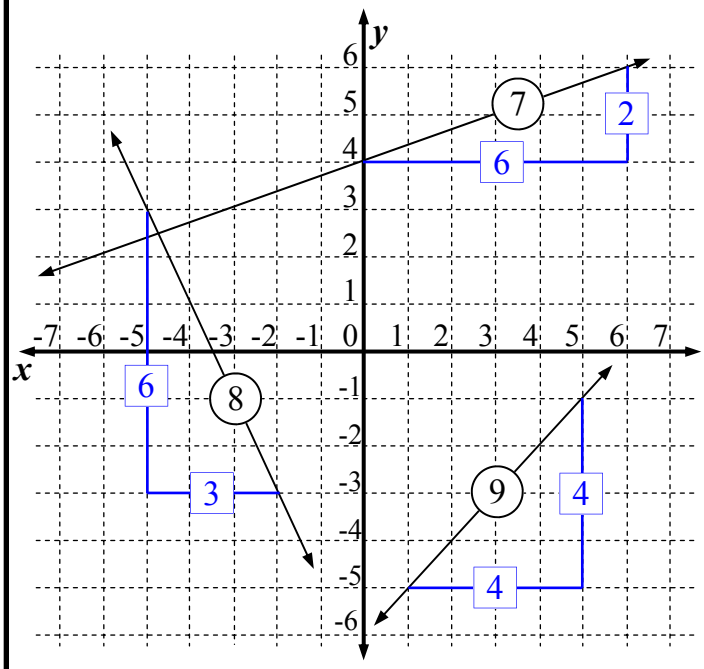
a) Positive

b) Negative

c) Positive

d) Negative

These lines have gradient triangles installed! Write the rise and run in the boxes on the triangles sides, then find the gradient. Make sure you remember to check for positive and negative gradient at the end.



7 $m = \frac{2}{6} = \frac{1}{3}$

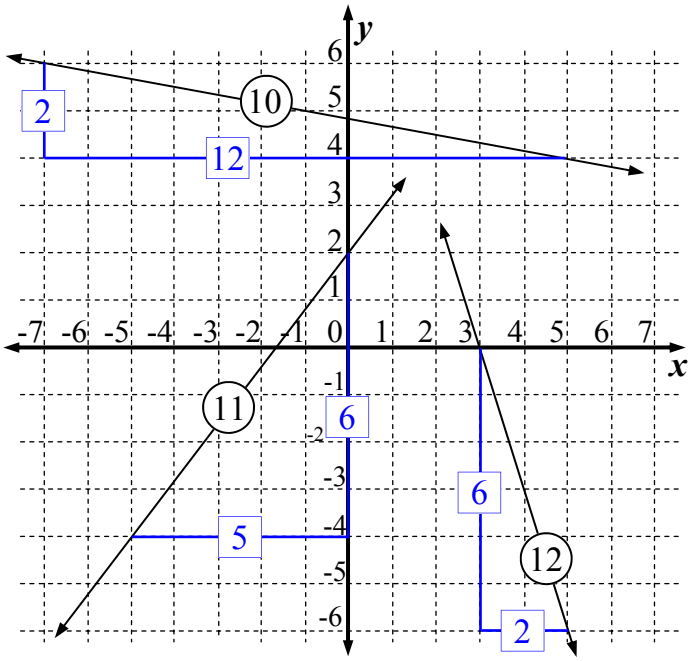
8 $m = \frac{6}{3} = -2$

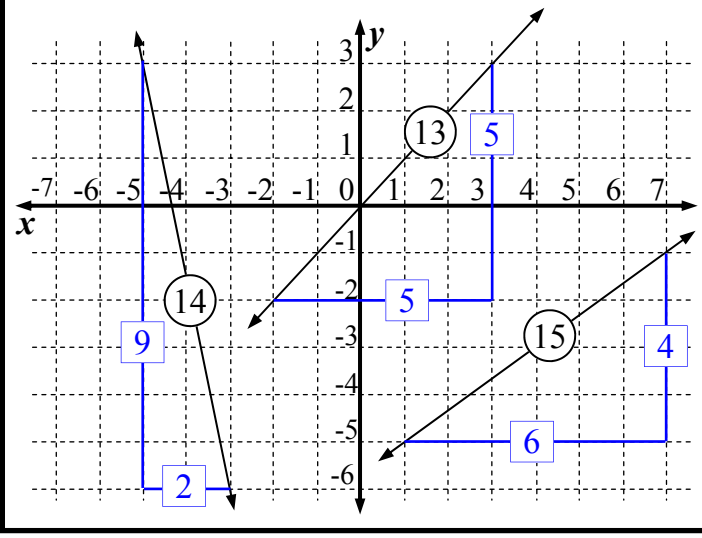
9 $m = \frac{4}{4} = 1$

10 $m = \frac{2}{12} = \frac{-1}{6}$

11 $m = \frac{6}{5}$

12 $m = \frac{6}{2} = -3$





13 $m = \frac{5}{5} = 1$

14 $m = \frac{-9}{2}$

15 $m = \frac{4}{6} = \frac{2}{3}$

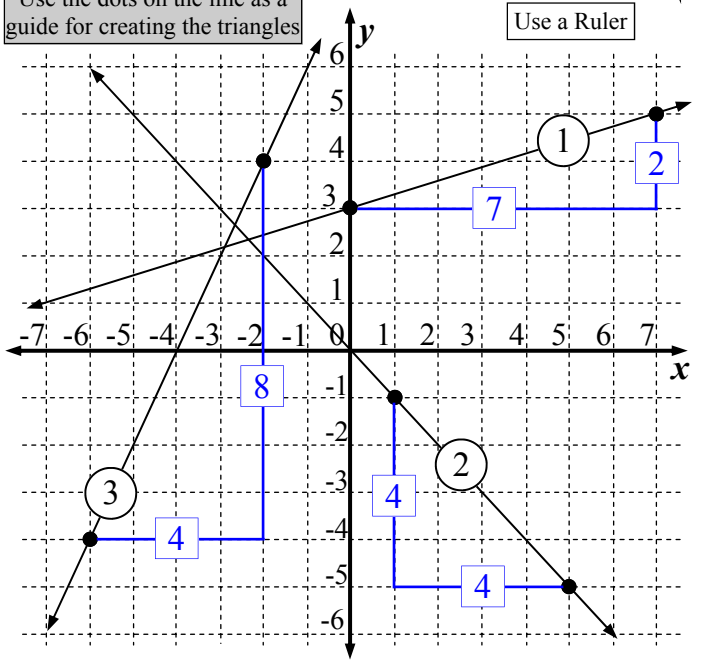
Cartesian Plane - Gradient (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the gradient for these lines. Create gradient triangles and remember your positive and negatives.

Use the dots on the line as a guide for creating the triangles

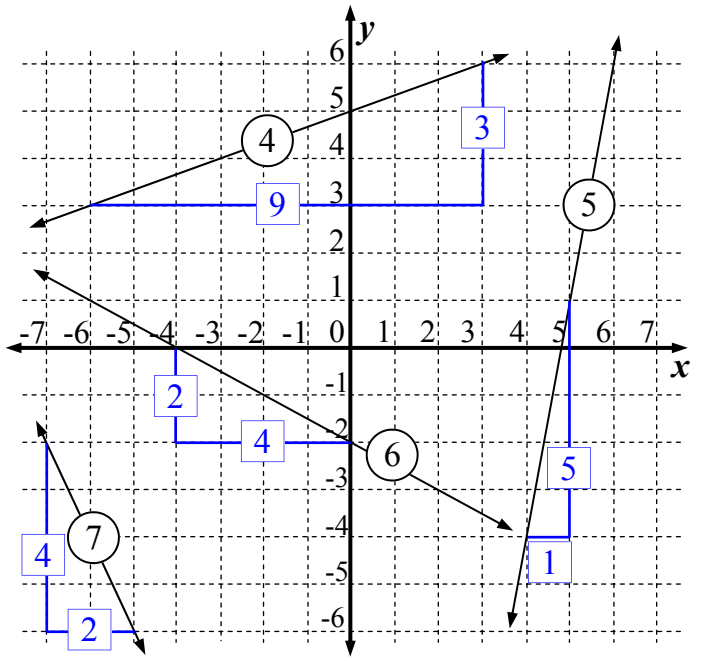
Use a Ruler



1 $m = \frac{2}{7}$

2 $m = \frac{4}{4} = -1$

3 $m = \frac{8}{4} = 2$

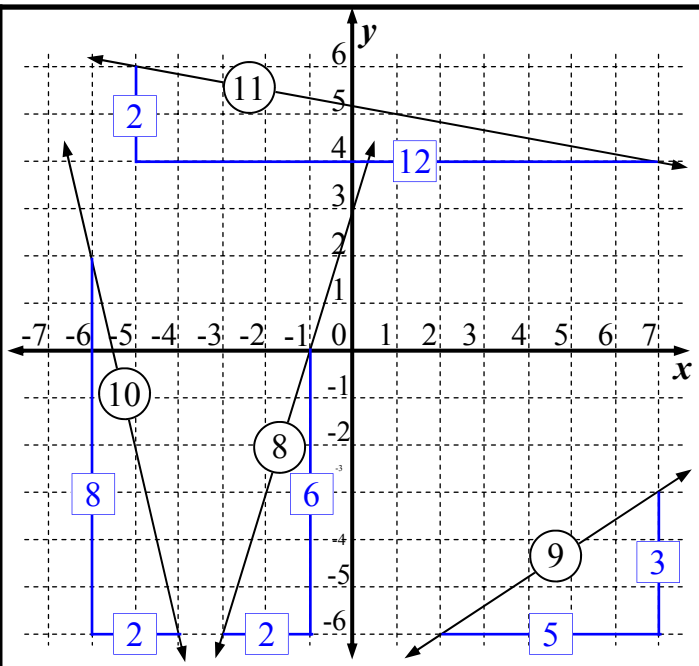


4 $m = \frac{3}{9} = \frac{1}{3}$

5 $m = \frac{5}{1} = 5$

6 $m = \frac{2}{4} = \frac{-1}{2}$

7 $m = \frac{4}{2} = -2$

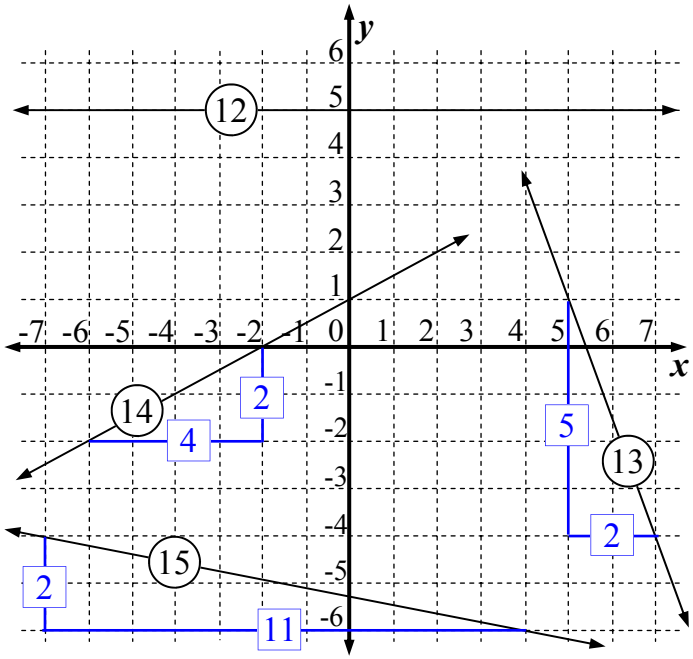


8 $m = \frac{6}{2} = 3$

9 $m = \frac{3}{5}$

10 $m = \frac{8}{2} = -4$

11 $m = \frac{2}{12} = \frac{-1}{6}$



12 $m = 0$

13 $m = \frac{-5}{2}$

14 $m = \frac{2}{4} = \frac{1}{2}$

15 $m = \frac{-2}{11}$

4 $m = \frac{3}{1} = -3$

Linear Relationships - Naming Straight Lines - Find *m*

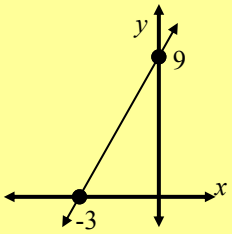
This sheet deals with naming straight lines. The standard equation for a straight line is:

$$y = mx + b$$

Where: m = the gradient or slope of the line, and
b = the y-intercept, which is the point at which the line cuts or intersects the y-axis. (the y-axis is the vertical axis)

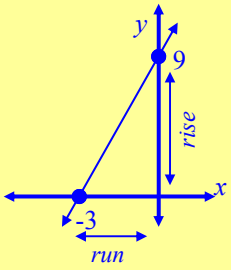
This is a difficult concept for some students, but it is important to realise that there are three steps, with only one of those steps being tricky, the other two are easy. As long as you can find the gradient, finding the y-intercept and getting the line equation is straight-forward.

Example - Find the equation of the straight line shown.



STEP 1

FIND THE GRADIENT



FIND THE GRADIENT

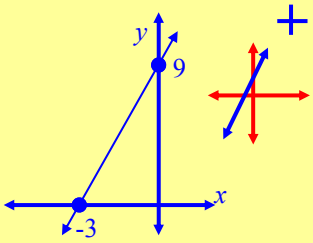
$$m = \frac{\text{rise}}{\text{run}} = \frac{9}{3} = 3$$

Don't use -2

Gradient is rise over the run. So the vertical distance over the horizontal. Remember only use positive numbers, so change -3 to 3.

STEP 2

POSITIVE OR NEGATIVE

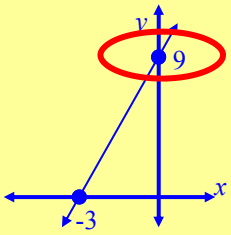


POSITIVE OR NEGATIVE

If the line is going up to the right it is positive. (Which this question is). If it is going up to the left, it is negative. It is vital you ask yourself this question each time you find the gradient. Put a '-' sign in front of the gradient if it is negative. Otherwise leave it.

STEP 3

FIND THE y-INTERCEPT



FIND THE y-INTERCEPT

Where does the line cut the y-axis? It cuts at +9

STEP 4

CONSTRUCT THE EQUATION

$y = 3x + 9$
m b

CONSTRUCT THE EQUATION

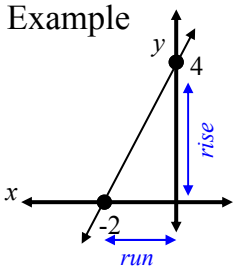
Using $y = mx + b$, replace the m with the gradient and b with the y-intercept. You are done.

Linear Relationships - Naming Straight Lines - Find *m* (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the gradient and *y*-intercept, then the equation for these straight lines. All gradients are positive.

Example

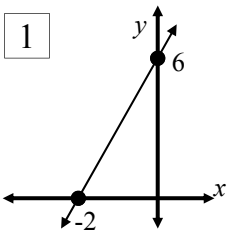


$m = \frac{\text{rise}}{\text{run}} = \frac{4}{2} = 2$ — Positive as up to the right; Don't use -2

$b = 4$ — Cuts the *y*-axis at 4

$y = 2x + 4$ (m, b)

1

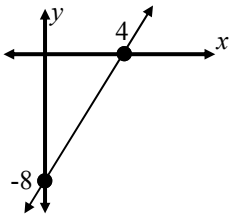


$m = \frac{\square}{\square} = \square$ $\quad b = \square$

$y = \square x + \square$

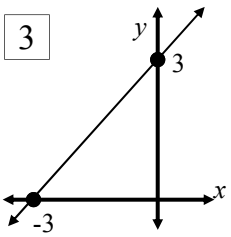
2

$m = \frac{\square}{\square} = \square$ $\quad b = \square$



$y = \square x - \square$

3

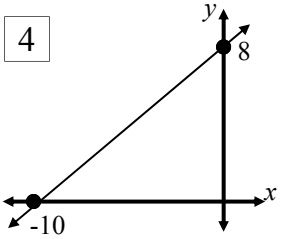


$m = \frac{\square}{\square} = \square$ $\quad b = \square$

$y = \square$

These gradients will be fractions, fully simplify them.

4



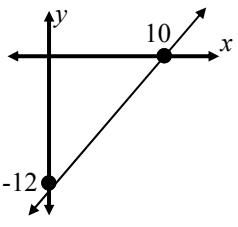
$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$

Calc: 8 ▪ 1 0 =

$y = \frac{\square}{\square} x + \square$

5

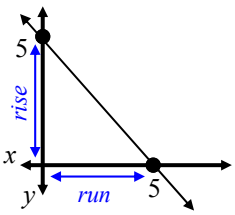
$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$



$\square$

All the gradients are up to the left, so all are negative gradients. Find the equations for these lines.

Example



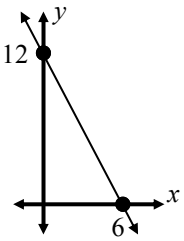
$m = \frac{\text{rise}}{\text{run}} = \frac{5}{5} = -1$ — Negative as up to the left

$b = 5$ — Cuts the *y*-axis at 5

$y = -x + 5$ — Write -*x* not -1*x* (m, b)

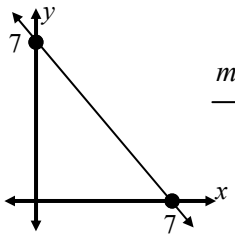
6

$m = \frac{\square}{\square} = \square$ $\quad b = \square$



$y = \square$

7

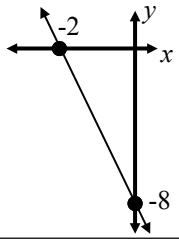


$m = \frac{\square}{\square} = \square$ $\quad b = \square$

$\square$

8

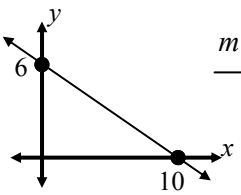
$m = \frac{\square}{\square} = \square$ $\quad b = \square$



$\square$

These gradients will be fractions, fully simplify them.

9

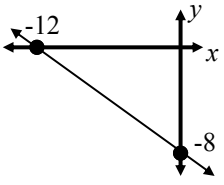


$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$

$y = \frac{\square}{\square} x + \square$

10

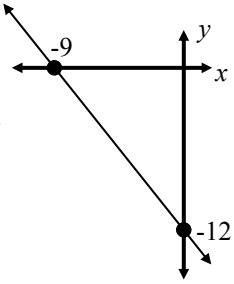
$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$



$\square$

11

$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$



$\square$

Linear Relationships - Naming Straight Lines - Find *m* (Sheet 2)

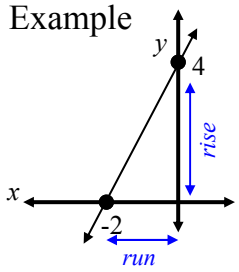
Linear Relationships - Naming Straight Lines - Find *m* (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the gradient and *y*-intercept, then the equation for these straight lines. All gradients are positive.

Example

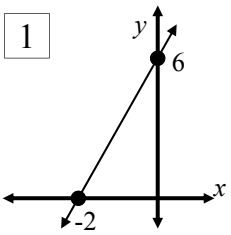


$m = \frac{\text{rise}}{\text{run}} = \frac{4}{2} = 2$ — Positive as up to the right; Don't use -2

$b = 4$ — Cuts the *y*-axis at 4

$y = 2x + 4$ (m, b)

1

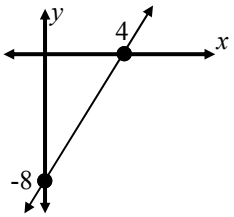


$m = \frac{6}{2} = 3$ $\quad b = 6$

$y = 3x + 6$

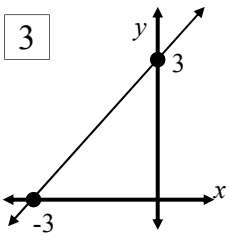
2

$m = \frac{8}{4} = 2$ $\quad b = -8$



$y = 2x - 8$

3

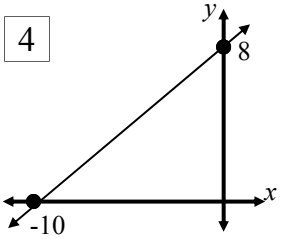


$m = \frac{3}{3} = 1$ $\quad b = 3$

$y = x + 3$

These gradients will be fractions, fully simplify them.

4



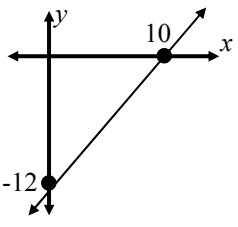
$m = \frac{8}{10} = \frac{4}{5}$ $\quad b = 8$

Calc: 8 ▪ 1 0 =

$y = \frac{4}{5}x + 8$

5

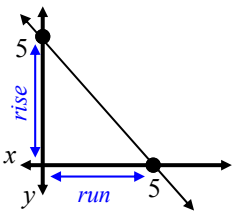
$m = \frac{12}{10} = \frac{6}{5}$ $\quad b = -12$



$y = {}^{6}/_{5}\,x - 12$

All the gradients are up to the left, so all are negative gradients. Find the equations for these lines.

Example



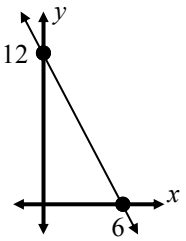
$m = \frac{\text{rise}}{\text{run}} = \frac{5}{5} = -1$ — Negative as up to the left

$b = 5$ — Cuts the *y*-axis at 5

$y = -x + 5$ — Write -*x* not -1*x* (m, b)

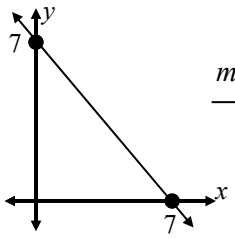
6

$m = \frac{12}{6} = -2$ $\quad b = 12$



$y = -2x + 12$

7

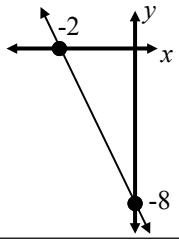


$m = \frac{7}{7} = -1$ $\quad b = 7$

$y = -x + 7$

8

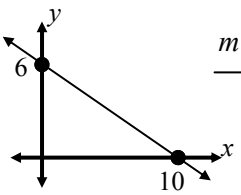
$m = \frac{8}{2} = -4$ $\quad b = -8$



$y = -4x - 8$

These gradients will be fractions, fully simplify them.

9

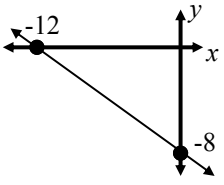


$m = \frac{6}{10} = \frac{-3}{5}$ $\quad b = 6$

$y = \frac{-3}{5}x + 6$

10

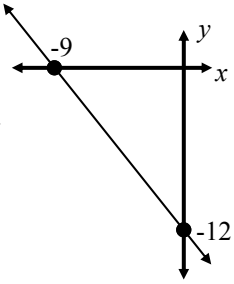
$m = \frac{8}{12} = \frac{-2}{3}$ $\quad b = -8$



$y = {}^{-2}/_{3}\,x - 8$

11

$m = \frac{12}{9} = \frac{-4}{3}$ $\quad b = -12$



$y = {}^{-4}/_{3}\,x - 12$

Linear Relationships - Naming Straight Lines - Find *m* (Sheet 2)

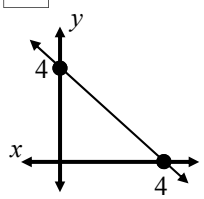
$b = 6$

$y = 2x + 6$

2

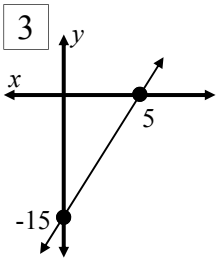


$m = \frac{4}{4} = -1$

$b = 4$

$y = -x + 4$

3



$m = \frac{15}{5} = 3$

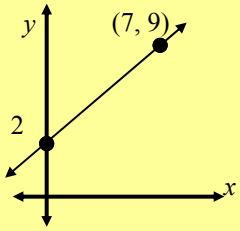
$b = -15$

$y = 3x - 15$

Linear Relationships - Further Naming Straight Lines

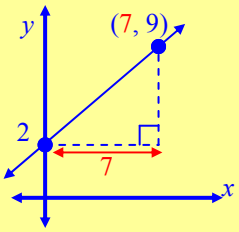
This sheet deals with naming straight lines. This is a more difficult concept for some students, because one point is not on an axis. You are always given the *y*-intercept, but the other point doesn't lie on the *x*-axis.

Example - Find the equation of the straight line shown.



STEP 1

CONSTRUCT GRADIENT TRIANGLE & FIND RUN

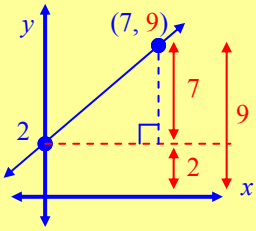


CONSTRUCT TRIANGLE - FIND RUN

Construct a triangle. Draw a horizontal line from the *y*-axis across from the *y*-intercept, then up to the point. Then write the run on the base of the triangle. The horizontal length is 7, because the point is (7, 9), which is 7 across, 9 up.

STEP 2

FIND RISE

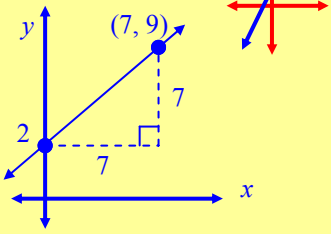


FIND RISE

The rise is found by using the 2nd number in the point, because that is the distance 'up'. If the point is 'up 9', but the triangle is raised 2 above the axis, then the triangle height is 7. (9 - 2 = 7)

STEP 3

CALCULATE THE GRADIENT



CALCULATE THE GRADIENT

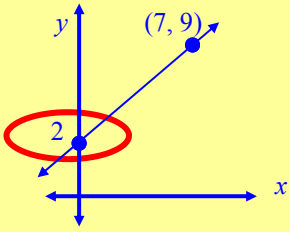
$$m = \frac{\text{rise}}{\text{run}} = \frac{7}{7} = 1$$

Calculate the gradient using the rise and run you found.

Remember to check if it is positive or negative.

STEP 4

FIND THE *y*-INTERCEPT



FIND THE *y*-INTERCEPT

Where does the line cut the *y*-axis? It cuts at +2

STEP 5

CONSTRUCT THE EQUATION

$y = x + 2$

m b

CONSTRUCT THE EQUATION

Using $y = mx + b$, replace the m with the gradient and b with the *y*-intercept. You are done.

Linear Relationships - Further Naming Straight Lines (Sheet 1)

Gradient: ⊕ ⊖

$m = \frac{\square}{\square} = \square$ $b = \square$

$y = \square x + \square$

Date Due:

Find the gradient for these lines.

1 
$m = \frac{\square}{\square}$ — $m = \square$

2 
$m = \frac{\square}{\square}$ — $m = \square$

Find the equation for this line.

3 
Gradient: ⊕ ⊖

$m = \frac{\square}{\square} = \square$ $b = \square$

$y = \square x + \square$

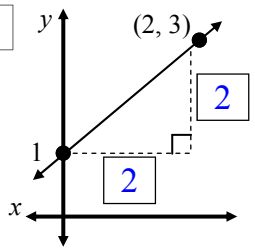
Linear Relationships - Further Naming Straight Lines (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Date Due:

Find the gradient for these lines.

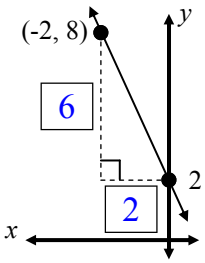
1



$m = \frac{2}{2}$

$m = 1$

2

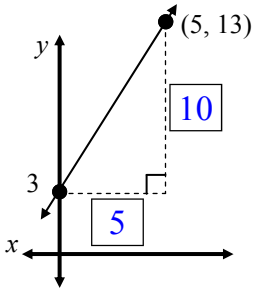


$m = \frac{6}{2}$

$m = -3$

Find the equation for this line.

3



Gradient: ● ⊖

$m = \frac{10}{5} = 2$

$b = 3$

$y = 2x + 3$

Linear Relationships - Proving if a Point is on a Line

If a point is on a line when you substitute the point's co-ordinates into the straight line equation, it satisfies it (which means 'it makes sense'). If the point is substituted into the equation and it doesn't satisfy it (make sense), then it isn't on the line.

The worksheet starts off with basic substitution, this is given an x-value and an equation, find the value of y. Here is an example:

Example: $y = 7x - 3$, find y when $x = 6$.

$y = 7x - 3$ ← Write the equation

$y = 7 \times 6 - 3$ ← Substitute $x = 6$

$y = 39$ ← Calculate the y value

What this is used for, is, for finding a point on the line for a given value of x. So the above found a value, not a point. If you were asked to find the point, you include the x-value in the answer. These are in the second column.

Example: $y = 7x - 3$, find the co-ordinates of the point when $x = 6$.

$y = 7x - 3$ ← Write the equation

$y = 7 \times 6 - 3$ ← Substitute $x = 6$

$y = 39$ ← Calculate the y value

$\therefore (x, y) = (6, 39)$ ← Give the point

The third column deals with finding if a point is on the line. With these you substitute both x and y values into the equation. If the equation is satisfied, then the point is on the line. No satisfaction? Then the point isn't on the line.

Example: Does the point (6, 39) lie on the line $y = 7x - 3$?

x y ← Write x and y here

$y = 7x - 3$ ← Write the equation

$39 = 7 \times 6 - 3$ ← Substitute $x = 6$ and $y = 39$

$39 = 39$ ← Calculate the RHS

RHS = Right hand side (of the equation)

LHS = RHS. $\therefore$ Point is on line. ← Make a statement

Linear Relationships - Proving if a Point is on a Line (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Given x, find the value of y.

Example $y = 3x + 2$ $x = 2$

$y = 3x + 2$ ← Write equation

$y = 3 \times 2 + 2$ ← Substitute $x = 2$

$y = 8$ ← Answer

1 $y = 7x - 5$ $x = 3$

$y = 7x - 5$ ← Write equation

$y = 7 \times \square - 5$ ← Substitute $x = 3$

$y = \square$ ← Answer

2 $y = x - 7$ $x = 5$

____ ← Write equation

____ ← Substitute $x = 5$

Linear Relationships - Proving if a Point is on a Line (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find if the point is on the line.

Example $2x + y = 2$ $(-2, 6)$

x y — Label x, y.

$2x + y = 2$ — Equation

$2 \times (-2) + 6 = 2$ — Substitute $x = -2, y = 6$

$2 = 2$ — Solve

LHS = RHS. ∴ Point on line.

1 $5y + 11 = 6x$ $(5, 6)$

Label x, y. → ☐ ☐

Write equation

Substitute $x = 5, y = 6$

Solve Use = or ≠

Using LHS/RHS State if point on the line

☐ ☐

2 Does the point (-2, 4) lie on the line $10y + 3x = 46$?

Equation

Substitute

Solve

Using LHS/RHS State if point on the line

☐ ☐

3 Does the point (-7, 9) lie on the line $13 - 2x = 3y$?

This time you have two lines and you have to check if they intersect at the given point.

4 Do the lines $y = 2x + 6$ and $y = 5x - 15$ intersect at (7, 20)?

☐ ☐

Write $y = 2x + 6$

Substitute $x = 7, y = 20$

Solve Use = or ≠

LHS ☐ RHS ∴

= or ≠ Point is or not on line

Write $y = 5x - 15$

Substitute $x = 7, y = 20$

Solve Use = or ≠

LHS ☐ RHS ∴

= or ≠ Point is or not on line

Yes they, or no they don't, intersect at (7, 20)

5 Do the lines $y = 15 - 3x$ and $y = -2x + 12$ intersect at (3, 6)?

☐ ☐

6 Do the lines $3y - 2x = -5$ and $y = -3x + 8$ intersect at (7, 3)?

☐ ☐

7 Do the lines $y = -x + 12$ and $y = 5x - 12$ intersect at (4, 8)?

☐ ☐

Linear Relationships - Proving if a Point is on a Line (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Given x, find the value of y.

Example $y = 3x + 2$ $x = 2$

$y = 3x + 2$ ← Write equation

$y = 3 \times 2 + 2$ ← Substitute $x = 2$

$y = 8$ ← Answer

1 $y = 7x - 5$ $x = 3$

$y = 7x - 5$ Write equation

$y = 7 \times \boxed{3} - 5$ Substitute $x = 3$

$y = \boxed{16}$ Answer

2 $y = x - 7$ $x = 5$

$y = x - 7$ Write equation

$y = 5 - 7$ Substitute $x = 5$

$y = -2$ Answer

3 $y = -2x + 4$ $x = 6$

$y = -2x + 4$

$y = -2 \times 6 + 4$

$y = -8$

4 $y = 12 - 3x$ $x = 0$

$y = 12 - 3x$

$y = 12 - 3 \times 0$

$y = 12$

5 $y = -x - 9$ $x = 4$

$y = -x - 9$

$y = -4 - 9$

$y = -13$

Given an x co-ordinate, give the co-ordinates for a point on a line.

Example $y = 2x + 7$ $(5, y)$

$y = 2x + 7$ ← Write equation

$y = 2 \times 5 + 7$ ← Substitute $x = 5$

$y = 17$ ← y-value

$\therefore (x, y) = (5, 17)$ ← Point

6 $y = 4x - 8$ $(3, y)$

$y = 4x - 8$ Write equation

$y = 4 \times 3 - 8$ Substitute $x = 3$

$y = 4$ y-value

$\therefore (x, y) = (3, \boxed{4})$ Point

7 $y = -5x + 7$ $(-4, y)$

$y = -5x + 7$

$y = -5 \times (-4) + 7$

$y = 27$

$\therefore (x, y) = (-4, 27)$

8 $y = -x - 11$ $(-1, y)$

$y = -x - 11$

$y = -(-1) - 11$

$y = 10$

$\therefore (x, y) = (-1, 10)$

9 $y = 15 - 5x$ $(-7, y)$

$y = 15 - 5x$

$y = 15 - 5 \times (-7)$

$y = 50$

$\therefore (x, y) = (-7, 50)$

Find if the point is on the line.

Example $y = 4x + 5$ $(2, 11)$

x y

$y = 4x + 5$ ← Label x, y. / Equation

$11 = 4 \times 2 + 5$ ← Substitute $x = 2, y = 11$

$11 \neq 13$ ← Solve RHS

LHS ≠ RHS. $\therefore$ Not on line.

10 $y = 6x + 2$ $(5, 28)$

Label x, y. → x y

$y = 6x + 2$ Write equation

$\boxed{28} = 6 \times \boxed{5} + 2$ Substitute $x = 5, y = 28$

$28 \neq 32$ Solve Use = or ≠

LHS ≠ RHS. $\therefore$ Not on line.

Using LHS/RHS State if point on the line

x y

11 Does the point (8, 17) lie on the line $y = 3x - 7$?

$y = 3x - 7$ Equation

$17 = 3 \times 8 - 7$ Substitute

$17 = 17$ Solve

LHS = RHS. $\therefore$ Point is on line.

x y

12 Does the point (-3, -13) lie on the line $y = -4x - 25$?

$y = -4x - 25$

$-13 = -4 \times (-3) - 25$

$-13 = -13$

LHS = RHS. $\therefore$ Point is on line.

Linear Relationships - Proving if a Point is on a Line (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find if the point is on the line.

Example $2x + y = 2$ (-2, 6)

x y

$2x + y = 2$ — Label x, y. / Equation

$2 \times (-2) + 6 = 2$ — Substitute $x = -2, y = 6$

$2 = 2$ — Solve

LHS = RHS. ∴ Point on line.

1 $5y + 11 = 6x$ (5, 6)

Label x, y. → x y

$5y + 11 = 6x$ — Write equation

$5 \times 6 + 11 = 6 \times 5$ — Substitute $x = 5, y = 6$

$41 \neq 30$ — Solve Use = or ≠

LHS ≠ RHS. ∴ Point not on line

Using LHS/RHS State if point on the line

x y

2 Does the point (-2, 4) lie on the line $10y + 3x = 46$?

$10y + 3x = 46$ — Equation

$10 \times 4 + 3 \times (-2) = 46$ — Substitute

$34 \neq 46$ — Solve

LHS ≠ RHS. ∴ Point not on line

Using LHS/RHS State if point on the line

x y

3 Does the point (-7, 9) lie on the line $13 - 2x = 3y$?

$13 - 2x = 3y$

$13 - 2 \times (-7) = 3 \times 9$

$27 = 27$

LHS = RHS. ∴ Point is on line

This time you have two lines and you have to check if they intersect at the given point.

4 Do the lines $y = 2x + 6$ and $y = 5x - 15$ intersect at (7, 20)?

$y = 2x + 6$ — Write $y = 2x + 6$

$20 = 2 \times 7 + 6$ — Substitute $x = 7, y = 20$

$20 = 20$ — Solve Use = or ≠

LHS = RHS ∴ Point is on line

= or ≠ Point is or not on line

$y = 5x - 15$ — Write $y = 5x - 15$

$20 = 5 \times 7 - 15$ — Substitute $x = 7, y = 20$

$20 = 20$ — Solve Use = or ≠

LHS = RHS ∴ Point is on line

= or ≠ Point is or not on line

Yes the lines intersect at (7, 20)

Yes they, or no they don't, intersect at (7, 20)

5 Do the lines $y = 15 - 3x$ and $y = -2x + 12$ intersect at (3, 6)?

x y

$y = 15 - 3x$

$6 = 15 - 3 \times 3$

$6 = 6$

LHS = RHS. ∴ Point is on line

$y = -2x + 12$

$6 = -2 \times 3 + 12$

$6 = 6$

LHS = RHS. ∴ Point is on line

Yes the lines intersect at (3, 6)

6 Do the lines $3y - 2x = -5$ and $y = -3x + 8$ intersect at (7, 3)?

x y

$3y - 2x = -5$

$3 \times 3 - 2 \times 7 = -5$

$-5 = -5$

LHS = RHS. ∴ Point on line.

$y = -3x + 8$

$3 = -3 \times 7 + 8$

$3 \neq -13$

LHS ≠ RHS. ∴ Point not on line.

The lines don't intersect at (7, 3)

7 Do the lines $y = -x + 12$ and $y = 5x - 12$ intersect at (4, 8)?

x y

$y = -x + 12$

$8 = -4 + 12$

$8 = 8$

LHS = RHS. ∴ Point on line.

$y = 5x - 12$

$8 = 5 \times 4 - 12$

$8 = 8$

LHS = RHS. ∴ Point on line.

Yes the lines intersect at (4, 8)

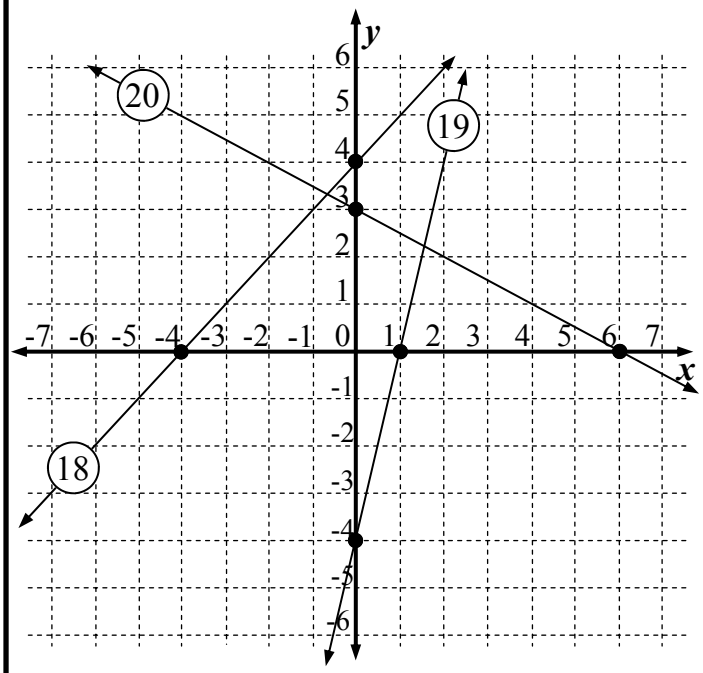
Find the gradient of the lines shown below.



18 _____

19 _____

20 _____

Give the equation for the three lines above

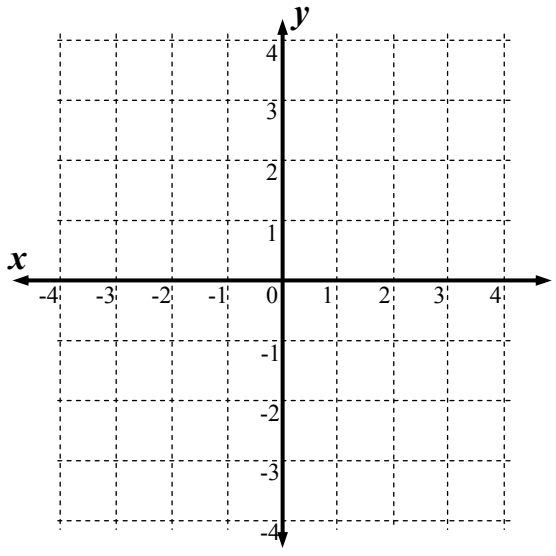
21 Name (18) _____

22 Name (19) _____

23 Name (20) _____

Plot the two lines $x = 2$ and $y = -3$ on the grid below

24



A tennis racquet manufacturer has daily figures below. Complete the tables.

25 *Production Cost : P* = 10*n* + 30 000

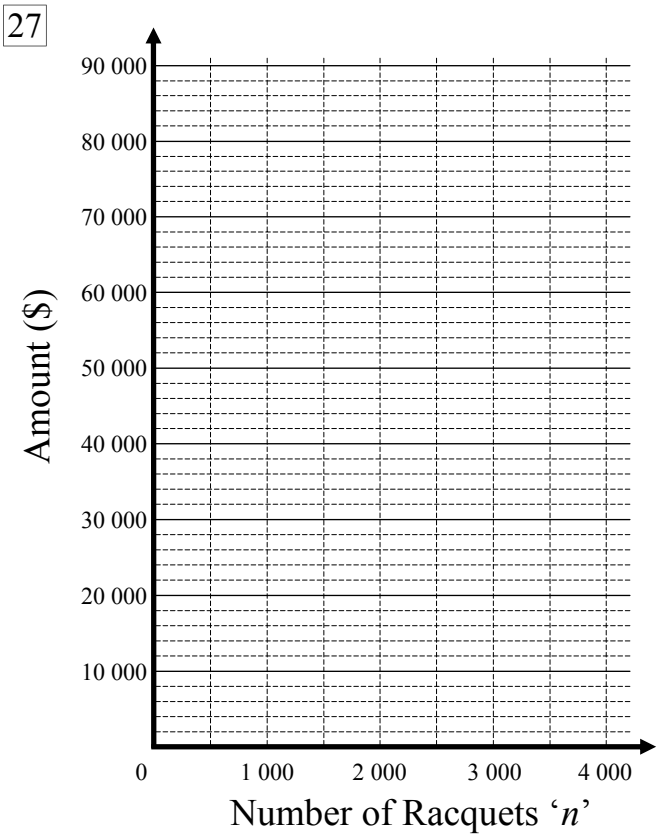
n	0	1 000	2 000	3 000	4 000
P					

26 *Sales Revenue : S* = 22*n*

n	0	1 000	2 000	3 000	4 000
S					

Plot the production and sales cost functions on the grid below.

27



28 Estimate the number of racquets required to be manufactured to break even.

_____

29 Estimate the profit made when 3 500 racquets are manufactured.

_____

Show that the point (3, 13) lies on the line $y = 5x - 2$

30 _____

_____

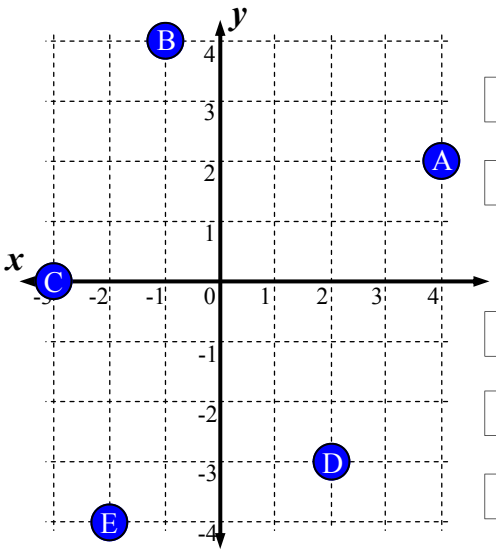
_____

_____

Linear Relationships - Topic Review

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot the points on the number plane below.



1 Ⓐ (4, 2)

2 Ⓑ (-1, 4)

3 Ⓒ (-3, 0)

4 Ⓓ (2, -3)

5 Ⓔ (-2, -4)

Complete these table of values

6 $y = x + 5$

x	0	1	2	3	4
y	5	6	7	8	9

7 $y = 3x - 7$

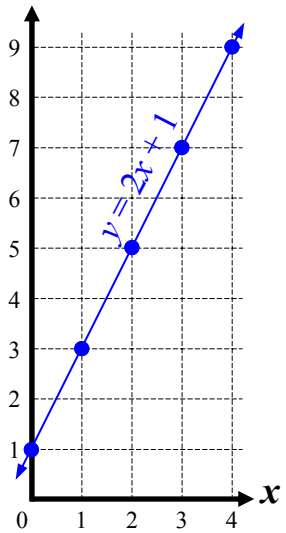
x	-4	-2	0	2	4
y	-19	-13	-7	-1	5

8 $y = -\frac{1}{2}x + 6$

x	-4	-2	0	2	4
y	8	7	6	5	4

Plot this line on the number plane below

9



$y = 2x + 1$

x	0	1	2	3	4
y	1	3	5	7	9

Plot the two lines on the number plane, then give the coordinates for the point of intersection.

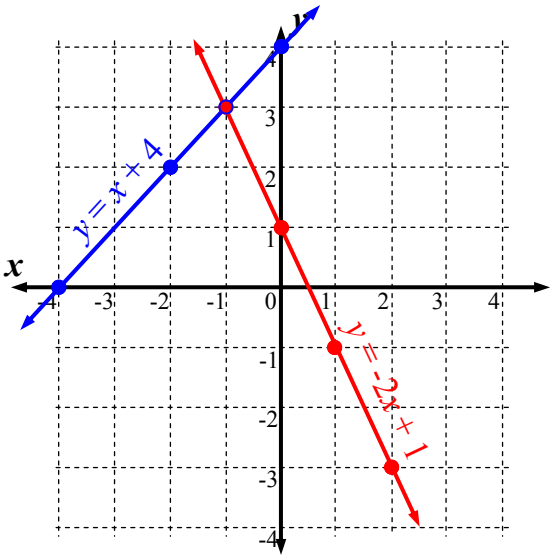
10

$y = x + 4$

x	-4	-2	0	2	4
y	0	2	4	6	8

$y = -2x + 1$

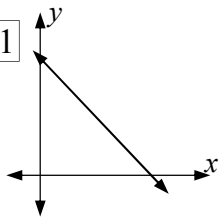
x	-2	-1	0	1	2
y	5	3	1	-1	-3



Intersection Point ([-1] , [3])

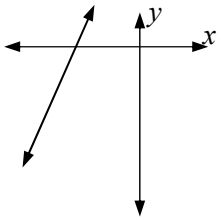
Are these gradients positive or negative?

11



○ Positive ● Negative

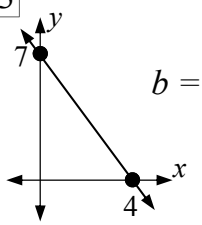
12



● Positive ○ Negative

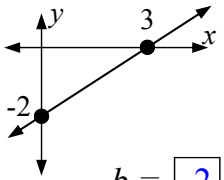
Give the y-intercept for these lines.

13



b = [7]

14



b = [-2]

What is the gradient and y-intercept for these lines.

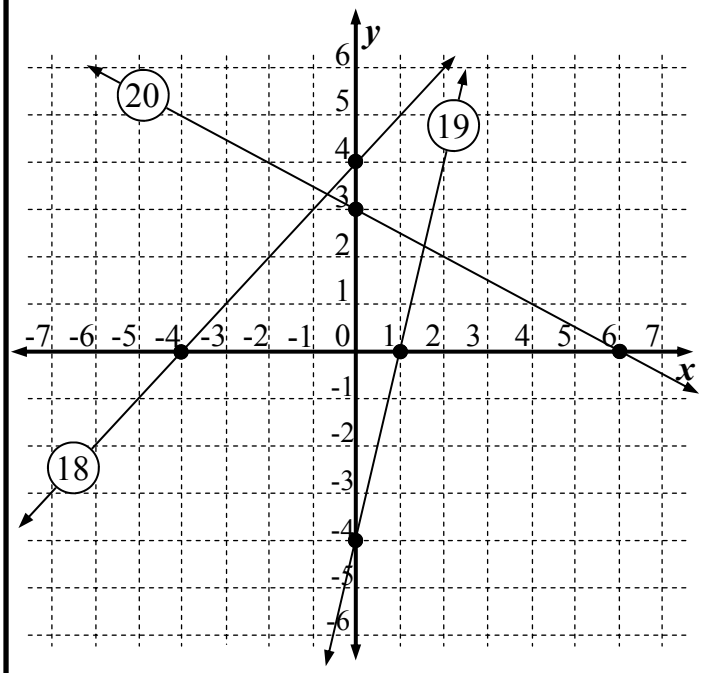
15 $y = -3x + 7$ m = [-3] b = [7]

16 $y = -x$ m = [-1] b = [0]

17 $y = 6 - 2x$ m = [-2] b = [6]

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the gradient of the lines shown below.



18 $m = \frac{4}{4} = 1$

19 $m = \frac{4}{1} = 4$

20 $m = \frac{3}{6} = \frac{-1}{2}$

Give the equation for the three lines above

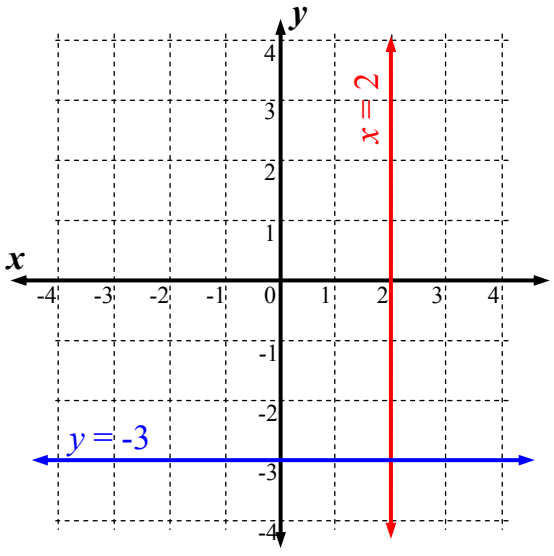
21 Name (18) $y = x + 4$

22 Name (19) $y = 4x - 4$

23 Name (20) $y = \frac{-1}{2}x + 3$

Plot the two lines $x = 2$ and $y = -3$ on the grid below

24



A tennis racquet manufacturer has daily figures below. Complete the tables.

25 *Production Cost* : $P = 10n + 30\,000$

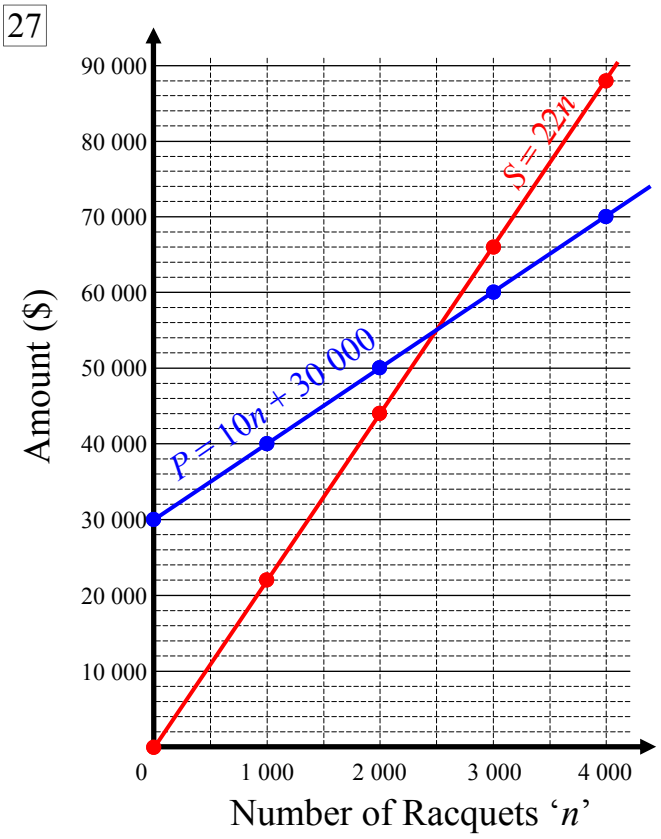
n	0	1 000	2 000	3 000	4 000
P	30 000	40 000	50 000	40 000	70 000

26 *Sales Revenue* : $S = 22n$

n	0	1 000	2 000	3 000	4 000
S	0	22 000	44 000	66 000	88 000

Plot the production and sales cost functions on the grid below.

27



28 Estimate the number of racquets required to be manufactured to break even.

2 500 racquets

29 Estimate the profit made when 3 500 racquets are manufactured.

77 000 - 65 000 = \$12 000

Show that the point (3, 13) lies on the line $y = 5x - 2$

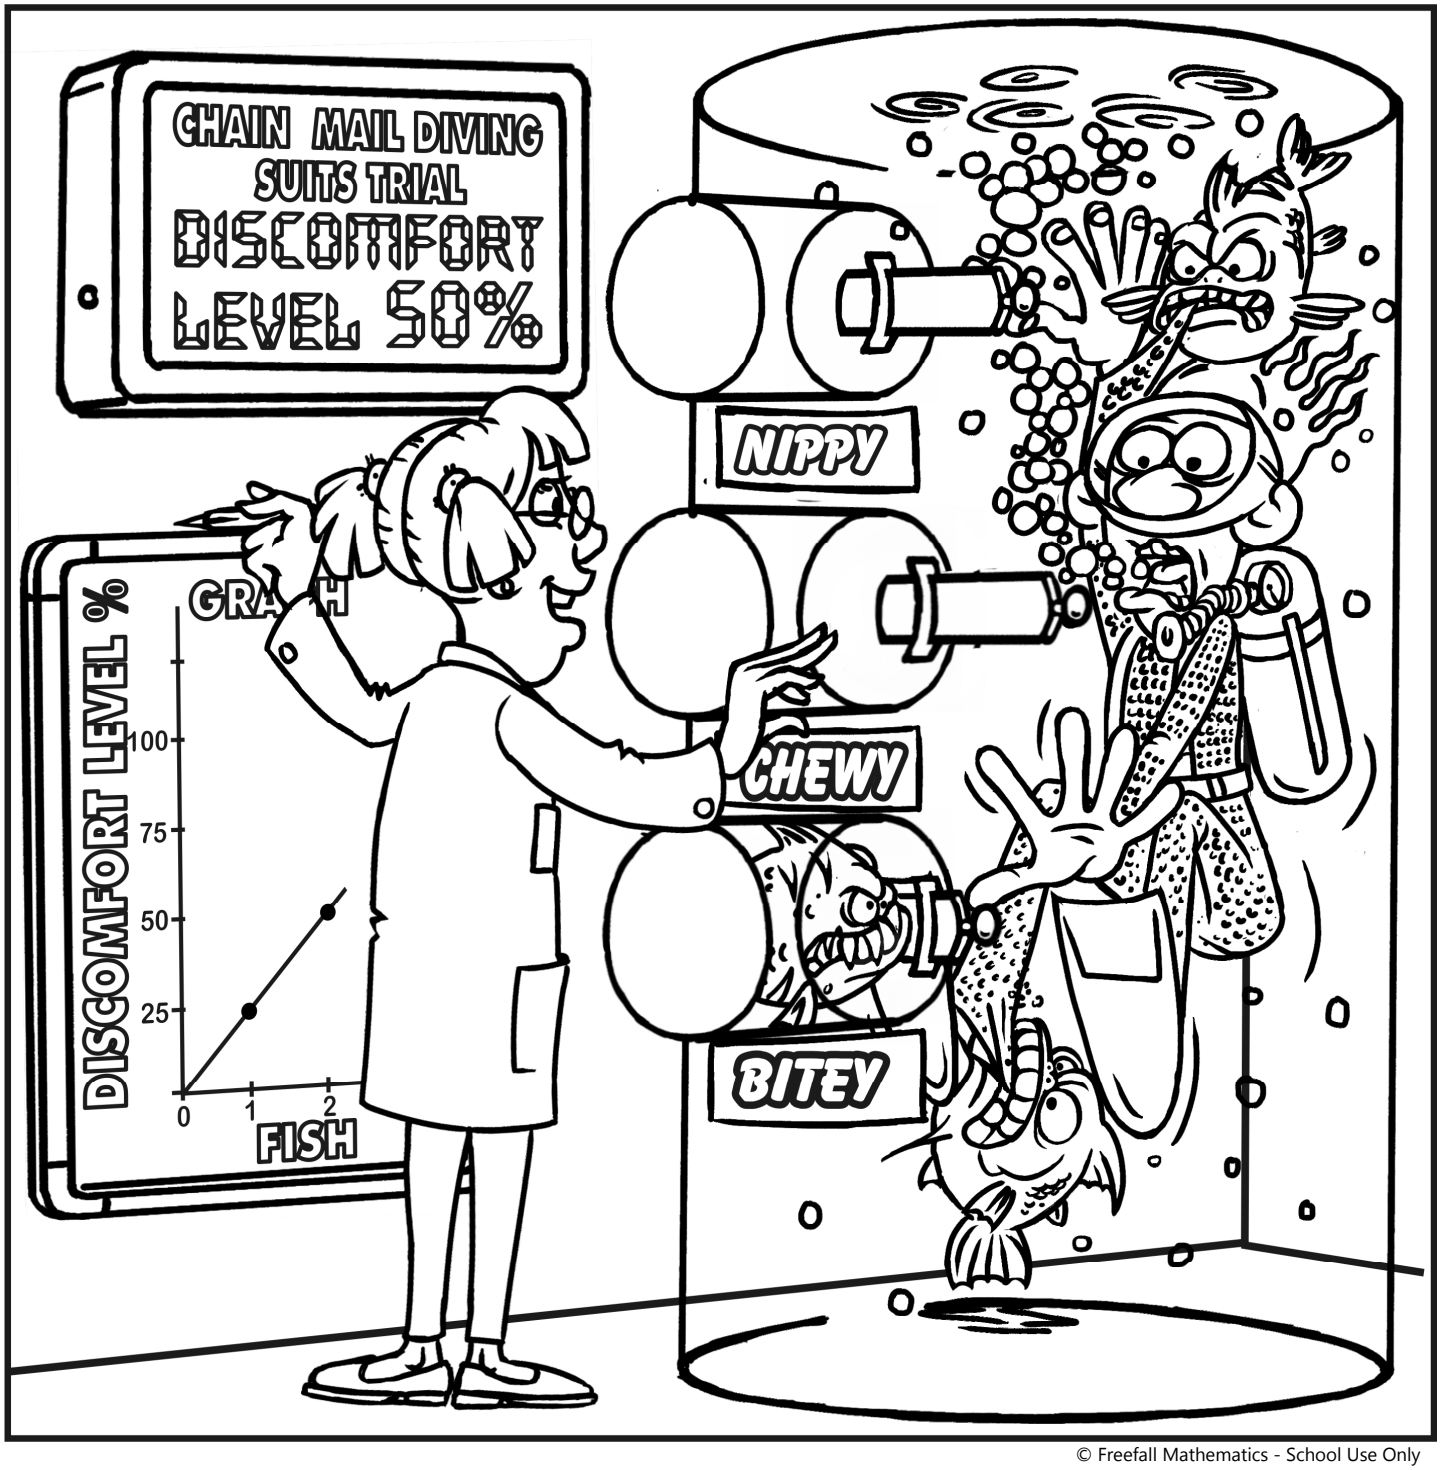
30 $y = 5x - 2$

$13 = 5 \times 3 - 2$

$13 = 13$

LHS = RHS ∴ Point is on line.

Linear Relationships



© Freefall Mathematics - School Use Only

Linear Rel- Plotting Points & Drawing Straight Lines - + Quad (Sheet 1)

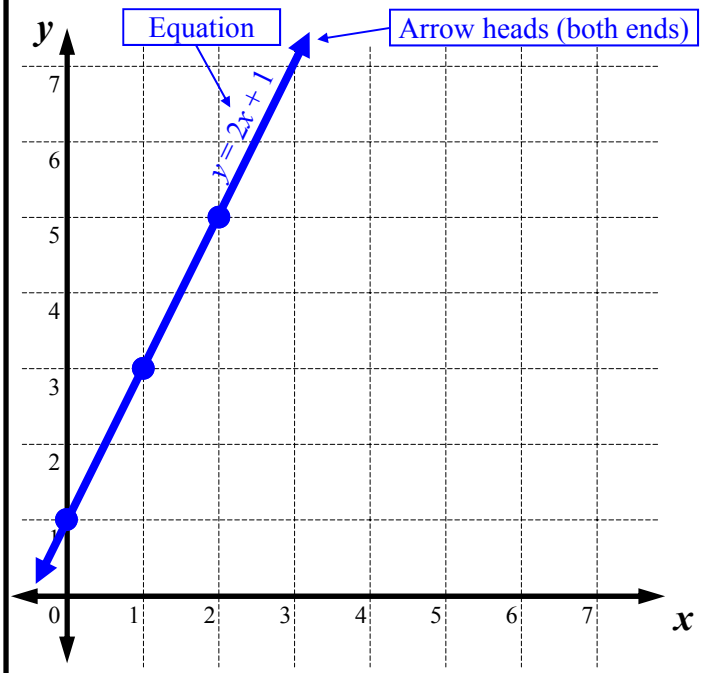
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot the points then draw a line through them. Use a ruler, show arrow heads and write the equation of the line on the line. **The line should be the full size of the graph**, not stop at the last point.

1 $y = 2x + 1$ Plot Points: (0, 1), (1, 3), (2, 5).

2 $y = -x + 6$ Plot Points: (0, 6), (2, 4), (4, 2).

3 $y = x - 3$ Plot Points: (3, 0), (4, 1), (5, 2).

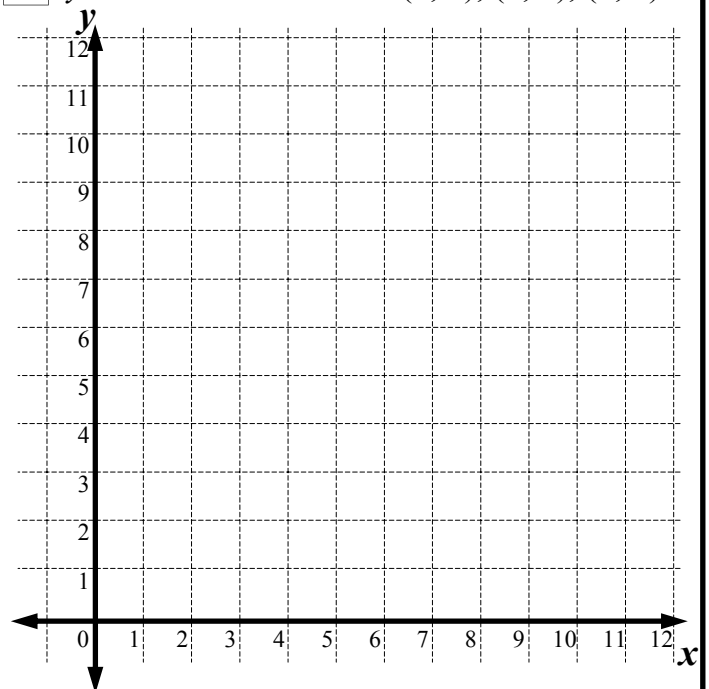


Use the lower grid for these

4 $y = 12 - x$ Plot Points: (0, 12), (2, 10), (4, 8)

5 $y = 3x$ Plot Points: (0, 0), (2, 6), (4, 12)

6 $y = x + 2$ Plot Points: (0, 2), (2, 4), (4, 6)



7 List the 3 points where the lines intersect.

(□, □), (□, □), (□, □).

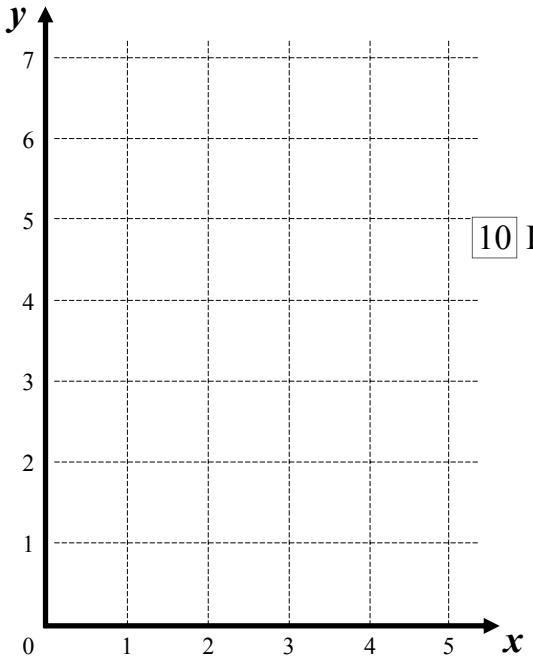
Now use the table of values to plot the lines. Go across 'x' and up 'y'.

8 $y = x$

x	0	1	2	3	4
y	0	1	2	3	4

9 $y = -x + 6$

x	0	1	2	3	4
y	6	5	4	3	2



10 Intersection

(□, □)

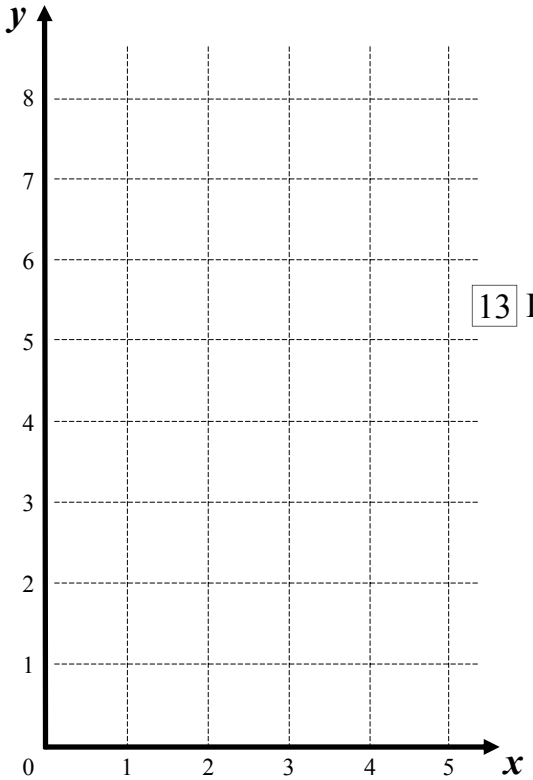
Point

11 $y = 2x$

x	0	1	2	3	4
y	0	2	4	6	8

12 $y = -2x + 8$

x	0	1	2	3	4
y	8	6	4	2	0



13 Intersection

(□, □)

Point

Linear Rel- Plotting Points & Drawing Straight Lines - 4 Quad (Sheet 2)

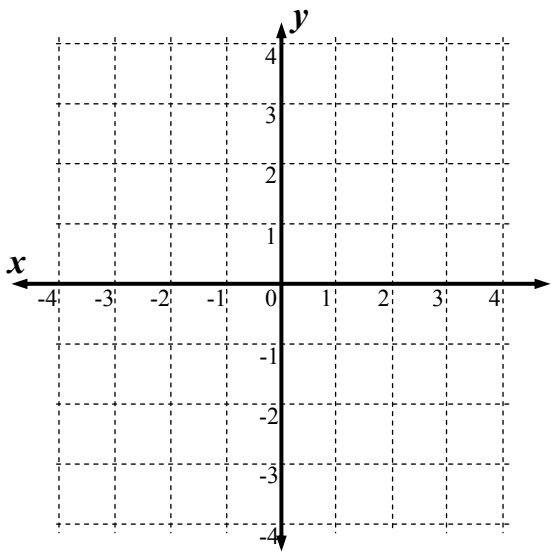
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot the points then draw a line through them. Use a ruler, show arrow heads and write the equation of the line on the line. The line should be the full size of the graph, not stop at the last point.

1 $y = x + 3$ Plot Points: (-4, -1), (-1, 2), (1, 4).

2 $y = -x + 1$ Plot Points: (-3, 4), (2, -1), (4, -3).

3 $y = -3x - 7$ Plot Points: (1, -4), (2, -1), (3, 2).

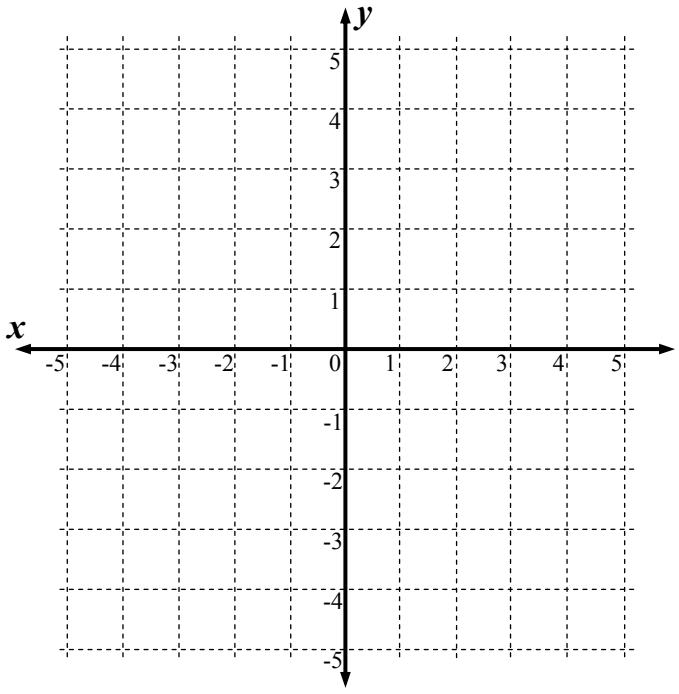


Use the lower grid for Questions 4-6

4 $y = 3x - 2$ Plot Points: (-1, -5), (0, -2), (1, 1)

5 $y = -2x - 2$ Plot Points: (-3, 4), (-1, 0), (1, -4)

6 $y = \frac{1}{2}x + 3$ Plot Points: (-4, 1), (0, 3), (4, 5)



7 List the 3 points where the lines intersect.

(□, □), (□, □), (□, □).

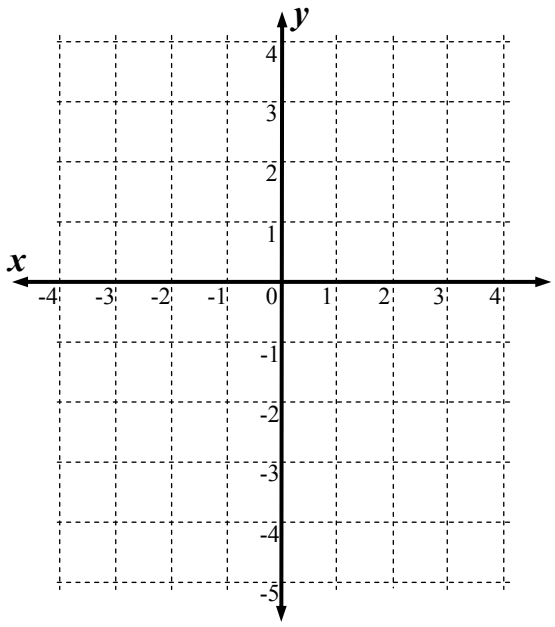
Now use the table of values to plot the lines. Go across the 'x' value and up/down the 'y' value.

8 $y = 2x$

x	-2	-1	0	1	2
y	-4	-2	0	2	4

9 $y = -x - 3$

x	-2	-1	0	1	2
y	-1	-2	-3	-4	-5



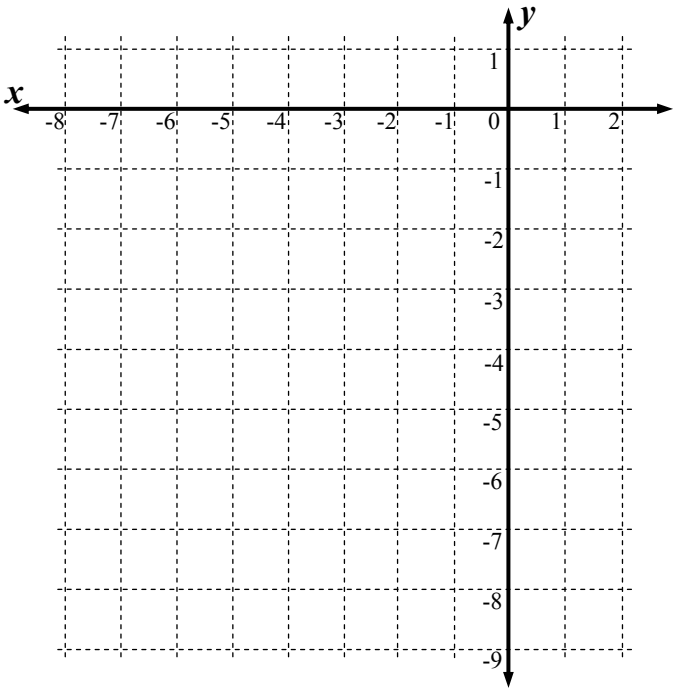
10 Intersection Point (□, □)

11 $y = -2x - 13$

x	-6	-5	-4	-3	-2
y	-1	-3	-5	-7	-9

12 $y = x - 1$

x	-2	-1	0	1	2
y	-3	-2	-1	0	1



13 Intersection Point (□, □)

Linear Relationships - Plotting Straight Lines - Pos Quad (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete these table of values. There are hints below each box.

1 $y = x + 2$

x	0	1	2	3	4
y					

$0 + 2$ $1 + 2$ $2 + 2$ $3 + 2$ $4 + 2$

2 $y = 4x$

x	0	1	2	3	4
y					

4×0 4×1 4×2 4×3 4×4

3 $y = 3x + 6$

x	0	1	2	3	4
y					

$3 \times 0 + 6$ $3 \times 1 + 6$ $3 \times 2 + 6$ $3 \times 3 + 6$ $3 \times 4 + 6$

4 $y = 8 - 2x$

x	0	1	2	3	4
y					

$8 - 2 \times 0$ $8 - 2 \times 1$ $8 - 2 \times 2$ $8 - 2 \times 3$ $8 - 2 \times 4$

The next table will have answers that have ½'s in them

5 $y = \frac{1}{2}x + 7$

x	0	1	2	3	4
y					

$\frac{1}{2} \times 0 + 7$ $\frac{1}{2} \times 1 + 7$ $\frac{1}{2} \times 2 + 7$ $\frac{1}{2} \times 3 + 7$ $\frac{1}{2} \times 4 + 7$

Complete the tables, then plot the results on the number plane.

6 $y = x + 3$

x	0	1	2	3	4
y

Complete the table of values then plot the points. Draw the line with arrow heads and the equation on the line. With values in the table that can't be plotted, construct the line with the points that you can plot.

1 $y = -2x$

x	-4	-2	0	2	4
y					

2 $y = x + 1$

x	-4	-2	0	2	4
y					

3 $y = -\frac{1}{2}x + 1$

x	-4	-2	0	2	4
y					

4 $y = -2x - 5$

x	-4	-2	0	2	4
y					

5 Lines in Q.1 and Q.4 both have '-2' in front of the x. Look at the lines and describe a common feature. _____

6 Lines in Q.2 and Q.3 both have '+1' in the equation. Look at the lines, describe a common feature. _____

Use the top grid, in the next column for Q.7, 8 & 9. below

7 $y = 3x - 6$

x	-4	-2	0	2	4
y					

8 $y = 2x + 1$

x	-4	-2	0	2	4
y					

9 $y = x$

x	-4	-2	0	2	4
y					

Use the lower grid, in the next column for these below

10 $y = -2x + 1$

x	-4	-2	0	2	4
y					

11 $y = -3x - 6$

x	-4	-2	0	2	4
y					

12 $y = -x$

x	-4	-2	0	2	4
y					

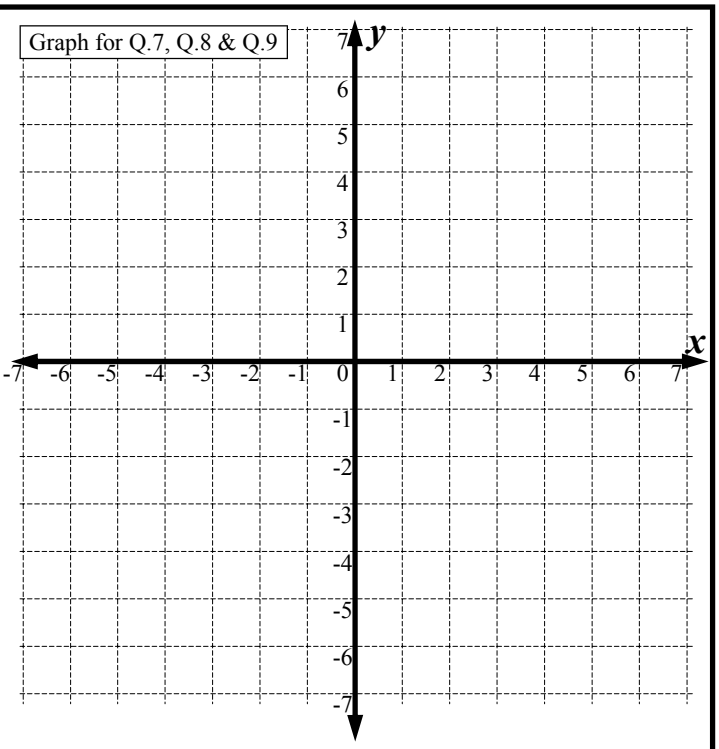
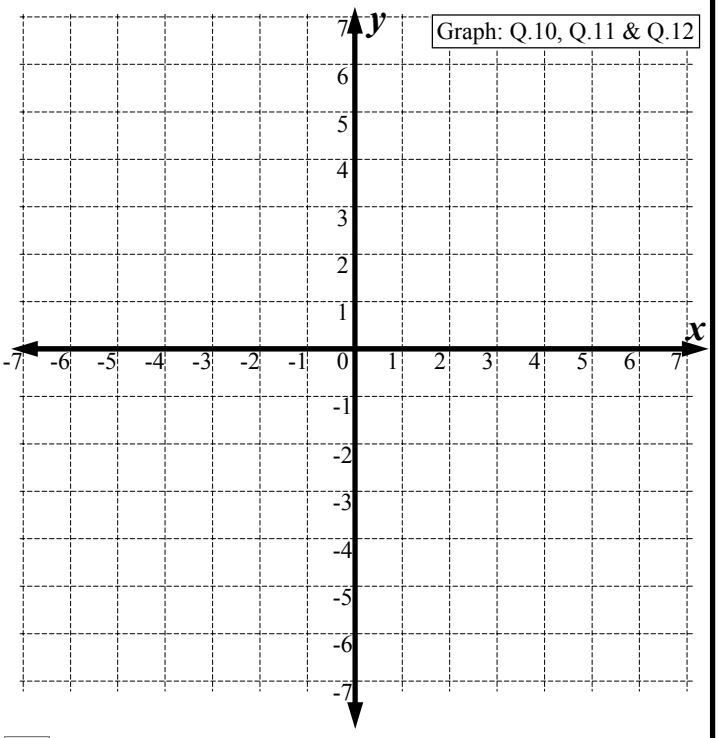
Graph for Q.7, Q.8 & Q.9



Graph: Q.10, Q.11 & Q.12



13 What do all the lines in the top grid have in common? _____

14 What do all the lines in the lower grid have in common? _____

15 Complete: A negative number in front of the x means that the line 'goes up' to the _____

16 Complete: A positive number in front of the x means that the line 'goes up' to the _____

17 Some lines are more steep than others. Which is more steep … $y = 4x$ or $y = 3x$? _____

Linear Relationships - Further Straight Lines (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table of values then plot the lines. These include equations involving fractions/denominators.

Colour same as line colour

1 $y = x - 9$

x	-1	0	1	2	3
y					

2 $y = \frac{x}{3} + 2$

x	-5	-3	-1	1	3
y					

Find the points of intersection for these lines.

8 $y = \frac{x + 10}{2}$, $y = \frac{-x + 2}{2}$ (,)

9 $y = \frac{-x - 9}{2}$, $y = 3x + 6$ (,)

10 $y = \frac{-x - 9}{2}$, $y = x - 9$ (,)

Linear Relationships - Cost Functions (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table of values for these Cost Functions.

1 *Consultation Fees:* $C = 60n + 120$

n	1	2	3	4	5
C					

2 *Labour Costs:* $C = 720h + 8\,000$

h	0	10	20	30	40
C					

3 *Unit Rates:* $R = 250e + 320$

e	0	5	10	15	20
R					

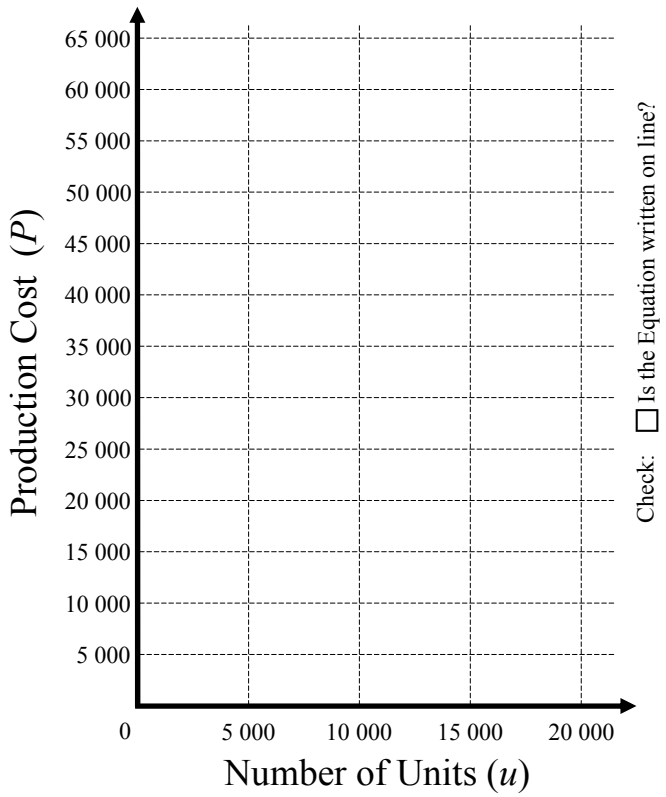
4 *Advertising Outlay :* $A = 180p + 12\,000$

p	0	60	120	180	240
A					

OK it's plotting time. Complete the cost function table then plot the values on the graph and construct a straight line. Write the function on the line.

5 *Production Costs :* $P = 2u + 15\,000$

u	0	5 000	10 000	15 000	20 000
P					



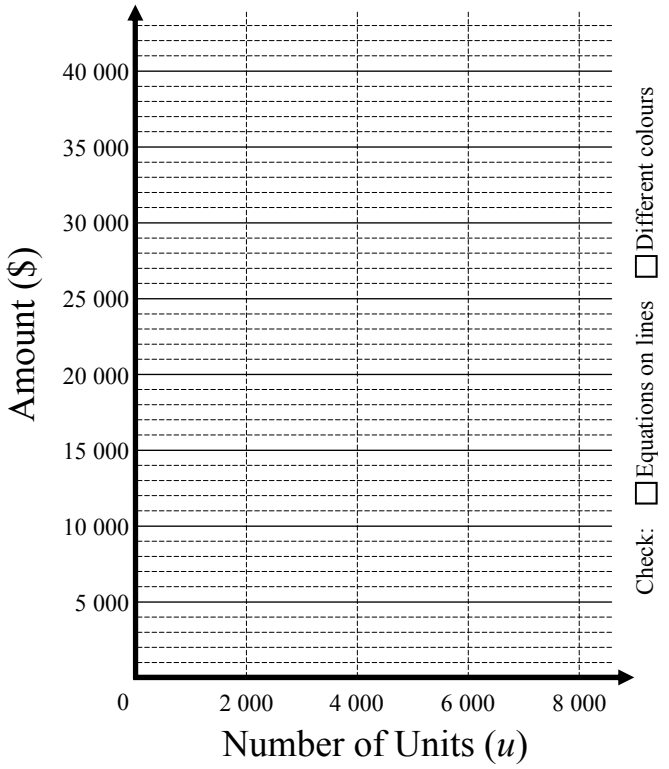
Complete the tables for these Cost Functions, plot them both on the same graph. Use two colours.

6 *Manufacturing Cost :* $C = 3u + 14\,000$

u	0	2 000	4 000	6 000	8 000
P					

7 *Revenue :* $R = 5u$

u	0	2 000	4 000	6 000	8 000
R					



8 Estimate the cost to make 3 000 units. _____ $ sign

9 Estimate the revenue on selling 3 000 units. _____

10 Calculate the loss made on selling 3 000 units.

Loss = _____ (Cost (Q.8)) - _____ (Revenue (Q.9)) = _____

11 Estimate how many units have to be sold for the company to break even. _____

12 Calculate the loss made on selling 6 000 units.

Loss = _____ - _____ = _____

13 Calculate the profit made on selling 8 000 units.

Profit = _____ - _____ = _____

Linear Relationships - Cost Functions (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

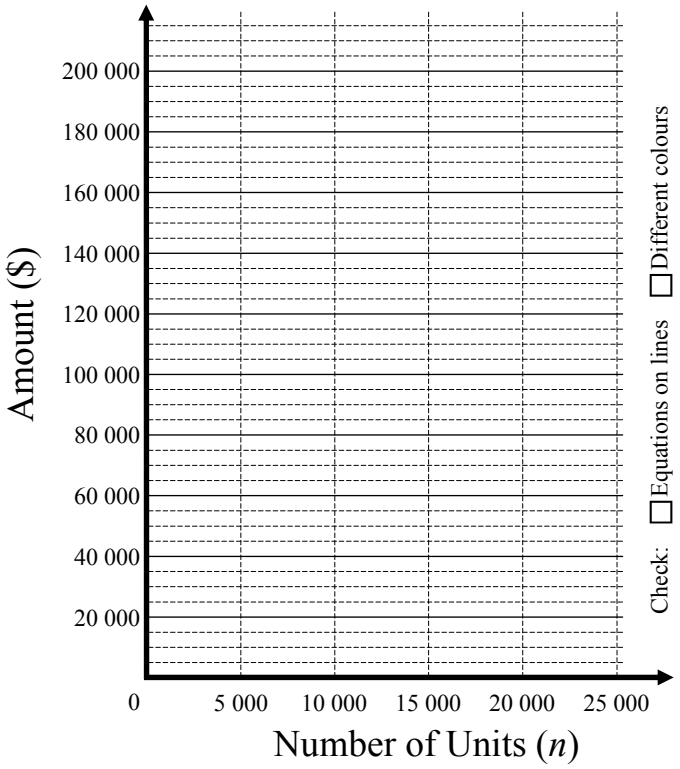
Complete the tables for these Cost Functions, plot them both on the same graph. Use two colours.

1 *Advertising Budget : $A = 5n + 45\,000$*

n	0	5 000	10 000	15 000	20 000
A					

2 *Sales Revenue : $S = 8n$*

n	0	5 000	10 000	15 000	20 000
S					



3 If the advertising budget is \$105 000, estimate the number of units produced. _____

4 If sales revenue is \$140 000, estimate how many units are produced. _____

5 Calculate the loss made on selling 5 000 units.

Loss = _____ - _____ = _____

6 How many units have to be sold for the company to break even? _____

7 Calculate the profit made on selling 20 000 units.

_____

8 Estimate the profit made on selling 25 000 units.

_____

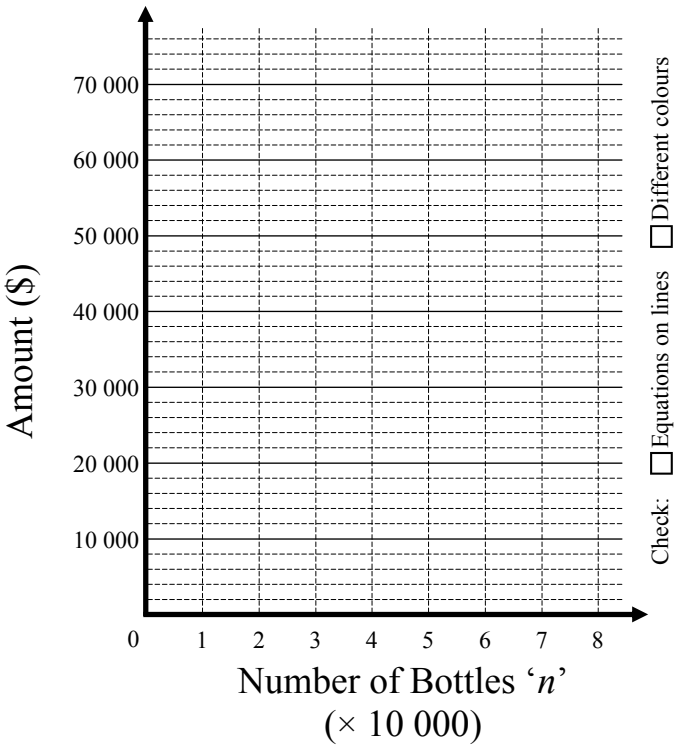
A soft drink manufacturer has cost and revenue functions for daily production. Extend the lines the full extent of the graph to answer the questions.

9 *Daily Production Cost : $P = 0.5n + 20\,000$*

n	0	10 000	20 000	30 000	40 000
P					

10 *Sales Revenue : $S = 0.9n$*

n	0	10 000	20 000	30 000	40 000
S					



11 Estimate the production cost for producing:

_____ 25 000 bottles _____ 60 000 bottles

12 Estimate the bottles produced which gives revenue of:

_____ \$30 000 in sales _____ \$50 000 in sales

13 Estimate how many bottles have to be sold for the company to break even? _____

14 Estimate the profit (or loss) on bottle production of:

15 000 _____

80 000 _____

Linear Relationships - Horizontal and Vertical Line Equations (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot these points on the number plane. Draw a line through the points and write the name of the line, on the line. Remember to extend line, arrowheads.

1 Points: (3 , 2), (3 , -4) and (3, 5) $x = 3$

Plot these points on the plane below

Write name on the line

$x = 3$ cuts the x-axis at: ☐

$x = 3$ is: ○ horizontal or ○ vertical

2 Points: (-2 , 1), (-2 , 3) and (-2, -5) $x = -2$

Write name on the line

$x = -2$ cuts the x-axis at: ☐

$x = -2$ is: ○ horizontal or ○ vertical

3 Points: (4 , -4), (0 , -4) and (-3, -4) $y = -4$

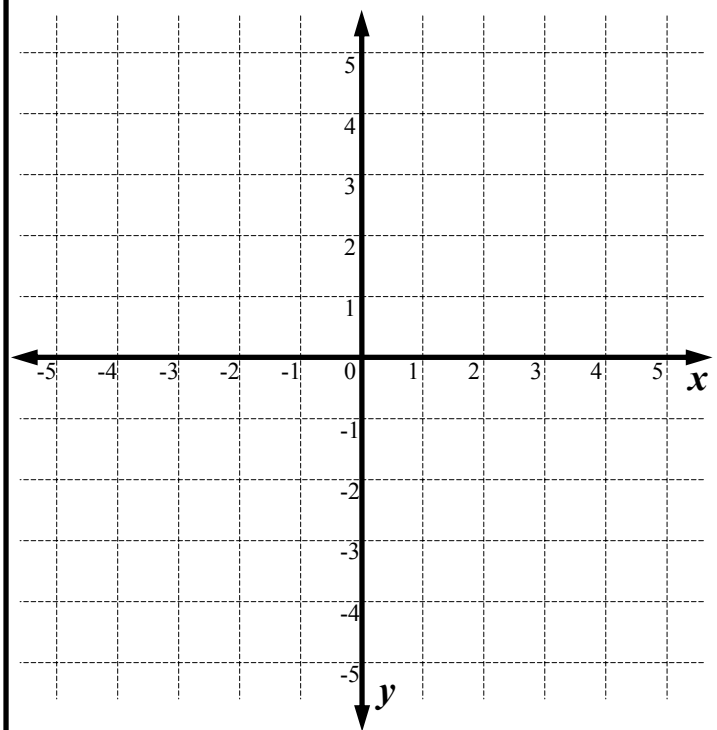
$y = -4$ cuts the y-axis at: ☐

$y = -4$ is: ○ horizontal or ○ vertical

4 Points: (-3 , 2), (-1 , 2) and (2, 2) $y = 2$

$y = 2$ cuts the y-axis at: ☐

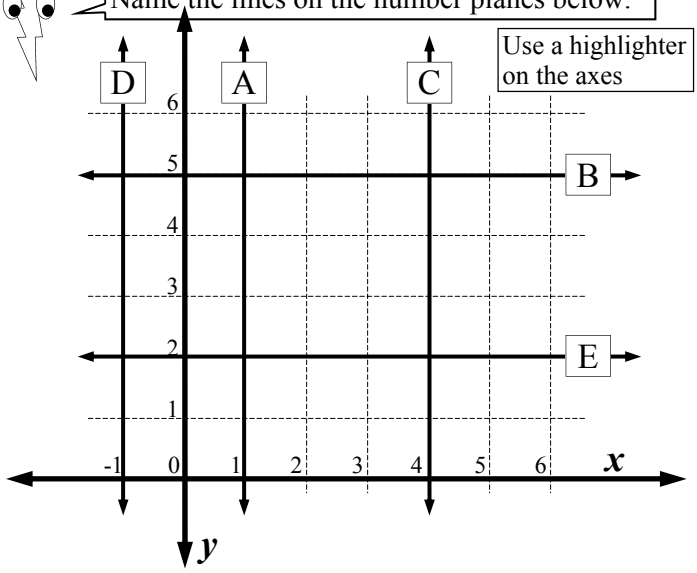
$y = 2$ is: ○ horizontal or ○ vertical



Check:
- ☐ Arrow heads on each line?
- ☐ Is the Equation written on each line?
- ☐ Is each line extended fully on the plane?

Name the lines on the number planes below.

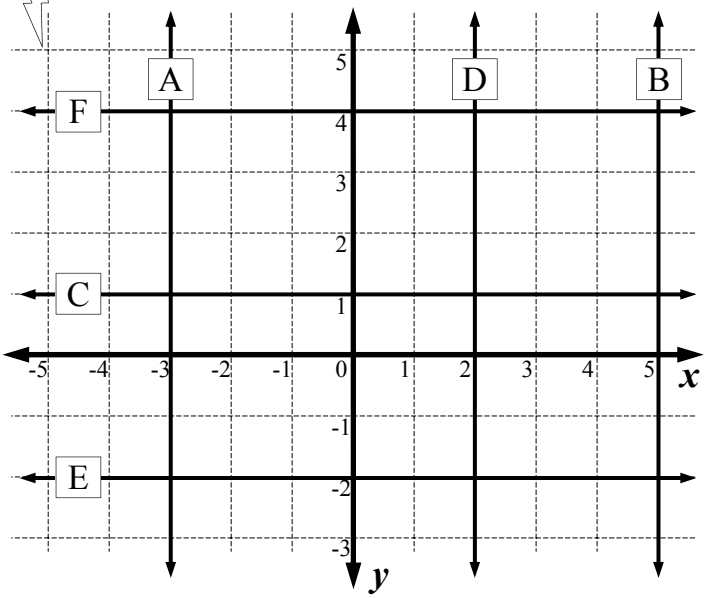
Use a highlighter on the axes



5 A _____ B _____

C _____ D _____ E _____

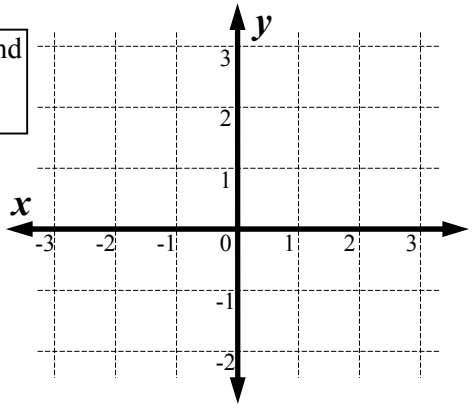
Now try these, use a highlighter on the axes.



6 A _____ B _____ C _____

D _____ E _____ F _____

Plot $y = -2$ and $x = 2$ on the plane.



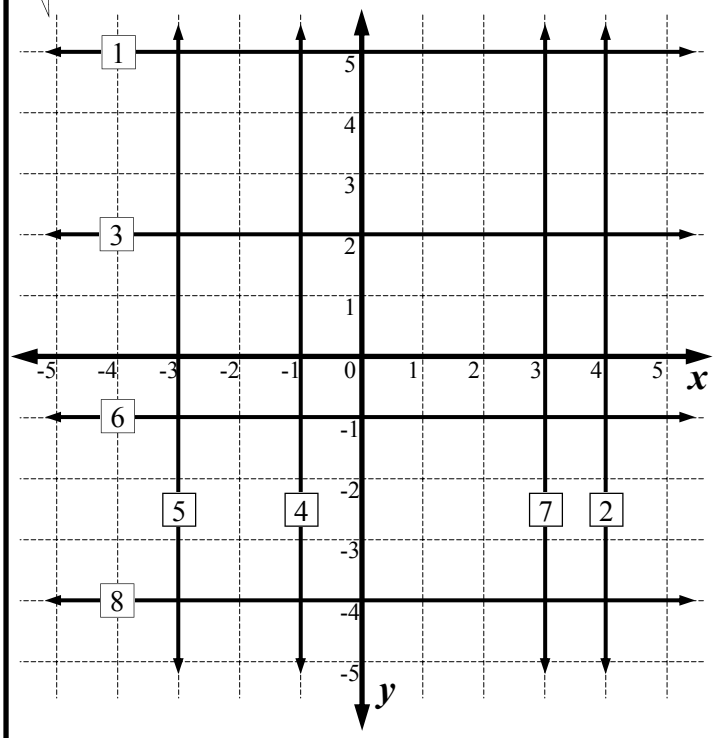
7

Check:
- ☐ Arrow heads?
- ☐ Equation on lines?
- ☐ Extended fully?

Linear Relationships - Horizontal and Vertical Line Equations (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Name the lines shown. Use the spaces below the number plane then label the lines on the plane also.



1 $y =$ ☐ 2 $x =$ ☐ 3 _____ 4 _____

5 _____ 6 _____ 7 _____ 8 _____

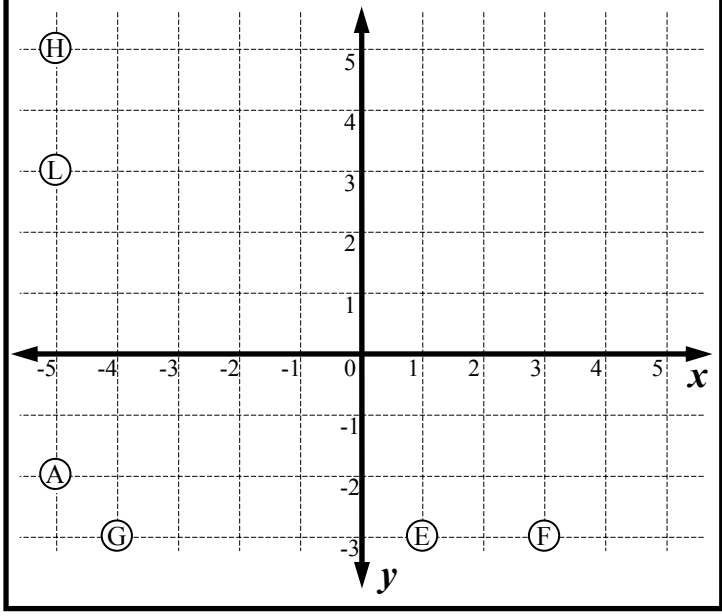
9 What is the equation for the y-axis? _____

10 What is the equation for the x-axis? _____

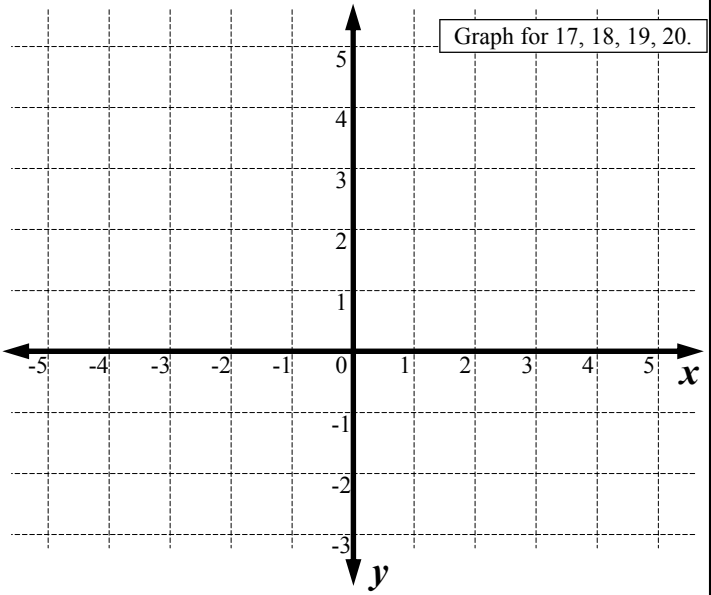
Draw these lines on the Cartesian plane, show arrow heads and labels. After you draw the line it will pass through a letter, write it in the box.

11 $y = -2$ ☐ Letter 12 $x = 3$ ☐ Letter 13 $x = -4$ ☐ Letter

14 $y = 5$ ☐ Letter 15 $x = 1$ ☐ Letter 16 $y = 3$ ☐ Letter



Draw the lines on the grid. Once drawn there will be four intersection points. Give the coordinates for these points as well as the name of shape formed.

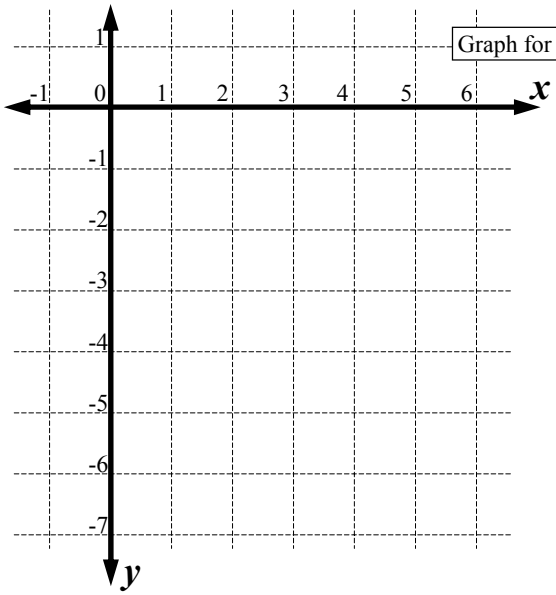


17 $y = 2$ 18 $y = -1$

19 $x = -4$ 20 $x = 1$

21 Points: _____

22 Shape formed: _____



23 $y = -2x + 3$

x	1	2	3	4	5
y					

24 $y = -5$

25 $x = 2$

26 Points: (☐, ☐), (☐, ☐), (☐, ☐).

27 Shape formed: _____

Linear Relationships - Naming Straight Lines (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Name the straight lines, given the gradient and the y-intercept. $y = mx + b$, m = gradient & b = y-int.

1 Gradient = 4, y-int = 1. $y =$ ☐ x + ☐

2 Gradient = -3, y-int = -6. $y =$ ☐ x - ☐

3 Gradient = -2, y-int = 5. $y =$ ☐

4 y-int = 3, Gradient = -4. ☐

5 y-int = 0, Gradient = -2. ☐

When the y-int = 0, you don't include it

6 Gradient = 1, y-int = 2. ☐

Don't include '1' or '-1' just 'x' or '-x'

7 y-int = -3, Gradient = -1. ☐

8 Gradient = ½, y-int = 0. ☐

9 Gradient = 2, y-int = -6. ☐

10 y-int = 0, Gradient = -1. ☐

This time you are given the equation, you need to find the gradient and y-intercept.

11 $y = 3x + 2$ $m =$ ☐ $b =$ ☐

12 $y = x - 7$ $b =$ ☐ $m =$ ☐

13 $y = -4x$ $b =$ ☐ $m =$ ☐

14 $y = ½x + 2$ $m =$ ☐ $b =$ ☐

15 $y = 10 - 2x$ $b =$ ☐ $m =$ ☐

If lines are parallel they have the same gradient. Find the equations of these lines.

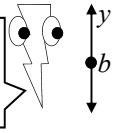
16 Find the equation of the line with a y-int of 6 which is parallel to $y = 3x + 1$. $y =$ ☐ x + ☐

17 Find the equation of the line with a y-int of 4 which is parallel to $y = -2x - 3$. ☐

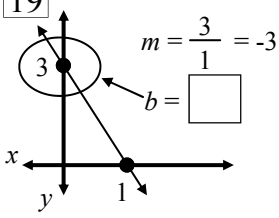
17 Find the equation of the line with a y-int of -3 which is parallel to $y = -3x$. ☐

18 Find the equation of the line with a y-int of 0 which is parallel to $y = 5x + 2$. ☐

You are given the gradient, read off the y-int and then construct the equation for the line. 'b' is where the line 'cuts' the y-axis. (vertical axis)



19

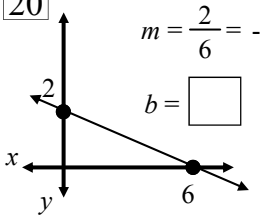


$m = \frac{3}{1} = -3$

$b =$ ☐

$y =$ ☐ x + ☐

20



$m = \frac{2}{6} = -\frac{1}{3}$

$b =$ ☐

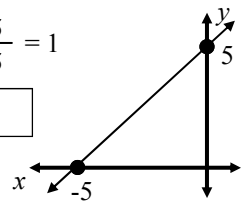
$y =$ ☐ x + ☐

21

$y =$ ☐

$m = \frac{5}{5} = 1$

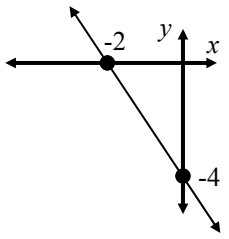
$b =$ ☐



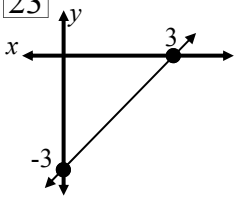
22 ☐

$m = \frac{4}{2} = -2$

$b =$ ☐



23



$m = \frac{3}{3} = 1$

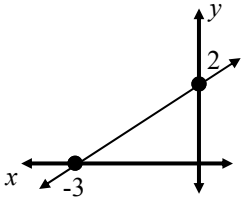
$b =$ ☐

☐

24 ☐

$m = \frac{2}{3}$

$b =$ ☐



Cartesian Plane - Gradient (Sheet 1)

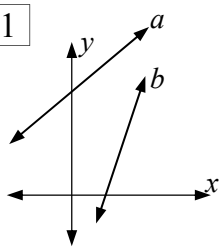
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

State whether the following have a positive or negative gradient.

Up to the left is -ve

Up to the right is +ve

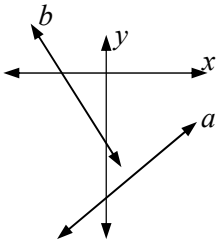
1



a) _____ Positive or Negative

b) _____ Positive or Negative

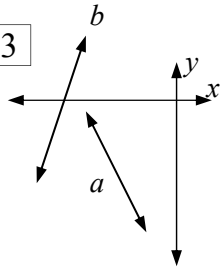
2



a) _____

b) _____

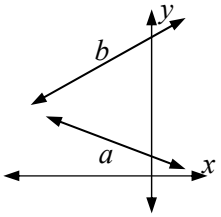
3



a) _____

b) _____

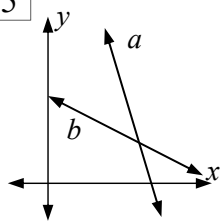
4



a) _____

b) _____

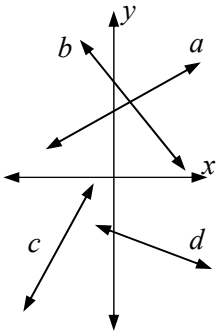
5



a) _____

b) _____

6



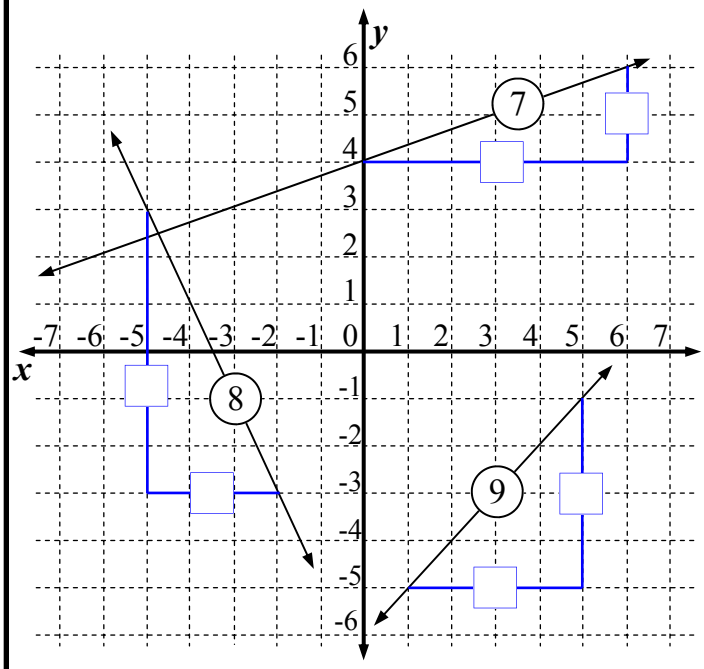
a) _____

b) _____

c) _____

d) _____

These lines have gradient triangles installed! Write the rise and run in the boxes on the triangles sides, then find the gradient. Make sure you remember to check for positive and negative gradient at the end.



7 $m = \frac{\square}{\square} = \frac{\square}{\square}$

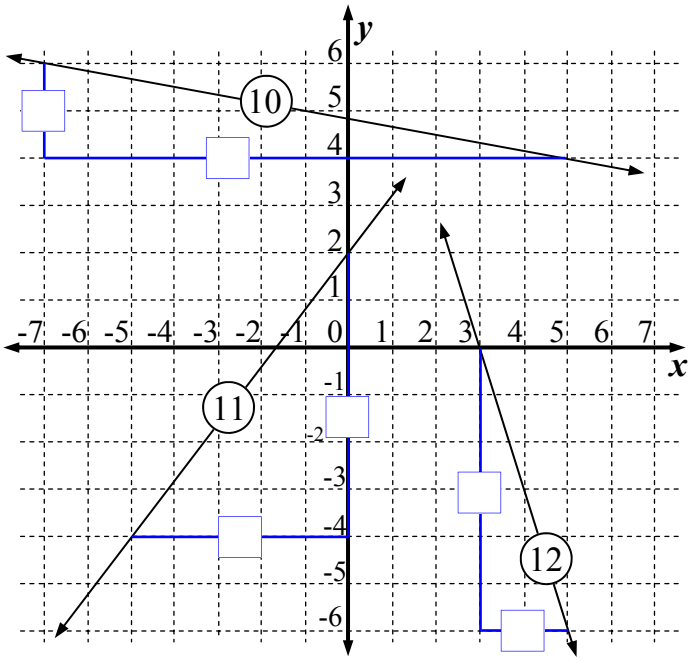
8 $m = \frac{\square}{\square} = \square$

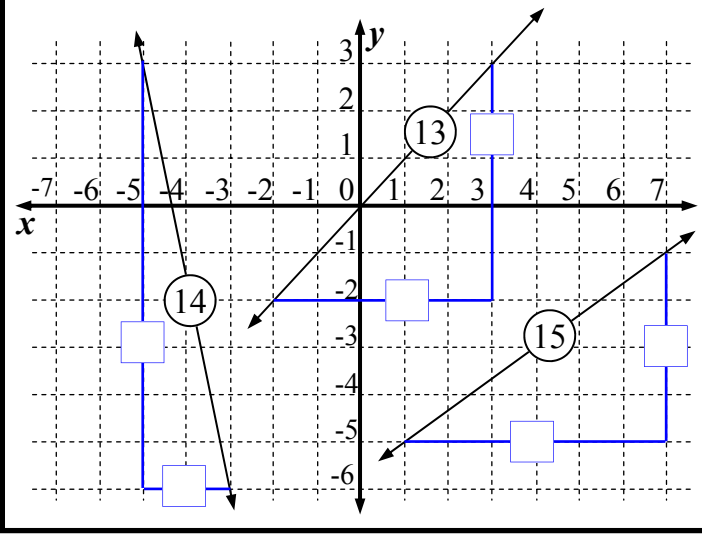
9 $m = \frac{\square}{\square} = \square$

10 $m = \frac{\square}{\square} = \frac{\square}{\square}$

11 $m = \frac{\square}{\square}$

12 $m = \frac{\square}{\square} = \square$





13 $m = \frac{\square}{\square} = \square$

14 $m = \frac{\square}{\square}$

15 $m = \frac{\square}{\square} = \frac{\square}{\square}$

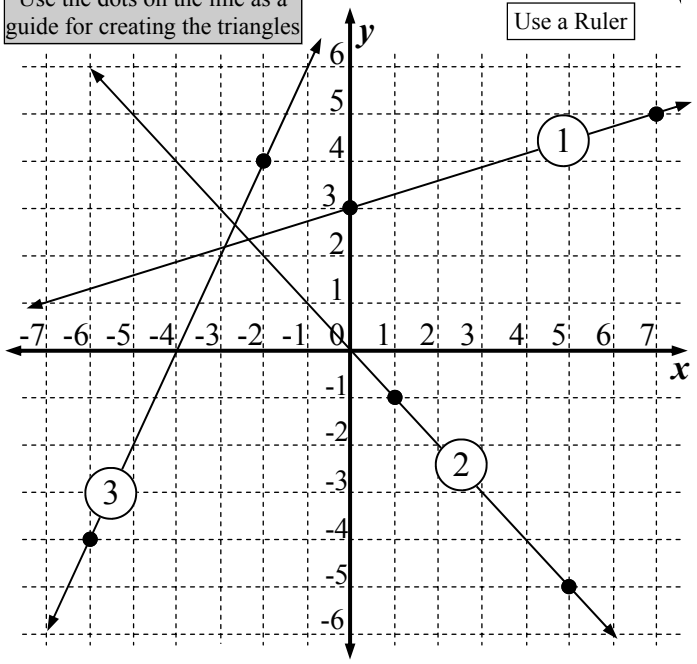
Cartesian Plane - Gradient (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the gradient for these lines. Create gradient triangles and remember your positive and negatives.

Use the dots on the line as a guide for creating the triangles

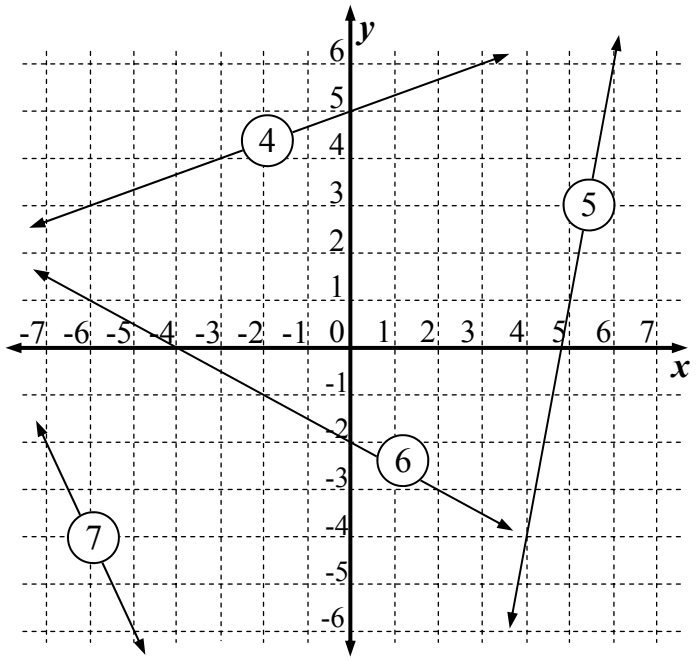
Use a Ruler



1 $m = \frac{\square}{\square}$

2 $m = \frac{\square}{\square} = \square$

3 $m = \frac{\square}{\square} = \square$

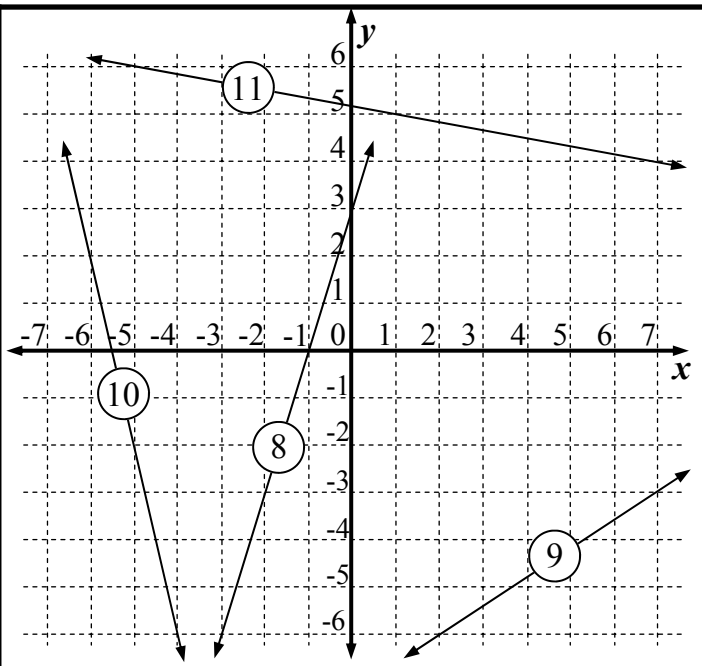


4 $m = \frac{\square}{\square} = \frac{\square}{\square}$

5 $m = \frac{\square}{\square} = \square$

6 $m = \frac{\square}{\square} = \frac{\square}{\square}$

7 $m = \frac{\square}{\square} = \square$



8 $m =$ _____

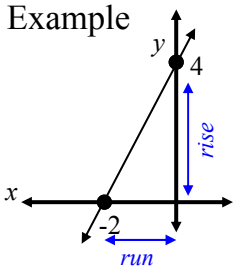
Linear Relationships - Naming Straight Lines - Find *m* (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the gradient and *y*-intercept, then the equation for these straight lines. All gradients are positive.

Example

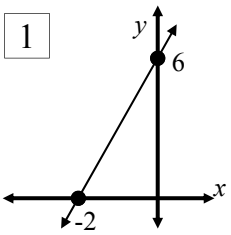


$m = \frac{\text{rise}}{\text{run}} = \frac{4}{2} = 2$ — Positive as up to the right; Don't use -2

$b = 4$ — Cuts the *y*-axis at 4

$y = 2x + 4$ (m, b)

1

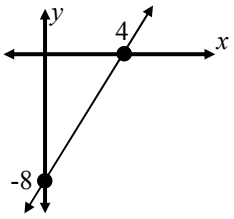


$m = \frac{\square}{\square} = \square$ $\quad b = \square$

$y = \square x + \square$

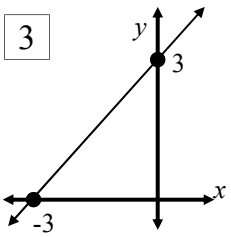
2

$m = \frac{\square}{\square} = \square$ $\quad b = \square$



$y = \square x - \square$

3

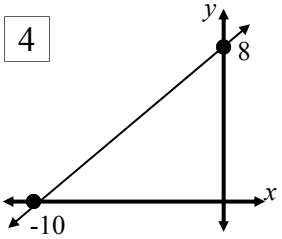


$m = \frac{\square}{\square} = \square$ $\quad b = \square$

$y = \square$

These gradients will be fractions, fully simplify them.

4



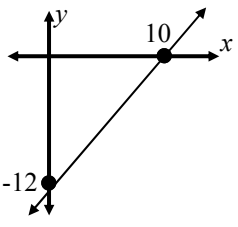
$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$

Calc: 8 ▪ 1 0 =

$y = \frac{\square}{\square} x + \square$

5

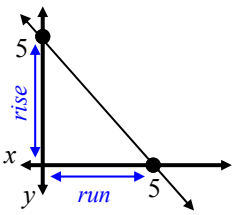
$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$



$\square$

All the gradients are up to the left, so all are negative gradients. Find the equations for these lines.

Example



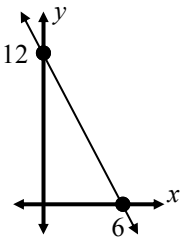
$m = \frac{\text{rise}}{\text{run}} = \frac{5}{5} = -1$ — Negative as up to the left

$b = 5$ — Cuts the *y*-axis at 5

$y = -x + 5$ — Write -*x* not -1*x* (m, b)

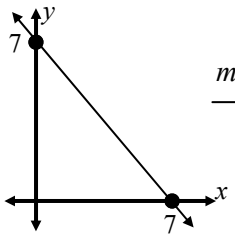
6

$m = \frac{\square}{\square} = \square$ $\quad b = \square$



$y = \square$

7

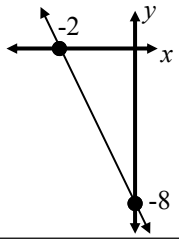


$m = \frac{\square}{\square} = \square$ $\quad b = \square$

$\square$

8

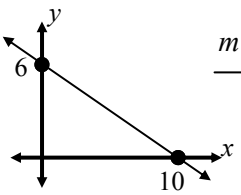
$m = \frac{\square}{\square} = \square$ $\quad b = \square$



$\square$

These gradients will be fractions, fully simplify them.

9

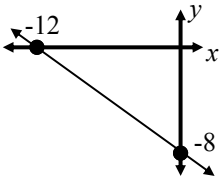


$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$

$y = \frac{\square}{\square} x + \square$

10

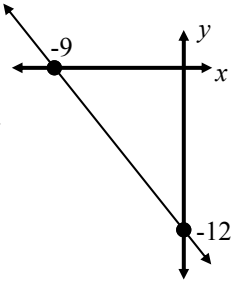
$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$



$\square$

11

$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$



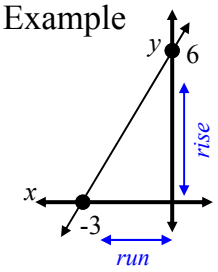
$\square$

Linear Relationships - Naming Straight Lines - Find *m* (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the gradient and *y*-intercept, then the equation for these straight lines. Watch for gradient sign.

Example

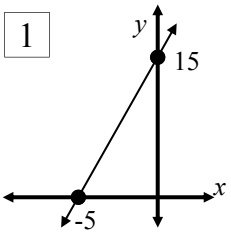


$m = \frac{\text{rise}}{\text{run}} = \frac{6}{3} = 2$ — Positive as up to the right; Don't use -3

$b = 6$ — Cuts the *y*-axis at 6

$y = 2x + 6$ (m, b)

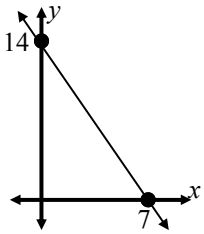
1



$m = \frac{\square}{\square} = \square$ $\quad b = \square$

$y = \square x + \square$

2



$m =$ _____ $\quad b =$ _____

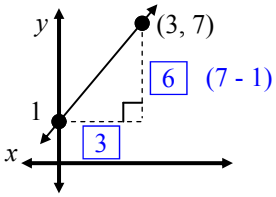
Linear Relationships - Further Naming Straight Lines (Sheet 1)

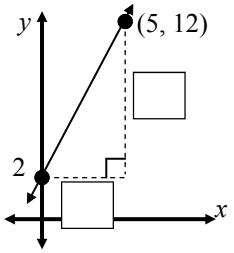
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The gradient triangle is constructed. Write in the rise and run. All values are positive, no negatives!

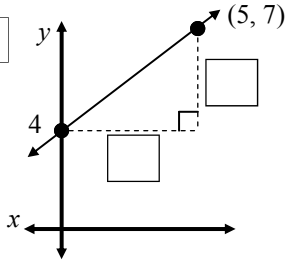
Example



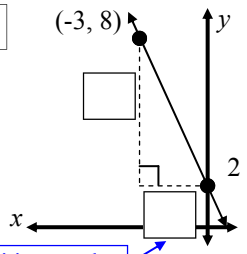
1



2

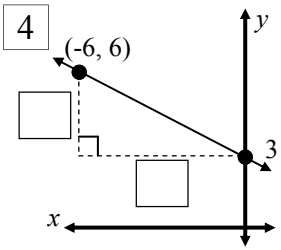


3

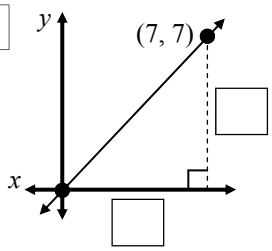


positive number

4

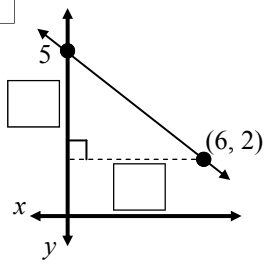


5

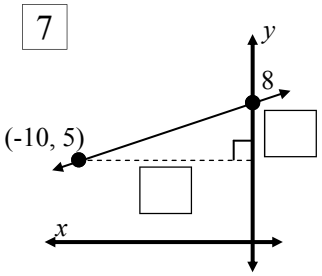


This time the rise is written on the *y*-axis

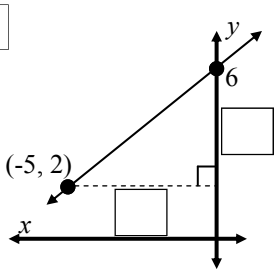
6



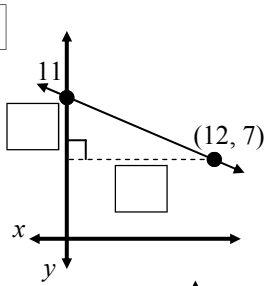
7



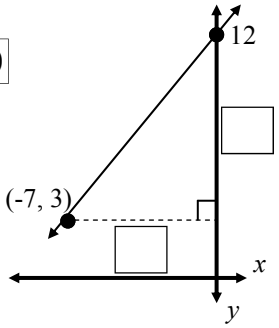
8



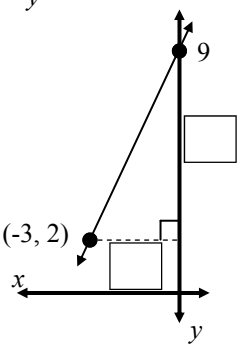
9



10



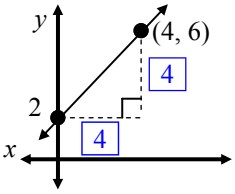
11



Find the rise, run, gradient, *y*-intercept and equation.

Example

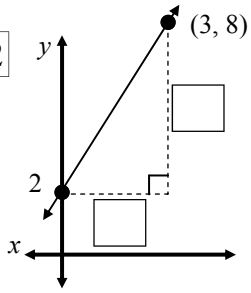
Gradient: ⊕ ⊖



$m = \frac{4}{4} = 1$ $\quad b = 2$

$y = x + 2$

12



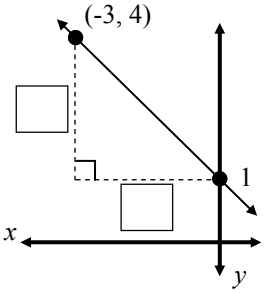
Gradient: ⊕ ⊖

$m = \frac{\square}{\square} = \square$ $\quad b = \square$

$y = \square x + \square$

13

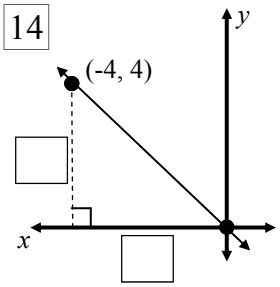
Gradient: ⊕ ⊖



$m = \frac{\square}{\square} = \square$ $\quad b = \square$

$y = \square x + \square$

14



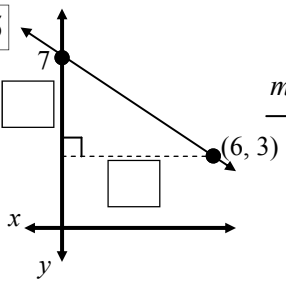
Gradient: ⊕ ⊖

$m = \frac{\square}{\square} = \square$ $\quad b = \square$

$y = \square$

This time the gradient is a fraction

15



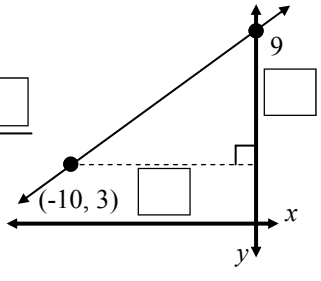
Gradient: ⊕ ⊖

$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$

$y = \frac{\square}{\square} x + \square$

16

Gradient: ⊕ ⊖



$m = \frac{\square}{\square} = \frac{\square}{\square}$ $\quad b = \square$

$y = \frac{\square}{\square} x + \square$

Linear Relationships - Proving if a Point is on a Line (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Given x, find the value of y.

Example $y = 3x + 2$ $x = 2$

$y = 3x + 2$ ← Write equation

$y = 3 \times 2 + 2$ ← Substitute $x = 2$

$y = 8$ ← Answer

1 $y = 7x - 5$ $x = 3$

$y = 7x - 5$ ← Write equation

$y = 7 \times \square - 5$ ← Substitute $x = 3$

$y = \square$ ← Answer

2 $y = x - 7$ $x = 5$

____ ← Write equation

____ ← Substitute $x = 5$

____ ← Answer

3 $y = -2x + 4$ $x = 6$

____

____

____

4 $y = 12 - 3x$ $x = 0$

____

____

____

5 $y = -x - 9$ $x = 4$

____

____

____

Given an x co-ordinate, give the co-ordinates for a point on a line.

Example $y = 2x + 7$ $(5, y)$

$y = 2x + 7$ ← Write equation

$y = 2 \times 5 + 7$ ← Substitute $x = 5$

$y = 17$ ← y-value

$\therefore (x, y) = (5, 17)$ ← Point

6 $y = 4x - 8$ $(3, y)$

____ ← Write equation

____ ← Substitute $x = 3$

____ ← y-value

$\therefore (x, y) = (3, \square)$ ← Point

7 $y = -5x + 7$ $(-4, y)$

____

____

____

____

8 $y = -x - 11$ $(-1, y)$

____

____

____

____

9 $y = 15 - 5x$ $(-7, y)$

____

____

____

____

Find if the point is on the line.

Example $y = 4x + 5$ $(2, 11)$

x y ← Label x, y.

$y = 4x + 5$ ← Equation

$11 = 4 \times 2 + 5$ ← Substitute $x = 2, y = 11$

$11 \neq 13$ ← Solve RHS

LHS ≠ RHS. ∴ Not on line.

10 $y = 6x + 2$ $(5, 28)$

Label x, y. → __ __

____ ← Write equation

$\square = 6 \times \square + 2$ ← Substitute $x = 5, y = 28$

____ ← Solve Use = or ≠

____

Using LHS/RHS State if point on the line

__ __

11 Does the point (8, 17) lie on the line $y = 3x - 7$?

____ ← Equation

____ ← Substitute

____ ← Solve

____

__ __

12 Does the point (-3, -13) lie on the line $y = -4x - 25$?

____

____

____

____

Linear Relationships - Proving if a Point is on a Line (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find if the point is on the line.

Example $2x + y = 2$ $(-2, 6)$

x y — Label x, y.

$2x + y = 2$ — Equation

$2 \times (-2) + 6 = 2$ — Substitute $x = -2, y = 6$

$2 = 2$ — Solve

LHS = RHS. ∴ Point on line.

1 $5y + 11 = 6x$ $(5, 6)$

Label x, y. → ☐ ☐

Write equation

Substitute $x = 5, y = 6$

Solve Use = or ≠

Using LHS/RHS State if point on the line

☐ ☐

2 Does the point (-2, 4) lie on the line $10y + 3x = 46$?

Equation

Substitute

Solve

Using LHS/RHS State if point on the line

☐ ☐

3 Does the point (-7, 9) lie on the line $13 - 2x = 3y$?

This time you have two lines and you have to check if they intersect at the given point.

4 Do the lines $y = 2x + 6$ and $y = 5x - 15$ intersect at (7, 20)?

☐ ☐

Write $y = 2x + 6$

Substitute $x = 7, y = 20$

Solve Use = or ≠

LHS ☐ RHS ∴

= or ≠ Point is or not on line

Write $y = 5x - 15$

Substitute $x = 7, y = 20$

Solve Use = or ≠

LHS ☐ RHS ∴

= or ≠ Point is or not on line

Yes they, or no they don't, intersect at (7, 20)

5 Do the lines $y = 15 - 3x$ and $y = -2x + 12$ intersect at (3, 6)?

☐ ☐

6 Do the lines $3y - 2x = -5$ and $y = -3x + 8$ intersect at (7, 3)?

☐ ☐

7 Do the lines $y = -x + 12$ and $y = 5x - 12$ intersect at (4, 8)?

☐ ☐

Surface Area - Identifying Solids

When identifying solids first decide whether the solid is a prism or a pyramid. Then look at the base to name the solid.

Use these words:
Triangular (3 sides), Rectangular (4 sides), Pentagonal (5 sides), Hexagonal (6) and Octagonal (8 sides). End these words with either the word 'pyramid' or 'prism'.

The most confusion occurs with triangles, is it a pyramid or a prism? If there are only two triangles in the solid then it is a triangular prism. If there is more than two triangles then the solid is a pyramid, look at its base to decide what type of pyramid it is.

Other shapes to consider are cube, cone, sphere (and hemisphere), and cylinder.

These sheets repeat a few solids so don't think that you have made a mistake if you have used the same name more than once.

A net in mathematics refers to the way a solid would look if it were made from paper and unfolded. So to answer this sheet you have to look at the net and fold it up in your mind and decide what shape it makes when it is folded up.

For most students the difficulty comes when prisms and pyramids are involved. Think about this:

- If a net only has 2 triangles in the net, it will always be a triangular prism.
- If a net has more that 2 triangles in the net it will always be pyramid.
- If a net is of a pyramid then the name of the net will come from the shape in the net that isn't a triangle.
- If the net is of a prism then the name of the prism will come from the shape that isn't a rectangle or square. (except rectangular prisms)

Remember that a shape can't be a pyramid if it has no triangles in its net. A shape can't be a prism if it has more than two triangles in its net. To answer the sheet write the solid's name in the table at the bottom of the page next to the net's number and fill the circle to indicate if it is a prism or not.

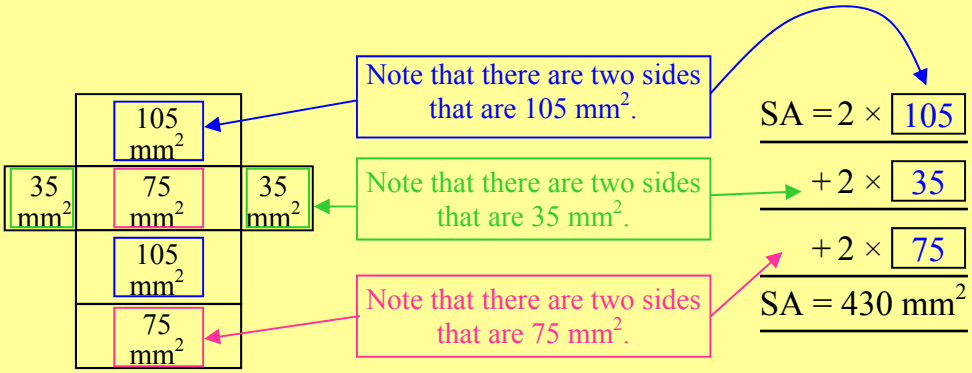
Surface Area - Face Areas and Edges

Surface area (S.A.) is the outside area of the faces/curved surfaces of a solid. So to calculate the S.A. of a solid you add all the areas of the individual shapes/surfaces that make up the solid. These sheets also show the **nets** of popular solids. A net is like a solid that has been opened up, like it was constructed from paper and unfolded.

The first sheet has three rectangular prisms shown as nets. The SA is found in two ways. Firstly by counting the grid squares within the nets. So count the squares and get the total. This gives you the surface area, but before you move on, work out the surface area another way. Write the side lengths on the side of the nets in the boxes and then find the area of the three Areas, White, Spotted and Grey, by multiplying the sides. Add these three areas to get a total, then double this as there are two matching faces and you have worked the area out for just one face. If the first number matches the last number, great, if not ….. You have to check your working out or your counting.

The second sheet starts with showing nets that have the area for each shape that makes the solid labeled with its area. Note that there are no side lengths … just areas. So the S.A. is found by adding all these areas together. But because some areas are repeated, these are gathered together and multiplication is used to speed things up.



Columns 2 and 3 show solids with the areas labeled on them. But they aren't shown as nets so you can't see all the faces of the solid. But the faces are repeated and you have all the numbers you need, just ask …. How many of each area is there? Then you solve the question using the same method as Column 1.

Surface Area - Face Areas and Edges (Sheet 1)

The grid below is in 1 cm^2. Measure the edge lengths and write their lengths (in cm) in the boxes. The surface area can be measured in two ways. By counting all the squares in each net or using the edge lengths to find the area, then adding the areas together and doubling the answer. Find the surface area using both methods.

1

Grid squares = ☐ cm^2 ← Count all the squares in the net in Q1 and write it here.

Grey = 1 × 3 = ☐

Spotty = 2×3 = ☐

White = 2×1 = ☐

Total = ☐ cm^2

SA = 2 × ☐ = ☐ cm^2

2

3

2 Grid squares = ☐ cm^2

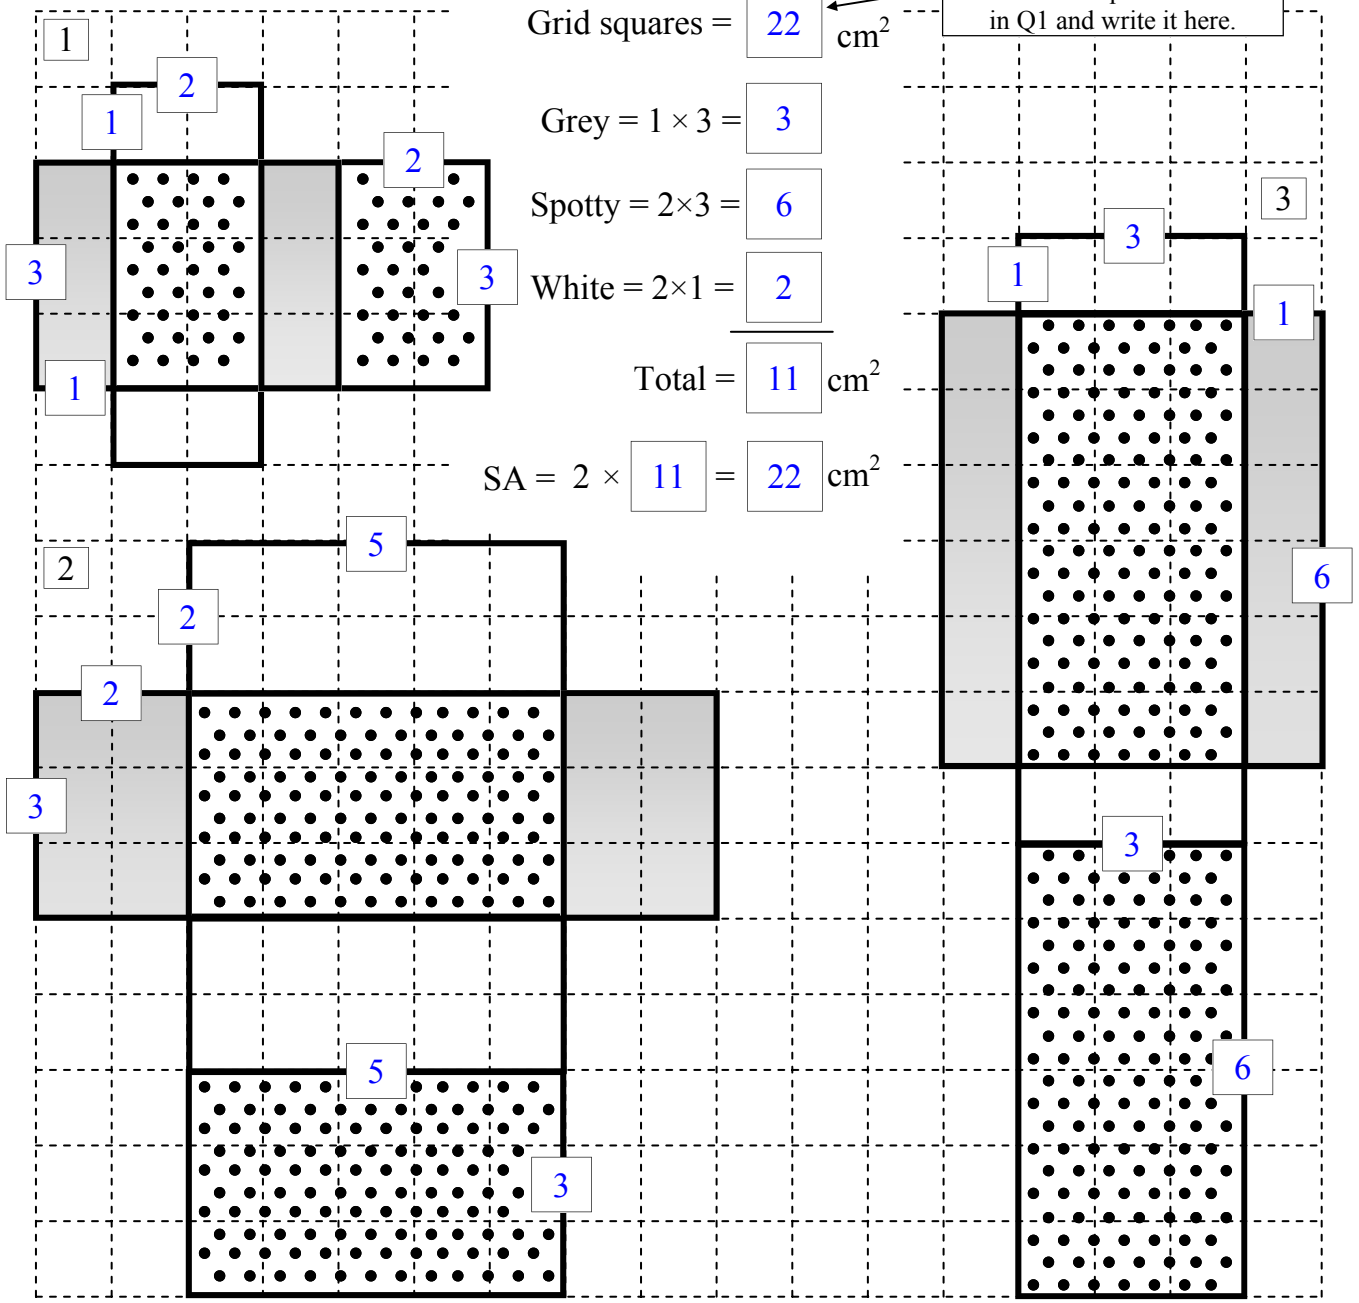
The grid below is in 1 cm^2. Measure the edge lengths and write their lengths (in cm) in the boxes. The surface area can be measured in two ways. By counting all the squares in each net or using the edge lengths to find the area, then adding the areas together and doubling the answer. Find the surface area using both methods.



1

Grid squares = 22 cm^2 ← Count all the squares in the net in Q1 and write it here.

Grey = 1 × 3 = 3

Spotty = 2×3 = 6

White = 2×1 = 2

Total = 11 cm^2

SA = 2 × 11 = 22 cm^2

2 Grid squares = 62 cm^2

Grey Area = 2 × 3 = 6 cm^2

Spotty Area = 5 × 3 = 15 cm^2

White Area = 2 × 5 = 10 cm^2

Total = 31 cm^2

SA = 2 × 31 = 62 cm^2

3 Grid squares = 54 cm^2

Grey Area = 6 × 1 = 6 cm^2

Spotty Area = 6 × 3 = 18 cm^2

White Area = 3 × 1 = 3 cm^2

Total = 27 cm^2

SA = 2 × 27 = 54 cm^2

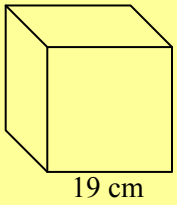
Surface Area - Cubes and Rectangular Prisms

The previous sheet gave you the areas of each face of a solid. This exercise gives you the length of the edges of the solids. So you have to calculate the areas yourself.

Column 1 asks you to find the S.A. of cubes. A cube has six identical square faces, so calculate the area of one square face, then multiply (times) by 6. But there is a formula as well and it is: S.A. = $6l^2$, where 'l' is the side length of the square face.

Example



$SA = 6l^2$ ← Write out the formula.

$= 6 \times 19^2$ ← Substitute the side length into the formula.

$SA = 2\ 166\ cm^2$ ← Use your calculator and write the answer showing the units, which are square units.

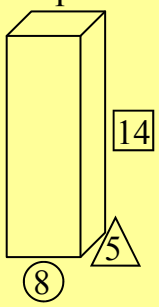
S.A. of a Cube Calculator Steps:

To Find 6×19^2

[6] [×] [1] [9] [x^2] [=]

After a rounding exercise with cubes, column 2 deals with finding the S.A. of rectangular prisms. These are more complicated than cubes because they have 3 pairs of identical face areas. So you have to perform three separate calculations. This column assists you by putting shapes around the edge lengths, this matches the shapes in the working out area …. so just rewrite the number in the correct position and so on. The lengths are all cm, so your final answer should have cm^2 in it.

Example



$SA = 2 \times \boxed{14} \times \triangle 5$ ← The square is 14 and the triangle is 5.

$+ 2 \times \boxed{14} \times (8)$ ← The square is 14 and the circle is 8.

$+ 2 \times (8) \times \triangle 5$ ← The circle is 8 and the triangle is 5.

$SA = 444\ cm^2$ ← Use your calculator and write the answer showing the units, which are all cm^2.

S.A. of a Rectangular Prism Calculator Steps:

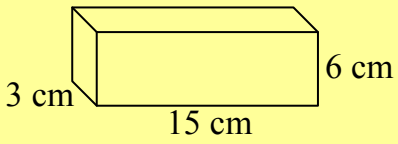
[2] [×] [1] [4] [×] [5] [+] [2] [×] [1] [4] [×] [8] [+] [2] [×] [8] [×] [5] [=]

Column 3 is a mix of cubes and rectangular prisms. But this time the rectangular prisms don't have the shapes around the lengths. So you have to make sure that you use two of each number when you calculate the S.A.

A step-by step process is on the next page.

When you select the sides you are going to use, you can place a stroke through them. Once a number has a cross through it, you don't use it again.

Example



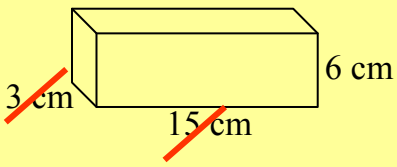
SA = 2 × ×
+ 2 × ×
+ 2 × ×
SA =

STEP 1

Write SA = 2 × ×
+ 2 × ×
+ 2 × ×
SA =

This is always the same, this sets you up to write the side lengths in.

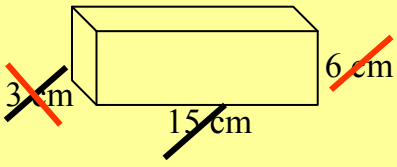
SA = 2 × **3** × **15**
+ 2 × ×
+ 2 × ×
SA =



STEP 2

Pick two side lengths, whichever two you like. Write them in the top line and put a stroke through the numbers on the diagram.

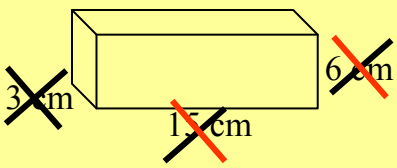
SA = 2 × 3 × 15
+ 2 × **3** × **6**
+ 2 × ×
SA =



STEP 3

Pick the side you haven't used (6 cm) and one side that you have (we used 3 cm). Write them in the second line and put a stroke through the numbers on the solid. Note that the 3 cm side has a cross through it, it is no longer able to be used.

SA = 2 × 3 × 15
+ 2 × 3 × 6
+ 2 × **15** × **6**
SA =



STEP 4

The sides with only one stroke are now used, so use 15 cm and 6 cm. Write these in the third line and you are now ready to calculate the answer.

2	×	3	×	1	5	+	2	×	3	×	6	+	2	×	1	5	×	6	=

SA = 306 cm^2

STEP 5

Calculate the answer and write the square units on the answer. You are done!

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

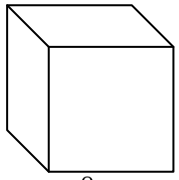
Date Due: _____

Find the SA of these two cubes.

1



$SA = 6l^2$

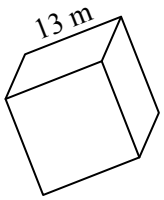
$= 6 \times 8^2$

$SA = 384 \text{ cm}^2$

2



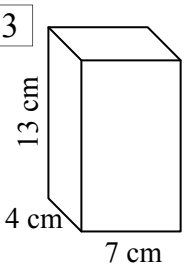
$SA = 6l^2$

$= 6 \times 13^2$

$SA = 1\,014 \text{ m}^2$

Find the SA of the rectangular prism.

3



$SA = 2 \times 7 \times 4$

$+ 2 \times 7 \times 13$

$+ 2 \times 4 \times 13$

$SA = 342 \text{ cm}^2$

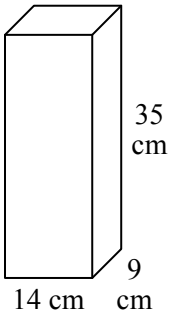
4

$SA = 2 \times 14 \times 9$

$+ 2 \times 14 \times 35$

$+ 2 \times 9 \times 35$

$SA = 1\,862 \text{ cm}^2$



Surface Area - Cubes and Rectangular Prisms Problems.

This worksheet takes your skills with finding the surface area of cubes and rectangular prisms and applies it to different situations.

Column 1 starts with constructing a steel tool box. What happens when you double the size of something, how does that affect the surface area of the object?

Column 2 checks the same theory with cubes, does it also apply? Surface area of a rectangular prism is then applied to re-plastering a room. Calculating how many plaster sheets are required to replace the walls and ceiling.

Column 3 ends with production of a cereal box. Remember that if you need 12.2 m^2 of material, but the material is supplied only in full m^2. You don't round 12.2 m^2 down to 12 m^2. Yes it is true that 12.2 m^2, rounded to the nearest m^2, is 12m^2. but if you need 12.2 m^2, then you won't have enough material for the job.

So rounding up is always required when you buy things like plastering, paint, tiles and anything else that is 'better to have more of', than 'not enough of'.

Surface Area - Cubes and Rectangular Prisms Problems

Find the SA of these tool boxes!

A steel rectangular shaped toolbox is 35 cm wide, 20 cm high and 25 cm deep, draw a diagram and find the SA

Diagram - Use a Ruler

1

2 SA = 2 × ☐ × ☐

\+ 2 × ☐ × ☐

\+ 2 × ☐ × ☐

SA = ☐ cm^2

Double each of the sides of the tool box.

3 35: 2 × 35 = ☐ cm

20: 2 × 20 = ☐ cm

25: 2 × 25 = ☐ cm

Draw a diagram and then find the SA of the enlarged tool box.

Diagram - Use a Ruler

4

5 SA = 2 × ☐ × ☐

\+ 2 × ☐ × ☐

\+ 2 × ☐ × ☐

SA = ☐ cm^2

Divide (÷) the larger tool box's SA by the smaller tool box's SA.

6 ☐ (Larger Area) / ☐ (Smaller Area) = ☐

Complete this statement

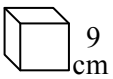
7 When I double the side lengths of a rectangular prism the SA is multiplied by a factor of ☐.

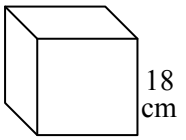
Apply to cubes, find the SA.

8 $SA = 6l^2$

$= 6 \times$ ☐^{2}

SA = ☐ cm^2





Divide the larger cube's SA by the smaller cube's SA.

9 ☐ / ☐ = ☐

Make a statement about the size & SA

10 When I double _____

Jen measures her room, its floor size is 3.7 m by 4.5 m, and the ceiling height is 2.4 m. Calculate the SA of the room.

11 SA = 2 × ☐ × ☐

\+ 2 × ☐ × ☐

\+ 2 × ☐ × ☐

SA = ☐ m^2

Calculate the floor area of the room. Floor size is 3.7 m by 4.5 m.

12 A = ☐ × ☐

A = ☐ m^2

The ceiling and walls are to be re-plastered. Find their area.

13 A = ☐ (Room SA) - ☐ (Floor Area)

A = ☐

Remember units

The plaster sheets are 1.2 m by 2.4 m, calculate the area of one plaster sheet.

14 A = ☐ × ☐

A = ☐

How many **FULL** sheets are required to plaster Jen's ceiling and walls?

15 ☐ (Q13) / ☐ (Q14) = ☐ sheets

A box of 'Oaties' cereal is 0.32 m by 0.23 m by 0.06 m. Find the box's SA.

16 _____

Don't round your answer

The company produces 30 000 boxes in a day, what is the area of cardboard needed per day (ignoring seams)?

17 _____

If cardboard is supplied in rolls of 220 m^2. How many complete rolls are required for one day's production?

18 _____

Surface Area - Cubes and Rectangular Prisms Problems

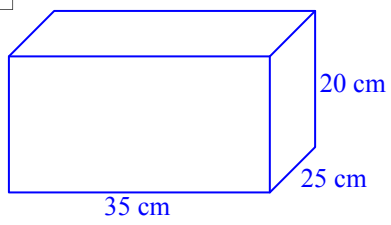
Find the SA of these tool boxes!

A steel rectangular shaped toolbox is 35 cm (L)× 25 cm (W)× 20 (H) cm, draw a diagram and find the SA.

Diagram - Use a Ruler

1



2 SA = 2 × 35 × 25
+ 2 × 35 × 20
+ 2 × 25 × 20
SA = 4 150 cm²

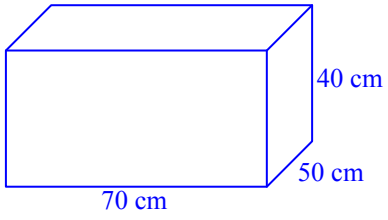
Double each of the sides of the tool box.

3 35: 2 × 35 = 70 cm
20: 2 × 20 = 40 cm
25: 2 × 25 = 50 cm

Draw a diagram and then find the SA of the enlarged tool box.

Diagram - Use a Ruler

4



5 SA = 2 × 70 × 40
+ 2 × 70 × 50
+ 2 × 40 × 50
SA = 16 600 cm²

Divide (÷) the larger tool box's SA by the smaller tool box's SA.

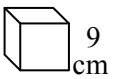
6 16 600 (Larger Area) / 4 150 (Smaller Area) = 4

Complete this statement

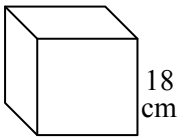
7 When I double the side lengths of a rectangular prism the SA is multiplied by a factor of 4.

Apply to cubes, find the SA.

8 $SA = 6l^2$
$= 6 \times 9^2$
SA = 486 cm²



$SA = 6l^2$
$= 6 \times 18^2$
$SA = 1\,944$ cm²



Divide the larger cube's SA by the smaller cube's SA.

9 1 944 / 486 = 4

Make a statement about the size & SA

10 When I double the side lengths of a cube, the SA is multiplied by a factor of 4.

Jen measures her room, its floor size is 3.7 m by 4.5 m, and the ceiling height is 2.4 m. Calculate the SA of the room.

11 SA = 2 × 3.7 × 4.5
+ 2 × 3.7 × 2.4
+ 2 × 4.5 × 2.4
SA = 72.66 m²

Calculate the floor area of the room. Floor size is 3.7 m by 4.5 m.

12 A = 3.7 × 4.5
A = 16.65 m²

The ceiling and walls are to be re-plastered. Find their area.

13 A = 72.66 (Room SA) - 16.65 (Floor Area)
A = 56.01 m²
Remember units

The plaster sheets are 1.2 m by 2.4 m, calculate the area of one plaster sheet.

14 A = 1.2 × 2.4
A = 2.88 m²

How many **FULL** sheets are required to plaster Jen's ceiling and walls?

15 56.01 (Q13) / 2.88 (Q14) = 20 sheets

A box of 'Oaties' cereal is 0.32 m by 0.23 m by 0.06 m. Find the box's SA.

16 SA = 2 × 0.32 × 0.23
+ 2 × 0.32 × 0.06
+ 2 × 0.23 × 0.06

Don't round your answer

The company produces 30 000 boxes in a day, what is the area of cardboard needed per day (ignoring seams)?

17 A = 0.2132 × 30 000
A = 6 396 m²

If cardboard is supplied in rolls of 220 m². How many complete rolls are required for one day's production?

18 Rolls Req'd = 6 396 ÷ 220
Rolls Req'd = 30 rolls

Surface Area - SA of Nets of Triangular Prisms

When you calculate the Surface Area of a Triangular Prism you are adding 5 areas together. There are the two triangular ends of the solid, then there are the three rectangles that wrap around the solid.

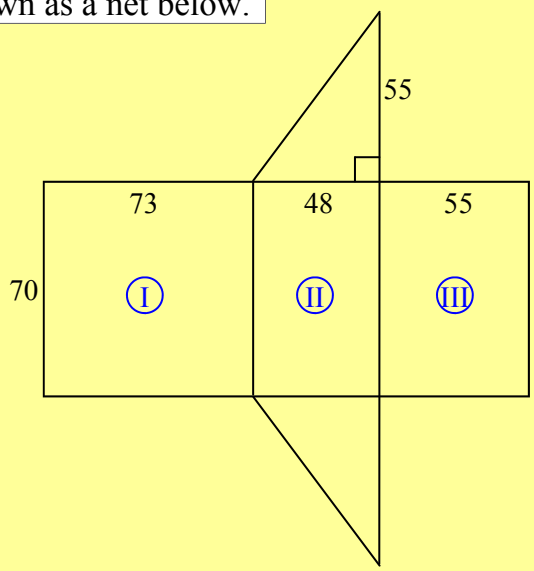
This sheet takes you through the procedure in parts to assist you to understand the steps involved in the process. The first sheet revises finding the area of a triangle and the area of a rectangle, which should be straight-forward revision.

The second sheet deals with nets of triangular prisms. With nets, you can see all the plane shapes that build to make the solid, as they are folded out in front of you. With nets of triangular prisms, there are:

- 2 matching triangular ends
- 3 rectangular areas (sometimes these areas might be the same)

So the surface area is found by finding these areas, then adding them together. An example is below.

Example - Find the surface area of the triangular prism, shown as a net below.



$2\blacktriangle$: $2 \times \frac{1}{2} \times 48 \times 55$

$= 2\,640 \text{ cm}^2$

This is the area of the two triangles

Ⓘ: $73 \times 70 = 5\,110 \text{ cm}^2$

Ⓘ: $48 \times 70 = 3\,360 \text{ cm}^2$

Ⓘ: $55 \times 70 = 3\,850 \text{ cm}^2$

This is the area of the three rectangles

$SA = 2\,640 + 5\,110 + 3\,360 + 3\,850$

$SA = 14\,960 \text{ cm}^2$

Add all the areas to find the surface area (SA)

Surface Area - Area of Triangles and Rectangles (Sheet 1)

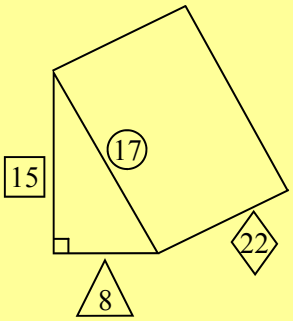
Surface Area - Triangular Prisms

The surface area of a triangular prism is found by finding the area of the two identical triangular ends and the three rectangles wrapped around the prism, then adding them together.

Because there are four numbers and it is important which is multiplied by which, the first sheet uses shapes around the numbers that match their correct position in the calculation. Just take the numbers from the shape and place them into the calculation and away you go!

Example - Finding the SA of the triangular prism shown below



The shape has a circle, square, triangle and rhombus around its dimensions. Place each into their correct position in the calculation below.

$SA = 2 \times \frac{1}{2} \times 8 \times 15$

The shape has two identical triangles on the front and back. This line calculates their combined area. Remember that ½ = 0.5, easier on your calculator and maybe you know what 2 × 0.5 is? Is it necessary?

$+ 8 \times 22$

This is calculating the rectangular base of the triangular prism.

$+ 15 \times 22$

This is calculating the rectangular side of the triangular prism. (The vertical face on the left side of the shape).

$+ 17 \times 22$

This is calculating the rectangular side of the triangular prism. (The slanted face on the right side of the shape).

$SA = 1\ 000\ cm^2$

The second sheet doesn't have the shapes around the numbers, but the method to find the SA is the same.

Find the surface area of these triangular prisms.

Example

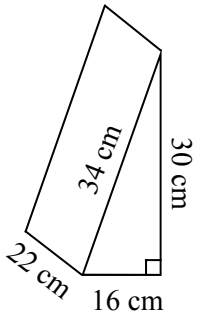
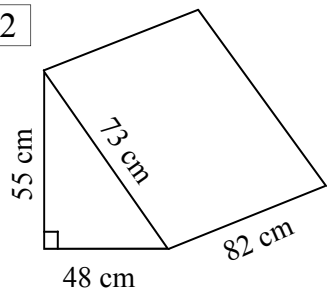
SA = 2 × ½ × 12 × 35
+ 12 × 50
+ 35 × 50
+ 37 × 50
SA = 4 620 mm²

1

base height
SA = 2 × ½ × 16 × 30
+ 30 × 22
+ 34 × 22
+ 16 × 22
Front three edges, all × 22
SA = 2 240 cm²



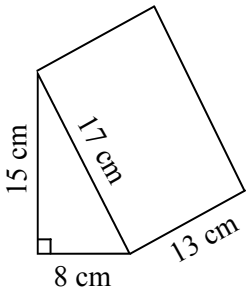
2



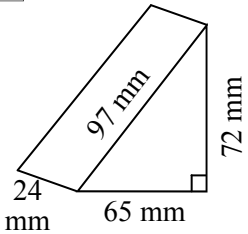
base height
SA = 2 × ½ × 48 × 55
+ 48 × 82
+ 55 × 82
+ 73 × 82
Front 3 edges, all × 82
SA = 17 072 cm²

3

SA = 2 × ½ × 8 × 15
+ 8 × 13
+ 15 × 13
+ 17 × 13
SA = 640 cm²
Remember square units

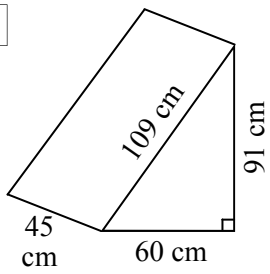


4



SA = 2 × ½ × 65 × 72
+ 65 × 24
+ 72 × 24
+ 97 × 24
SA = 10 296 mm²

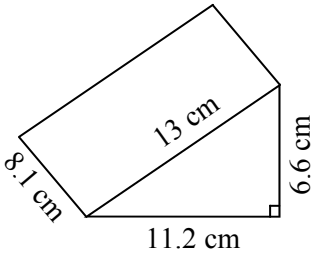
5



SA = 2 × ½ × 60 × 91
+ 60 × 45
+ 91 × 45
+ 109 × 45
SA = 17 160 cm²

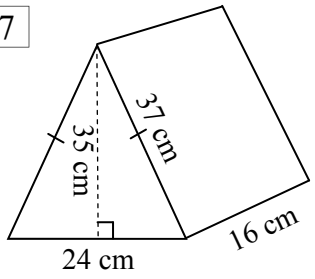
6

SA = 2 × ½ × 11.2 × 6.6
+ 11.2 × 8.1
+ 6.6 × 8.1
+ 13 × 8.1
SA = 323.4 cm²



These have matching pairs of sides, so you can double the repeated side. Find the surface area.

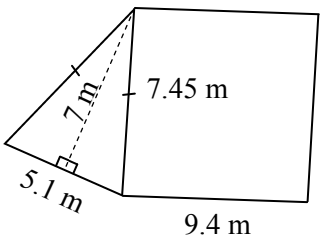
7



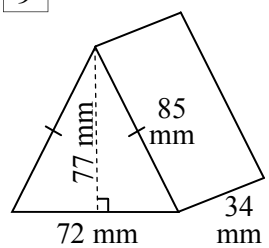
base height
SA = 2 × ½ × 24 × 35
+ 24 × 16 base rectangle
+ 2 × 37 × 16
2 × identical (slanted) rectangles
SA = 2 408 cm²

8

SA = 2 × ½ × 5.1 × 7
+ 5.1 × 9.4
+ 2 × 7.45 × 9.4
SA = 223.7 m²



9



SA = 2 × ½ × 72 × 77
+ 72 × 34
+ 2 × 85 × 34
SA = 13 772 mm²

Surface Area - Triangular Prisms using Pythagoras Theorem

This worksheet covers finding the surface area of a triangular prism but you need to find a missing side length first.

The first worksheet starts with revising Pythagoras Theorem. All the questions use addition. Given triangles, find the hypotenuse. There is an example at the top of the column.

Column 2 is just the same as the first column except the triangles are the faces of Triangular Prisms. The only trick is remembering to ignore the 'depth' measurement. You don't use all the measurements.

Column 3 asks you to find the hypotenuse just like the previous columns, but then also find the surface area. So these questions are lengthy.

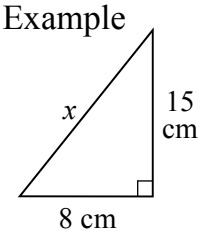
The second worksheet carries on with the same questions, except then in Column 2, you are reminded of the process of finding a short side using Pythagoras Theorem. This is then applied to surface area questions in Column 3.

Surface Area - Triangular Prisms using Pythagoras Theorem (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use Pythagoras Theorem (only addition) for these. Find the length of the hypotenuse. All lengths are whole numbers.

Example



$x^2 = 8^2 + 15^2$

$x^2 = 289$

$x = \sqrt{289}$

$x = 17$ cm

1

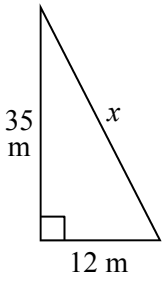
$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ m

Answer is a whole number



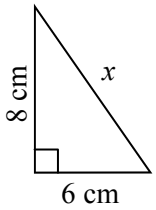
2

$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ cm



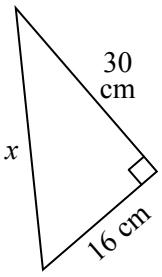
3

$x^2 =$

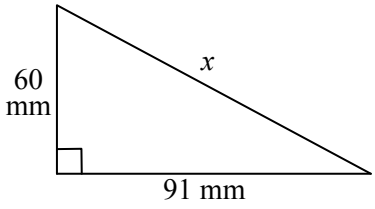
$x^2 =$

$x =$

$x =$



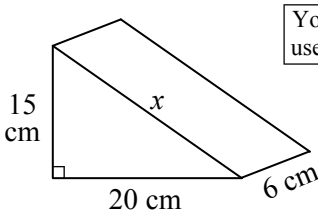
4



Use Pythagoras Theorem (only addition) to find the length '*x*'.

5

You don't use the '6'



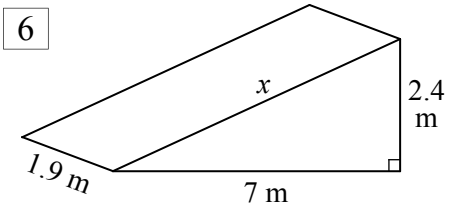
$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$

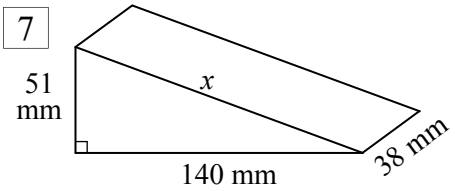
$x =$

$x =$

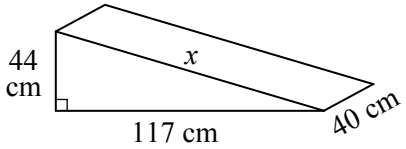
6



7

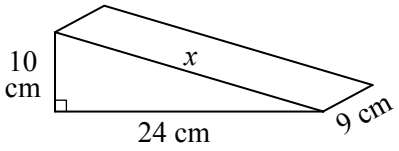


8



Find the length '*x*' first, then calculate the surface area

9



$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ cm

Now calculate the surface area

SA = 2 × ½ × ☐ × ☐

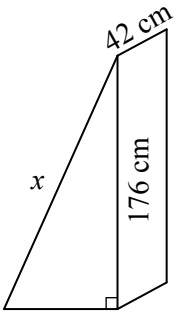
+ ☐ × 9

+ ☐ × 9

+ ☐ × 9

SA = ☐ cm^2

10



$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ cm

Now calculate the surface area

SA = 2 × ½ × ☐ × ☐

+ ☐ × ☐

+ ☐ × ☐

+ ☐ × ☐

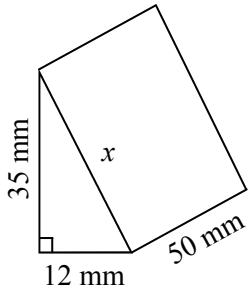
SA = ☐ cm^2

Surface Area - Triangular Prisms using Pythagoras Theorem (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the SA of these triangular prisms. Pythagoras Theorem is required as a 1st step.

Example



$x^2 = 12^2 + 35^2$

$x^2 = 1\ 369$

$x = \sqrt{1\ 369}$

$x = 37$ mm

$SA = 2 \times ½ \times 12 \times 35$

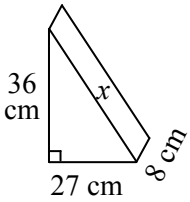
$+ 12 \times 50$

$+ 35 \times 50$

$+ 37 \times 50$

$SA = 4\ 620$ mm^2

1



$x^2 = \square^2 + \square^2$

$x^2 = \square$

$x = \sqrt{\square}$

$x = \square$ cm

$SA = 2 \times ½ \times \square \times \square$

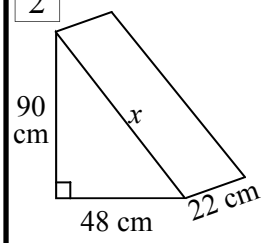
$+ \square \times \square$

$+ \square \times \square$

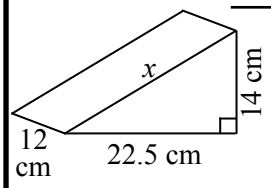
$+ \square \times \square$

$SA = \square$ cm^2

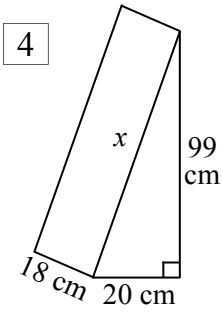
2



3

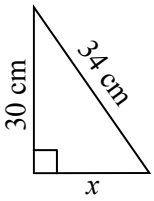


4



Use Pythagoras Theorem (subtraction). Find the length of the short side.

5



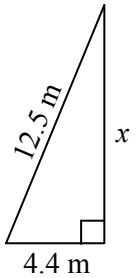
$x^2 = \square^2 - \square^2$

$x^2 = \square$

$x = \sqrt{\square}$

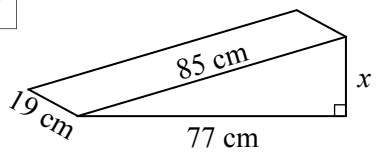
$x = \square$ cm

6



Find the SA of these triangular prisms.

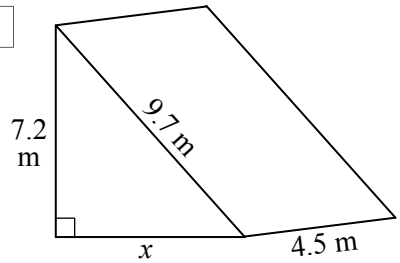
7



Calculate the triangle's height (P.T. minus)

Calculate the triangular prism's surface area

8



Calculate the triangle's base length

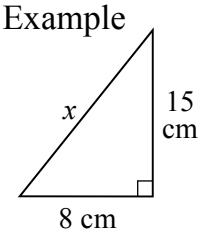
Calculate the triangular prism's surface area

Surface Area - Triangular Prisms using Pythagoras Theorem (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use Pythagoras Theorem (only addition) for these. Find the length of the hypotenuse. All lengths are whole numbers.

Example



$x^2 = 8^2 + 15^2$

$x^2 = 289$

$x = \sqrt{289}$

$x = 17$ cm

1

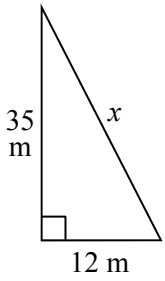
$x^2 =$ 12 $^2 +$ 35 ^{2}

$x^2 =$ 1 369

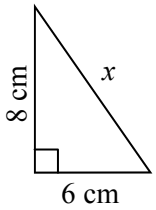
$x =$ $\sqrt{\ 1\ 369\ }$

$x =$ 37 m

Answer is a whole number



2



$x^2 =$ 6 $^2 +$ 8 ^{2}

$x^2 =$ 100

$x =$ $\sqrt{\ 100\ }$

$x =$ 10 cm

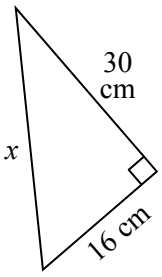
3

$x^2 = 16^2 + 30^2$

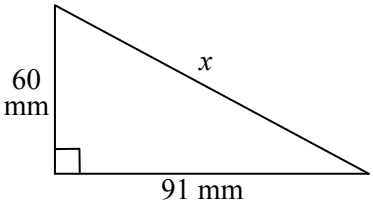
$x^2 = 1\ 156$

$x = \sqrt{1\ 156}$

$x = 34$ cm



4



$x^2 = 60^2 + 91^2$

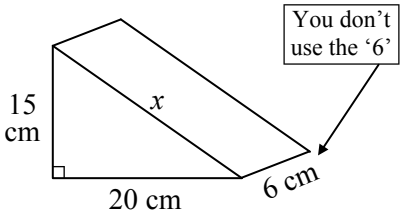
$x^2 = 11\ 881$

$x = \sqrt{11\ 881}$

$x = 109$ mm

Use Pythagoras Theorem (only addition) to find the length 'x'.

5



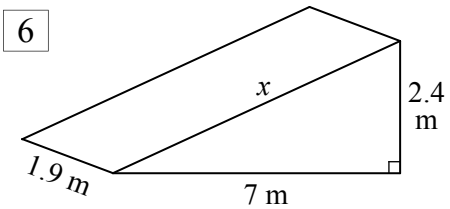
$x^2 =$ 15 $^2 +$ 20 ^{2}

$x^2 = 625$

$x = \sqrt{625}$

$x = 25$ cm

6



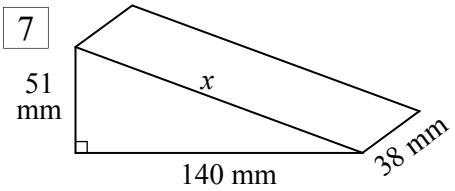
$x^2 = 7^2 + 2.4^2$

$x^2 = 54.76$

$x = \sqrt{54.76}$

$x = 7.4$ m

7



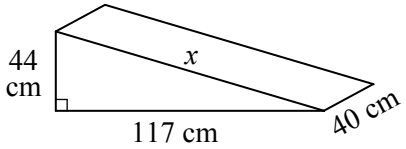
$x^2 = 51^2 + 140^2$

$x^2 = 22\ 201$

$x = \sqrt{22\ 201}$

$x = 149$ mm

8



$x^2 = 44^2 + 117^2$

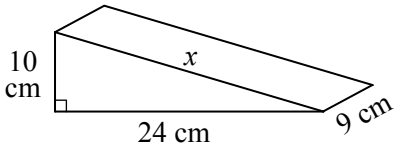
$x^2 = 15\ 625$

$x = \sqrt{15\ 625}$

$x = 125$ cm

Find the length 'x' first, then calculate the surface area

9



$x^2 =$ 10 $^2 +$ 24 ^{2}

$x^2 =$ 676

$x =$ $\sqrt{\ 676\ }$

$x =$ 26 cm

Now calculate the surface area

SA = 2 × ½ × 24 × 10

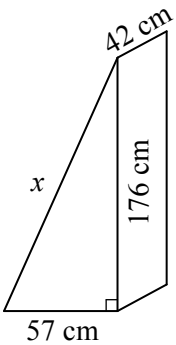
+ 10 × 9

+ 24 × 9

+ 26 × 9

SA = 780 cm^2

10



$x^2 =$ 57 $^2 +$ 176 ^{2}

$x^2 =$ 34 225

$x =$ $\sqrt{\ 34\ 225\ }$

$x =$ 185 cm

Now calculate the surface area

SA = 2 × ½ × 57 × 176

+ 57 × 42

+ 176 × 42

+ 185 × 42

SA = 27 588 cm^2

Surface Area - Triangular Prisms using Pythagoras Theorem (Sheet 2)

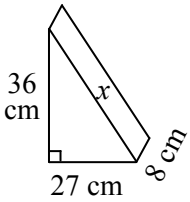
$+ 35 \times 50$

$+ 37 \times 50$

$SA = 4\ 620$ mm^2

1



$x^2 = \boxed{27}^2 + \boxed{36}^2$

$x^2 = \boxed{2\ 025}$

$x = \sqrt{\boxed{2\ 025}}$

$x = \boxed{45}$ cm

$SA = 2 \times ½ \times \boxed{27} \times \boxed{36}$

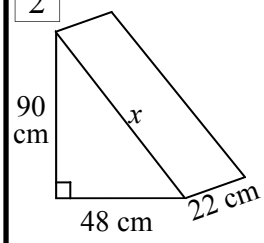
$+ \boxed{27} \times \boxed{8}$

$+ \boxed{36} \times \boxed{8}$

$+ \boxed{45} \times \boxed{8}$

$SA = \boxed{1\ 836}$ cm^2

2



$x^2 = 48^2 + 90^2$

$x^2 = 10\ 404$

$x = \sqrt{10\ 404}$

$x = 102$ cm

$SA = 2 \times ½ \times 48 \times 90$

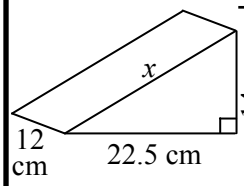
$+ 48 \times 22$

$+ 90 \times 22$

$+ 102 \times 22$

$SA = 9\ 600$ cm^2

3



$x^2 = 14^2 + 22.5^2$

$x^2 = 702.25$

$x = \sqrt{702.25}$

$x = 26.5$ cm

$SA = 2 \times ½ \times 22.5 \times 14$

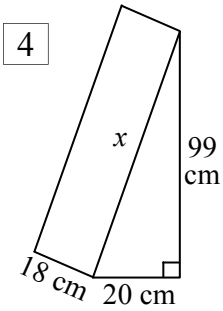
$+ 22.5 \times 12$

$+ 14 \times 12$

$+ 26.5 \times 12$

$SA = 1\ 071$ cm^2

4



$x^2 = 20^2 + 99^2$

$x^2 = 10\ 201$

$x = \sqrt{10\ 201}$

$x = 101$ cm

$SA = 2 \times ½ \times 20 \times 99$

$+ 20 \times 18$

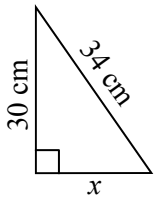
$+ 99 \times 18$

$+ 101 \times 18$

$SA = 5\ 940$ cm^2

Use Pythagoras Theorem (subtraction). Find the length of the short side.

5



$x^2 = \boxed{34}^2 - \boxed{30}^2$

$x^2 = \boxed{256}$

$x = \sqrt{\boxed{256}}$

$x = \boxed{16}$ cm

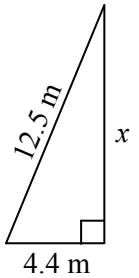
6

$x^2 = 12.5^2 - 4.4^2$

$x^2 = 136.89$

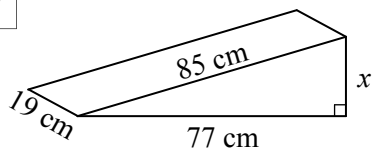
$x = \sqrt{136.89}$

$x = 11.7$ m



Find the SA of these triangular prisms.

7



Calculate the triangle's height (P.T. minus)

$x^2 = 85^2 - 77^2$

$x^2 = 1\ 296$

$x = \sqrt{1\ 296}$

$x = 36$ cm

Calculate the triangular prism's surface area

$SA = 2 \times ½ \times 77 \times 36$

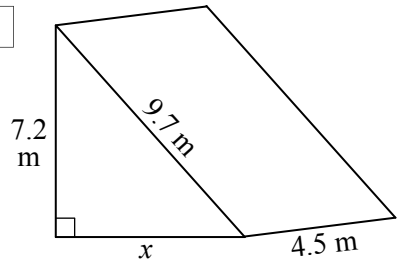
$+ 77 \times 19$

$+ 36 \times 19$

$+ 85 \times 19$

$SA = 6\ 534$ cm^2

8



Calculate the triangle's base length

$x^2 = 9.7^2 - 7.2^2$

$x^2 = 42.25$

$x = \sqrt{42.25}$

$x = 6.5$ m

Calculate the triangular prism's surface area

$SA = 2 \times ½ \times 6.5 \times 7.2$

$+ 6.5 \times 4.5$

$+ 7.2 \times 4.5$

$+ 9.7 \times 4.5$

$SA = 152.1$ m^2

$x^2 = 15^2 + 36^2$

$x^2 = 1\,521$

$x = \sqrt{1\,521}$

$x = 39$ cm

Find the surface area.

3

$SA = 2 \times \frac{1}{2} \times 36 \times 15$

$+ 15 \times 11$

$+ 36 \times 11$

$+ 39 \times 11$

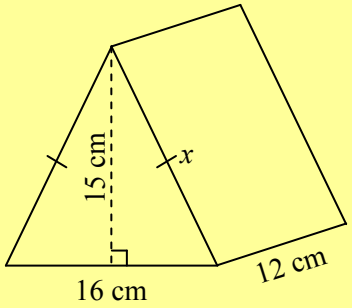
$SA = 1\,530$ cm^2

Surface Area - Further Triangular Prisms using Pythagoras Theorem

This worksheet covers finding the surface area of a triangular prism but you need to find a missing side length first. This sheet is more difficult than the previous sheet because the triangular faces are isosceles not right-angled triangles.

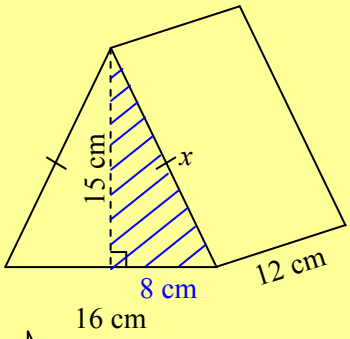
Here is an example of the process.

Calculate the SA of the triangular prism below, answer to 1 decimal place.



STEP 1

HALVE THE BASE

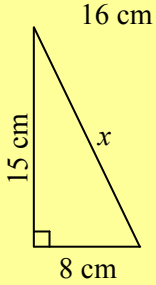


HALVE THE BASE

You need to create a right angled triangle to use Pythagoras Theorem. So divide the base by two. Then deal just with the shaded triangle, for x.

STEP 2

APPLY PYTHAGORAS



$x^2 = 8^2 + 15^2$

$x^2 = 289$

$x^2 = \sqrt{289}$

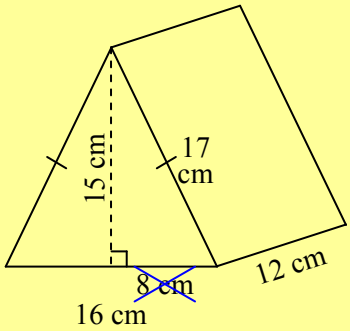
$x^2 = 17$ cm

FIND THE LENGTH

Find the missing length using Pythagoras Theorem.

STEP 3

CALCULATE THE SA



SA = 2 × ½ × 16 × 15

+ 2 × 17 × 12

+ 16 × 12

SA = 840 cm^2

CALCULATE THE SURFACE AREA

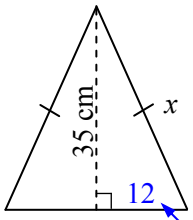
The most common mistake to avoid is using half the base instead of the full base. You use the 8 cm (above) in the Pythagoras calculation. Once that is done, you don't use it in the SA calculation.

Surface Area - Further Triangular Prisms & Pythagoras Theorem (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Halve the base first, then use P.T. to find the length 'x'. All lengths are whole numbers.

Example



$x^2 = 12^2 + 35^2$

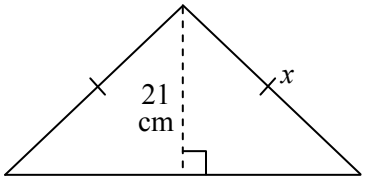
$x^2 = 1\,369$

$x = \sqrt{1\,369}$

$x = 37$ cm

24 ÷ 2

1



$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ cm

Answer is a whole number

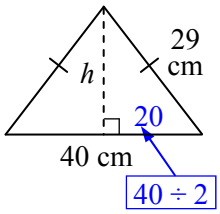
Halve the base, then use P.T. (subtraction) to find the height 'h'. Heights are whole numbers.

Example



$h^2 = 29^2 - 20^2$

$h^2 = 441$

$h = \sqrt{441}$

$h = 21$ cm

1

$h^2 =$ 61 $^2 -$ 11 ^{2}

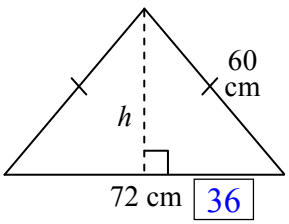
$h^2 =$ 3 600

$h = \sqrt{3\ 600}$

$h =$ 60 cm

Answer is a whole number

2



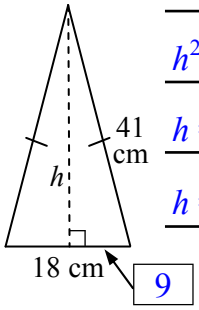
$h^2 =$ 60 $^2 -$ 36 ^{2}

$h^2 =$ 2 304

$h = \sqrt{2\ 304}$

$h =$ 48 cm

3



$h^2 = 41^2 - 9^2$

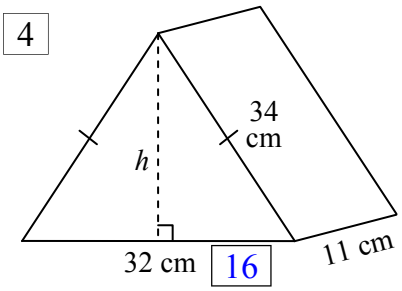
$h^2 = 1\ 600$

$h = \sqrt{1\ 600}$

$h = 40$ cm

Halve the base, find 'h' using P.T., then calculate the SA.

4



$h^2 =$ 34 $^2 -$ 16 ^{2}

$h^2 =$ 900

$h = \sqrt{900}$

$h =$ 30 cm

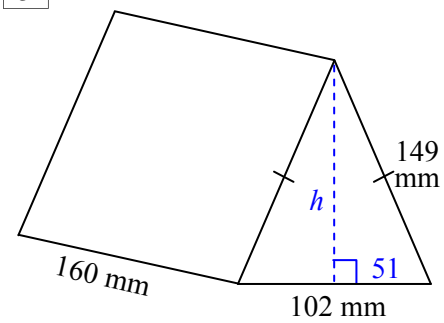
SA = 2 × ½ × 32 × 30 (h)

+ 2 × 34 × 11

+ 32 × 11

SA = 2 060 cm^2

5



$h^2 = 149^2 - 51^2$

$h^2 = 19\ 600$

$h = \sqrt{19\ 600}$

$h = 140$ mm

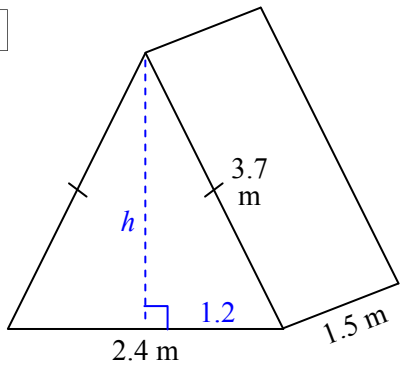
SA = 2 × ½ × 102 × 140

+ 2 × 149 × 160

+ 102 × 160

SA = 78 280 mm^2

6



$h^2 = 3.7^2 - 1.2^2$

$h^2 = 12.25$

$h = \sqrt{12.25}$

$h = 3.5$ m

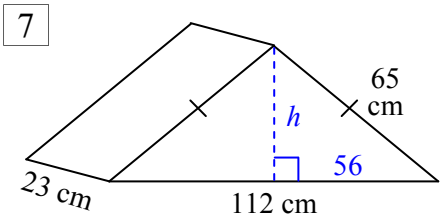
SA = 2 × ½ × 2.4 × 3.5

+ 2 × 3.7 × 1.5

+ 2.4 × 1.5

SA = 23.1 m^2

7



$h^2 = 65^2 - 56^2$

$h^2 = 1\ 089$

$h = \sqrt{1\ 089}$

$h = 33$ cm

SA = 2 × ½ × 112 × 33

+ 2 × 65 × 23

+ 112 × 23

SA = 9 262 cm^2

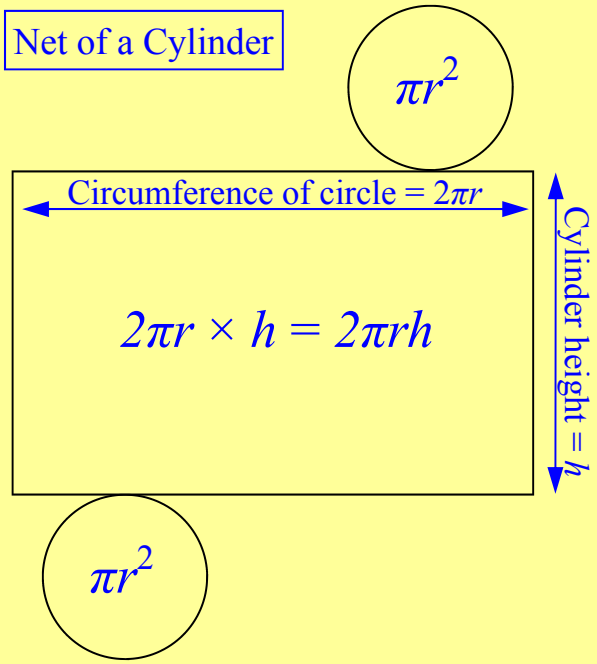
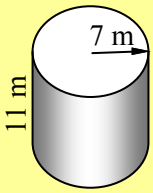
Surface Area - Cylinders

The surface area of a cylinder is the sum of the areas of the shapes that make up the solid. As the net of a cylinder below shows, each circle has an area of πr^2. So the two circles added together gives an area of $2\pi r^2$. The cylinder wall, (also called the curved surface) is the rectangle in the net, it wraps around the circles so one of its sides is the same length as the circumference of the circular ends, which is $2\pi r$. Its height is the height of the cylinder, which is h. As this area is a rectangular area, its area is one side times the other, or $2\pi r \times h = 2\pi rh$.



SA of a Cylinder = $2\pi r^2 + 2\pi rh$

Example - SA of a cylinder



$SA = 2\pi r^2 + 2\pi rh$	Write the formula
$= 2\times\pi\times7^2 + 2\times\pi\times7\times11$	Substitute r and h
$SA = 791.7\ m^2$ (1 d.p.)	Find surface area

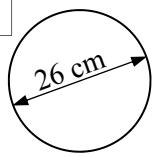
1



$r = 26 \div 2$

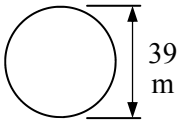
$r =$ 13 cm

2

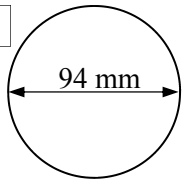


$r =$ 39 $\div$ 2

$r =$ 19.5 m

Write the units

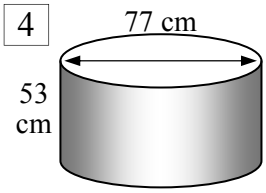
3



$r = 94 \div 2$

$r = 47$ mm

4

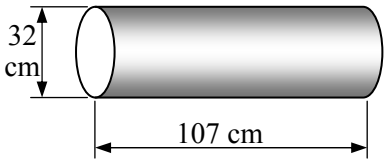


$r = 77 \div 2$

$r =$ 38.5 cm

Write the units

5

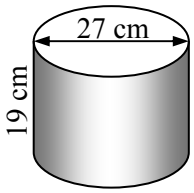


$r = 32 \div 2$

$r = 16$ cm

Calculate the radius first, then find the SA of the cylinder, round your answer to 1 decimal place.

Example



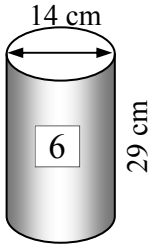
$r = 13.5$ cm

$SA = 2\pi r^2 + 2\pi rh$

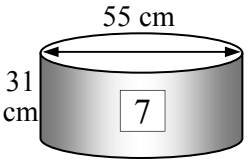
$= 2 \times \pi \times 13.5^2 + 2 \times \pi \times 13.5 \times 19$

$SA = 2\,756.7$ cm^2 (1 d.p.)

This is surface area so show square units



$r =$ 7 cm



$r =$ 27.5 cm

6 $SA = 2\pi r^2 + 2\pi rh$

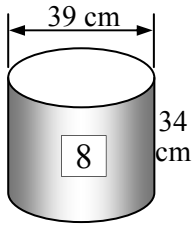
$= 2 \times \pi \times$ 7 $^2 + 2 \times \pi \times$ 7 $\times$ 29

$SA =$ 1 583.4 cm^2

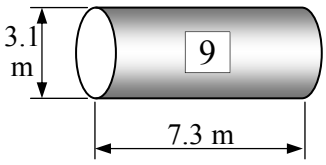
7 $SA = 2\pi r^2 + 2\pi rh$

$= 2 \times \pi \times 27.5^2 + 2 \times \pi \times 27.5 \times 31$

$SA =$ 10 108.1 cm^2



$r = 19.5$ cm



$r = 1.55$ m

Don't round the radius

8 $SA = 2\pi r^2 + 2\pi rh$

$= 2 \times \pi \times 19.5^2 + 2 \times \pi \times 19.5 \times 34$

$SA = 6\,554.9$ cm^2

9 $SA = 2\pi r^2 + 2\pi rh$

$= 2 \times \pi \times 1.55^2 + 2 \times \pi \times 1.55 \times 7.3$

$SA = 86.2$ m^2

Find the SA of the water tank to 1 decimal place.

'WeSaveU' cylindrical water tanks are 3.6 m high and 4.3 m in diameter.

10 What is the tank's radius? $r = 2.15$ m

Don't round the radius

11 Calculate the surface area of the tank.

$SA = 2\pi r^2 + 2\pi rh$

$= 2 \times \pi \times 2.15^2 + 2 \times \pi \times 2.15 \times 3.6$

$SA = 77.7$ m^2

12 If powder coating costs \$6.78/m^2, estimate the cost to coat the tank, answer to the nearest \$10.

Cost = 77.7 × 6.78 = \$526.81 = \$530

13 If Teresa pays cash she gets a \$150 discount. The tank (uncoated) costs \$2 990, calculate the price paid with powder coating added and a discount for cash applied.

Price = 2 990 + 530 –150 = \$3 370 or

Price = 2 990 + 526.81 –150 = \$3 366.81

14 If the sheet metal that is used to build the tank weighs 0.8 kg/m^2. Calculate the weight of the empty tank.

Weight = 77.7 × 0.8 = 62.16 kg (62.2 kg - 1d.p.)

Surface Area - Cylinders (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Date Due:

Calculate these to 1 decimal place.

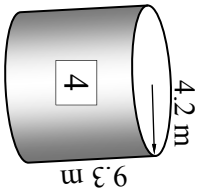
1 $2 \times \pi \times 6^2 + 2 \times \pi \times 6 \times 11$

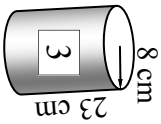
$= 640.9$

2 $2 \times \pi \times 12^2 + 2 \times \pi \times 12 \times 25$

$= 2\,789.7$

Find the SA to 1 decimal place





3 $SA = 2\pi r^2 + 2\pi rh$

$= 2 \times \pi \times 8^2 + 2 \times \pi \times 8 \times 23$

$SA = 1\,558.2 \text{ cm}^2$

4 $SA = 2\pi r^2 + 2\pi rh$

$= 2 \times \pi \times 4.2^2 + 2 \times \pi \times 4.2 \times 9.3$

$SA = 356.3 \text{ m}^2$

Surface Area - Find a Word

Look for words in the list at the bottom of the grid. Once you find a word cross it off the list.

A letter could be used more than once so don’t colour it in too dark (using a texta for example) so that you can still read it.

Surface Area - Find a Word

A rectangular room is 2.4 m × 3.7 m × 4.1 m in size.
Calculate the surface area of the entire room.
Answer to 1 decimal place.

17

A rectangular cereal box has sides 23 cm, 35 cm & 6 cm.
Calculate the total surface area of the cardboard box.

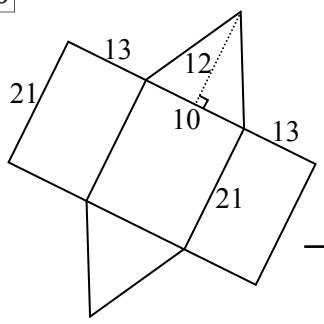
18

An advertisement on the back of the cereal box (above) occupies an area of 358 cm^2. What percentage of the surface area is taken by the advertisement.
Answer to the nearest whole percent.

19

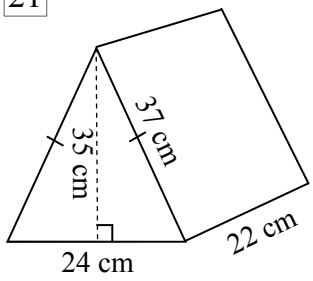
Calculate the total surface area of the triangular prism shown below as a net. All measurements are in cm.

20

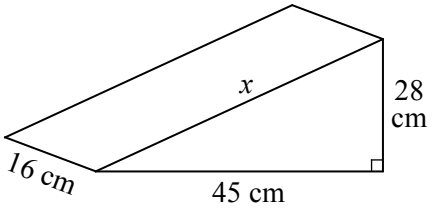


Calculate the surface area of these two triangular prisms.

21

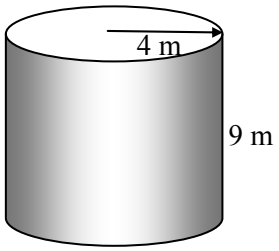


22

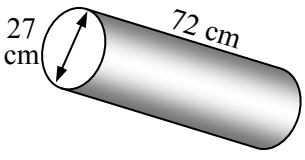


Calculate the surface area of these two cylinders. Use:
$SA = 2\pi r^2 + 2\pi rh$
Round your answer to 2 decimal places.

23



24



Surface Area - Topic Review

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Name these solids.

1 
cone

2 
cube

3 
cylinder

4 
Rectangular prism

5 
Triangular prism

6 
Square pyramid

Two Word Description

Name the solids shown below as nets.

7 
Cube

8 
Cylinder

9 
Triangular prism

10 
Rectangular prism

11 
Hexagonal pyramid

12 
Triangular pyramid (Tetrahedron)

Add the face areas to calculate the total surface area

13 
$SA = 6 \times 16$

$SA = 96 \text{ cm}^2$

14 
$SA = 2 \times 96$

$+ 2 \times 336$

$+ 2 \times 504$

$SA = 1\,872 \text{ cm}^2$

Use $SA = 6l^2$ to calculate the surface area of these cubes. Answer to 1 decimal place.

15 
$SA = 6l^2$

$= 6 \times 3.5^2$

$SA = 73.5 \text{ m}^2$

16 
$SA = 6l^2$

$= 6 \times 17.9^2$

$SA = 1\,922.5 \text{ cm}^2$

Calculate the surface area of the rectangular prism.

17 
$SA = 2 \times 23 \times 9$

$+ 2 \times 23 \times 15$

$+ 2 \times 9 \times 15$

$SA = 1\,374 \text{ cm}^2$

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

A rectangular room is 2.4 m × 3.7 m × 4.1 m in size. Calculate the surface area of the entire room. Answer to 1 decimal place.

17

$SA = 2 \times 2.4 \times 3.7$

$+ 2 \times 2.4 \times 4.1$

$+ 2 \times 3.7 \times 4.1$

$SA = 67.8 \text{ m}^2$

A rectangular cereal box has sides 23 cm, 35 cm & 6 cm. Calculate the total surface area of the cardboard box.

18

$SA = 2 \times 23 \times 35$

$+ 2 \times 23 \times 6$

$+ 2 \times 35 \times 6$

$SA = 2\,306 \text{ cm}^2$

An advertisement on the back of the cereal box (above) occupies an area of 358 cm^2. What percentage of the surface area is taken by the advertisement. Answer to the nearest whole percent.

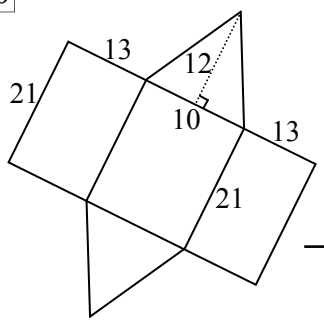
19

$\text{Area \%} = \dfrac{358}{2\,306} \times 100$

Area % = 16% (15.5247….)

Calculate the total surface area of the triangular prism shown below as a net. All measurements are in cm.

20



$SA = 2 \times ½ \times 10 \times 12$

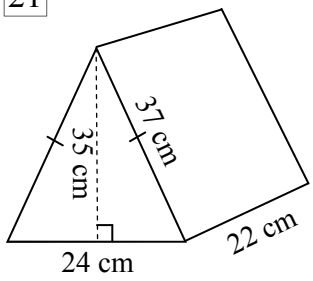
$+ 2 \times 21 \times 13$

$+ 21 \times 10$

$SA = 876 \text{ cm}^2$

Calculate the surface area of these two triangular prisms.

21



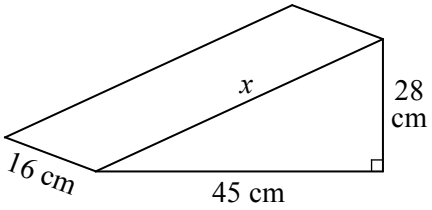
$SA = 2 \times ½ \times 24 \times 35$

$+ 2 \times 37 \times 22$

$+ 24 \times 22$

$SA = 2\,996 \text{ cm}^2$

22



$x^2 = 28^2 + 45^2$

$x^2 = 2\,809$

$x = \sqrt{2\,809}$

$x = 53 \text{ cm}$

$SA = 2 \times ½ \times 45 \times 28$

$+ 28 \times 16$

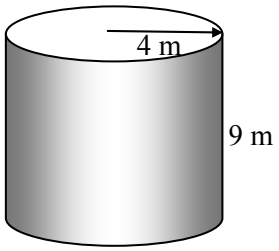
$+ 45 \times 16$

$+ 53 \times 16$

$SA = 3\,276 \text{ cm}^2$

Calculate the surface area of these two cylinders. Use: $SA = 2\pi r^2 + 2\pi rh$ Round your answer to 2 decimal places.

23

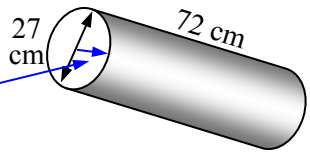


$SA = 2\pi r^2 + 2\pi rh$

$= 2 \times \pi \times 4^2 + 2 \times \pi \times 4 \times 9$

$SA = 326.73 \text{ m}^2$ (326.725636)

24



$r = 13.5 \text{ cm}$

$SA = 2\pi r^2 + 2\pi rh$

$= 2 \times \pi \times 13.5^2 + 2 \times \pi \times 13.5 \times 72$

$SA = 7\,252.37 \text{ cm}^2$ (7 252.366641)

Surface Area - Face Areas and Edges (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The grid below is in 1 cm^2. Measure the edge lengths and write their lengths (in cm) in the boxes. The surface area can be measured in two ways. By counting all the squares in each net or using the edge lengths to find the area, then adding the areas together and doubling the answer. Find the surface area using both methods.

1

Grid squares = ☐ cm^2 ← Count all the squares in the net in Q1 and write it here.

Grey = 1 × 3 = ☐

Spotty = 2×3 = ☐

White = 2×1 = ☐

Total = ☐ cm^2

SA = 2 × ☐ = ☐ cm^2

2

3

2 Grid squares = ☐ cm^2

Surface Area - Cubes and Rectangular Prisms Problems

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the SA of these tool boxes!

A steel rectangular shaped toolbox is 35 cm wide, 20 cm high and 25 cm deep, draw a diagram and find the SA

Diagram - Use a Ruler

1

2 SA = 2 × ☐ × ☐

\+ 2 × ☐ × ☐

\+ 2 × ☐ × ☐

SA = ☐ cm^2

Double each of the sides of the tool box.

3 35: 2 × 35 = ☐ cm

20: 2 × 20 = ☐ cm

25: 2 × 25 = ☐ cm

Draw a diagram and then find the SA of the enlarged tool box.

Diagram - Use a Ruler

4

5 SA = 2 × ☐ × ☐

\+ 2 × ☐ × ☐

\+ 2 × ☐ × ☐

SA = ☐ cm^2

Divide (÷) the larger tool box's SA by the smaller tool box's SA.

6 ☐ (Larger Area) / ☐ (Smaller Area) = ☐

Complete this statement

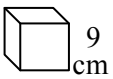
7 When I double the side lengths of a rectangular prism the SA is multiplied by a factor of ☐.

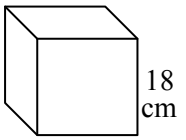
Apply to cubes, find the SA.

8 $SA = 6l^2$

$= 6 \times$ ☐^{2}

SA = ☐ cm^2





Divide the larger cube's SA by the smaller cube's SA.

9 ☐ / ☐ = ☐

Make a statement about the size & SA

10 When I double _____

Jen measures her room, its floor size is 3.7 m by 4.5 m, and the ceiling height is 2.4 m. Calculate the SA of the room.

11 SA = 2 × ☐ × ☐

\+ 2 × ☐ × ☐

\+ 2 × ☐ × ☐

SA = ☐ m^2

Calculate the floor area of the room. Floor size is 3.7 m by 4.5 m.

12 A = ☐ × ☐

A = ☐ m^2

The ceiling and walls are to be re-plastered. Find their area.

13 A = ☐ (Room SA) - ☐ (Floor Area)

A = ☐

Remember units

The plaster sheets are 1.2 m by 2.4 m, calculate the area of one plaster sheet.

14 A = ☐ × ☐

A = ☐

How many **FULL** sheets are required to plaster Jen's ceiling and walls?

15 ☐ (Q13) / ☐ (Q14) = ☐ sheets

A box of 'Oaties' cereal is 0.32 m by 0.23 m by 0.06 m. Find the box's SA.

16 _____

Don't round your answer

The company produces 30 000 boxes in a day, what is the area of cardboard needed per day (ignoring seams)?

17 _____

If cardboard is supplied in rolls of 220 m^2. How many complete rolls are required for one day's production?

18 _____

Surface Area - Area of Triangles and Rectangles (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

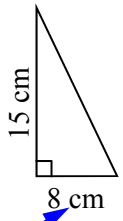
Find the area of these triangles. Use A = ½*bh*, using either 0.5 or ½ on your calculator.

Example

A = ½*bh*

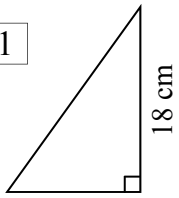
= ½×8×15

A = 60 cm^2



units^2 must match

1

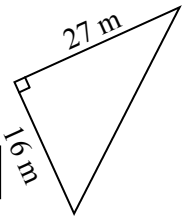


A = ½*bh*

= ½× ☐ × ☐

A = ☐ cm^2

2

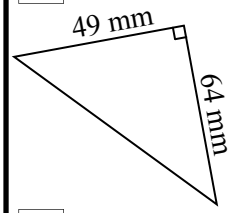


A = ½*bh*

= ½ × ☐ × ☐

A = ☐ m^2

3

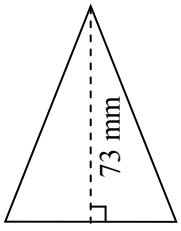


A =

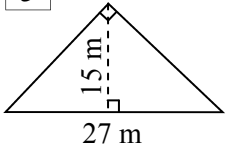
A =

Show square units

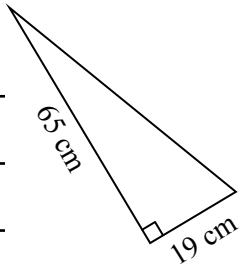
4



5

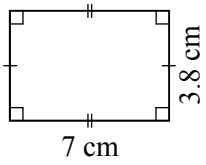


6



Now rectangles. Use A=*lb* to find the area, round to 1 d.p. when required.

Example



A = *lb*

= 7 × 3.8

A = 26.6 cm^2

Show square units

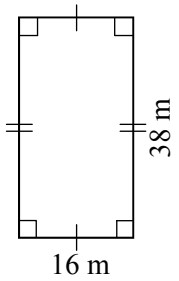
7

A = *lb*

= ☐ × ☐

Multiply, in any order

A = ☐ m^2



8

Surface Area - Triangular Prisms Method Sheet (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use the Δ, □, ◊ and ○ to help you to find the SA of these triangular prisms. All measurements are in cm.

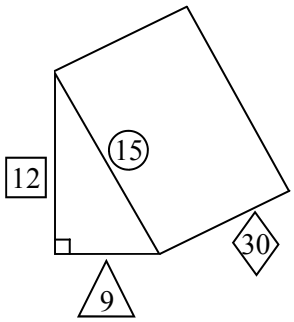
1 SA = 2×½× △ × □

\+ △ × ◊

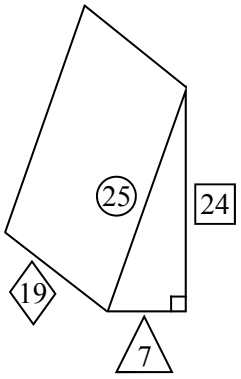
\+ □ × ◊

\+ ○ × ◊

SA = _____ cm^2



2



SA = 2×½× △ × □

\+ △ × ◊

\+ □ × ◊

\+ ○ × ◊

SA = _____ cm^2

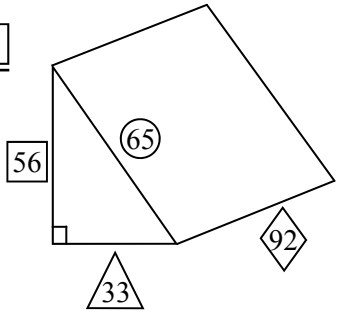
3 SA = 2×½× △ × □

\+ △ × ◊

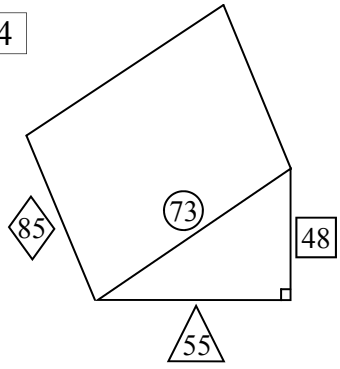
\+ □ × ◊

\+ ○ × ◊

SA = _____



4



SA = × × △ × □

Write the '2' and the '½' above

\+ △ × ◊

\+ □ × ◊

\+ ○ × ◊

SA = _____

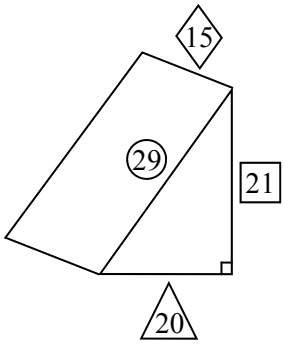
5 SA = × × △ × □

\+ △ × ◊

\+ □ × ◊

\+ ○ × ◊

SA = _____



6 SA = 2×½× △ × □

\+ △ × ◊

\+2 × ○ × ◊

SA = _____ cm^2

15 is the perpendicular height

These are isosceles triangles. Careful!

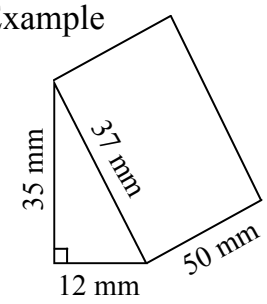
Surface Area - Triangular Prisms (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the surface area of these triangular prisms.

Example



$SA = 2 \times \frac{1}{2} \times 12 \times 35$

$+ 12 \times 50$

$+ 35 \times 50$

$+ 37 \times 50$

$SA = 4\,620 \text{ mm}^2$

1

base height

$SA = 2 \times \frac{1}{2} \times \square \times \square$

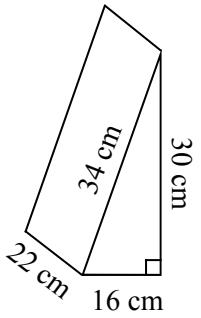
$+ \square \times \square$

$+ \square \times \square$

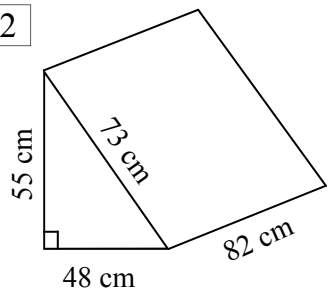
$+ \square \times \square$

Front three edges, all × 22

$SA = \square \text{ cm}^2$



2



base height

$SA = 2 \times \frac{1}{2} \times \square \times \square$

$+ \square \times \square$

$+ \square \times \square$

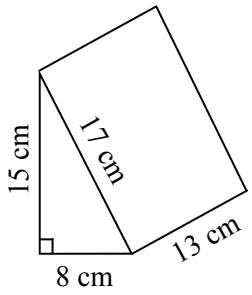
$+ \square \times \square$

Front 3 edges, all × 82

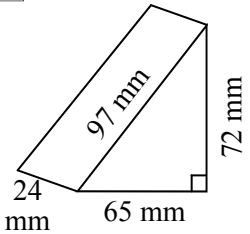
$SA = \square \text{ cm}^2$

3

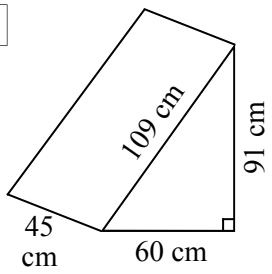
Remember square units



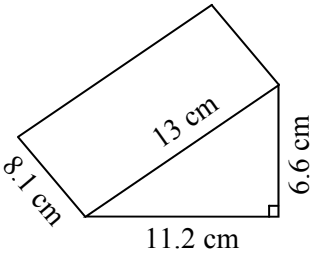
4



5

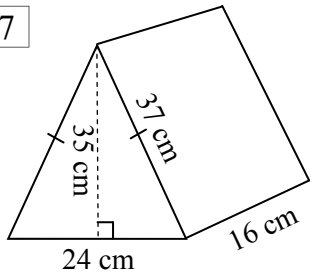


6



These have matching pairs of sides, so you can double the repeated side. Find the surface area.

7



base height

$SA = 2 \times \frac{1}{2} \times \square \times \square$

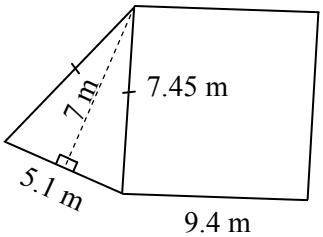
$+ \square \times \square$ base rectangle

$+ 2 \times \square \times \square$

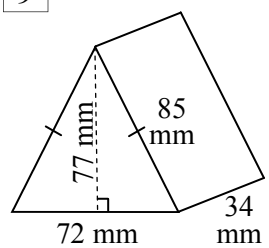
2 × identical (slanted) rectangles

$SA = \square \text{ cm}^2$

8



9

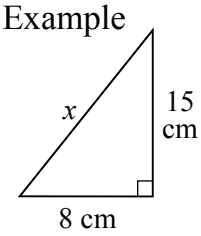


Surface Area - Triangular Prisms using Pythagoras Theorem (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use Pythagoras Theorem (only addition) for these. Find the length of the hypotenuse. All lengths are whole numbers.

Example



$x^2 = 8^2 + 15^2$

$x^2 = 289$

$x = \sqrt{289}$

$x = 17$ cm

1

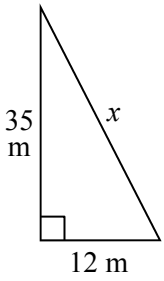
$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ m

Answer is a whole number



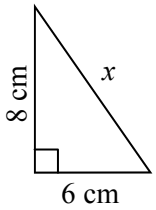
2

$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ cm



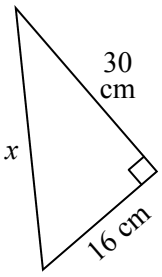
3

$x^2 =$

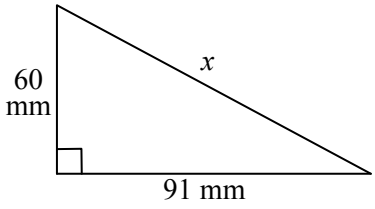
$x^2 =$

$x =$

$x =$



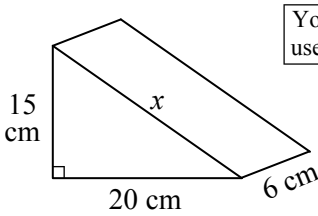
4



Use Pythagoras Theorem (only addition) to find the length '*x*'.

5

You don't use the '6'



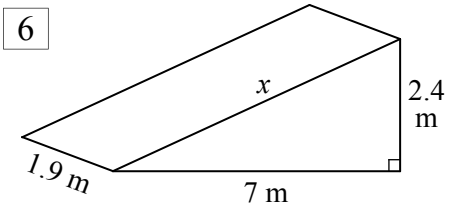
$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$

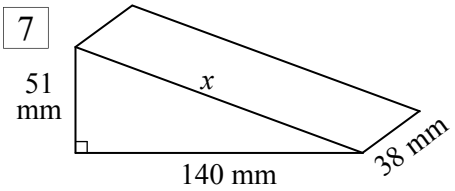
$x =$

$x =$

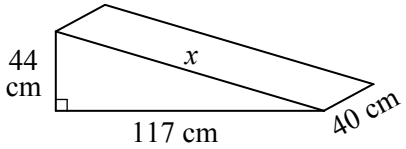
6



7

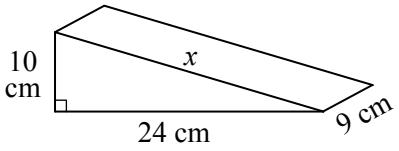


8



Find the length '*x*' first, then calculate the surface area

9



$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ cm

Now calculate the surface area

SA = 2 × ½ × ☐ × ☐

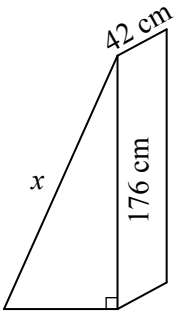
+ ☐ × 9

+ ☐ × 9

+ ☐ × 9

SA = ☐ cm^2

10



$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ cm

Now calculate the surface area

SA = 2 × ½ × ☐ × ☐

+ ☐ × ☐

+ ☐ × ☐

+ ☐ × ☐

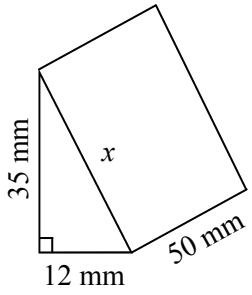
SA = ☐ cm^2

Surface Area - Triangular Prisms using Pythagoras Theorem (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the SA of these triangular prisms. Pythagoras Theorem is required as a 1st step.

Example



$x^2 = 12^2 + 35^2$

$x^2 = 1\ 369$

$x = \sqrt{1\ 369}$

$x = 37$ mm

$SA = 2 \times ½ \times 12 \times 35$

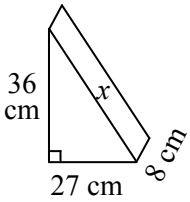
$+ 12 \times 50$

$+ 35 \times 50$

$+ 37 \times 50$

$SA = 4\ 620$ mm^2

1



$x^2 = \square^2 + \square^2$

$x^2 = \square$

$x = \sqrt{\square}$

$x = \square$ cm

$SA = 2 \times ½ \times \square \times \square$

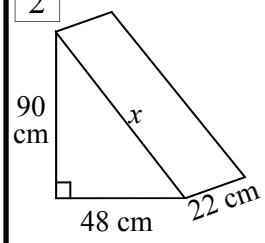
$+ \square \times \square$

$+ \square \times \square$

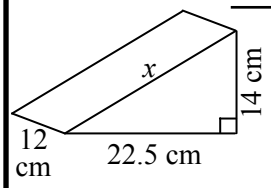
$+ \square \times \square$

$SA = \square$ cm^2

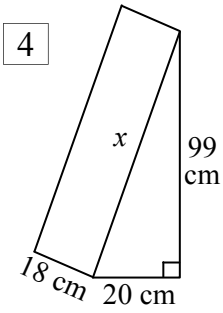
2



3

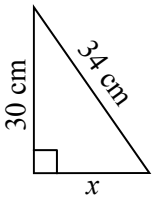


4



Use Pythagoras Theorem (subtraction). Find the length of the short side.

5



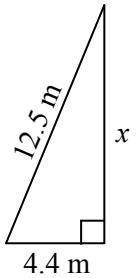
$x^2 = \square^2 - \square^2$

$x^2 = \square$

$x = \sqrt{\square}$

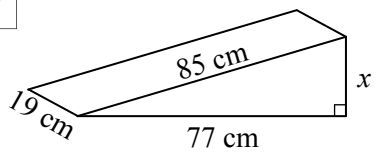
$x = \square$ cm

6



Find the SA of these triangular prisms.

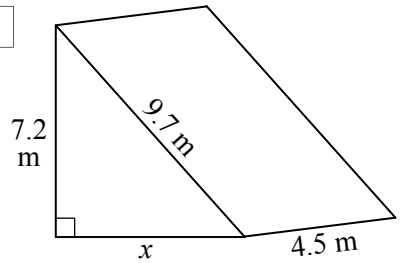
7



Calculate the triangle's height (P.T. minus)

Calculate the triangular prism's surface area

8



Calculate the triangle's base length

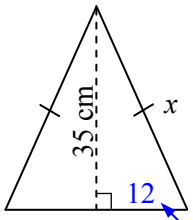
Calculate the triangular prism's surface area

Surface Area - Further Triangular Prisms & Pythagoras Theorem (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Halve the base first, then use P.T. to find the length 'x'. All lengths are whole numbers.

Example



$x^2 = 12^2 + 35^2$

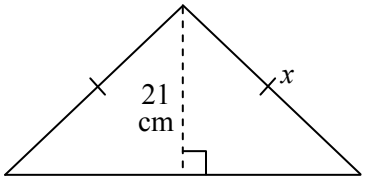
$x^2 = 1\,369$

$x = \sqrt{1\,369}$

$x = 37$ cm

24 ÷ 2

1



$x^2 =$ ☐^{2} + ☐^{2}

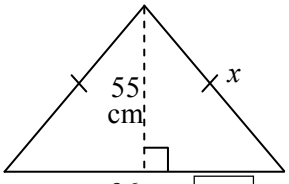
$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ cm

Answer is a whole number

2



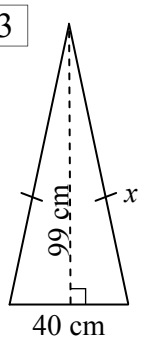
$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

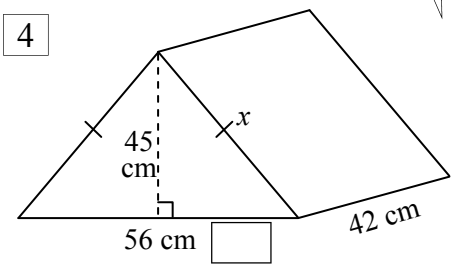
$x =$ ☐ cm

3



Halve the base, find 'x' using P.T., then the SA …. R U OK?

4



$x^2 =$ ☐^{2} + ☐^{2}

$x^2 =$ ☐

$x = \sqrt{}$ ☐

$x =$ ☐ cm

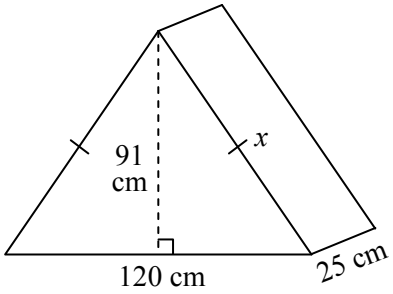
SA = 2 × ½ × 56 × 45

+ 2 × ☐ × 42 (☐ = x)

+ 56 × 42

SA = ☐ cm^2

5



$x^2 =$

$x^2 =$

$x =$

$x =$

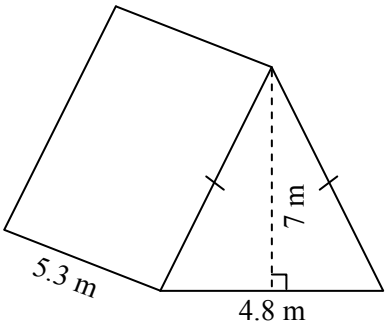
SA = 2 × ½ × ☐ × ☐

+ 2 × ☐ × ☐

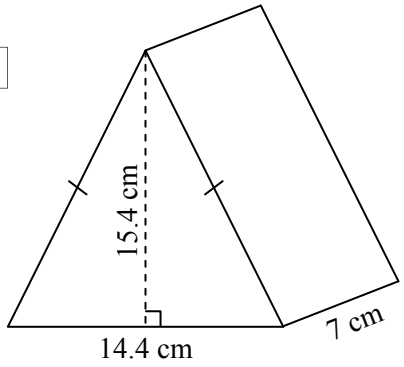
+ ☐ × ☐

SA = ☐ cm^2

6



7

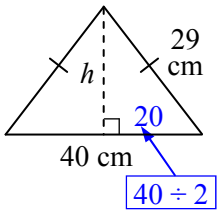


Surface Area - Further Triangular Prisms & Pythagoras Theorem (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Halve the base, then use P.T. (subtraction) to find the height 'h'. Heights are whole numbers.

Example



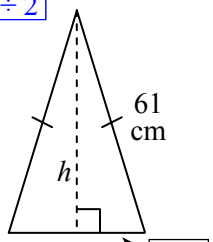
$h^2 = 29^2 - 20^2$

$h^2 = 441$

$h = \sqrt{441}$

$h = 21$ cm

1



$h^2 =$ ☐^{2} - ☐^{2}

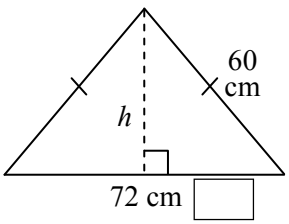
$h^2 =$ ☐

$h = \sqrt{}$☐

$h =$ ☐ cm

Answer is a whole number

2



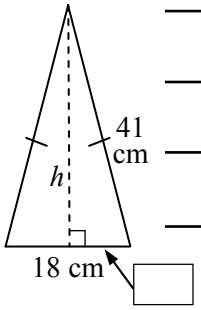
$h^2 =$ ☐^{2} - ☐^{2}

$h^2 =$ ☐

$h = \sqrt{}$☐

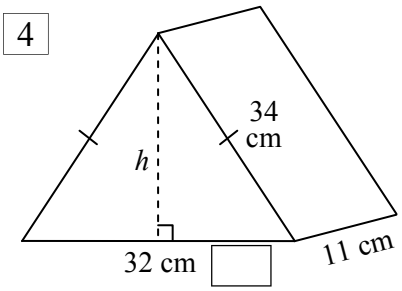
$h =$ ☐ cm

3



Halve the base, find 'h' using P.T., then calculate the SA.

4



$h^2 =$ ☐^{2} - ☐^{2}

$h^2 =$ ☐

$h = \sqrt{}$☐

$h =$ ☐ cm

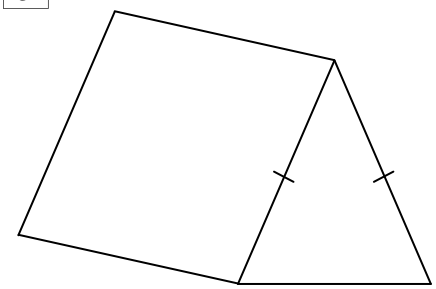
SA = 2 × ½ × 32 × ☐ (h)

+ 2 × 34 × 11

+ 32 × 11

SA = ☐ cm^2

5



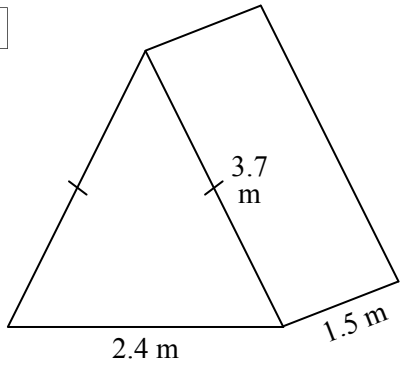
SA = 2 × ½ × ☐ × ☐

+ 2 × ☐ × ☐

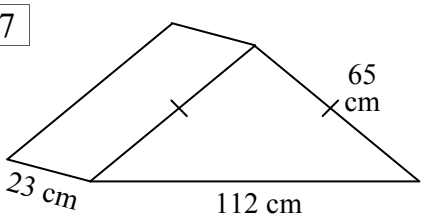
+ ☐ × ☐

SA = ☐ mm^2

6



7



Surface Area - Cylinders (Sheet 1)

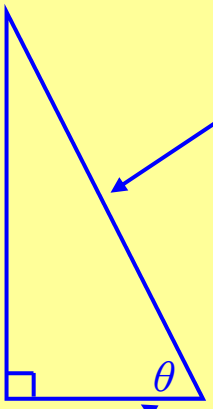
Trigonometry - Naming the Sides

Trigonometry begins with first getting the basics right. The most essential skill to start using trigonometry to solve questions is naming the three sides of a triangle. If you get this wrong the entire process collapses and so it is essential that you are able to name the three sides. The good news is that it is a straight-forward process.

A triangle consists of three sides, they are:



THE HYPOTENUSE (H)

The hypotenuse should be the first side you find. It is the longest side of the triangle so is easy to pick, it also doesn't depend on the position of the angle θ. Note that the hypotenuse is always opposite the right angle.

THE OPPOSITE SIDE (O)

The opposite side should be the last side you find. As you have already found H and A. Note that the opposite side doesn't touch the angle.

THE ADJACENT SIDE (A)

The adjacent side should be the second side you find. The angle θ is always held by the hypotenuse and the adjacent side. So it and the hypotenuse 'touch' or create the angle.

The sheet starts with naming three sides of a triangle. Just like above, just start with H, then A, then O. The second and third column require you to name two sides only. When you use trigonometry to calculate angles in triangles in later exercises you will require two sides only. There is less chance of confusion if you just label two sides as it makes the choice of trig function less confusing.

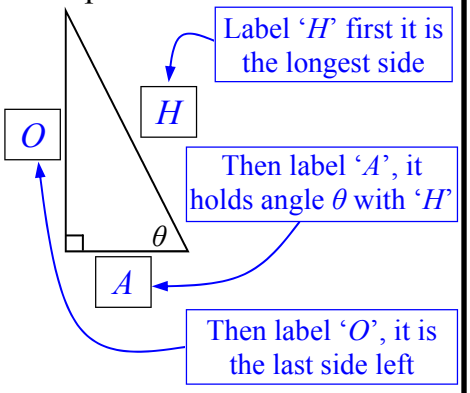
The second sheet is a variation of the first sheet, it also asks you to measure lengths.

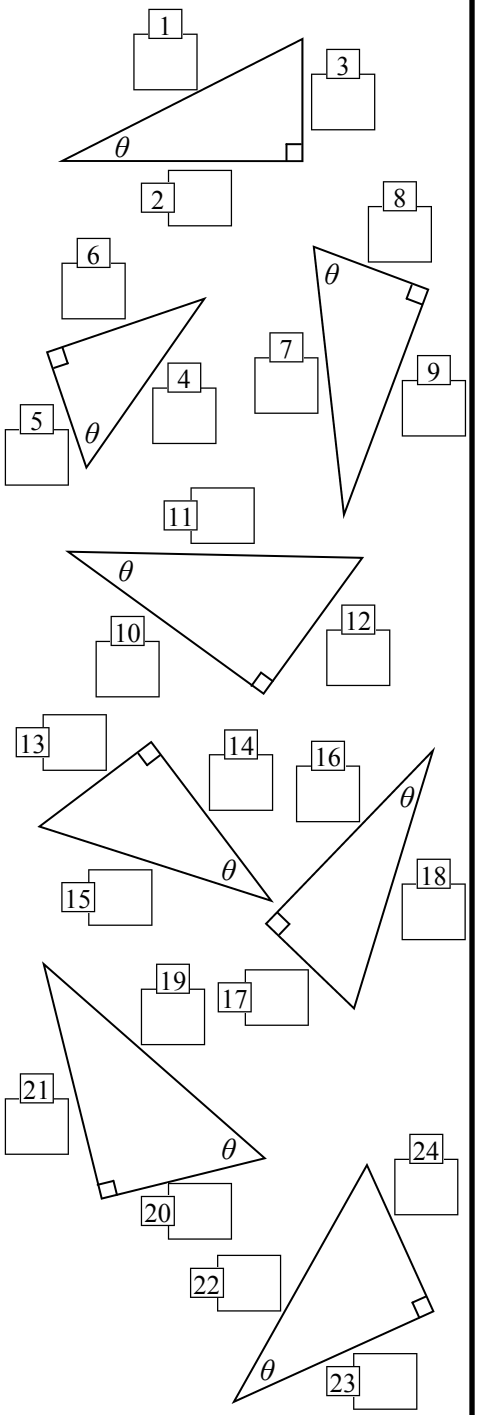
Trigonometry - Naming the Sides (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

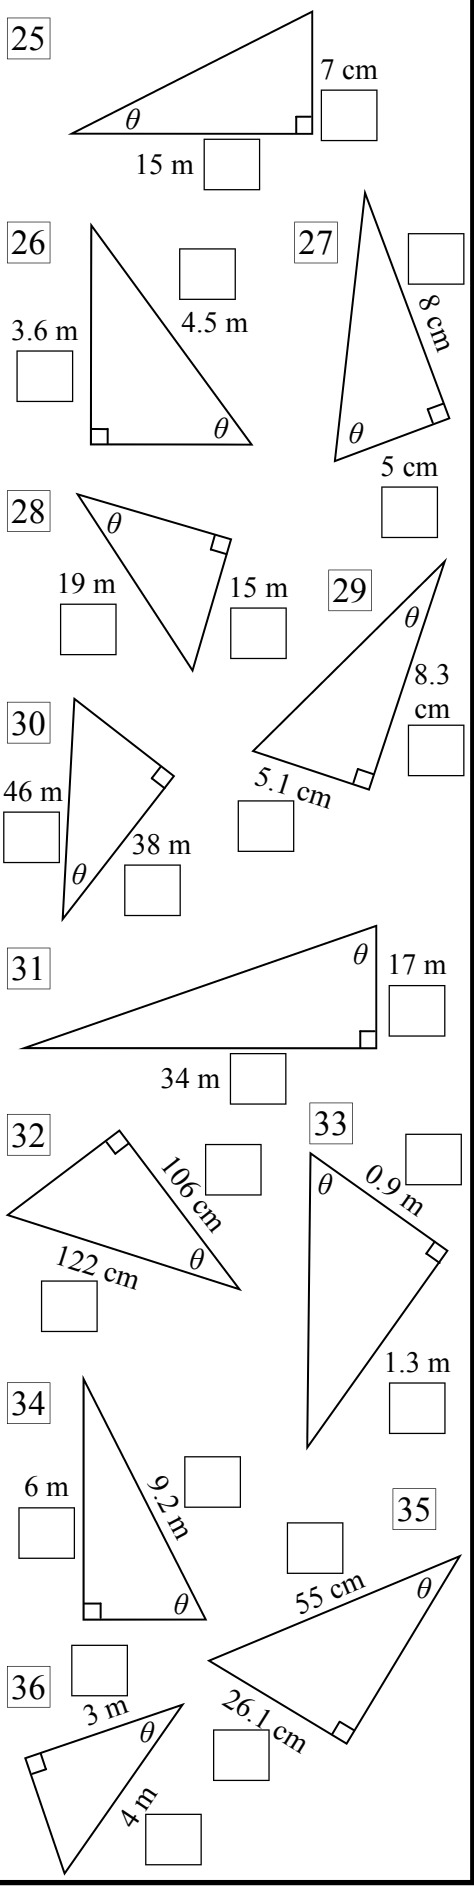
Label the sides as '*O*', '*A*' and '*H*'. Start with '*H*', the angle is always held by '*A*' and '*H*'.

Example:

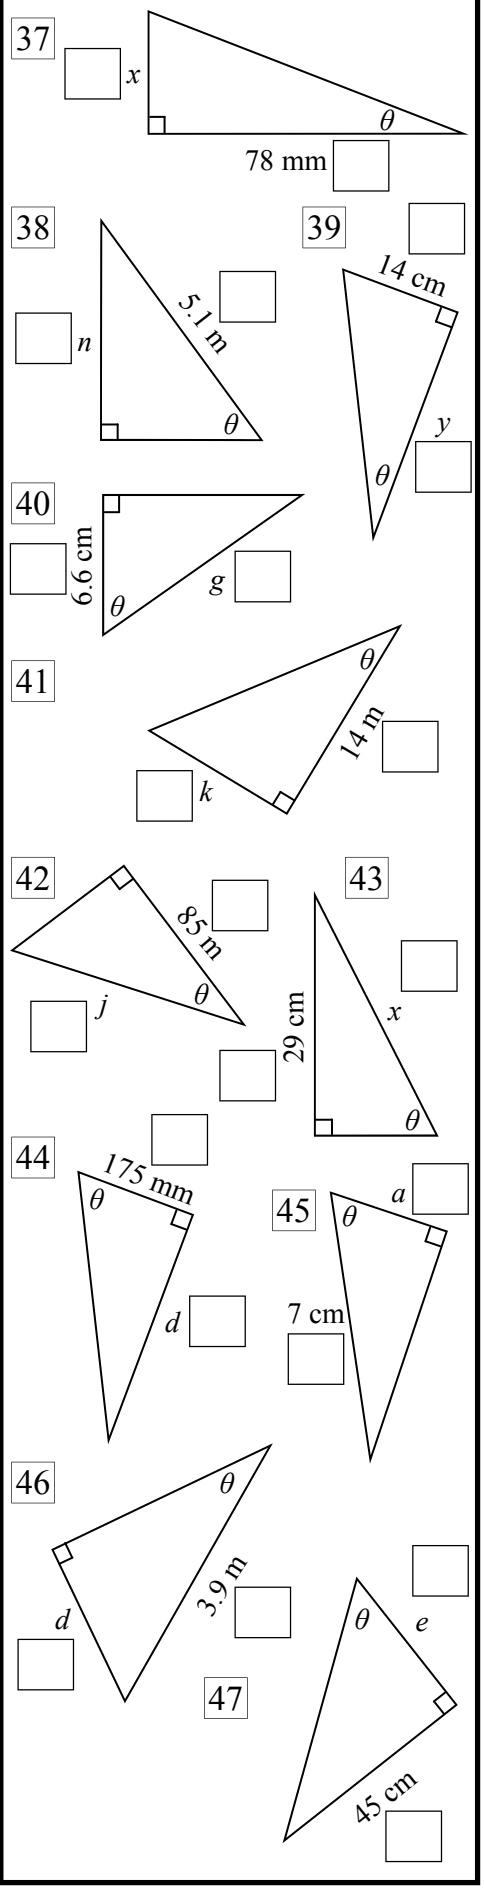




Only label two sides now. If a side has no number, don't label it. Use either '*O*', '*A*' or '*H*'.



These are the same except there is a number and a term. Label two sides '*O*', '*A*' or '*H*'.

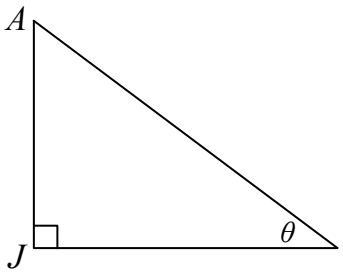


Trigonometry - Naming the Sides (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use a ruler to measure the lengths of each side and write the name of the side and its length (whole cm) in the box.

1



Hypotenuse: Name ____ Length ____ *cm*

Adjacent: Name ____ Length ____ *cm*

Opposite: Name ____ Length ____ *cm*

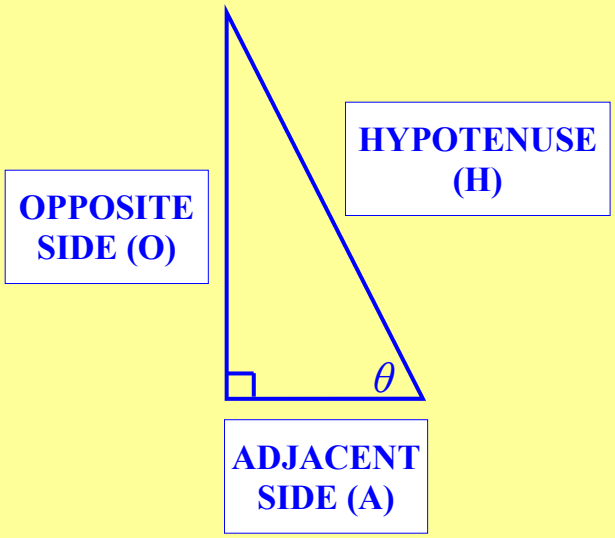
Trigonometry - Trigonometric Ratios

Trigonometric ratios involves creating fractions using the three sides of a triangle. The fractions are created using this rule:

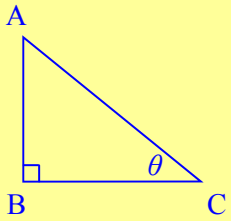


SOH CAH TOA

$\sin\theta = \frac{O}{H}$ $\cos\theta = \frac{A}{H}$ $\tan\theta = \frac{O}{A}$

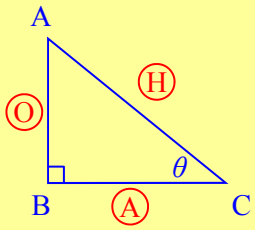
Like normal fractions these can be numbers. But unlike fractions, these can also involve letters, including pairs of letters. Here are some examples.

Example: Find the trigonometric ratios for the triangle shown.



STEP 1

LABEL THE SIDES

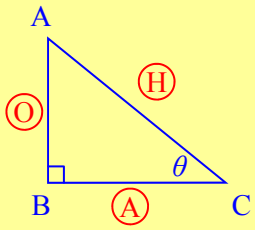


LABEL THE SIDES

Always label the sides O, A, and H. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with letters on the vertices of the triangle.

STEP 2

FIND THE RATIOS

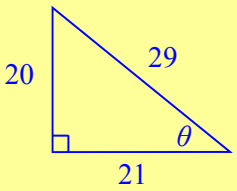


FIND THE TRIG RATIOS

Use SOH CAH TOA to remember the ratios, and construct the ratios. Use two letters to name each side, answers can vary because letters can be backwards. For example the hypotenuse is both 'AC' and 'CA'.

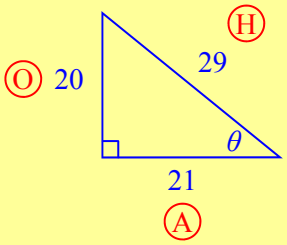
$\sin\theta = \frac{O}{H} = \frac{AB}{AC}$ $\cos\theta = \frac{A}{H} = \frac{BC}{AC}$ $\tan\theta = \frac{O}{A} = \frac{AB}{BC}$

Example: Find the trigonometric ratios for the triangle shown.



STEP 1

LABEL THE SIDES

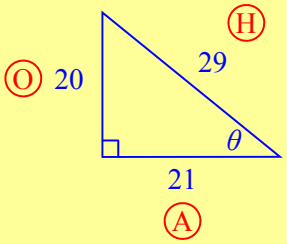


LABEL THE SIDES

Always label the sides O, A, and H.

STEP 2

FIND THE RATIOS

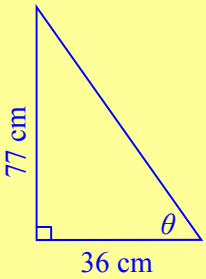


FIND THE TRIG RATIOS

Use SOH CAH TOA to remember the ratios, and construct the ratios. Use the numbers on each side,

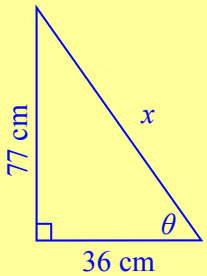
$$\sin\theta = \frac{O}{H} = \frac{20}{29} \qquad \cos\theta = \frac{A}{H} = \frac{21}{29} \qquad \tan\theta = \frac{O}{A} = \frac{20}{21}$$

Example: Find the trigonometric ratios for the triangle shown.



STEP 1

USE PYTHAGORAS



$$x^2 = 36^2 + 77^2$$

$$x^2 = 7\,225$$

$$x = \sqrt{7\,225}$$

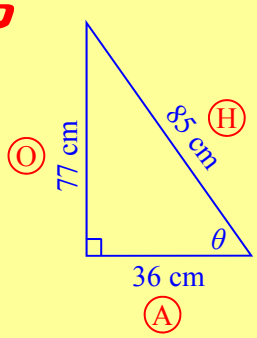
$$x = 85 \text{ cm}$$

USE PYTHAGORAS THEOREM

You need three sides to find all three trig ratios. So before you start the trig, you first need to find the missing side length. Because the hypotenuse is the unknown side, use P.T. addition.

STEP 2

LABEL THE SIDES



STEP 3

FIND THE RATIOS

$$\sin\theta = \frac{O}{H} = \frac{77}{85}$$

$$\cos\theta = \frac{A}{H} = \frac{36}{85}$$

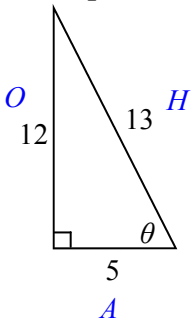
$$\tan\theta = \frac{O}{A} = \frac{77}{36}$$

Trigonometry - Trigonometric Ratios (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Label the sides as '*O*', '*A*' and '*H*'. Then find sin θ, cos θ and tan θ. Use *SOH CAH TOA!*

Example:



$$\sin\theta = \frac{O}{H} = \frac{12}{13}$$

$$\cos\theta = \frac{A}{H} = \frac{5}{13}$$

$$\tan\theta = \frac{O}{A} = \frac{12}{5}$$

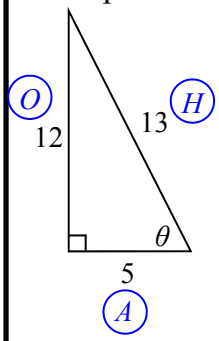
Label the sides as '*O*', '*A*' and '*H*'. Then find sin θ, cos θ and tan θ. Use *SOH CAH TOA!*

Example:

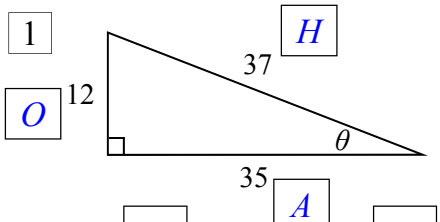


$\sin\theta = \frac{O}{H} = \frac{12}{13}$

$\cos\theta = \frac{A}{H} = \frac{5}{13}$

$\tan\theta = \frac{O}{A} = \frac{12}{5}$

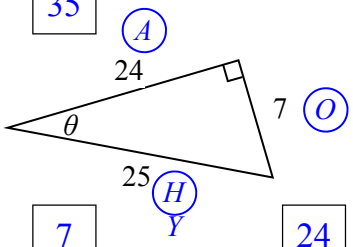
1



$\sin\theta = \frac{12}{35}$ $\quad \cos\theta = \frac{35}{37}$

$\tan\theta = \frac{12}{35}$

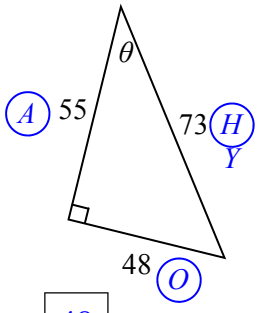
2



$\sin\theta = \frac{7}{25}$ $\quad \cos\theta = \frac{24}{25}$

$\tan\theta = \frac{7}{24}$

3



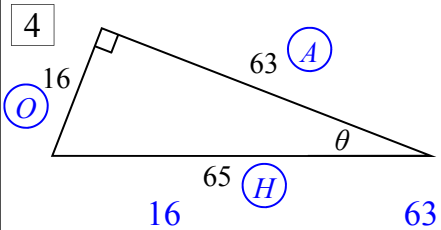
$\tan\theta = \frac{48}{55}$ $\quad \sin\theta = \frac{48}{73}$

$\cos\theta = \frac{55}{73}$

Note: The order of the functions has changed!

SOH CAH TOA

4

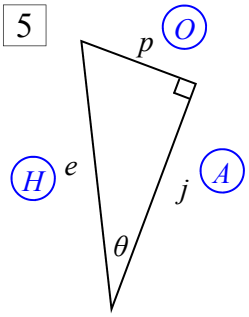


$\sin\theta = \frac{16}{65}$ $\quad \cos\theta = \frac{63}{65}$

$\tan\theta = \frac{16}{63}$

These involve algebra... same process

5



$\cos\theta = \frac{j}{e}$

$\tan\theta = \frac{p}{j}$

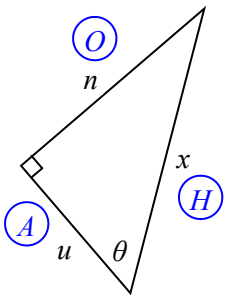
$\sin\theta = \frac{p}{e}$

6

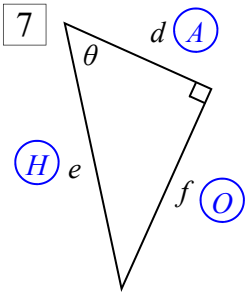
$\sin\theta = \frac{n}{x}$

$\cos\theta = \frac{u}{x}$

$\tan\theta = \frac{n}{u}$



7

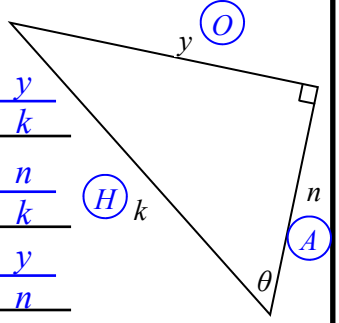


$\sin\theta = \frac{f}{e}$

$\cos\theta = \frac{d}{e}$

$\tan\theta = \frac{f}{d}$

8



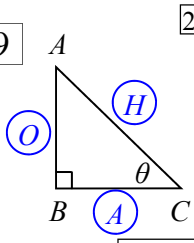
$\sin\theta = \frac{y}{k}$

$\cos\theta = \frac{n}{k}$

$\tan\theta = \frac{y}{n}$

When letters are on the vertices (corners) of the triangle, use two letters to name the sides.

9

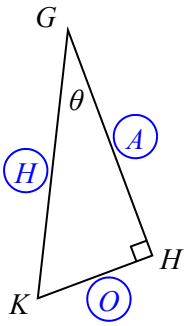


2 letters → $\cos\theta = \frac{BC}{AC}$ (2 letters →)

$\tan\theta = \frac{AB}{BC}$

$\sin\theta = \frac{AB}{AC}$

10

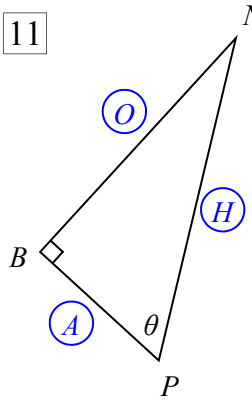


$\sin\theta = \frac{HK}{GK}$

$\cos\theta = \frac{GH}{GK}$

$\tan\theta = \frac{HK}{GH}$

11

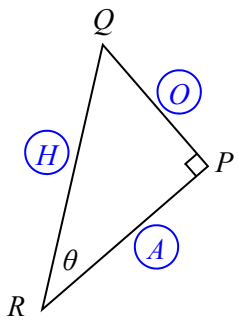


$\sin\theta = \frac{BN}{NP}$

$\cos\theta = \frac{BP}{NP}$

$\tan\theta = \frac{BN}{BP}$

12

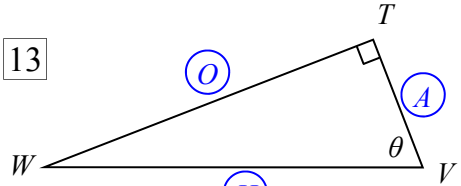


$\sin\theta = \frac{QP}{QR}$

$\cos\theta = \frac{RP}{QR}$

$\tan\theta = \frac{QP}{RP}$

13



$\sin\theta = \frac{WT}{WV}$ $\quad \cos\theta = \frac{TV}{WV}$

$\tan\theta = \frac{WT}{TV}$

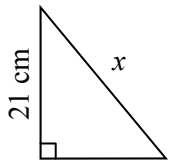
Trigonometry - Trigonometric Ratios (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

When a side measurement is missing use Pythagoras. Review Pythagoras here first.

Use addition to find the hypotenuse

1



$x^2 = 20^2 + 21^2$

$x^2 = 841$

$x = \sqrt{841}$

$x = 29$ cm

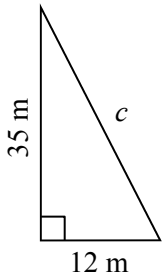
2

$c^2 = 12^2 + 35^2$

$c^2 = 1\,369$

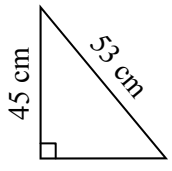
$c = \sqrt{1\,369}$

$c = 37$ m



Use subtraction to find a short side

3



$x^2 = 53^2 - 45^2$

$x^2 = 784$

$x = \sqrt{784}$

$x = 28$ cm

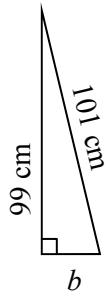
4

$b^2 = 101^2 - 99^2$

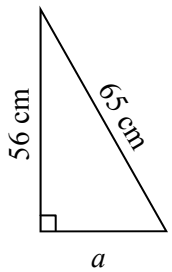
$b^2 = 400$

$b = \sqrt{400}$

$b = 20$ cm



5



$a^2 = 65^2 - 56^2$

$a^2 = 1\,089$

$a = \sqrt{1\,089}$

$a = 33$ cm

SOH CAH TOA

Find the missing side then find the trig ratios for sin θ, cos θ and tan θ.

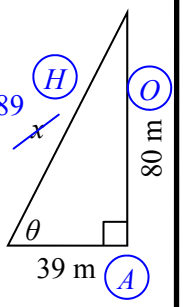
6

$x^2 = 39^2 + 80^2$

$x^2 = 7\,921$

$x = \sqrt{7\,921}$

$x = 89$ m



Label triangle sides *H*, *A* & *O* first!

$\sin\theta = \frac{80}{89}$ $\cos\theta = \frac{39}{89}$

$\tan\theta = \frac{80}{39}$

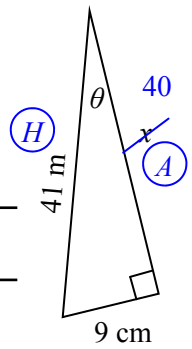
7

$x^2 = 41^2 - 9^2$

$x^2 = 1\,600$

$x = \sqrt{1\,600}$

$x = 40$ m



$\tan\theta = \frac{9}{40}$ $\sin\theta = \frac{9}{41}$

$\cos\theta = \frac{40}{41}$

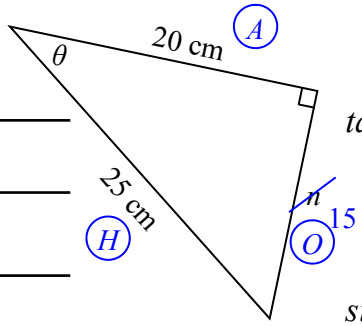
8

$n^2 = 25^2 - 20^2$

$n^2 = 225$

$n = \sqrt{225}$

$n = 15$ cm



$\tan\theta = \frac{15}{20}$ $\cos\theta = \frac{20}{25}$

$\sin\theta = \frac{15}{25}$

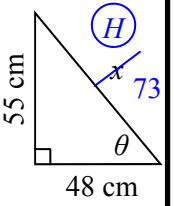
9

$x^2 = 48^2 + 55^2$

$x^2 = 5\,329$

$x = \sqrt{5\,329}$

$x = 73$ cm



$\sin\theta = \frac{55}{73}$ $\cos\theta = \frac{48}{73}$ A

$\tan\theta = \frac{55}{48}$

10

Trigonometry - Calculator Use (Angle)

Trigonometry can be used to calculate the size of an angle in a triangle. Angles are measured in degrees, more accuracy involves degrees and minutes, more accuracy still is degrees, minutes and seconds. This course deals with degrees only.

Rounding to the nearest degree can be done in two ways. You can use decimals to guide you, or use minutes to guide you.

Examples: Round these angles to the nearest degree.

1 57.3º = 57º Because 0.3 is less than 0.5, it rounds down

2 51.7º = 52º Because 0.7 is more (or equal to) than 0.5, it rounds up

Now using degrees, minutes and seconds

1 57º 19’ 38.44’’ = 57º Because 19 is less than 30, it rounds down. SECONDS ARE IGNORED

2 51º 40’ 11.72’’ = 52º Because 40 is more than 30, it rounds up. SECONDS ARE IGNORED

Trigonometry uses a calculator’s trig ratios of sin, cos and tan. It is important that you remember that:

TO GET AN ANGLE YOU USE **SHIFT** THEN THE RATIO

The sheet has questions involving fractions and decimals. Below are examples for both.

Examples: Find θ to the nearest degree

DECIMAL

$\sin\theta = 0.317$ $\theta =$ 18°

Calc: SHIFT or 2ndF SIN 0 • 3 1 7 =

Display 18.48159427

Less than 0.5 so round down

FRACTION

$\cos\theta = \frac{8}{17}$ $\theta =$ 62°

Calc: SHIFT or 2ndF COS 8 ▪/□ 1 7 =

Display 61.92751306

More than 0.5 so round up

USING THE DMS KEY

$\cos\theta = \frac{8}{17}$ $\theta =$ 62°

Calc: SHIFT or 2ndF COS 8 ▪/□ 1 7 = º ’ ’’

Display 61º 55’ 39.05’’

More than 30 so round up

Trigonometry - Calculator Use (Angle)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Round these angles to the nearest degree. No calculator.

Examples

$58.\underline{7}^\circ = 59^\circ$ — More than 0.5 Round UP

$18.\underline{3}^\circ = 18^\circ$ — Less than 0.5 Round DOWN

1 15.8° ____°

2 22.3° ____ Show ° symbol

3 35.7° ____

4 29.8° ____

5 11.73° ____

6 43.2177° ____

7 64.195° ____

8 59.60613° ____

Now complete the calculation and round to the nearest degree.

CALCULATOR IN DEG MODE

Example $\tan\theta = 0.3407$

Calc: SHIFT or 2ndF TAN 0 • 3 4 0 7 =

Display: 18.813……(calc)

Answer: $\theta = 19^\circ$

9 $\tan\theta = 0.556$ $\theta =$ ____°

10 $\sin\theta = 0.12$ $\theta =$ ____°

11 $\cos\theta = 0.5$ $\theta =$ ____ Show ° symbol

12 $\sin\theta = 0.2271$ ____ Write '$\theta =$'

13 $\tan\theta = 1.766$ ____

14 $\sin\theta = 0.4208$ ____

15 $\cos\theta = 0.317$ ____

Complete the calculation to find the angle θ, rounding your answer to the nearest degree.

CALCULATOR IN DEG MODE

16 $\tan\theta = \frac{4}{7}$ $\theta =$ ____°

Calc: SHIFT or 2ndF TAN 4 ▪/□ 7 =

17 $\sin\theta = \frac{7}{9}$ $\theta =$ ____°

10 $\tan\theta = \frac{8}{5}$ $\theta = 58º$

θ = & º symbol

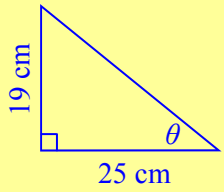
11 $\cos\theta = \frac{7}{11}$ $\theta = 50º$

12 $\sin\theta = \frac{3}{5}$ $\theta = 37º$

Trigonometry - Finding an Angle

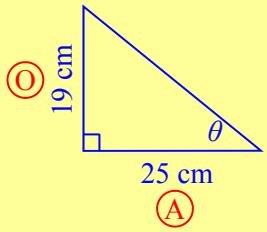
Trigonometry can be used to calculate the size of an angle in a triangle. Below are the steps.

Example: Find the angle θ to the nearest degree



STEP 1

LABEL THE SIDES

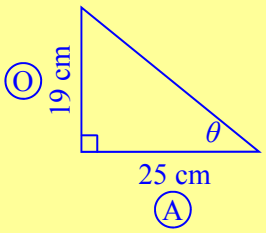


LABEL THE SIDES

Always label the sides O, A, and H. You only have to label the sides that have a measurement on them. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with any letters that may be on the vertices of the triangle.

STEP 2

PICK THE RATIO

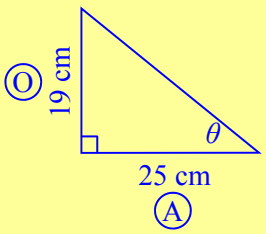


PICK THE RATIO

Write SOH CAH TOA on your page if it isn't there. Then pick the ratio that has the two sides in it. The example has O and A. So this is TOA, which means you use tan to solve this question.

STEP 3

SOLVE



SOLVE

Use the ratio and the two sides to solve, as below.

When you round you can use the decimal as the guide or press the 'DMS' key and use the minutes to guide you whether to round up or down.

$$\tan\theta = \frac{19}{25} \quad \frac{O}{A}$$

Calc: SHIFT or 2ndF TAN 1 9 ■ 2 5 = ° ' '' (optional)

$\theta = 37°$

Actual 37.23483398 — Less than 0.5 so round down

Using DMS 37° 14' 5.4" — Less than 30' so round down

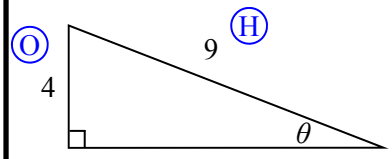
Trigonometry - Finding an Angle (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Label two of the sides either '*O*', '*A*' and '*H*'. Then pick which ratio you'd use.

SOH $\sin\theta = \frac{\text{Opp}}{\text{Hyp}}$ CAH $\cos\theta = \frac{\text{Adj}}{\text{Hyp}}$ TOA $\tan\theta = \frac{\text{Opp}}{\text{Adj}}$

Example:



● sin ○ cos ○ tan

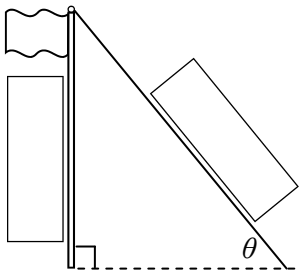
Calculate the angle θ, rounding to the nearest degree.

CALCULATOR IN DEG MODE

A 4.5 m tall flagpole has a 5.6 m guy wire anchored into the ground.

1 Write the two dimensions in the boxes on the diagram below.



2 Calculate the angle θ that the guy wire makes with the ground.

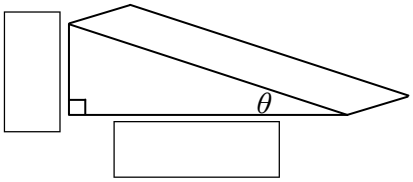
$\theta =$ ☐ / ☐

$\theta =$ ☐ °

A triangular skateboard ramp is 3.5 m long and has a height of 80 cm.

3 Convert 3.5 m to cm

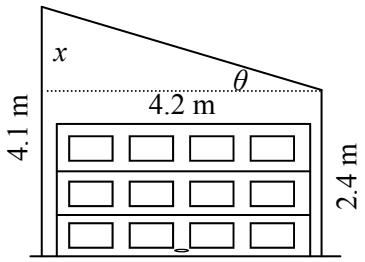
4 Add the two dimensions (in cm) to the diagram below.



5 Calculate the angle θ that the ramp makes with the ground.

SOH CAH TOA

A garage has a skillion roof shown in the diagram below.

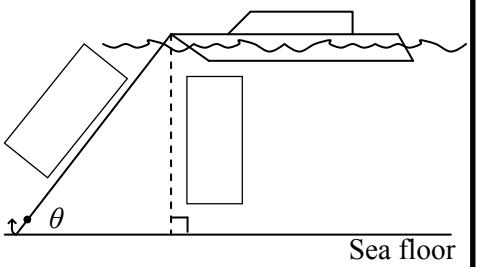


6 Calculate the distance x, being the difference in height between the two walls.

7 Calculate the 'pitch' of the roof, which is the angle θ on the diagram.

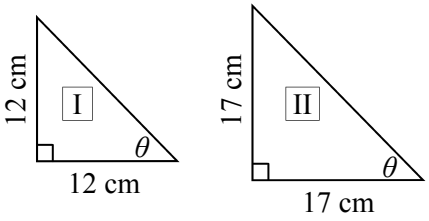
A fishing boat is anchored in 65 m deep water. The anchor rope is 90 m long and is fully extended.

8 Write the two dimensions in the boxes on the diagram below.



9 Calculate the angle θ that the anchor rope makes with the sea floor.

Toby has constructed two isosceles right triangles. He says that when the two short sides of a right triangle are the same, the angle θ is always 45º.



10 Calculate the angle θ in the two triangles.

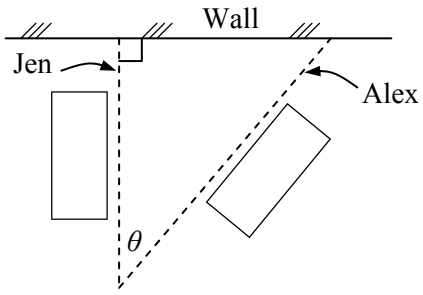
I :

II :

11 Is Toby correct?

Jen measured the straight distance to a wall of 55m. Alex walked to the wall at an angle and measured the distance as 72 m.

PLAN (TOP) VIEW



12 Write the two dimensions in the boxes on the diagram above.

13 Calculate the angle θ that Alex's route took compared to Jen's.

Trigonometry - Finding an Angle with Protractor Verification

In the previous sheet you learned how to calculate the angle in a triangle. This sheet is just the same except instead of being given side lengths, you have to measure them with a ruler yourself.

STEP 1

MEASURE THE SIDES

Use a ruler to measure the sides that have a box on them. Write the lengths in cm in the box.

STEP 2

LABEL THE SIDES

Label the two sides either ‘O’ or ‘A’ or ‘H’.

STEP 3

CALCULATE ANGLE

Pick the appropriate trig ratio, either ‘sin’, ‘cos’ or ‘tan’ and then solve using your calculator. Write the angle to the nearest degree.

STEP 4

MEASURE ANGLE

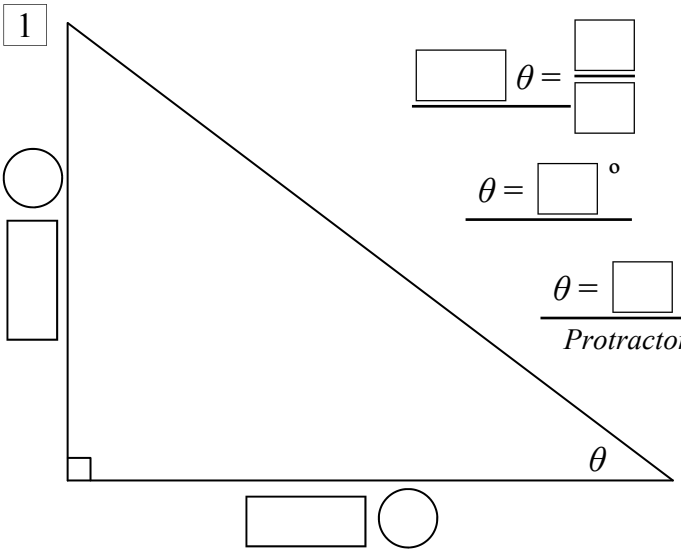
Use a protractor to measure the angle with a protractor. Verify that your calculation is correct. Note that you could do this step first if you want to.

Trigonometry - Finding an Angle with Protractor Verification

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use a ruler to measure the lengths of the sides with the box, write the side lengths (in whole cm). Then use the circles for '*O*'/'*A*'/'*H*' and use trigonometry to calculate the angle θ, to the nearest degree. Then verify the size of the angle and your calculation by checking it manually with a protractor. SOH CAH TOA

1



$\square\ \theta = \frac{\square}{\square}$

$\theta = \underline{\square}\ ^{o}$

$\theta = \underline{\square}\ ^{o}$ *Protractor*

2

Trigonometry - Calculator Use (Side)

Trigonometry can be used to calculate the length of side of a triangle. Lengths may have to be rounded and this sheet deals with rounding lengths and using the relevant trig ratio.

Examples: Round these decimals to 1 decimal place.

1 57.362 = 57.4 Because '6' is more than (or equal to) 5, it rounds up

2 51.7206 = 51.7 Because '2' is less than 5, it rounds down

Round these decimals to 2 decimal places.

1 33.362 = 33.36 Because '2' is less than 5, it rounds down

2 10.8963 = 10.90 Because '6' is more than (or equal to) 5, it rounds up

When calculating the side length of a triangle, you could use multiplication or division. Below are examples for both.

Examples: Evaluate the following to 1 decimal place.

MULTIPLICATION

14 tan 32°

Calc: 1 4 TAN 3 2 =

Display 8.748170927

Less than 5 so round down

= 8.7

DIVISION FRACTION KEY

$$\frac{42}{\tan 17^\circ}$$

Calc: 4 2 a/b TAN 1 7) =

Display 137.37581

More than 5 so round up

= 137.4

DIVISION ÷ KEY

$$\frac{135}{\sin 71^\circ}$$

Calc: 1 3 5 ÷ SIN 7 1 =

Display 142.77878792

More than 5 so round up

= 142.8

Trigonometry - Calculator Use (Side)

8. 173.9952 — 174.00
9. 44.30594 — 44.31
10. 599.9953 — 600.00

Perform these calculations and round to 1 decimal place. You don't use the SHIFT key.

11. $5.7 \tan 38^\circ$ = 4.5
    Calc: 5 • 7 TAN 3 8 =
12. $23 \cos 61^\circ$ = 11.2
13. $82 \tan 18^\circ$ = 26.6
14. $76.2 \cos 40^\circ$ = 58.4
15. $114 \tan 48^\circ$ = 126.6
16. $13.7 \sin 31^\circ$ = 7.1
17. $57.8 \cos 77^\circ$ = 13.0

Perform these calculations and round to 2 decimal places. You don't use the SHIFT key.

18. $48 \sin 37^\circ$ = 28.89
19. $66 \sin 74^\circ$ = 63.44
20. $14.3 \tan 61^\circ$ = 25.80
21. $32.7 \cos 19^\circ$ = 30.92
22. $150.71 \tan 53^\circ$ = 200.00
23. $0.8 \cos 32^\circ$ = 0.68

These calculations use the fraction key or division. Answer these to 1 d.p.

24. $\dfrac{9}{\sin 57^\circ}$ = 10.7

No bracket may give an error

Calc: 9 ▪/□ SIN 5 7) = or 9 ÷ SIN 5 7 =

25. $\dfrac{18.7}{\cos 26^\circ}$ = 20.8

26. $\dfrac{138}{\tan 71^\circ}$ = 47.5

27. $\dfrac{54.7}{\tan 20^\circ}$ = 150.3

28. $\dfrac{3.4}{\sin 66^\circ}$ = 3.7

29. $\dfrac{277}{\sin 11^\circ}$ = 1 451.7

30. $\dfrac{83.5}{\cos 48^\circ}$ = 124.8

31. $\dfrac{4.2}{\tan 31^\circ}$ = 7.0

32. $\dfrac{0.64}{\sin 19^\circ}$ = 2.0

Match the left hand side question with the right hand side answer (to 1 d.p.).

33.

$10 \sin 27^\circ$	62.7
$\dfrac{58.5}{\tan 43^\circ}$	4.6
$\dfrac{14.13}{\cos 77^\circ}$	353.6
$11.4 \tan 22^\circ$	4.5
$58 \cos 39^\circ$	45.1
$\dfrac{155}{\sin 26^\circ}$	62.6
$8.8 \tan 82^\circ$	62.8

These include algebraic terms and measurement units. Round to 1 decimal place.

Example

$y = 80.6 \tan 28^\circ$ [cm]

$y = 42.9$ cm

Write letter — Show units

34. $x = 38 \sin 52^\circ$ [m]
    $x =$ 29.9 m
35. $y = 52.7 \cos 19^\circ$ [cm]
    $y = 49.8$ cm
36. $a = 255 \tan 62^\circ$ [mm]
    $a = 479.6$ mm
37. $x = 30.6 \sin 40^\circ$ [m]
    $x = 19.7$ m
38. $y = 450 \tan 45^\circ$ [km]
    $y = 450.0$ km

Trigonometry - Calculator Use (Side) (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Date Due:

Round these to 1 decimal place

1 45.25 → 45.3

2 13.4927 → 13.5

Round these to 2 decimal places

3 56.4241 → 56.42

4 8.33774 → 8.34

Evaluate these to 1 decimal place. Ensure your calculator is in DEG mode.

5 $13 \sin 71^\circ$ = 12.3

6 $56 \cos 19^\circ$ = 52.9

7 $\dfrac{42}{\tan 38^\circ}$ = 53.8

8 $\dfrac{117}{\cos 52^\circ}$ = 190.0

9 $106 \sin 69^\circ$ = 99.0

10 $\dfrac{220}{\cos 59^\circ}$ = 427.2

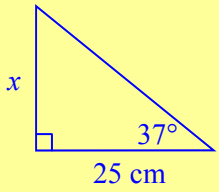
11 $\dfrac{65.4}{\tan 22^\circ}$ = 161.9

12 $104 \sin 47^\circ$ = 76.1

Trigonometry - Finding a Side (tan)

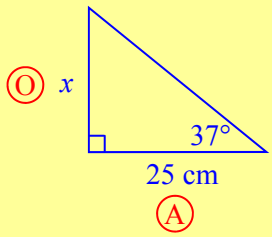
Trigonometry can be used to calculate the length of a side of a triangle. Below are the steps.

Example: Find the length 'x' to 1 decimal place ('x' on top)



STEP 1

LABEL THE SIDES

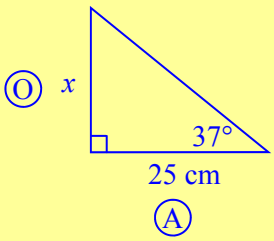


LABEL THE SIDES

Always label the sides O and A. You only have to label the sides that have a measurement on them or have a letter, like 'x'. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with any letters that may be on the triangle.

STEP 2

PICK THE RATIO

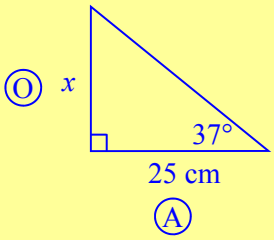


PICK THE RATIO

All the questions on these sheets are TAN, so this step will always result in TAN being used.

STEP 3

WRITE FIRST LINE



WRITE THE FIRST LINE

Write: $\tan 37 = \frac{x}{25}$ — x: OPPOSITE, OVER; 25: ADJACENT

STEP 4

REMOVE THE FRACTION

REMOVE THE FRACTION

$\tan 37 = \frac{x}{25}$

×25 ×25

$25 \tan 37 = x$

$x = 25 \tan 37$

To remove the divided by 25, multiply both sides by 25

This is correct but write it backwards with x on the left hand side

STEP 5

SOLVE

SOLVE USING YOUR CALCULATOR

$x = 25 \tan 37$

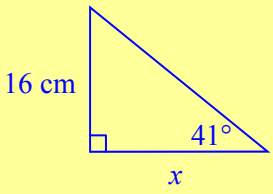
Calc: 2 5 TAN 3 7 =

$x = 18.8$ cm

You will have to round to specified decimal places. Remember the units.

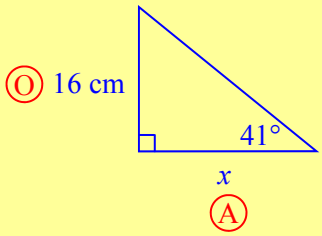
Trigonometry - Finding a Side (tan)

Example: Find the length 'x' to 1 decimal place ('x' on the bottom)



STEP 1

LABEL THE SIDES

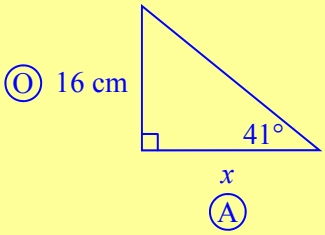


LABEL THE SIDES

Always label the sides O and A. You only have to label the sides that have a measurement on them or have a letter, like 'x'. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with any letters that may be on the triangle.

STEP 2

PICK THE RATIO

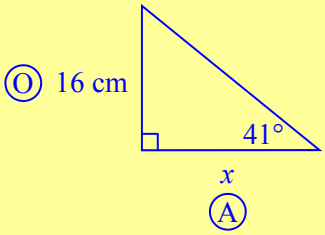


PICK THE RATIO

All the questions on these sheets are TAN, so this step will always result in TAN being used.

STEP 3

WRITE FIRST LINE



WRITE THE FIRST LINE

Write: $\tan 41 = \dfrac{16}{x}$ — 16: OPPOSITE, OVER; x: ADJACENT

STEP 4

SWAP x AND THE TRIG

Look at this example

$3 = \dfrac{6}{2}$ Yes, 3 equals 6 divided by 2

swap

$2 = \dfrac{6}{3}$ Yes, 2 equals 6 divided by 3

SWAP X WITH THE TRIG RATIO

$\tan 41 = \dfrac{16}{x}$ To remove the divided by x, swap the x with the tan 41

swap

$x = \dfrac{16}{\tan 41}$ After the swap, you get this equation

STEP 5

SOLVE

SOLVE USING YOUR CALCULATOR

$x = \dfrac{16}{\tan 41}$

Calc: [1][6][÷][TAN][4][1][)][=]

or

Calc: [1][6][÷][TAN][4][1][=]

$x = 18.4$ cm

The bracket after the 41, will depend on your calculator. You will have to round to specified decimal places. Remember the units.

Trigonometry - Finding a Side (tan) (Sheet 1)

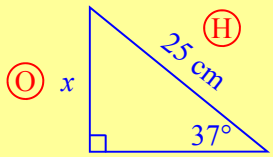
Trigonometry - Finding a Side (sin)

Trigonometry can be used to calculate the length of a side of a triangle. Below are the steps.

Example: Find the length 'x' to 1 decimal place ('x' on top)

STEP 1

LABEL THE SIDES

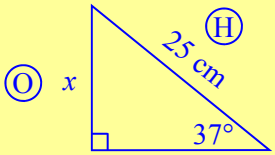


LABEL THE SIDES

Always label the sides O and H. You only have to label the sides that have a measurement on them or have a letter, like 'x'. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with any letters that may be on the triangle.

STEP 2

PICK THE RATIO

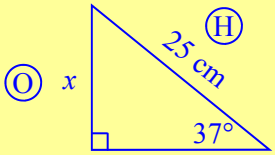


PICK THE RATIO

All the questions on these sheets are SIN, so this step will always result in SIN being used.

STEP 3

WRITE FIRST LINE



WRITE THE FIRST LINE

Write: $\sin 37 = \frac{x}{25}$

x ← OPPOSITE

OVER

25 ← HYPOTENUSE

STEP 4

REMOVE THE FRACTION

REMOVE THE FRACTION

$\sin 37 = \frac{x}{25}$

To remove the divided by 25, multiply both sides by 25

×25 ×25

$25 \sin 37 = x$

$x = 25 \sin 37$

This is correct but write it backwards with x on the left hand side

STEP 5

SOLVE

SOLVE USING YOUR CALCULATOR

$x = 25 \sin 37$

Calc: 2 5 SIN 3 7 =

$x = 15.0$ cm

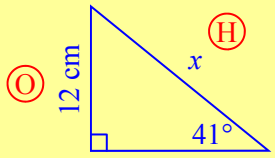
You will have to round to specified decimal places. Remember the units.

Trigonometry - Finding a Side (sin)

Example: Find the length 'x' to 1 decimal place ('x' on the bottom)

STEP 1

LABEL THE SIDES

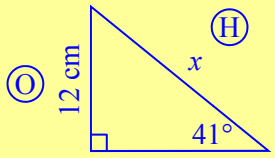


LABEL THE SIDES

Always label the sides O and H. You only have to label the sides that have a measurement on them or have a letter, like 'x'. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with any letters that may be on the triangle.

STEP 2

PICK THE RATIO

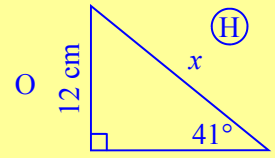


PICK THE RATIO

All the questions on these sheets are SIN, so this step will always result in SIN being used.

STEP 3

WRITE FIRST LINE



WRITE THE FIRST LINE

Write: $\sin 41 = \dfrac{12}{x}$

12 ← OPPOSITE

OVER

x ← HYPOTENUSE

STEP 4

SWAP x AND THE TRIG

Look at this example

$3 = \dfrac{6}{2}$ Yes, 3 equals 6 divided by 2

swap

$2 = \dfrac{6}{3}$ Yes, 2 equals 6 divided by 3

SWAP X WITH THE TRIG RATIO

$\sin 41 = \dfrac{12}{x}$ To remove the divided by x, swap the x with the sin 41

swap

$x = \dfrac{12}{\sin 41}$ After the swap, you get this equation

STEP 5

SOLVE

SOLVE USING YOUR CALCULATOR

$x = \dfrac{12}{\sin 41}$

Calc: 1 2 ■ SIN 4 1) =

or

Calc: 1 2 ÷ SIN 4 1 =

$x = 18.3$ cm

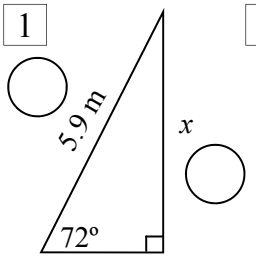
The bracket after the 41, will depend on your calculator.
You will have to round to specified decimal places.
Remember the units.

Trigonometry - Finding a Side (sin) (Sheet 1)

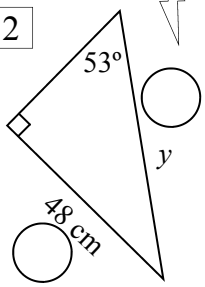
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Label these sides '*O*', and '*H*'.

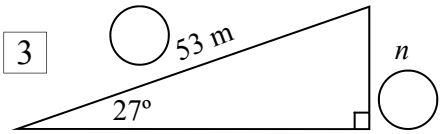
1



2



3



Calculate these, answer to 1 d.p.

4 $\dfrac{13}{\sin 21^\circ}$ = ____

5 $\dfrac{54.7}{\sin 77^\circ}$ = ____

Calc: 1 3 ▪/□ SIN 2 1) =

6 $94 \sin 36^\circ$ = ____

Calc: 9 4 SIN 3 6 =

7 $11.2 \sin 62^\circ$ = ____

8 $118 \sin 48^\circ$ = ____

9 $\dfrac{200}{\sin 55^\circ}$ = ____

10 $\dfrac{0.8}{\sin 32^\circ}$ = ____

Calculate the side length.
Answering to 1 decimal place.

11 (O) *x*, (H) 31 cm, 28°

$\sin 28 = \dfrac{O}{H}$

$\times 31$ $\times 31$

$x =$ ____ $\sin$ ____

$x =$ ____ cm 1 d.p.

12 (H) 185 mm, *e*, (O), 38°

$\sin 38 = \dfrac{O}{H}$

2

3

Calculate these, answer to 1 d.p.

4 $\dfrac{13}{\sin 21°}$ = 36.3

5 $\dfrac{54.7}{\sin 77°}$ = 56.1

Calc: 1 3 ▪ SIN 2 1) =

6 94 sin 36° = 55.3

Calc: 9 4 SIN 3 6 =

7 11.2 sin 62° = 9.9

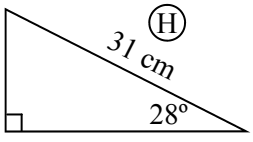
8 118 sin 48° = 87.7

9 $\dfrac{200}{\sin 55°}$ = 244.2

10 $\dfrac{0.8}{\sin 32°}$ = 1.5

Calculate the side length. Answering to 1 decimal place.

11

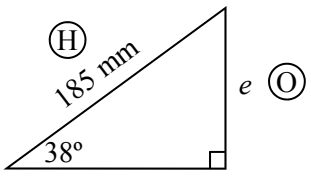


$\sin 28 = \dfrac{x\ \text{O}}{31\ \text{H}}$ (×31) (×31)

$x =$ 31 sin 28

$x =$ 14.6 cm 1 d.p.

12

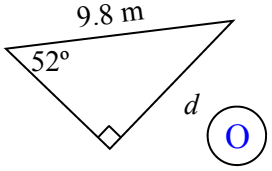


$\sin 38 = \dfrac{e\ \text{O}}{185\ \text{H}}$ (×185) (×185)

$e =$ 185 sin 38

$e =$ 113.9 mm 1 d.p.

13



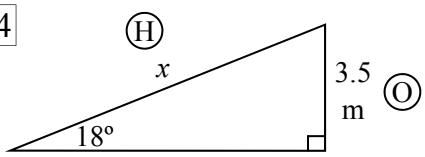
$\sin 52 = \dfrac{d}{9.8}$ (×9.8) (×9.8)

$d =$ 9.8 sin 52

$d =$ 7.7 m 1 d.p.

Now '*x*' (the term) is on the bottom

14



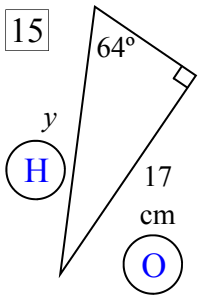
$\sin 18 = \dfrac{3.5\ \text{O}}{x\ \text{H}}$ swap swap

$x = \dfrac{3.5}{\sin 18}$

$x =$ 11.3 m

1 d.p.

15



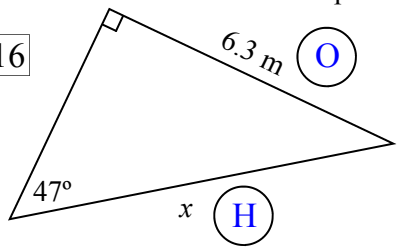
$\sin 64 = \dfrac{17\ \text{O}}{y\ \text{H}}$ swap swap

$y = \dfrac{17}{\sin 64}$

$y =$ 18.9 cm

1 d.p.

16



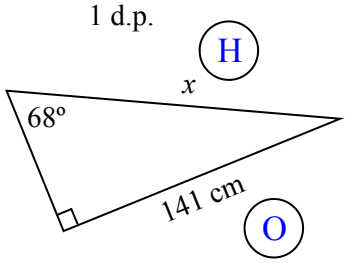
$\sin 47 = \dfrac{6.3}{x}$ swap swap

$x = \dfrac{6.3}{\sin 47}$

$x =$ 8.6 m

1 d.p.

17



$\sin 68 = \dfrac{141}{x}$ swap swap

$x = \dfrac{141}{\sin 68}$

$x =$ 152.1 cm

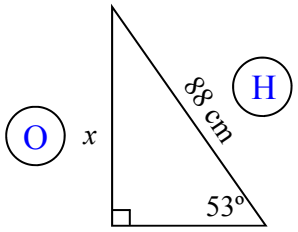
1 d.p.

Trigonometry - Finding a Side (sin) (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the side length (1 d.p.). All are sin, but are a mix of '*x* on top' and '*x* on the bottom'.

1



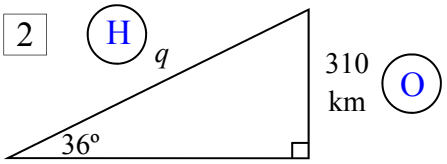
$\sin 53 = \frac{x}{88}$ (O / H)

× 88 × 88

$x = 88 \sin 53$

$x = 70.3$ cm 1 d.p.

2



$\sin 36 = \frac{310}{q}$ (O / H)

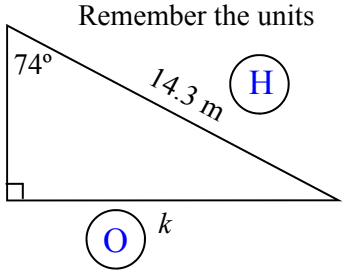
swap swap

$q = \frac{310}{\sin 36}$

$q =$ 527.4 km

Remember the units

3



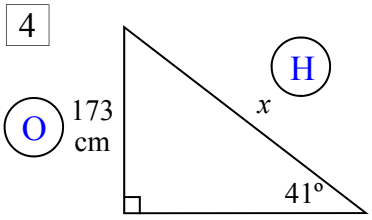
$\sin 74 = \frac{k}{14.3}$

× 14.3 × 14.3

$k = 14.3 \sin 74$

$k =$ 13.8 m

4



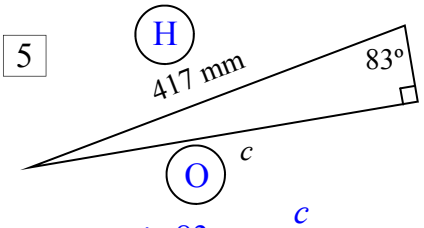
$\sin 41 = \frac{173}{x}$

swap swap

$x = \frac{173}{\sin 41}$

$x = 263.7$ cm

5



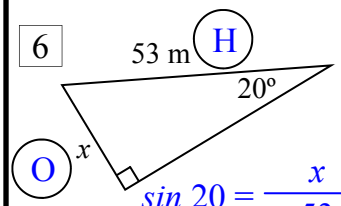
$\sin 83 = \frac{c}{417}$

× 417 × 417

$c = 417 \sin 72$

$c = 396.6$ mm

6



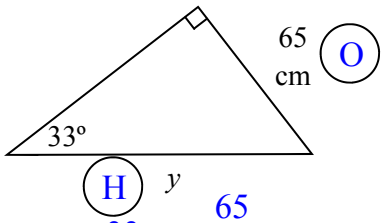
$\sin 20 = \frac{x}{53}$

× 53 × 53

$x = 53 \sin 20$

$x = 18.1$ m

7



$\sin 33 = \frac{65}{y}$

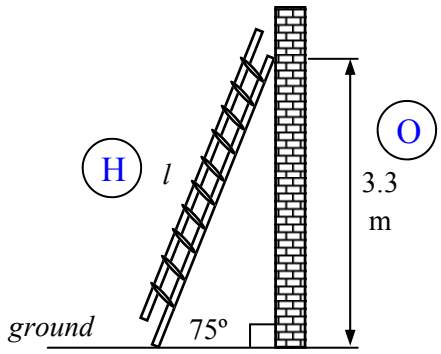
swap swap

$y = \frac{65}{\sin 33}$

$y = 119.3$ cm

Answer these using your sin trig skills. Find the lengths to 1 decimal place.

A ladder is leaning against a wall making an angle of 75° with the ground. The ladder reaches 3.3m up the wall.



8 Find '*l*', the length of the ladder.

$\sin 75 = \frac{3.3}{l}$

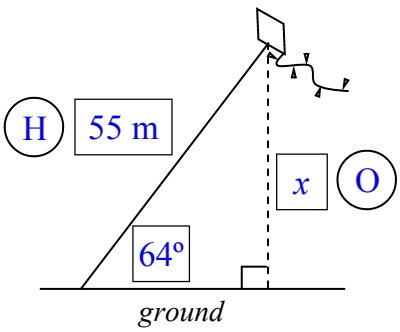
swap swap

$l = \frac{3.3}{\sin 75}$

$l = 3.4$ m

A kite string is 55 m long and is fully extended. The string makes an angle of 64° with the ground.

9 Write '*x*' as the height of the kite. Then write the string length and angle in the two boxes on the diagram



10 Label the distances 'O' and 'H' then calculate the height of the kite.

$\sin 64 = \frac{x}{55}$

× 55 × 55

$x = 55 \sin 64$

$x = 49.4$ m

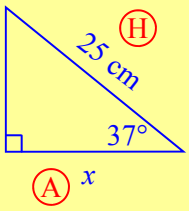
Trigonometry - Finding a Side (cos)

Trigonometry can be used to calculate the length of a side of a triangle. Below are the steps.

Example: Find the length 'x' to 1 decimal place ('x' on top)

STEP 1

LABEL THE SIDES

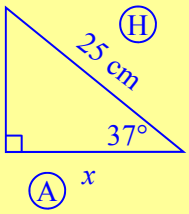


LABEL THE SIDES

Always label the sides A and H. You only have to label the sides that have a measurement on them or have a letter, like 'x'. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with any letters that may be on the triangle.

STEP 2

PICK THE RATIO

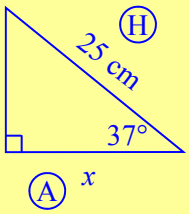


PICK THE RATIO

All the questions on these sheets are COS, so this step will always result in COS being used.

STEP 3

WRITE FIRST LINE



WRITE THE FIRST LINE

Write: $\cos 37 = \frac{x}{25}$

x ← ADJACENT

OVER

25 ← HYPOTENUSE

STEP 4

REMOVE THE FRACTION

REMOVE THE FRACTION

$\cos 37 = \frac{x}{25}$

To get remove the divided by 25, multiply both sides by 25

×25 ×25

$25 \cos 37 = x$

$x = 25 \cos 37$

This is correct but write it backwards with x on the left hand side

STEP 5

SOLVE

SOLVE USING YOUR CALCULATOR

$x = 25 \cos 37$

Calc: 2 5 COS 3 7 =

$x = 20.0$ cm

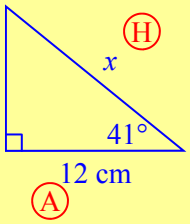
You will have to round to specified decimal places. Remember the units.

Trigonometry - Finding a Side (cos)

Example: Find the length 'x' to 1 decimal place ('x' on the bottom)

STEP 1

LABEL THE SIDES

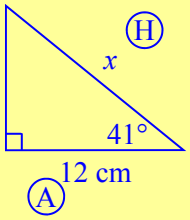


LABEL THE SIDES

Always label the sides A and H. You only have to label the sides that have a measurement on them or have a letter, like 'x'. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with any letters that may be on the triangle.

STEP 2

PICK THE RATIO

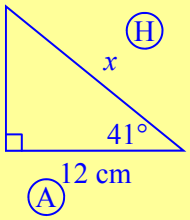


PICK THE RATIO

All the questions on these sheets are COS, so this step will always result in COS being used.

STEP 3

WRITE FIRST LINE



WRITE THE FIRST LINE

Write: $\cos 41 = \frac{12}{x}$ ← ADJACENT, OVER, ← HYPOTENUSE

STEP 4

SWAP x AND THE TRIG

Look at this example

$3 = \frac{6}{2}$ (swap) Yes, 3 equals 6 divided by 2

$2 = \frac{6}{3}$ Yes, 2 equals 6 divided by 3

SWAP X WITH THE TRIG RATIO

$\cos 41 = \frac{12}{x}$ (swap)

To remove the divided by x, swap the x with the sin 41

$x = \frac{12}{\cos 41}$

After the swap, you get this equation

STEP 5

SOLVE

SOLVE USING YOUR CALCULATOR

$x = \frac{12}{\cos 41}$

Calc: 12 ▣ COS 41) =

or

Calc: 12 ÷ COS 41 =

$x = 15.9$ cm

The bracket after the 41, will depend on your calculator.
You will have to round to specified decimal places.
Remember the units.

Trigonometry - Finding a Side (cos) (Sheet 1)

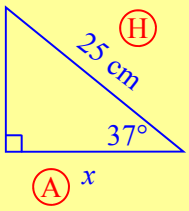
Trigonometry - Finding a Side

Trigonometry can be used to calculate the length of a side of a triangle. Below are the steps.

Example: Find the length 'x' to 1 decimal place ('x' on top)

STEP 1

LABEL THE SIDES

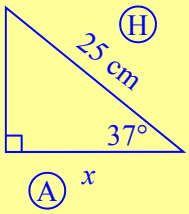


LABEL THE SIDES

Always label the sides, in this case it is A and H. You only have to label the sides that have a measurement on them or have a letter, like 'x'. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with any letters that may be on the triangle.

STEP 2

PICK THE RATIO

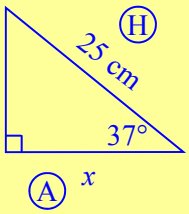


PICK THE RATIO

Use SOH CAH TOA to determine the ratio. This triangle has A and H, that means you use COS.

STEP 3

WRITE FIRST LINE



WRITE THE FIRST LINE

Write: $\cos 37 = \frac{x}{25}$

x ← ADJACENT

OVER

25 ← HYPOTENUSE

STEP 4

REMOVE THE FRACTION

REMOVE THE FRACTION

$\cos 37 = \frac{x}{25}$

To get remove the divided by 25, multiply both sides by 25

×25 ×25

$25 \cos 37 = x$

$x = 25 \cos 37$

This is correct but write it backwards with x on the left hand side

STEP 5

SOLVE

SOLVE USING YOUR CALCULATOR

$x = 25 \cos 37$

Calc: 2 5 COS 3 7 =

$x = 20.0$ cm

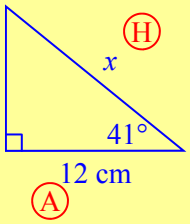
You will have to round to specified decimal places. Remember the units.

Trigonometry - Finding a Side

Example: Find the length 'x' to 1 decimal place ('x' on the bottom)

STEP 1

LABEL THE SIDES

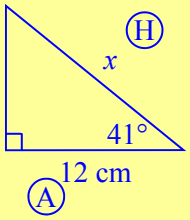


LABEL THE SIDES

Always label the sides, in this case it is A and H. You only have to label the sides that have a measurement on them or have a letter, like 'x'. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with any letters that may be on the triangle.

STEP 2

PICK THE RATIO

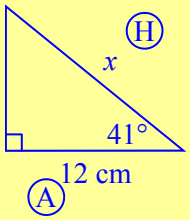


PICK THE RATIO

Use SOH CAH TOA to determine the ratio to use. This triangle has A and H, that means you use COS.

STEP 3

WRITE FIRST LINE



WRITE THE FIRST LINE

Write: $\cos 41 = \dfrac{12}{x}$

12 ← ADJACENT

OVER

x ← HYPOTENUSE

STEP 4

SWAP x AND THE TRIG

Look at this example

$3 = \dfrac{6}{2}$ Yes, 3 equals 6 divided by 2

swap

$2 = \dfrac{6}{3}$ Yes, 2 equals 6 divided by 3

SWAP X WITH THE TRIG RATIO

$\cos 41 = \dfrac{12}{x}$ To remove the divided by x, swap the x with the sin 41

swap

$x = \dfrac{12}{\cos 41}$ After the swap, you get this equation

STEP 5

SOLVE

SOLVE USING YOUR CALCULATOR

$x = \dfrac{12}{\cos 41}$

Calc: 1 2 ■ COS 4 1) =

or

Calc: 1 2 ÷ COS 4 1 =

$x = 15.9$ cm

The bracket after the 41, will depend on your calculator.
You will have to round to specified decimal places.
Remember the units.

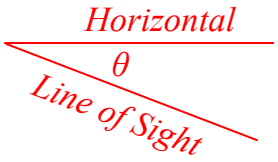
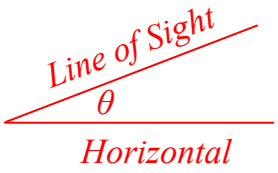
Trigonometry - Angle of Depression and Elevation

Trigonometry can be used to calculate the distance to an object or the angle that you are looking down or up at an object. When a person is depressed they feel down, when they are elevated they are feeling good or they are 'up'. This is much the same in Trigonometry:

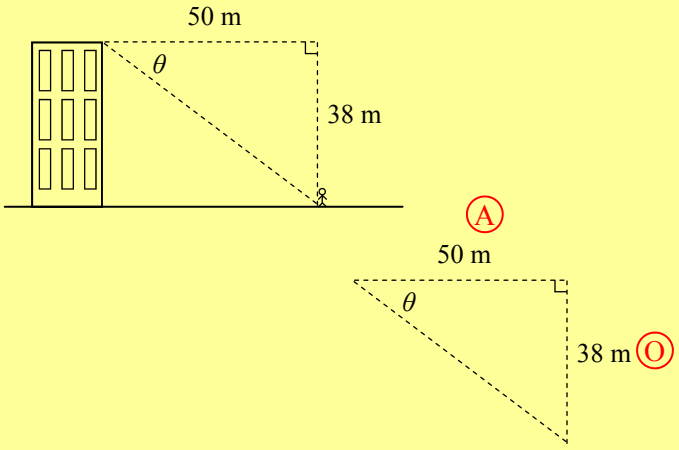
Angle of Depression: When you are looking down, it is the angle made with the 'line of sight' and the horizontal



Angle of Elevation: When you are looking up, it is the angle made with the 'line of sight' and the horizontal



Example: Find the angle of depression 'θ' from the 38 m tall building to a point on the ground 50 m away, where Lucky Phil is standing. Round your answer to the nearest degree.



STEP 1

LABEL THE SIDES

LABEL THE SIDES

Always label the sides, in this case it is A and H. You only have to label the sides that have a measurement on them or have a letter, like 'x'. Most mistakes start with students thinking they don't have to label the sides. Circle the letters that way they aren't confused with any letters that may be on the triangle.

STEP 2

PICK THE RATIO

PICK THE RATIO

Use SOH CAH TOA to determine the ratio. This triangle has O and A, that means you use TAN.

S O H C A H T O A

STEP 3

WRITE FIRST LINE

WRITE THE FIRST LINE

Write: $\tan\theta = \frac{38}{50}$ ← 38 OPPOSITE OVER 50 ← ADJACENT

STEP 4

SOLVE

SOLVE USING YOUR CALCULATOR

Calc: SHIFT TAN (3 8) 5 0 =

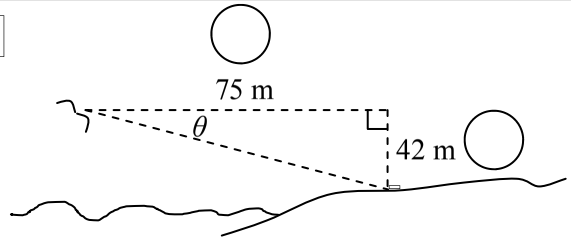
$x =$ ☐ m

1 d.p.

Jonathan the seagull is flying at 42 m above the beach when he spies a chip on the beach 75m away. Calculate the angle of depression 'θ' for his descent. Answer to the nearest degree.

2



☐ $\theta = \frac{\square}{\square}$

$\theta =$ ☐ °

Use SHIFT to get an angle

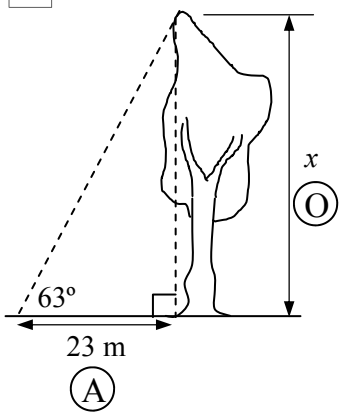
Trigonometry - Elevation/Depression (Homework Strip)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Date Due: _____

Find the height of the tree 'x' given the angle of elevation from a point 23 m away from the tree is 63°. Answer in metres, to 1 decimal point.

1



$\tan 63 = \frac{x}{23}$ (O / A)

$\times 23$ $\times 23$

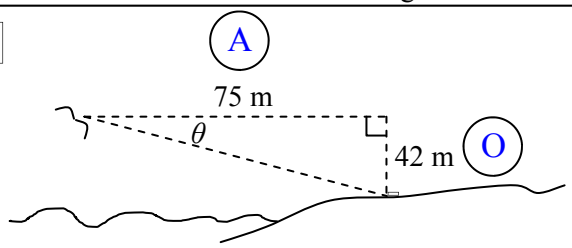
$x = 23 \tan 63$

$x = 45.1$ m

1 d.p.

Jonathan the seagull is flying at 42 m above the beach when he spies a chip on the beach 75m away. Calculate the angle of depression 'θ' for his descent. Answer to the nearest degree.

2



$\tan \theta = \frac{42}{75}$

$\theta = 29°$

Use SHIFT to get an angle

Trigonometry - Find A Word

Look for words in the list at the bottom of the grid. Once you find a word cross it off the list.

A letter could be used more than once so don’t colour it in too dark (using a texta for example) so that you can still read it.

Trigonometry - Find A Word

Trigonometry Review

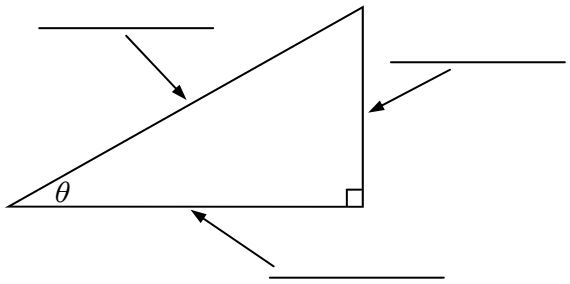
This is the review of the Trigonometry Topic.

Trigonometry - Topic Review

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

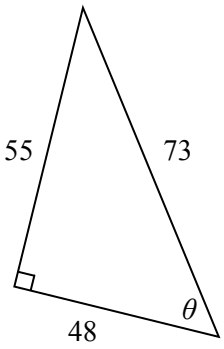
Label the hypotenuse, opposite and adjacent sides.

1

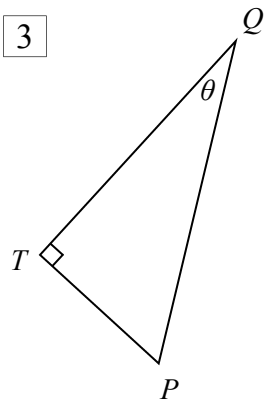


Find the trigonometric ratios for sin θ, cos θ, and tan θ.
NO CALCULATOR REQUIRED.

2



3



Use your calculator to solve these to 1 decimal place.

4 19 tan 38º

5 $\dfrac{57}{\cos 31º}$

Round these angles to the nearest degree.

6 45.36º

7 59.56033º

8 28º 42’

9 55º 13’ 55”

Use your calculator to find θ, round to the nearest degree.

10 $\sin\theta = 0.4228$

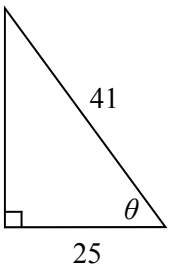
11 $\cos\theta = \dfrac{3}{8}$

12 $\tan\theta = \dfrac{11}{5}$

13 $\tan\theta = 5.4$

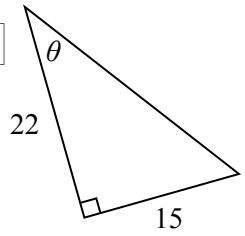
Would you use sin, cos or tan to find these angles?
Colour in the circle to indicate your choice.
DON’T SOLVE THE QUESTIONS.

14



○ sin
○ cos
○ tan

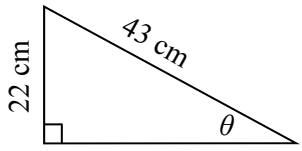
15



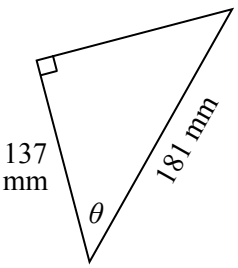
○ sin
○ cos
○ tan

Find the angle θ, round to the nearest degree.

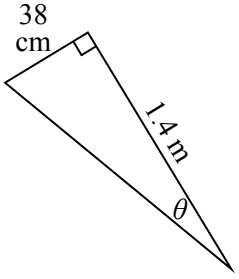
16



17



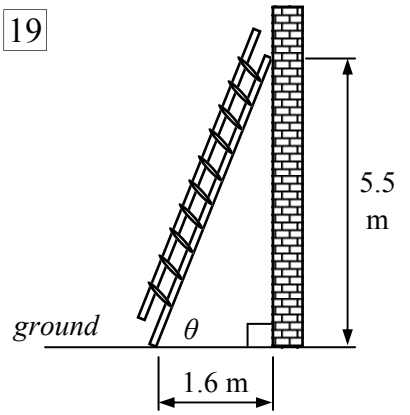
18



© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

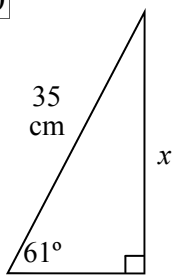
A 5.5 m ladder is leaning against a wall. The toe of the ladder is 1.6 m away from the wall. What angle (shown as θ on the diagram) does the ladder make with the ground? Answer to the nearest degree.

19

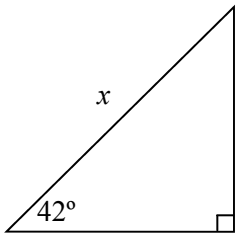


Calculate the length 'x' on the triangles below. Answer to 1 decimal place.

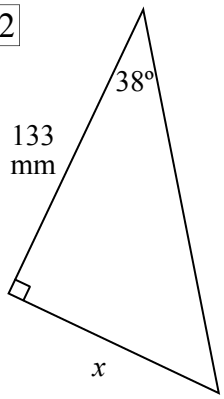
20



21

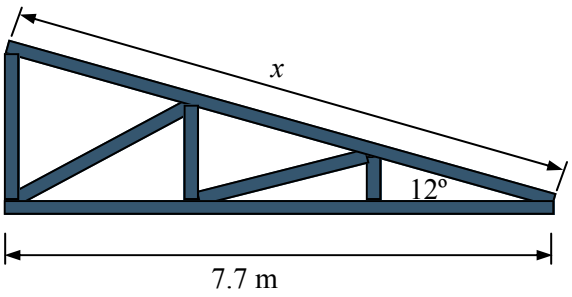


22



A roof truss is shown below. The roof width is 7.7 m, if the required angle (pitch) of the roof is 12º. Calculate the length of the inclined timber beam, labeled 'x'. Answer in metres, to 1 decimal place.

23



Jessica is watching a hot air balloon which is 330 m away and at a height of 195 m. Calculate the angle of elevation of the balloon from Jessica's position. Answer to the nearest degree.

24

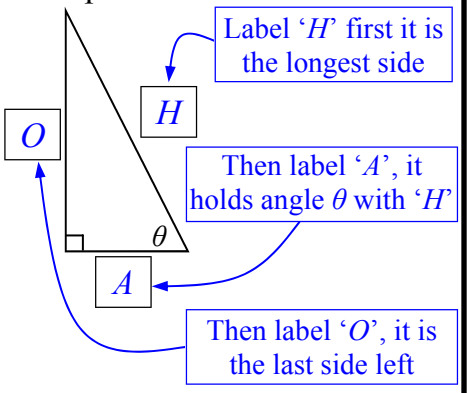
© Freefall Mathematics - School Use Only

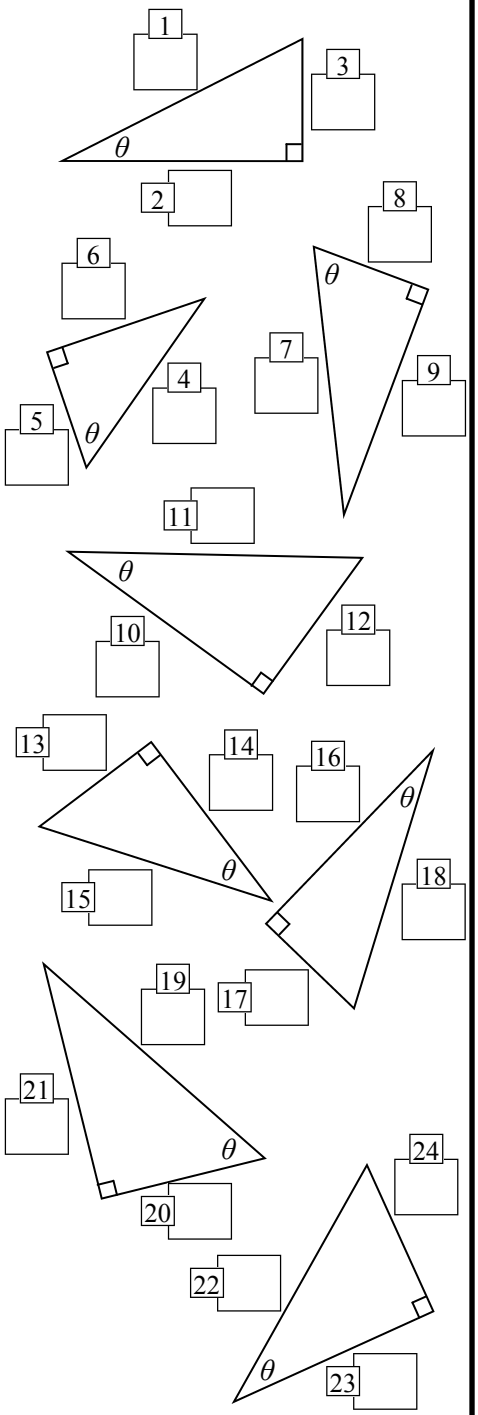
Trigonometry - Naming the Sides (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

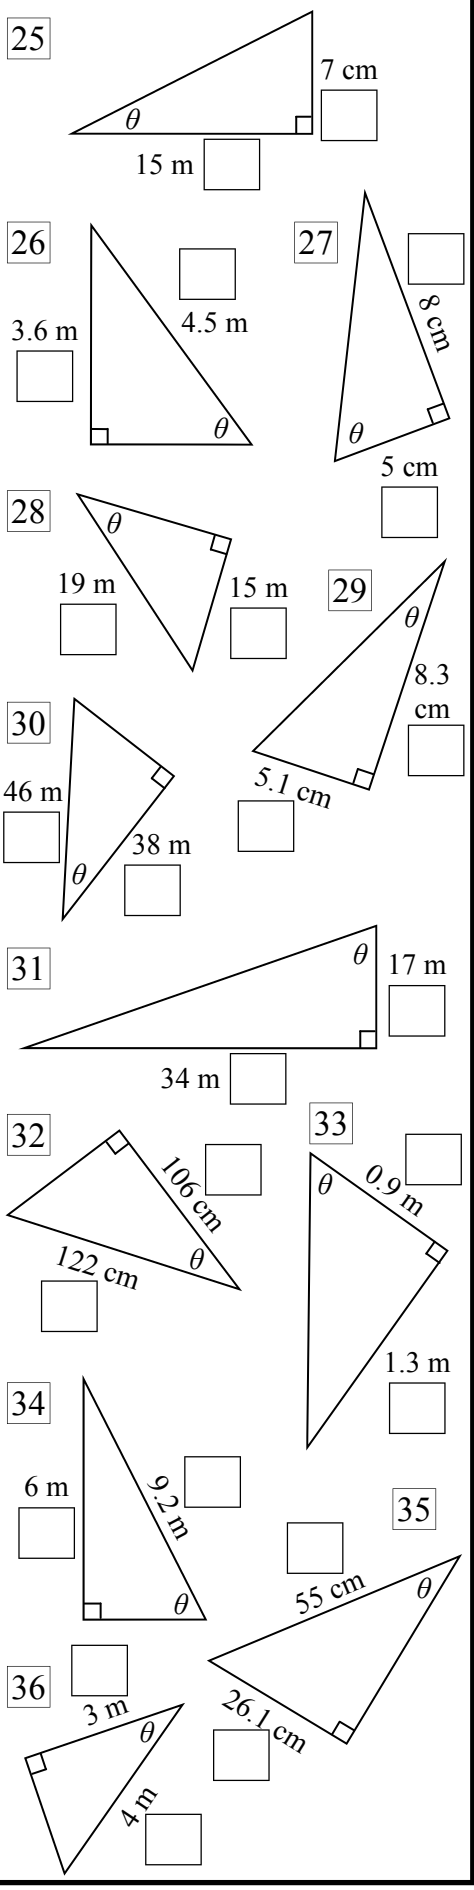
Label the sides as '*O*', '*A*' and '*H*'. Start with '*H*', the angle is always held by '*A*' and '*H*'.

Example:

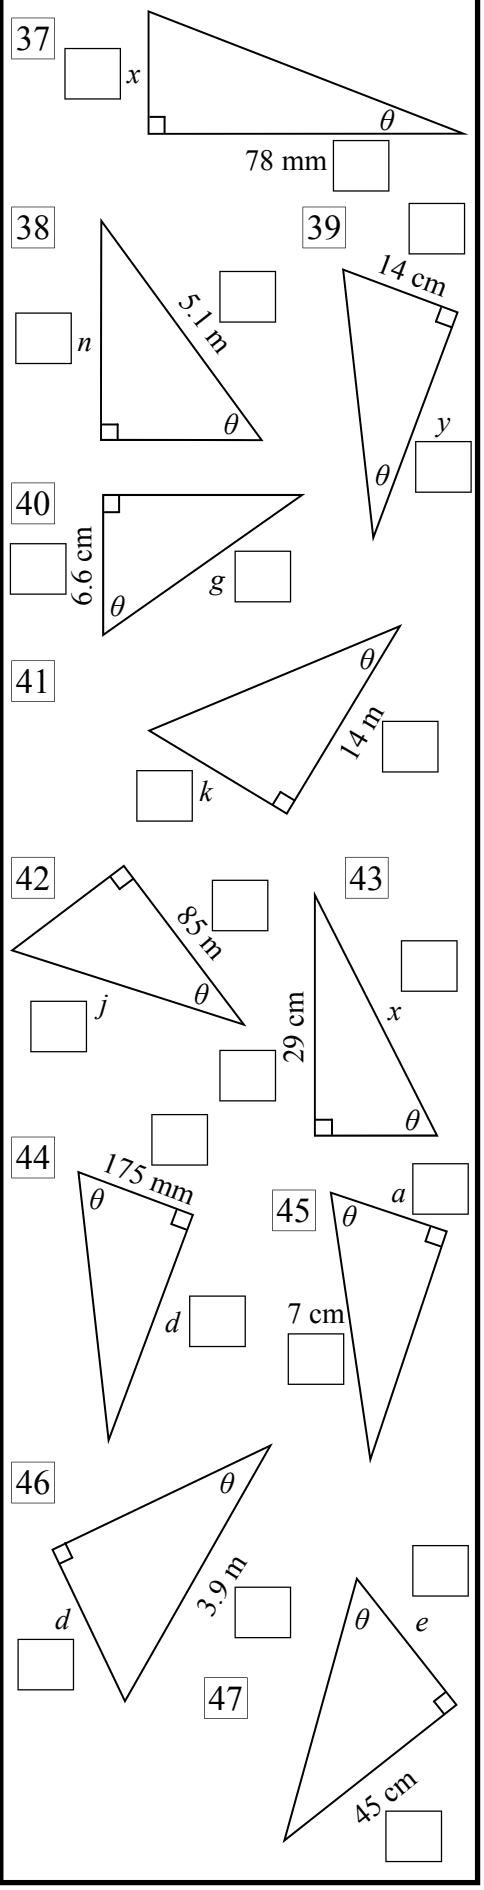




Only label two sides now. If a side has no number, don't label it. Use either '*O*', '*A*' or '*H*'.



These are the same except there is a number and a term. Label two sides '*O*', '*A*' or '*H*'.

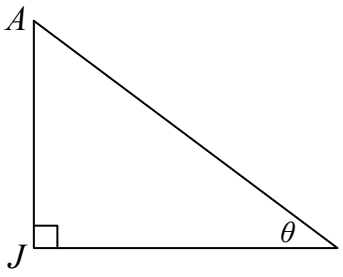


Trigonometry - Naming the Sides (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use a ruler to measure the lengths of each side and write the name of the side and its length (whole cm) in the box.

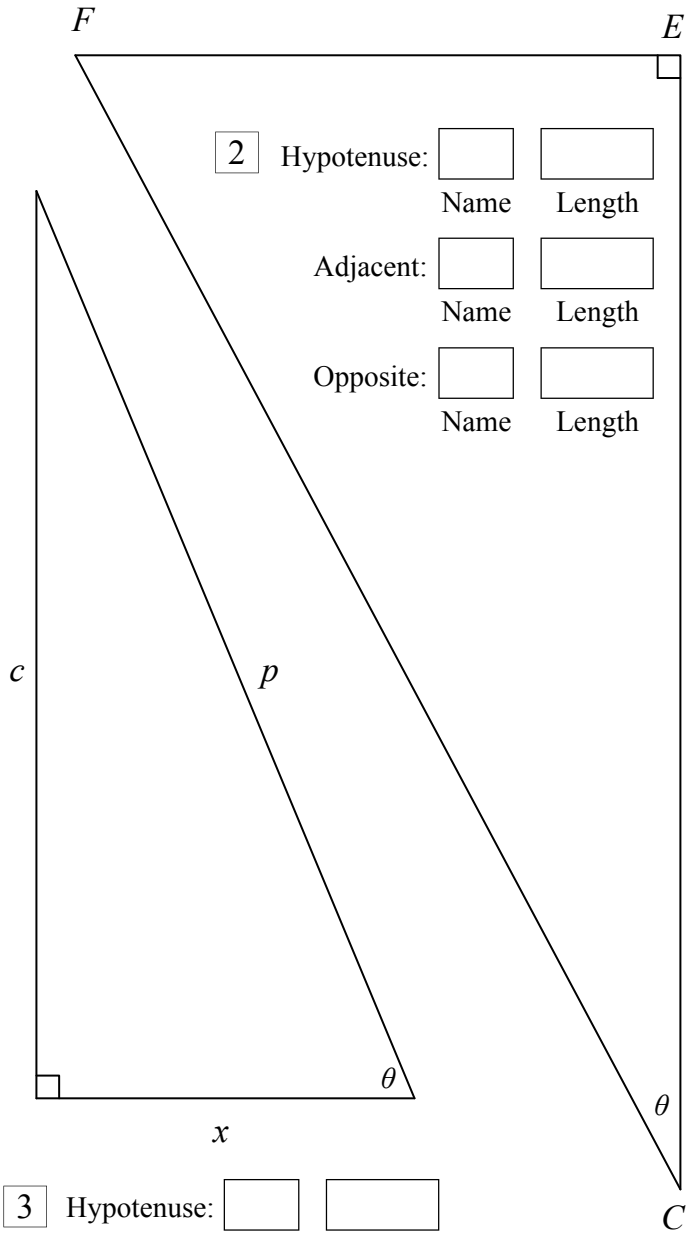
1



Hypotenuse: Name ____ Length ____ *cm*

Adjacent: Name ____ Length ____ *cm*

Opposite: Name ____ Length ____ *cm*



2 Hypotenuse: Name ____ Length ____

Adjacent: Name ____ Length ____

Opposite: Name ____ Length ____

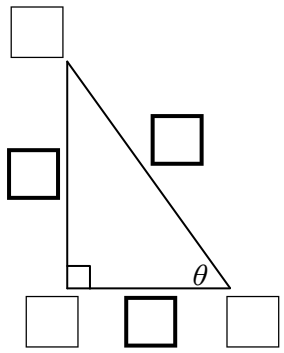
3 Hypotenuse: Name ____ Length ____

Adjacent: Name ____ Length ____

Opposite: Name ____ Length ____

Label the sides '*O*', '*A*' and '*H*' then add the letters to the vertices (corners) of the triangles. Use a pencil in case you need to change letters.

4

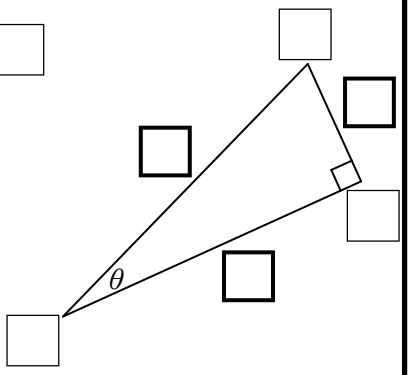


Hypotenuse: *EC*

Adjacent: *QC*

Opposite: ____ Name

5



Hypotenuse: *TJ*

Adjacent: *TG*

Opposite: ____

6

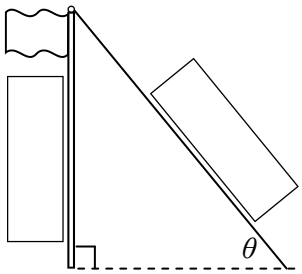
Calculate the angle θ, rounding to the nearest degree.

CALCULATOR IN DEG MODE

A 4.5 m tall flagpole has a 5.6 m guy wire anchored into the ground.

1 Write the two dimensions in the boxes on the diagram below.



2 Calculate the angle θ that the guy wire makes with the ground.

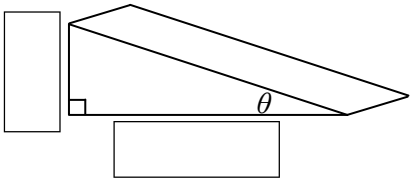
$\theta =$ ☐ / ☐

$\theta =$ ☐ °

A triangular skateboard ramp is 3.5 m long and has a height of 80 cm.

3 Convert 3.5 m to cm

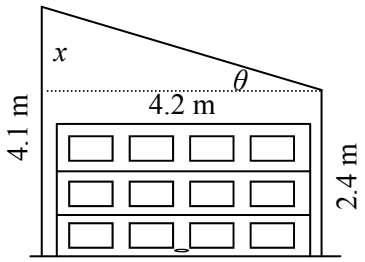
4 Add the two dimensions (in cm) to the diagram below.



5 Calculate the angle θ that the ramp makes with the ground.

SOH CAH TOA

A garage has a skillion roof shown in the diagram below.

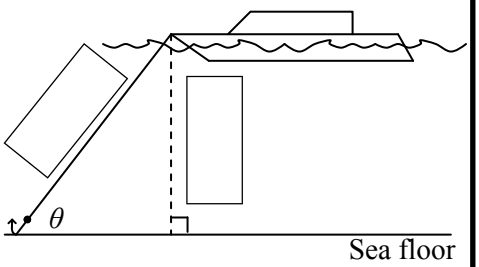


6 Calculate the distance x, being the difference in height between the two walls.

7 Calculate the 'pitch' of the roof, which is the angle θ on the diagram.

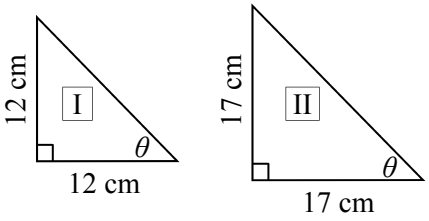
A fishing boat is anchored in 65 m deep water. The anchor rope is 90 m long and is fully extended.

8 Write the two dimensions in the boxes on the diagram below.



9 Calculate the angle θ that the anchor rope makes with the sea floor.

Toby has constructed two isosceles right triangles. He says that when the two short sides of a right triangle are the same, the angle θ is always 45º.



10 Calculate the angle θ in the two triangles.

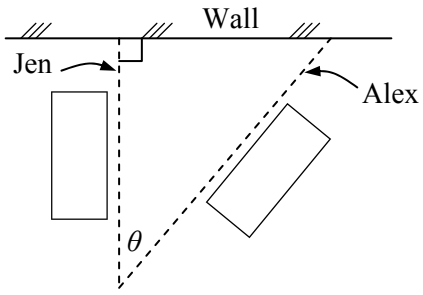
I :

II :

11 Is Toby correct?

Jen measured the straight distance to a wall of 55m. Alex walked to the wall at an angle and measured the distance as 72 m.

PLAN (TOP) VIEW



12 Write the two dimensions in the boxes on the diagram above.

13 Calculate the angle θ that Alex's route took compared to Jen's.

Trigonometry - Finding an Angle with Protractor Verification

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use a ruler to measure the lengths of the sides with the box, write the side lengths (in whole cm). Then use the circles for '*O*'/'*A*'/'*H*' and use trigonometry to calculate the angle θ, to the nearest degree. Then verify the size of the angle and your calculation by checking it manually with a protractor. SOH CAH TOA

8 173.9952 ____

9 44.30594 ____

10 599.9953 ____

Perform these calculations and round to 1 decimal place. You don't use the SHIFT key.

11 $5.7 \tan 38^\circ$ = ____

Calc: 5 • 7 TAN 3 8 =

12 $23 \cos 61^\circ$ = ____

13 $82 \tan 18^\circ$ = ____

14 $76.2 \cos 40^\circ$ = ____

15 $114 \tan 48^\circ$ = ____

16 $13.7 \sin 31^\circ$ = ____

17 $57.8 \cos 77^\circ$ = ____

Perform these calculations and round to 2 decimal places. You don't use the SHIFT key.

18 $48 \sin 37^\circ$ = ____

19 $66 \sin 74^\circ$ = ____

20 $14.3 \tan 61^\circ$ = ____

21 $32.7 \cos 19^\circ$ = ____

22 $150.71 \tan 53^\circ$ = ____

23 $0.8 \cos 32^\circ$ = ____

These calculations use the fraction key or division. Answer these to 1 d.p.

24 $\dfrac{9}{\sin 57^\circ}$ = ____

No bracket may give an error

Calc: 9 ▪/□ SIN 5 7) = or

9 ÷ SIN 5 7 =

25 $\dfrac{18.7}{\cos 26^\circ}$ = ____

26 $\dfrac{138}{\tan 71^\circ}$ = ____

27 $\dfrac{54.7}{\tan 20^\circ}$ = ____

28 $\dfrac{3.4}{\sin 66^\circ}$ = ____

29 $\dfrac{277}{\sin 11^\circ}$ = ____

30 $\dfrac{83.5}{\cos 48^\circ}$ = ____

31 $\dfrac{4.2}{\tan 31^\circ}$ = ____

32 $\dfrac{0.64}{\sin 19^\circ}$ = ____

Match the left hand side question with the right hand side answer (to 1 d.p.).

33

$10 \sin 27^\circ$	62.7
$\dfrac{58.5}{\tan 43^\circ}$	4.6
$\dfrac{14.13}{\cos 77^\circ}$	353.6
$11.4 \tan 22^\circ$	4.5
$58 \cos 39^\circ$	45.1
$\dfrac{155}{\sin 26^\circ}$	62.6
$8.8 \tan 82^\circ$	62.8

These include algebraic terms and measurement units. Round to 1 decimal place.

Example

$y = 80.6 \tan 28^\circ$ [cm]

$y = 42.9$ cm

Write letter Show units

34 $x = 38 \sin 52^\circ$ [m]

$x =$ ____ m

35 $y = 52.7 \cos 19^\circ$ [cm]

36 $a = 255 \tan 62^\circ$ [mm]

37 $x = 30.6 \sin 40^\circ$ [m]

38 $y = 450 \tan 45^\circ$ [km]

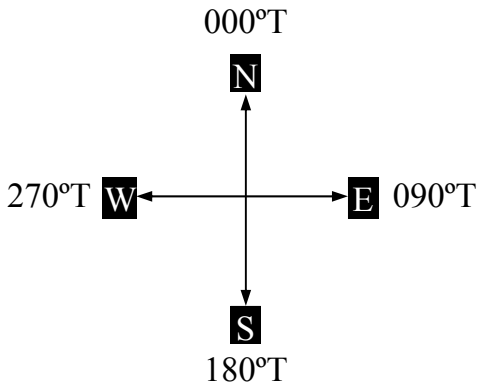
EXTENSION

Trigonometry - True Bearings

True bearings are measured from North in a clockwise direction. They are also regularly called 'Whole Circle Bearings'. So bearings start from North 000ºT and increase clockwise, with the largest bearing (in degrees) being 359ºT. Bearings are always shown using 3 digits, so bearings less than 100ºT will have a zero at the front. Example, 073ºT.

North is 000°T,
East is 090°T,
South 180°T and
West 270°T
*North is also considered as 360° for subtraction.

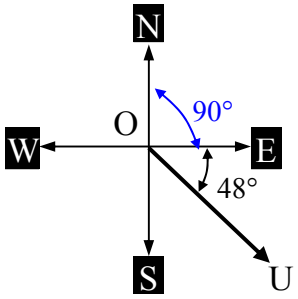


Calculation of bearings uses the values above and either addition or subtraction.

EXAMPLE OF ADDITION

The bearing OU is 48º past East.
The bearing of East is 090ºT, so the bearing of OU is:

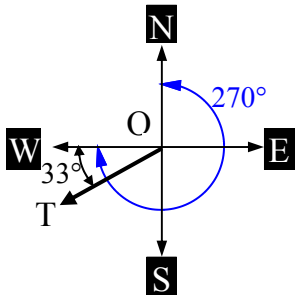
090º + 48º = 138ºT



EXAMPLE OF SUBTRACTION

The bearing OT is 33º before West.
The bearing of West is 270ºT, so the bearing of OT is:

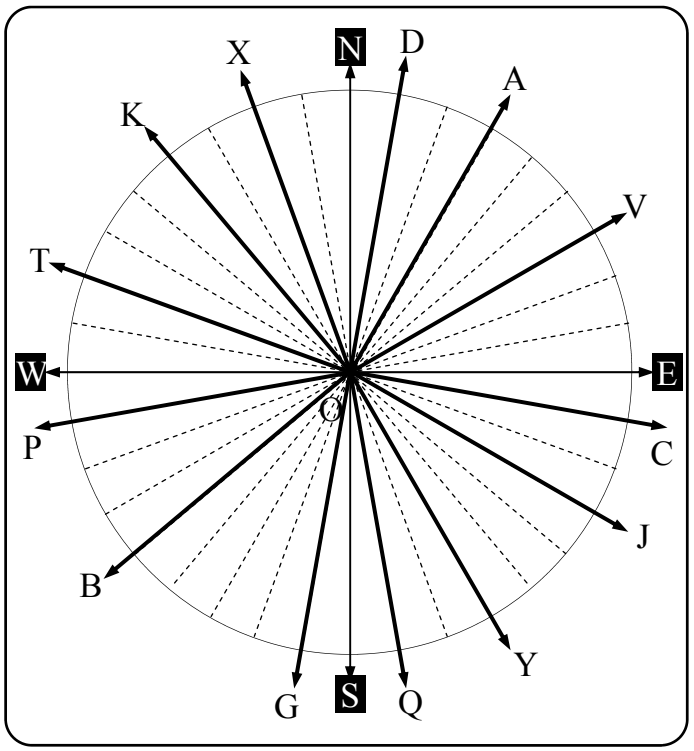
270º - 33º = 237ºT



Trigonometry - True Bearings (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

These bearings are on 10° divisions. 'O' is in the centre of the diagram, so bearings are 'OA', 'OB' etc., from the centre out. North is 000° (or 000° T).



Give the True bearing for these. Count the 10º divisions. Remember the bearing for East, South and West, to speed things up.

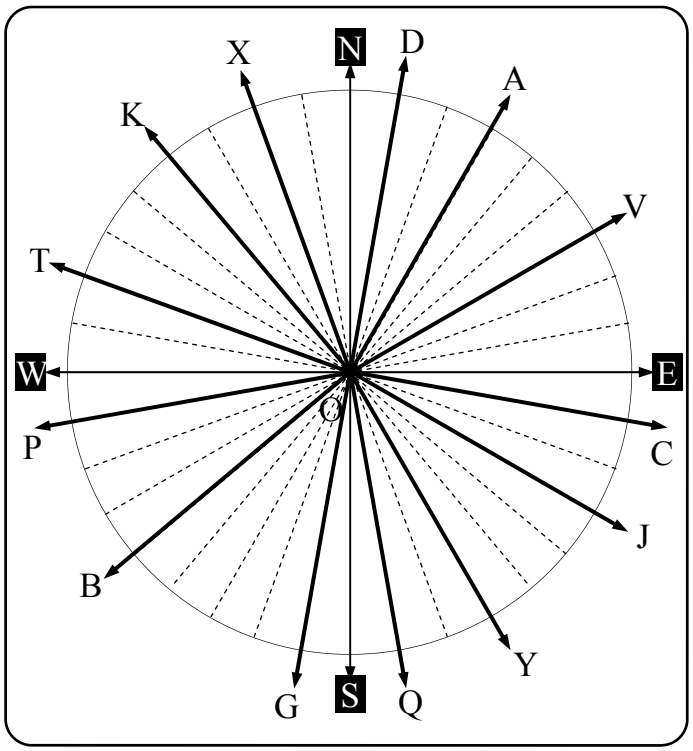
Trigonometry - True Bearings (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

These bearings are on 10° divisions. 'O' is in the centre of the diagram, so bearings are 'OA', 'OB' etc., from the centre out. North is 000° (or 000° T).



Give the True bearing for these. Count the 10° divisions. Remember the bearing for East, South and West, to speed things up.

1	OA	030° T		2	OD	010° T	
3	OY	150° T	Show ° symbol	4	OX	340° T	
5	OC	100° T		6	OB	230° T	
7	EAST	090° T		8	OJ	120° T

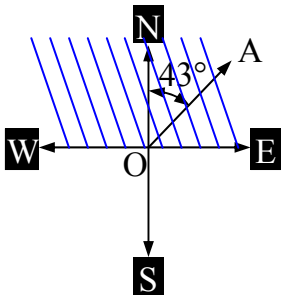
Trigonometry - Compass Bearings

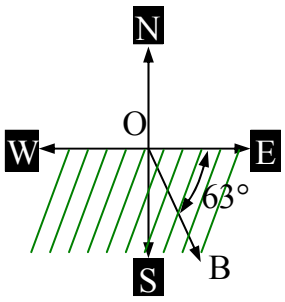
Compass bearings measure the bearing from North, when above the East-West line. Or South, when below the East-West Line.

MEASURED OFF NORTH



OA is above the East-West line.
So it is measured off North.

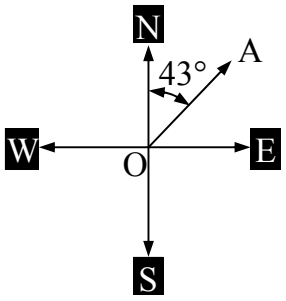
MEASURED OFF SOUTH



OB is below the East-West line.
So it is measured off South.

To give the compass bearing, you use two directions. Firstly North or South, the angle, then the direction the angle is heading, which is either East or West. The angle is always measured from North or from South. If the angle isn't given from North/South, a calculation is performed to change it.

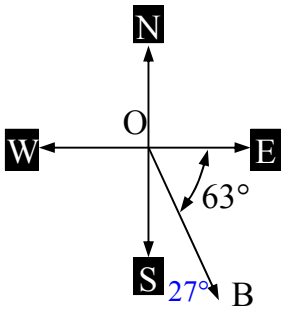
NO CALCULATION REQUIRED



OA is 43° from North in an Easterly direction.

N 43° E

CALCULATION REQUIRED



OB is 27° from South in an Easterly direction. Note 90° - 63° = 27°

S 27° E

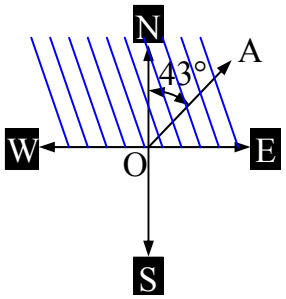
Trigonometry - Bearing Conversion

Compass bearings measure the bearing from North, when above the East-West line. Or South, when below the East-West Line.

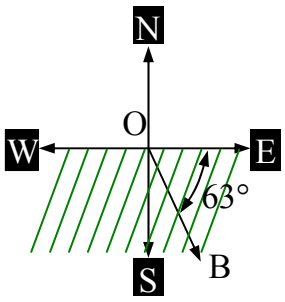
MEASURED OFF NORTH



OA is above the East-West line.
So it is measured off North.

N 43° E

MEASURED OFF SOUTH



OB is below the East-West line.
So it is measured off South.

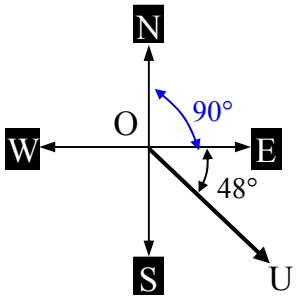
S 27° E

True (or Whole circle) bearings measure the bearing from North, in a clockwise direction using 3 digits. North is 000°T.

EXAMPLE OF ADDITION

The bearing OU is 48° past East.
The bearing of East is 090°T, so the bearing of OU is:

090° + 48° = 138°T



EXAMPLE OF SUBTRACTION

The bearing OT is 33° before West.
The bearing of West is 270°T, so the bearing of OT is:

270° - 33° = 237°T

Trigonometry - Bearing Diagrams

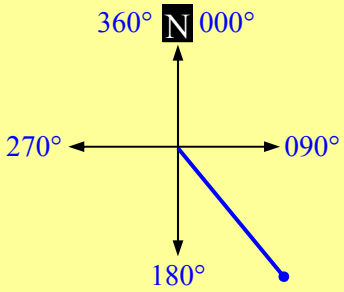
Bearings are often a specific length measurement in a given direction. This can be given in a diagram, or in words. When you apply trigonometry to a question, it is much easier when you have a diagram, but this means you may have to construct one yourself.

These worksheets don't involve scale, so in constructing a diagram you don't have to use a protractor for the angle and apply a scale to rule a line of a set length. They are sketches, not scale diagrams.

Example: Dave drove for 19 km at a bearing of 148ºT.

STEP 1

DRAW THE BEARING



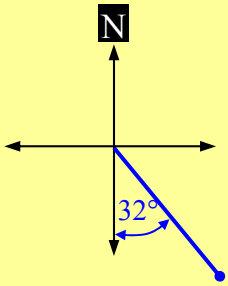
Sketch the bearing.

Think about the angles on the compass points and use that to guide you in where you should draw the bearing.

Unlike a bearing without a distance, you don't use an arrowhead, just a line or put a small circle at the end.

STEP 2

FIND THE ANGLE



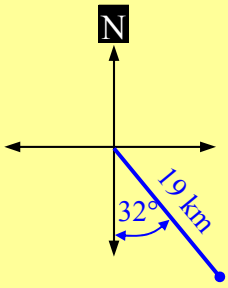
Find the Angle

Because the bearing is below the East-West Line, find the angle to the bearing from South.

Angle = 180 - 148 = 32º

STEP 3

ADD THE DISTANCE



Write the distance

Because the bearing is both direction and length, you also write the distance on the bearing.

Trigonometry - Bearing Diagrams (Sheet 1)

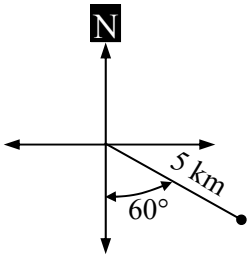
Trigonometry - Bearing Diagrams (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

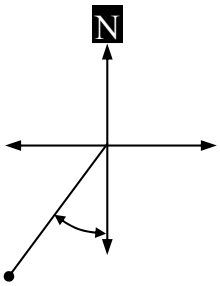
Sketch the bearing and then label the distance and show the angle made with North or South.

Example

John sailed 5 km at a bearing of 120°T.



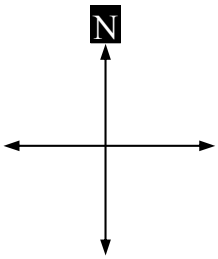
1



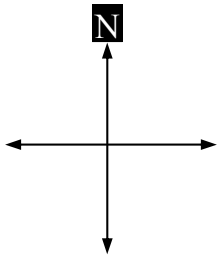
Toni walked for 9 km at a bearing of 210°T.

2

Ben rode for 15 km at a bearing of 320°T.



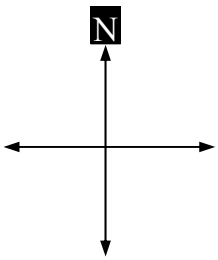
3



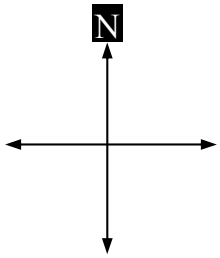
Rohit drove for 46 km at a bearing of 055°T.

4

Keira hiked for 7 km at a bearing of S 30° W.



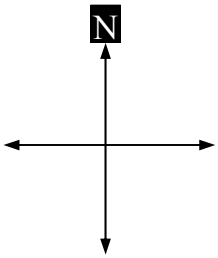
5



Mike sailed for 25 km at a bearing of S 45° E.

6

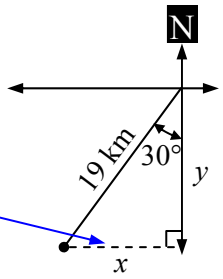
Duncan flew for 300 km at a bearing of N 70° W.



Sketch the bearing, label the distance, show the angle made with North or South. Then label the vertical (y) and horizontal (x) distance travelled.

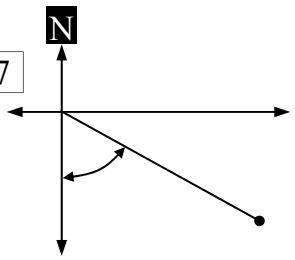
Example

Jade trekked 19 km at a bearing of 210°T.



Draw a dashed line for the x measurement

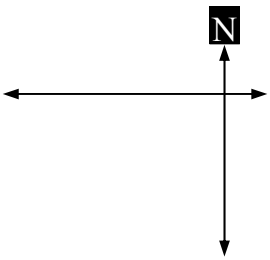
7



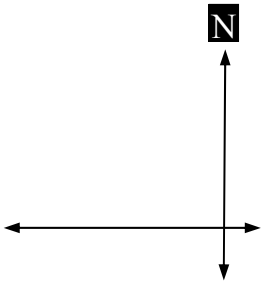
Ike walked for 11 km at a bearing of 125°T.

8

Nidal swam for 2.6 km at a bearing of 250°T.

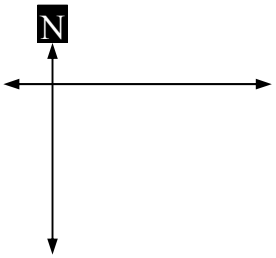


9



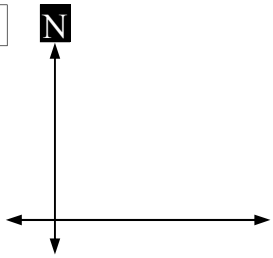
Jiao trekked for 8 km at a bearing of N 25°W.

10



Blake rode for 11 km at a bearing of S 50° E.

11



Aweyes sailed for 25 km at a bearing of N 35° E.

Trigonometry - Bearing Diagrams (Sheet 1)

Trigonometry - Bearings and Trigonometry Applications

Bearings are often a specific length measurement in a given direction. This can be given in a diagram, or in words. When you apply trigonometry to a question, it is much easier when you have a diagram, but this means you may have to construct one yourself. Combining drawings, interpretation and trigonometry makes this outcome one of the most difficult in the course, so these sheets should be considered very challenging.

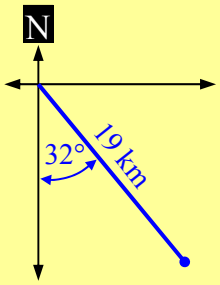
These worksheets don't involve scale, so in constructing a diagram you don't have to use a protractor for the angle and apply a scale to rule a line of a set length. They are sketches, not scale diagrams.

All of the questions on these sheets will be solved using sin or cos, you won't need to use tan.

Example: Dave drove for 19 km at a bearing of 148ºT. How far East of his departure point will he be when he arrives? Answer to 2 decimal places.

STEP 1

DRAW THE BEARING



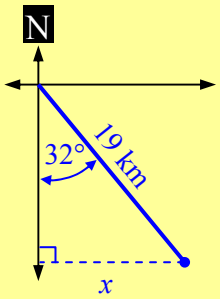
Sketch the bearing.

Position the North-South/East-West lines that favours the quadrant you are going to use …. giving you the most space for your sketch.

Then draw the bearing and label it as well as the angle made with the North-South line.

STEP 2

CONSTRUCT TRIANGLE

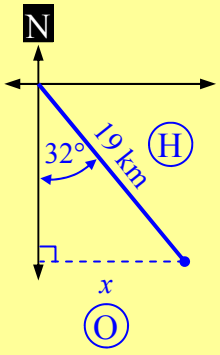


Construct the triangle.

Rule a horizontal line from the end point to North-South line. Include a perpendicular symbol, then write the unknown length on the diagram.

STEP 3

SOLVE



Solve the trig problem.

Label the sides O, A or H. Choose either sin or cos, tan won't be used in these exercises. Also, 'x' will always be on top in these questions, so you will always multiply to solve them.

$$\sin 32 = \frac{x}{19}$$

$\times 19$ $\times 19$

$$x = 19 \sin 32$$

$$x = 10.07 \text{ km} \quad (2 \text{ d.p.})$$

Trigonometry - Bearings and Trigonometry Applications (Sheet 1)

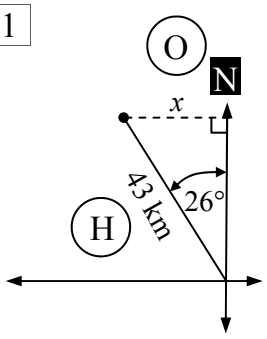
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

TAN

Label the sides O, A or H and calculate the unknown length to 2 decimal places. Tan free zone.

SOH CAH ~~TOA~~

1



$\sin \square = \frac{\square}{\square}$ O / H

$\times 43$ $\times 43$

$x = \square \sin \square$

$x = \square$ km 2 d.p.

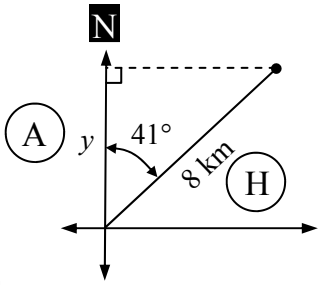
2

$\cos \square = \frac{\square}{\square}$ A / H

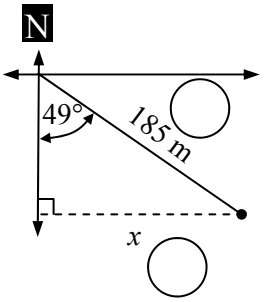
$\times 8$ $\times 8$

$y = \square \cos \square$

$y = \square$ km 2 d.p.



3



$\square = \frac{\square}{\square}$

$\times$ $\times$

$x = \square \sin \square$

$x = \square$ m

2 d.p.

4

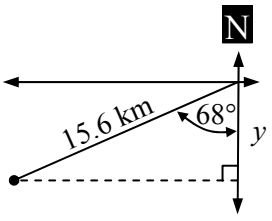
$\square = \frac{\square}{\square}$

$\times$ $\times$

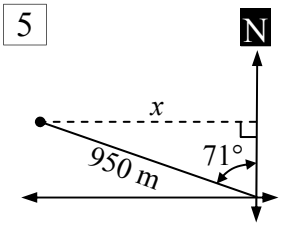
$y =$

$y =$

2 d.p.



5



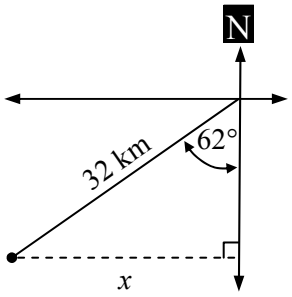
$\square = \frac{\square}{\square}$

$\times$ $\times$

2 d.p.

These questions are the same except they have a worded explanation of the bearing as well. Find the unknown distance to 1 decimal place.

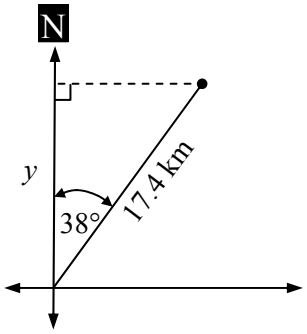
6 A ferry travels 32 km at a bearing of 242ºT. Calculate how far East of its departure point (x on the diagram) the ferry has travelled.



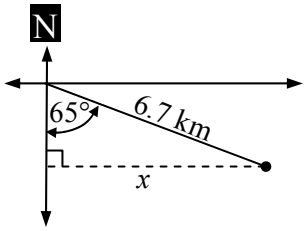
$\times$ $\times$

1 d.p.

7 Murali is trekking for 17.4 km at a bearing of N 38º E. Calculate how far North of his starting point, y on the diagram, he has travelled.



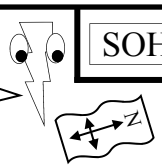
8 Briony is competing in a 6.7 km cross country run at a bearing of 115ºT. Calculate how far East (x) of her starting point she is, when she finishes the run.



Trigonometry - Bearings and Trigonometry Applications (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

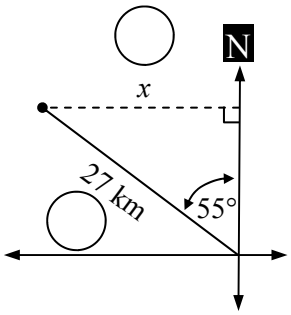
Get ready to construct your own diagrams! Calculate the unknown distance to 1 decimal place.



SOH CAH ~~TOA~~

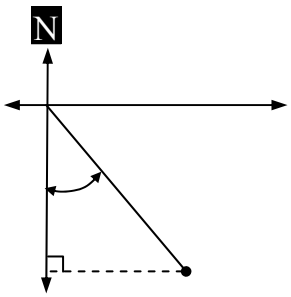
OK you are on your own. Calculate the unknown distance to 1 decimal place.

1 Josh is hiking for 27 km at a bearing of N 55º W. Calculate how far West of his original position, *x* on the diagram, he will be when he finishes the hike.

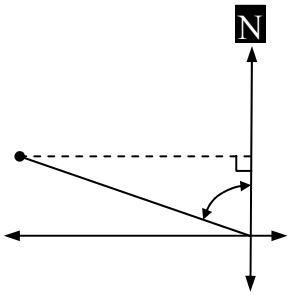


1 d.p.

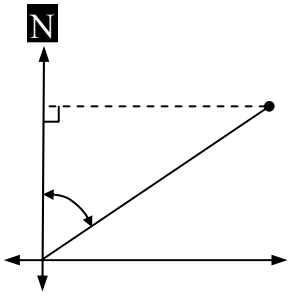
2 Lucy is sailing 33 km at a bearing of 142º T. Add the information to the diagram and calculate how far South of her original position Lucy will be.



3 Darius is bush-walking for 4.2 km at a bearing of 285ºT to a campsite. How far North of his starting point is the campsite?



4 Thien is driving 10.7 km at a bearing of N 41º E. How far East of his starting position will he be when he arrives?



5 Isla is jogging 3.4 km at a bearing of 022ºT. Calculate how far North of her starting point she will be when she finishes.

6 Azmi is trekking at a bearing of S 36º W for 17 km. Calculate how far West Azmi will be from his starting point when he completes the trek.

7 Jodi is looking at a lighthouse which is 5 km away at a bearing of N 58º W. How far North of Jodi is the light-house?

8 Amy is flying at a bearing of 142ºT for 650 km. How far East of her departure point will she be when she lands?

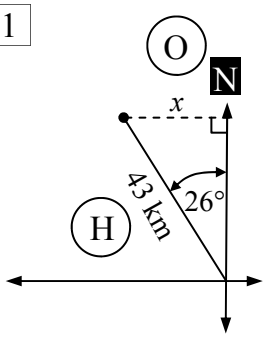
Trigonometry - Bearings and Trigonometry Applications (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Label the sides O, A or H and calculate the unknown length to 2 decimal places. Tan free zone.

SOH CAH ~~TOA~~

1



$\sin 26 = \frac{x}{43}$ O / H

$\times 43$ $\times 43$

$x = 43 \sin 26$

$x = 18.85$ km 2 d.p.

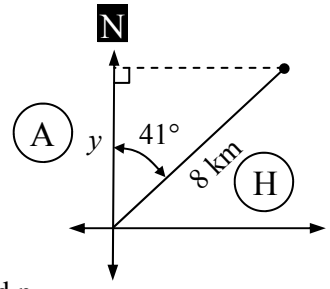
2

$\cos 41 = \frac{y}{8}$ A / H

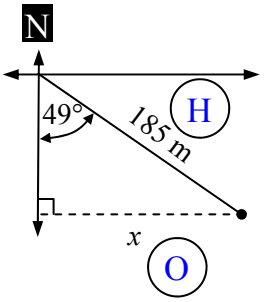
$\times 8$ $\times 8$

$y = 8 \cos 41$

$y = 6.04$ km 2 d.p.



3



$\sin 49 = \frac{x}{185}$

$\times 185$ $\times 185$

$x = 185 \sin 49$

$x = 139.62$ m

2 d.p.

4

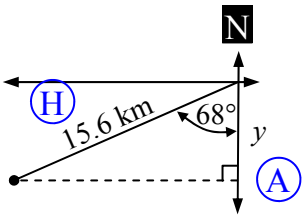
$\cos 68 = \frac{y}{15.6}$

$\times 15.6$ $\times 15.6$

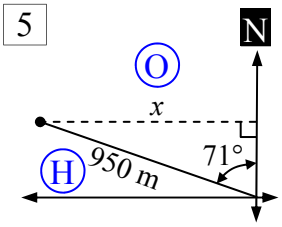
$y = 15.6 \cos 68$

$y = 5.84$ km

2 d.p.



5



$\sin 71 = \frac{x}{950}$

$\times 950$ $\times 950$

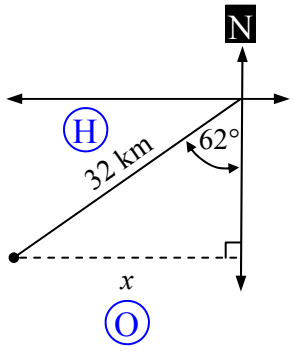
$x = 950 \sin 71$

$x = 898.24$ m

2 d.p.

These questions are the same except they have a worded explanation of the bearing as well. Find the unknown distance to 1 decimal place.

6 A ferry travels 32 km at a bearing of 242°T. Calculate how far East of its departure point (x on the diagram) the ferry has travelled.



$\sin 62 = \frac{x}{32}$

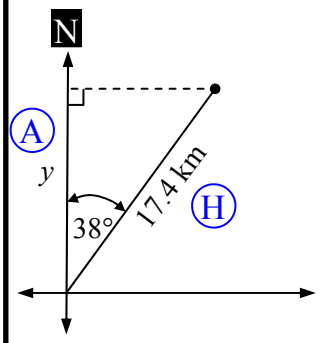
$\times 32$ $\times 32$

$y = 32 \sin 62$

$y = 28.3$ km

1 d.p.

7 Murali is trekking for 17.4 km at a bearing of N 38° E. Calculate how far North of his starting point, y on the diagram, he has travelled.



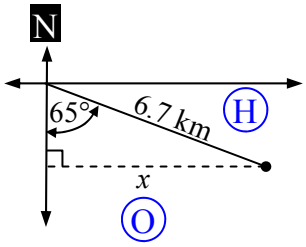
$\cos 38 = \frac{y}{17.4}$

$\times 17.4$ $\times 17.4$

$y = 17.4 \cos 38$

$y = 13.7$ km

8 Briony is competing in a 6.7 km cross country run at a bearing of 115°T. Calculate how far East (x) of her starting point she is, when she finishes the



$\sin 65 = \frac{x}{6.7}$

$\times 6.7$ $\times 6.7$

$x = 6.7 \sin 65$

$x = 6.1$ km

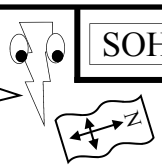
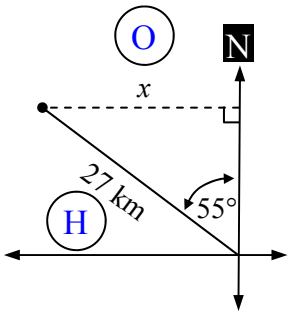
Get ready to construct your own diagrams! Calculate the unknown distance to 1 decimal place.



SOH CAH ~~TOA~~

OK you are on your own. Calculate the unknown distance to 1 decimal place.

1 Josh is hiking for 27 km at a bearing of N 55º W. Calculate how far West of his original position, x on the diagram, he will be when he finishes the hike.



$\sin 55 = \frac{x}{27}$

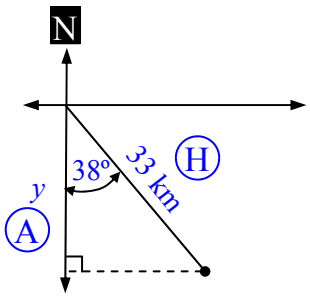
$\times 27 \quad \times 27$

$x = 27 \sin 55$

$x = 22.1$ km

1 d.p.

2 Lucy is sailing 33 km at a bearing of 142º T. Add the information to the diagram and calculate how far South of her original position Lucy will be.



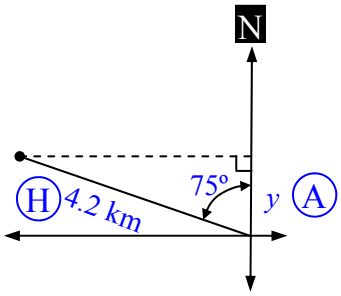
$\cos 38 = \frac{y}{33}$

$\times 33 \quad \times 33$

$y = 33 \cos 38$

$y = 22.1$ km

3 Darius is bush-walking for 4.2 km at a bearing of 285ºT to a campsite. How far North of his starting point is the campsite?



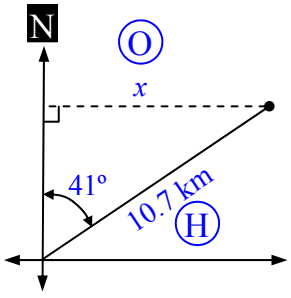
$\cos 75 = \frac{y}{4.2}$

$\times 4.2 \quad \times 4.2$

$y = 4.2 \cos 75$

$y = 1.1$ km

4 Thien is driving 10.7 km at a bearing of N 41º E. How far East of his starting position will he be when he arrives?



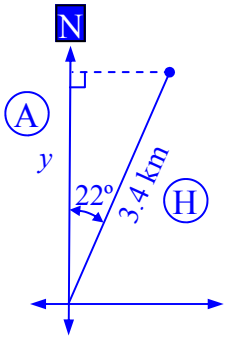
$\sin 41 = \frac{x}{10.7}$

$\times 10.7 \quad \times 10.7$

$x = 10.7 \sin 41$

$x = 7.0$ km

5 Isla is jogging 3.4 km at a bearing of 022ºT. Calculate how far North of her starting point she will be when she finishes.



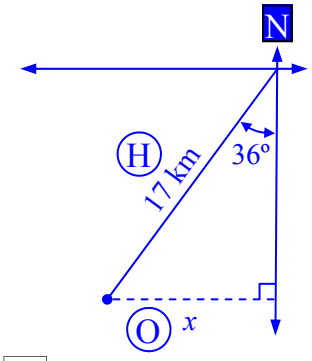
$\cos 22 = \frac{y}{3.4}$

$\times 3.4 \quad \times 3.4$

$y = 3.4 \cos 22$

$y = 3.2$ km

6 Azmi is trekking at a bearing of S 36º W for 17 km. Calculate how far West Azmi will be from his starting point when he completes the trek.



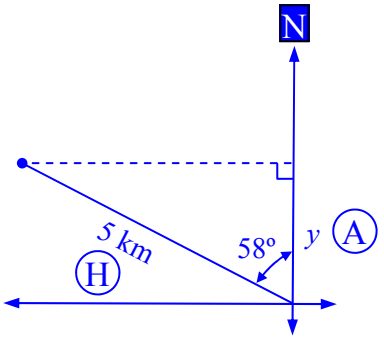
$\sin 36 = \frac{x}{17}$

$\times 17 \quad \times 17$

$x = 17 \sin 36$

$x = 10.0$ km

7 Jodi is looking at a lighthouse which is 5 km away at a bearing of N 58º W. How far North of Jodi is the light-house?



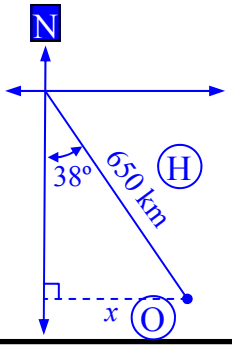
$\cos 59 = \frac{y}{5}$

$\times 5 \quad \times 5$

$y = 5 \cos 59$

$y = 2.6$ km

8 Amy is flying at a bearing of 142ºT for 650 km. How far East of her departure point will she be when she lands?



$\sin 38 = \frac{x}{650}$

$\times 650 \quad \times 650$

$x = 650 \sin 38$

$x = 400.2$ km

11 058° T N 58° E

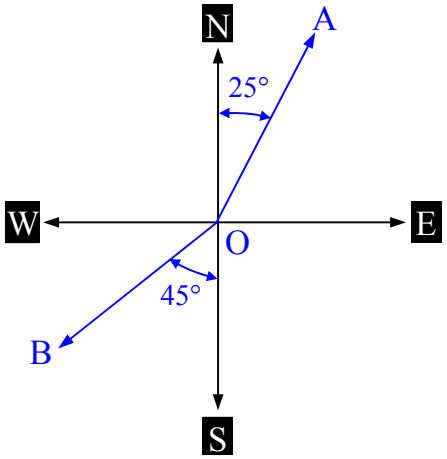
12 267° T S 87° W

13 155° T S 25° E

14 090° T EAST

Given bearings, show them on the diagrams. Include the angle between the North-South line and the bearing, then name each bearing using the letters.

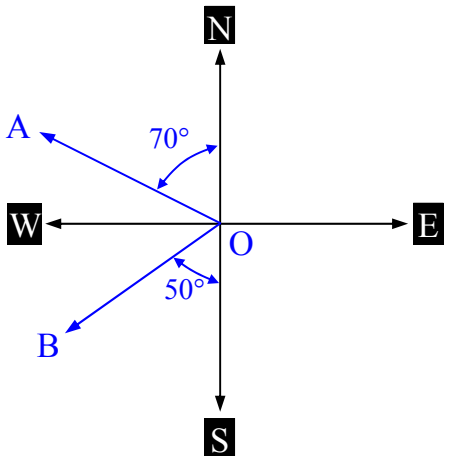
15 OA: 025° T



16 OB: S 45° W

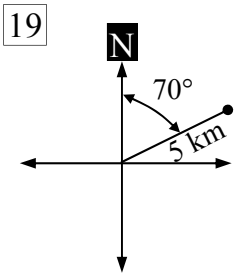
17 OA: 290° T

18 OB: 230° T



Pick which bearing is shown in these diagrams.

19



(A) 5 km at N 70° W

(B) 5 km at S 70° E

(C) 5 km at N 70° S

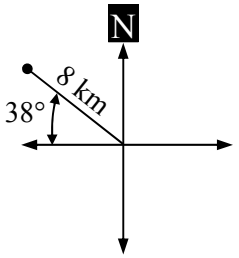
(D) 5 km at N 70° E

20 (A) 8 km at 038°T

(B) 8 km at 308°T

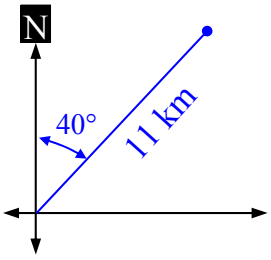
(C) 8 km at 322°T

(D) 8 km at 218°T

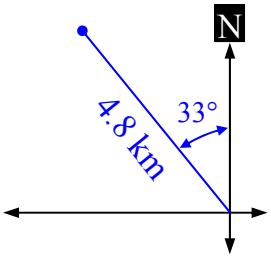


Show these bearings on the diagrams below. Include the distance and the angle made with the North-South line.

21 Jake rode for 11 km at a bearing of 040°T.



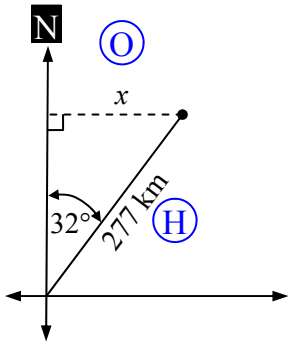
22 Joanna walked for 4.8 km at a bearing of N 33° W.



© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Apply your trigonometry skills to calculate the unknown lengths. Answer to 1 decimal place.

23 A plane travels 277 km at a bearing of 032º T. Calculate how far East of its departure point (x on the diagram) the plane has travelled.



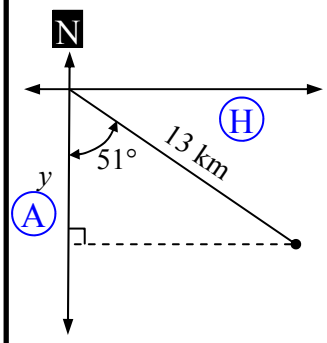
$\sin 32 = \frac{x}{277}$

$\times 277 \quad \times 277$

$x = 277 \sin 32$

$x = 146.8$ km

24 Josiah is trekking for 13 km at a bearing of S 51º E. Calculate how far South of his starting point, y on the diagram, he has travelled.



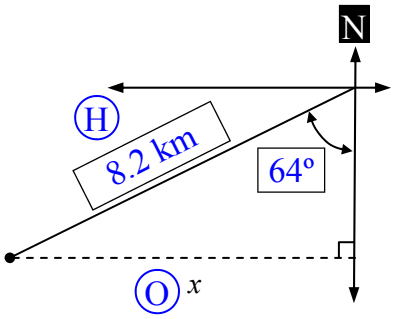
$\cos 51 = \frac{y}{13}$

$\times 13 \quad \times 13$

$y = 13 \cos 51$

$y = 8.2$ km

25 Alyssa is bush-walking for 8.2 km at a bearing of 244ºT to a campsite, shown on the diagram below. Write the distance on the bearing and the angle between South and the bearing, in the boxes.



26 Calculate the distance 'x', which is the distance her finishing point is West of her starting point.

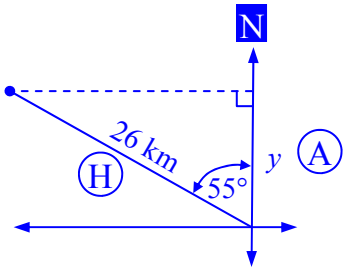
$\sin 64 = \frac{x}{8.2}$

$\times 8.2 \quad \times 8.2$

$x = 8.2 \sin 64$

$x = 7.4$ km

27 Brody is sailing at a bearing of 305º T for a distance of 26 km. Construct a diagram showing all relevant data.



28 Calculate how far North of his starting point he will be when he completes the voyage, to 1 decimal place.

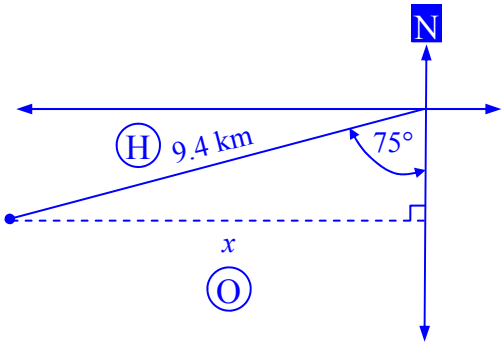
$\cos 55 = \frac{y}{26}$

$\times 26 \quad \times 26$

$y = 26 \cos 55$

$y = 14.9$ km

29 Kirby is riding at a bearing of S 75º W for a distance of 9.4 km. Construct a diagram showing all relevant data.



30 Calculate how far West of her starting point she will be when she completes riding, to 1 decimal place.

$\sin 75 = \frac{x}{9.4}$

$\times 9.4 \quad \times 9.4$

$x = 9.4 \sin 75$

$x = 9.1$ km

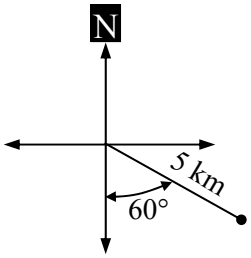
Trigonometry - Bearing Diagrams (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

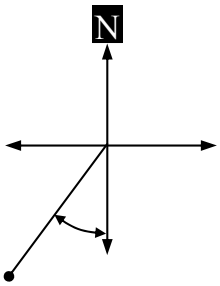
Sketch the bearing and then label the distance and show the angle made with North or South.

Example

John sailed 5 km at a bearing of 120°T.



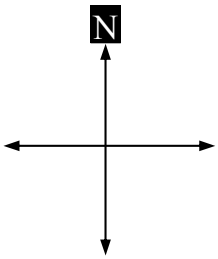
1



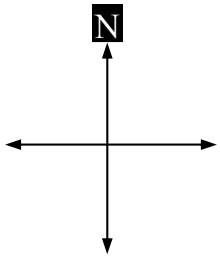
Toni walked for 9 km at a bearing of 210°T.

2

Ben rode for 15 km at a bearing of 320°T.



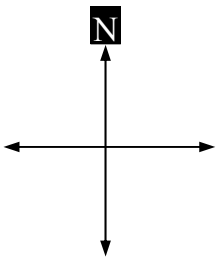
3



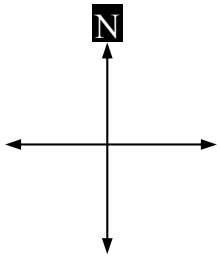
Rohit drove for 46 km at a bearing of 055°T.

4

Keira hiked for 7 km at a bearing of S 30° W.



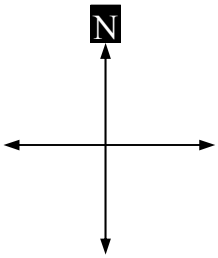
5



Mike sailed for 25 km at a bearing of S 45° E.

6

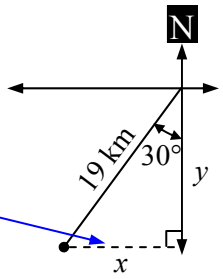
Duncan flew for 300 km at a bearing of N 70° W.



Sketch the bearing, label the distance, show the angle made with North or South. Then label the vertical (y) and horizontal (x) distance travelled.

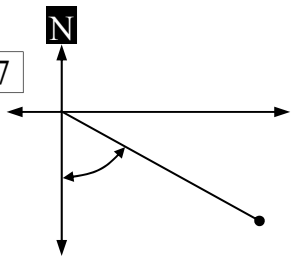
Example

Jade trekked 19 km at a bearing of 210°T.



Draw a dashed line for the x measurement

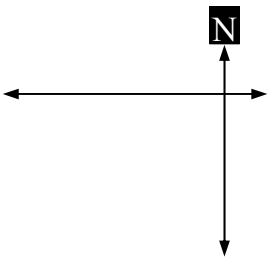
7



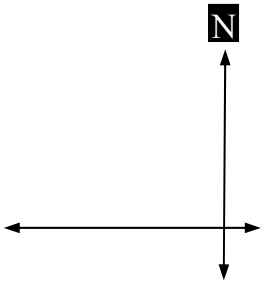
Ike walked for 11 km at a bearing of 125°T.

8

Nidal swam for 2.6 km at a bearing of 250°T.

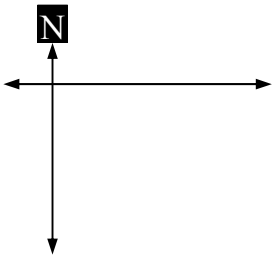


9



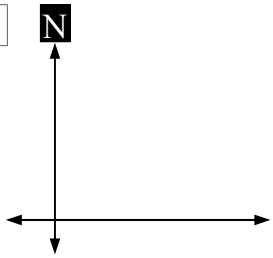
Jiao trekked for 8 km at a bearing of N 25°W.

10



Blake rode for 11 km at a bearing of S 50° E.

11



Aweyes sailed for 25 km at a bearing of N 35° E.

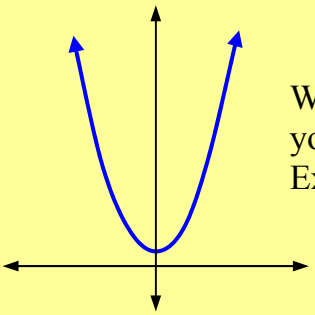
Non-Linear Relationships - Properties of Parabolas

A parabola is a curved line which is like 'U' (or upside-down 'U') shape. In this course the parabola is symmetrical across the *y*-axis, so it is the same either side of the *y*-axis. The equation for a parabola is:

$$y = ax^2 + c$$

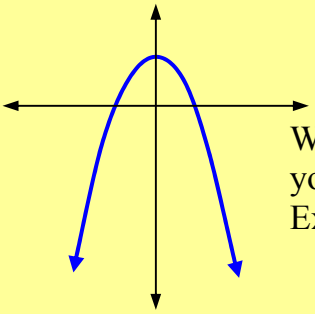
Where: a and c are rational numbers

Positive *a* value



When a is positive the parabola is concave up, with these you have a minimum value which will be on the *y*-axis.
Examples: $y = x^2$, $y = 2x^2$, $y = x^2 + 5$, $y = x^2 - 3$, $y = \frac{1}{2}x^2 + 2$.

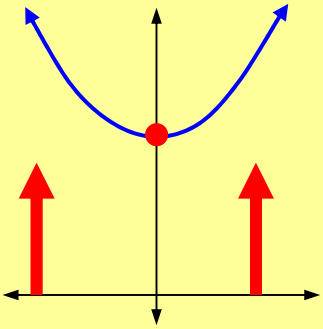
Negative *a* value



When a is negative the parabola is concave down, with these you have a maximum value which will be on the *y*-axis.
Examples: $y = -x^2$, $y = -2x^2$, $y = -x^2 + 5$, $y = -x^2 - 3$, $y = -\frac{1}{2}x^2 + 2$.

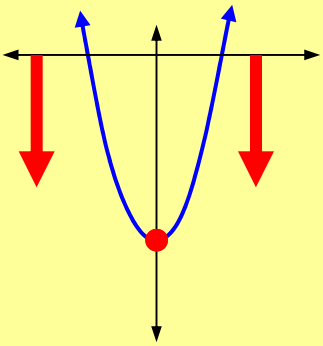
When there is no '*a*' value present '*a*' is 1. So it is positive.

Positive *c* value



When c is positive the parabola cuts the *y*-axis at this value which is ***above*** the *x*-axis.
Examples: $y = x^2 + 5$, $y = -x^2 + 1$, $y = \frac{1}{2}x^2 + 2$.

Negative *c* value

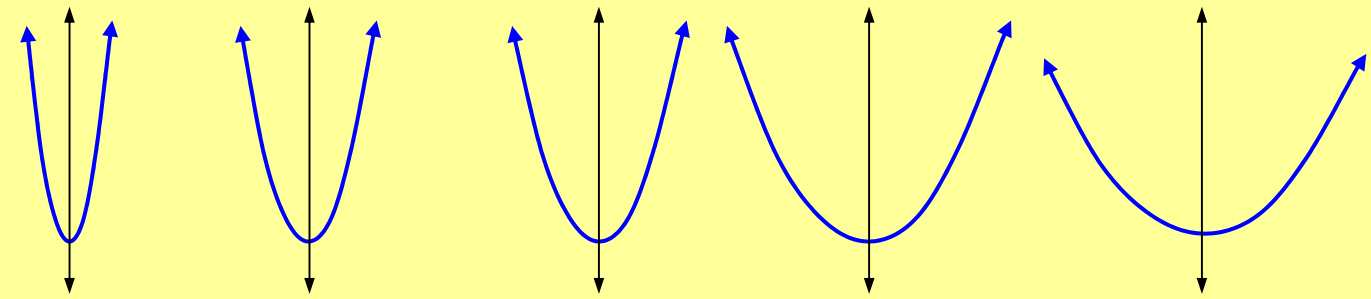


When c is negative the parabola cuts the *y*-axis at this value, which is ***below*** the *x*-axis.
Examples: $y = x^2 - 5$, $y = -x^2 - 1$, $y = \frac{1}{2}x^2 - 2$.

a values

When *a* is larger the parabola is more narrow, or 'hugs' the *y*-axis more closely. Below are sketches, not exact representations

As '*a*' reduces the parabola becomes more wide



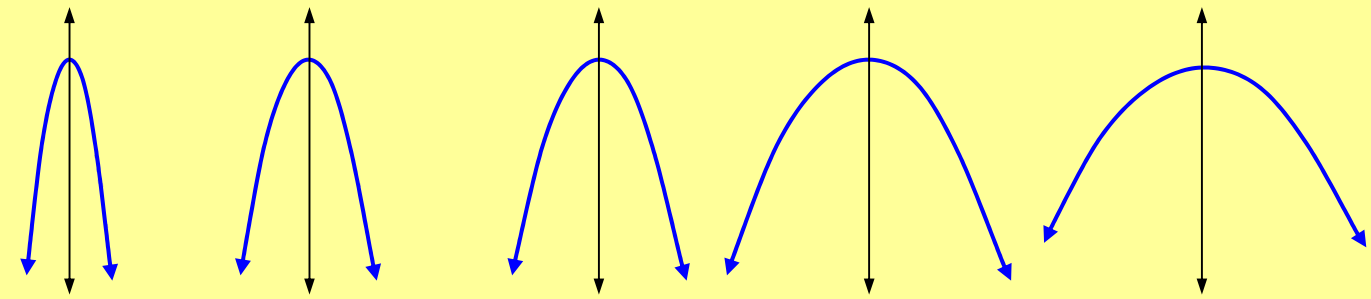
$y = 3x^2$ $y = 2x^2$ $y = x^2$ $y = \frac{1}{2}x^2$ $y = \frac{1}{4}x^2$

($a = 1$)

a values

The same effect occurs with negative values of '*a*'. As the magnitude of the '*a*' values reduce, the parabola flattens.

As the magnitude of '*a*' reduces the parabola becomes more wide



$y = -3x^2$ $y = -2x^2$ $y = -x^2$ $y = -\frac{1}{2}x^2$ $y = -\frac{1}{4}x^2$

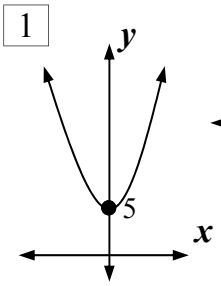
($a = -1$)

Non-Linear Relationships - Properties of Parabolas (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

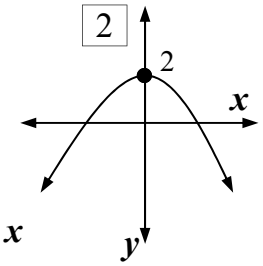
Look at the y-intercept and complete the equations for these parabolas.

1



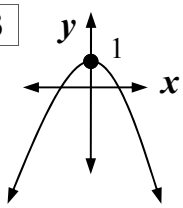
$y = 2x^2 +$ ☐

2



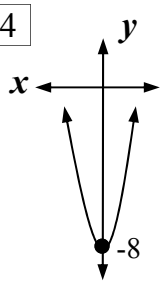
$y = -\frac{1}{2}x^2 +$ ☐

3



$y = -x^2 +$ ☐

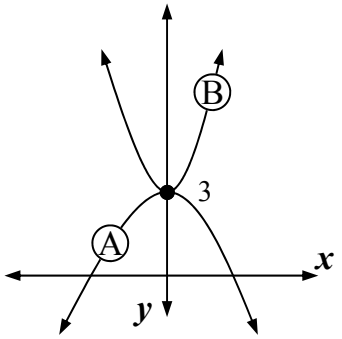
4



$y = 3x^2 -$ ☐

Choose which equation applies to each of the parabolas.

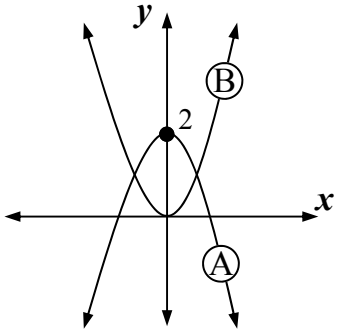
5



$y = x^2 + 3$ Ⓐ Ⓑ

$y = -\frac{1}{2}x^2 + 3$ Ⓐ Ⓑ

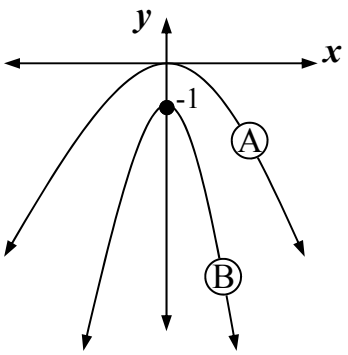
6



$y = x^2$ Ⓐ Ⓑ

$y = -x^2 + 2$ Ⓐ Ⓑ

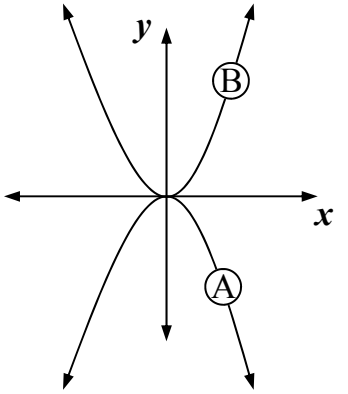
7



$y = -\frac{1}{2}x^2$ Ⓐ Ⓑ

$y = -2x^2 - 1$ Ⓐ Ⓑ

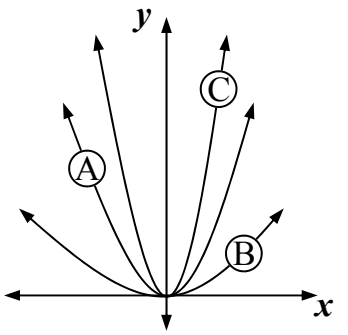
8



$y = -x^2$ Ⓐ Ⓑ

$y = x^2$ Ⓐ Ⓑ

9

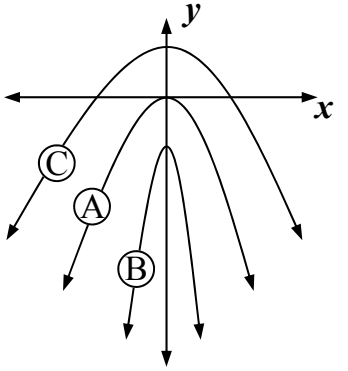


$y = x^2$ ⒶⒷⒸ

$y = 2x^2$ ⒶⒷⒸ

$y = \frac{1}{2}x^2$ ⒶⒷⒸ

10



$y = -\frac{1}{2}x^2 + 3$ ⒶⒷⒸ

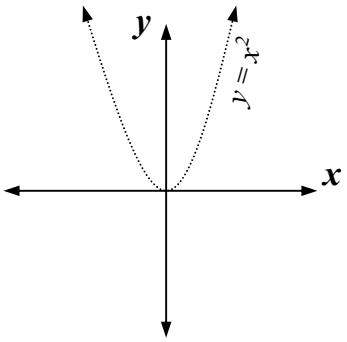
$y = -3x^2 - 3$ ⒶⒷⒸ

$y = -x^2$ ⒶⒷⒸ

Now sketch your own parabolas.

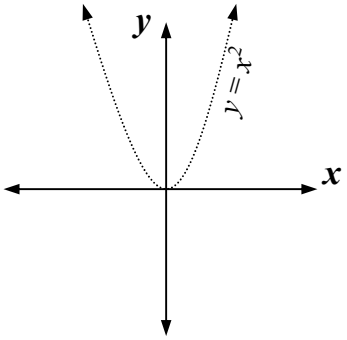
The graph below shows $y = x^2$ as a dotted curve. Sketch $y = -x^2$.

11 Arrowheads, Equation on curve



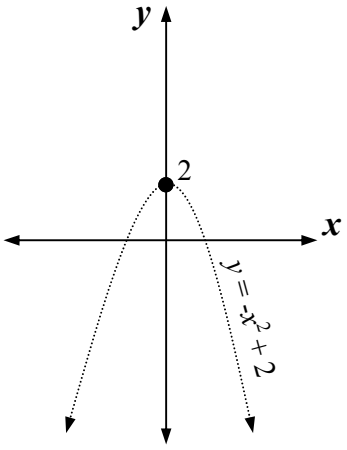
The graph below shows $y = x^2$ as a dotted curve. Sketch $y = x^2 - 3$.

12



The graph below shows $y = -x^2 + 2$ as a dotted curve. Sketch $y = x^2 - 2$.

13



Non-Linear Relationships - Properties of Parabolas (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Join the sketch with the equation for each parabola.

1 
$y = 2x^2$

2 
$y = x^2$

3 
$y = \frac{1}{2}x^2$

4 
$y = 3x^2$

5 
$y = x^2 + 2$

6 
$y = -x^2$

7 
$y = x^2$

8 
$y = x^2 - 2$

9 
$y = -x^2 - 2$

10 
$y = -x^2 + 7$

11 
$y = x^2 - 2$

12 
$y = -x^2$

13 
$y = x^2 + 2$

14 
$y = -x^2$

15 
$y = x^2$

16 
$y = x^2 - 2$

Give 2 examples of parabolas that have the following properties.

17 A parabola is concave-up and cuts the y-axis at 4.

$y = x^2 + \square$ $\qquad$ $y = \square x^2 + \square$

18 A parabola is concave-down and cuts the y-axis at the origin.

$y =$ $\qquad$ $y =$

19 A parabola is concave-up and cuts the y-axis at the -3.

20 A parabola is concave-down and cuts the y-axis at the same intercept as $y = 3x^2 + 5$.

21 A parabola is concave-up and cuts the y-axis at the same intercept as $y = -x^2 - 6$.

22 A parabola is concave-up, cuts the y-axis at the same intercept as $y = -\frac{1}{2}x^2 - 4$ and is more narrow than $y = 2x^2$.

23 A parabola is concave-down, cuts the y-axis at the same intercept as $y = 3x^2 - 6$ and is a more wide than $y = -2x^2$.

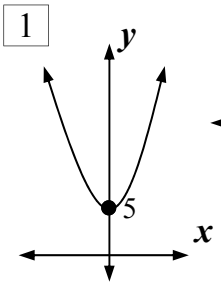
Give a possible name for the solid-line unnamed parabolas shown below

24 
25 
Non-Linear Relationships - Properties of Parabolas (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

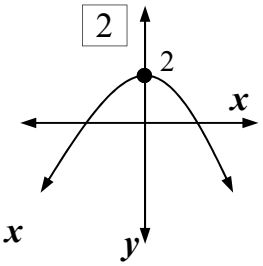
Look at the y-intercept and complete the equations for these parabolas.

1



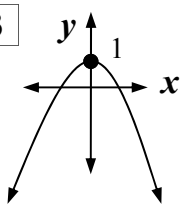
$y = 2x^2 +$ 5

2



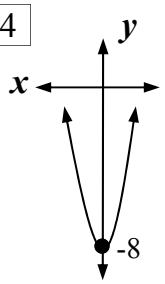
$y = -\frac{1}{2}x^2 +$ 2

3



$y = -x^2 +$ 1

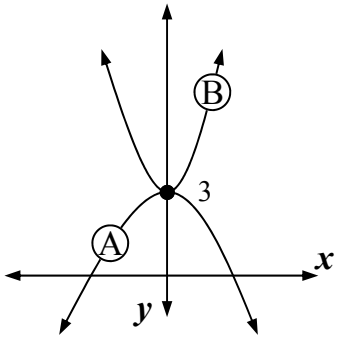
4



$y = 3x^2 -$ 8

Choose which equation applies to each of the parabolas.

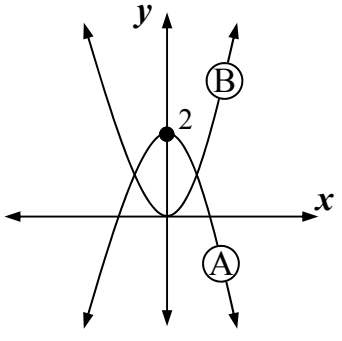
5



$y = x^2 + 3$ $y = -\frac{1}{2}x^2 + 3$

Ⓐ Ⓑ Ⓐ Ⓑ

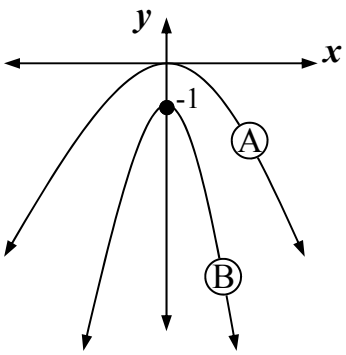
6



$y = x^2$ $y = -x^2 + 2$

Ⓐ Ⓑ Ⓐ Ⓑ

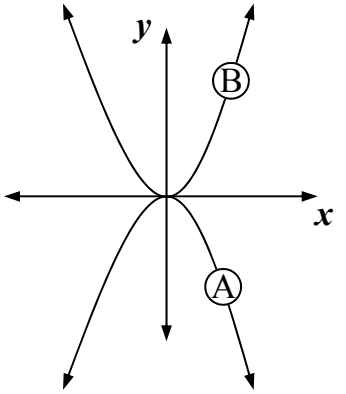
7



$y = -\frac{1}{2}x^2$ $y = -2x^2 - 1$

Ⓐ Ⓑ Ⓐ Ⓑ

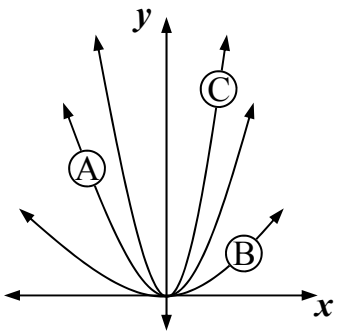
8



$y = -x^2$ $y = x^2$

Ⓐ Ⓑ Ⓐ Ⓑ

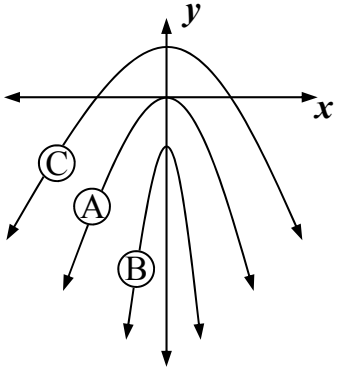
9



$y = x^2$ $y = 2x^2$ $y = \frac{1}{2}x^2$

Ⓐ Ⓑ Ⓒ Ⓐ Ⓑ Ⓒ Ⓐ Ⓑ Ⓒ

10



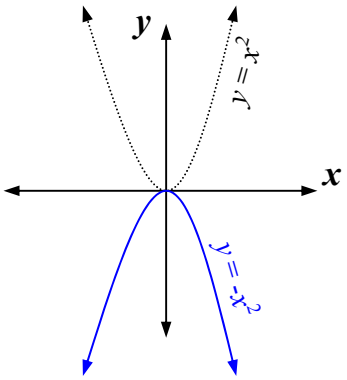
$y = -\frac{1}{2}x^2 + 3$ $y = -3x^2 - 3$ $y = -x^2$

Ⓐ Ⓑ Ⓒ Ⓐ Ⓑ Ⓒ Ⓐ Ⓑ Ⓒ

Now sketch your own parabolas.

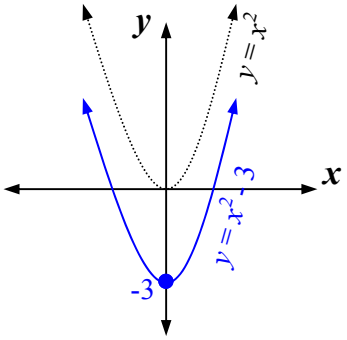
The graph below shows $y = x^2$ as a dotted curve. Sketch $y = -x^2$.

11 Arrowheads, Equation on curve



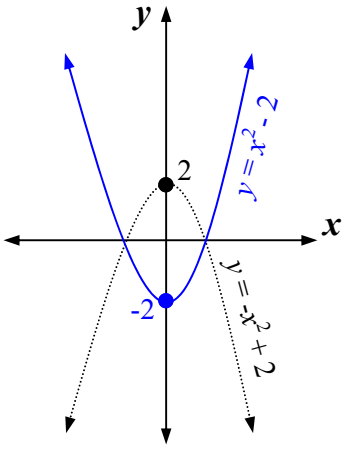
The graph below shows $y = x^2$ as a dotted curve. Sketch $y = x^2 - 3$.

12



The graph below shows $y = -x^2 + 2$ as a dotted curve. Sketch $y = x^2 - 2$.

13

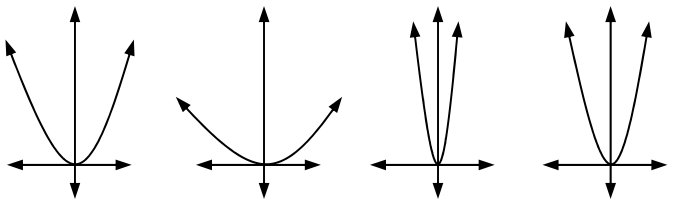


Non-Linear Relationships - Properties of Parabolas (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

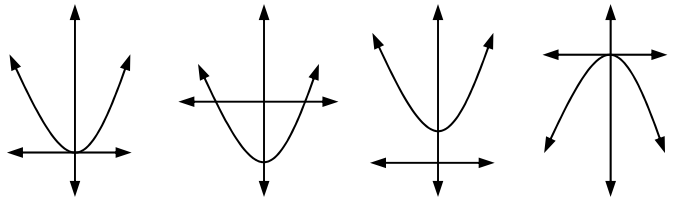
Join the sketch with the equation for each parabola.

1 2 3 4



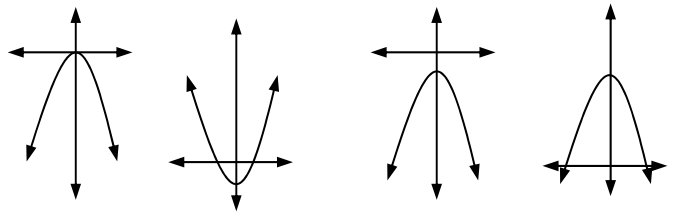
$y = 2x^2$ $y = x^2$ $y = \frac{1}{2}x^2$ $y = 3x^2$

5 6 7 8



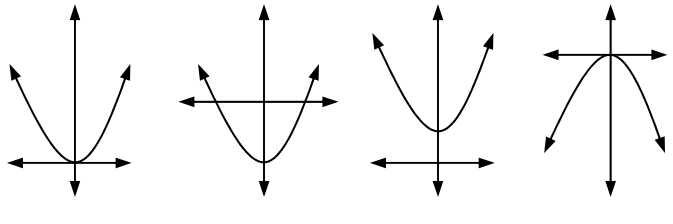
$y = x^2 + 2$ $y = -x^2$ $y = x^2$ $y = x^2 - 2$

9 10 11 12



$y = -x^2 - 2$ $y = -x^2 + 7$ $y = x^2 - 2$ $y = -x^2$

13 14 15 16



$y = x^2 + 2$ $y = -x^2$ $y = x^2$ $y = x^2 - 2$

Give 2 examples of parabolas that have the following properties.

17 A parabola is concave-up and cuts the y-axis at 4.

$y = x^2 + 4$ $y = 2x^2 + 4$

18 A parabola is concave-down and cuts the y-axis at the origin.

$y = -x^2$ $y = -2x^2$

19 A parabola is concave-up and cuts the y-axis at the -3.

$y = x^2 - 3$ $y = 2x^2 - 3$

20 A parabola is concave-down and cuts the y-axis at the same intercept as $y = 3x^2 + 5$.

$y = -x^2 + 5$ $y = -2x^2 + 5$

21 A parabola is concave-up and cuts the y-axis at the same intercept as $y = -x^2 - 6$.

$y = x^2 - 6$ $y = 2x^2 - 6$

22 A parabola is concave-up, cuts the y-axis at the same intercept as $y = -\frac{1}{2}x^2 - 4$ and is more narrow than $y = 2x^2$.

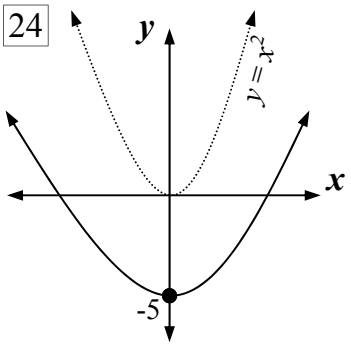
$y = 3x^2 - 4$ $y = 4x^2 - 4$

23 A parabola is concave-down, cuts the y-axis at the same intercept as $y = 3x^2 - 6$ and is a more wide than $y = -2x^2$.

$y = -x^2 - 6$ $y = -\frac{1}{2}x^2 - 6$

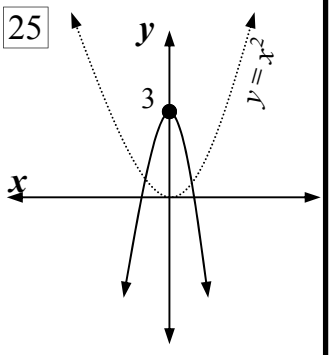
Give a possible name for the solid-line unnamed parabolas shown below

24



$y = \frac{1}{2}x^2 - 5$

25



$y = -2x^2 + 3$

Non-Linear Relationships - Plotting Points & Drawing Parabolas

This sheet gives you the points to plot, which when you plot them, creates parabolas. Parabolas are symmetrical curves, which for this course, will be symmetric across the *y*-axis.

Given points to plot, plot them and draw the parabola through the points. Once the curve is drawn, place arrowheads on its ends, then write the equation somewhere on the parabola.

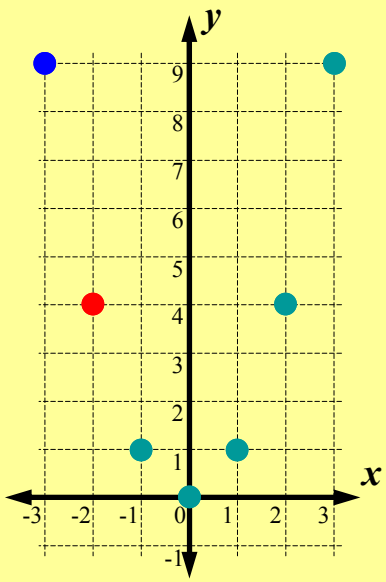
STEP 1 Remember that *x* moves across and *y* moves up and down. Plot the points on the graph.

$y = x^2$

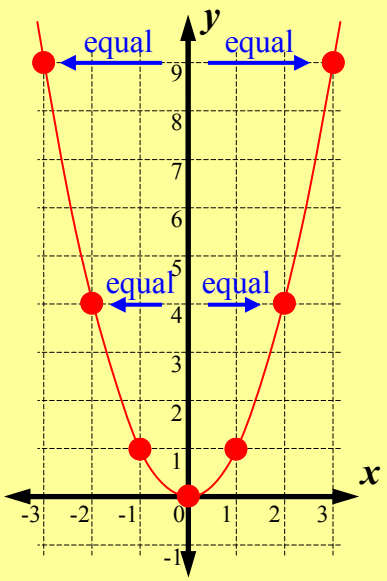
x	-3	-2	-1	0	1	2	3
y	9	4	1	0	1	4	9

Across to the left -3, then up 9

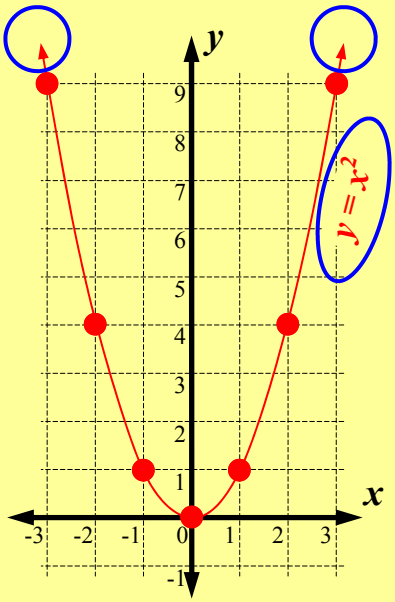
Across to the left -2, then up 4



STEP 2 Draw the curve. Note that the points are symmetrical, check for this before you draw curve.



STEP 3 Add arrowheads and the equation of the parabola. Done.



Non-Linear R'ships - Plotting Points & Drawing Parabolas (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot the points for each parabola then draw a curve through them. Show arrow heads and write the equation of the parabola on the curve.

1 $y = x^2 + 3$ Plot these points:

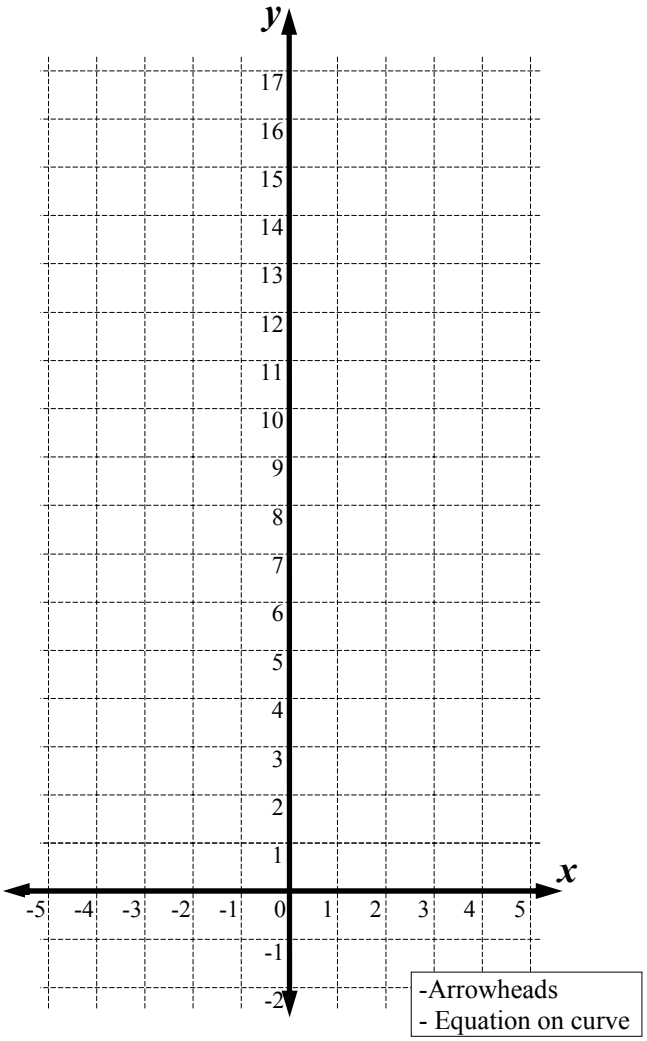
(-3, 12), (0, 3), (2, 7), (-1, 4), (-2, 7), (1, 4), (3, 12).

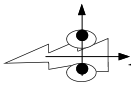
2 $y = x^2$ Plot these points:

(-1, 1), (4, 16), (2, 4), (-3, 9), (-4, 16), (3, 9), (0, 0), (1, 1), (-2, 4).

3 $y = x^2 - 2$ Plot these points:

(2, 2), (4, 14), (3, 7), (-4, 14), (-1, -1), (3, 9), (-2, 2), (1, -1), (-3, 7).





Now use the table of values to plot these parabolas. Go across 'x' and up 'y'.

4 $y = 2x^2$

x	-3	-2	-1	0	1	2	3
y	18	8	2	0	2	8	18

5 $y = x^2$

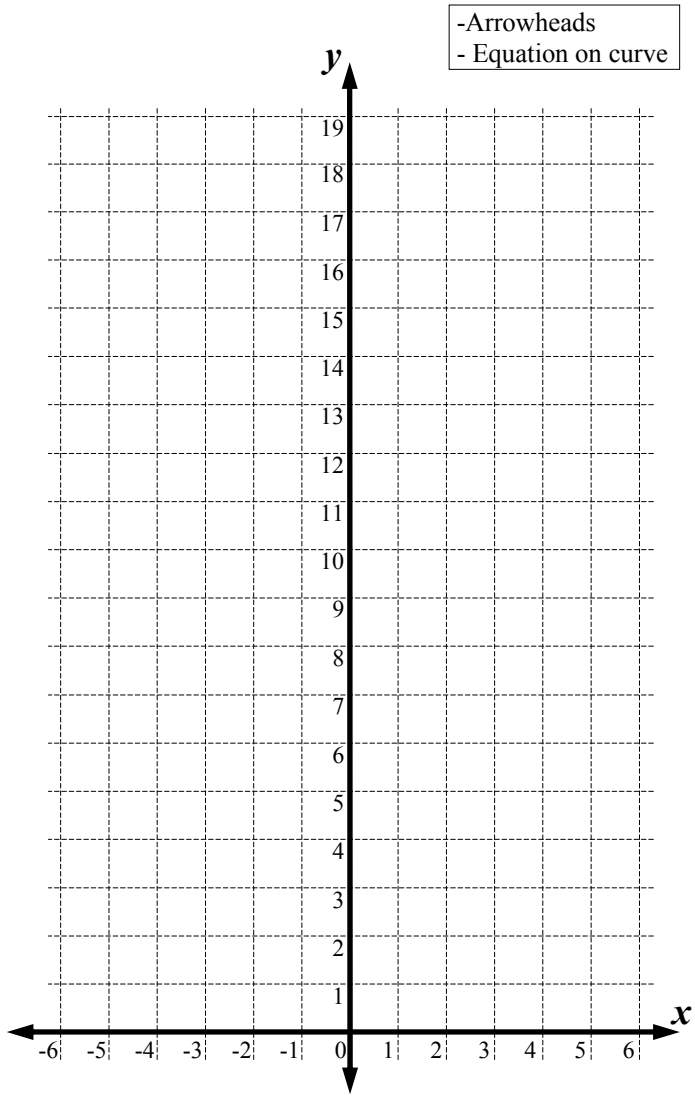
x	-4	-3	-2	1	0	1	2	3	4
y	16	9	4	1	0	1	4	9	16

6 $y = \frac{1}{2}x^2$

x	-6	-4	-2	-1	0	1	2	4	6
y	18	8	2	½	0	½	2	8	18

7 $y = \frac{1}{4}x^2$

x	-6	-4	-2	0	2	4	6
y	9	4	1	0	1	4	9



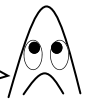
8 What effect does the number before the x^2 term have on the parabola?

- ○ A larger coefficient has a more narrow curve.
- ○ A smaller coefficient has a narrower curve.

Non-Linear R'ships - Plotting Points & Drawing Parabolas (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot the points for each parabola then draw a curve through them. Show arrow heads and write the equation of the parabola on the curve.



1 $y = -x^2$

x	-3	-2	-1	0	1	2	3
y	-9	-4	-1	0	-1	-4	-9

2 $y = -x^2 + 4$

x	-4	-3	-2	1	0	1	2	3	4
y	-12	-5	0	3	4	3	0	-5	-12

3 $y = -x^2 - 3$

x	-3	-2	-1	0	1	2	3
y	14	4	-2	-4	-2	4	14

Non-Linear Relationships - Calculator Use

T plot a parabola you need to complete a table of values. These require you to know how to use your calculator, especially when dealing with negative numbers.

The important issue is: You have to place a negative number in brackets to square it.
Example:

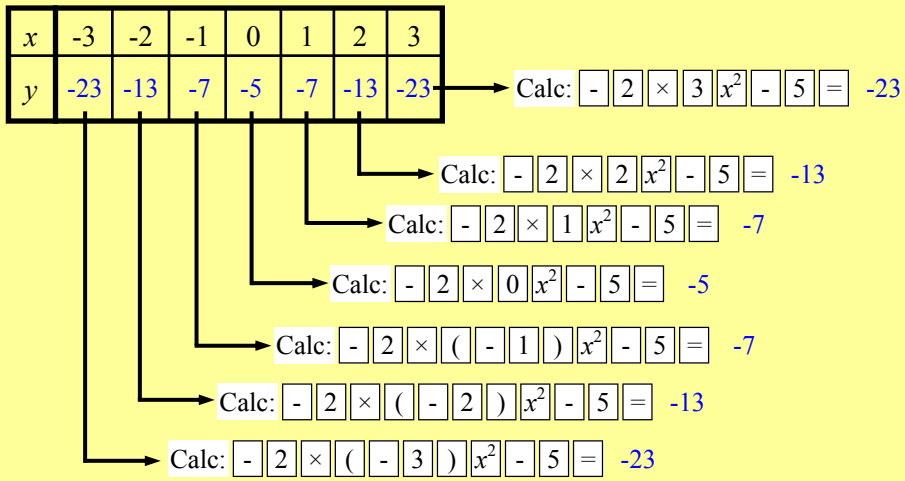
-4^2 is not the same as $(-4)^2$

$-4^2 = -16$ while $(-4)^2$ is 16.

Example

$y = -2x^2 - 5$

x	-3	-2	-1	0	1	2	3
y	-23	-13	-7	-5	-7	-13	-23



Note that the table is symmetrical across the 0 x-value.

$y = -2x^2 - 5$

x	-3	-2	-1	0	1	2	3
y	-23	-13	-7	-5	-7	-13	-23

symmetrical

Non-Linear Relationships - Calculator Use

19 $y = 3x^2 - 10$

x	-6	-5	-4	-3	-2	-1	0
y	98	65	38	17	2	-7	-10

20 $y = -x^2 - 3$

x	-6	-5	-4	-3	-2	-1	0
y	-39	-28	-19	-12	-7	-4	-3

Match the question on the left with the answer on the right.

21

$8^2 - 11$	152
$2 \times (-2)^2$	32
$3 \times 7^2 + 5$	8
$(-6)^2 - 4$	-20
$-2 \times 5^2 - 4$	25
$-5^2 + 5$	20
$(-5)^2 - 5$	53
$2 \times 4^2 - 7$	-54

Now both positive and negative. Expect to see symmetry, across the '0 value.' Complete these.

22 $y = x^2$

x	-3	-2	-1	0	1	2	3
y	9	4	1	0	1	4	9

23 $y = x^2 + 3$

x	-3	-2	-1	0	1	2	3
y	12	7	4	3	4	7	12

24 $y = -3x^2$

x	-3	-2	-1	0	1	2	3
y	-27	-12	-3	0	-3	-12	-27

25 $y = -x^2$

x	-3	-2	-1	0	1	2	3
y	-9	-4	-1	0	-1	-4	-9

26 $y = 2x^2 - 9$

x	-3	-2	-1	0	1	2	3
y	9	-1	-7	-9	-7	-1	9

Non-Linear Relationships - Plotting Parabolas

This sheet requires you to complete a table of values and then plot points which will form a parabola. All parabolas on these worksheets are symmetrical across the y-axis. So that means each side of the table of values will be the same. Even with negative values.

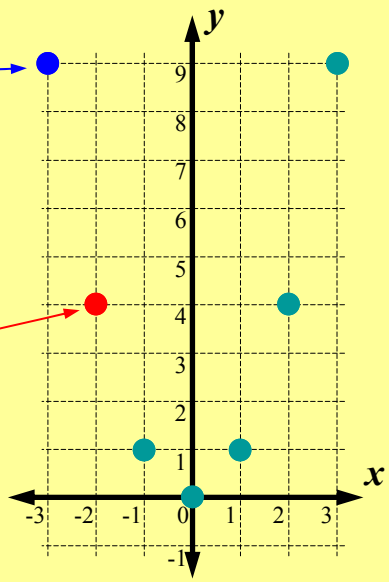
STEP 1 First complete the table. DON'T ANSWER HALF THEN COPY THE VALUES. Otherwise you don't have a check system for your table.

STEP 2 Remember that x moves across and y moves up and down. Plot the points on the graph.

$y = x^2$

x	-3	-2	-1	0	1	2	3
y	9	4	1	0	1	4	9

Calc: (- 3) x^2 =



STEP 3 Draw the curve. Note that the points are symmetrical, check for this before you draw curve.

STEP 4 Add arrowheads and the equation of the parabola. Done.

Non-Linear Relationships - Further Plotting Parabolas

This sheet requires you to complete a table of values and then plot points which will form a parabola. It is a more difficult sheet than the previous sheet due to the inclusion of fractions. Also each grid has three parabolas on the same grid, so it is more busy. All parabolas on these worksheets are symmetrical across the y-axis. So that means each side of the table of values will be the same. Even with negative values.

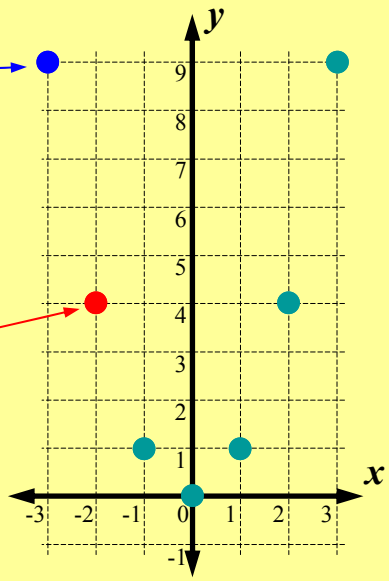
STEP 1 First complete the table. DON'T ANSWER HALF THEN COPY THE VALUES. Otherwise you don't have a check system for your table.

STEP 2 Remember that *x* moves across and *y* moves up and down. Plot the points on the graph.

$y = x^2$

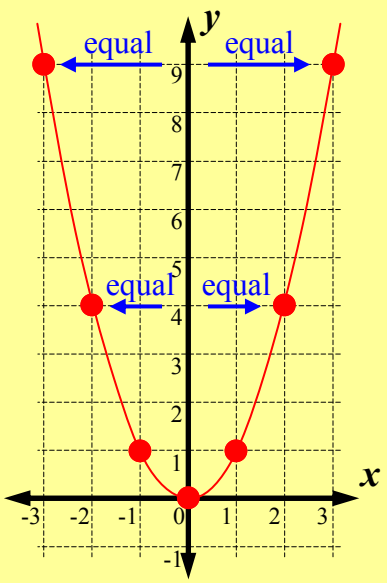
x	-3	-2	-1	0	1	2	3
y	9	4	1	0	1	4	9

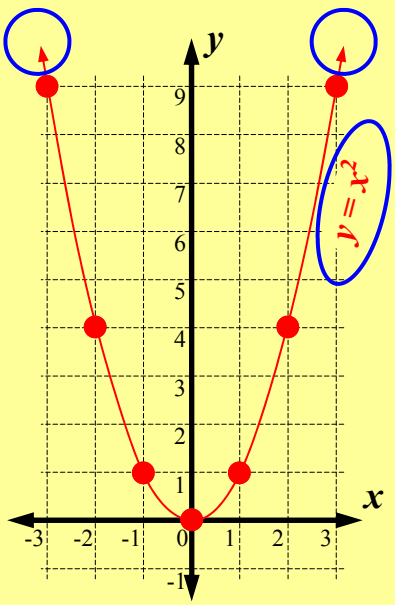
Calc: (- 3) x^2 =



STEP 3 Draw the curve. Note that the points are symmetrical, check for this before you draw curve.

STEP 4 Add arrowheads and the equation of the parabola. Done.





Non-Linear Relationships - Further Plotting Parabolas (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table of values below. Use brackets for negatives & your back button.

1 $y = x^2$

x	-3	-2	-1	0	1	2	3
y							

Calc: (- 3) x^2 =

2 $y = 2x^2 + 5$

x	-3	-2	-1	0	1	2	3
y							

Calc: 2 × (- 3) x^2 + 5 =

3 $y = -x^2 - 1$

x	-3	-2	-1	0	1	2	3
y							

Calc: - (- 3) x^2 - 1 =

4 $y = -2x^2 + 3$

x	-3	-2	-1	0	1	2	3
y							

Calc: - 2 × (- 3) x^2 + 3 =

5 $y = ½x^2$

x	-3	-2	-1	0	1	2	3
y	½						

Calc: 1 a b/c 2 ▶ × (- 3) x^2 = S⇔D

6 $y = -½x^2 + 6$

x	-3	-2	-1	0	1	2	3
y							

Calc: - 1 a b/c 2 ▶ × (- 3) x^2 + 6 = S⇔D

7 $y = -½x^2 - 4$

x	-3	-2	-1	0	1	2	3
y							

Now use the table of values to plot the three parabolas all on the same number plane. Go across 'x' and up 'y'.

Non-Linear Relationships - Plotting Exponentials

This sheet requires you to complete a table of values and then plot points which will form an exponential curve. All exponentials on these worksheets are for positive x-values.

Exponentials accelerate quickly and in the space of three x-values, you can have y-values that are thousands of times larger. So when you complete a table of values, you have to be aware that you may not be able to plot all the values from the table on the graph.

STEP 1

First complete the table. You use the power key on your calculator.

STEP 2

Remember that x moves across and y moves up and down. Plot the points on the graph.

STEP 3

Draw the curve. Add an arrowhead and the equation of the curve. Done.

$y = 2^x$

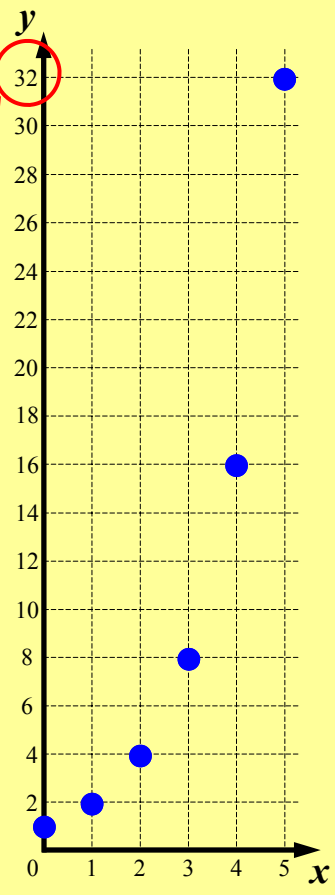
x	0	1	2	3	4	5	6
y	1	2	4	8	16	32	64

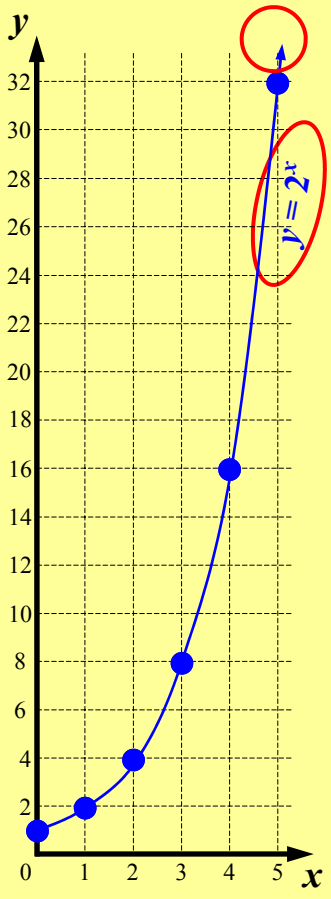
Calc: 2 $x^{\blacksquare}$ 2 =

Calc: 2 $x^{\blacksquare}$ 1 =

Calc: 2 $x^{\blacksquare}$ 0 =

Note that (6, 64) isn't plotted as it won't fit on the graph.





Non-Linear Relationships - Plotting Exponentials (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table of values below. Use your power key.

1 $y = 2^x$

x	0	1	2	3	4	5	6
y							

Calc: 2 $x^{\blacksquare}$ 0 =

2 $y = 3^x$

x	0	1	2	3	4	5
y						

3 $y = 4^x$

x	0	1	2	3	4	5
y						

These negative coefficients will give negative y-values.

4 $y = -2^x$

x	0	1	2	3	4	5	6
y							

Calc: - 2 $x^{\blacksquare}$ 0 =

5 $y = -4^x$

x	0	1	2	3	4	5
y						

6 $y = -5^x$

x	0	1	2	3	4	5
y						

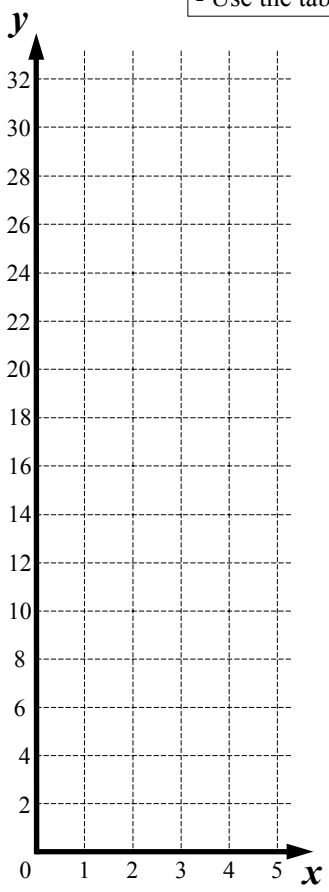
7 $y = -3^x$

x	0	1	2	3	4	5
y						

Use the table of values from your first column to plot these exponentials. Go across 'x' and up 'y'.

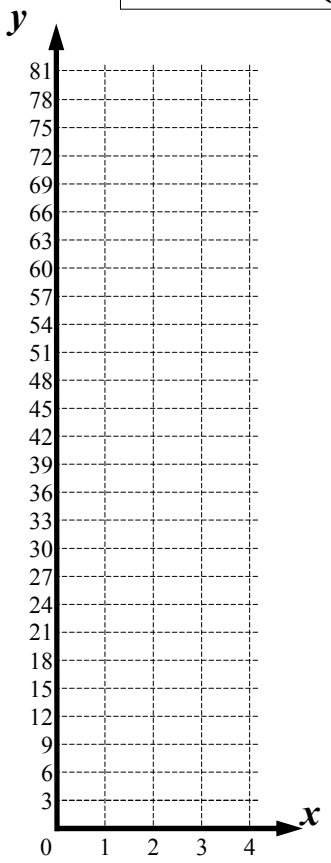
8 $y = 2^x$

- Don't plot (6, 64)
- Equation on curve
- Use the table in Q.1

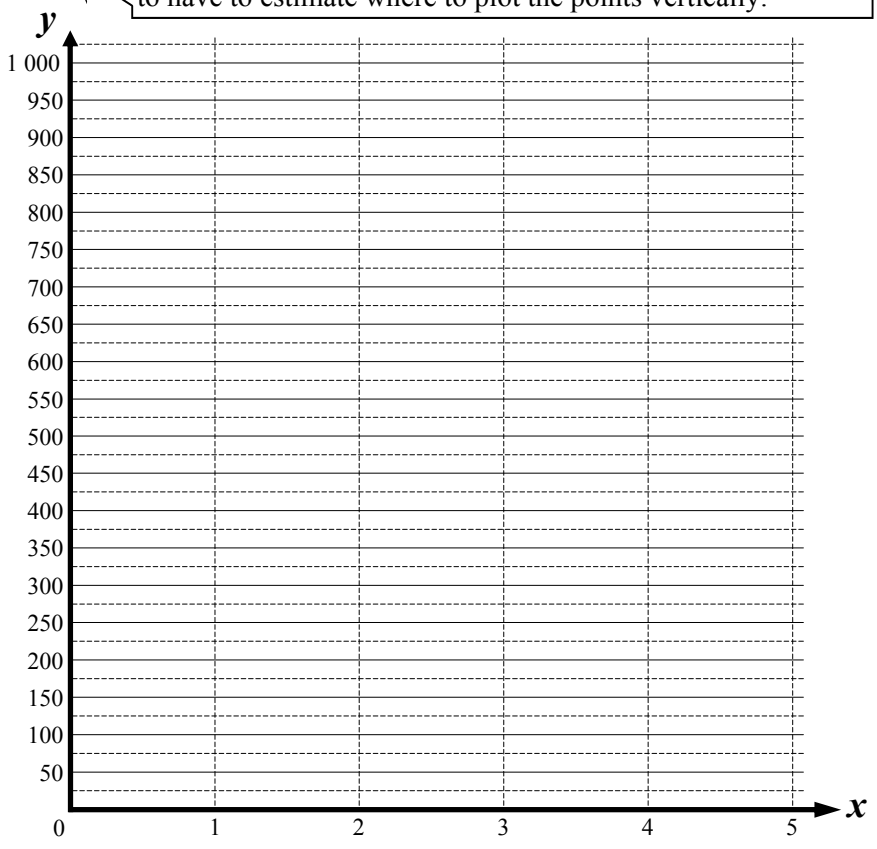


9 $y = 3^x$

- Don't plot (5, 243)
- Equation on curve
- Use the table in Q.2



10 Plot $y = 4^x$ on the grid below. (Table from Q.3). You are going to have to estimate where to plot the points vertically.



Non-Linear Relationships - Plotting Exponentials (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table of values below.
Then plot the curves on the grids.

1 $y = -2^x$

x	0	1	2	3	4	5
y						

- 2 $x^{\blacksquare}$ 0 =

2 $y = -3^x$

x	0	1	2	3	4
y					

3 $y = -4^x$

x	0	1	2	3	4
y					

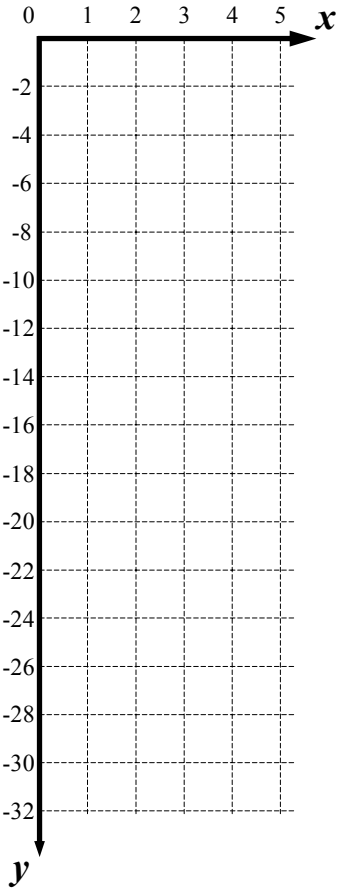
4 $y = 4^x$

x	0	1	2	3	4
y					

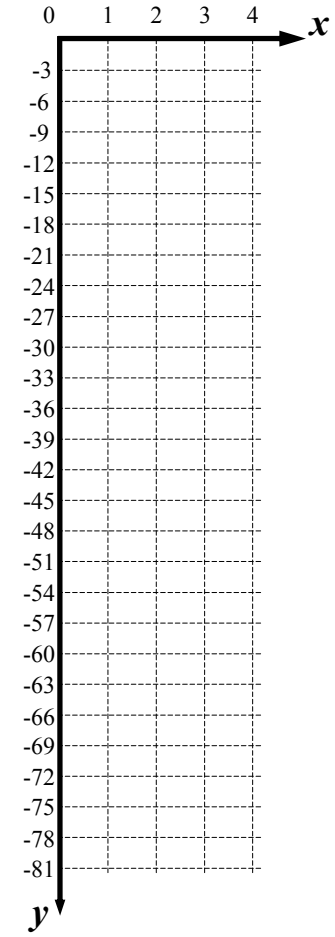
Plot $y = 4^x$ and $y = -4^x$ on the same grid.
(Tables from Q.3 & Q.4)

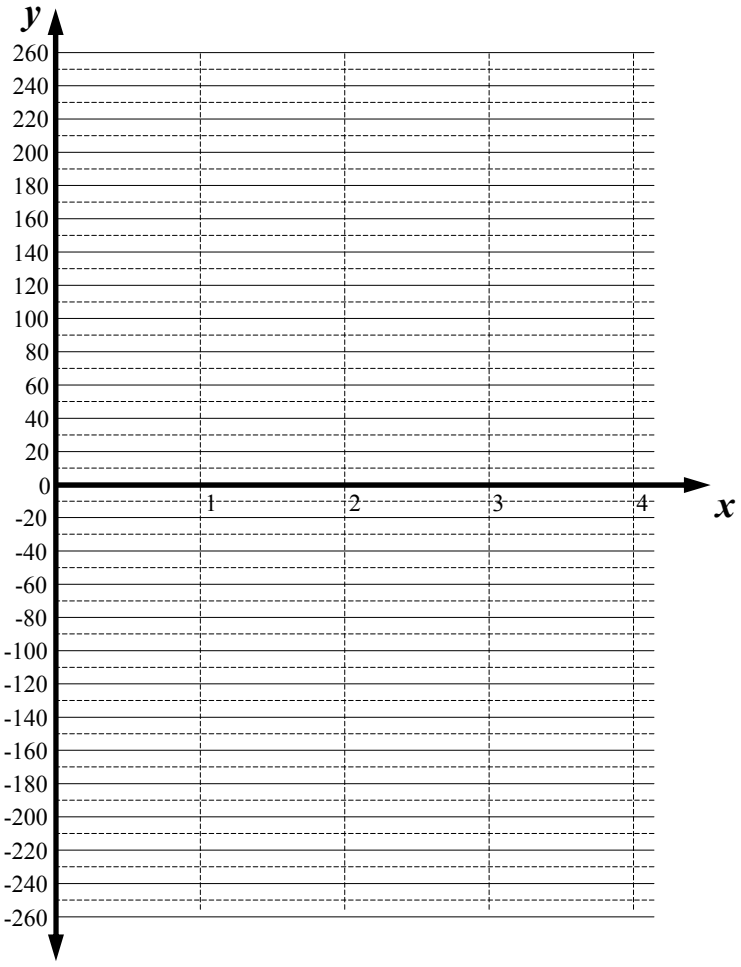
7 $y = -4^x$ & $y = 4^x$

5 $y = -2^x$ (Q.1)



6 $y = -3^x$ (Q.2)





Non-Linear Relationships - Plotting Exponentials (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table of values below. Use your power key.

1 $y = 2^x$

x	0	1	2	3	4	5	6
y	1	2	4	8	16	32	64

Calc: 2 $x^{\blacksquare}$ 0 =

2 $y = 3^x$

x	0	1	2	3	4	5
y	1	3	9	27	81	243

3 $y = 4^x$

x	0	1	2	3	4	5
y	1	4	16	64	256	1 024

These negative coefficients will give negative y-values.

4 $y = -2^x$

x	0	1	2	3	4	5	6
y	-1	-2	-4	-8	-16	-32	-64

Calc: - 2 $x^{\blacksquare}$ 0 =

5 $y = -4^x$

x	0	1	2	3	4	5
y	-1	-4	-16	-64	-256	-1 024

6 $y = -5^x$

x	0	1	2	3	4	5
y	-1	-5	-25	-125	-625	-3 125

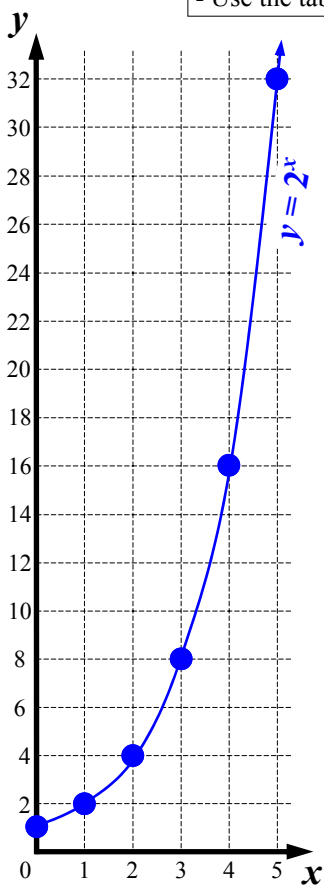
7 $y = -3^x$

x	0	1	2	3	4	5
y	-1	-3	-9	-27	-81	-243

Use the table of values from your first column to plot these exponentials. Go across 'x' and up 'y'.

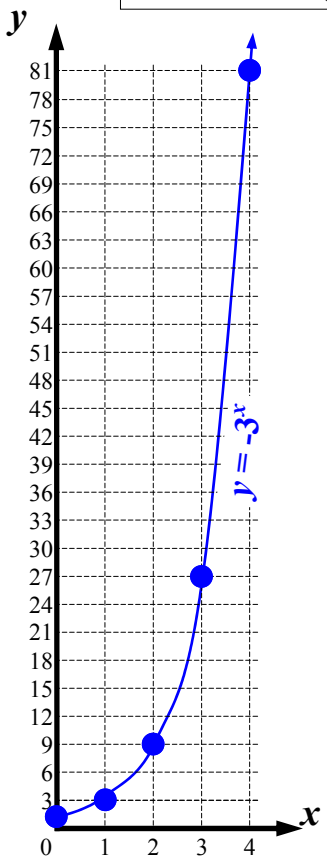
8 $y = 2^x$

- Don't plot (6, 64)
- Equation on curve
- Use the table in Q.1

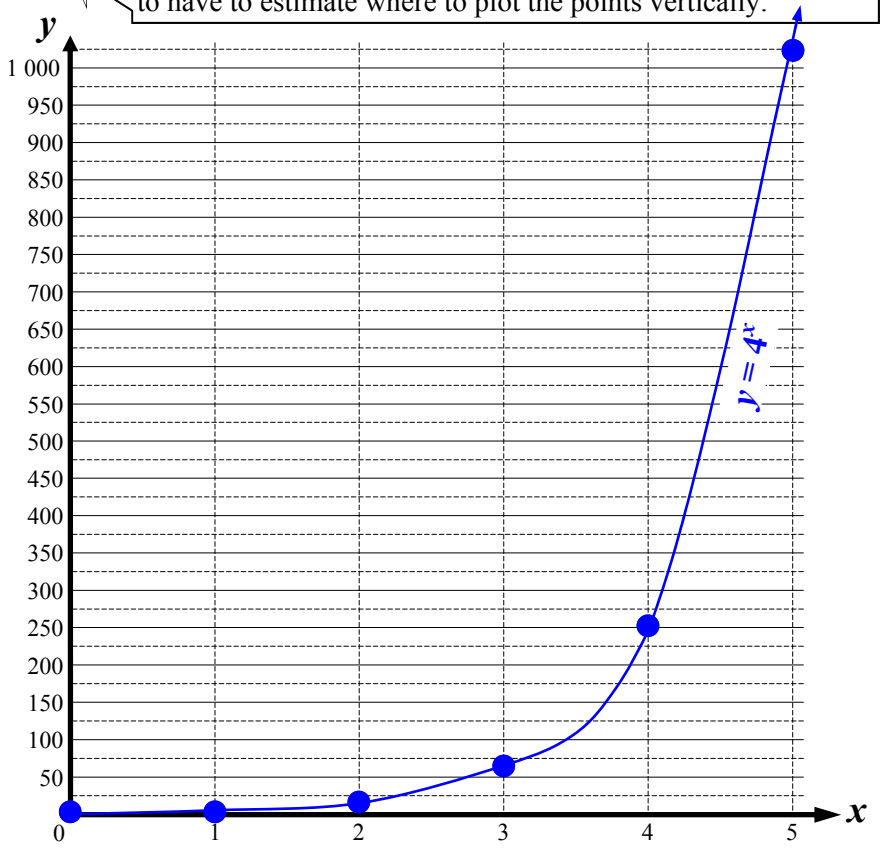


9 $y = 3^x$

- Don't plot (5, 243)
- Equation on curve
- Use the table in Q.2



10 Plot $y = 4^x$ on the grid below. (Table from Q.3). You are going to have to estimate where to plot the points vertically.



Non-Linear Relationships - Plotting Exponentials (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table of values below.
Then plot the curves on the grids.

1 $y = -2^x$

x	0	1	2	3	4	5
y	-1	-2	-4	-8	-16	-32

- 2 $x^{\blacksquare}$ 0 =

2 $y = -3^x$

x	0	1	2	3	4
y	-1	-3	-9	-27	-81

3 $y = -4^x$

x	0	1	2	3	4
y	-1	-4	-16	-64	-256

4 $y = 4^x$

x	0	1	2	3	4
y	1	4	16	64	256

Plot $y = 4^x$ and $y = -4^x$ on the same grid.
(Tables from Q.3 & Q.4)

7 $y = -4^x$ & $y = 4^x$

5 $y = -2^x$ (Q.1)

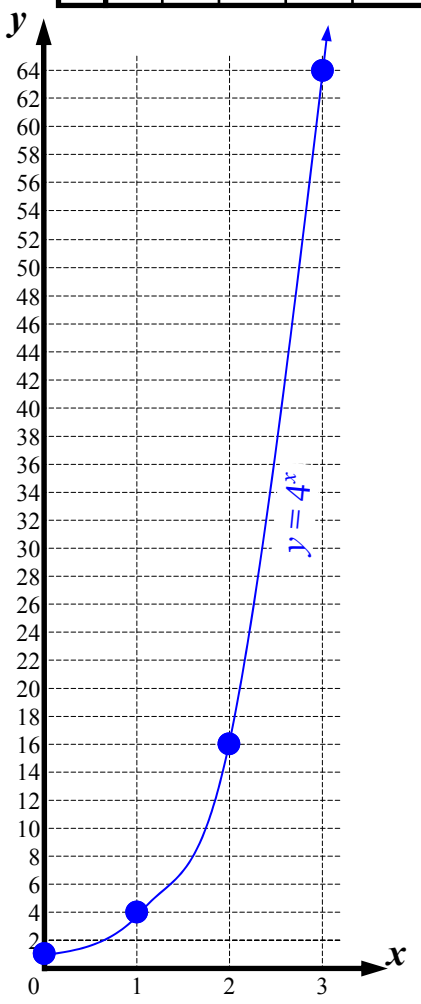
y	1	4	16	64	256



Non-Linear Relationships - Plotting Circles

This sheet requires you to complete a table of values and then plot points which will form a circle.

Circles are different from functions like parabolas and exponentials as for each x-value, there are two y-values. (Except the minimum and maximum x-values). The two y-values are the same except that one is positive and one is negative.

Example Plot the circle: $x^2 + y^2 = 36$.

STEP 1

Rearrange the equation by subtracting x^2 from both sides.

$$x^2 + y^2 = 36 \xrightarrow{\text{Rearrange}} y^2 = 36 - x^2$$

STEP 2

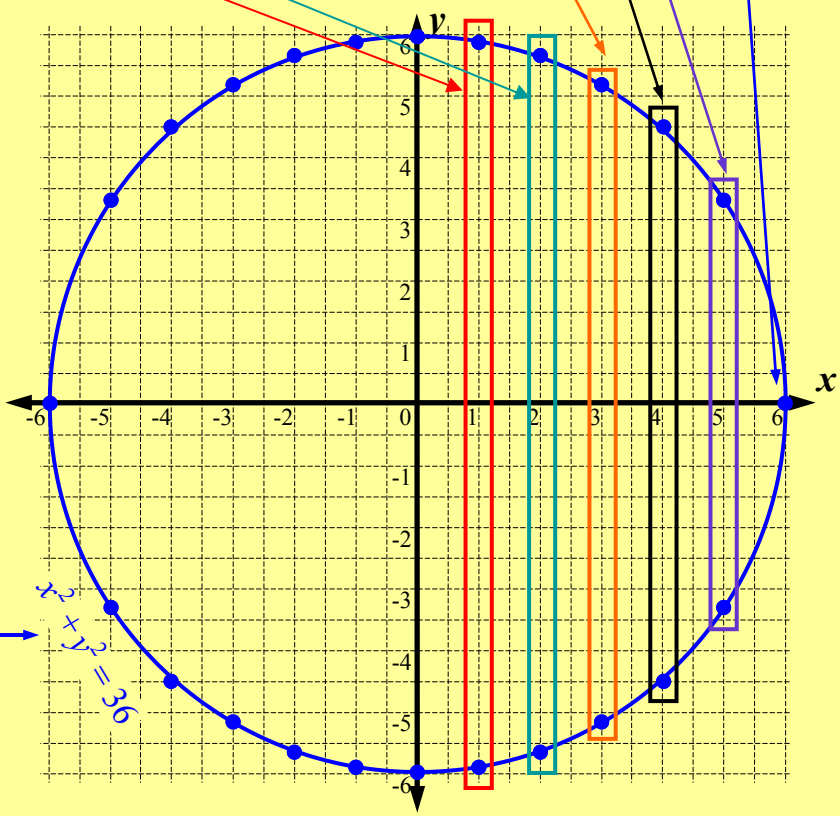
Complete the table, using $y^2 = 36 - x^2$ and substituting the x-values. Round decimal answers to 1 decimal place. Note that the answers are symmetrical across the 0. Use ± for all y-values except the 1st & last.

Symmetrical

x	-6	-5	-4	-3	-2	-1	0	1	2	3	4	5	6
y	0	±3.3	±4.5	±5.2	±5.7	±5.9	±6	±5.9	±5.7	±5.2	±4.5	±3.3	0

STEP 3

Plot the points and construct the circle.



STEP 4

Write the original equation on the circle.

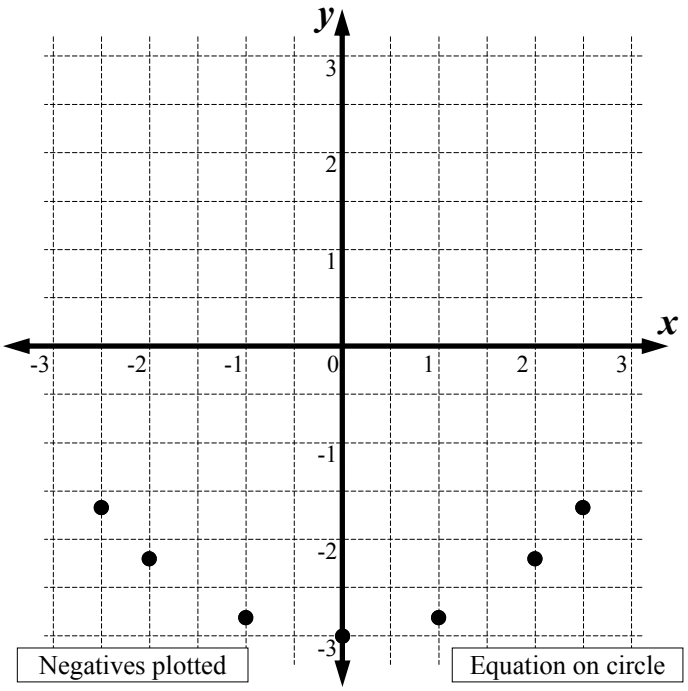
Non-Linear Relationships - Plotting Circles (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot the points for each circle then construct the circle. Write the equation of the circle near it. There are two y-values for each x-value (not ±3).

1 $x^2 + y^2 = 9$

x	-3	-2.5	-2	-1	0	1	2	-2.5	3
y	0	±1.7	±2.2	±2.8	±3	±2.8	±2.2	±1.7	0

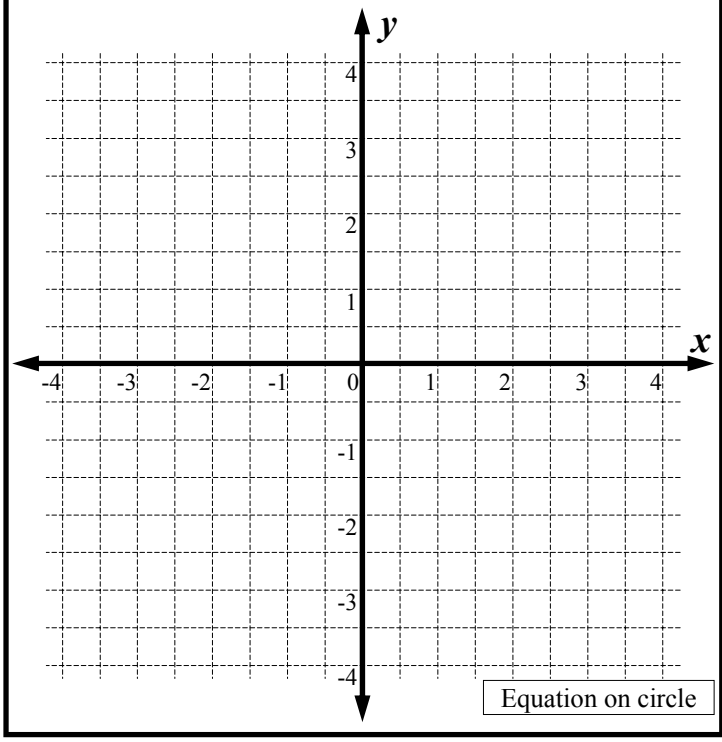


Negatives plotted

Equation on circle

2 $x^2 + y^2 = 16$

x	-4	-3.5	-3	-2	0	2	3	3.5	3
y	0	±1.9	±2.6	±3.5	±4	±3.5	±2.6	±1.9	0



Equation on circle

To complete the table of values yourself, you need to substitute to find y^2 then y. Find y, given these x-values. Round to 1 d.p. if needed (Q. 6).

Example For $y^2 = 20 - x^2$, find y when x is 3.

$y^2 = 20 - x^2$ ← Write equation

$y^2 = 20 - 3^2$ ← Substitute $x = 3$

$y^2 = 11$ ← $20 - 3^2 = 11$

$y = \pm 3.3$ ← $\sqrt{11} = \pm 3.3$ (1 d.p.)

For $y^2 = 25 - x^2$, find y when:

3 $x = 0$

$y^2 =$

$y^2 =$ ← Substitute x-value, $x = 0$

$y^2 =$ ← Calculate y^2

$y = \pm$ ← $\sqrt{\ }$ for y

4 $x = 3$

$y^2 =$ ← Write equation

$y^2 =$ ← Substitute x-value, $x = 3$

$y^2 =$ ← Calculate y^2

$y = \pm$ ← $\sqrt{\ }$ for y

For $y^2 = 50 - x^2$, find y when:

5 $x = 5$

$y^2 =$

$y^2 =$ ← Substitute x-value, $x = 5$

$y^2 =$ ← Calculate y^2

$y =$ ← $\sqrt{\ }$ for y

Write ±

6 $x = 1$

$y^2 =$ ← Write equation

$y^2 =$ ← Substitute x-value, $x = 1$

$y^2 =$ ← Calculate y^2

$y =$ ← $\sqrt{\ }$ for y

Write ±

For $y^2 = 36 - x^2$, find y when:

6 $x = 3$

$y^2 =$

$y^2 =$

$y^2 =$

$y =$

Write ±, to 1 d.p.

6 $x = 5$

$y^2 =$

$y^2 =$

$y^2 =$

$y =$

Write ±, to 1 d.p.

Equation on circle

To complete the table of values yourself, you need to substitute to find y^2 then y. Find y, given these x-values. Round to 1 d.p. if needed.

Example For $y^2 = 20 - x^2$, find y when x is 3.

$y^2 = 20 - x^2$ ← Write equation

$y^2 = 20 - 3^2$ ← Substitute $x = 3$

$y^2 = 11$ ← $20 - 3^2 = 11$

$y = \pm 3.3$ ← $\sqrt{11} = \pm 3.3$ (1 d.p.)

For $y^2 = 25 - x^2$, find y when:

3 $x = 0$

$y^2 = 25 - x^2$ ← Write equation

$y^2 = 25 - 0^2$ ← Substitute x-value ($x = 0$)

$y^2 = 25$ ← Calculate y^2

$y = \pm 5$ ← $\sqrt{\ }$ for y

4 $x = 3$

$y^2 = 25 - x^2$ ← Write equation

$y^2 = 25 - 3^2$ ← Substitute x-value ($x = 3$)

$y^2 = 16$ ← Calculate y^2

$y = \pm 4$ ← $\sqrt{\ }$ for y

For $y^2 = 50 - x^2$, find y when:

5 $x = 5$

$y^2 = 50 - x^2$ ← Write equation

$y^2 = 50 - 5^2$ ← Substitute x-value ($x = 5$)

$y^2 = 25$ ← Calculate y^2

$y = \pm 5$ ← $\sqrt{\ }$ for y

Write ±

6 $x = 1$

$y^2 = 50 - x^2$ ← Write equation

$y^2 = 50 - 1^2$ ← Substitute x-value ($x = 1$)

$y^2 = 49$ ← Calculate y^2

$y = \pm 7$ ← $\sqrt{\ }$ for y

Write ±

For $y^2 = 36 - x^2$, find y when:

6 $x = 3$

$y^2 = 36 - x^2$

$y^2 = 36 - 3^2$

$y^2 = 27$

$y = \pm 5.2$

Write ±, to 1 d.p.

6 $x = 5$

$y^2 = 36 - x^2$

$y^2 = 36 - 5^2$

$y^2 = 11$

$y = \pm 3.3$

Write ±, to 1 d.p.

Non-Linear Relationships - Find A Word

Look for words in the list at the bottom of the grid. Once you find a word cross it off the list.

A letter could be used more than once so don't colour it in too dark (using a texta for example) so that you can still read it.

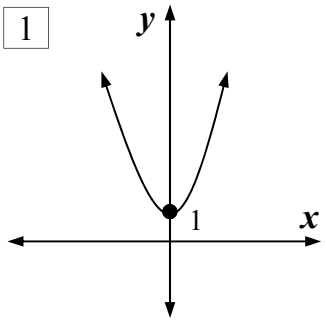
Non-Linear Relationships Review

This is the review of the Non-Linear Relationships Topic.

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

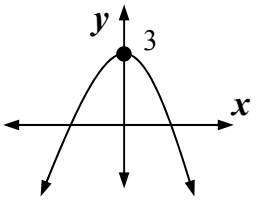
Complete the box to show the parabola's equation

1



$y = x^2 +$ ☐

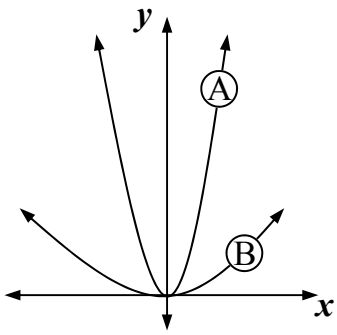
2



$y = -x^2 +$ ☐

Pick the appropriate equation for the parabolas below.

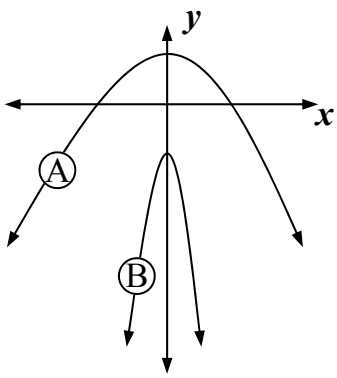
3



$y = 2x^2$ Ⓐ Ⓑ

$y = \frac{1}{2}x^2$ Ⓐ Ⓑ

4



$y = -3x^2 - 2$ Ⓐ Ⓑ

$y = -\frac{1}{2}x^2 + 2$ Ⓐ Ⓑ

Complete the sentence with a number and either up/down.

5 The parabola $y = x^2 + 5$ cuts the y-axis at ☐ and is concave ☐.

6 The parabola $y = -x^2 - 2$ cuts the y-axis at ☐ and is concave ☐.

Complete the sentence with either 'narrow' or 'wide'.

7 The parabola $y = -x^2 - 4$ is more ☐ than $y = -2x^2 - 1$.

8 The parabola $y = 2x^2$ is more ☐ than $y = \frac{1}{2}x^2 + 5$.

Complete these tables.

9 $y = x^2 + 3$

x	-3	-2	-1	0	1	2	3
y							

10 $y = -3x^2$

x	-3	-2	-1	0	1	2	3
y							

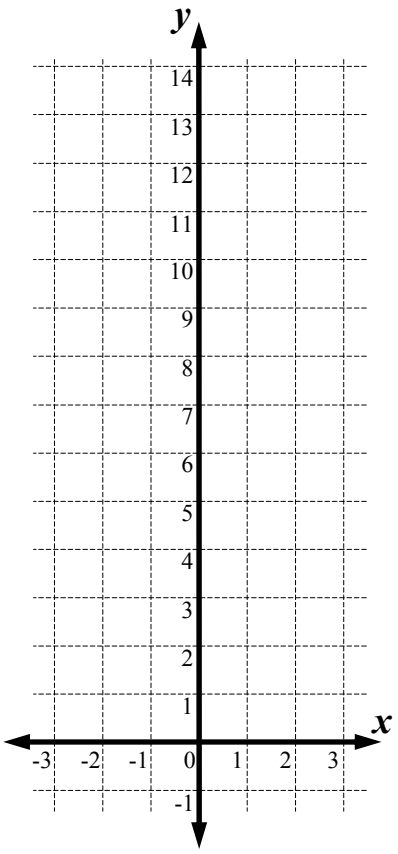
11 $y = \frac{1}{2}x^2 + 4$

x	-6	-4	-2	0	2	4	6
y							

Complete the table then plot the parabola $y = x^2 - 2$ on the number plane.

12 $y = x^2 + 4$

x	-3	-2	-1	0	1	2	3
y							

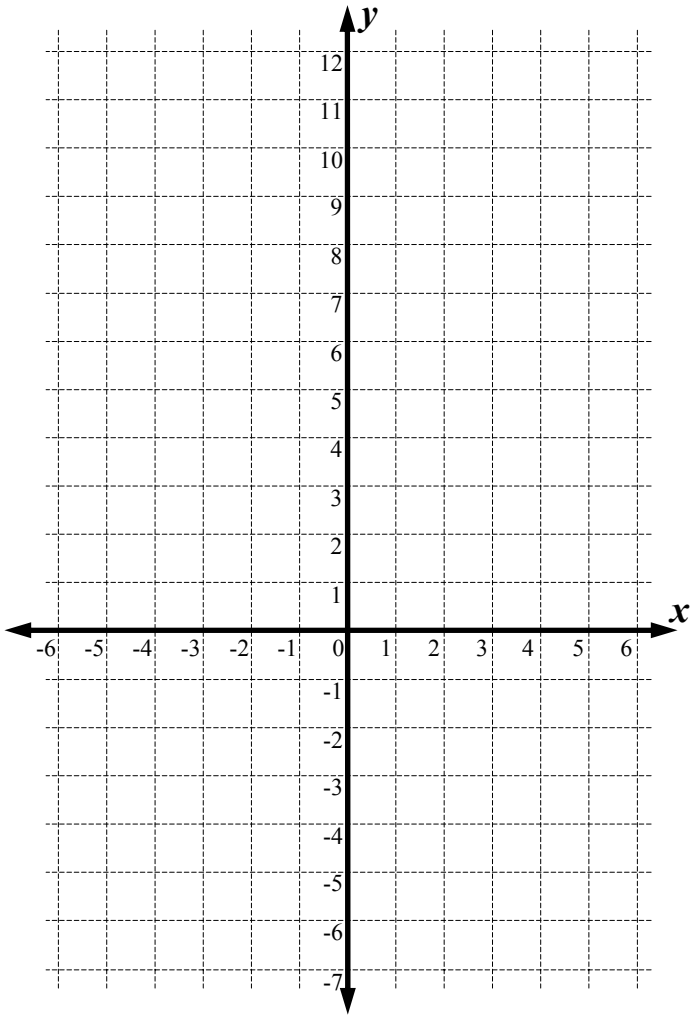


© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table, then plot the parabola.

13 $y = \frac{1}{2}x^2 - 6$

x	-6	-4	-2	0	2	4	6
y							



Complete the table of values.

14 $y = 2^x$

x	0	1	2	3	4	5
y						

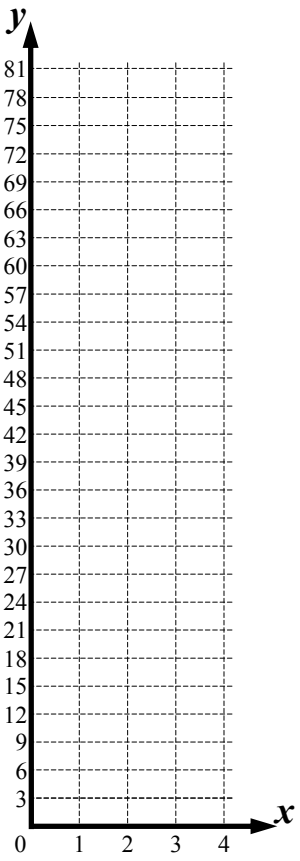
15 $y = 4^x$

x	0	1	2	3	4	5
y						

Complete the table, then plot the exponential.

16 $y = 3^x$

x	0	1	2	3	4
y					



Complete the table to 1 d.p., then plot the circle.

17 $x^2 + y^2 = 4$

x	-2	-1.5	-1	-0.5	0	0.5	1	1.5	2
y

x	-3	-2	-1	0	1	2	3
y	-27	-12	-3	0	-3	-12	-27

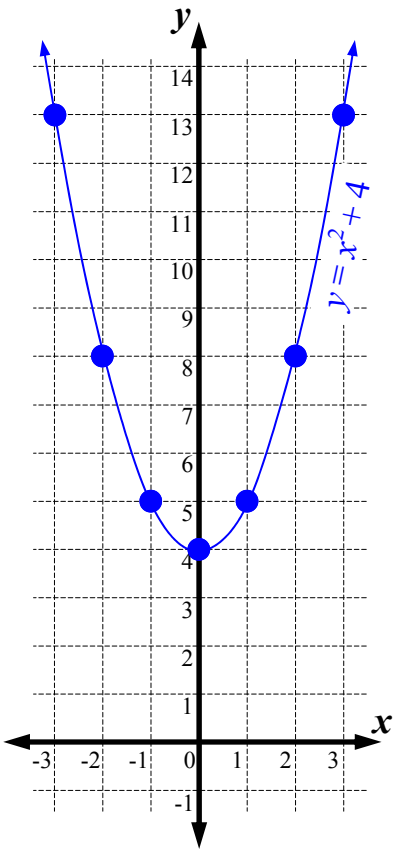
11 $y = \frac{1}{2}x^2 + 4$

x	-6	-4	-2	0	2	4	6
y	22	12	6	4	6	12	22

Complete the table then plot the parabola $y = x^2 - 2$ on the number plane.

12 $y = x^2 + 4$

x	-3	-2	-1	0	1	2	3
y	13	8	5	4	5	8	13

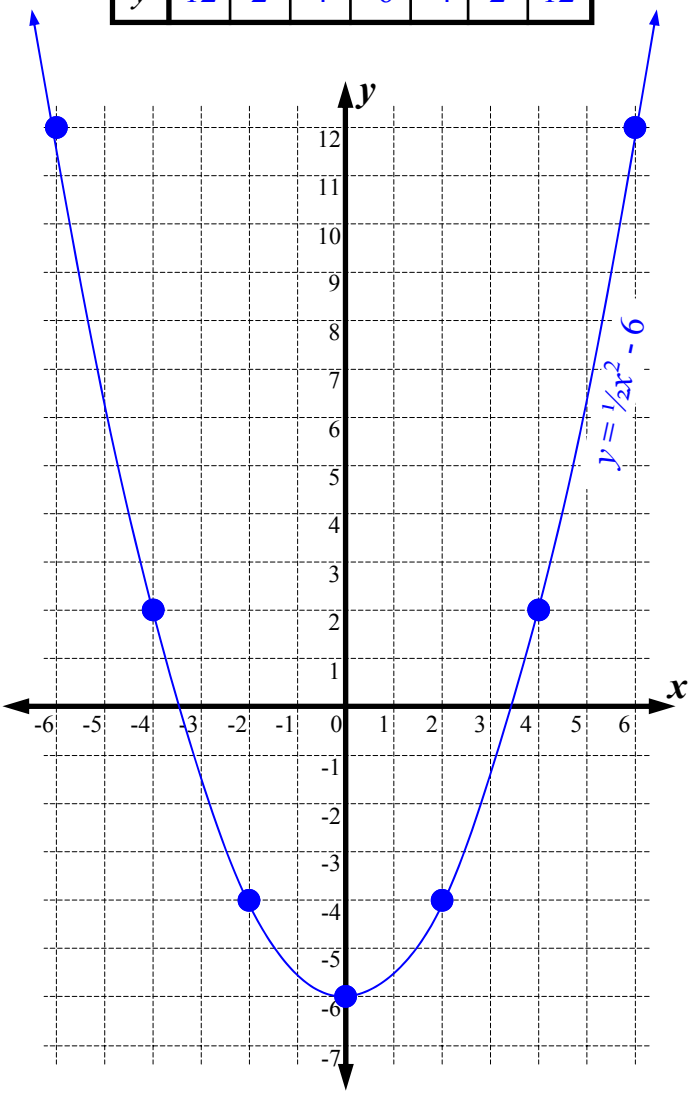


© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table, then plot the parabola.

13 $y = \frac{1}{2}x^2 - 6$

x	-6	-4	-2	0	2	4	6
y	12	2	4	-6	-4	2	12



Complete the table of values.

14 $y = 2^x$

x	0	1	2	3	4	5
y	1	2	4	8	16	32

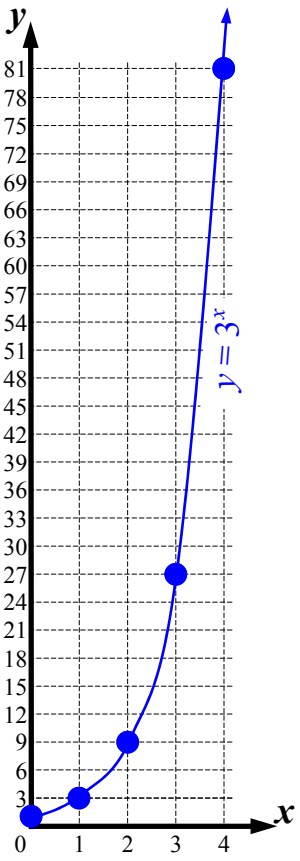
15 $y = 4^x$

x	0	1	2	3	4	5
y	1	4	16	64	256	1 024

Complete the table, then plot the exponential.

16 $y = 3^x$

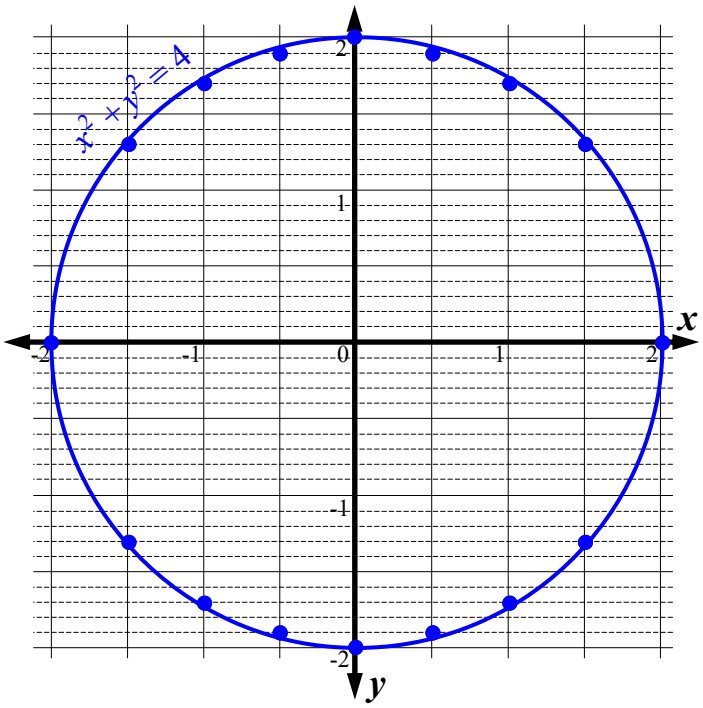
x	0	1	2	3	4
y	1	3	9	27	81



Complete the table to 1 d.p., then plot the circle.

17 $x^2 + y^2 = 4$

x	-2	-1.5	-1	-0.5	0	0.5	1	1.5	2
y	0	±1.3	±1.7	±1.9	±2	±1.9	±1.7	±1.3	0



Non-Linear Relationships

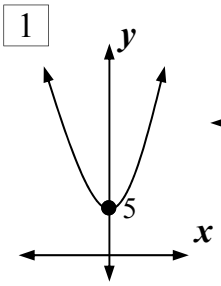
© Freefall Mathematics - School Use Only

Non-Linear Relationships - Properties of Parabolas (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

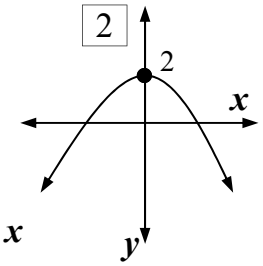
Look at the y-intercept and complete the equations for these parabolas.

1



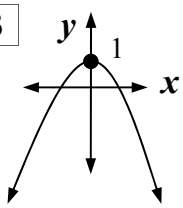
$y = 2x^2 +$ ☐

2



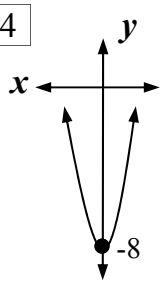
$y = -\frac{1}{2}x^2 +$ ☐

3



$y = -x^2 +$ ☐

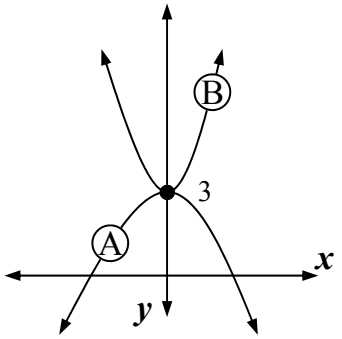
4



$y = 3x^2 -$ ☐

Choose which equation applies to each of the parabolas.

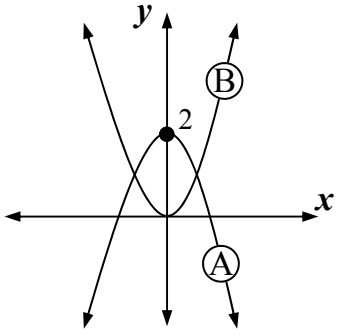
5



$y = x^2 + 3$ Ⓐ Ⓑ

$y = -\frac{1}{2}x^2 + 3$ Ⓐ Ⓑ

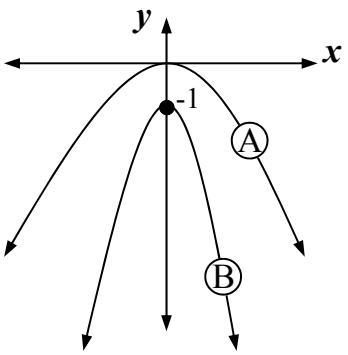
6



$y = x^2$ Ⓐ Ⓑ

$y = -x^2 + 2$ Ⓐ Ⓑ

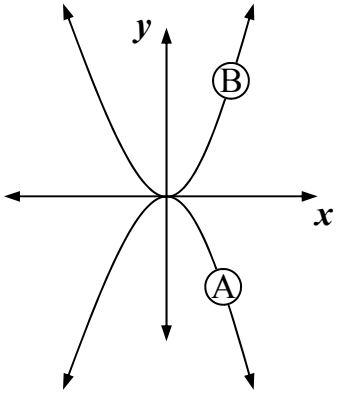
7



$y = -\frac{1}{2}x^2$ Ⓐ Ⓑ

$y = -2x^2 - 1$ Ⓐ Ⓑ

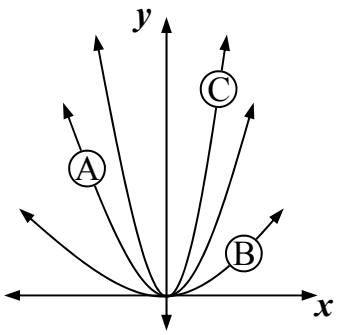
8



$y = -x^2$ Ⓐ Ⓑ

$y = x^2$ Ⓐ Ⓑ

9

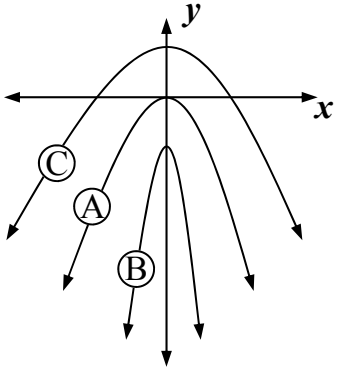


$y = x^2$ ⒶⒷⒸ

$y = 2x^2$ ⒶⒷⒸ

$y = \frac{1}{2}x^2$ ⒶⒷⒸ

10



$y = -\frac{1}{2}x^2 + 3$ ⒶⒷⒸ

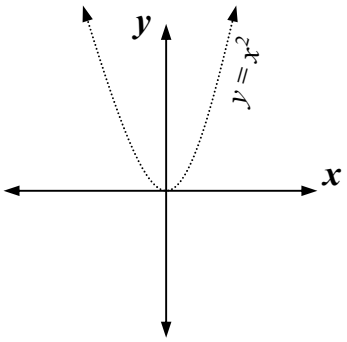
$y = -3x^2 - 3$ ⒶⒷⒸ

$y = -x^2$ ⒶⒷⒸ

Now sketch your own parabolas.

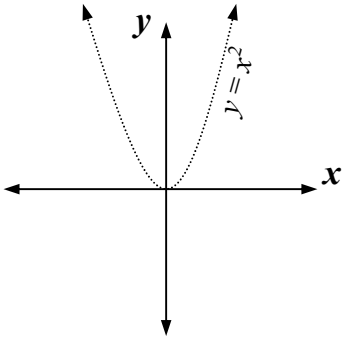
The graph below shows $y = x^2$ as a dotted curve. Sketch $y = -x^2$.

11 Arrowheads, Equation on curve



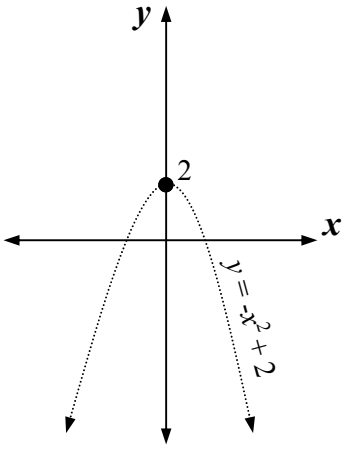
The graph below shows $y = x^2$ as a dotted curve. Sketch $y = x^2 - 3$.

12



The graph below shows $y = -x^2 + 2$ as a dotted curve. Sketch $y = x^2 - 2$.

13



Non-Linear Relationships - Properties of Parabolas (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Join the sketch with the equation for each parabola.

1 
$y = 2x^2$

2 
$y = x^2$

3 
$y = \frac{1}{2}x^2$

4 
$y = 3x^2$

5 
$y = x^2 + 2$

6 
$y = -x^2$

7 
$y = x^2$

8 
$y = x^2 - 2$

9 
$y = -x^2 - 2$

10 
$y = -x^2 + 7$

11 
$y = x^2 - 2$

12 
$y = -x^2$

13 
$y = x^2 + 2$

14 
$y = -x^2$

15 
$y = x^2$

16 
$y = x^2 - 2$

Give 2 examples of parabolas that have the following properties.

17 A parabola is concave-up and cuts the y-axis at 4.

$y = x^2 + \square$ $\qquad$ $y = \square x^2 + \square$

18 A parabola is concave-down and cuts the y-axis at the origin.

$y =$ $\qquad$ $y =$

19 A parabola is concave-up and cuts the y-axis at the -3.

20 A parabola is concave-down and cuts the y-axis at the same intercept as $y = 3x^2 + 5$.

21 A parabola is concave-up and cuts the y-axis at the same intercept as $y = -x^2 - 6$.

22 A parabola is concave-up, cuts the y-axis at the same intercept as $y = -\frac{1}{2}x^2 - 4$ and is more narrow than $y = 2x^2$.

23 A parabola is concave-down, cuts the y-axis at the same intercept as $y = 3x^2 - 6$ and is a more wide than $y = -2x^2$.

Give a possible name for the solid-line unnamed parabolas shown below

24 
25 
Non-Linear R'ships - Plotting Points & Drawing Parabolas (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot the points for each parabola then draw a curve through them. Show arrow heads and write the equation of the parabola on the curve.

1 $y = x^2 + 3$ Plot these points:

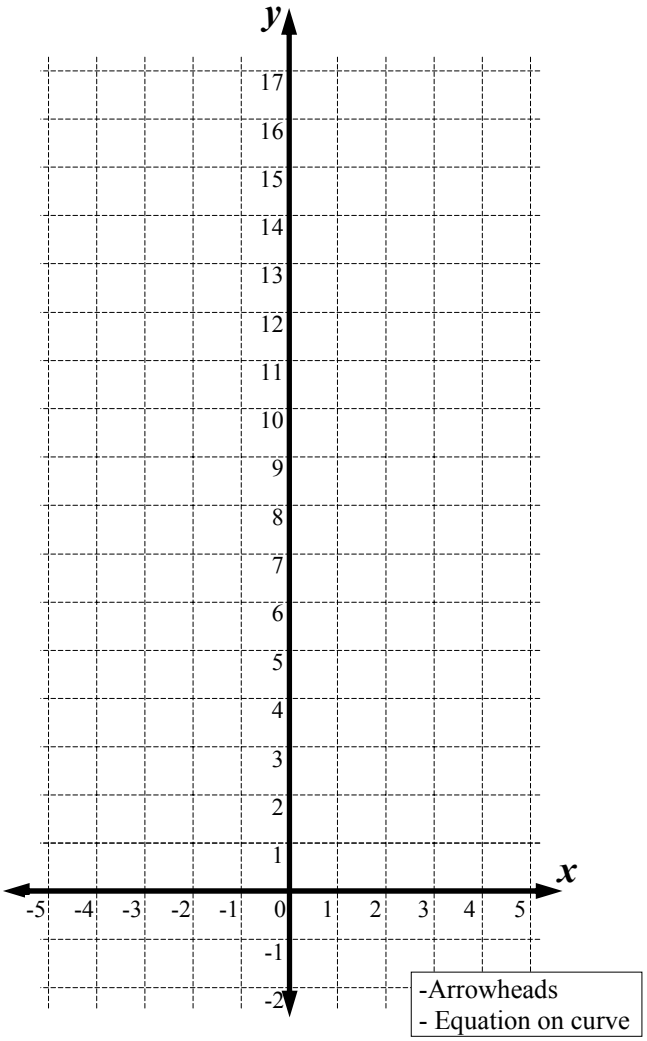
(-3, 12), (0, 3), (2, 7), (-1, 4), (-2, 7), (1, 4), (3, 12).

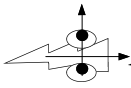
2 $y = x^2$ Plot these points:

(-1, 1), (4, 16), (2, 4), (-3, 9), (-4, 16), (3, 9), (0, 0), (1, 1), (-2, 4).

3 $y = x^2 - 2$ Plot these points:

(2, 2), (4, 14), (3, 7), (-4, 14), (-1, -1), (3, 9), (-2, 2), (1, -1), (-3, 7).





Now use the table of values to plot these parabolas. Go across 'x' and up 'y'.

4 $y = 2x^2$

x	-3	-2	-1	0	1	2	3
y	18	8	2	0	2	8	18

5 $y = x^2$

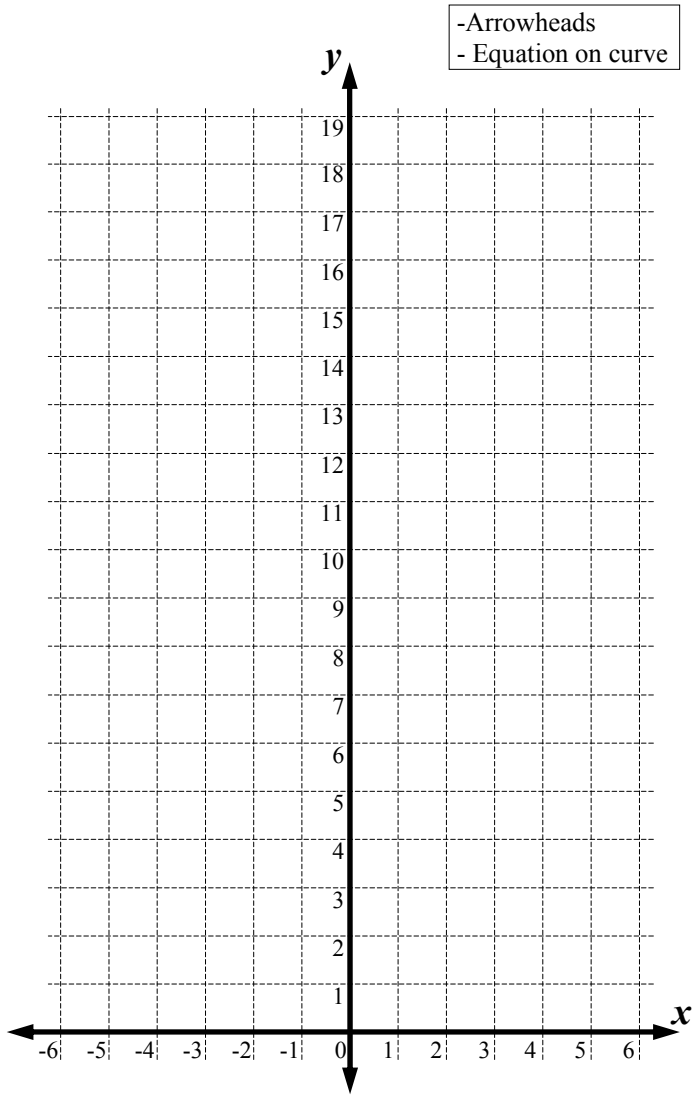
x	-4	-3	-2	1	0	1	2	3	4
y	16	9	4	1	0	1	4	9	16

6 $y = \frac{1}{2}x^2$

x	-6	-4	-2	-1	0	1	2	4	6
y	18	8	2	½	0	½	2	8	18

7 $y = \frac{1}{4}x^2$

x	-6	-4	-2	0	2	4	6
y	9	4	1	0	1	4	9



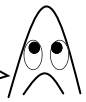
8 What effect does the number before the x^2 term have on the parabola?

- ○ A larger coefficient has a more narrow curve.
- ○ A smaller coefficient has a narrower curve.

Non-Linear R'ships - Plotting Points & Drawing Parabolas (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot the points for each parabola then draw a curve through them. Show arrow heads and write the equation of the parabola on the curve.



1 $y = -x^2$

x	-3	-2	-1	0	1	2	3
y	-9	-4	-1	0	-1	-4	-9

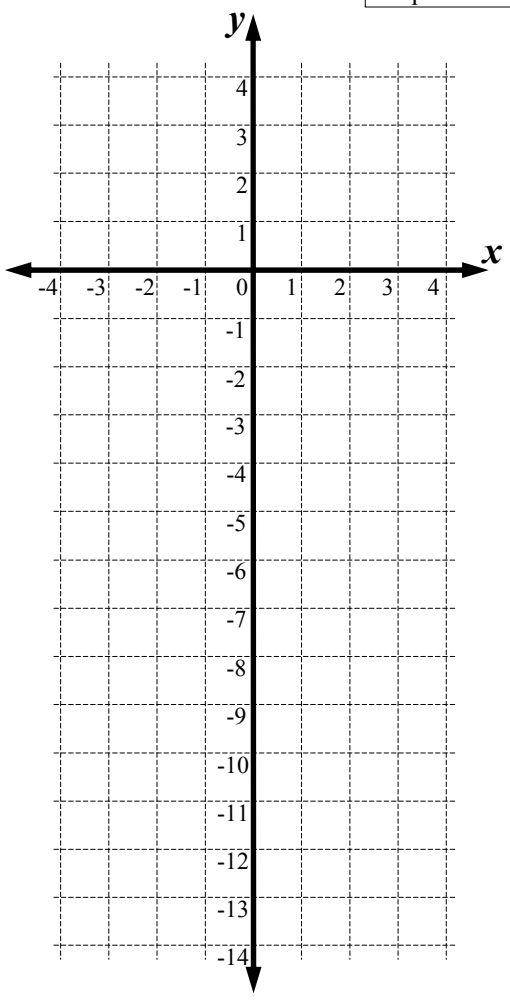
2 $y = -x^2 + 4$

x	-4	-3	-2	1	0	1	2	3	4
y	-12	-5	0	3	4	3	0	-5	-12

3 $y = -x^2 - 3$

x	-3	-2	-1	0	1	2	3
y	-12	-7	-4	-3	-4	-7	-12

-Arrowheads
- Equation on curve

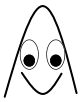


4 What effect does the number after the x^2 term have on the parabola? Choose one …..

○ It shifts the parabola up or down the y-axis.

○ It determines where the parabola cuts the y-axis.

○ Both of the above.



Keep going. This time you have both positive and negative coefficients.

5 $y = -x^2 + 9$

x	-4	-3	-2	1	0	1	2	3	4
y	-7	0	5	8	9	8	5	0	-7

6 $y = x^2 - 6$

x	-4	-3	-2	1	0	1	2	3	4
y	10	3	-2	-5	-6	-5	-2	3	10

7 $y = 2x^2 - 4$

x	-3	-2	-1	0	1	2	3
y	14	4	-2	-4	-2	4	14

Non-Linear Relationships - Calculator Use

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use your calculator to find these.

1 $6^2 - 5 =$ ____

Calc: [6] [x^2] [-] [5] [=]

2 $4^2 + 11 =$ ____

3 $2^2 - 9 =$ ____

4 $3 \times 4^2 + 7 =$ ____

Calc: [3] [×] [4] [x^2] [+] [7] [=]

5 $2 \times 2^2 - 4 =$ ____

6 $-2 \times 3^2 - 8 =$ ____

Calc: [-] [2] [×] [3] [x^2] [-] [8] [=]

Complete the table of values below. Use your back button to speed things up.

7 $y = x^2$

x	0	1	2	3	4	5	6
y							

Calc: [0] [x^2] [=]

8 $y = x^2 + 5$

x	0	1	2	3	4	5	6
y							

Calc: [0] [x^2] [+] [5] [=]

9 $y = -x^2 + 6$

x	0	1	2	3	4	5	6
y							

Calc: [-] [0] [x^2] [+] [6] [=]

10 $y = -2x^2 + 3$

x	0	1	2	3	4	5	6
y							

Calc: [-] [2] [×] [0] [x^2] [+] [3] [=]

These involve negative numbers. To square a negative number you use brackets. Try these.

11 $(-3)^2 =$ ____

Calc: [(] [-] [3] [)] [x^2] [=]

12 $(-6)^2 =$ ____

13 $(-4)^2 + 12 =$ ____

Calc: [(] [-] [4] [)] [x^2] [+] [1] [2] [=]

14 $(-2)^2 - 8 =$ ____

15 $2 \times (-3)^2 - 2 =$ ____

Calc: [2] [×] [(] [-] [3] [)] [x^2] [-] [2] [=]

16 $-3 \times (-1)^2 + 5 =$ ____

Complete these tables which have negative 'x' values.

17 $y = x^2$

x	-6	-5	-4	-3	-2	-1	0
y							

Calc: [(] [-] [6] [)] [x^2] [=]

18 $y = -2x^2 + 4$

x	-6	-5	-4	-3	-2	-1	0
y							

Calc: [-] [2] [×] [(] [-] [6] [)] [x^2] [+] [4] [=]

19 $y = 3x^2 - 10$

x	-6	-5	-4	-3	-2	-1	0
y							

20 $y = -x^2 - 3$

x	-6	-5	-4	-3	-2	-1	0
y							

Match the question on the left with the answer on the right.

21

$8^2 - 11$	152
$2 \times (-2)^2$	32
$3 \times 7^2 + 5$	8
$(-6)^2 - 4$	-20
$-2 \times 5^2 - 4$	25
$-5^2 + 5$	20
$(-5)^2 - 5$	53
$2 \times 4^2 - 7$	-54

Now both positive and negative. Expect to see symmetry, across the '0 value.' Complete these.

22 $y = x^2$

x	-3	-2	-1	0	1	2	3
y							

23 $y = x^2 + 3$

x	-3	-2	-1	0	1	2	3
y

Non-Linear Relationships - Plotting Exponentials (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table of values below. Use your power key.

1 $y = 2^x$

x	0	1	2	3	4	5	6
y							

Calc: 2 $x^{\blacksquare}$ 0 =

2 $y = 3^x$

x	0	1	2	3	4	5
y						

3 $y = 4^x$

x	0	1	2	3	4	5
y						

These negative coefficients will give negative y-values.

4 $y = -2^x$

x	0	1	2	3	4	5	6
y							

Calc: - 2 $x^{\blacksquare}$ 0 =

5 $y = -4^x$

x	0	1	2	3	4	5
y						

6 $y = -5^x$

x	0	1	2	3	4	5
y						

7 $y = -3^x$

x	0	1	2	3	4	5
y						

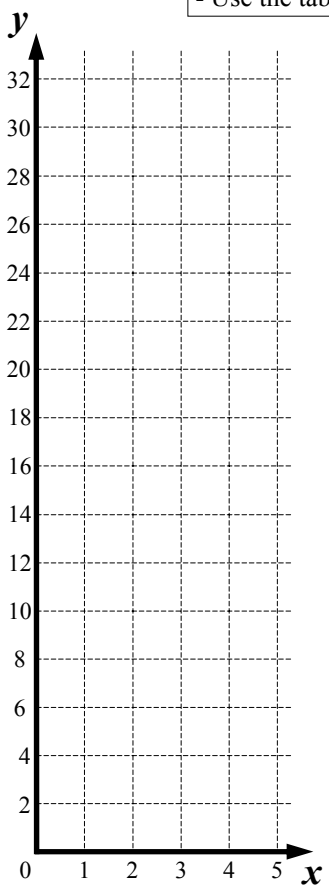
Use the table of values from your first column to plot these exponentials. Go across 'x' and up 'y'.

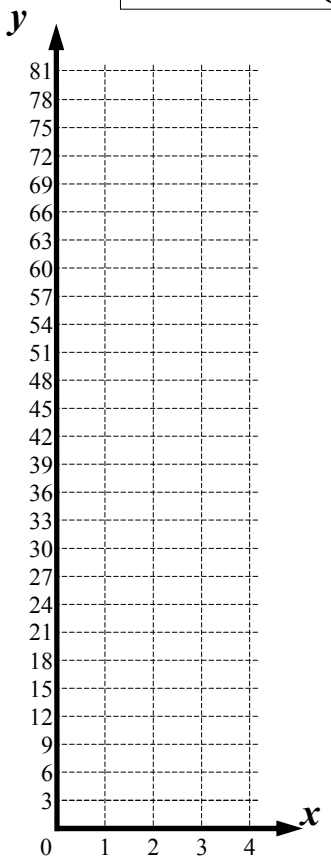
8 $y = 2^x$

- Don't plot (6, 64)
- Equation on curve
- Use the table in Q.1

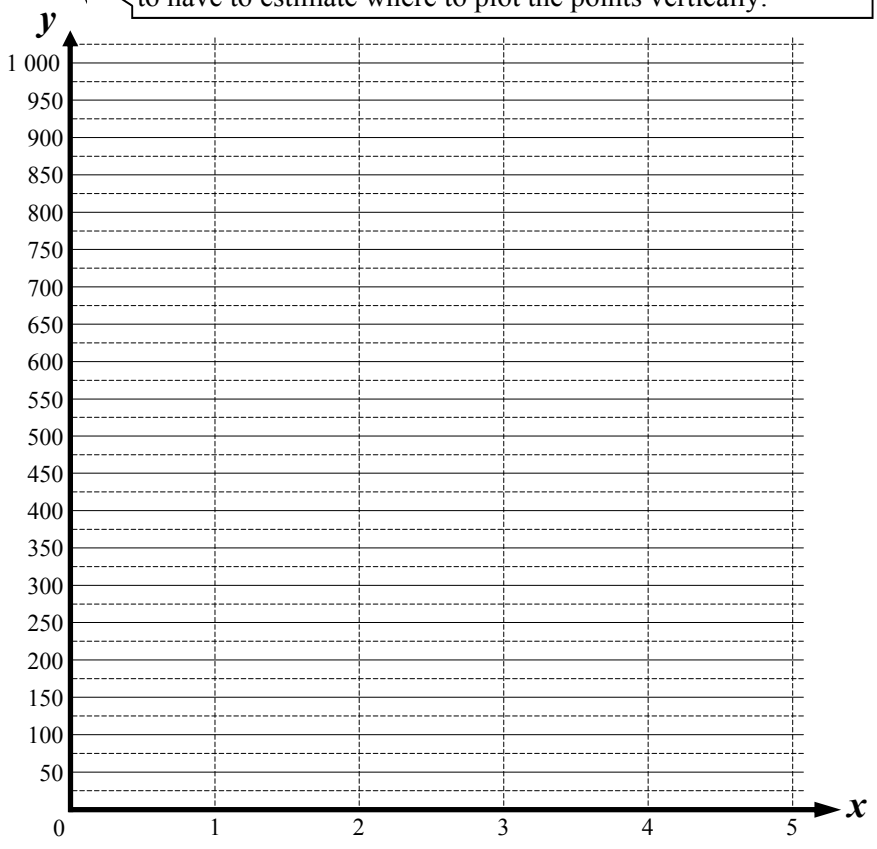


9 $y = 3^x$

- Don't plot (5, 243)
- Equation on curve
- Use the table in Q.2



10 Plot $y = 4^x$ on the grid below. (Table from Q.3). You are going to have to estimate where to plot the points vertically.



Non-Linear Relationships - Plotting Exponentials (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table of values below.
Then plot the curves on the grids.

1 $y = -2^x$

x	0	1	2	3	4	5
y						

- 2 $x^{\blacksquare}$ 0 =

2 $y = -3^x$

x	0	1	2	3	4
y					

3 $y = -4^x$

x	0	1	2	3	4
y					

4 $y = 4^x$

x	0	1	2	3	4
y					

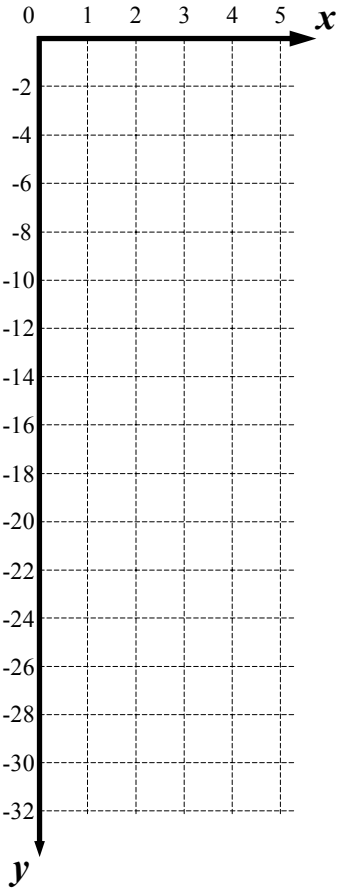
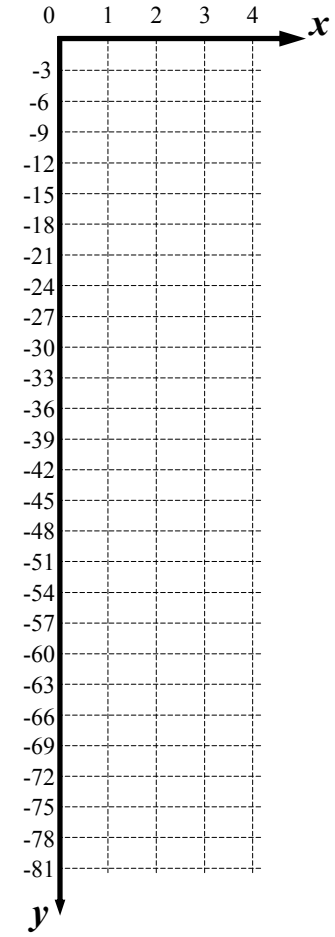
Plot $y = 4^x$ and $y = -4^x$ on the same grid.
(Tables from Q.3 & Q.4)

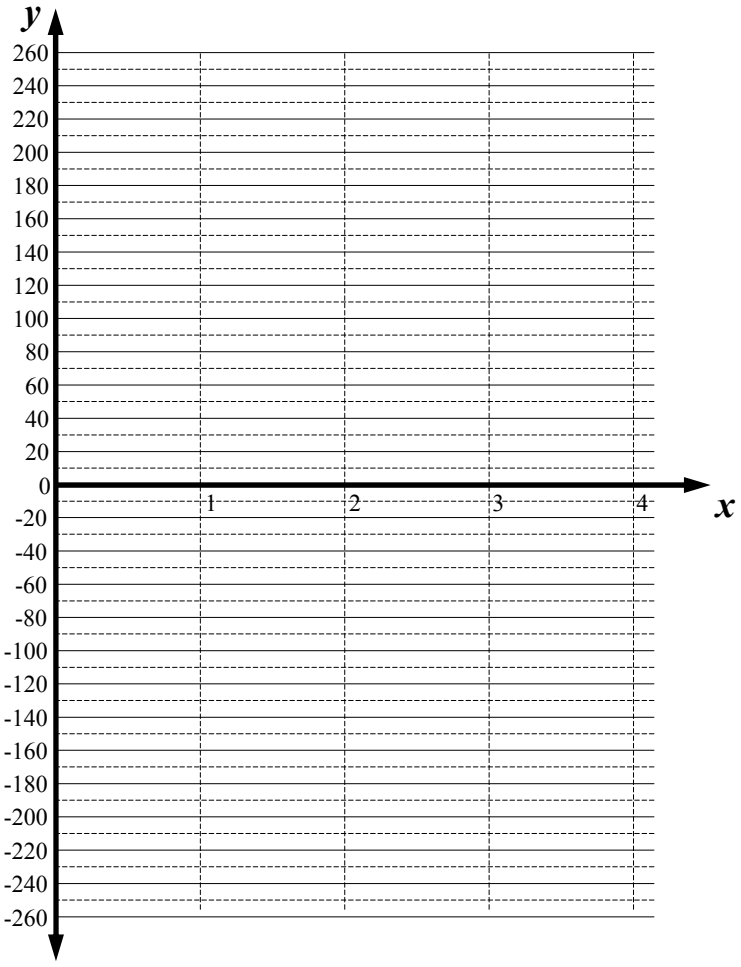
7 $y = -4^x$ & $y = 4^x$

5 $y = -2^x$ (Q.1)



6 $y = -3^x$ (Q.2)





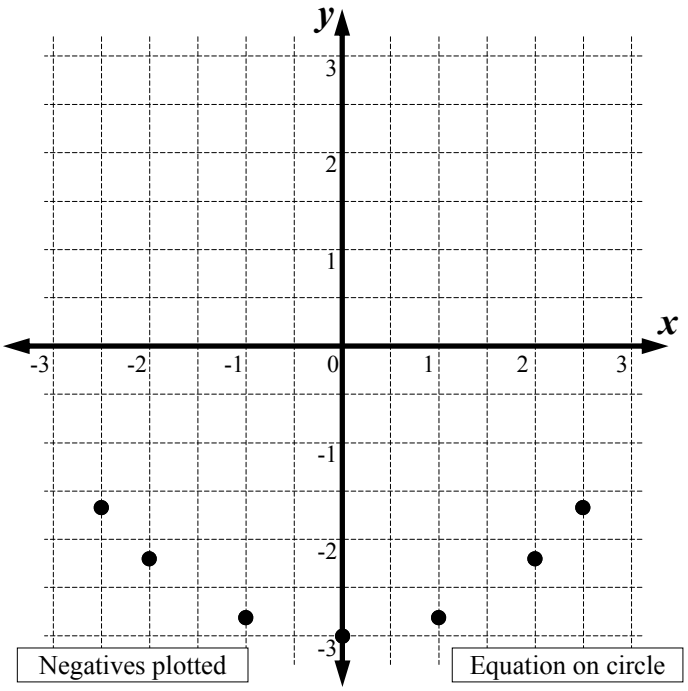
Non-Linear Relationships - Plotting Circles (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Plot the points for each circle then construct the circle. Write the equation of the circle near it. There are two y-values for each x-value (not ±3).

1 $x^2 + y^2 = 9$

x	-3	-2.5	-2	-1	0	1	2	-2.5	3
y	0	±1.7	±2.2	±2.8	±3	±2.8	±2.2	±1.7	0

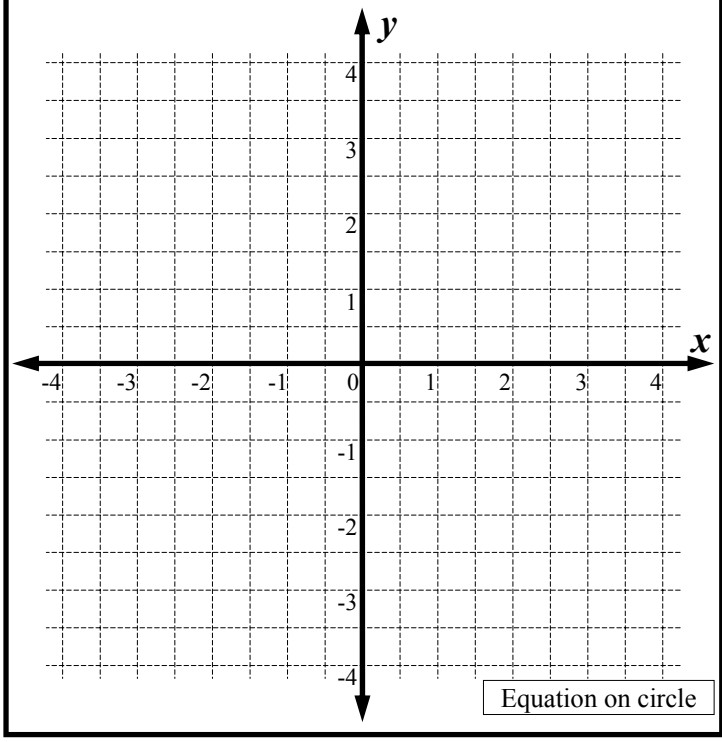


Negatives plotted

Equation on circle

2 $x^2 + y^2 = 16$

x	-4	-3.5	-3	-2	0	2	3	3.5	3
y	0	±1.9	±2.6	±3.5	±4	±3.5	±2.6	±1.9	0



Equation on circle

To complete the table of values yourself, you need to substitute to find y^2 then y. Find y, given these x-values. Round to 1 d.p. if needed (Q. 6).

Example For $y^2 = 20 - x^2$, find y when x is 3.

$y^2 = 20 - x^2$ ← Write equation

$y^2 = 20 - 3^2$ ← Substitute $x = 3$

$y^2 = 11$ ← $20 - 3^2 = 11$

$y = \pm 3.3$ ← $\sqrt{11} = \pm 3.3$ (1 d.p.)

For $y^2 = 25 - x^2$, find y when:

3 $x = 0$

$y^2 =$

$y^2 =$ ← Substitute x-value, $x = 0$

$y^2 =$ ← Calculate y^2

$y = \pm$ ← $\sqrt{\ }$ for y

4 $x = 3$

$y^2 =$ ← Write equation

$y^2 =$ ← Substitute x-value, $x = 3$

$y^2 =$ ← Calculate y^2

$y = \pm$ ← $\sqrt{\ }$ for y

For $y^2 = 50 - x^2$, find y when:

5 $x = 5$

$y^2 =$

$y^2 =$ ← Substitute x-value, $x = 5$

$y^2 =$ ← Calculate y^2

$y =$ ← $\sqrt{\ }$ for y

Write ±

6 $x = 1$

$y^2 =$ ← Write equation

$y^2 =$ ← Substitute x-value, $x = 1$

$y^2 =$ ← Calculate y^2

$y =$ ← $\sqrt{\ }$ for y

Write ±

For $y^2 = 36 - x^2$, find y when:

6 $x = 3$

$y^2 =$

$y^2 =$

$y^2 =$

$y =$

Write ±, to 1 d.p.

6 $x = 5$

$y^2 =$

$y^2 =$

$y^2 =$

$y =$

Write ±, to 1 d.p.

Non-Linear Relationships - Plotting Circles (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Rewrite the circle equation by subtracting the x^2 term (Q.1. done for you). Complete the table and plot the circle. Round to 1 d.p. when required.

1 $x^2 + y^2 = 4 \xrightarrow{\text{Rearrange}} y^2 = 4 - x^2$

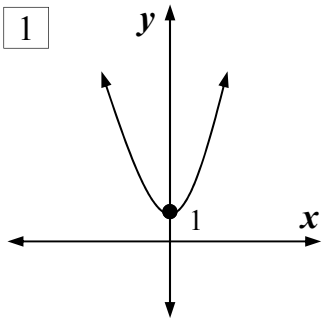
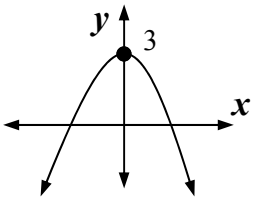
Complete the box to show the parabola's equation

1



$y = x^2 +$ ☐

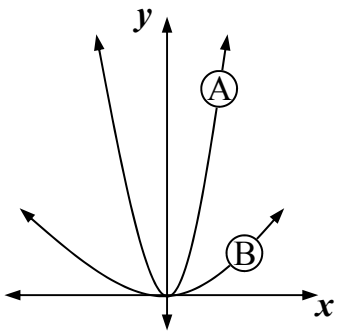
2



$y = -x^2 +$ ☐

Pick the appropriate equation for the parabolas below.

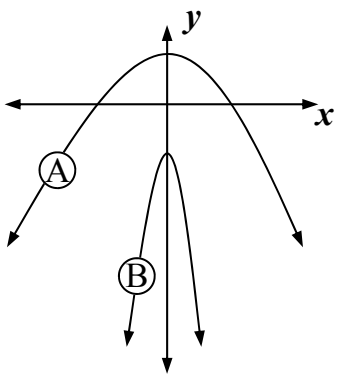
3



$y = 2x^2$ Ⓐ Ⓑ

$y = \frac{1}{2}x^2$ Ⓐ Ⓑ

4



$y = -3x^2 - 2$ Ⓐ Ⓑ

$y = -\frac{1}{2}x^2 + 2$ Ⓐ Ⓑ

Complete the sentence with a number and either up/down.

5 The parabola $y = x^2 + 5$ cuts the y-axis at ☐ and is concave ☐.

6 The parabola $y = -x^2 - 2$ cuts the y-axis at ☐ and is concave ☐.

Complete the sentence with either 'narrow' or 'wide'.

7 The parabola $y = -x^2 - 4$ is more ☐ than $y = -2x^2 - 1$.

8 The parabola $y = 2x^2$ is more ☐ than $y = \frac{1}{2}x^2 + 5$.

Complete these tables.

9 $y = x^2 + 3$

x	-3	-2	-1	0	1	2	3
y							

10 $y = -3x^2$

x	-3	-2	-1	0	1	2	3
y							

11 $y = \frac{1}{2}x^2 + 4$

x	-6	-4	-2	0	2	4	6
y							

Complete the table then plot the parabola $y = x^2 - 2$ on the number plane.

12 $y = x^2 + 4$

x	-3	-2	-1	0	1	2	3
y							

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Complete the table, then plot the parabola.

13 $y = \frac{1}{2}x^2 - 6$

x	-6	-4	-2	0	2	4	6
y							

Complete the table of values.

14 $y = 2^x$

x	0	1	2	3	4	5
y						

15 $y = 4^x$

x	0	1	2	3	4	5
y						

Complete the table, then plot the exponential.

16 $y = 3^x$

x	0	1	2	3	4
y					

Complete the table to 1 d.p., then plot the circle.

17 $x^2 + y^2 = 4$

NON-LINEAR RELATIONSHIPS

EXTENSION

Non-Linear Relationships - Testing Points

If you are given a point and are asked to verify if it is on a parabola, or exponential or circle, the process is the same. Substitute the point into the equation and if it is satisfied, the point is on the equation.

Satisfied means the left hand side of the equation = right hand side (after substitution). Here is an example.

Example: Does the point $\overset{x}{6}, \overset{y}{16}$ lie on the parabola $y = x^2 - 8$?

STEP 1 Label the point in the question with an 'x' and a 'y'.

$\overset{x}{6}, \overset{y}{16}$

STEP 2 Write out the equation of the parabola.

$y = x^2 - 8$

STEP 3 Substitute the values of x and y. Which is the point's coordinates in the question.

$y = x^2 - 8$

$16 = 6^2 - 8$ ← $x = 6, y = 16$.

STEP 4 Calculate the right hand side. If the two sides aren't equal, put a stroke through the 'equals' sign.

$y = x^2 - 8$

$16 = 6^2 - 8$

$16 \neq 28$ Calc: 6 x^2 - 8 =

STEP 5 Make a statement about the left and right hand side of the equation.

If they aren't equal, then the point isn't on the curve. If they are equal the point is on the curve.

$y = x^2 - 8$

$16 = 6^2 - 8$

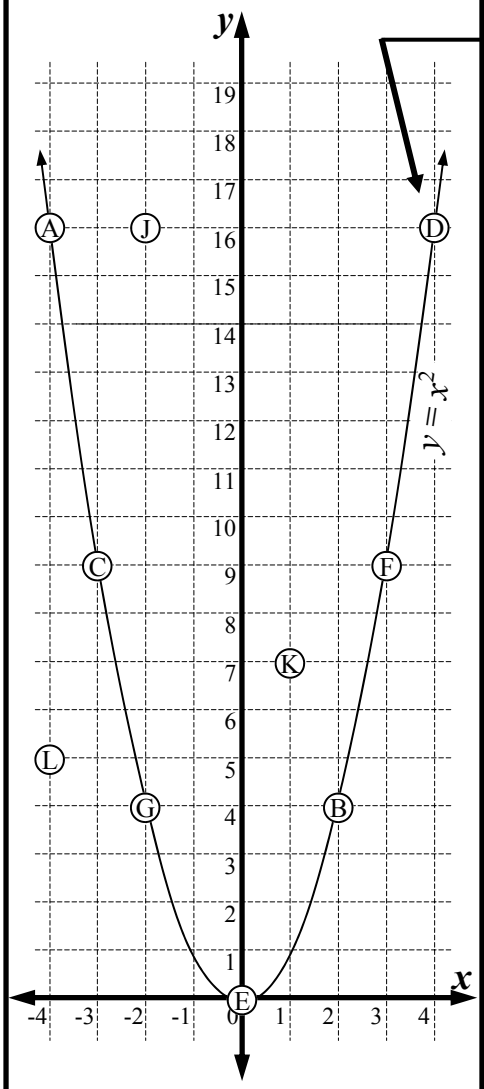
$16 \neq 28$

LHS ≠ RHS ∴ Point not on Parabola

Non-Linear Relationships - Testing Points and Parabolas (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Look at the graph of $y = x^2$ and give the co-ordinates for these points.



Give the co-ordinates for…..

1	A	(,)	These 7 points are on the parabola
2	G	(,)	
3	B	(,)	
4	E	(,)	
5	C	(,)	
6	D	(,)	
7	F	(,)	
8	J	(,)	These 3 points aren't on the parabola
9	K	(,)	
10	L	(,)	

Now show which points are or aren't on the parabola $y = x^2$, algebraically.

Example Point D: (4, 16)
x y

$y = x^2$ ← Write the equation

$16 = 4^2$ ← Substitute x and y

$16 = 16$ ← Calculate 4^2

LHS = RHS ∴ Point on Parabola

12 Point B: (,)
x y

← Write the equation

$\square = \square^2$ ← Substitute x and y

← Calculate

13 Point K: (,)
x y

14 Point A: (,)

← Negative in brackets

15 Point J: (,)

← Negative in brackets

Now the parabolas change each question. Find whether the point is on the parabola or not.

16 Does (2, 7) lie on $y = x^2 + 5$?
x y

← Write equation

$\square = \square^2 + 5$ ← Sub x and y

← Calculation

17 Does (-3, 8) lie on $y = x^2 - 1$?

$\square = \square^2 - \square$

← Brackets

18 Does (5, 85) lie on $y = 2x^2 - 15$?

19 Does (-4, 9) lie on $y = -x^2 - 7$?

20 Does (4, -43) lie on $y = -3x^2 + 5$?

Non-Linear Relationships - Testing Points Circles/Exponentials (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Substitute in x and y into these exponential equations to find if the point is on the curve.

Example

Does (3, 143) lie on $y = 4^x$?

x y

$y = 4^x$ ← Write the equation

$143 = 4^3$ ← Substitute x and y

$143 \neq 64$ ← Calculate 4^3

4 $x^{\blacksquare}$ 3 =

LHS ≠ RHS ∴ Point not on curve

1 Does (5, 32) lie on $y = 2^x$?

x y

← Write equation

$\square = 2^{\square}$ ← Substitute x and y

← Calculate 2^5

2 $x^{\blacksquare}$ 5 =

2 Does (7, 2 187) lie on $y = 3^x$?

3 Does (3, 10 000) lie on $y = 10^x$?

4 Does (10, 1 024) lie on $y = 2^x$?

Now it is circles, sub in x and y to show if the point is on the circle.

Example

Does (3, 6) lie on $x^2 + y^2 = 45$?

x y

$x^2 + y^2 = 45$ ← Write the equation

$3^2 + 6^2 = 45$ ← Substitute x and y

$45 = 45$ ← Calculate $3^2 + 6^2$

3 x^2 + 6 x^2 =

LHS = RHS ∴ Point on circle

5 Does (2, 3) lie on $x^2 + y^2 = 15$?

x y

← Write equation

$\square^2 + \square^2 = 15$ ← Sub x and y

← Calculate

6 Does (7, 6) lie on $x^2 + y^2 = 77$?

7 Does (9, 12) lie on $x^2 + y^2 = 225$?

8 Does (1, 8) lie on $x^2 + y^2 = 60$?

If $x^2 + y^2$ is less than the constant the point is inside the circle, more and it's outside. Find if the point is in or out!

LHS < RHS ⟶ Point Inside

LHS > RHS ⟶ Point Outside

Example

x y

Is the point (3, 7) inside or outside of the circle $x^2 + y^2 = 60$?

$x^2 + y^2 = 60$ ← Write the equation

$3^2 + 7^2 = 60$ ← Substitute x and y

$58 < 60$ ← Calculate $3^2 + 7^2$

3 x^2 + 7 x^2 =

LHS < RHS ∴ Point inside circle

9 Is the point (5, 2) inside or outside of the circle $x^2 + y^2 = 20$?

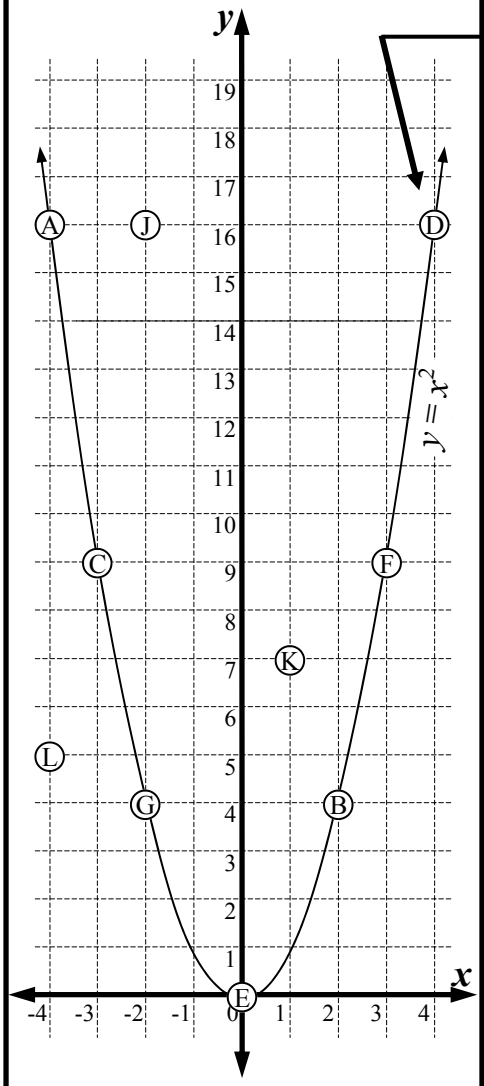
10 Is the point (7, 5) inside or outside of the circle $x^2 + y^2 = 64$?

11 Is the point (3, 8) inside or outside of the circle $x^2 + y^2 = 75$?

Non-Linear Relationships - Testing Points and Parabolas (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Look at the graph of $y = x^2$ and give the co-ordinates for these points.



Give the co-ordinates for…..

1	A	(-4, 16)	These 7 points are on the parabola
2	G	(-2, 4)	
3	B	(2, 4)	
4	E	(0, 0)	
5	C	(-3, 9)	
6	D	(4, 16)	
7	F	(3, 9)	
8	J	(-2, 16)	These 3 points aren't on the parabola
9	K	(1, 7)	
10	L	(-4, 5)	

Now show which points are or aren't on the parabola $y = x^2$, algebraically.

Example Point D: (4, 16)

$y = x^2$ ← Write the equation

$16 = 4^2$ ← Substitute x and y

$16 = 16$ ← Calculate 4^2

LHS = RHS ∴ Point on Parabola

12 Point B: (2 , 4)

$y = x^2$ ← Write the equation

$4 = 2^2$ ← Substitute x and y

$4 = 4$ ← Calculate

LHS = RHS ∴ Point on Parabola

13 Point K: (1 , 7)

$y = x^2$

$7 = 1^2$

$7 \neq 1$

LHS ≠ RHS ∴ Point not on Parabola

14 Point A: (-4 , 16)

$y = x^2$

$16 = (-4)^2$

$16 = 16$ ← Negative in brackets

LHS = RHS ∴ Point on Parabola

15 Point J: (-2 , 16)

$y = x^2$

$16 = (-2)^2$

$16 \neq 4$ ← Negative in brackets

LHS ≠ RHS ∴ Point not on Parabola

Now the parabolas change each question. Find whether the point is on the parabola or not.

16 Does (2, 7) lie on $y = x^2 + 5$?

$y = x^2 + 5$ ← Write equation

$7 = 2^2 + 5$ ← Sub x and y

$7 \neq 9$ ← Calculation

LHS ≠ RHS ∴ Point not on Parabola

17 Does (-3, 8) lie on $y = x^2 - 1$?

$y = x^2 - 1$

$8 = (-3)^2 - 1$

$8 = 8$ ← Brackets

LHS = RHS ∴ Point on Parabola

18 Does (5, 85) lie on $y = 2x^2 - 15$?

$y = 2x^2 - 15$

$85 = 2 \times 5^2 - 15$

$85 \neq 35$

LHS ≠ RHS ∴ Point not on Parabola

19 Does (-4, 9) lie on $y = -x^2 - 7$?

$y = -x^2 - 7$

$9 = -(-4)^2 - 7$

$9 \neq -23$

LHS ≠ RHS ∴ Point not on Parabola

20 Does (4, -43) lie on $y = -3x^2 + 5$?

$y = -3x^2 + 5$

$-43 = -3 \times 4^2 + 5$

$-43 = -43$

LHS = RHS ∴ Point on Parabola

Non-Linear Relationships - Testing Points Circles/Exponentials (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Substitute in x and y into these exponential equations to find if the point is on the curve.

Example

Does (3, 143) lie on $y = 4^x$?

x y

$y = 4^x$ ← Write the equation

$143 = 4^3$ ← Substitute x and y

$143 \neq 64$ ← Calculate 4^3

4 $x^{\blacksquare}$ 3 =

LHS ≠ RHS ∴ Point not on curve

1 Does (5, 32) lie on $y = 2^x$?

x y

$y = 2^x$ ← Write equation

$32 = 2^{5}$ ← Substitute x and y

$32 = 32$ ← Calculate 2^5

2 $x^{\blacksquare}$ 5 =

LHS = RHS ∴ Point is on curve

2 Does (7, 2 187) lie on $y = 3^x$?

x y

$y = 3^x$

$2\,187 = 3^7$

$2\,187 = 2\,187$

LHS = RHS ∴ Point is on curve

3 Does (3, 10 000) lie on $y = 10^x$?

x y

$y = 10^x$

$10\,000 = 10^3$

$10\,000 \neq 1\,000$

LHS ≠ RHS ∴ Point not on curve

4 Does (10, 1 024) lie on $y = 2^x$?

x y

$y = 2^x$

$1\,024 = 2^{10}$

$1\,024 = 1\,024$

LHS = RHS ∴ Point is on curve

Now it is circles, sub in x and y to show if the point is on the circle.

Example

Does (3, 6) lie on $x^2 + y^2 = 45$?

x y

$x^2 + y^2 = 45$ ← Write the equation

$3^2 + 6^2 = 45$ ← Substitute x and y

$45 = 45$ ← Calculate $3^2 + 6^2$

3 x^2 + 6 x^2 =

LHS = RHS ∴ Point on circle

5 Does (2, 3) lie on $x^2 + y^2 = 15$?

x y

$x^2 + y^2 = 15$ ← Write equation

$2^{2} + 3^{2} = 15$ ← Sub x and y

$13 \neq 15$ ← Calculate

LHS ≠ RHS ∴ Point not on circle

6 Does (7, 6) lie on $x^2 + y^2 = 77$?

x y

$x^2 + y^2 = 77$

$7^2 + 6^2 = 77$

$85 \neq 77$

LHS ≠ RHS ∴ Point not on circle

7 Does (9, 12) lie on $x^2 + y^2 = 225$?

x y

$x^2 + y^2 = 225$

$9^2 + 12^2 = 225$

$225 = 225$

LHS = RHS ∴ Point on circle

8 Does (1, 8) lie on $x^2 + y^2 = 60$?

x y

$x^2 + y^2 = 60$

$1^2 + 8^2 = 60$

$65 \neq 60$

LHS ≠ RHS ∴ Point not on circle

If $x^2 + y^2$ is less than the constant the point is inside the circle, more and it's outside. Find if the point is in or out!

LHS < RHS ⟶ Point Inside

LHS > RHS ⟶ Point Outside

Example

Is the point (3, 7) inside or outside of the circle $x^2 + y^2 = 60$?

x y

$x^2 + y^2 = 60$ ← Write the equation

$3^2 + 7^2 = 60$ ← Substitute x and y

$58 < 60$ ← Calculate $3^2 + 7^2$

3 x^2 + 7 x^2 =

LHS < RHS ∴ Point inside circle

9 Is the point (5, 2) inside or outside of the circle $x^2 + y^2 = 20$?

x y

$x^2 + y^2 = 20$

$5^2 + 2^2 = 20$

$29 > 20$

LHS > RHS ∴ Point outside circle

10 Is the point (7, 5) inside or outside of the circle $x^2 + y^2 = 64$?

x y

$x^2 + y^2 = 64$

$7^2 + 5^2 = 64$

$74 > 64$

LHS > RHS ∴ Point outside circle

11 Is the point (3, 8) inside or outside of the circle $x^2 + y^2 = 75$?

x y

$x^2 + y^2 = 75$

$3^2 + 8^2 = 75$

$73 < 75$

LHS < RHS ∴ Point inside circle

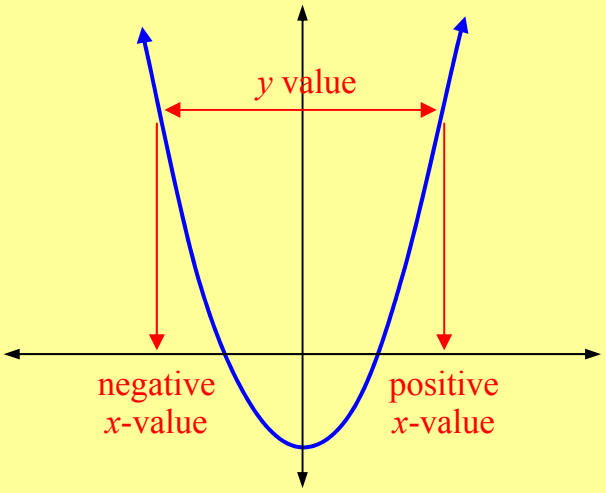
$50 \neq 55$

LHS ≠ RHS ∴ Point not on circle

Non-Linear Relationships - Finding *x*-values

A parabola is a symmetrical 'U-shaped' curve. Because it is U-shaped, it means that for each *y*-value (except at the minimum or maximum), there are two *x*-values.



This course deals with parabolas that are symmetrical across the *y*-axis. So that means the two *x*-values are the same magnitude, except that one is positive and the other is negative

These questions are solved by substitution and solving the resulting equation. Below is an example.

Example Find the *x*-values when $y = 44$ for the parabola $y = x^2 - 5$.

$y = x^2 - 5$ ← Write the equation

$44 = x^2 - 5$ ← Substitute $y = 44$

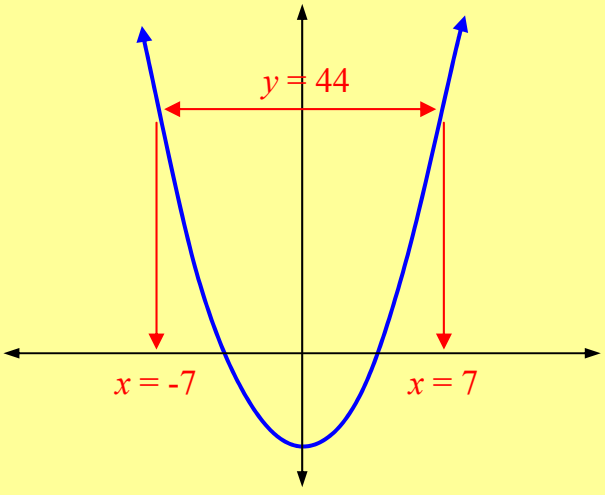
$+5 \quad +5$ ← +5 each side to get the x^2 term by itself

$49 = x^2$

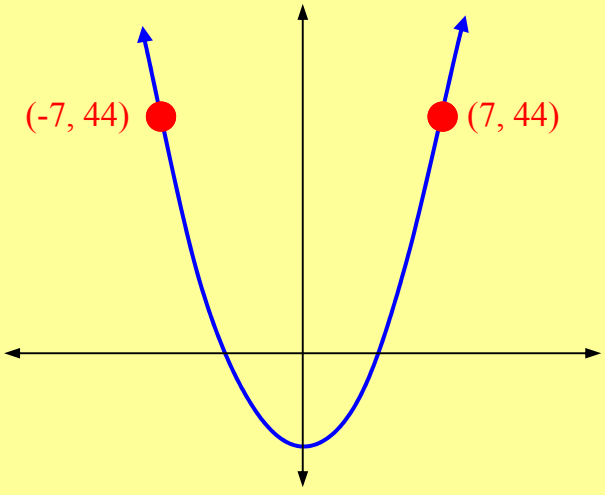
$\sqrt{\ } \quad \sqrt{\ }$ ← $\sqrt{\ }$ each side

$x = \pm 7$

So the *x*-values are -7 and 7.



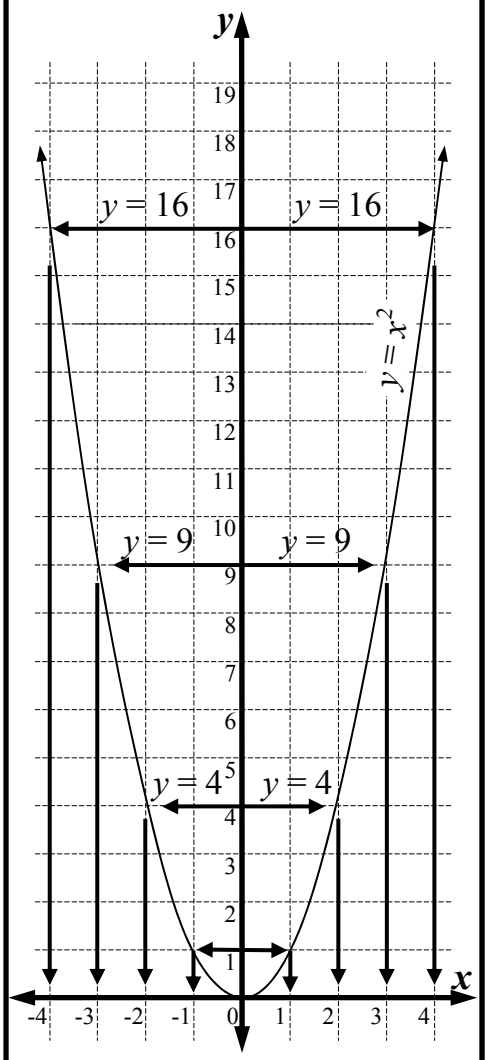
That means the points on the parabola are (-7, 44) and (7, 44).



Non-Linear Relationships - Finding x-values (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Read off the two x-values for each y-value on $y = x^2$.



1 When $y = 16$: $x =$ ☐ & ☐

2 When $y = 4$: $x =$ ☐ & ☐

3 When $y = 1$: $x =$ ☐ & ☐

4 When $y = 9$: $x =$ ☐ & ☐

The square root of a number results in two answers. Find the two answers for these.

5 $\sqrt{25} = \pm$ ☐ Calc: √ 2 5 =

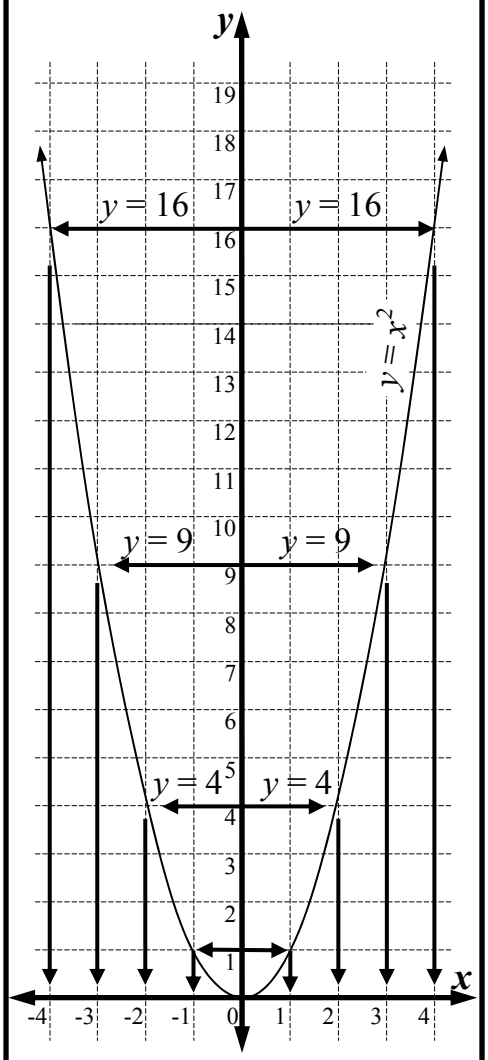
Non-Linear Relationships - Finding x-values (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Read off the two x-values for each y-value on $y = x^2$.



1 When $y = 16$: $x =$ -4 & -4

2 When $y = 4$: $x =$ -2 & 2

3 When $y = 1$: $x =$ -1 & 1

4 When $y = 9$: $x =$ -3 & 3

The square root of a number results in two answers. Find the two answers for these.

5 $\sqrt{25} = \pm 5$ Calc: √ 2 5 =

6 $\sqrt{169} = \pm 13$

7 $\sqrt{324} = \pm 18$

8 $\sqrt{121} = \pm 11$

9 $\sqrt{81} = \pm 9$

Solve these equations. The steps are set up for you.

10

$23 = x^2 + 7$

-7 -7

$16 = x^2$

√ √

$x = \pm 4$

11

$39 = x^2 + 3$

-3 -3

$36 = x^2$

√ √

$x = \pm 6$

12

$58 = x^2 + 9$

-9 -9

$49 = x^2$

√ √

$x = \pm 7$

13

$50 = x^2 - 14$

+14 +14

$64 = x^2$

√ √

$x = \pm 8$

Now solve these equations yourself. All answers are whole numbers. Remember ±

14

$9 = x^2 + 8$

-8 -8

$1 = x^2$

√ √

$x = \pm 1$

15

$91 = x^2 - 9$

+9 +9

$100 = x^2$

√ √

$x = \pm 10$

16

$51 = x^2 - 13$

+13 +13

$64 = x^2$

√ √

$x = \pm 8$

17

$26 = x^2 + 22$

-22 -22

$4 = x^2$

√ √

$x = \pm 2$

Now apply the skill to finding the x-values when given a y-value on a parabola.

18 Find the x-values when $y = 10$ for the parabola $y = x^2 + 6$.

$y = x^2 + 6$ ← Write the equation

$10 = x^2 + 6$ ← Substitute $y = 10$

-6 -6 ← -6 each side

$4 = x^2$

√ √ ← √ each side

$x = \pm 2$

19 Find the x-values when $y = 33$ for the parabola $y = x^2 - 3$.

$y = x^2 - 3$

$33 = x^2 - 3$

+3 +3

$36 = x^2$

√ √

$x = \pm 6$

20 Find the x-values when $y = 25$ for the parabola $y = x^2 + 9$.

$y = x^2 + 9$

$25 = x^2 + 9$

-9 -9

$16 = x^2$

√ √

$x = \pm 4$

Non-Linear Relationships - Properties of Circles

This sheet deals with finding the equation of a circle given its radius, or, given an equation of a circle, sketch the circle. The circles on this sheet all have their centre at the origin and so are symmetrical across both axes. The general equation for a circle with its centre at the origin is:

$$x^2 + y^2 = r^2$$

Where: r is the radius of the circle

Example Find the equation of a circle with radius 6 units (centre at the origin)

STEP 1 Write the general equation of a circle

$$x^2 + y^2 = r^2$$

STEP 2 Substitute the radius into the equation (radius = 6)

$$x^2 + y^2 = r^2$$
$$x^2 + y^2 = 6^2$$

STEP 3 Calculate 6^2 and you are done.

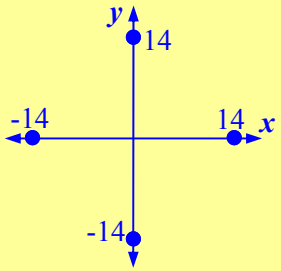
$$x^2 + y^2 = r^2$$
$$x^2 + y^2 = 6^2$$
$$x^2 + y^2 = 36$$

Example Sketch the circle $x^2 + y^2 = 196$

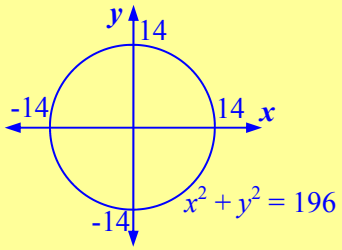
STEP 1 Find the radius of the circle. Square root 196 as it is r^2, and you want r.

$$r = \sqrt{196} = 14 \text{ units}$$

STEP 2 Rule a number plane and plot points at 14 and -14 on both the x and y axes.



STEP 3 Sketch the circle and write the equation next to the circle.



Non-Linear Relationships - Properties of Circles

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The equation of a circle with centre at the origin is $x^2+y^2=r^2$. Find the equation for these circles centred at the origin.

Example

Circle with radius of 5 units.

$x^2 + y^2 = r^2$ ← Write equation

$x^2 + y^2 = 5^2$ ← Substitute radius

$x^2 + y^2 = 25$ ← Calculate 5^2

1 Circle with radius of 2 units.

← Write equation

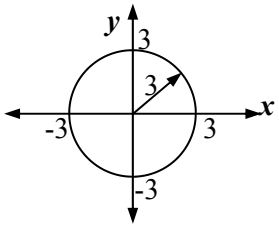
← Substitute radius

← Calculate 2^2

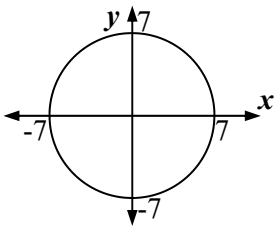
2 Circle with radius of 13 units.

3 Circle with radius of 9 units.

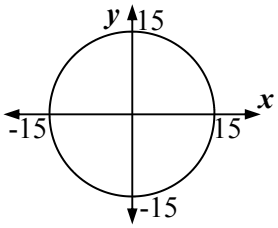
4 The circle shown below.



5 The circle shown below.



6 The circle shown below.



If you are given a diameter, halve it to find the radius. Find the equations for these circles with centres at the origin.

7 Circle with diameter of 16 units.

$r = 16 \div 2 =$ ☐ units

← Write equation

← Substitute **radius**

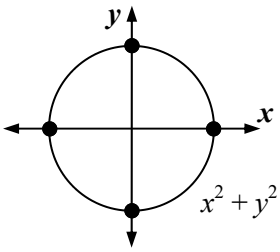
← Calculate

8 Circle with diameter of 34 units.

Sketch these circles on a number plane. Find the radius first by using your $\sqrt{}$ key.

9 $x^2 + y^2 = 144$

$r = \sqrt{144} =$ ☐ units

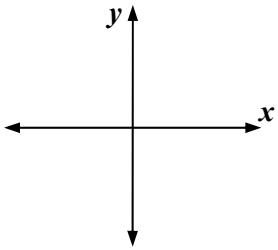


Write x and y intercepts at the 4 dots

$x^2 + y^2 = 144$

10 $x^2 + y^2 = 400$

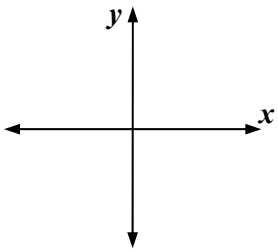
$r = \sqrt{400} =$ ☐ units



Write equation next to circle

11 $x^2 + y^2 = 729$

$r =$



12 $x^2 + y^2 = 361$

Non-Linear Relationships - Properties of Circles

The equation of a circle with centre at the origin is $x^2+y^2=r^2$. Find the equation for these circles centred at the origin.

Example

Circle with radius of 5 units.

$x^2 + y^2 = r^2$ ← Write equation

$x^2 + y^2 = 5^2$ ← Substitute radius

$x^2 + y^2 = 25$ ← Calculate 5^2

1 Circle with radius of 2 units.

$x^2 + y^2 = r^2$ ← Write equation

$x^2 + y^2 = 2^2$ ← Substitute radius

$x^2 + y^2 = 4$ ← Calculate 2^2

2 Circle with radius of 13 units.

$x^2 + y^2 = r^2$

$x^2 + y^2 = 13^2$

$x^2 + y^2 = 169$

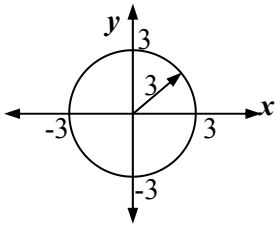
3 Circle with radius of 9 units.

$x^2 + y^2 = r^2$

$x^2 + y^2 = 9^2$

$x^2 + y^2 = 81$

4 The circle shown below.

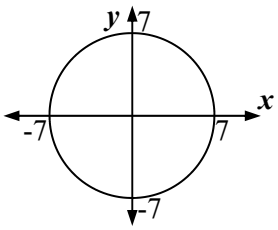


$x^2 + y^2 = r^2$

$x^2 + y^2 = 3^2$

$x^2 + y^2 = 9$

5 The circle shown below.

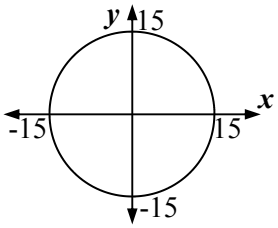


$x^2 + y^2 = r^2$

$x^2 + y^2 = 7^2$

$x^2 + y^2 = 49$

6 The circle shown below.



$x^2 + y^2 = r^2$

$x^2 + y^2 = 15^2$

$x^2 + y^2 = 225$

If you are given a diameter, halve it to find the radius. Find the equations for these circles with centres at the origin.

7 Circle with diameter of 16 units.

$r = 16 \div 2 =$ 8 units

$x^2 + y^2 = r^2$ ← Write equation

$x^2 + y^2 = 8^2$ ← Substitute **radius**

$x^2 + y^2 = 64$ ← Calculate

8 Circle with diameter of 34 units.

$r = 34 \div 2 = 17$ units

$x^2 + y^2 = r^2$

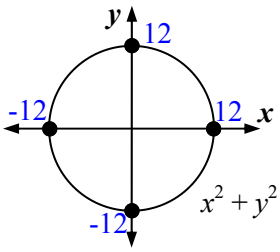
$x^2 + y^2 = 17^2$

$x^2 + y^2 = 289$

Sketch these circles on a number plane. Find the radius first by using your $\sqrt{}$ key.

9 $x^2 + y^2 = 144$

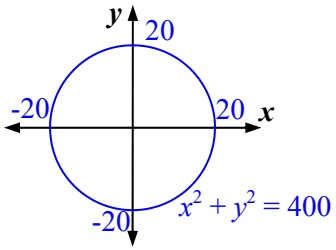
$r = \sqrt{144} =$ 12 units



Write x and y intercepts at the 4 dots

10 $x^2 + y^2 = 400$

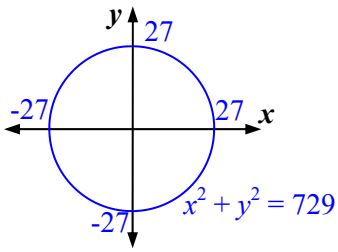
$r = \sqrt{400} =$ 20 units



Write equation next to circle

11 $x^2 + y^2 = 729$

$r = \sqrt{729} = 27$ units



12 $x^2 + y^2 = 361$

$r = \sqrt{361} = 19$ units

$x^2 + y^2 = 6^2$

$x^2 + y^2 = 36$

Non-Linear Relationships - Point on Circle Find Equation - Pythagoras

If you are given the radius of a circle which has its centre at the origin then you can use the general equation:

$$x^2 + y^2 = r^2$$

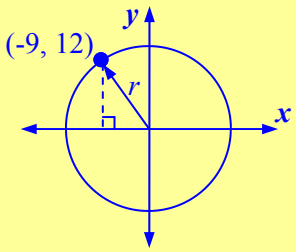
Where: r is the radius of the circle

The equation for the circle is found by substituting the value of r into the above equation.

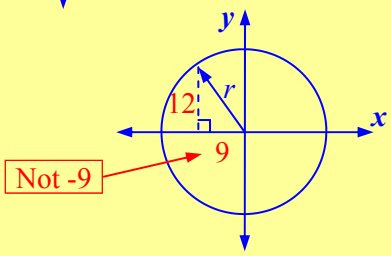
This sheet adds a step to the skill you learned on the previous sheet. Rather than being given r, you have to calculate the radius using a given point on the circle. A right angle triangle is created using the point, then Pythagoras Theorem (Addition) is used. Here is an example.

Example Find the equation of a circle, with centre at the origin, that passes through the point (-9, 12).

STEP 1 This is what the question looks like graphically. All the questions show the diagram.



STEP 2 Write the two short side distances on the triangle. Note that the distances are positive.



STEP 3 Calculate r using Pythagoras Theorem (Addition).

$r^2 = 9^2 + 12^2$

$r^2 = 225$

$r = \sqrt{225}$

$r = 15$ units

STEP 4 Write the general equation for a circle $x^2 + y^2 = r^2$.

$x^2 + y^2 = r^2$

STEP 5 Substitute the radius, that you calculated, into the equation.

$x^2 + y^2 = 15^2$

STEP 6 Calculate the square and you are done.

$x^2 + y^2 = 225$

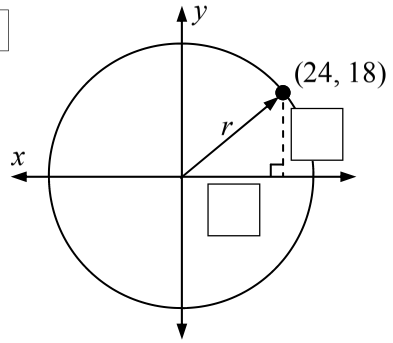
Date Due: _____

Write the short side distances on the triangle, given the point on the circle.

1



Use Pythagoras Theorem to find the radius.

2

$r^2 = \square^2 + \square^2$

$r^2 = \square$

$r = \sqrt{\square}$

$r = \square$ units

Find the equation of the circle above.

3

$x^2 + y^2 = r^2$

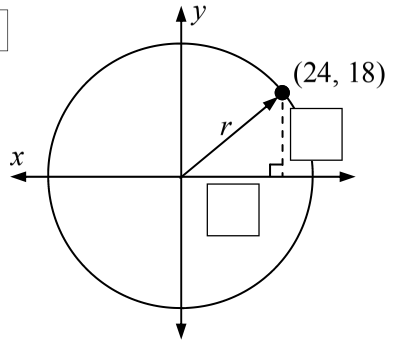
$x^2 + y^2 = \square^2$

$x^2 + y^2 = \square$

Date Due: _____

Write the short side distances on the triangle, given the point on the circle.

1



Use Pythagoras Theorem to find the radius.

2

$r^2 = \square^2 + \square^2$

$r^2 = \square$

$r = \sqrt{\square}$

$r = \square$ units

Find the equation of the circle above.

3

$x^2 + y^2 = r^2$

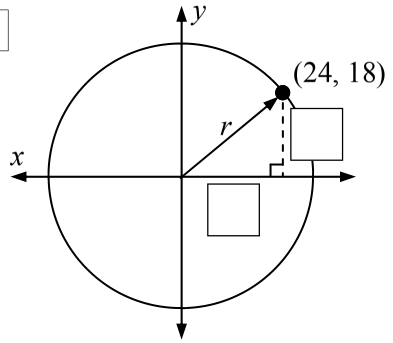
$x^2 + y^2 = \square^2$

$x^2 + y^2 = \square$

Date Due: _____

Write the short side distances on the triangle, given the point on the circle.

1



Use Pythagoras Theorem to find the radius.

2

$r^2 = \square^2 + \square^2$

$r^2 = \square$

$r = \sqrt{\square}$

$r = \square$ units

Find the equation of the circle above.

3

$x^2 + y^2 = r^2$

$x^2 + y^2 = \square^2$

$x^2 + y^2 = \square$

Date Due: _____

3

$x^2 + y^2 = r^2$

$x^2 + y^2 = 30^2$

$x^2 + y^2 = 900$

Non-Linear Relationships - Exponentials - Negative Powers

This sheet requires you to complete a table of values and then plot points which will form an exponential curve. The exponentials on these worksheets feature both positive and negative x-values and also include decimals.

Exponentials accelerate quickly and in the space of three x-values, you can have y-values that are significantly larger.

STEP 1

First complete the table. You use the power key on your calculator.

Round to 1 d.p. for graphing.

$y = 4^x$

x	-2	-1.5	-1	-0.5	0	0.5	1
y	0.1	0.1	0.3	0.5	1	2	4

Calc: [4] [$x^{\blacksquare}$] [-] [2] [=]

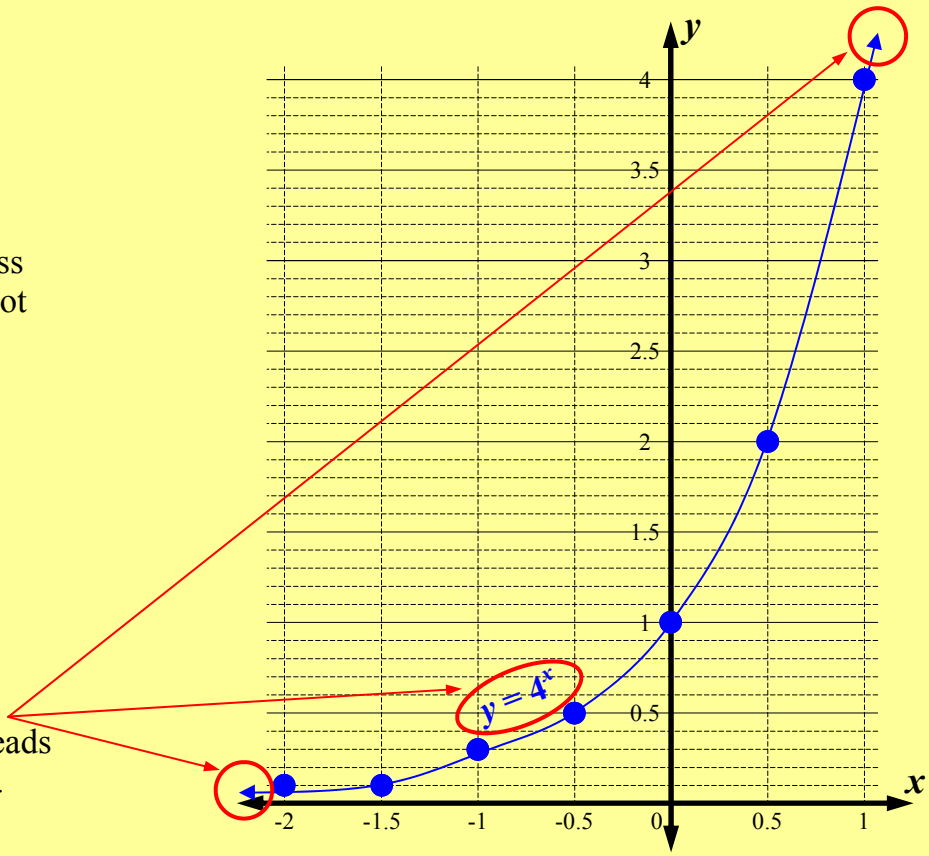
Calc: [4] [$x^{\blacksquare}$] [-] [1] [.] [5] [=]

STEP 2

Remember that x moves across and y moves up and down. Plot the points on the graph.

STEP 3

Draw the curve. Add arrowheads and the equation of the curve. Done.



Non-Linear Relationships - Exponentials - Negative Powers

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Evaluate these, rounding your answer to 1 decimal place.

1 $2^{-1} = 0.\square$

Calc: 2 $x^{\blacksquare}$ - 1 =

2 $2^{-2} = 0.\square$ Round to 1 d.p.

3 $3^{-2} =$ ____

4 $5^{-1} =$ ____

5 $3^{-1} =$ ____

These are decimal powers.

6 $3^{-1.5} =$ ____

7 $2^{-2.5} =$ ____

8 $5^{-0.5} =$ ____

Complete the tables rounding your answers to 1 decimal place when required.

6 $y = 3^x$

x	-2	-1	0	1	2
y					

7 $y = 2^x$

x	-2	-1	0	1	2
y					

8 $y = 5^x$

x	-2	-1	0	1	2
y					

9 $y = 4^x$

x	-2	-1	0	1	2
y					

Complete the tables round answer to 1 decimal place when required. Then plot the exponential curves, place arrowheads on the curve as well as the equation of the curve.

10 $y = 3^x$

x	-2	-1.5	-1	-0.5	0	0.5	1
y

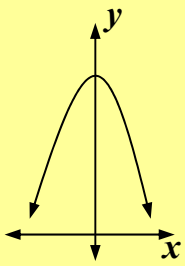
Non-Linear Relationships - Recognising Equations

When you are given an equation or shown a sketch of an equation, you should be able to state whether the equation is of a parabola, straight line (linear), circle or exponential. Below are the way you pick them out.

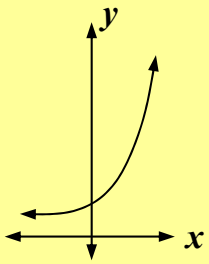
PARABOLAS



$y = 2x^2 + 3$

- Parabolas are U-shaped
- Parabolas are symmetrical across the y-axis. (this course)
- Parabolas have an x^2 term

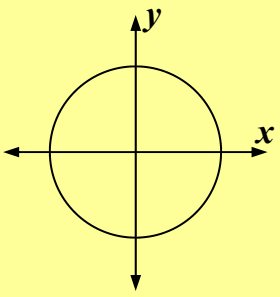
EXPONENTIALS



$y = 2^x$

- Exponentials flatten toward the x-axis
- Exponentials are curves but aren't symmetrical.
- Exponentials have x as a power

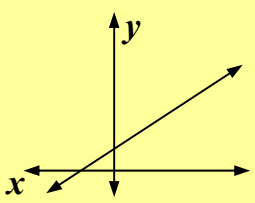
CIRCLES



$x^2 + y^2 = 25$

- Circles look like circles!
- Circles have an x^2 and a y^2 term.

LINEAR



$y = 2x + 4$

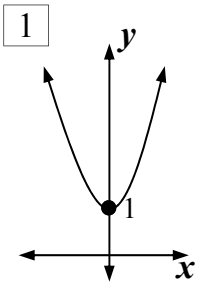
- Linear equations are straight lines
- Linear equations have no powers

Non-Linear Relationships - Recognising Equations

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

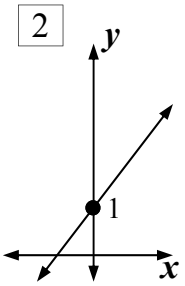
Join the dots between the graph and the equation that matches. You have linear relationships (straight lines), parabolas, circles and exponentials.

1



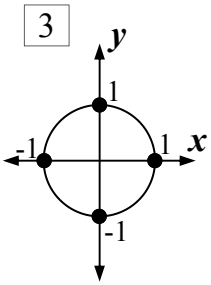
Ⓐ $y = x + 1$

2



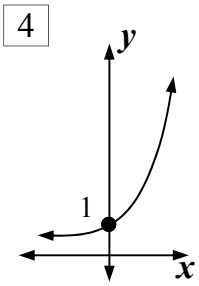
Ⓑ $x^2 + y^2 = 1$

3



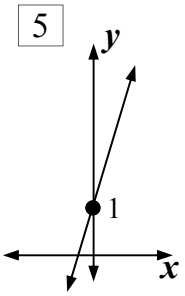
Ⓒ $y = x^2 + 1$

4



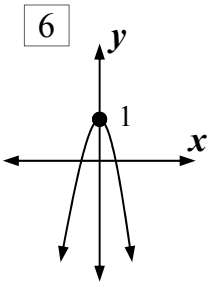
Ⓐ $y = -3x^2 + 1$

5



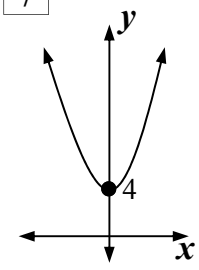
Ⓑ $y = 3x + 1$

6



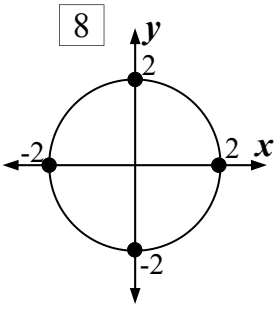
Ⓒ $y = 3^x$

7



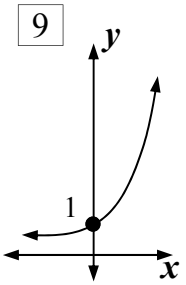
Ⓐ $x^2 + y^2 = 4$

8



Ⓑ $y = x^2 + 4$

9



Ⓒ $y = 4^x$

Write either: 'circle', 'linear', 'parabola' or 'exponential' next to these.

10 $y = 2x^2$ _____

11 $y = 5^x$ _____

12 $y = 4x + 2$ _____

13 $x^2 + y^2 = 16$ _____

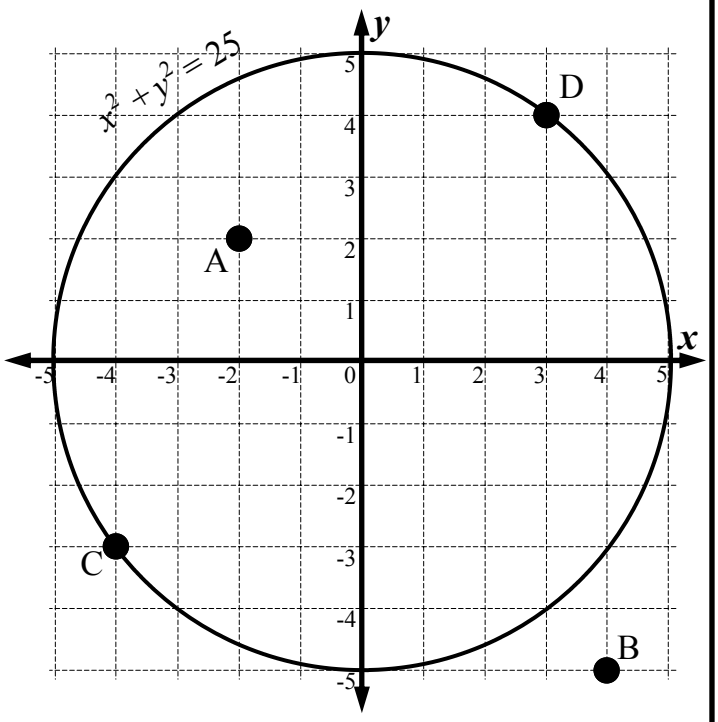
Non-Linear Relationships Extension Review

This is the review of the Non-Linear Relationships Extension Topic.

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Name and give the coordinates for the points that are on the circle and the points that are inside and outside.



1 On Circle: _____ _____

2 Outside Circle: _____

3 Inside Circle: _____

Show algebraically that the point (4, 21) lies on the parabola $y = x^2 + 5$.

4

Is the point (-2, 7) inside or outside the circle $x^2 + y^2 = 36$? Show working to justify your answer.

5

Complete these and solve the equations.

6

$31 = x^2 + 6$

$\square = x^2$

$x = \pm \square$

7

$1 = x^2 - 8$

$\square = x^2$

$x = \pm \square$

Find the x-values when $y = 21$ for the parabola $y = x^2 + 5$. Show all working.

8

Find the equation for a circle with its centre at the origin that has a radius of 6 units.

9

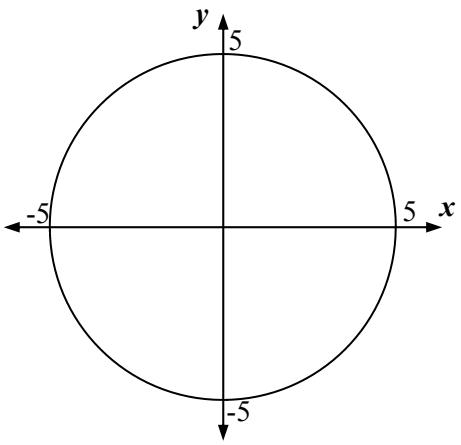
Find the equation for a circle with its centre at the origin that has a diameter of 16 units.

10

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

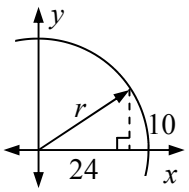
Give the equation for the circle below.

11



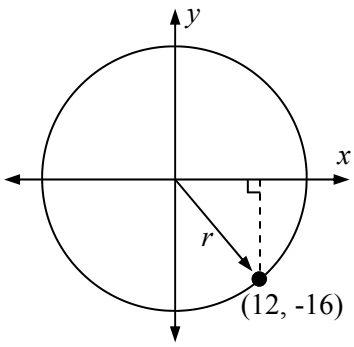
Use Pythagoras Theorem to calculate the radius of the circle below. (Only part of the circle is shown)

12



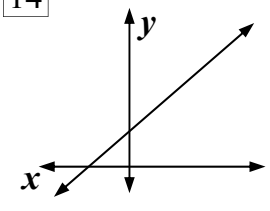
Use Pythagoras Theorem to calculate the radius of the circle below. Then give the equation of the circle.

13

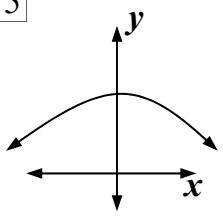


Describe these graphs as either: 'Parabola', 'Circle', 'Linear' or 'Exponential'.

14

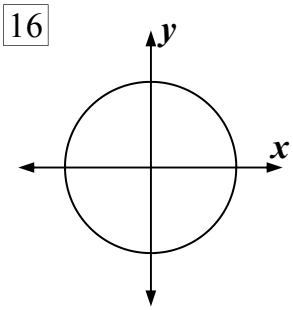


15

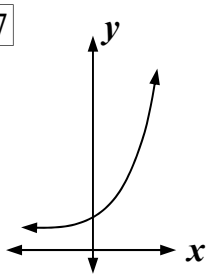


Describe these as either: 'Parabola', 'Circle', 'Linear' or 'Exponential'.

16



17



18 $y = 2x^2$

19 $y = 5^x$

20 $y = 4x + 2$

Complete the table for the exponential equation $y = 3^x$.

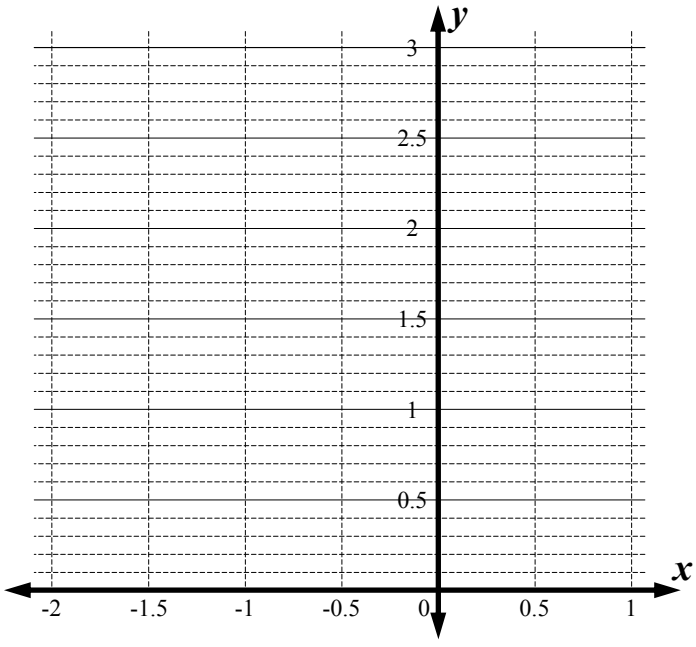
21 $y = 3^x$

x	-2	-1.5	-1	-0.5	0	0.5	1
y							

Round decimals to 1 decimal place

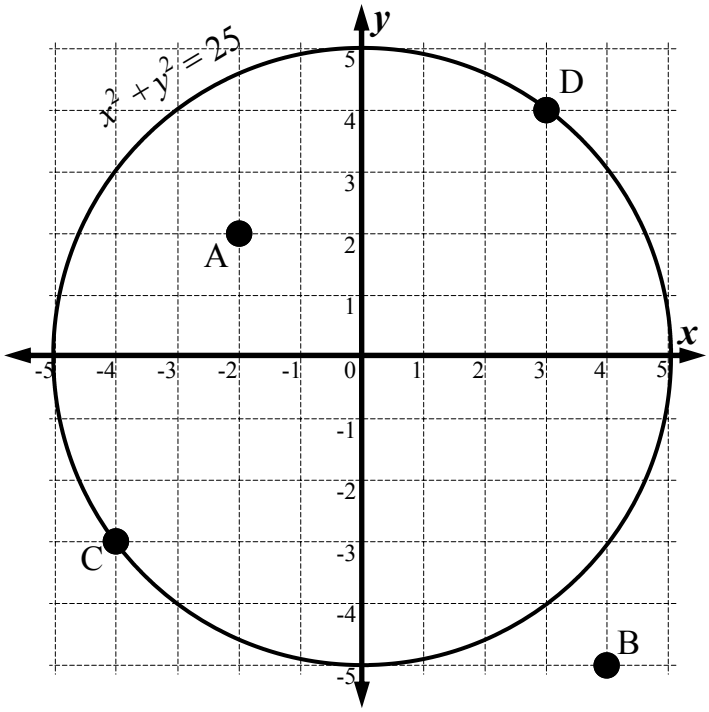
Plot the exponential equation $y = 3^x$ on the graph below.

22



© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Name and give the coordinates for the points that are on the circle and the points that are inside and outside.



1 On Circle: C (-4, -3) D (3, 4)

2 Outside Circle: B (4, -5)

3 Inside Circle: A (-2, 2)

Show algebraically that the point (4, 21) lies on the parabola $y = x^2 + 5$.

4

$y = x^2 + 5$

$21 = 4^2 + 5$

$21 = 21$

LHS = RHS ∴ Point on parabola

Is the point (-2, 7) inside or outside the circle $x^2 + y^2 = 36$? Show working to justify your answer.

5

$x^2 + y^2 = 36$

$(-2)^2 + 7^2 = 36$

$53 > 36$

LHS > RHS ∴ Point is outside circle

Complete these and solve the equations.

6

$31 = x^2 + 6$

$25 = x^2$

(√) (√)

$x = \pm 5$

7

$1 = x^2 - 8$

(+8) (+8)

$9 = x^2$

(√) (√)

$x = \pm 3$

Find the x-values when $y = 21$ for the parabola $y = x^2 + 5$. Show all working.

8

$y = x^2 + 5$

$21 = x^2 + 5$

(-5) (-5)

$16 = x^2$

$x = \pm 4$

Find the equation for a circle with its centre at the origin that has a radius of 6 units.

9

$x^2 + y^2 = r^2$

$x^2 + y^2 = 6^2$

$x^2 + y^2 = 36$

Find the equation for a circle with its centre at the origin that has a diameter of 16 units.

10

$r = 16 \div 2 = 8$ units

$x^2 + y^2 = r^2$

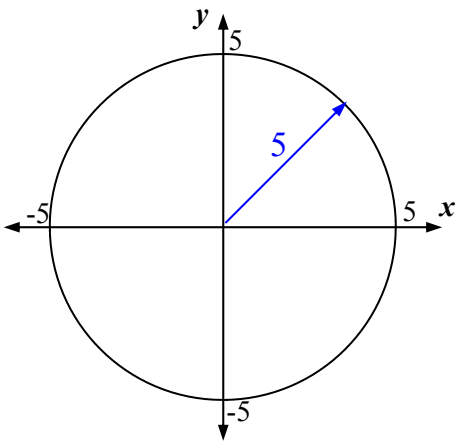
$x^2 + y^2 = 8^2$

$x^2 + y^2 = 64$

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Give the equation for the circle below.

11



$x^2 + y^2 = r^2$

$x^2 + y^2 = 5^2$

$x^2 + y^2 = 25$

Use Pythagoras Theorem to calculate the radius of the circle below. (Only part of the circle is shown)

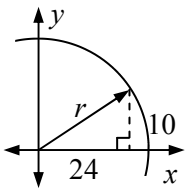
12

$r^2 = 10^2 + 24^2$

$r^2 = 676$

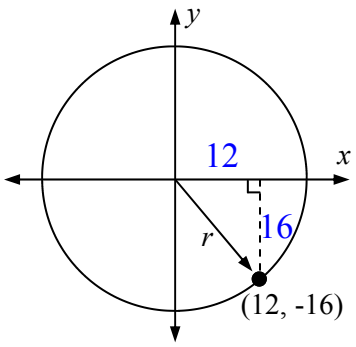
$r = \sqrt{676}$

$r = 26$ units



Use Pythagoras Theorem to calculate the radius of the circle below. Then give the equation of the circle.

13



$r^2 = 12^2 + 16^2$

$r^2 = 400$

$r = \sqrt{400}$

$r = 20$ units

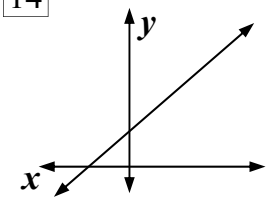
$x^2 + y^2 = r^2$

$x^2 + y^2 = 20^2$

$x^2 + y^2 = 400$

Describe these graphs as either: 'Parabola', 'Circle', 'Linear' or 'Exponential'.

14



linear

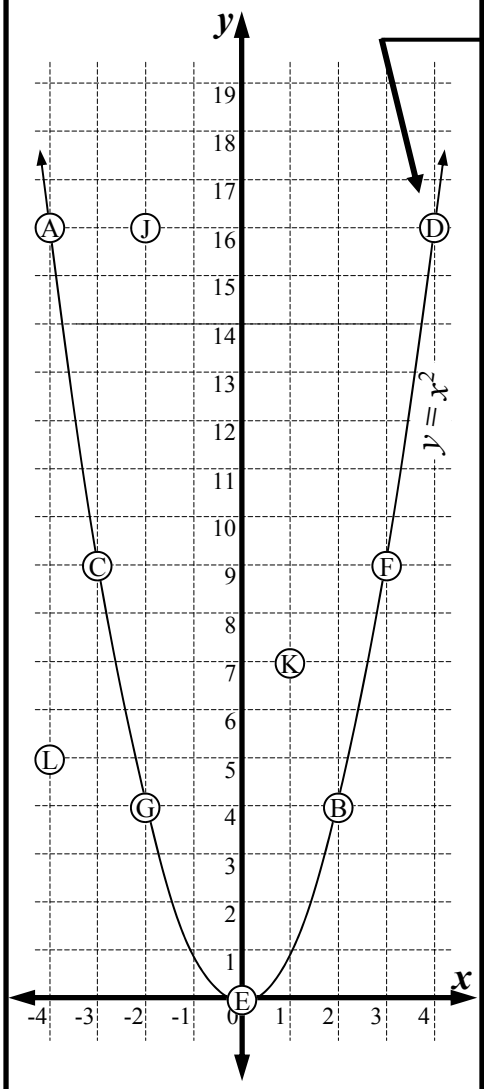
Non-Linear Relationships Extension

© Freefall Mathematics - School Use Only

Non-Linear Relationships - Testing Points and Parabolas (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Look at the graph of $y = x^2$ and give the co-ordinates for these points.



Give the co-ordinates for…..

1	A	(,)	These 7 points are on the parabola
2	G	(,)	
3	B	(,)	
4	E	(,)	
5	C	(,)	
6	D	(,)	
7	F	(,)	
8	J	(,)	These 3 points aren't on the parabola
9	K	(,)	
10	L	(,)	

Now show which points are or aren't on the parabola $y = x^2$, algebraically.

Example Point D: (4, 16)
x y

$y = x^2$ ← Write the equation

$16 = 4^2$ ← Substitute x and y

$16 = 16$ ← Calculate 4^2

LHS = RHS ∴ Point on Parabola

12 Point B: (,)
x y

← Write the equation

$\square = \square^2$ ← Substitute x and y

← Calculate

13 Point K: (,)
x y

14 Point A: (,)

← Negative in brackets

15 Point J: (,)

← Negative in brackets

Now the parabolas change each question. Find whether the point is on the parabola or not.

16 Does (2, 7) lie on $y = x^2 + 5$?
x y

← Write equation

$\square = \square^2 + 5$ ← Sub x and y

← Calculation

17 Does (-3, 8) lie on $y = x^2 - 1$?

$\square = \square^2 - \square$

← Brackets

18 Does (5, 85) lie on $y = 2x^2 - 15$?

19 Does (-4, 9) lie on $y = -x^2 - 7$?

20 Does (4, -43) lie on $y = -3x^2 + 5$?

Non-Linear Relationships - Testing Points Circles/Exponentials (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Substitute in x and y into these exponential equations to find if the point is on the curve.

Example

Does (3, 143) lie on $y = 4^x$?

x y

$y = 4^x$ ← Write the equation

$143 = 4^3$ ← Substitute x and y

$143 \neq 64$ ← Calculate 4^3

4 $x^{\blacksquare}$ 3 =

LHS ≠ RHS ∴ Point not on curve

1 Does (5, 32) lie on $y = 2^x$?

x y

← Write equation

$\square = 2^{\square}$ ← Substitute x and y

← Calculate 2^5

2 $x^{\blacksquare}$ 5 =

2 Does (7, 2 187) lie on $y = 3^x$?

3 Does (3, 10 000) lie on $y = 10^x$?

4 Does (10, 1 024) lie on $y = 2^x$?

Now it is circles, sub in x and y to show if the point is on the circle.

Example

Does (3, 6) lie on $x^2 + y^2 = 45$?

x y

$x^2 + y^2 = 45$ ← Write the equation

$3^2 + 6^2 = 45$ ← Substitute x and y

$45 = 45$ ← Calculate $3^2 + 6^2$

3 x^2 + 6 x^2 =

LHS = RHS ∴ Point on circle

5 Does (2, 3) lie on $x^2 + y^2 = 15$?

x y

← Write equation

$\square^2 + \square^2 = 15$ ← Sub x and y

← Calculate

6 Does (7, 6) lie on $x^2 + y^2 = 77$?

7 Does (9, 12) lie on $x^2 + y^2 = 225$?

8 Does (1, 8) lie on $x^2 + y^2 = 60$?

If $x^2 + y^2$ is less than the constant the point is inside the circle, more and it's outside. Find if the point is in or out!

LHS < RHS ⟶ Point Inside

LHS > RHS ⟶ Point Outside

Example

x y

Is the point (3, 7) inside or outside of the circle $x^2 + y^2 = 60$?

$x^2 + y^2 = 60$ ← Write the equation

$3^2 + 7^2 = 60$ ← Substitute x and y

$58 < 60$ ← Calculate $3^2 + 7^2$

3 x^2 + 7 x^2 =

LHS < RHS ∴ Point inside circle

9 Is the point (5, 2) inside or outside of the circle $x^2 + y^2 = 20$?

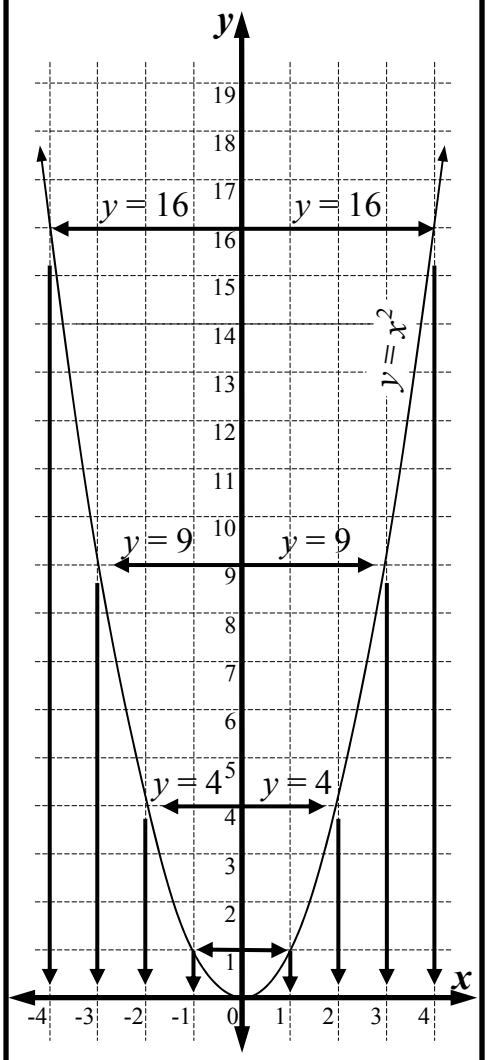
10 Is the point (7, 5) inside or outside of the circle $x^2 + y^2 = 64$?

11 Is the point (3, 8) inside or outside of the circle $x^2 + y^2 = 75$?

Non-Linear Relationships - Finding x-values (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Read off the two x-values for each y-value on $y = x^2$.



1 When $y = 16$: $x =$ ☐ & ☐

2 When $y = 4$: $x =$ ☐ & ☐

3 When $y = 1$: $x =$ ☐ & ☐

4 When $y = 9$: $x =$ ☐ & ☐

The square root of a number results in two answers. Find the two answers for these.

5 $\sqrt{25} = \pm$ ☐ Calc: √ 2 5 =

Find the x-values when given a y-value on a parabola. Then give the points on the parabola.

1 Find the x-values when $y = 57$ for the parabola $y = x^2 - 7$.

_____ ← Write eqn

_____ ← Sub $y = 57$

◯ ◯ ← +7 each side

□ $= x^2$

◯ ◯ ← √ each side

$x =$ ±□

2 The two points are:

(□ , 57) & (□ , 57)

3 Find the x-values when $y = 0$ for the parabola $y = x^2 - 4$.

_____

_____

◯ ◯

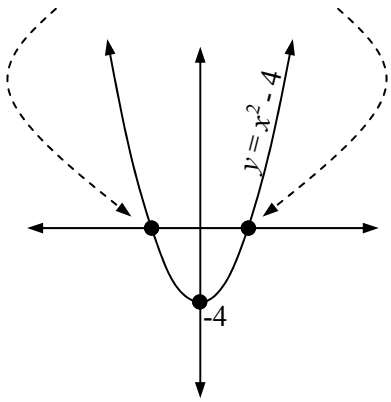
_____

◯ ◯

_____

4 The two points are:

(□ , □) & (□ , □)



With negatives, you switch the sign either side of the equation. Find the x-values for these.

5 Find the x-values when $y = 3$ for the parabola $y = -x^2 + 12$.

_____ ← Write eqn

_____ ← Sub $y = 3$

◯ ◯ ← -12 each side

□ $= -x^2$

swap swap

$x^2 =$ □ ← Change the sign

◯ ◯ ← √ each side

_____

6 The two points are:

(□ , 3) & (□ , 3)

7 Find the x-values when $y = -32$ for the parabola $y = -x^2 - 7$.

Non-Linear Relationships - Properties of Circles

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The equation of a circle with centre at the origin is $x^2+y^2=r^2$. Find the equation for these circles centred at the origin.

Example

Circle with radius of 5 units.

$x^2 + y^2 = r^2$ ← Write equation

$x^2 + y^2 = 5^2$ ← Substitute radius

$x^2 + y^2 = 25$ ← Calculate 5^2

1 Circle with radius of 2 units.

← Write equation

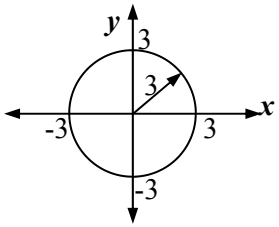
← Substitute radius

← Calculate 2^2

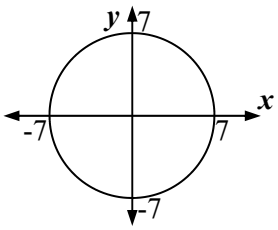
2 Circle with radius of 13 units.

3 Circle with radius of 9 units.

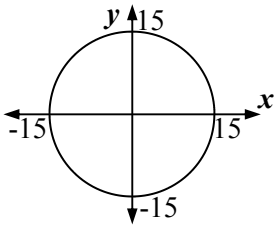
4 The circle shown below.



5 The circle shown below.



6 The circle shown below.



If you are given a diameter, halve it to find the radius. Find the equations for these circles with centres at the origin.

7 Circle with diameter of 16 units.

$r = 16 \div 2 =$ ☐ units

← Write equation

← Substitute **radius**

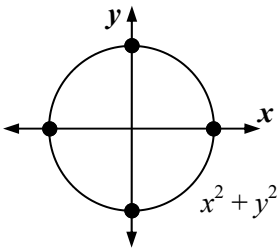
← Calculate

8 Circle with diameter of 34 units.

Sketch these circles on a number plane. Find the radius first by using your $\sqrt{}$ key.

9 $x^2 + y^2 = 144$

$r = \sqrt{144} =$ ☐ units

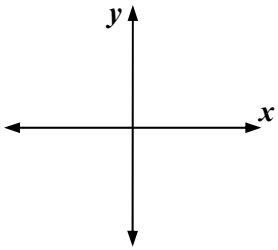


Write x and y intercepts at the 4 dots

$x^2 + y^2 = 144$

10 $x^2 + y^2 = 400$

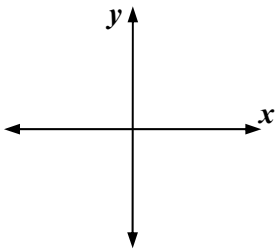
$r = \sqrt{400} =$ ☐ units



Write equation next to circle

11 $x^2 + y^2 = 729$

$r =$



12 $x^2 + y^2 = 361$

Non-Linear Relationships - Point on Circle Find Equation - Pythagoras

Geometrical Properties - Angles & Similarity - Practical

When you enlarge a shape, the sides of the larger shape are longer, but what about the internal angles? Well unlike the sides, the angles stay the same.

These sheets involve creating an enlargement and then checking internal angles to verify that they remain the same. Two methods are used to enlarge the shapes.

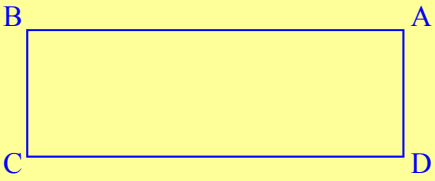
The first worksheet features a grid with a shape inside the grid with vertices on intersecting grid lines. Use the larger grid to copy the shape then measure the internal angles. Note that the original shape is small, if edges are too small for your protractor, remember that you can use a pencil and ruler to extend the lines so that you can then use the protractor.

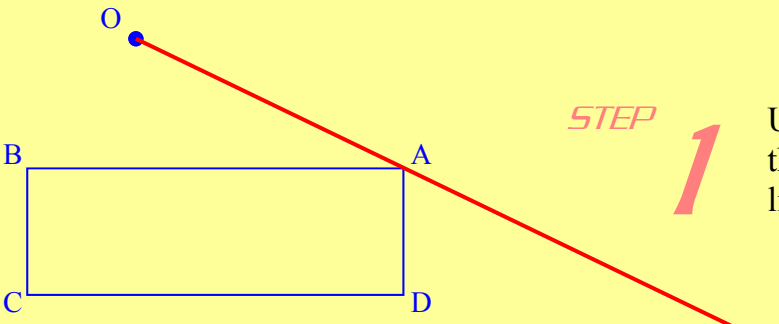
The second worksheet uses a point called a centre of enlargement (CoE). Draw lines from the point marked 'O' through the vertices. Measure the length from 'O' to the corner and triple the distance for Q.1, double the distance for Q.2.

Example

O

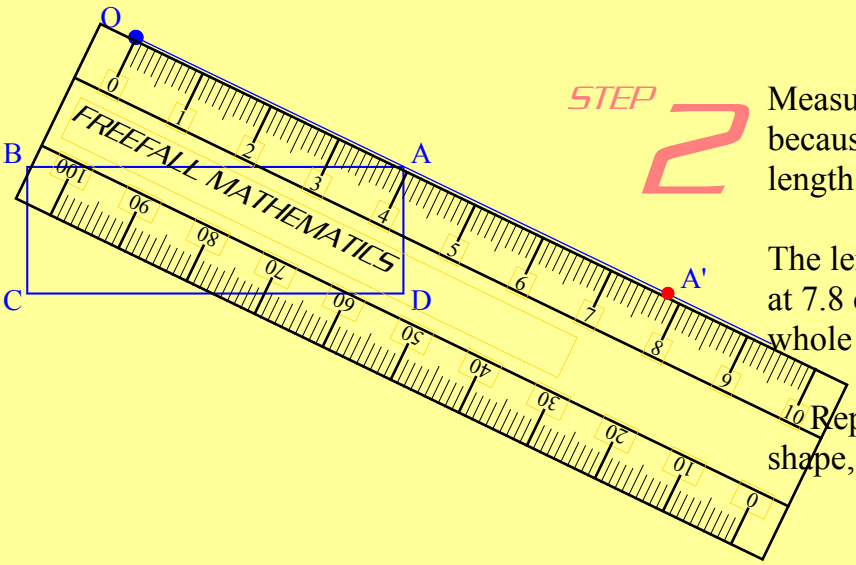
An enlargement of rectangle ABCD with a scale factor of 2 is required.





STEP 1

Use a ruler to draw a line from the CoE through one point. In this case it is the red line from O through A.



STEP 2

Measure the length OA and then double it, because the scale factor is 2. Mark the length on the constructed line.

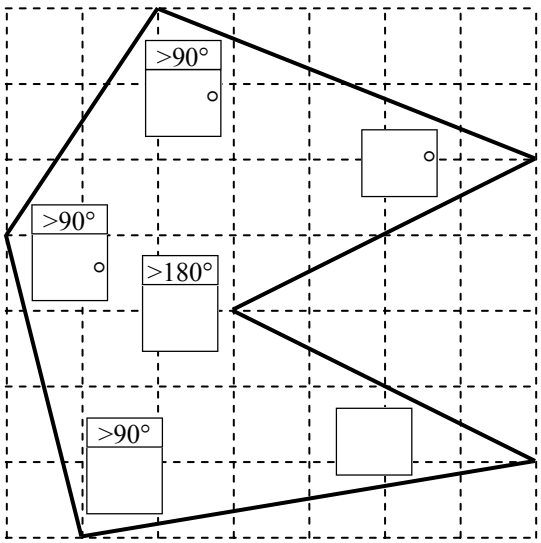
The length was 3.9 cm, so a mark is placed at 7.8 cm. All lengths on Worksheet 2 are whole centimeters.

Repeat for the 4 vertices, draw the shape, label vertices with a '.

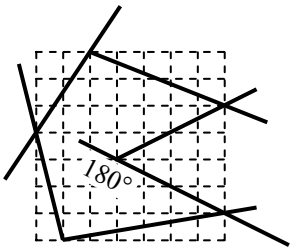
Geometrical Properties - Angles & Similarity - Practical (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Use a protractor to measure internal angles in the polygon. Write all the angles in the boxes. You can extend lines to use your protractor. Then enlarge this polygon to create a similar figure using the grid. Measure the angles in the similar figure. Do they match?



Extend lines to allow protractor use.



Steps:
- Measure angles in smaller figure
- Construct enlarged (similar) polygon
- Measure angles in enlargement.

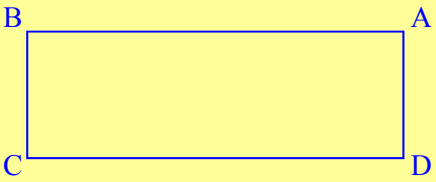
Geometrical Properties - Further Enlargements (Ratios)

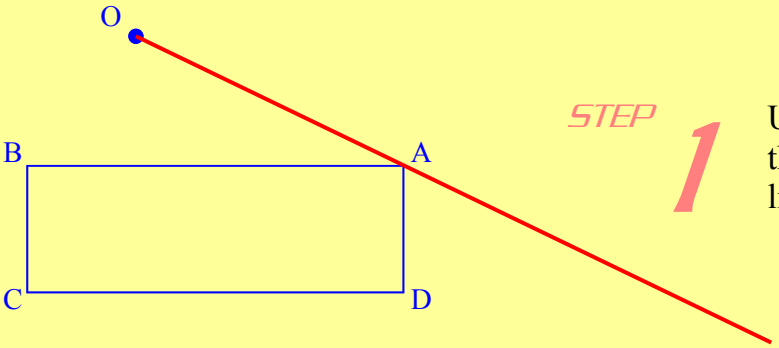
One way to make a similar figure is to create an enlargement of the shape. A point called a centre of enlargement (CoE) is used by drawing lines from it to all the vertices (corners) of the shape. The length from the CoE is measured then multiplied by the scale factor to move that point along the line. The scale factors on this sheet are all more than 1, that means that the enlarged shape will be larger than the original shape.

The CoE can be placed anywhere. It can be inside the shape (Q.2) and outside the shape. It can also be on one of the lines that make the shape. Below are the steps to follow to make an enlargement.

O

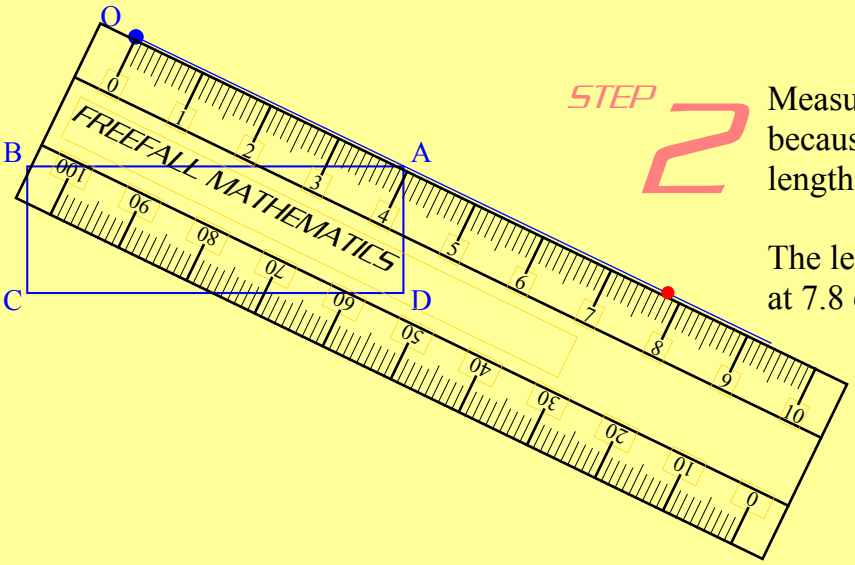
An enlargement of rectangle ABCD with a scale factor of 2 is required.





STEP 1

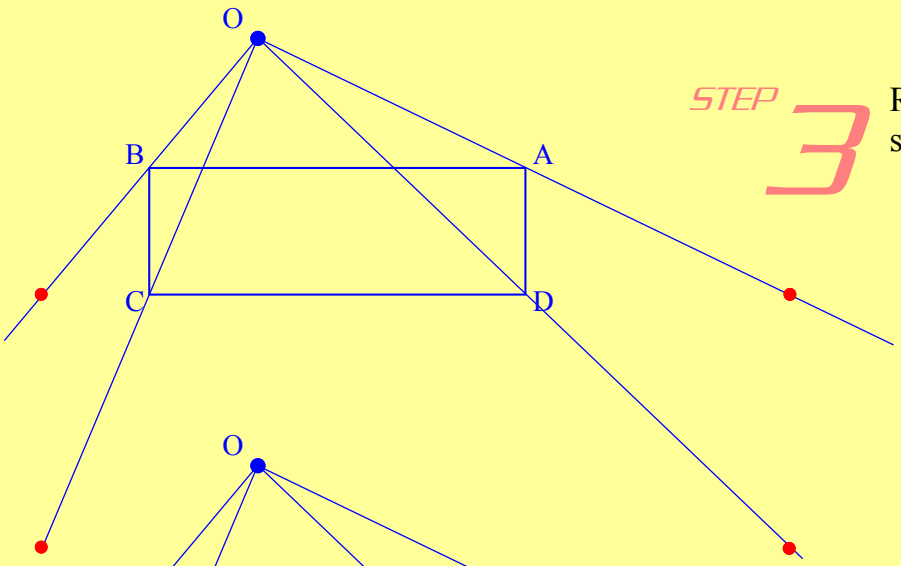
Use a ruler to draw a line from the CoE through one point. In this case it is the red line from O through A.



STEP 2

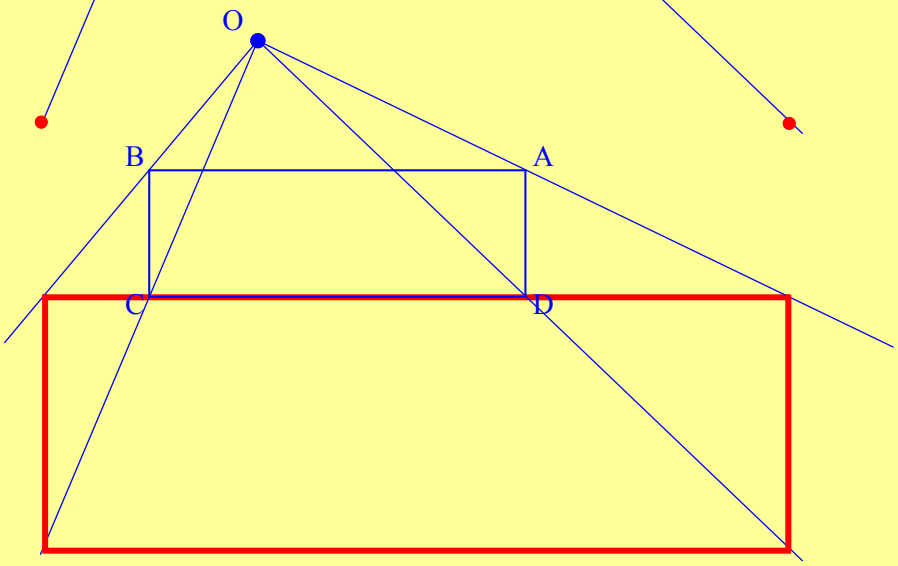
Measure the length OA and then double it, because the scale factor is 2. Mark the length on the constructed line.

The length was 3.9 cm, so a mark is placed at 7.8 cm.



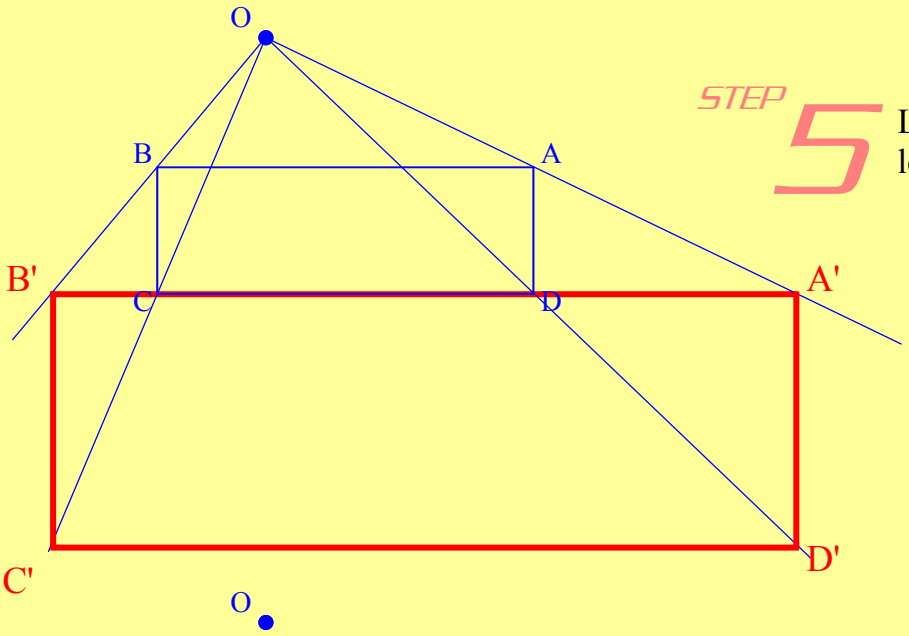
STEP 3

Repeat for the three other corners of the shape.



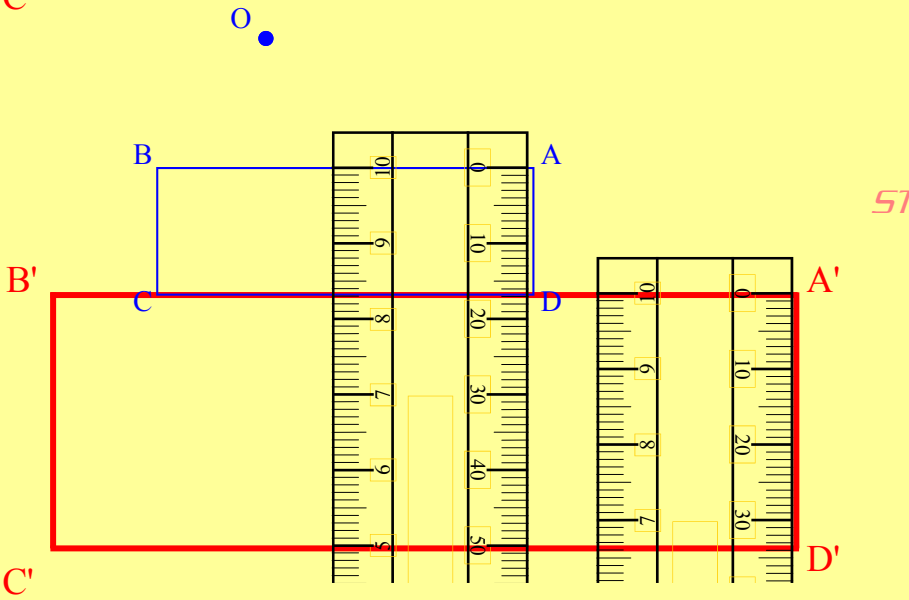
STEP 4

Draw the lines to make the shape.



STEP 5

Label the sides of the shape, use the same letters and add a dash. You are all done!



STEP 6

Measure matching sides, one should be double the other.

AD = 1.7 cm

A'D' = 3.4 cm Looks good.

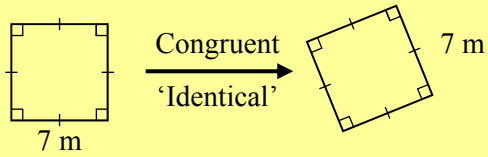
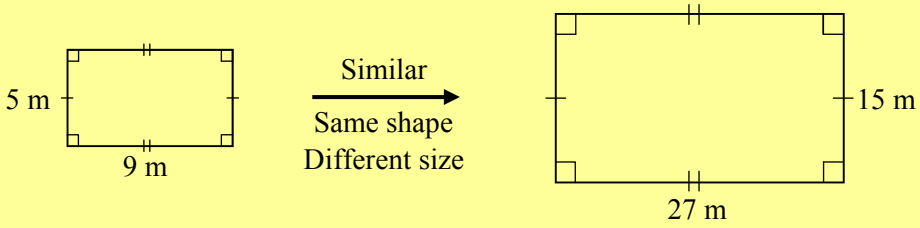
Geometrical Properties - Similarity and Congruence

Congruence means identical. So internal angles are the same on both shapes and the length of sides (or radius) is the same. Note that shapes can be in different orientation (eg. rotated).



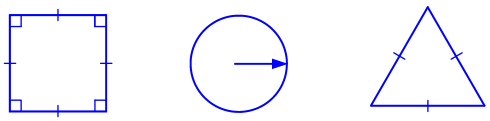
Similar means same shape but different size. So internal angles are the same, but the side lengths are larger or smaller, multiplied by a scale factor.



In the above example the internal angles are all 90°. But the right rectangle is 3 times larger than the left rectangle. Because both sides are multiplied by three, the rectangles are similar.

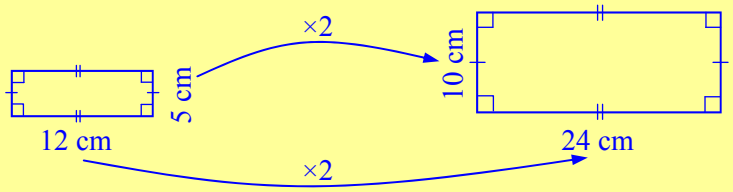
When a shape features only one length, other shapes of its type are always either congruent or similar. Squares, equilateral triangles and circles are examples of shapes that must be either similar or congruent.

These shapes must be either similar or congruent



With shapes like rectangles and isosceles triangles, the shapes are congruent if the sides are the same length. If matching sides on the two shapes have lengths that have a common scale factor, then those shapes are similar. So find the scale factor to show similarity.

Example



● Similar
○ Not similar
because the scale factor
● is uniform
○ is inconsistent

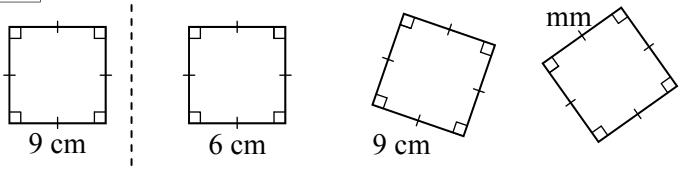
If one side was ×2 and the other was ×3 then the shapes aren't similar, because the pairs of matching sides don't have the same scale factor.

Geometrical Properties - Similarity and Congruence (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

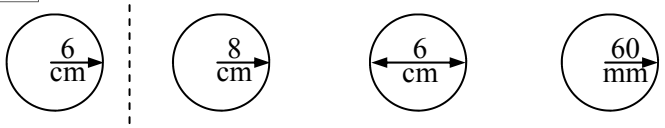
All squares, circles and equilateral triangles are either similar or congruent. Decide if these are congruent or similar to the original shape.

1



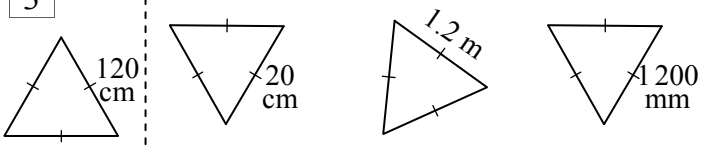
○ similar ○ congruent | ○ similar ○ congruent | ○ similar ○ congruent

2



○ similar ○ congruent | ○ similar ○ congruent | ○ similar ○ congruent

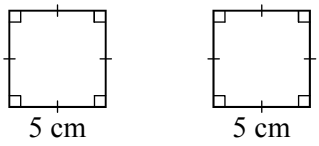
3



○ similar ○ congruent | ○ similar ○ congruent | ○ similar ○ congruent

State why these are similar or congruent. Use:
Congruent - all sides & angles are the same, or
Similarity - all sides enlarged by same scale factor.

4

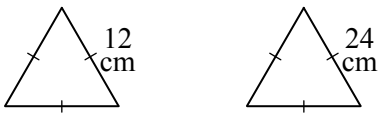


○ similar
○ congruent

Reason: _____

_____

5

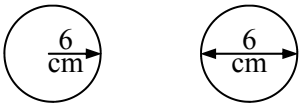


○ similar
○ congruent

Reason: _____

_____

6



Use the word 'radius' not 'side'

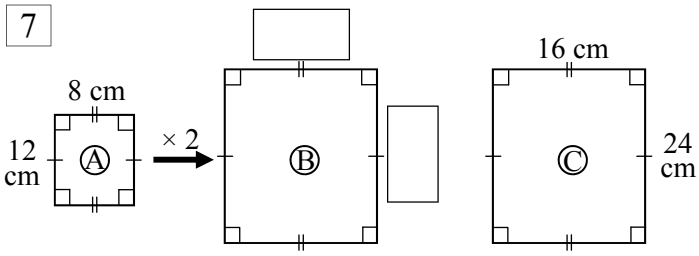
○ similar
○ congruent

Reason: _____

_____

Enlarge the first shape 'A' given a scale factor. If the enlarged shape 'B' is congruent with the third shape 'C', then you have similarity between A & C.

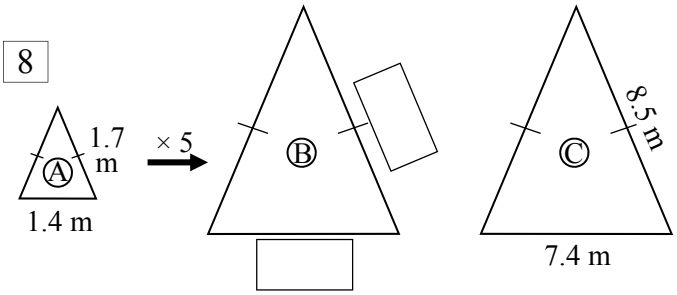
7



Because rectangle B ○is ○isn't congruent to rectangle C,

rectangle A ○is ○isn't similar to rectangle C.

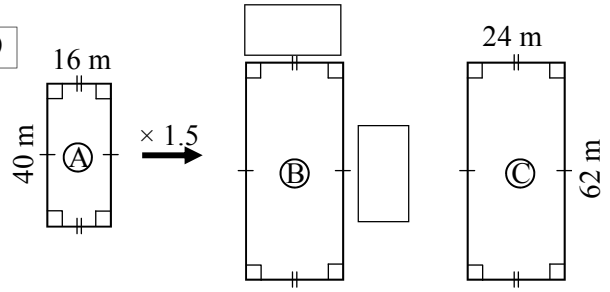
8



Because triangle B ○is ○isn't congruent to triangle C,

triangle A ○is ○isn't similar to triangle C.

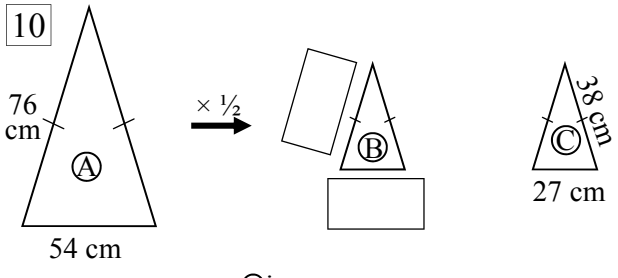
9



Because rectangle B ○is ○isn't congruent to rectangle C,

rectangle A ○is ○isn't similar to rectangle C.

10



Because triangle B ○is ○isn't congruent to triangle C,

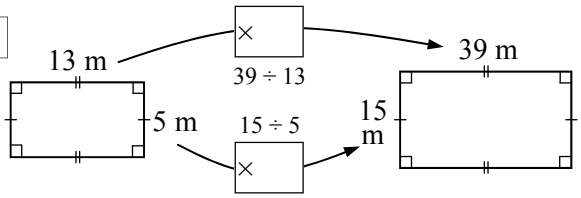
triangle A ○is ○isn't similar to triangle C.

Geometrical Prop - Similarity and Congruence - Scale Factors (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

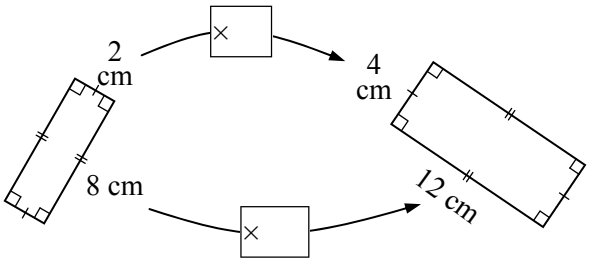
With rectangles, if the scale factor for both sides is the same, you have similarity. Test these rectangles for similarity.

1



○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

2



○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

Geometrical Properties - Similar Figures & Similarity Statements

Similar figures are shapes that are the same shape only a scale factor has been applied to enlarge one of the shapes. Angles inside the shape are identical, but the side lengths are different, having been multiplied by a scale factor. Similarity is stated by using three vertical strokes, $|||$.

The first worksheet starts with pairs of similar shapes scattered around the column. Find the similar pairs, that is, identical shapes just one is larger than the other. When you have found them, write the answer in the boxes at the base of the column. Strike each shape out with a lead pencil that you can rub out later, because you can colour the matching pairs the same colour. There is one shape that doesn't have a match, write its letter/number in the box at the bottom of the column.

The next column asks you to write similarity statements. When you name a shape you start at one vertex (corner) of the shape and go around it either in a clockwise or anti-clockwise direction. With similarity (and later congruence) statements you must start at matching vertices and move around the shape always matching vertices. The first column gives you the order with either symbols or numbers below the boxes. Just write the letters in the boxes that match the angle/symbol.

Because angles match in similar figures, you can check that the angles are the same when identifying matching vertices. So check that the internal angles are the same to make sure you are listing the letters the correct way.

Geometrical Props - Similar Figures & Similarity Statements (Sheet 1)

Geometrical Properties - Congruent Shapes & Congruence Statements

This sheet compares shapes and asks you if they are congruent. When shapes are congruent they are identical, same internal angles and same side lengths. Note that a congruent shape can be formed by reflection.

Column 1 starts with three questions and asks you to use a ruler and write down all the side lengths. Once you do this if all the sides match, and are in the same position, then the shapes are congruent. Fill in the yes circle if they are.

Column 2 has a number of shapes labeled, A to Z and 1 - 9. So there are 35 shapes. There are 17 pairs of matching shapes and one ‘non-matching shape’. Some shapes are easy as there is only one possible match, but others aren’t so straight forward. With slight variations and rotation as well it is difficult to tell. You have three options:

- Reach for your ruler.
- Use a piece of tracing paper to trace the more difficult shapes, then move the trace over the possible matching shapes.
- Or your teacher may give you a transparency which has all the shapes on it. Use the transparency to check for congruence.

Once you have found your pairs write them in the boxes below the shapes. After you have found all the matches there will be one shape left, write that at the base of the page. Your last step is to colour the shapes that match the same colour.

Geometrical Properties - Matching Congruent Shapes (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

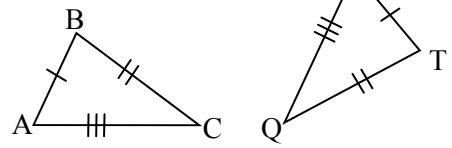
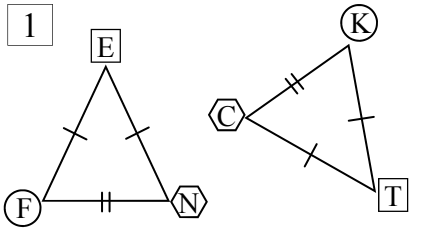
A congruence statement has the matching vertices named in the same order. Write a congruence statement for these.

Example



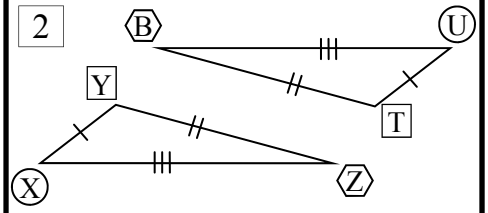
$\triangle ABC \equiv \triangle MTQ$

1



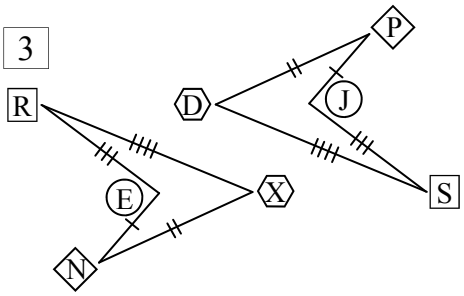
$\triangle\bigcirc\square\hexagon \equiv \triangle\bigcirc\square\hexagon$

2



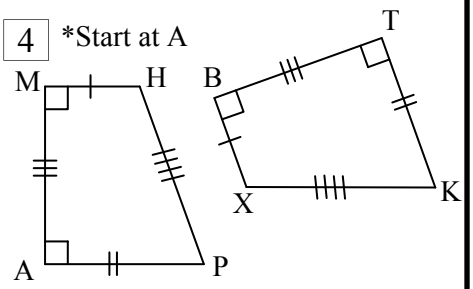
$\triangle\bigcirc\square\hexagon \equiv \triangle\bigcirc\square\hexagon$

3

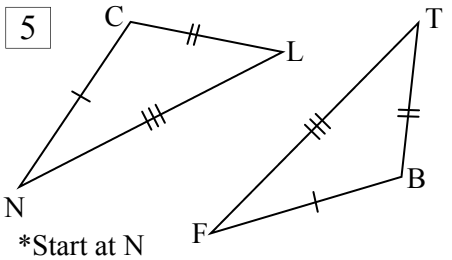


$\bigcirc\square\hexagon\diamond \equiv \bigcirc\square\hexagon\diamond$

4 *Start at A



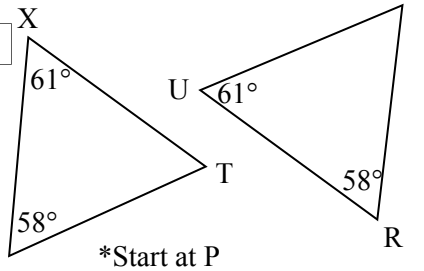
5



*Start at N

State which angles and sides are equal & complete congruence statements for these congruent shapes.

6



*Start at P

$\angle P = \angle R$ $\angle X = \angle\square$

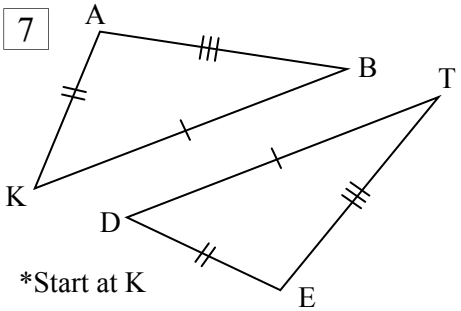
$\angle T = \angle\square$ $XP = \square$

$PT = \square$ $XT = \square$

$\triangle\square \equiv \triangle\square$

Remember same starting point & order.

7



*Start at K

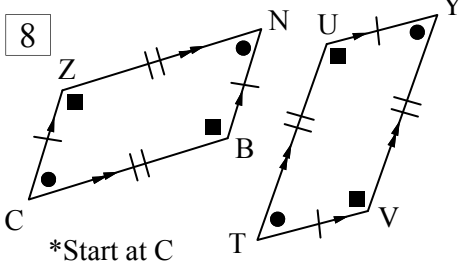
$\angle K = \angle\square$ $\angle\square = \angle\square$

$\angle\square = \angle\square$ $AK = \square$

$\square = \square$ $\square = \square$

$\triangle\square \equiv \triangle\square$

8



*Start at C

$\angle\square = \angle\square = \angle\square = \angle\square$

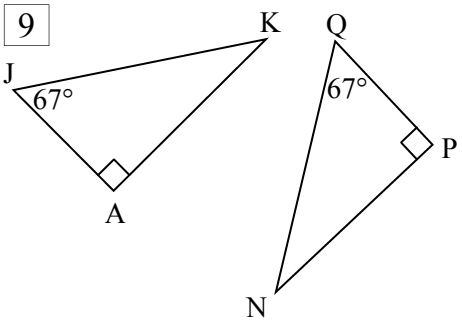
$\angle\square = \angle\square = \angle\square = \angle\square$

$\square = \square = \square = \square$

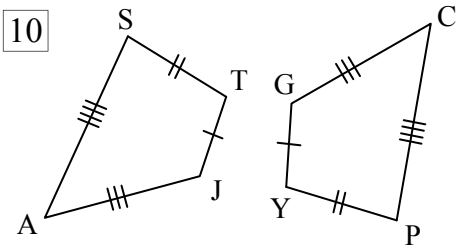
$\square = \square = \square = \square$

$\square \equiv \square$

9

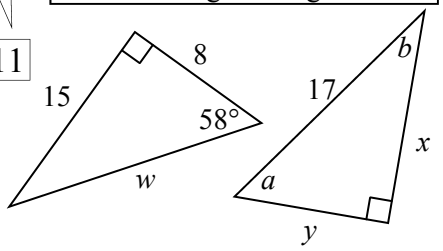


10



Find the value of all unknowns, for these congruent figures.

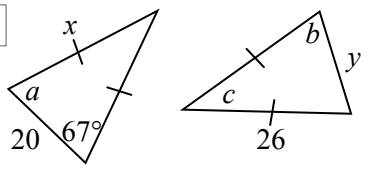
11



$a =$ $b =$ $w =$

$x =$ $y =$

12



$a =$ $b =$ $c =$

$x =$ $y =$

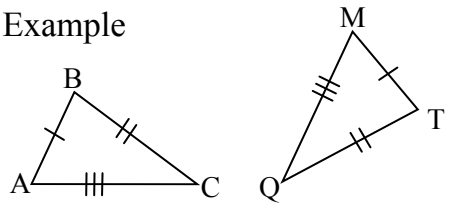
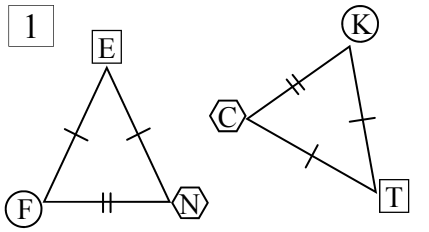
A congruence statement has the matching vertices named in the same order. Write a congruence statement for these.

Example



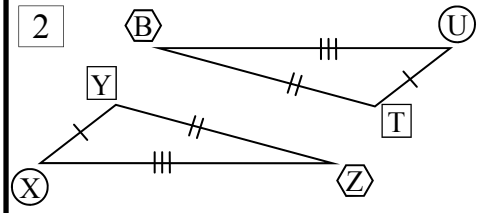
$\triangle ABC \equiv \triangle MTQ$

1



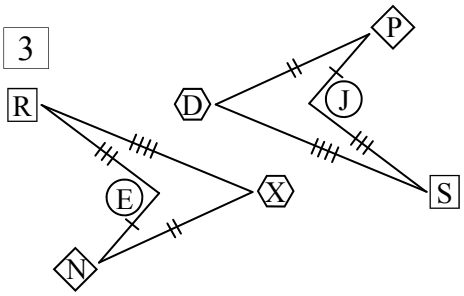
$\triangle FEN \equiv \triangle KTC$

2



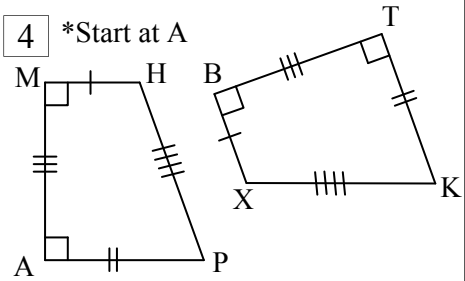
$\triangle XYZ \equiv \triangle UTB$

3



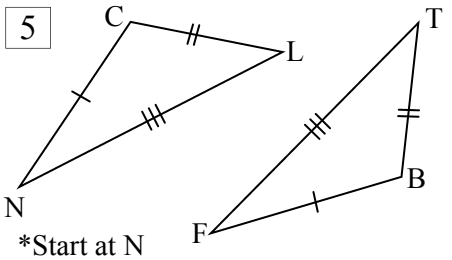
$ERXN \equiv JSDP$

4 *Start at A



$AMHP \equiv TBXK$

5

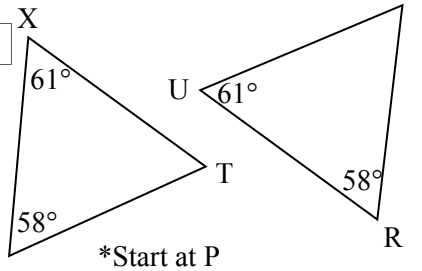


*Start at N

$\triangle CLN \equiv \triangle BTF$

State which angles and sides are equal & complete congruence statements for these congruent shapes.

6



*Start at P

$\angle P = \angle R$ $\angle X = \angle U$

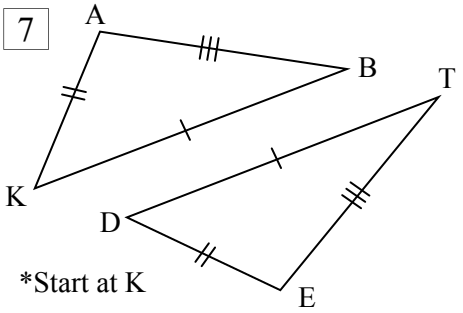
$\angle T = \angle E$ $XP = UR$

$PT = RE$ $XT = UE$

$\triangle PXT \equiv \triangle RUE$

Remember same starting point & order.

7



*Start at K

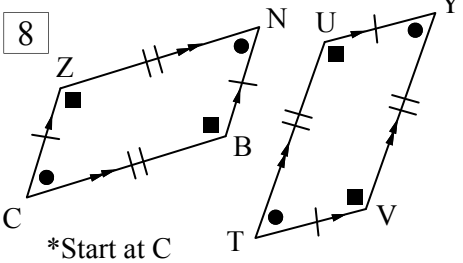
$\angle K = \angle D$ $\angle A = \angle E$

$\angle B = \angle T$ $AK = ED$

$AB = ET$ $TD = BK$

$\triangle ABK \equiv \triangle ETD$

8



*Start at C

$\angle C = \angle N = \angle T = \angle Y$

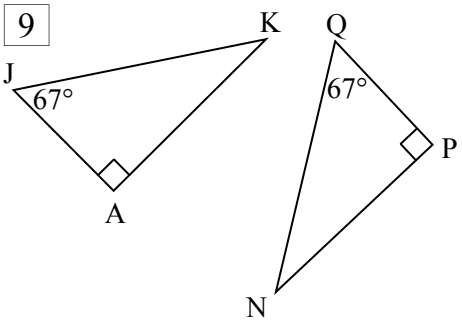
$\angle Z = \angle B = \angle U = \angle V$

$ZC = NB = YU = VT$

$ZN = CB = YV = UT$

$CZNB \equiv TUYV$

9



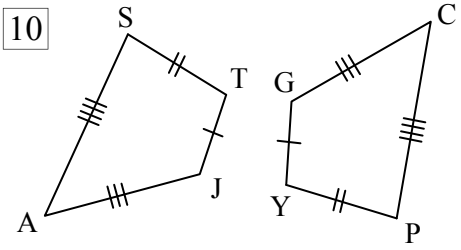
$\angle A = \angle P$ $\angle N = \angle K$

$\angle J = \angle Q$ $JA = QP$

$AK = QP$ $QN = JK$

$\triangle AJK \equiv \triangle PQN$

10



$\angle A = \angle C$ $\angle J = \angle G$

$\angle T = \angle Y$ $\angle S = \angle P$

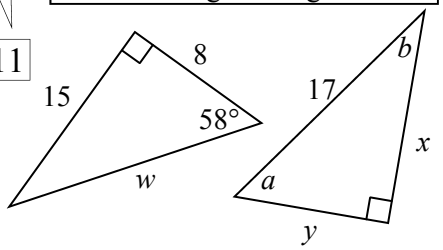
$AS = CP$ $ST = PY$

$TJ = YG$ $JA = GC$

$ASTJ \equiv CPYG$

Find the value of all unknowns, for these congruent figures.

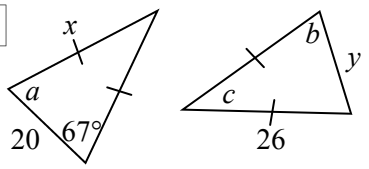
11



$a = 58°$ $b = 32°$ $w = 17$

$x = 15$ $y = 8$

12



$a = 67°$ $b = 67°$ $c = 46°$

$x = 26$ $y = 20$

Geometrical Properties - Similarity - Finding Sides

If shapes are similar then the sides of one shape can be found by multiplying (×) the sides of the other by a number, called the scale factor.

So given a matching side (in location on the shape) you can work out the scale factor. Then apply this to work out other sides. These sheets focus on triangles. Similar triangles have an important place in history, because they were used to estimate heights of objects that you couldn't physically measure, but due to similarity they could be. Similarity has been used to help construct some of the world's most amazing structures from ancient times.

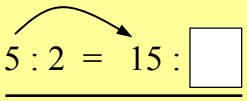
Column 1 starts with equivalent ratios. Sides are found using equivalent ratios, so this is a refresher on calculating them. Use multiplication to find the value of the box.

This method is then applied to triangles. Using ratios and the scale factor to find missing sides. If you can handle the equivalent ratios in the first column, you can handle similarity.

Example - Complete to find the equivalent ratio $3 : 7 = 15 : \square$

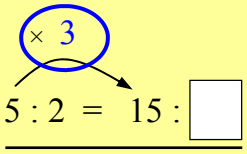
STEP 1

Match the ratios, so Position 1 in the first ratio matches Position 1 in the 2nd ratio.



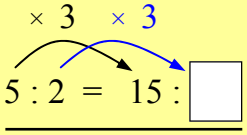
STEP 2

Ask your self "What do I multiply 5 by to get 15?" The answer is 3. Write '×3' above the arrow.



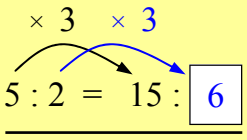
STEP 3

Draw another arrow matching the numbers in Position 2, and write the same '×3'.



STEP 4

Ask yourself "What is 2 times 3 (2 × 3)?" It is 6. Guess what …. you are done!



Geometrical Properties - Similarity - Finding Sides (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Let's start with a quick review of equivalent ratios. Find the value of the box in the ratios.

1 $5 : 2 = 30 : \square$ (×6 ×6)

2 $4 : 3 = 16 : \square$ (×4 ×4)

3 $2 : 3 = 22 : \square$ (×11 ×11)

Now find the scale factor (multiplier) yourself.

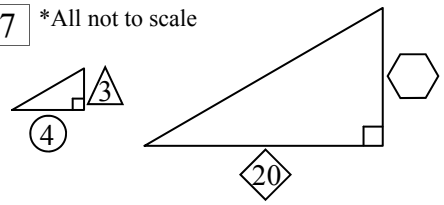
4 $5 : 2 = 15 : \square$ (× □ × □)

5 $1 : 6 = 7 : \square$ (× □ × □)

6 $5 : 12 = 10 : \square$ (× □ × □)

Build the ratios from these similar triangles*

7 *All not to scale



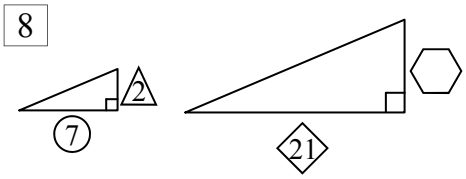
× □ × □

□ : △ = ◇ : ⬡

Base Height Base Height

Left △ Right △

8



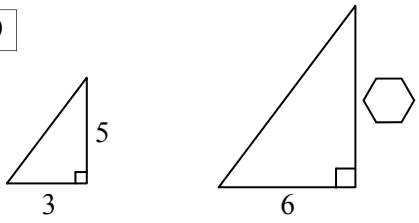
× □ × □

□ : △ = ◇ : ⬡

Base Height Base Height

Left △ Right △

9



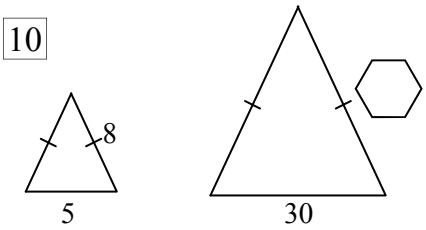
× □ × □

□ : □ = □ : ⬡

Base Height Base Height

Left △ Right △

10

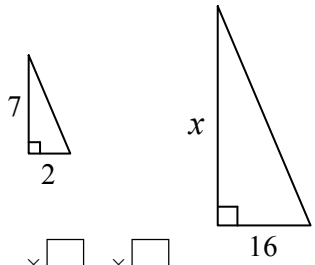


× □ × □

□ : □ = □ : ⬡

From now on the unknown side is 'x'

11

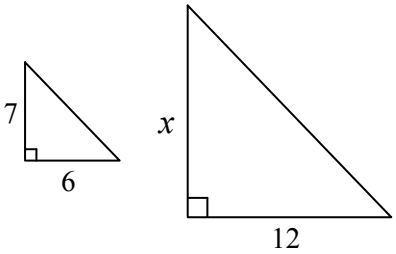


× □ × □

□ : □ = □ : x

$x = \square$

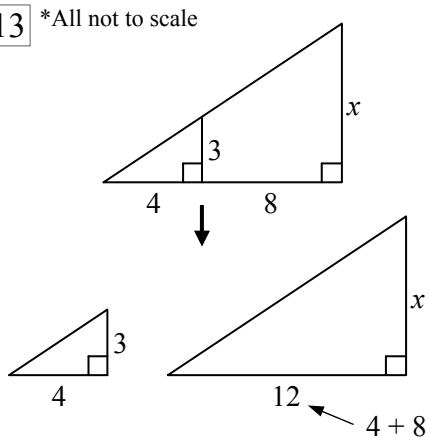
12



$x = \square$

Deconstruct these and solve like before. Change the diagram to two triangles. All are similar.

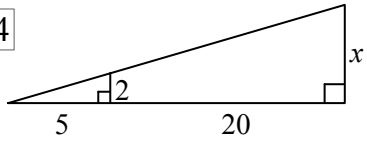
13 *All not to scale



□ : □ = □ : x

$x = \square$

14

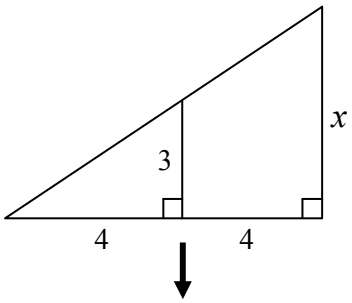


Redraw 2 triangles

□ : □ = □ : x

$x = \square$

15



Geometrical Properties - Similarity - Finding Sides (Sheet 2)

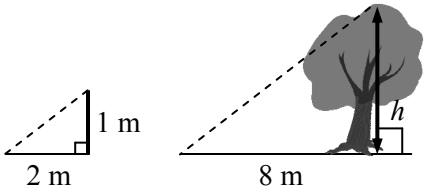
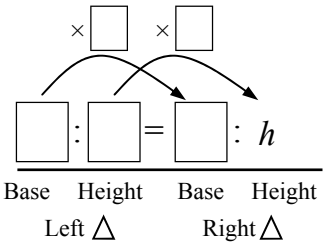
Find the height of these objects, by using similarity to calculate the unknown height.

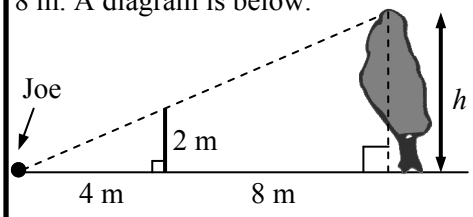
1 A 1 m high post casts a 2 m long shadow. How tall is a tree that casts an 8 m long shadow?



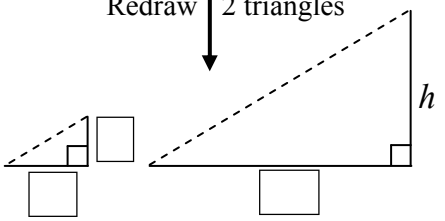


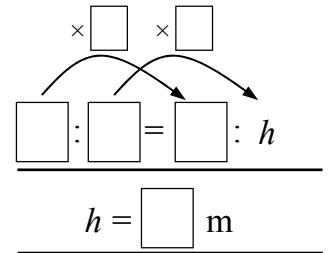
$h =$ ☐ m

2 Joe looks at the top of a tree and moves until a 2 m post's top is in line with the top of the tree. The post is 4 m away. He then measures the distance from the post to the tree, it is 8 m. A diagram is below.



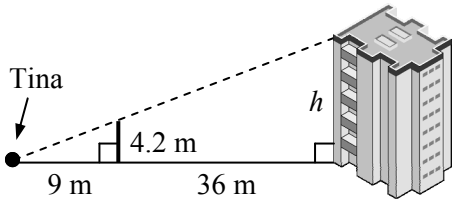
Redraw | 2 triangles





$h =$ ☐ m

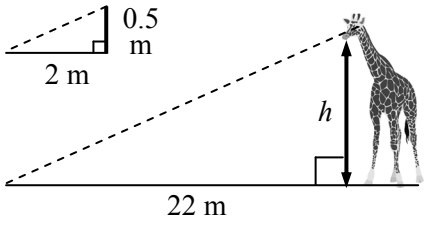
3 Tina looks at the top of a building and she moves until the top of a 4.2 m post is in line with the building's top. The post is 9 m away, the building is 36 m from the post. Diagram below.



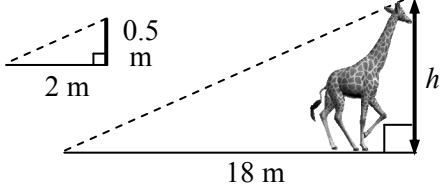
Redraw | 2 triangles

Find the height of the building.

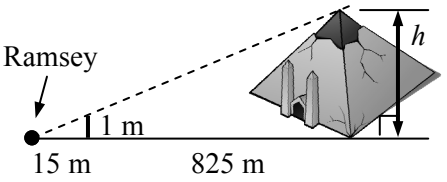
4 A 0.5 m high post casts a 2 m long shadow. How tall is 'Spotty' the giraffe who casts an 22 m shadow?



5 'Shorty' the giraffe is standing next to Spotty. He casts an 18 m long shadow. Calculate Shorty's height.



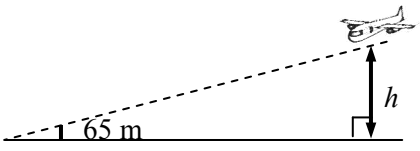
6 Ramsey is estimating the height of a pyramid using a 1 m vertical staff. The staff is 15 m away and its top is in the line of sight of the top of the pyramid, which is 825 m away.



Redraw | 2 triangles

Find the height of the pyramid.

6 Brie is looking at a plane coming in to land. The plane is 6 km away from the flight control tower. Brie has the top of the tower in the same line of sight as the plane. If the tower is 1.2 km away and is 65 m tall, how high is the plane?



Redraw | 2 triangles

Find the height of the plane.

Geometrical Properties - Similarity - Finding Sides (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Let's start with a quick review of equivalent ratios. Find the value of the box in the ratios.

1 $5 : 2 = 30 : \boxed{12}$ (×6, ×6)

2 $4 : 3 = 16 : \boxed{12}$ (×4, ×4)

3 $2 : 3 = 22 : \boxed{33}$ (×11, ×11)

Now find the scale factor (multiplier) yourself.

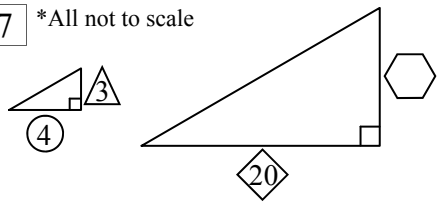
4 $5 : 2 = 15 : \boxed{6}$ (×3, ×3)

5 $1 : 6 = 7 : \boxed{42}$ (×7, ×7)

6 $5 : 12 = 10 : \boxed{24}$ (×2, ×2)

Build the ratios from these similar triangles*

7 *All not to scale

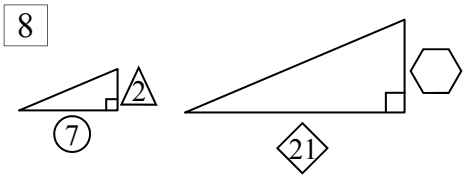


$4 : 3 = 20 : 15$ (×5, ×5)

Base Height Base Height

Left △ Right △

8

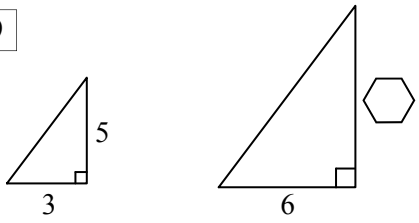


$7 : 2 = 21 : 6$ (×3, ×3)

Base Height Base Height

Left △ Right △

9

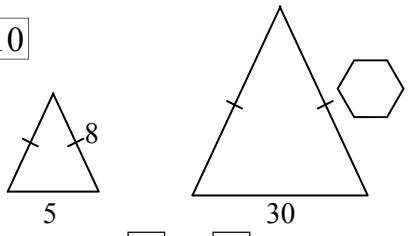


$3 : 5 = 6 : 10$ (×2, ×2)

Base Height Base Height

Left △ Right △

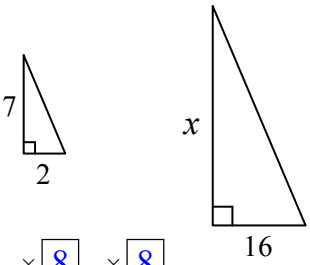
10



$5 : 8 = 30 : 48$ (×6, ×6)

From now on the unknown side is 'x'

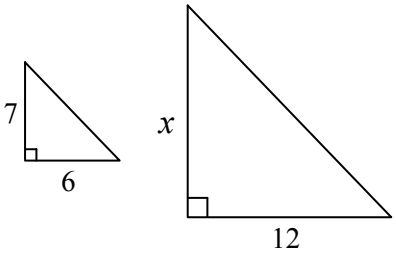
11



$2 : 7 = 16 : x$ (×8, ×8)

$x = 16$

12

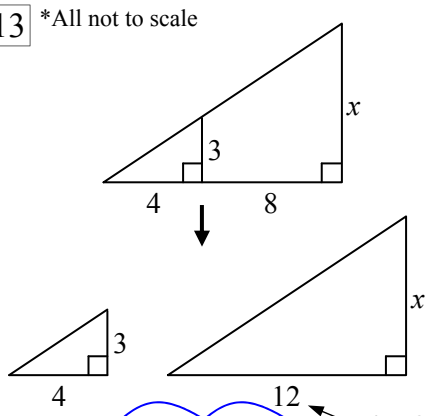


$6 : 7 = 12 : x$ (×2, ×2)

$x = 14$

Deconstruct these and solve like before. Change the diagram to two triangles. All are similar.

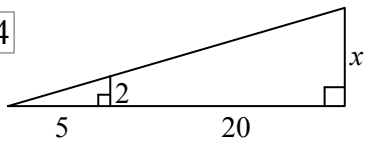
13 *All not to scale



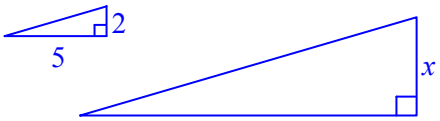
$4 : 3 = 12 : x$ (×3, ×3) 4 + 8

$x = 9$

14



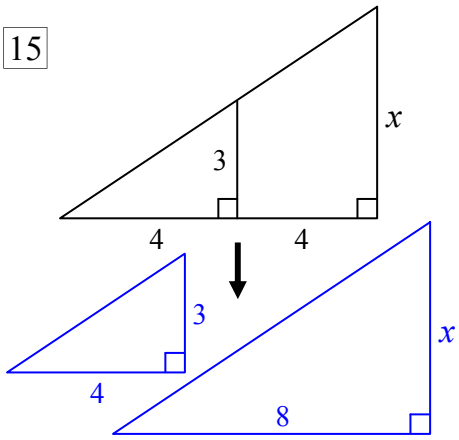
Redraw 2 triangles



$5 : 2 = 25 : x$ (×5, ×5)

$x = 10$

15



$4 : 3 = 8 : x$ (×2, ×2)

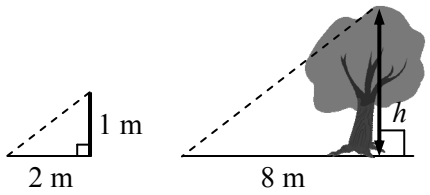
$x = 6$

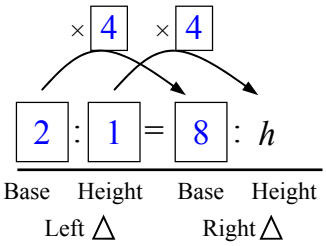
Geometrical Properties - Similarity - Finding Sides (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the height of these objects, by using similarity to calculate the unknown height.

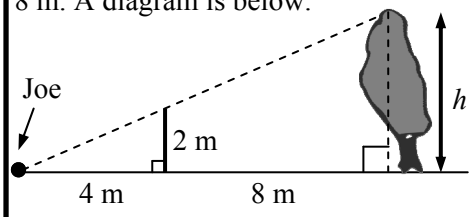
1 A 1 m high post casts a 2 m long shadow. How tall is a tree that casts an 8 m long shadow?



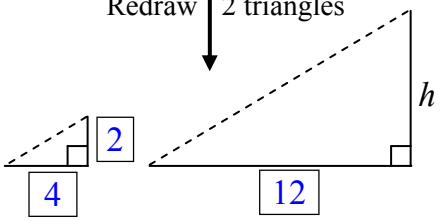


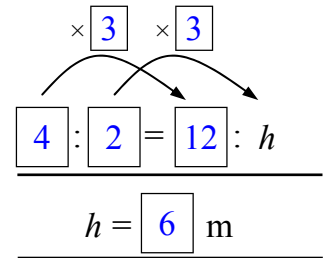
$h =$ 4 m

2 Joe looks at the top of a tree and moves until a 2 m post's top is in line with the top of the tree. The post is 4 m away. He then measures the distance from the post to the tree, it is 8 m. A diagram is below.



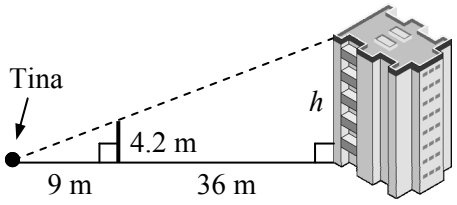
Redraw 2 triangles



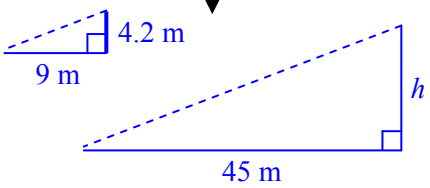


$h =$ 6 m

3 Tina looks at the top of a building and she moves until the top of a 4.2 m post is in line with the building's top. The post is 9 m away, the building is 36 m from the post. Diagram below.



Redraw 2 triangles



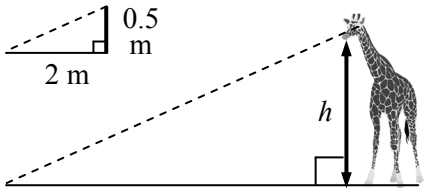
Find the height of the building.

× 5 × 5

9 : 4.2 = 45 : h

$h = 21$ m

4 A 0.5 m high post casts a 2 m long shadow. How tall is 'Spotty' the giraffe who casts an 22 m shadow?

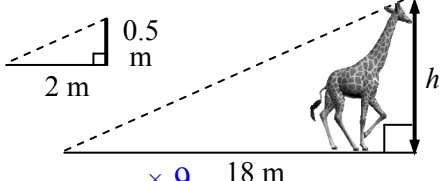


× 11

2 : 0.5 = 22 : h

$h = 5.5$ m

5 'Shorty' the giraffe is standing next to Spotty. He casts an 18 m long shadow. Calculate Shorty's height.

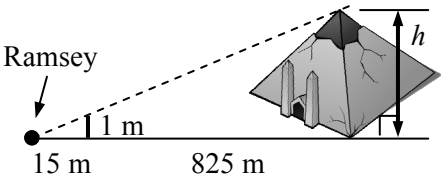


× 9

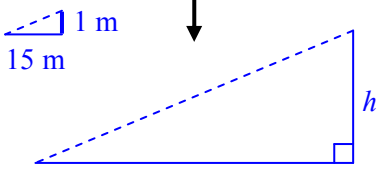
2 : 0.5 = 18 : h

$h = 4.5$ m

6 Ramsey is estimating the height of a pyramid using a 1 m vertical staff. The staff is 15 m away and its top is in the line of sight of the top of the pyramid, which is 825 m away.



Redraw 2 triangles



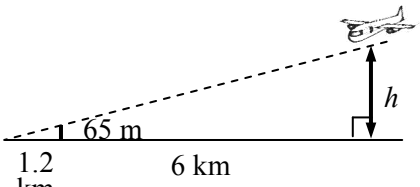
Find the height of the pyramid.

× 56

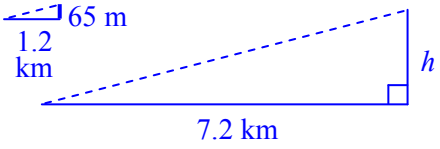
15 : 1 = 840 : h

$h = 56$ m

6 Brie is looking at a plane coming in to land. The plane is 6 km away from the flight control tower. Brie has the top of the tower in the same line of sight as the plane. If the tower is 1.2 km away and is 65 m tall, how high is the plane?



Redraw 2 triangles



Find the height of the plane.

× 6

1.2 : 65 = 7.2 : h

$h = 390$ m

Geometrical Properties - Scale Diagrams

Two common applications of scale diagrams is maps and construction drawings. Maps are perhaps less relevant with GPS now used, but many walkers have to know how to use a map and compass in the case technology fails them. Some prefer maps also.

When a building is designed it is shown in two dimensional views. It can be shown from the sides (elevation and end elevation) or from above, which is called the plan view. This sheet deals with a scale drawing diagram in plan view.

So the roof has been ripped off and you are like a giant bent over the room looking down. The kitchen shown on the worksheet contains a pantry cupboard, a sink (wet area), a cooking area and other cupboards. While you can't see how tall they are, you can measure them and find their length and width.

The scale of this diagram is 1 : 50. So every measurement you make has to be multiplied by 50. Once you do that, change the length from cm to m. All the lengths on the sheet are either exact cm lengths, or 0.5 cm lengths.

So measure the lengths, make the conversion using the scale and answer the questions. You should notice an easier way to convert than using your calculator all the time. Nothing that a giant couldn't manage, as long as they have a ruler of course.

With maps you use the same skill as above. The scale is in a different format, rather than being a ratio it tells you that 1cm = 4 km. So multiply all lengths by 4 (×4), and change the cm to km. Measure from the centre of the dots, record the length in cm, then make the conversion.

Geometrical Props - Scale Diagrams - Construction Plan Views (Sheet 1)

Scale 1 : 50

Measure lengths to the nearest whole or 0.5 cm.

Get out your ruler and measure lengths in cm, to the nearest 0.5 cm. Use the scale to find the actual lengths. Round answers to 2 d.p where required.

1 The length of the eastern wall (in m).

Length = 9 cm = 450 cm = 4.5 m
(× 50 → ; ÷ 100 →)

2 The length of the northern wall (in m).

Length = 15 cm = 750 cm = 7.5 m
(× 50 → ; ÷ 100 →)

3 The floor area (empty) of the room (m^2).

Q.1 × Q.2

$A = lb$

$= 7.5 \times 4.5$

$A = 33.75$ m^2

2 d.p.

4 The length, breadth and floor area of the pantry. ① on diagram.

Length = 1.75 m

Breadth = 0.75 m

$A = lb$

$= 1.75 \times 0.75$

$A = 1.31$ m^2

Round to 2 d.p., in m^2.

5 The length, breadth and floor area of the sink bench. ② on diagram.

Length = 3 m

Breadth = 1 m

$A = lb$

$= 3 \times 1$

$A = 3$ m^2

6 The length, breadth and floor area of the cook top. ③ on diagram.

Length = 2.5 m

Breadth = 1 m

$A = lb$

$= 2.5 \times 1$

$A = 2.5$ m^2

7 The length, breadth and floor area of the cupboards. ④ on diagram.

Length = 3 m

Breadth = 1 m

$A = lb$

$= 3 \times 1$

$A = 3$ m^2

8 Find the total covered floor area. = ① + ② + ③ + ④

Area = 1.31 + 3 + 2.5 + 3

Area = 9.81 m^2

9 Find the total exposed floor area. Q.3 - Q.8

Area = 33.75 - 9.81 = 23.94 m^2

10 Estimate the cost of tiling the exposed floor area when tiles cost \$35/m^2. Available in whole m^2 only.

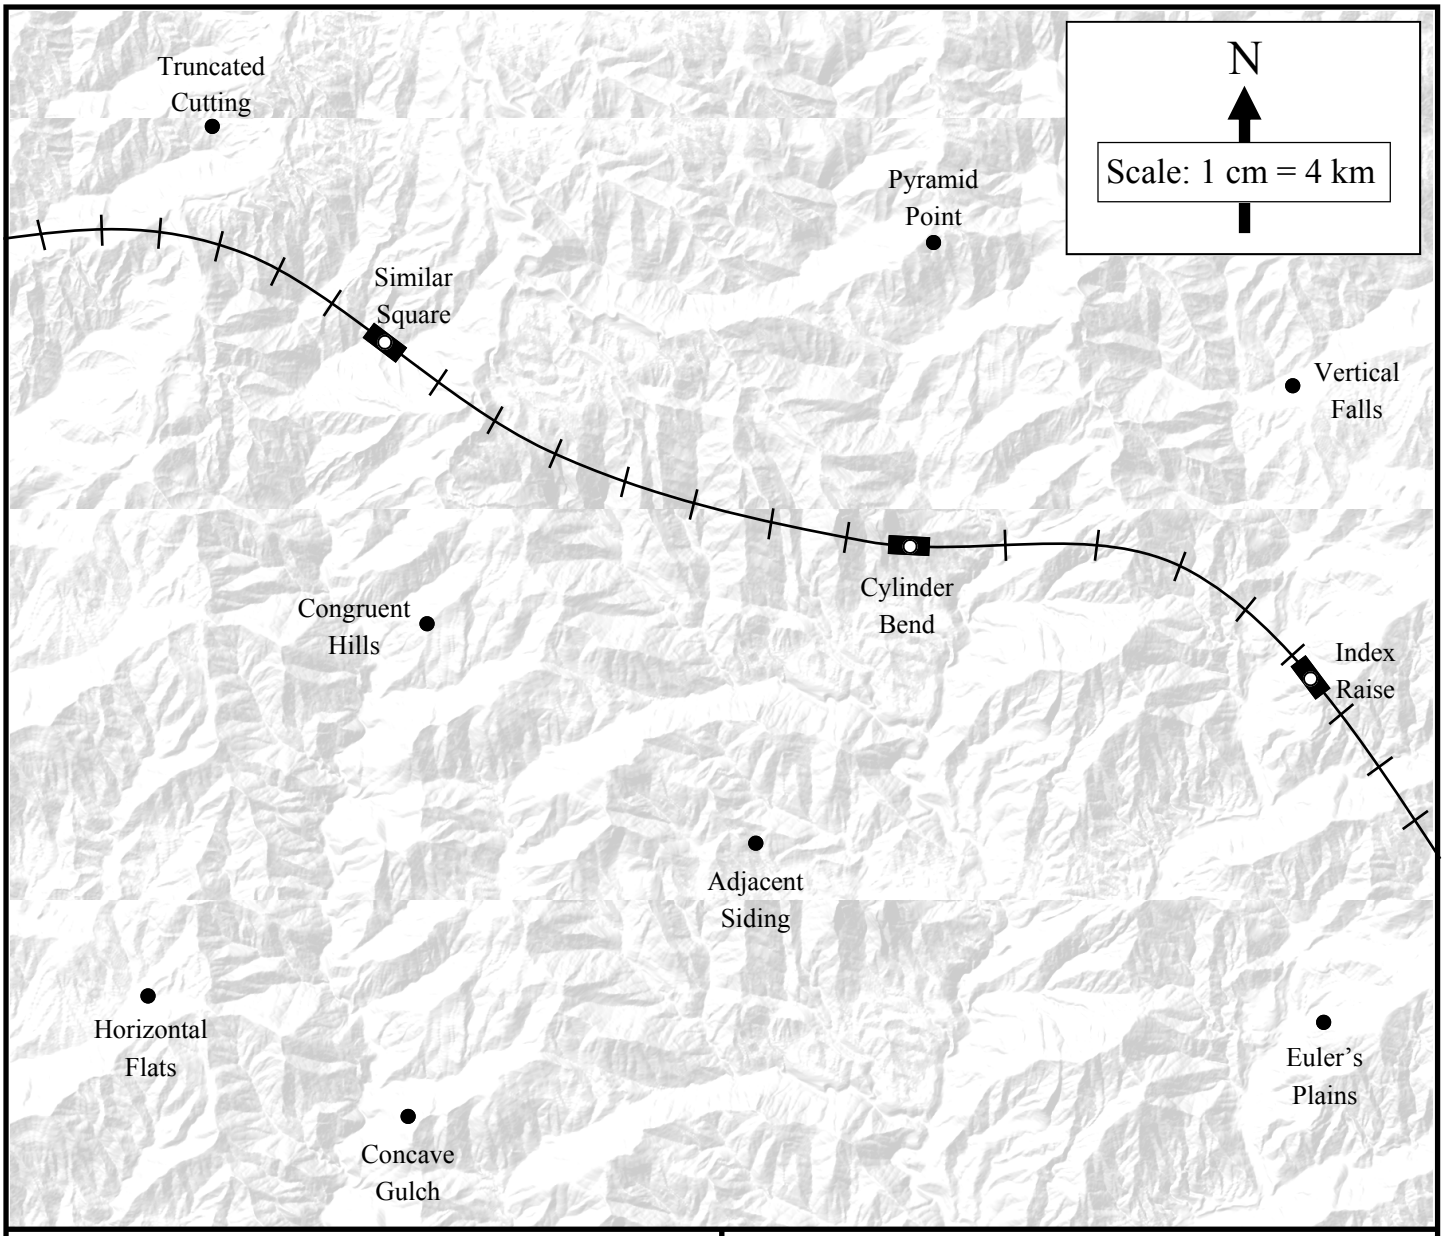
Exposed floor area rounded up to whole m^2 = 24 m^2

Cost = 24 × 35 = \$840

\$ sign

Geometrical Properties - Scale Diagrams - Using Maps (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4



Get out your ruler and measure lengths in cm, to the nearest 0.1 cm. Use the scale (top right) to find the actual distances. Round answers to 1 d.p if required.

1 Index Raise station to Euler's Plains.

Distance = 4.5 cm = 18 km

× 4

2 Similar Square station to Horizontal Flats.

Distance = 9.2 cm = 36.8 km

READ THE NEXT QUESTION CAREFULLY!

3 Pyramid Point to Index Raise, **via Vertical Falls**.

Distance = 5.1 cm + 3.9 cm = 9 cm = 36 km

4 Concave Gulch to Cylinder Bend, via Adjacent Siding.

Distance = 5.8 cm + 4.4 cm = 10.2 cm = 40.8 km

Hansel travels from Truncated Cutting to Adjacent Siding via Congruent Hills. While **Gretel** travels from Truncated Cutting to Adjacent Siding via Pyramid Point.

5 Calculate the distance Hansel travels

Distance = 7.1 + 5.2 = 12.3 cm = 49.2 km

6 Calculate the distance Gretel travels

Distance = 9.6 + 8.3 = 17.9 cm = 71.6 km

7 Who travels the furthest and by how much?

Gretel. Difference = 71.6 - 49.2 = 22.4 km

Which station is the closest to **Adjacent Siding** and by how much? Similar Square Station or Index Raise Station?

8 Similar Square: Distance = 8.2 cm = 32.8 km

Index Raise: Distance = 7.6 cm = 30.4 km

Difference = 32.8 - 30.4 = 2.4 km

Geometrical Properties - Further Scale Drawing

Scale drawings allow us to use images to measure distances. By multiplying by the scale any length on a scale diagram can be used to determine the actual length.

The first worksheet asks you to enlarge triangles and rectangles using a scale. The rule with using a scale is that you multiply by the second number and divide by the first.

Example

If a drawing of an image is 55 mm long what is the actual length, given a scale factor of 5 : 4.

$$55 \times \frac{4}{5} = 44 \text{ mm}$$

Once you convert lengths, draw the shapes on the grids provided. Use dashes on the vertice's letters to indicate it is an image. For example A becomes A′. (An image is the drawing after the scale factor has been applied).

The second worksheet features diagrams and images of animals/insects in nature and man-made objects, as well as the scale ratio applied to the image. How do you find the actual length? Measure the length in mm, then multiply by the second number in the ratio, then divide by the first number.

Write the measured length in the table at the base of the column, using mm. Apply the scale and write the actual length in the RHS of the table. Again use mm, but if the column asks you to convert this to cm or m, then divide by 10 or 1 000, and rewrite in the units requested.

Column 2 involves travel between two wharves. One person drives on land, the other uses a ferry. Use the scale to measure the distance between the two points requested in km. Then using the speed of the ferry complete a timetable for its operation.

Further down Column 2 is a map with roads connecting towns. Measure the straight line distances between the points, then apply the scale. You should notice a quick way to apply the scale rather than multiplying and dividing by the large numbers. The lengths aren't exact in mm, sometimes they are slightly out, so answers will vary by small amounts. Write the distances in the boxes.

Geometrical Properties - Further Scale Drawing (Sheet 1)

4.4 cm

Apply the scale factor to calculate the actual lengths in cm for these. Round to 1 d.p.

5 Fish, Scale 2 : 5 $4.2 \times \frac{5}{2} = 10.5$ cm

6 TV, Scale 1 : 24 $3.5 \times \frac{24}{1} = 84$ cm

7 Phone, Scale 4 : 9

$4.4 \times \frac{9}{4} = 9.9$ cm

Geometrical Properties - Find A Word

Look for words in the list at the bottom of the grid. Once you find a word cross it off the list.

A letter could be used more than once so don’t colour it in too dark (using a texta for example) so that you can still read it.

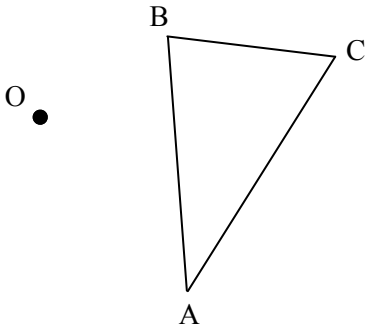
Geometrical Properties Review

This is the review of the Geometrical Properties Topic.

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Enlarge triangle ABC by a scale factor of 2, using the centre of enlargement labeled 'O'.

1



The car below is drawn to a scale of 1 : 35. Measure the length of the wheelbase on the image then use the scale factor to give the actual car's wheelbase length.

2

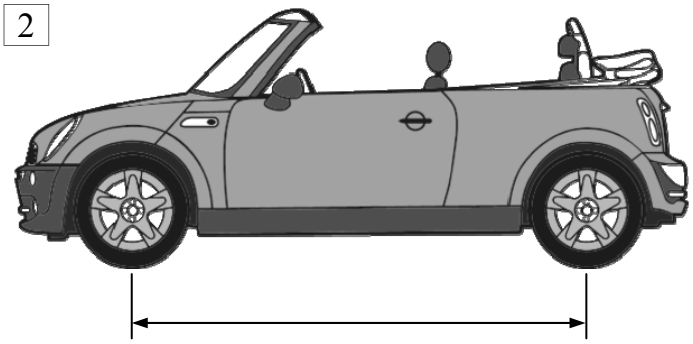


Image length (cm): ____

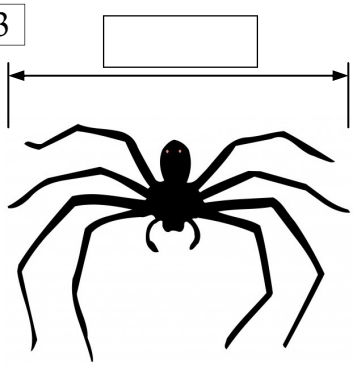
Actual length (cm): ____

The spider below is drawn to a scale of 3 : 2. Use the scale to calculate the width (cm) of this spider in real life.

3

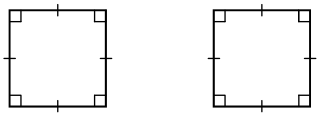


Actual length (cm): _____

_____

Is the first square below similar, congruent or neither when compared to the second square? Give a reason.

4



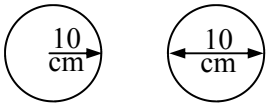
○similar
○congruent
○neither

Reason: _____

_____

Is the first circle below similar, congruent or neither when compared to the second circle? Give a reason.

5 Not to scale



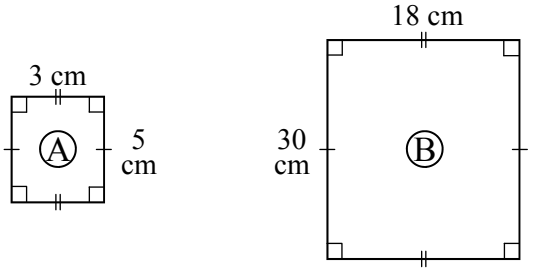
○similar
○congruent
○neither

Reason: _____

_____

Calculate the scale factor used to get Rectangle B from Rectangle A.

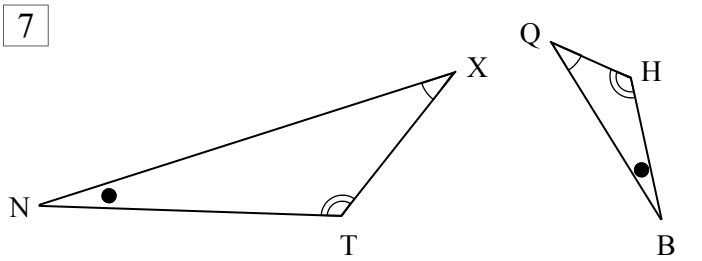
6



Scale factor: _____

The two triangles below are similar. Write a similarity statement for the two triangles.

7



_____

List 3 pairs of matching (similar) sides for the triangles.

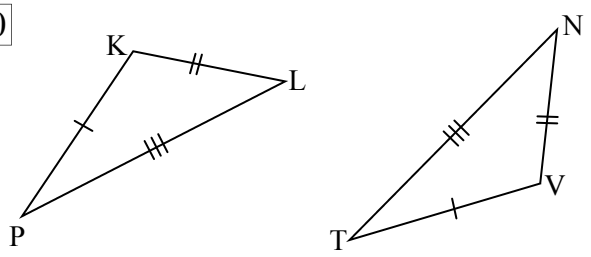
8

____ & ____, ____ & ____, ____ & ____.

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The triangles below are congruent. Write a congruence statement for the two triangles.

10



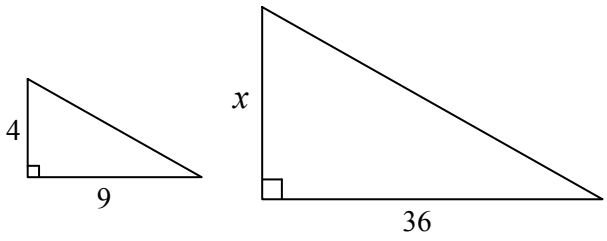
Complete the equivalent ratios below.

11 $5 : 6 = 30 : \square$

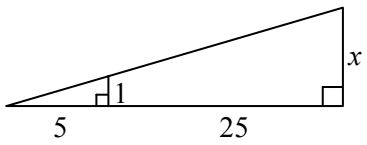
12 $10 : 4 = 20 : \square$

Find the unknown length on the triangles. (Not to scale). The two triangles are similar.

13



14



A plan view of Lucy's room is shown below. The scale is 1 : 30. Find the actual lengths of these objects in cm.

15 Desk width (w) _____

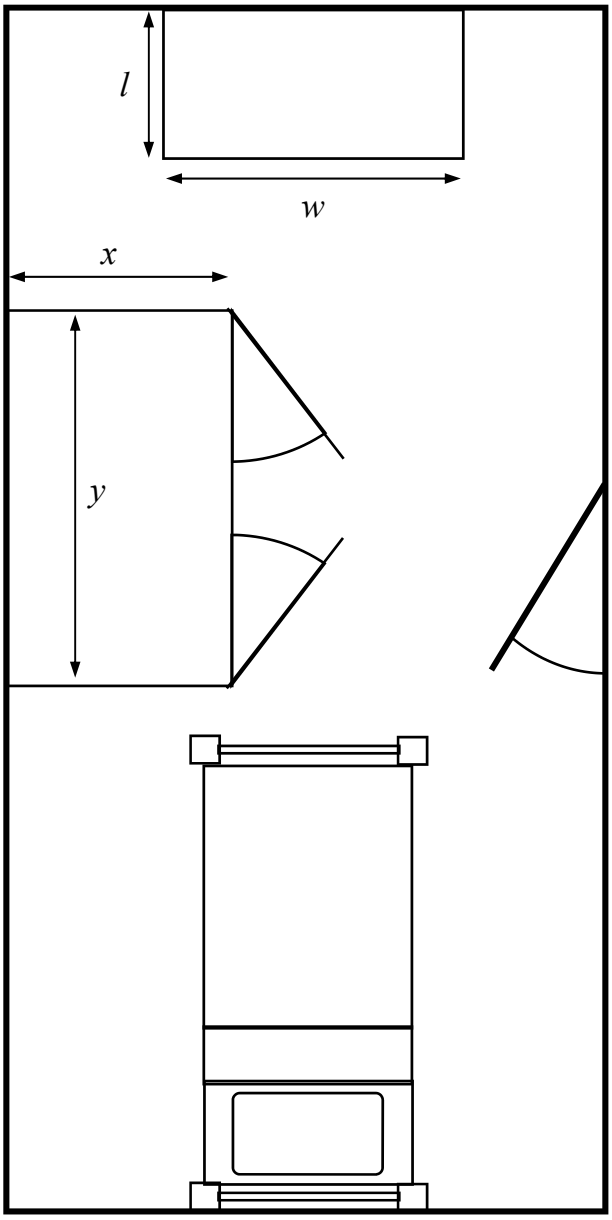
Actual object width, not diagram width

16 Desk depth (l) _____

17 Wardrobe depth (x) _____

18 Wardrobe width (y) _____

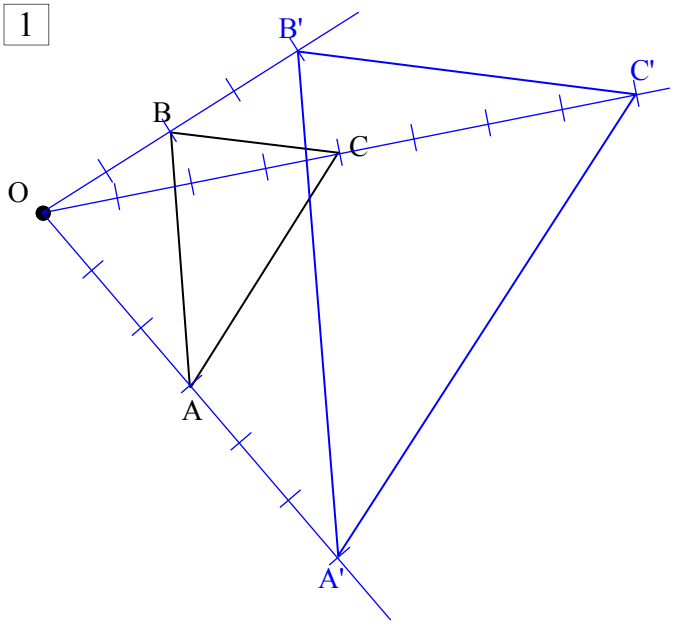
Scale 1 : 30



© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Enlarge triangle ABC by a scale factor of 2, using the centre of enlargement labeled 'O'.

1



The car below is drawn to a scale of 1 : 35. Measure the length of the wheelbase on the image then use the scale factor to give the actual car's wheelbase length.

2

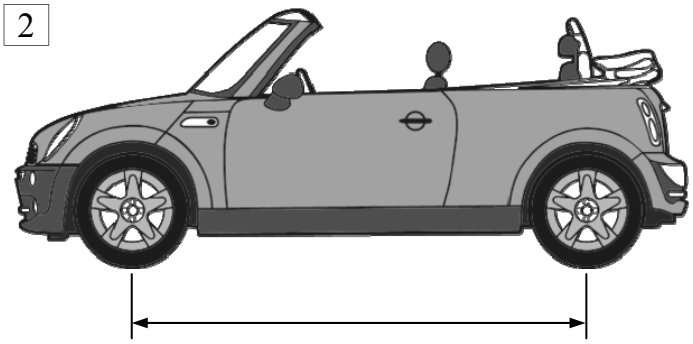


Image length (cm): 6 cm

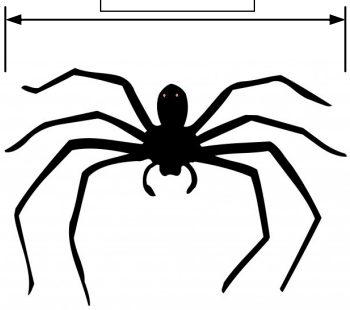
Actual length (cm): 210 cm

The spider below is drawn to a scale of 3 : 2. Use the scale to calculate the width (cm) of this spider in real life.

3



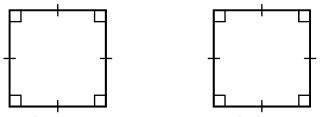
Actual length (cm):

Length = $4.5 \times \frac{2}{3}$

Length = 3 cm

Is the first square below similar, congruent or neither when compared to the second square? Give a reason.

4



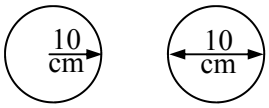
○similar
●congruent
○neither

Reason: Same side lengths and internal angles.

Is the first circle below similar, congruent or neither when compared to the second circle? Give a reason.

5

Not to scale



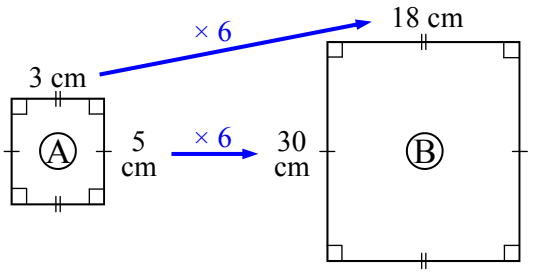
●similar
○congruent
○neither

Reason: Circles are either congruent or similar.

One has radius of 5 cm, the other 10 cm. Similar.

Calculate the scale factor used to get Rectangle B from Rectangle A.

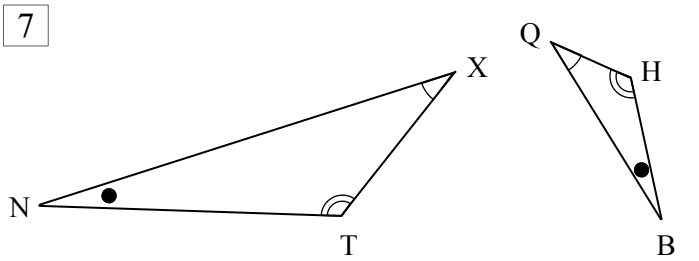
6



Scale factor: 6 (scale of 1 : 6)

The two triangles below are similar. Write a similarity statement for the two triangles.

7



△ NXT ||| △ BQH

List 3 pairs of matching (similar) sides for the triangles.

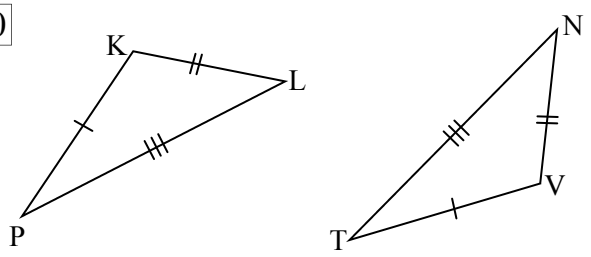
8

NX & BQ, XT & QH, TN & HB.

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The triangles below are congruent. Write a congruence statement for the two triangles.

10



△PKL ≡ △TVN

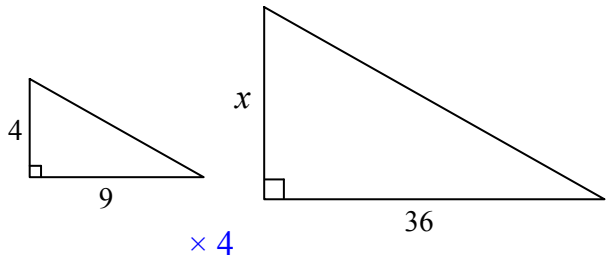
Complete the equivalent ratios below.

11 5 : 6 = 30 : 36

12 10 : 4 = 20 : 8

Find the unknown length on the triangles. (Not to scale). The two triangles are similar.

13

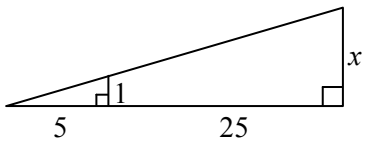


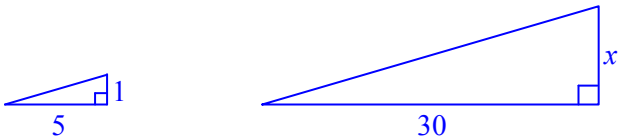
× 4 →

9 : 4 = 36 : x

x = 16

14





× 6 →

5 : 1 = 30 : x

x = 6

A plan view of Lucy's room is shown below. The scale is 1 : 30. Find the actual lengths of these objects in cm.

15 Desk width (w) 2 cm = 60 cm

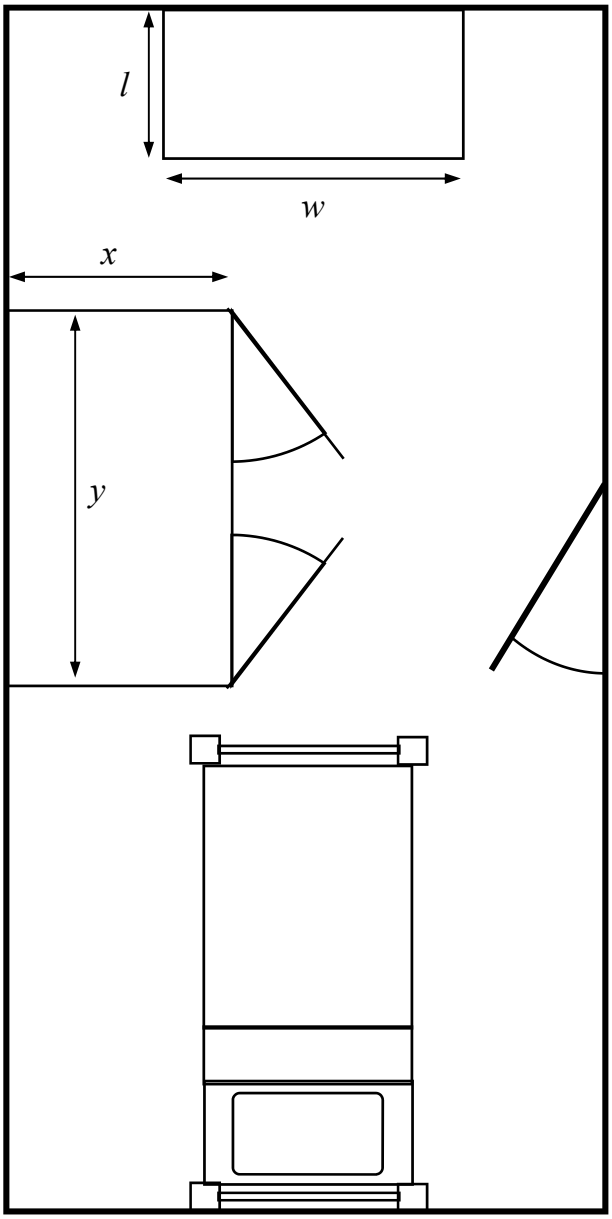
Actual object width, not diagram width

16 Desk depth (l) 4 cm = 120 cm

17 Wardrobe depth (x) 3 cm = 90 cm

18 Wardrobe width (y) 5 cm = 150 cm

Scale 1 : 30

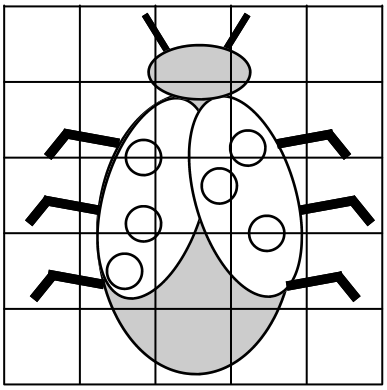


Geometrical Properties

© Freefall Mathematics - School Use Only

Geometrical Properties - Enlargements - Drawing Exercise (Sheet 1)

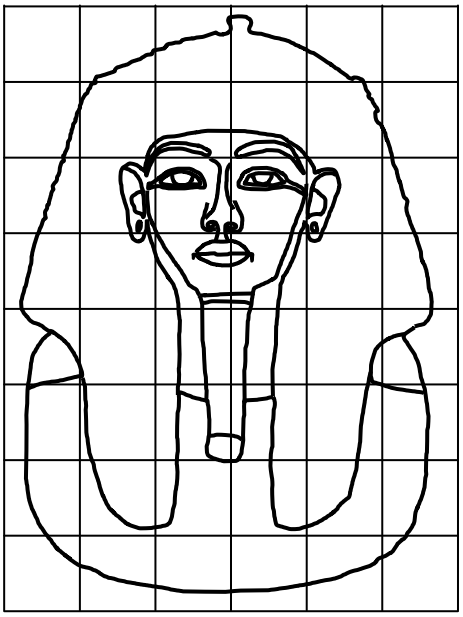
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4



Reproduce the Ladybird beetle in the space below. Once you are done colour the wings red and the body and spots black.

Geometrical Properties - Enlargements - Drawing Exercise (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

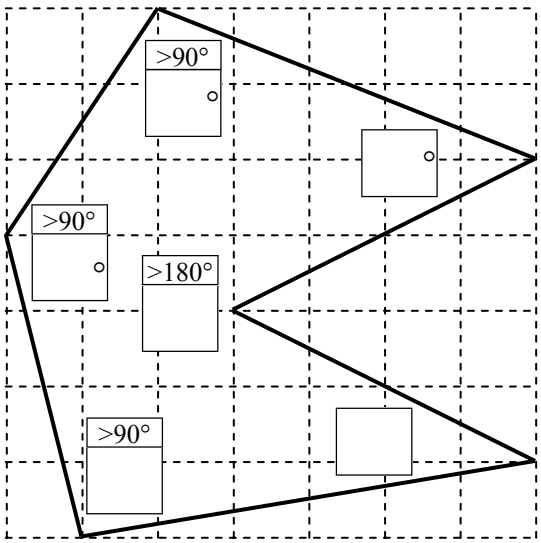


Reproduce the Death Mask of King Tutankhamun in the space below. Once you are done perform an image search on the web to colour it in correctly.

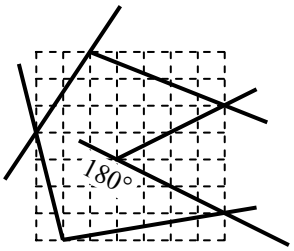
Geometrical Properties - Angles & Similarity - Practical (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

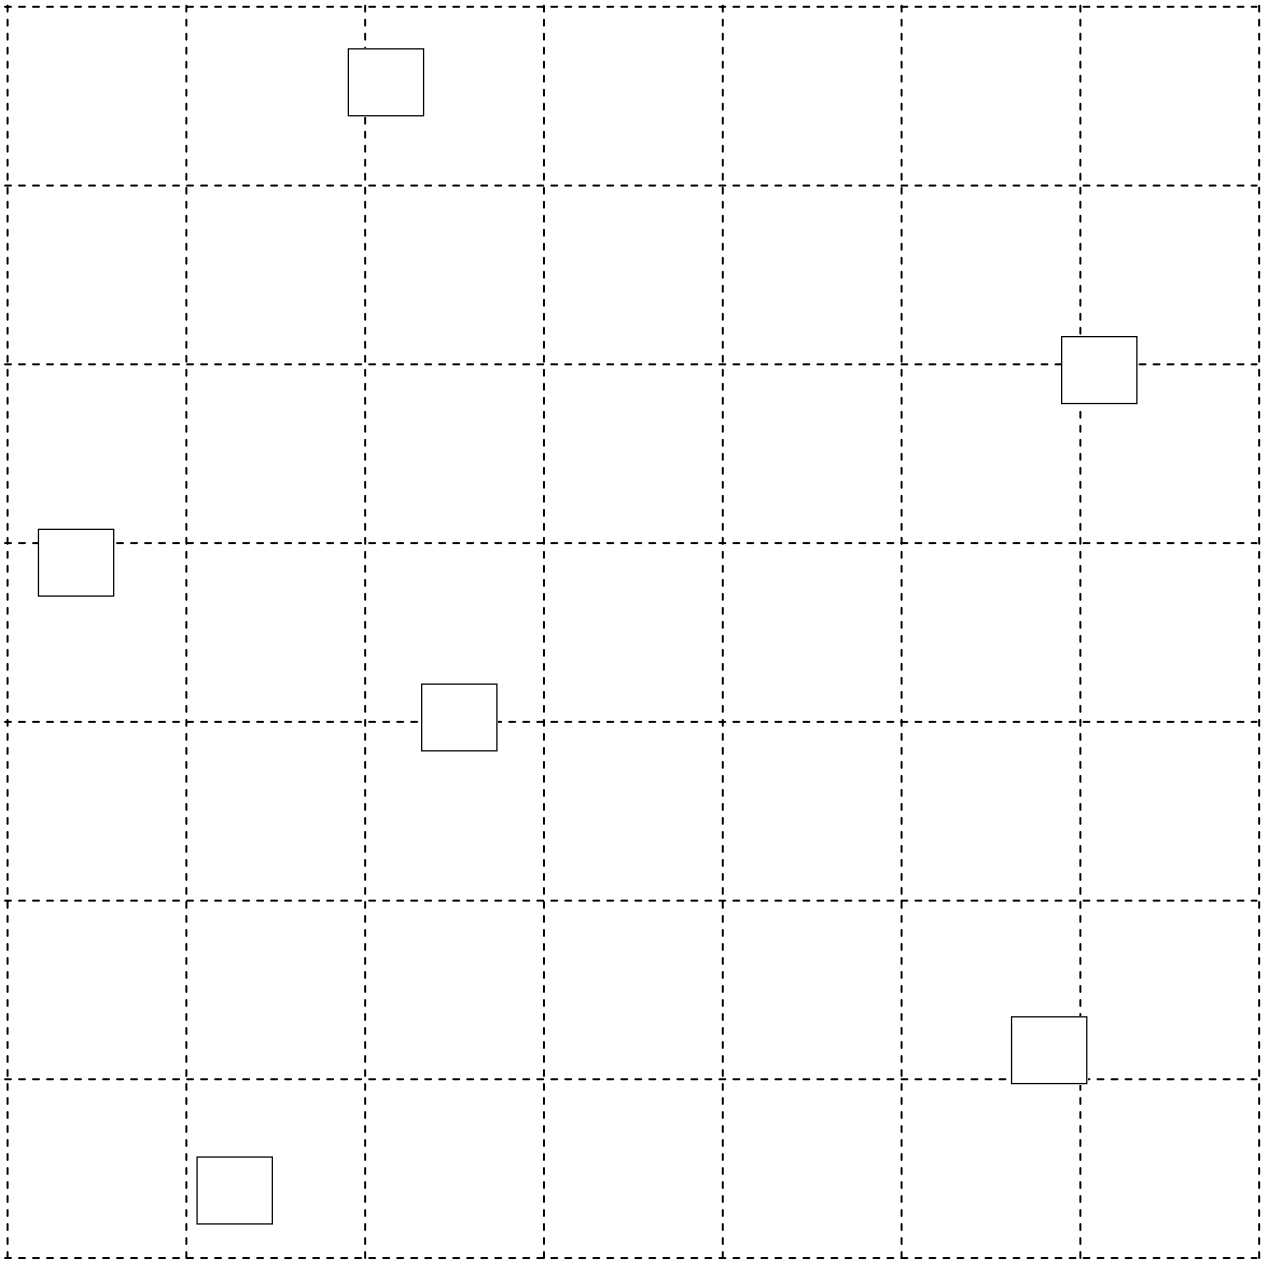
Use a protractor to measure internal angles in the polygon. Write all the angles in the boxes. You can extend lines to use your protractor. Then enlarge this polygon to create a similar figure using the grid. Measure the angles in the similar figure. Do they match?



Extend lines to allow protractor use.



Steps:
- Measure angles in smaller figure
- Construct enlarged (similar) polygon
- Measure angles in enlargement.



Geometrical Properties - Angles & Similarity - Practical (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

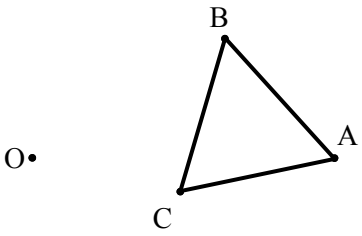
Enlarge the shapes shown using 'O' as the centre of enlargement. Label the similar figure as A'B'C', and so on. Measure the internal angles to confirm that internal angles are the same in similar figures.

1 Enlarge Triangle ABC by a scale factor of 3.

$\angle BAC = \angle B'A'C' =$ ☐°

$\angle ACB = \angle A'C'B' =$ ☐

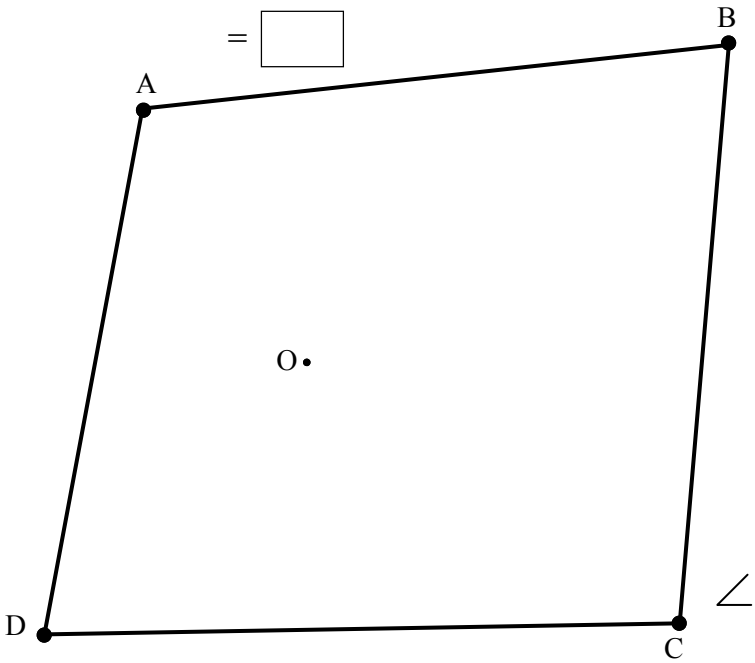
$\angle CBA = \angle C'B'A' =$ ☐



2 Enlarge Quadrilateral ABCD by a scale factor of 2.

$\angle DAB = \angle D'A'B' =$ ☐

$\angle ABC = \angle A'B'C' =$ ☐



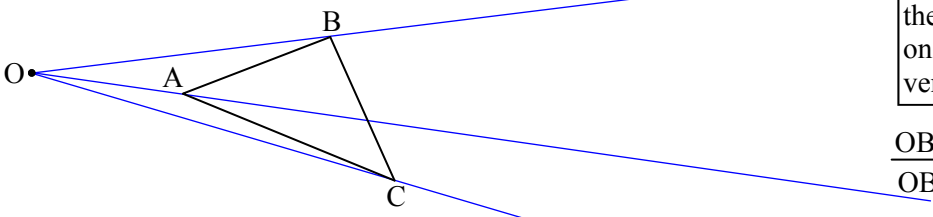
$\angle BCD = \angle B'C'D' =$ ☐

$\angle CDA = \angle C'D'A' =$ ☐

Geometrical Properties - Further Enlargements (Ratios)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

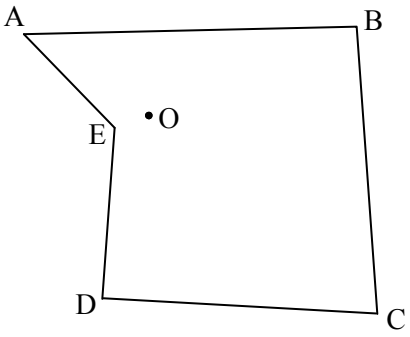
1 Enlarge Triangle ABC by a scale factor of 2.



Enlarge the shapes shown using 'O' as the centre of enlargement. Label the enlarged shape as A'B'C', and so on. Then complete the ratios to verify scale factor properties.

$\frac{OB'}{OB} = \frac{\square}{\square} = \square$ $\frac{A'B'}{AB} = \frac{\square}{\square} = \square$

2 Enlarge Pentagon ABCDE by a scale factor of 3.

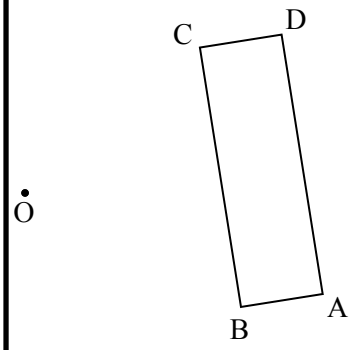


$\frac{OA'}{OA} = \frac{\square}{\square} = \square$

$\frac{B'C'}{BC} = \frac{\square}{\square} = \square$

$\frac{C'D'}{CD} = \frac{\square}{\square} = \square$

3 Enlarge Rectangle ABCD by a scale factor of 2.5.



$\frac{OD'}{OD} = \frac{\square}{\square} = \square$

$\frac{A'D'}{AD} = \frac{\square}{\square} = \square$

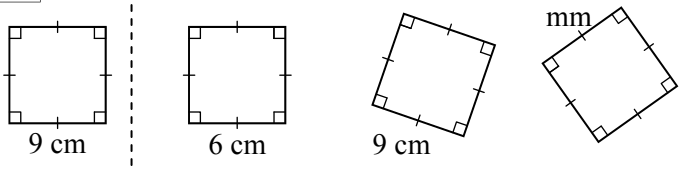
$\frac{B'D'}{BD} = \frac{\square}{\square} = \square$

Geometrical Properties - Similarity and Congruence (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

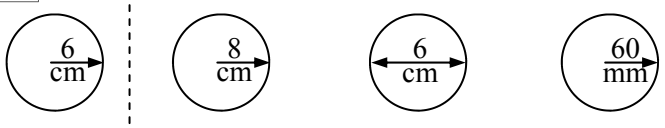
All squares, circles and equilateral triangles are either similar or congruent. Decide if these are congruent or similar to the original shape.

1



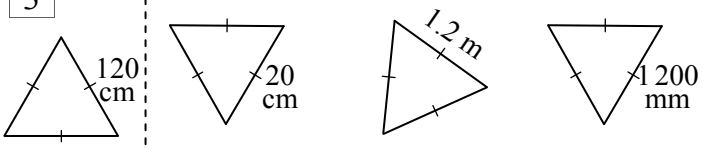
○ similar ○ congruent | ○ similar ○ congruent | ○ similar ○ congruent

2



○ similar ○ congruent | ○ similar ○ congruent | ○ similar ○ congruent

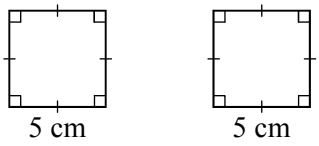
3



○ similar ○ congruent | ○ similar ○ congruent | ○ similar ○ congruent

State why these are similar or congruent. Use:
Congruent - all sides & angles are the same, or
Similarity - all sides enlarged by same scale factor.

4

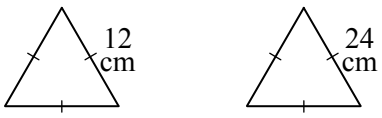


○ similar
○ congruent

Reason: _____

_____

5

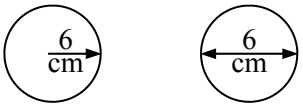


○ similar
○ congruent

Reason: _____

_____

6



Use the word 'radius' not 'side'

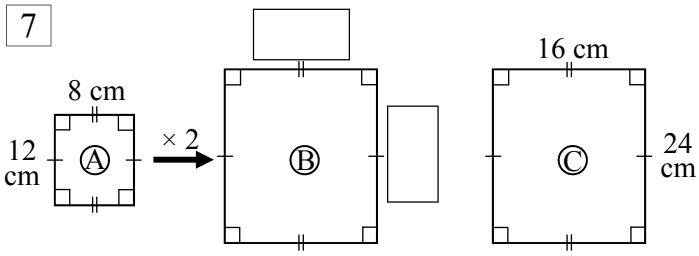
○ similar
○ congruent

Reason: _____

_____

Enlarge the first shape 'A' given a scale factor. If the enlarged shape 'B' is congruent with the third shape 'C', then you have similarity between A & C.

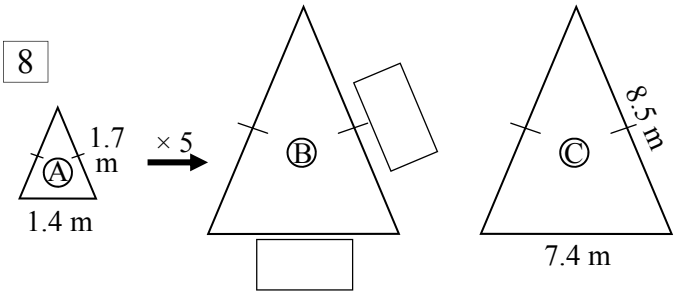
7



Because rectangle B ○is ○isn't congruent to rectangle C,

rectangle A ○is ○isn't similar to rectangle C.

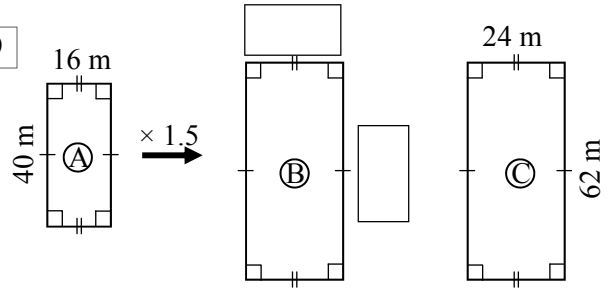
8



Because triangle B ○is ○isn't congruent to triangle C,

triangle A ○is ○isn't similar to triangle C.

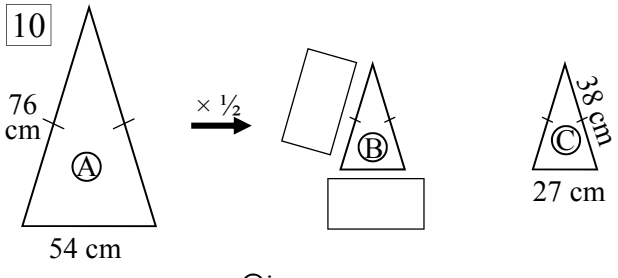
9



Because rectangle B ○is ○isn't congruent to rectangle C,

rectangle A ○is ○isn't similar to rectangle C.

10



Because triangle B ○is ○isn't congruent to triangle C,

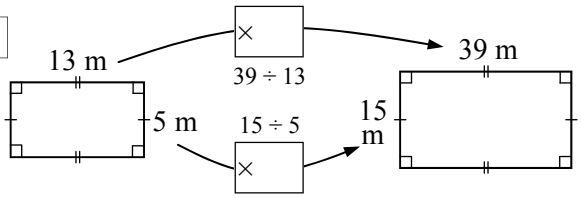
triangle A ○is ○isn't similar to triangle C.

Geometrical Prop - Similarity and Congruence - Scale Factors (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

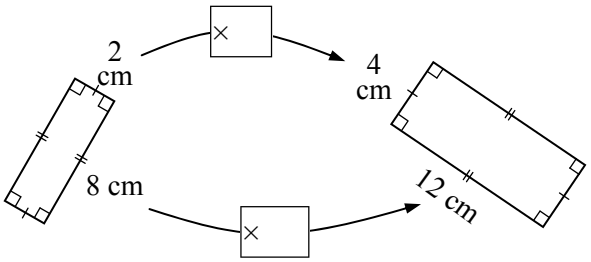
With rectangles, if the scale factor for both sides is the same, you have similarity. Test these rectangles for similarity.

1



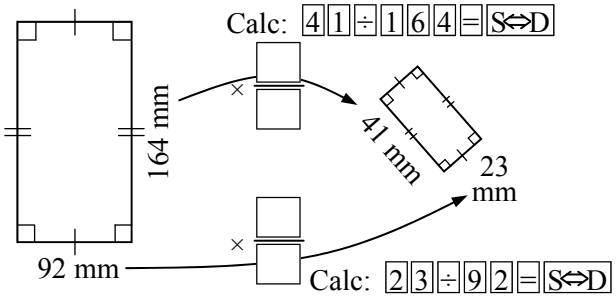
○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

2



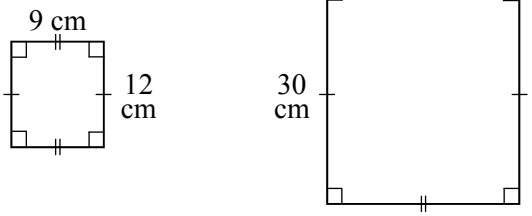
○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

3



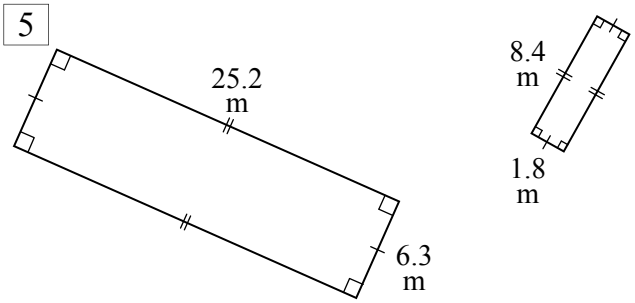
○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

4



○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

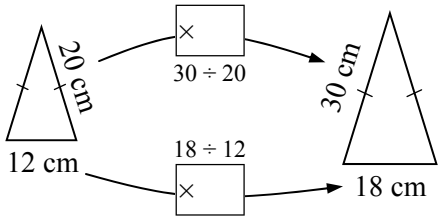
5



○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

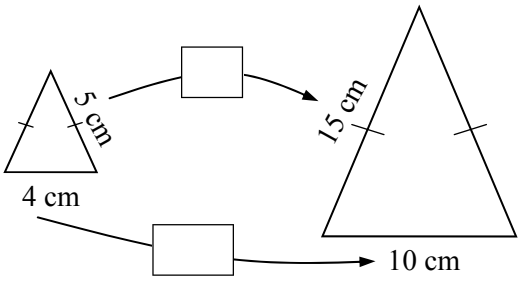
Like rectangles, triangles can be tested for similarity using the scale factor. Test these triangles for similarity.

6



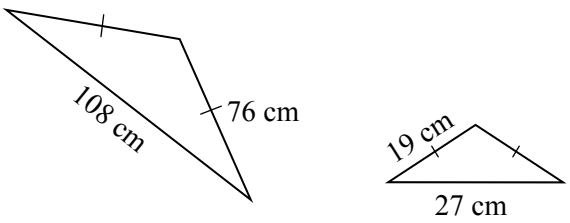
○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

7



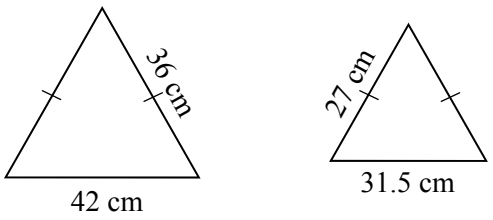
○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

8



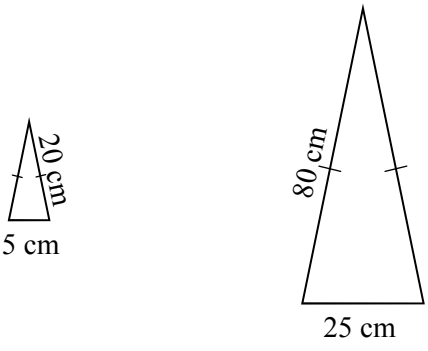
○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

9



○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

10

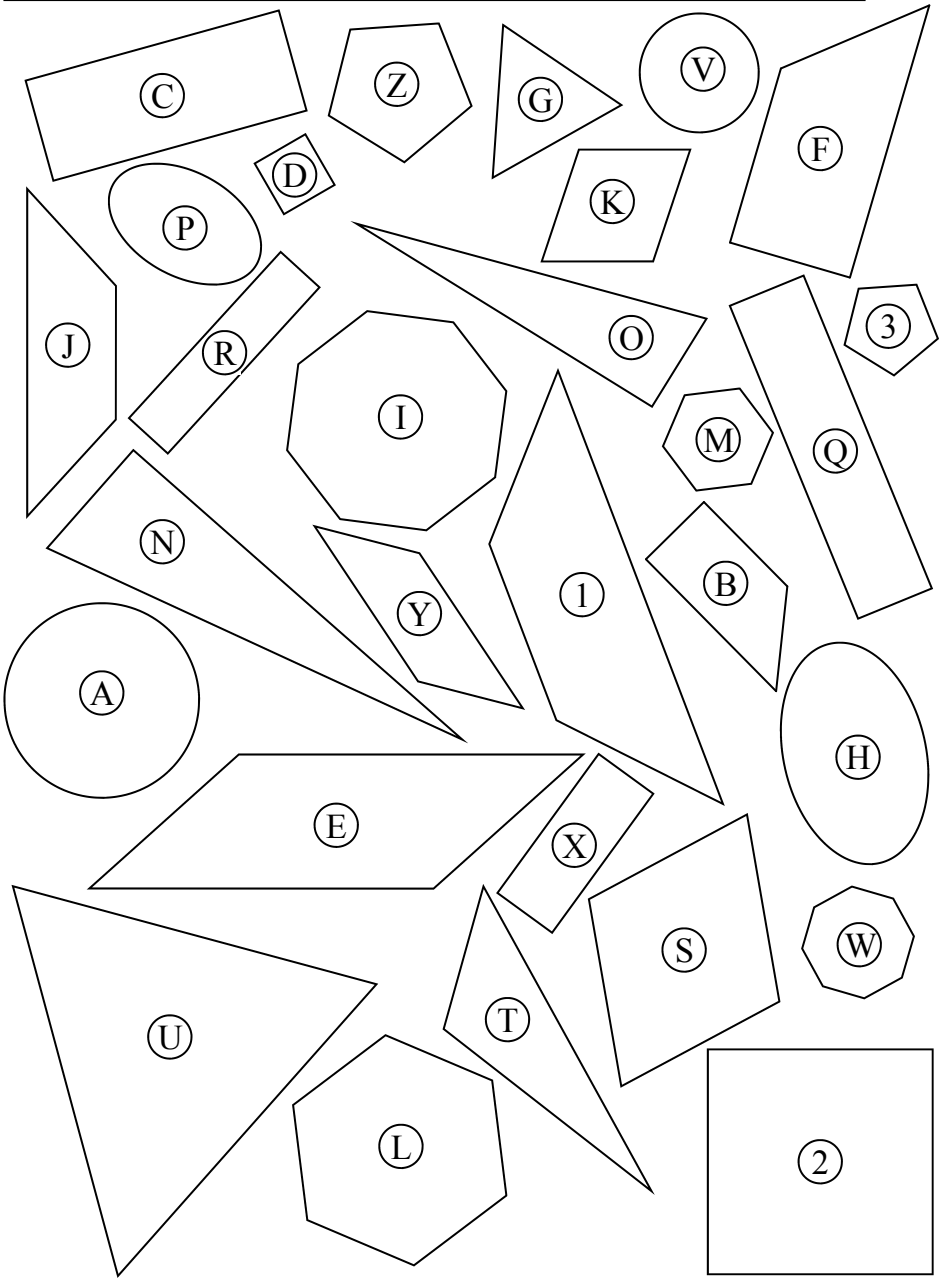


○ Similar ○ Not similar because the scale factor ○ is uniform ○ is inconsistent

Geometrical Props - Similar Figures & Similarity Statements (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Similar figures have matching internal angles but have a scale factor applied to their side lengths. In other words, one is an enlargement of the other. Find all the similar pairs below, there is one non-paired shape.



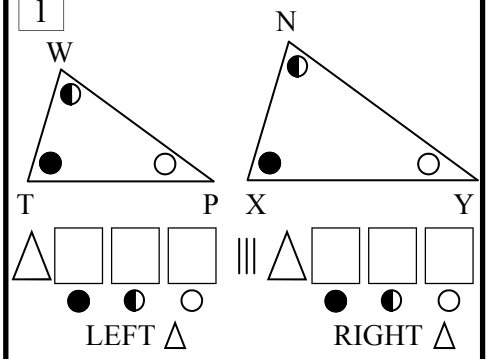
Write your matches below, once you are finished colour the similar shapes the same colour.

☐ & ☐	☐ & ☐	☐ & ☐	☐ & ☐
☐ & ☐	☐ & ☐	☐ & ☐	☐ & ☐
☐ & ☐	☐ & ☐	☐ & ☐	☐ & ☐
	☐ & ☐	☐ & ☐	

There is one unmatched shape, it is: ☐

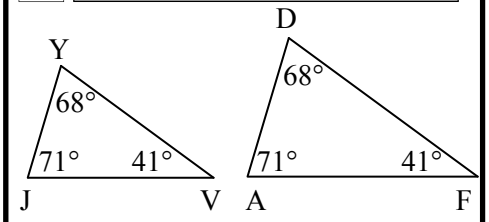
These triangles are similar. To state that, you have to start at matching vertices and go around the same direction.

1



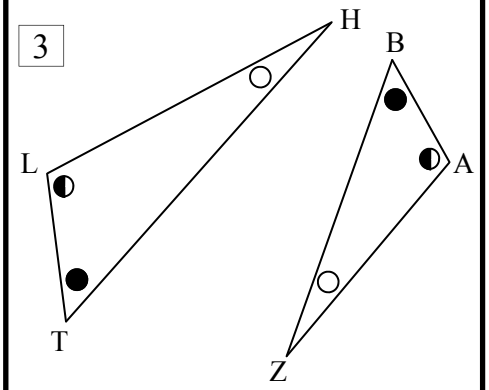
△ ☐ ☐ ☐ LEFT △ | ||| △ ☐ ☐ ☐ RIGHT △

2 Now use the matching angles



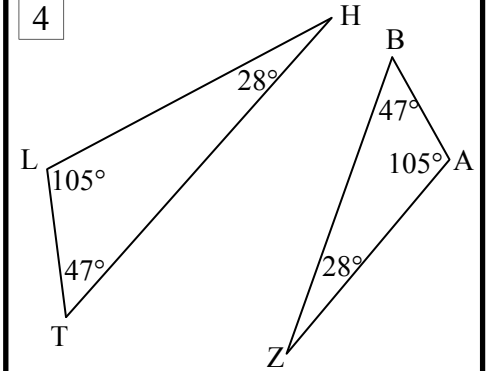
△ ☐ ☐ ☐ 71° 68° 41° LEFT △ | ||| △ ☐ ☐ ☐ 71° 68° 41° RIGHT △

3



△ ☐ ☐ ☐ | ||| △ ☐ ☐ ☐

4



△ ☐ ☐ ☐ 47° 105° 28° | ||| △ ☐ ☐ ☐ 47° 105° 28°

Geometrical Props - Similar Figures & Similarity Statements (Sheet 2)

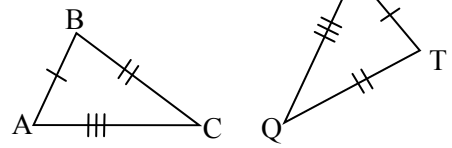
There is one unmatched shape, it is: ☐

Geometrical Properties - Congruence Statements (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

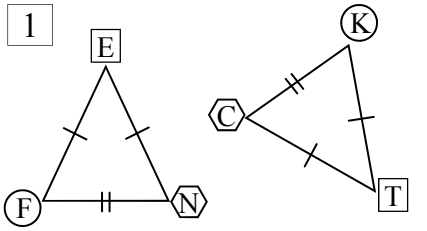
A congruence statement has the matching vertices named in the same order. Write a congruence statement for these.

Example



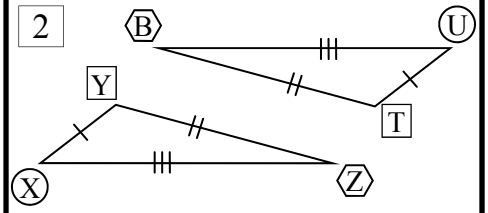
$\triangle ABC \equiv \triangle MTQ$

1



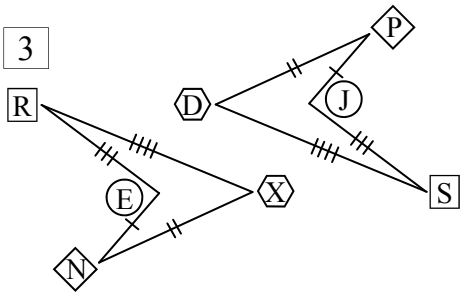
$\triangle\bigcirc\square\hexagon \equiv \triangle\bigcirc\square\hexagon$

2



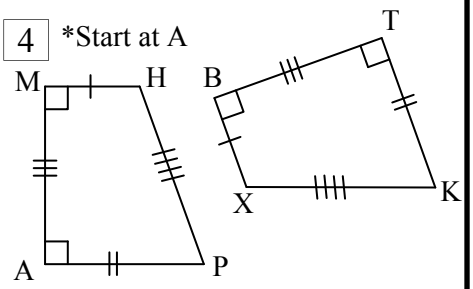
$\triangle\bigcirc\square\hexagon \equiv \triangle\bigcirc\square\hexagon$

3

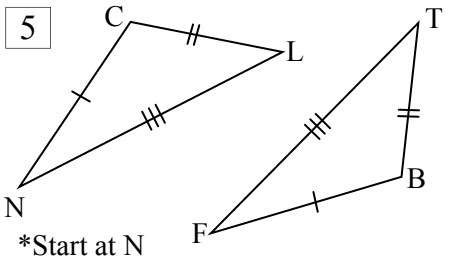


$\bigcirc\square\hexagon\diamond \equiv \bigcirc\square\hexagon\diamond$

4 *Start at A



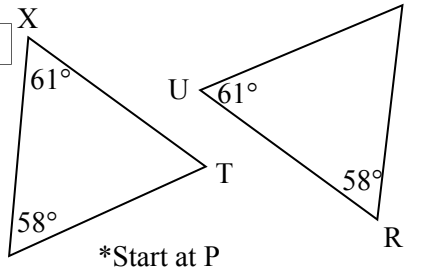
5



*Start at N

State which angles and sides are equal & complete congruence statements for these congruent shapes.

6



*Start at P

$\angle P = \angle R$ $\angle X = \angle\square$

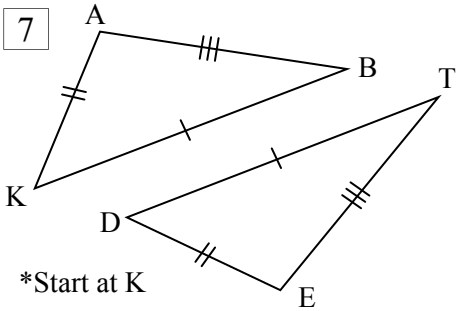
$\angle T = \angle\square$ $XP = \square$

$PT = \square$ $XT = \square$

$\triangle\square \equiv \triangle\square$

Remember same starting point & order.

7



*Start at K

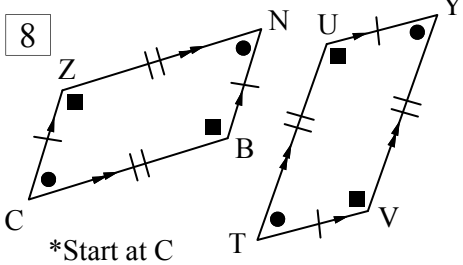
$\angle K = \angle\square$ $\angle\square = \angle\square$

$\angle\square = \angle\square$ $AK = \square$

$\square = \square$ $\square = \square$

$\triangle\square \equiv \triangle\square$

8



*Start at C

$\angle\square = \angle\square = \angle\square = \angle\square$

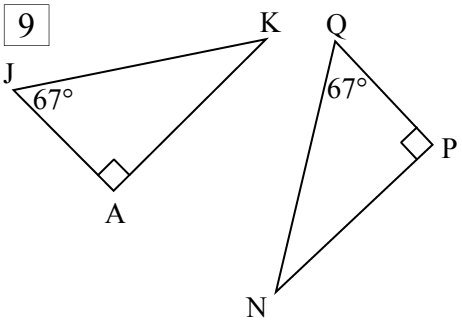
$\angle\square = \angle\square = \angle\square = \angle\square$

$\square = \square = \square = \square$

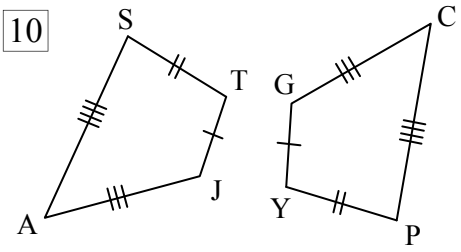
$\square = \square = \square = \square$

$\square \equiv \square$

9

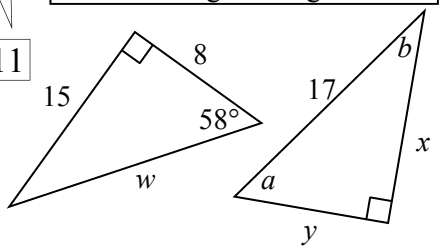


10



Find the value of all unknowns, for these congruent figures.

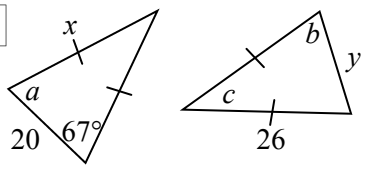
11



$a =$ $b =$ $w =$

$x =$ $y =$

12



$a =$ $b =$ $c =$

$x =$ $y =$

Geometrical Properties - Similarity - Finding Sides (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Let's start with a quick review of equivalent ratios. Find the value of the box in the ratios.

1 $5 : 2 = 30 : \square$ (×6 ×6)

2 $4 : 3 = 16 : \square$ (×4 ×4)

3 $2 : 3 = 22 : \square$ (×11 ×11)

Now find the scale factor (multiplier) yourself.

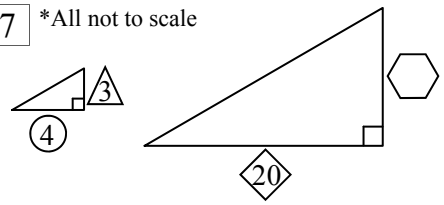
4 $5 : 2 = 15 : \square$ (× □ × □)

5 $1 : 6 = 7 : \square$ (× □ × □)

6 $5 : 12 = 10 : \square$ (× □ × □)

Build the ratios from these similar triangles*

7 *All not to scale



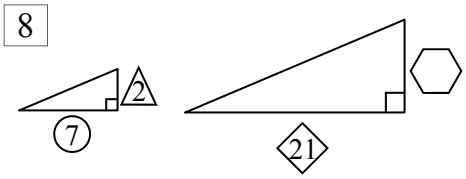
× □ × □

□ : △ = ◇ : ⬡

Base Height Base Height

Left △ Right △

8



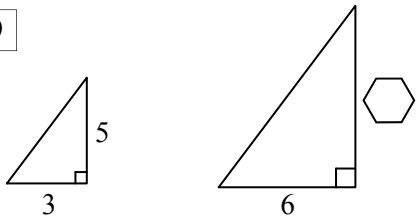
× □ × □

□ : △ = ◇ : ⬡

Base Height Base Height

Left △ Right △

9



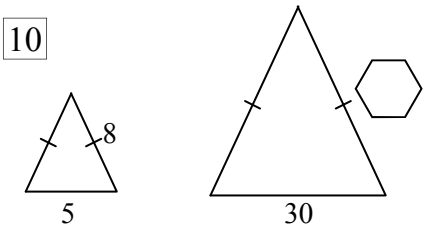
× □ × □

□ : □ = □ : ⬡

Base Height Base Height

Left △ Right △

10

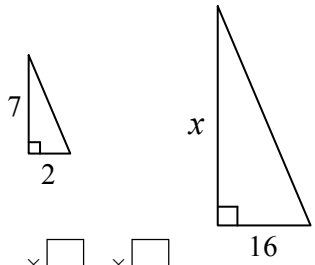


× □ × □

□ : □ = □ : ⬡

From now on the unknown side is 'x'

11

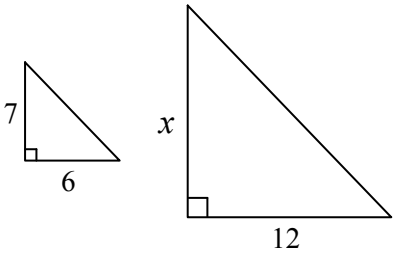


× □ × □

□ : □ = □ : x

$x = \square$

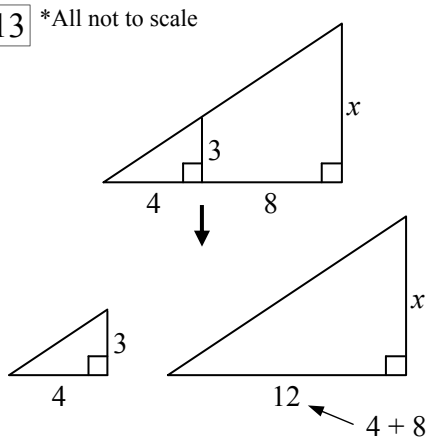
12



$x = \square$

Deconstruct these and solve like before. Change the diagram to two triangles. All are similar.

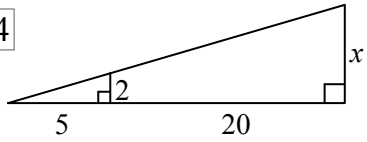
13 *All not to scale



□ : □ = □ : x

$x = \square$

14

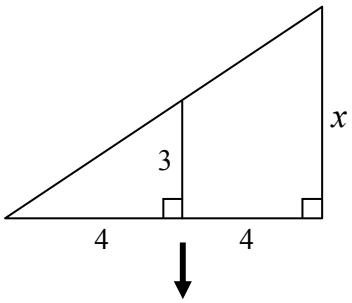


Redraw 2 triangles

□ : □ = □ : x

$x = \square$

15

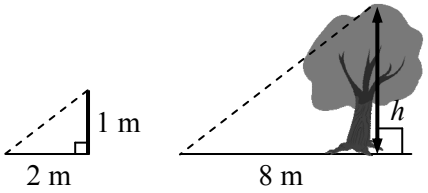


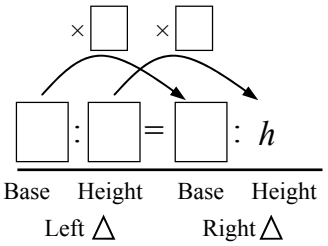
Geometrical Properties - Similarity - Finding Sides (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Find the height of these objects, by using similarity to calculate the unknown height.

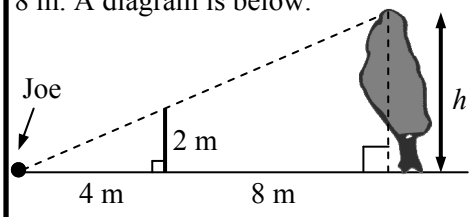
1 A 1 m high post casts a 2 m long shadow. How tall is a tree that casts an 8 m long shadow?



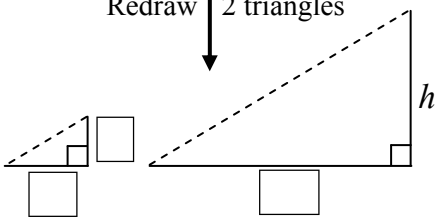


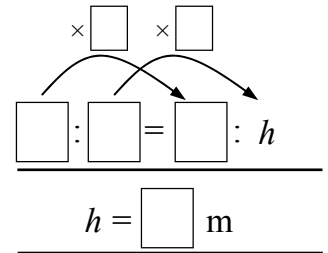
$h =$ ☐ m

2 Joe looks at the top of a tree and moves until a 2 m post's top is in line with the top of the tree. The post is 4 m away. He then measures the distance from the post to the tree, it is 8 m. A diagram is below.



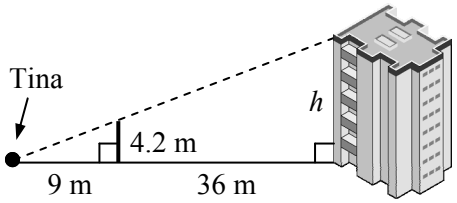
Redraw | 2 triangles





$h =$ ☐ m

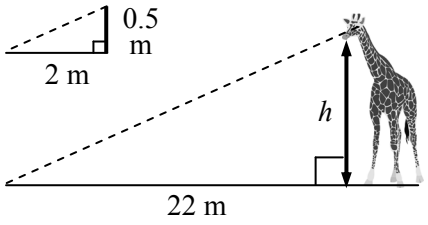
3 Tina looks at the top of a building and she moves until the top of a 4.2 m post is in line with the building's top. The post is 9 m away, the building is 36 m from the post. Diagram below.



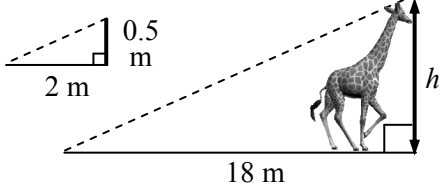
Redraw | 2 triangles

Find the height of the building.

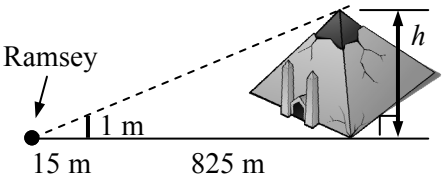
4 A 0.5 m high post casts a 2 m long shadow. How tall is 'Spotty' the giraffe who casts an 22 m shadow?



5 'Shorty' the giraffe is standing next to Spotty. He casts an 18 m long shadow. Calculate Shorty's height.



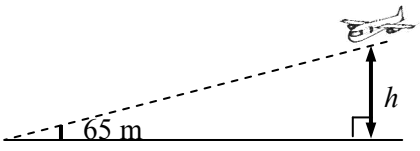
6 Ramsey is estimating the height of a pyramid using a 1 m vertical staff. The staff is 15 m away and its top is in the line of sight of the top of the pyramid, which is 825 m away.



Redraw | 2 triangles

Find the height of the pyramid.

6 Brie is looking at a plane coming in to land. The plane is 6 km away from the flight control tower. Brie has the top of the tower in the same line of sight as the plane. If the tower is 1.2 km away and is 65 m tall, how high is the plane?



Redraw | 2 triangles

Find the height of the plane.

Scale 1 : 50

Get out your ruler and measure lengths in cm, to the nearest 0.5 cm. Use the scale to find the actual lengths. Round answers to 2 d.p where required.

1 The length of the eastern wall (in m).

Length = ____ cm = ____ cm = ____ m
(× 50 →) (÷ 100 →)

2 The length of the northern wall (in m).

Length = ____ cm = ____ cm = ____ m
(× 50 →) (÷ 100 →)

3 The floor area (empty) of the room (m^2).

Q.1 × Q.2

$A = lb$

$= \square \times \square$

$A = \square$ m^2

2 d.p.

4 The length, breadth and floor area of the pantry. ① on diagram.

Length = ____ m

Breadth = ____ m

Round to 2 d.p., in m^2.

5 The length, breadth and floor area of the sink bench. ② on diagram.

Length = ____ m

Breadth = ____ m

6 The length, breadth and floor area of the cook top. ③ on diagram.

Length = ____ m

Breadth = ____ m

7 The length, breadth and floor area of the cupboards. ④ on diagram.

Length = ____ m

Breadth = ____ m

8 Find the total covered floor area. = ① + ② + ③ + ④

Area = ____ + ____ + ____ + ____

Area = ____

9 Find the total exposed floor area. Q.3 - Q.8

Area =

10 Estimate the cost of tiling the exposed floor area when tiles cost \$35/m^2. Available in whole m^2 only.

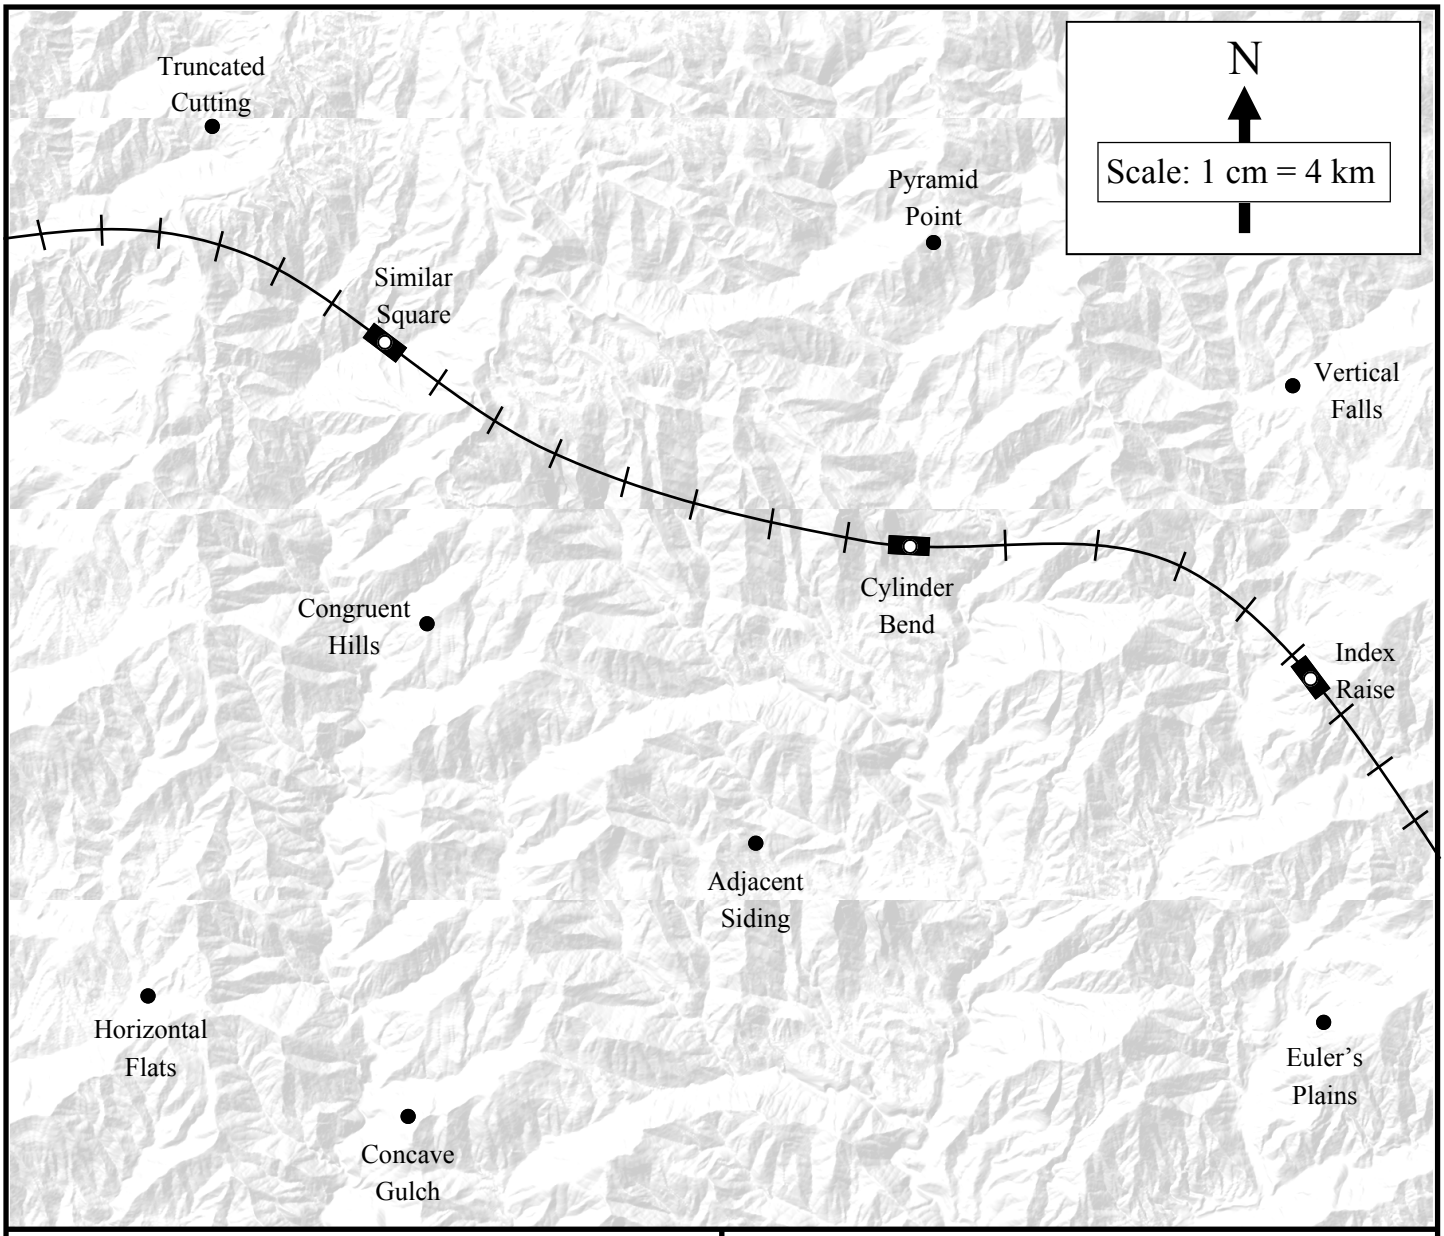
Exposed floor area rounded up to whole m^2 = ____

Cost = ____ × ____ = ____

\$ sign

Geometrical Properties - Scale Diagrams - Using Maps (Sheet 2)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4



Get out your ruler and measure lengths in cm, to the nearest 0.1 cm. Use the scale (top right) to find the actual distances. Round answers to 1 d.p if required.

1 Index Raise station to Euler's Plains.

Distance = ☐.☐ cm = ☐ km

× 4

2 Similar Square station to Horizontal Flats.

Distance = ☐.☐ cm = ☐ km

READ THE NEXT QUESTION CAREFULLY!

3 Pyramid Point to Index Raise, **via Vertical Falls**.

Distance = ☐ cm + ☐ cm = ☐ cm = ☐ km

4 Concave Gulch to Cylinder Bend, via Adjacent Siding.

Distance = ☐ cm + ☐ cm = ☐ cm = ☐ km

Hansel travels from Truncated Cutting to Adjacent Siding via Congruent Hills. While **Gretel** travels from Truncated Cutting to Adjacent Siding via Pyramid Point.

5 Calculate the distance Hansel travels

6 Calculate the distance Gretel travels

7 Who travels the furthest and by how much?

Which station is the closest to **Adjacent Siding** and by how much? Similar Square Station or Index Raise Station?

8

Geometrical Properties - Further Scale Drawing (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

Measure the sides of these shapes and then apply the scale factor to construct an enlargement. The construction will be larger than the original.

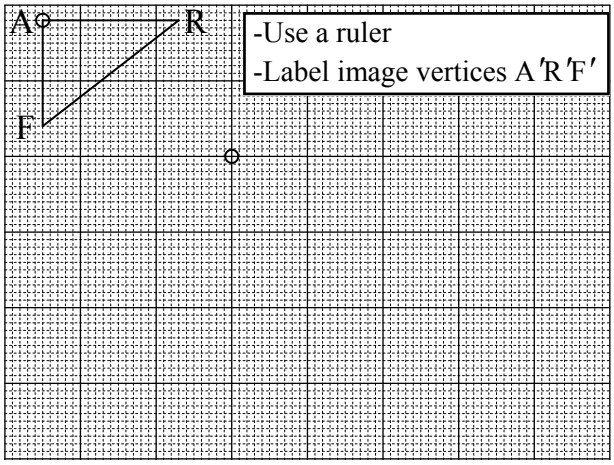
1 Scale = 2 : 5

A′R′: ☐ × $\frac{5}{2}$ = ☐ mm

Length in mm

A′F′: ☐ × $\frac{5}{2}$ = ☐ mm

Construct △A′R′F′ by drawing sides A′R′ and A′F′ first.

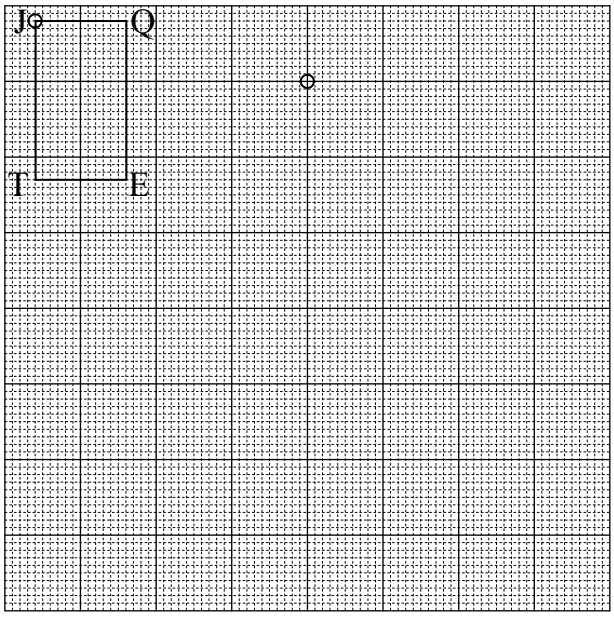


2 Scale = 3 : 8

J′Q′: ☐ × $\frac{\square}{\square}$ = ☐

J′T′: ☐ × $\frac{\square}{\square}$ = ☐

units!



These are enlargements … but they are smaller!

3 Scale = 7 : 2

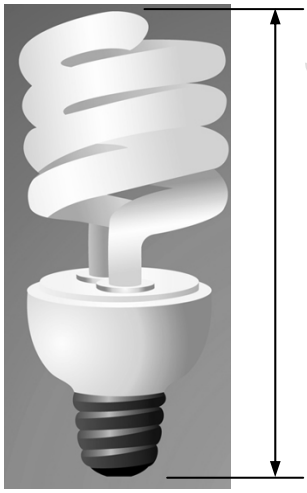
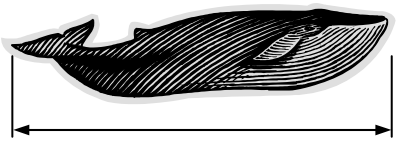
Measure the lengths in mm, using the arrowed length. Write the length in the 'image' box below. Apply the scale to find the actual length. Multiply by the second number in the ratio, divide by the first.

1 Scale = 1 : 2

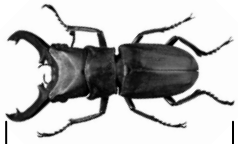


2 Scale = 1 : 660

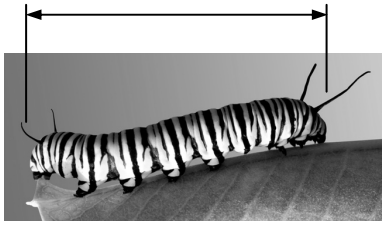


3 Scale = 9 : 1

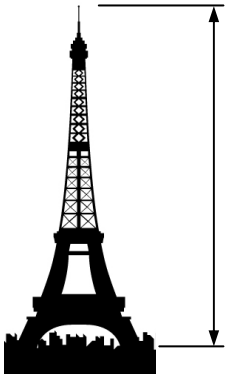
4 Scale = 3 : 2



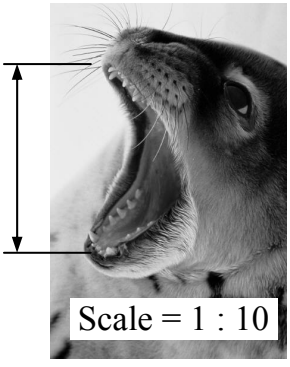
5 Scale = 5 : 3



6 Scale = 1 : 7 200

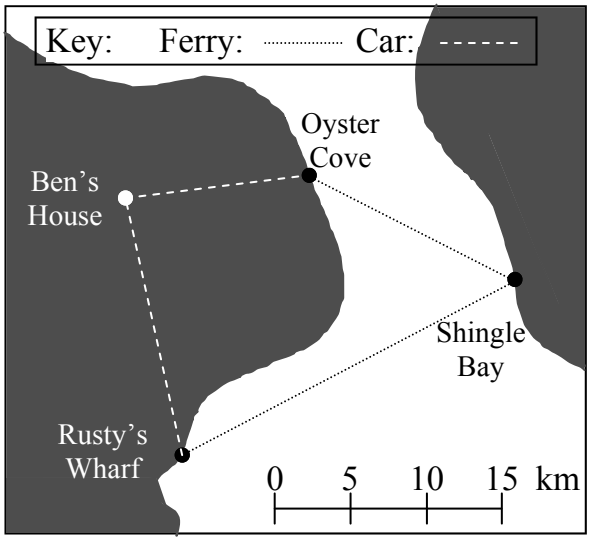


7



Q	Image Length (mm)	Actual Length (mm)
1		
2		mm = m
3		
4		
5		mm = cm
6		mm = m
7		mm = cm

Ben drove from Rusty's Wharf to Oyster Cove, while Tim caught the ferry. Use the scale to answer these questions.



Find the distance in km between:

8 Rusty's Wharf and Shingle Bay _____

9 Shingle Bay and Oyster Cove _____

10 Rusty's Wharf and Ben's House _____

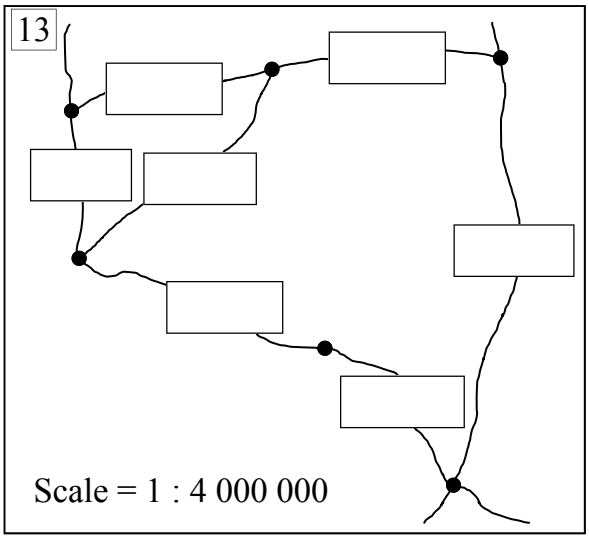
11 Ben's house and Oyster Cove _____

12 The ferry averages 20 km/h (5 km in 15 min), and it stops at all wharves for 10 min. Complete the time table below.

Location	Arrives	Departs
Rusty's Wharf	12.25 pm.	
Shingle Bay		
Oyster Cove		

Measure straight lengths in mm (ignore curves). Use the scale, then write the distances (km) in the boxes.

13



mm → m → km = ÷ 1 000 ÷ 1 000

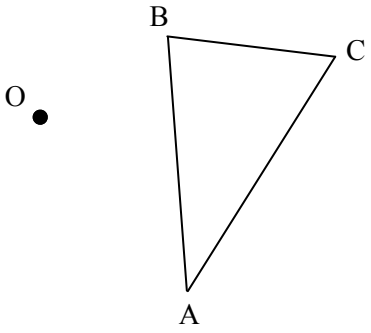
Enlarge triangle ABC by a scale factor of 2, using the centre of enlargement labeled 'O'.

1



The car below is drawn to a scale of 1 : 35. Measure the length of the wheelbase on the image then use the scale factor to give the actual car's wheelbase length.

2

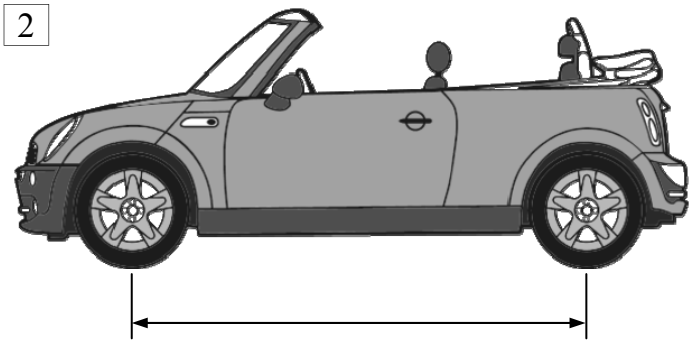


Image length (cm): ____

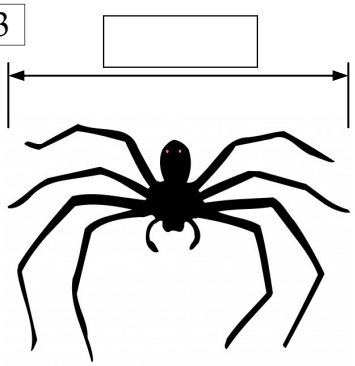
Actual length (cm): ____

The spider below is drawn to a scale of 3 : 2. Use the scale to calculate the width (cm) of this spider in real life.

3

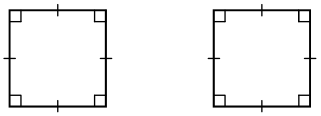


Actual length (cm): _____

_____

Is the first square below similar, congruent or neither when compared to the second square? Give a reason.

4



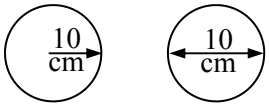
○similar
○congruent
○neither

Reason: _____

_____

Is the first circle below similar, congruent or neither when compared to the second circle? Give a reason.

5 Not to scale



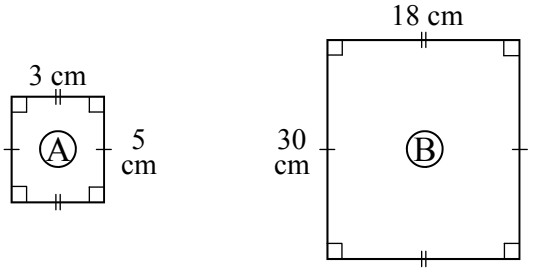
○similar
○congruent
○neither

Reason: _____

_____

Calculate the scale factor used to get Rectangle B from Rectangle A.

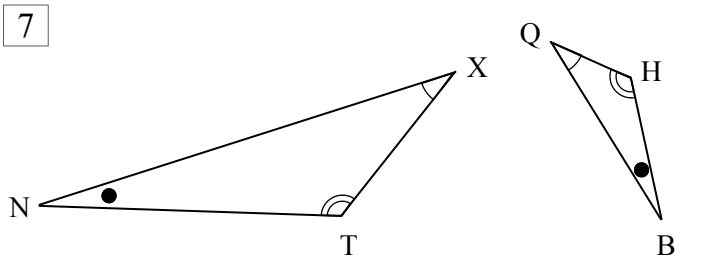
6



Scale factor: _____

The two triangles below are similar. Write a similarity statement for the two triangles.

7



_____

List 3 pairs of matching (similar) sides for the triangles.

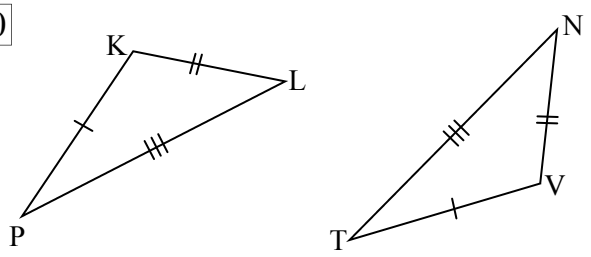
8

____ & ____, ____ & ____, ____ & ____.

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS VELOCITY BOOK 4 - LICENSED FOR SCHOOL USE ONLY - ISBN 978-0-9925361-1-4

The triangles below are congruent. Write a congruence statement for the two triangles.

10



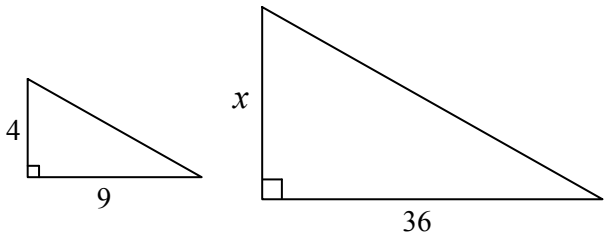
Complete the equivalent ratios below.

11 $5 : 6 = 30 : \square$

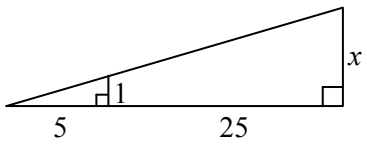
12 $10 : 4 = 20 : \square$

Find the unknown length on the triangles. (Not to scale). The two triangles are similar.

13



14



A plan view of Lucy's room is shown below. The scale is 1 : 30. Find the actual lengths of these objects in cm.

15 Desk width (w) _____

Actual object width, not diagram width

16 Desk depth (l) _____

17 Wardrobe depth (x) _____

18 Wardrobe width (y) _____

Scale 1 : 30

ALTITUDE

NUMBER

Operations Tables - Whole Numbers

This sheet is about completing tables. The tables are addition, multiplication and subtraction. With subtraction ensure the number in the column (up and down) is taken away from the number in the row, otherwise negative answers will occur.

The question mark starts with the number 13 and then the operation in blue is completed, until the last square is filled. All answers are whole numbers so fractions or decimal answers mean that a mistake has been made.

The small tables at the bottom of the page are division. Divide the larger number by the smaller number and then write the answer in the box below.

Addition - Whole Numbers

To perform additions move from right to left and “carry the tens” when the total exceeds 9. The example below shows how to carry the tens.

First answer the table, then complete the exercises, follow this method:

- total down the right hand column and if the sum is less than 10 write it in then move to the next column.
- If the total is ten or more write the last digit and write the tens digit above the next column, sometimes said as carry the 1, 2 or so on.
- Then add the next column including the figure above in your calculation, repeat the process if the total is 10 or more, and so on, until you are finished.

Subtraction - Whole Numbers

To perform subtractions move from right to left and “borrow tens” when the top number is smaller than the bottom number. The example below outlines how to show your working.

Firstly answer the table by subtracting the numbers in the column (up and down) from the numbers in the row. Then start the exercises, follow this method:

- subtract down the right hand column and if the top number is greater than the bottom number, or the total of the numbers below it, subtract.
- If the top number is less than the total of the bottom numbers 'borrow' 1 or more from the next column, these are 10’s. Write the amount borrowed underneath the column you borrowed from, below the numbers.
- Then subtract the next column including the figure you borrowed in your calculation, repeat the process until you are finished.

Complete the table below by subtracting the column from the row, then try the exercises.

-	10	15	11	20	18	14	19	13	17	12
3	7	12	8	17	15	11	16	10	14	9
10	0	5	1	10	8	4	9	3	7	2
9	1	6	2	11	9	5	10	4	8	3
4	6	11	7	16	14	10	15	9	13	8
1	9	14	10	19	17	13	18	12	16	11
8	2	7	3	12	10	6	11	5	9	4
5	5	10	6	15	13	9	14	8	12	7
7	3	8	4	13	11	7	12	6	10	5
2	8	13	9	18	16	12	17	11	15	10
6	4	9	5	14	12	8	13	7	11	6

1 67 − 24 = 43

2 89 − 45 = 44

3 76 − 47 = 29 (1)

4 56 − 29 = 27 (1)

5 157 − 68 = 89 (1 1)

6 253 − 157 = 96 (1 1)

7 439 − 263 = 176 (1)

8 736 − 578 = 158 (1 1)

9 357 − 134 − 84 = 139 (1 1)

10 578 − 207 − 76 = 295 (1 1)

11 627 − 274 − 170 = 183 (2)

12 923 − 467 − 266 = 190 (2 1)

13 873 − 394 − 387 = 92 (2 1)

14 1 274 − 490 − 377 = 407 (1 1 1)

15 4 880 − 967 − 479 = 3 434 (1 1 2)

16 6 550 − 3 542 − 876 = 2 132 (1 1 1)

17 4 255 − 1 633 − 2 150 = 472 (1 1)

18 7 638 − 2 952 − 2 008 = 2 678 (1 1 1)

19 6 557 − 1 264 − 2 765 − 304 = 2 224 (1 1 1)

20 5 670 − 3 622 − 1 109 − 576 = 363 (1 1 2)

21 8 990 − 2 378 − 3 482 − 1 676 = 1 454 (1 2 2)

22 7 553 − 1 865 − 1 777 − 2 039 = 1 872 (2 2 2)

23 9 741 − 2 503 − 3 780 − 1 986 = 1 472 (2 2 1)

Further Subtraction - Whole Numbers

To perform subtractions move from right to left and “borrow tens” when the top number is smaller than the bottom number. The example below outlines how to show your working.

Follow this method:

- subtract down the right hand column and if the top number is greater than the bottom number, or the total of the numbers below it, subtract.
- If the top number is less than the total of the bottom numbers 'borrow' 1 or more from the next column, these are 10’s. Write the amount borrowed underneath the column you borrowed from, below the numbers.
- Then subtract the next column including the figure you borrowed in your calculation, repeat the process until you are finished.

Multiplication - Whole Numbers

To perform multiplication move from right to left and carry the tens when the answer is greater than 9. The example below will show you how to do so.

Firstly answer the table, then when you are ready to start the exercises, follow this method:

- multiply the first numbers together and write the answer.
- If the answer is greater than 9 write the "units" digit then the tens digit above the numbers in the column to the left.
- Then repeat the multiplication but then add the figure above in your calculation, repeat the process until you are finished.
- From question 7 on, two rows are used. The first row is for the units in the bottom number, the second row is used when you multiply the tens digit. Write a 0 (zero) in the second row before you start to multiply the tens digit.
- When the two rows are completed you will have to add them. So carry the tens above the two rows as shown in the example below.

4	20	8	16	32	40	24	12	36	4	28
8	40	16	32	64	80	48	24	72	8	56

1 12 × 4 = 48

2 71 × 3 = 213

3 46 × 5 = 230

4 92 × 8 = 736

5 312 × 7 = 2 184

6 716 × 4 = 2 864

7 34 × 13 = 102 + 340 = 442

8 62 × 46 = 372 + 2 480 = 2 852

9 22 × 14 = 88 + 220 = 308

10 71 × 53 = 213 + 3 550 = 3 763

11 86 × 34 = 344 + 2 580 = 2 924

12 73 × 96 = 438 + 6 570 = 7 008

13 67 × 57 = 469 + 3 350 = 3 819

14 311 × 27 = 2 177 + 6 220 = 8 397

15 177 × 43 = 531 + 7 080 = 7 611

16 466 × 27 = 3 262 + 9 320 = 12 582

17 822 × 92 = 1 644 + 73 980 = 75 624

18 760 × 63 = 2 280 + 45 600 = 47 880

19 8 230 × 27 = 57 610 + 164 600 = 222 210

20 6 758 × 53 = 20 274 + 337 900 = 358 174

21 2962 × 47 = 20 734 + 118 480 = 139 214

22 7 738 × 69 = 69 642 + 464 280 = 533 922

23 8 965 × 82 = 17 930 + 717 200 = 735 130

Further Multiplication - Whole Numbers

To perform multiplication move from right to left and carry the tens when the result is greater than 9. The example below will show you how to do so.

Follow this method:

- multiply the first numbers together and write the answer.
- If the answer is greater than 9 write the "units" digit then the tens digit above the numbers in the column to the left.
- Then repeat the multiplication but then add the figure above in your calculation, repeat the process until you are finished.
- From questions 5 to 9 two rows are used. The first row is for the units in the bottom number, the second row is used when you multiply the tens digit. Write a 0 (zero) in the second row before you start to multiply the tens digit. From Q.10 add two zeros when using a third row.
- When the rows are completed you will have to add them. So carry the tens above the rows as shown in the example below.

3 4 568 × 3 = 13 704

4 7 022 × 8 = 56 176

5 3 699 × 13 = 11 097 + 36 990 = 48 087

6 4 668 × 37 = 32 676 + 140 040 = 172 716

7 5 433 × 64 = 21 732 + 325 980 = 347 712

8 6 880 × 82 = 13 760 + 550 400 = 564 160

9 7 889 × 76 = 47 334 + 552 230 = 599 564

10 222 × 198 = 1 776 + 19 980 + 22 200 = 43 956

11 308 × 234 = 1 232 + 9 240 + 61 600 = 72 072

12 711 × 507 = 4 977 + 0 + 355 500 = 360 477

13 459 × 276 = 2 754 + 32 130 + 91 800 = 126 684

14 787 × 527 = 5 509 + 15 740 + 393 500 = 414 749

15 832 × 146 = 4 992 + 33 280 + 83 200 = 121 472

16 371 × 141 = 371 + 14 840 + 37 100 = 52 311

17 539 × 411 = 539 + 5 390 + 215 600 = 221 529

18 620 × 373 = 1 860 + 43 400 + 186 000 = 231 260

19 874 × 453 = 2 622 + 43 700 + 349 600 = 395 922

20 743 × 605 = 3 715 + 0 + 445 800 = 449 515

21 687 × 272 = 1 374 + 48 090 + 137 400 = 186 864

22 866 × 357 = 6 062 + 43 300 + 259 800 = 309 162

23 830 × 462 = 1 660 + 49 800 + 332 000 = 383 460

24 999 × 999 = 8 991 + 89 910 + 899 100 = 998 001

Division - Whole Numbers

Division is calculating how many times a number ‘goes into’ another. The answer after the division is called the quotient.

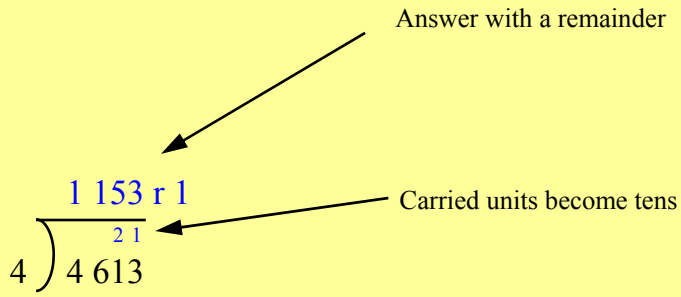
The first 8 questions involve completing tables. A number is given, the large number at the left side of the box, and this is to be divided by the numbers in the top row. Write the answer below each number.

Questions 9 through 23 involve divisions that don’t have a remainder. So the quotient will be a whole number only. While there isn’t a remainder at the end there will be remainders during the calculation which are carried through. This won’t be necessary in the first 6 questions as there are no remainders in the calculation stage.

Divide the outside number into the first number on the inside. If the number can divide into the other number write how many times it can do so, then write the remainder as a small number above the next number to its right. The remainder becomes the ‘tens’ digit and the number below it the units (ones) digit, then repeat the process.

Questions 24 through to 41 will have a remainder. Express this as in the example below, with the answer, a space, a ‘r’, a space, then the remainder.

Questions 42 through 45 are ‘long division’ questions. These all have remainders.



Division - Whole Numbers

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Try the tables first then the exercises, the first 23 won't have remainders. Position your answer on top.

Further Division - Whole Numbers

Division is calculating how many times a number ‘goes into’ another. The answer after the division is called the quotient.

Column 1 starts first with dividing by 10, 100 and 1 000. With these, the division process involves moving the decimal point. When dividing by 10 move the decimal point 1 place to the left, dividing by 100 moves it 2 places to the left and with 1 000, move the decimal point 3 places to the left. Question 17 is an introduction to writing divisions with remainders as fractions. Answer the question then select the fraction by circling it.

Column 2 are division exercises which will have a remainder, write the remainder on the top line of the fraction (the numerator) and write the number you were dividing by as the bottom number, (the denominator). The example above question 20 shows this.

Division by 10 and Fraction Remainders

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

When you divide by 10 move the decimal point 1 place to the left. 100 = 2 places and 1000 = 3 places.

÷ 10 — 1 place left

÷ 100 — 2 places left

÷ 1 000 — 3 places left

Example

$10 \overline{)\,34\,698} = 3\,469.8$

1 $10 \overline{)\,5\,450}$

2 $10 \overline{)\,7\,330}$

3 $100 \overline{)\,27\,880}$

4 $100 \overline{)\,14\,050}$

5 $1\,000 \overline{)\,53\,456}$

6 $1\,000 \overline{)\,73\,992}$

7 $\frac{180}{10} = $ ____

8 $\frac{270}{10} = $ ____

9 $\frac{573}{100} = $ ____

10 $\frac{692}{100} = $ ____

11 $\frac{1\,370}{100} = $ ____

12 $\frac{9\,600}{1\,000} = $ ____

13 $\frac{5\,687}{1\,000} = $ ____

14 $\frac{7\,808}{1\,000} = $ ____

15 $450 \div 10 = $ ____

16 $309 \div 10 = $ ____

Read the problem below and solve in the space provided.

17 If 77 jelly beans are shared equally between 2 children, how many is each child given and how many are left? Solve, then complete the statement.

$2 \overline{)\,77}$

Each child gets ☐ jelly beans and there is ☐ extra.

If the remainder was cut up equally, circle the fraction of a jelly bean received by each child.

$\frac{1}{4}$ $\frac{1}{2}$ $\frac{1}{3}$

Instead of writing 'r' then the remainder write it as a fraction as shown

$6 \overline{)\,2\,777}$ = 462 r 5 = $462\frac{5}{6}$

18 $3 \overline{)\,5\,386}$

19 $2 \overline{)\,1\,657}$

20 $5 \overline{)\,8\,791}$

21 $4 \overline{)\,3\,563}$

22 $8 \overline{)\,2\,441}$

23 $2 \overline{)\,7\,265}$

24 $5 \overline{)\,4\,678}$

25 $6 \overline{)\,9\,005}$

26 $9 \overline{)\,9\,121}$

27 $7 \overline{)\,76\,595}$

28 $9 \overline{)\,31\,217}$

29 $3 \overline{)\,70\,303}$

30 $7 \overline{)\,56\,729}$

31 $4 \overline{)\,34\,251}$

32 $6 \overline{)\,92\,335}$

33 $8 \overline{)\,43\,729}$

When you divide by 10 move the decimal point 1 place to the left. 100 = 2 places and 1000 = 3 places.

÷ 10 — 1 place left

÷ 100 — 2 places left

÷ 1 000 — 3 places left

Example

$10 \overline{)\,34\,698}$ = 3 469.8

1 $10 \overline{)\,5\,450}$ = 545

2 $10 \overline{)\,7\,330}$ = 733

3 $100 \overline{)\,27\,880}$ = 278.8

4 $100 \overline{)\,14\,050}$ = 140.5

5 $1\,000 \overline{)\,53\,456}$ = 53.456

6 $1\,000 \overline{)\,73\,992}$ = 73.992

7 $\frac{180}{10}$ = 18

8 $\frac{270}{10}$ = 27

9 $\frac{573}{100}$ = 5.73

10 $\frac{692}{100}$ = 6.92

11 $\frac{1\,370}{100}$ = 13.7

12 $\frac{9\,600}{1\,000}$ = 9.6

13 $\frac{5\,687}{1\,000}$ = 5.687

14 $\frac{7\,808}{1\,000}$ = 7.808

15 450 ÷ 10 = 45

16 309 ÷ 10 = 3.09

Read the problem below and solve in the space provided.

17 If 77 jelly beans are shared equally between 2 children, how many is each child given and how many are left? Solve, then complete the statement.

$2 \overline{)\,77}$ = 38 r 1 (1)

Each child gets [38] jelly beans and there is [1] extra.

If the remainder was cut up equally, circle the fraction of a jelly bean received by each child.

$\frac{1}{4}$ $\frac{1}{2}$ $\frac{1}{3}$

Instead of writing 'r' then the remainder write it as a fraction as shown

$6 \overline{)\,2\,777}$ = 462 r 5 (3 1) → 462 $\frac{5}{6}$

18 $3 \overline{)\,5\,386}$ = $1\,795\frac{1}{3}$ (2 2 1)

19 $2 \overline{)\,1\,657}$ = $828\frac{1}{2}$ (1 1)

20 $5 \overline{)\,8\,791}$ = $1\,758\frac{1}{2}$ (3 2 4)

21 $4 \overline{)\,3\,563}$ = $890\frac{3}{4}$ (3 3)

22 $8 \overline{)\,2\,441}$ = $305\frac{1}{8}$ (2 4)

23 $2 \overline{)\,7\,265}$ = $3\,632\frac{1}{2}$ (1)

24 $5 \overline{)\,4\,678}$ = $935\frac{3}{5}$ (4 1 2)

25 $6 \overline{)\,9\,005}$ = $1\,500\frac{5}{6}$ (3)

26 $9 \overline{)\,9\,121}$ = $1\,013\frac{4}{9}$ (1 3)

27 $7 \overline{)\,76\,595}$ = $10\,942\frac{1}{7}$ (6 2 1)

28 $9 \overline{)\,31\,217}$ = $3\,468\frac{5}{9}$ (3 4 6 7)

29 $3 \overline{)\,70\,303}$ = $23\,434\frac{1}{3}$ (1 1 1 1)

30 $7 \overline{)\,56\,729}$ = $8\,104\frac{1}{7}$

32 $6 \overline{)\,92\,335}$ = $15\,389\frac{1}{6}$ (3 2 5 5)

33 $8 \overline{)\,43\,729}$ = $5\,466\frac{1}{8}$ (4 3 5 4)

34 $7 \overline{)\,96\,839}$ = $13\,834\frac{1}{7}$ (2 5 2 2)

35 $6 \overline{)\,70\,207}$ = $11\,701\frac{1}{6}$ (1 4)

36 $4 \overline{)\,35\,447}$ = $8\,861\frac{3}{4}$ (3 3 2)

37 $8 \overline{)\,82\,635}$ = $10\,329\frac{3}{8}$ (2 2 7)

38 $5 \overline{)\,78\,118}$ = $15\,623\frac{3}{5}$ (2 3 1 1)

39 $11 \overline{)\,4\,655}$ = $423\frac{2}{11}$

44 / 25 / 22 / 35 / 33 / 2

40 $16 \overline{)\,5\,795}$ = $362\frac{3}{16}$

48 / 99 / 96 / 35 / 32 / 3

41 $13 \overline{)\,4\,642}$ = $357\frac{1}{13}$

39 / 74 / 65 / 92 / 91 / 1

Mental Strategies with Larger Numbers

When you add or multiply or subtract numbers that are larger than you are comfortable with, you can use a strategy to tackle the problem. Break the operation up so that you can evaluate the operation in two steps rather than one.

The process breaks the number up into tens and units and uses the first step to deals with the ‘tens’ part and the second step to deal with the units. There are examples at the top of each Column that show you how to approach the questions.

Mental Strategies with Larger Numbers

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Separate the units from one of the numbers to make the process of addition more manageable.

Example

Break up 39 into 30 and 9

27 + 39 = 27 + 30 + 9

= 57 + 9 (Add the tens first)

= 66 (Then add the units)

1

28 + 47 = 28 + 40 + 7

= ☐ + ☐

= ☐

2

57 + 19 = ☐ + ☐ + ☐

= ☐ + ☐

= ☐

3

88 + 36 = ☐ + ☐ + ☐

= ☐ + ☐

= ☐

4

117 + 67 = ☐ + ☐ + ☐

= ☐ + ☐

= ☐

5

127 + 28 = ☐ + ☐ + ☐

= ☐ + ☐

= ☐

6

77 + 77 = ☐ + ☐ + ☐

= ☐ + ☐

= ☐

Break the numbers up to perform these multiplications.

Example

Break up 14 into 10 and 4

14 × 8 = 10 × 8 + 4 × 8

= 80 + 32 (Calculate the 2 parts)

= 112 (Then add the 2 parts)

7

16 × 7 = ☐ × 7 + ☐ × 7

= ☐ + ☐

= ☐

8

12 × 9 = ☐ × ☐ + ☐ × ☐

= ☐ + ☐

= ☐

9

17 × 8 = ☐ × ☐ + ☐ × ☐

= ☐ + ☐

= ☐

10

27 × 5 = 20 × 5 + ☐ × ☐

= ☐ + ☐

= ☐

11

19 × 9 = ☐ × ☐ + ☐ × ☐

= ☐ + ☐

= ☐

12

26 × 7 = ☐ × ☐ + ☐ × ☐

= ☐ + ☐

= ☐

Now try some subtracting. Use two steps to evaluate.

Example

Break up 2nd number

54 - 39 = 54 - 30 - 9

= 24 - 9 (Subtract the 'tens' first)

= 15 (Then subtract the units for the answer)

13 46 - 28 = 46 - 20 - 8

= ☐ - ☐

= ☐

14 72 - 59 = ☐ - ☐ - ☐

= ☐ - ☐

= ☐

15 81 - 24 = ☐ - ☐ - ☐

= ☐ - ☐

= ☐

16 56 - 18 = ☐ - ☐ - ☐

= ☐ - ☐

= ☐

17 92 - 67 = ☐ - ☐ - ☐

= ☐ - ☐

= ☐

18 74 - 57 = ☐ - ☐ - ☐

= ☐ - ☐

= ☐

19 88 - 79 = ☐ - ☐ - ☐

= ☐ - ☐

= ☐

Separate the units from one of the numbers to make the process of addition more manageable.

Example

Break up 39 into 30 and 9

27 + 39 = 27 + 30 + 9

= 57 + 9 (Add the tens first)

= 66 (Then add the units)

1

28 + 47 = 28 + 40 + 7

= 68 + 7

= 75

2

57 + 19 = 57 + 10 + 9

= 67 + 9

= 76

3

88 + 36 = 88 + 30 + 6

= 118 + 6

= 124

4

117 + 67 = 117 + 60 + 7

= 177 + 7

= 184

5

127 + 28 = 127 + 20 + 8

= 147 + 8

= 155

6

77 + 77 = 77 + 70 + 7

= 147 + 7

= 154

Break the numbers up to perform these multiplications.

Example

Break up 14 into 10 and 4

14 × 8 = 10 × 8 + 4 × 8

= 80 + 32 (Calculate the 2 parts)

= 112 (Then add the 2 parts)

7

16 × 7 = 10 × 7 + 6 × 7

= 70 + 42

= 112

8

12 × 9 = 10 × 9 + 2 × 9

= 90 + 18

= 108

9

17 × 8 = 10 × 8 + 7 × 8

= 80 + 56

= 136

10

27 × 5 = 20 × 5 + 7 × 5

= 100 + 35

= 135

11

19 × 9 = 10 × 9 + 9 × 9

= 90 + 81

= 171

12

26 × 7 = 20 × 7 + 6 × 7

= 140 + 42

= 182

Now try some subtracting. Use two steps to evaluate.

Example

Break up 2nd number

54 - 39 = 54 - 30 - 9

= 24 - 9 (Subtract the 'tens' first)

= 15 (Then subtract the units for the answer)

13 46 - 28 = 46 - 20 - 8

= 26 - 8

= 18

14 72 - 59 = 72 - 50 - 9

= 22 - 9

= 13

15 81 - 24 = 81 - 20 - 4

= 61 - 4

= 57

16 56 - 18 = 56 - 10 - 8

= 46 - 8

= 38

17 92 - 67 = 92 - 60 - 7

= 32 - 7

= 25

18 74 - 57 = 74 - 50 - 7

= 24 - 7

= 17

19 88 - 79 = 88 - 70 - 9

= 18 - 9

= 9

Magic Squares

Magic squares are small puzzles that use your addition and subtraction ability. The total after the sum of the numbers in a line of a magic square must all be the same, there are 8 lines in all, 3 horizontal (flat), 3 vertical (up and down) and 2 diagonal.

To solve magic squares:

- One line of numbers will be complete, add the numbers along this line and write the total in the magic number box, called the 'Magic Number' below the magic square.
- There is one other number not in the line. Use this number together with one of the other numbers to form another line. Add the two numbers, then subtract the total from the Magic Number. Write the answer in the square that completes the line, then move to the next line.
- Continue this process until all the squares are filled.

Mixed Operations - Whole Numbers

This sheet involves using division, multiplication, addition and subtraction. As there are several operations in each question there are two methods you can use to answer the questions. The first is to calculate the entire question mentally. If you can do this great, but if you have difficulty you should use this method.

- Split the question up into chunks, in the example at the top of the first column you have 50 - 13 + 4 - 11 = ?
- Find 50 - 13 first, that's 37, you then write that answer above the 13 then strike out those first 2 numbers.
- Then using 37 find 37 + 4, that's 41, write that number above the 4 and strike out the 4
- Then using the 41 find 41 - 11, that is 30, so write the answer in the square.

Column 3 involves reading a sentence and translating it to numbers and operation signs. There are 3 answers supplied, only one of them is correct. Read the sentence and select the matching mathematical statement. To select your choice fill the circle. Then solve A, B and C not just the correct one, answer all three. Use the same method to solve as in the earlier columns.

Some terms you should be familiar with:

- Sum, total, increase, add - all mean Addition
- Reduce, decrease, find the difference, less, minus and subtract - all mean Subtraction
- Divide and 'find the quotient of' - mean Division
- Product, times and 'lots of' - mean Multiplication

Mixed Operations - Whole Numbers

Strike out the numbers and write the new total as you go across

Example

50 - 13 + 4 - 11 = 30 (37, 41)

1 $3 + 7 - 5 + 6 =$ ☐

2 $12 - 4 + 20 - 3 =$ ☐

3 $20 + 15 - 8 + 3 =$ ☐

4 $16 - 10 - 3 + 18 =$ ☐

5 $3 + 30 - 6 + 11 =$ ☐

6 $6 + 3 - 7 + 50 =$ ☐

7 $29 - 11 + 6 - 9 =$ ☐

8 $14 + 40 - 7 + 8 =$ ☐

9 $14 + 7 - 2 +$ ☐ $= 30$

10 $15 + 22 + 18 -$ ☐ $= 40$

11 $13 + 8 - 6 +$ ☐ $= 27$

12 $16 + 5 + 13 +$ ☐ $= 52$

13 $14 + 17 - 8 -$ ☐ $= 8$

14 $21 - 9 - 7 -$ ☐ $= 0$

15 $42 + 22 - 12 -$ ☐ $= 35$

16 $53 - 9 + 11 +$ ☐ $= 80$

17 $17 + 8 + 20 -$ ☐ $= 33$

18 $20 - 8 + 30 -$ ☐ $= 36$

19 $15 + 20 - 17 -$ ☐ $= 8$

20 $5 \times 4 \times 2 =$ ☐

21 $8 \times 2 \div 4 =$ ☐

22 $6 \times 4 \div 8 =$ ☐

23 $10 \div 5 \times 15 =$ ☐

24 $6 \times 5 \div 10 =$ ☐

25 $20 \times 3 \times 2 \div 40 =$ ☐

26 $6 \div 2 \times 5 \times 3 =$ ☐

27 $10 \div 2 \times 10 \div 2 =$ ☐

28 $20 \times 2 \div 8 \times 3 =$ ☐

29 $42 \div 7 \times 3 \div 9 =$ ☐

30 $8 \times 9 \div 12 \times 4 =$ ☐

31 $3 \times 12 \div 4 \times$ ☐ $= 63$

32 $8 \times 3 \div 4 \times$ ☐ $= 54$

33 $9 \times 5 \div 3 \times$ ☐ $= 30$

34 $10 \div 2 \times 15 \times$ ☐ $= 0$

35 $2 \times 2 \times 2 \times$ ☐ $= 64$

36 $5 \times 4 \times 4 \div$ ☐ $= 4$

37 $6 \times 8 \div 12 \times$ ☐ $= 32$

38 $9 \times 4 \div 18 \times$ ☐ $= 100$

39 $50 \div 5 \div 2 \div$ ☐ $= 1$

40 $6 \times 2 \times 5 \div$ ☐ $= 10$

Read the sentence, select the matching operation but solve all three.

41 The difference of 12 and 7 plus 25.

A $12 + 7 + 25 =$ ☐

B $12 - 7 + 25 =$ ☐

C $12 \times 7 + 25 =$ ☐

42 Increase the product of 7 and 8 by 15.

A $7 + 8 + 15 =$ ☐

B $8 - 7 + 15 =$ ☐

C $7 \times 8 + 15 =$ ☐

43 Reduce the quotient of 24 and 6 by 4.

A $24 - 6 - 4 =$ ☐

B $24 \div 6 - 4 =$ ☐

C $24 + 6 - 4 =$ ☐

44 From the product of 2, 3 and 4 subtract 9.

A $2 \times 3 \times 4 + 9 =$ ☐

B $2 + 3 + 4 - 9 =$ ☐

C $2 \times 3 \times 4 - 9 =$ ☐

45 Find the total of 22, 33 and 17 and reduce the result by 9.

A $22 + 33 + 17 - 9 =$ ☐

B $22 + 33 - 17 + 9 =$ ☐

C $22 + 33 + 17 + 9 =$ ☐

46 Reduce the sum of 14 and 21 by 7 then add 22 to the result.

A $21 - 14 - 7 + 22 =$ ☐

B $21 - 14 + 7 + 22 =$ ☐

C $21 + 14 - 7 + 22 =$ ☐

Strike out the numbers and write the new total as you go across

Example

50 - 13 + 4 - 11 = **30**

1. 3 + 7 - 5 + 6 = **11**
2. 12 - 4 + 20 - 3 = **25**
3. 20 + 15 - 8 + 3 = **30**
4. 16 - 10 - 3 + 18 = **21**
5. 3 + 30 - 6 + 11 = **38**
6. 6 + 3 - 7 + 50 = **52**
7. 29 - 11 + 6 - 9 = **15**
8. 14 + 40 - 7 + 8 = **55**
9. 14 + 7 - 2 + **11** = 30
10. 15 + 22 + 18 - **15** = 40
11. 13 + 8 - 6 + **12** = 27
12. 16 + 5 + 13 + **18** = 52
13. 14 + 17 - 8 - **15** = 8
14. 21 - 9 - 7 - **5** = 0
15. 42 + 22 - 12 - **17** = 35
16. 53 - 9 + 11 + **25** = 80
17. 17 + 8 + 20 - **8** = 33
18. 20 - 8 + 30 - **6** = 36
19. 15 + 20 - 17 - **10** = 8
20. 5 × 4 × 2 = **40**
21. 8 × 2 ÷ 4 = **4**
22. 6 × 4 ÷ 8 = **3**
23. 10 ÷ 5 × 15 = **30**
24. 6 × 5 ÷ 10 = **3**
25. 20 × 3 × 2 ÷ 40 = **3**
26. 6 ÷ 2 × 5 × 3 = **45**
27. 10 ÷ 2 × 10 ÷ 2 = **25**
28. 20 × 2 ÷ 8 × 3 = **15**
29. 42 ÷ 7 × 3 ÷ 9 = **2**
30. 8 × 9 ÷ 12 × 4 = **24**
31. 3 × 12 ÷ 4 × **7** = 63
32. 8 × 3 ÷ 4 × **9** = 54
33. 9 × 5 ÷ 3 × **2** = 30
34. 10 ÷ 2 × 15 × **0** = 0
35. 2 × 2 × 2 × **8** = 64
36. 5 × 4 × 4 ÷ **20** = 4
37. 6 × 8 ÷ 12 × **8** = 32
38. 9 × 4 ÷ 18 × **50** = 100
39. 50 ÷ 5 ÷ 2 ÷ **5** = 1
40. 6 × 2 × 5 ÷ **6** = 10

Read the sentence, select the matching operation but solve all three.

41. The difference of 12 and 7 plus 25.
    - A) 12 + 7 + 25 = **44**
    - ● 12 - 7 + 25 = **30**
    - C) 12 × 7 + 25 = **109**
42. Increase the product of 7 and 8 by 15.
    - A) 7 + 8 + 15 = **30**
    - B) 8 - 7 + 15 = **16**
    - ● 7 × 8 + 15 = **71**
43. Reduce the quotient of 24 and 6 by 4.
    - A) 24 - 6 - 4 = **14**
    - ● 24 ÷ 6 - 4 = **0**
    - C) 24 + 6 - 4 = **26**
44. From the product of 2, 3 and 4 subtract 9.
    - A) 2 × 3 × 4 + 9 = **33**
    - ● 2 + 3 + 4 - 9 = **0**
    - C) 2 × 3 × 4 - 9 = **11**
45. Find the total of 22, 33 and 17 and reduce the result by 9.
    - ● 22 + 33 + 17 - 9 = **63**
    - B) 22 + 33 - 17 + 9 = **47**
    - C) 22 + 33 + 17 + 9 = **81**
46. Reduce the sum of 14 and 21 by 7 then add 22 to the result.
    - A) 21 - 14 - 7 + 22 = **22**
    - B) 21 - 14 + 7 + 22 = **36**
    - ● 21 + 14 - 7 + 22 = **50**

Egyptian Numerals

Egyptian people used symbols to represent numbers. These symbols were of common objects that the people were familiar with. The table below has the names of these objects, the symbols themselves and the modern day numbers that these represent.

The system works by having up to 9 of each symbol, so 15 would be 1 heel bone and 5 vertical staffs, 20 would be 2 heel bones and 6 750 would be 6 Lotus flowers, 7 coiled ropes and 5 heel bones. The symbols are grouped together in any way you like and in any order you like. But for our purpose, let the order be from the largest down to the lowest value symbol.

Column 1 has groups of symbols, rewrite these in today's modern numerals, often referred to as the Hindu-Arabic number system. The table below will have to used so have it on screen or copy it in your book. The column ends with a pair of road signs, change the distances from modern numerals to Egyptian numerals, and write the symbols on the signs.

Column 2 is similar to the road sign questions giving numbers which are to be converted to Egyptian numerals.

Column 3 has questions that require an operation to be performed with modern numbers, find the answer, then rewrite that answer in Egyptian numerals.

1		Vertical staff
10		Heel bone
100		Coiled rope
1 000		Lotus flower
10 000		Bent reed
100 000		Fish
1 000 000		Amazed man

Roman Numerals

Much like the Egyptian system, Roman numerals build up numbers by combining several symbols together. The differences are:

- Instead of pictures, letters are used to represent the numbers, (see the table below)
- The letters are written in a single row starting from largest to smallest
- A maximum of 3 of the same letter can be used, instead of 4 letters you subtract the letter from the next largest letter. Subtraction is the only time that a smaller value letter comes before a letter of larger value.

Column 1 starts with converting Roman numbers to our modern day (Hindu-Arabic) system. Use the table below for reference if you need it. Complete the tables first then continue down the column. There are no 'subtraction' style questions in this column.

Column 2 asks you to answer questions in the same way, except this time there are subtraction style questions present. Remember there is no single Roman numeral for the following: 4, 9, 40, 90, 400 and 900. You have to 'subtract' numerals to get these numbers.
Eg. 4 = IV, 9 = IX, 40 = XL, 90 = XC, 400 = CD and 900 = CM.

You can take 1 from 10, 10 from 50 and 10 from 100, 100 from 500 and 100 from 1 000. But You can't take 1 from 500 to make 499, or 10 from 500 to make 490. So, 490 = CDXC and 499 = CDXCIX.

Column 3 asks you to write the given numbers in Roman numerals.

Inequalities, Ascending and Descending Order

Inequalities in mathematics refer to the use of < (less than) and > (greater than) signs. This sheet asks you to look at two numbers, determine which number is the smallest one and put a < or > in the box that separates them. If you have trouble remembering the 'less than' sign (<) and the 'greater than' sign (>) then imagine that they are arrows. Then if you point the arrow to the smallest number you will always be correct. Just to shake things up a little some require = signs not just < or >.

Column 1 asks to place < or > between two numbers, then later, instead of two numbers, each side has a small operation to perform. Find the answer and write it below the operation and then 'point the arrows'. The example at the top of the column shows the use of canceling strokes and finding the total as you move across.

Column 2 is similar to column 1 except that this time there are 3 numbers (or operations) rather than 2. The other difference is that the signs are given, you write the numbers (and operations) in the boxes rather than the signs. Fizzle is giving you a warning at question 22 because the signs have changed direction, so watch them! Again look at the example for the method to be used.

Column 3 involves placing numbers in ascending and descending order, this is actually what you have already been doing in column 2. How do you remember that ascending goes up (from lowest to highest) and descending goes down (from highest to lowest). Descending starts with a D, just like Down. When you go down you go from high to low. I always say: "What about ascending?...WHO CARES!!" Because you only have to remember one of them, the other one is just the opposite, so just remember descending.

So for the first part of the column write the smallest number in the row below it, then cancel it out on the top line with a stroke (so you know you have used it), then look for the next highest number and so on. The second part of the column is to be written in descending order which starts with the largest number and goes down, cancel them as before.

Inequalities, Ascending and Descending Order

Put <, > or = in the square to make true

Example

$\cancel{30} + \cancel{9}^{39} - 8$ [<] $22 + 17$

31 39

1 23 [ ] 37

2 110 [ ] 101

3 373 [ ] 337

4 10 010 [ ] 10 005

5 5 + 23 [ ] 28

6 23 - 6 [ ] 9 + 6

7 6 + 22 - 11 [ ] 22 - 5

8 9 × 4 + 14 [ ] 70 - 15

9 3 × 5 × 2 [ ] 5 × 6

10 32 ÷ 8 × 20 [ ] 9 × 10

11 37 + 15 - 9 [ ] 7 × 4

12 40 - 12 - 11 [ ] 10 + 5

13 33 - 15 [ ] 3 × 5 + 8

14 4 × 5 × 3 [ ] 90 - 20

15 18 + 11 + 15 [ ] 5 × 9

16 90 ÷ 10 × 4 [ ] 3 × 5 × 2

Put the numbers given into the correct position, you may have to do some calculating first.

Example

30, 18 + 9, 7 × 4

30 27 28

[30] > [7 × 4] > [18 + 9]

17 46, 23, 17

[ ] < [ ] < [ ]

18 153, 135, 351

[ ] < [ ] < [ ]

19 247, 89, 196

[ ] > [ ] > [ ]

20 111, 101, 110

[ ] < [ ] < [ ]

21 12 + 4, 6 +3, 14

[ ] > [ ] > [ ]

22 14 + 12, 5 × 7, 50 - 19

[ ] > [ ] > [ ]

23 37 + 25, 7 × 8, 9 × 6

[ ] > [ ] > [ ]

24 35 ÷ 7, 45 ÷ 5, 56 ÷ 8

[ ] > [ ] > [ ]

25 200 + 150, 500 - 120, 70 × 3

[ ] > [ ] > [ ]

Rewrite the numbers in ascending order

26 123, 281, 142, 412, 336

→ _____

27 1 232, 898, 1 199, 959

Inequalities, Ascending and Descending Order

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Put <, > or = in the square to make true

Example

$30 + 9 - 8$ (39) $\boxed{<}$ $22 + 17$ (39)

1 $23 \boxed{<} 37$ (31 < 37)

2 $110 \boxed{>} 101$

3 $373 \boxed{>} 337$

4 $10\,010 \boxed{>} 10\,005$

5 $5 + 23 \boxed{=} 28$ (28 = 28)

6 $23 - 6 \boxed{>} 9 + 6$ (17 > 15)

7 $6 + 22 - 11 \boxed{=} 22 - 5$ (28 − 11 = 17 = 22 − 5)

8 $9 \times 4 + 14 \boxed{<} 70 - 15$ (36 + 14 = 50 < 55)

9 $3 \times 5 \times 2 \boxed{=} 5 \times 6$ (15 × 2 = 30 = 30)

10 $32 \div 8 \times 20 \boxed{<} 9 \times 10$ (4 × 20 = 80 < 90)

11 $37 + 15 - 9 \boxed{>} 7 \times 4$ (52 − 9 = 43 > 28)

12 $40 - 12 - 11 \boxed{>} 10 + 5$ (28 − 11 = 17 > 15)

13 $33 - 15 \boxed{<} 3 \times 5 + 8$ (18 < 15 + 8 = 23)

14 $4 \times 5 \times 3 \boxed{<} 90 - 20$ (20 × 3 = 60 < 70)

15 $18 + 11 + 15 \boxed{<} 5 \times 9$ (29 + 15 = 44 < 45)

16 $90 \div 10 \times 4 \boxed{>} 3 \times 5 \times 2$ (9 × 4 = 36 > 30)

Put the numbers given into the correct position, you may have to do some calculating first.

Example

$30,\ 18 + 9,\ 7 \times 4$ (30, 27, 28)

$\boxed{30} > \boxed{7 \times 4} > \boxed{18 + 9}$

17 46, 23, 17

$\boxed{17} < \boxed{23} < \boxed{46}$

18 153, 135, 351

$\boxed{135} < \boxed{153} < \boxed{351}$

19 247, 89, 196

$\boxed{247} > \boxed{196} > \boxed{89}$

20 111, 101, 110

$\boxed{101} < \boxed{110} < \boxed{111}$

21 $12 + 4,\ 6 + 3,\ 14$ (16, 9, 14)

$\boxed{12 + 4} > \boxed{14} > \boxed{6 + 3}$

22 $14 + 12,\ 5 \times 7,\ 50 - 19$ (26, 35, 31)

$\boxed{5 \times 7} > \boxed{50 - 19} > \boxed{14 + 12}$

23 $37 + 25,\ 7 \times 8,\ 9 \times 6$ (62, 56, 54)

$\boxed{37 + 25} > \boxed{7 \times 8} > \boxed{9 \times 6}$

24 $35 \div 7,\ 45 \div 5,\ 56 \div 8$ (5, 9, 7)

$\boxed{45 \div 5} > \boxed{56 \div 8} > \boxed{35 \div 7}$

25 $200 + 150,\ 500 - 120,\ 70 \times 3$ (350, 380, 210)

$\boxed{500 - 120} > \boxed{200 + 150} > \boxed{70 \times 3}$

Rewrite the numbers in ascending order

26 ~~123~~, ~~281~~, ~~142~~, ~~412~~, ~~336~~
→ 123, 142, 281, 336, 412

27 ~~1 232~~, ~~898~~, ~~1 199~~, ~~959~~
→ 898, 959, 1 199, 1 232

28 ~~9 857~~, ~~8 667~~, ~~10 023~~, ~~9 156~~
→ 8 667, 9 156, 9 857, 10 023

29 ~~43~~, ~~103~~, ~~79~~, ~~110~~, ~~130~~, ~~101~~
→ 43, 79, 101, 103, 110, 130

30 ~~1 076~~, ~~10 760~~, ~~1 067~~, ~~7 601~~
→ 1 067, 1 076, 7 601, 10 760

31 ~~564~~, ~~692~~, ~~288~~, ~~1 206~~, ~~1 089~~
→ 288, 564, 692, 1 089, 1 206

Rewrite the numbers in descending order

32 ~~65~~, ~~75~~, ~~12~~, ~~33~~, ~~90~~, ~~29~~, ~~50~~
→ 90, 75, 65, 50, 33, 29, 12

33 ~~130~~, ~~105~~, ~~103~~, ~~150~~, ~~203~~
→ 203, 150, 130, 105, 103

34 ~~297~~, ~~369~~, ~~403~~, ~~1 003~~, ~~676~~
→ 1 003, 676, 403, 369, 297

35 ~~8 766~~, ~~3 452~~, ~~10 299~~, ~~5 677~~
→ 10 299, 8 766, 5 677, 3 452

36 ~~221~~, ~~390~~, ~~667~~, ~~767~~, ~~903~~, ~~93~~
→ 903, 767, 667, 390, 221, 93

37 ~~11~~, ~~23~~, ~~8~~, ~~15~~, ~~31~~, ~~0~~, ~~12~~, ~~5~~, ~~7~~
→ 31, 23, 15, 12, 11, 8, 7, 5, 0

Order of Operations

With a mathematical operation you normally move left to right, with order of operations this can change. Order of operations requires you to evaluate the question in this order:

- Evaluate × or ÷ first, then the + and - section of the question.
- Note × and ÷ have no priority over each other, it's simply the first one of the two as you move (to the right) through the question
- Likewise with + and - they have no priority, it's the first one you encounter.

Column 1 asks for the answer to each question considering order of operations. Look at each question as if it is in 'sections', the sections will be made by the × and ÷ signs, find totals for these then carry out the addition or subtraction between the sections. Look at the examples below.

Column 2 asks to evaluate the exercise each side of a box, then write either <, > or = to make them true. These are easier as there are 2 small operations rather than large one, so don't let the size of the question daunt you. Use the same method as with the first column except:

- Once you finish evaluating one side write the total in the box below each part of the question.
- Repeat for the other side, then using the 2 lower numbers write <, > or = in the box. Remember think of the < and > as arrows and point the arrow at the smallest number.

The bottom of column 2 has some questions which have a number missing. One side is complete, find the total for this side then write the answer in both lower boxes. Then find the value for the box that will give the total.

Column 3 are worded questions, colour the circle in front of the expression that matches the sentence, but once you have done that, solve all three.

This question doesn't require order of operations consideration because the × is first in the exercise.

$4 \times 3 + 2 =$ [14] (12)

This does as the × is after the + so calculate the × section first.

$4 + 3 \times 2 =$ [10] (6)

This requires the ÷ to be done first, so evaluate it first then work through the question from left to right.

$40 - 9 \div 3 + 2$ (3)

$= 40 - 3 + 2$ (37) $=$ [39]

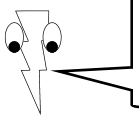
This requires the × and ÷ to be done first, but because the × is first you do it first, get your total then do the ÷.

$80 - 4 \times 9 \div 2$ (36)

$= 80 - 36 \div 2$ (18) $=$ [62]

Order of Operations

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE



Try these, remember to do the × and ÷ before you do the + and –.

Example

$12 + 3 \times 4 = 24$ (12)

1 $4 + 6 \times 3 =$ ☐

2 $4 \times 6 + 3 =$ ☐

3 $10 + 15 \div 5 =$ ☐

4 $36 - 27 \div 9 =$ ☐

5 $28 - 12 \div 2 =$ ☐

6 $4 \times 20 \div 10 =$ ☐

7 $4 \times 5 + 3 \times 9$

$= \_\_\_\_\_ =$ ☐

8 $10 \times 6 - 5 \times 5$

$= \_\_\_\_\_ =$ ☐

9 $30 \div 6 + 9 \times 5$

$= \_\_\_\_\_ =$ ☐

10 $11 \times 6 - 24 \div 6$

$= \_\_\_\_\_ =$ ☐

11 $60 - 20 + 7 \times 3$

$= \_\_\_\_\_ =$ ☐

12 $9 \times 6 - 4 \times 6$

$= \_\_\_\_\_ =$ ☐

13 $72 \div 6 + 36 \div 3$

$= \_\_\_\_\_ =$ ☐

14 $12 + 16 \div 4 - 16$

$= \_\_\_\_\_ =$ ☐

15 $30 - 4 \times 5 + 17$

$= \_\_\_\_\_ =$ ☐

Fill the box with either <, >, or =. Remember point 'the arrow' to the smallest number.

Example

$9 + 2 \times 4$ (8) ☐ $30 - 8 \times 2$ (16)

17 > Total each side < 14

16 $10 + 15 \times 2$ ☐ $40 + 10$

17 $86 - 6 \times 11$ ☐ $5 + 3 \times 3$

18 $10 \div 2 \times 5$ ☐ $15 + 5 \times 2$

19 $6 + 3 \times 11$ ☐ $9 + 24 \div 3$

20 $99 - 81 \div 9$ ☐ $48 \div 6 \times 2$

21 $12 + 64 \div 8$ ☐ $80 \div 5 + 5$

22 $15 + 55 \div 5$ ☐ $7 + 39 \div 3$

Find the missing number that makes these true

23 $10 + 5 \times$ ☐ $= 60 - 5$

24 $30 - 12 \times 2 = 10 -$ ☐

25 $20 + 16 \div 4 = 9 + 5 \times$ ☐

26 $35 - 3 \times$ ☐ $= 12 \div 4 + 2$

Read the sentence, select the matching operation but solve all three.

27 James is carrying 23 pair of shoes at once, if he drops three shoes, how many shoes is he carrying?

(A) $23 - 3 \times 2 =$ ☐

(B) $23 \times 2 - 3 \times 2$

$= \_\_\_\_\_ =$ ☐

(C) $23 \times 2 - 3 =$ ☐

28 Jane has a sheep farm. If she has 14 sheep in the barn and three fields with 15 sheep in each field, how many sheep does she have?

(A) $15 + 14 \times 3 =$ ☐

(B) $14 + 3 \times 15 =$ ☐

(C) $15 \times 3 - 14 =$ ☐

29 An ex-soldier wishes to give all of his 14 service ribbons and half of his 32 medal collection to his grand-daughter. How many awards does the child receive?

(A) $32 + 14 \div 2 =$ ☐

(B) $14 + 32 \div 2 =$ ☐

(C) $32 \div 2 - 14 =$ ☐

30 A school music production has several acts by different groups. There will be 3 quartets, 4 duos and one trio. How many students are performing?

(A) $3 \times 4 \times 4 \times 2 + 1$

$= \_\_\_\_\_ =$ ☐

(B) $3 \times 4 + 4 \times 2 + 3$

$= \_\_\_\_\_ =$ ☐

(C) $3 \times 4 + 4 \times 2 + 1$

$= \_\_\_\_\_ =$ ☐

Order of Operations

Try these, remember to do the × and ÷ before you do the + and –.

Example

$12 + 3 \times 4 = 24$ (12)

1 $4 + 6 \times 3 = 22$ (18)

2 $4 \times 6 + 3 = 27$ (24)

3 $10 + 15 \div 5 = 13$ (3)

4 $36 - 27 \div 9 = 33$ (3)

5 $28 - 12 \div 2 = 22$ (6)

6 $4 \times 20 \div 10 = 8$ (80)

7 $4 \times 5 + 3 \times 9$
$= 20 + 27 = 47$

8 $10 \times 6 - 5 \times 5$
$= 60 - 25 = 35$

9 $30 \div 6 + 9 \times 5$
$= 5 + 45 = 50$

10 $11 \times 6 - 24 \div 6$
$= 66 - 4 = 62$

11 $60 - 20 + 7 \times 3$ (21)
$= 40 + 21 = 61$

12 $9 \times 6 - 4 \times 6$
$= 54 - 24 = 30$

13 $72 \div 6 + 36 \div 3$
$= 12 + 12 = 24$

14 $12 + 16 \div 4 - 16$ (4)
$= 12 + 4 - 16 = 0$ (16)

15 $30 - 4 \times 5 + 17$ (20)
$= 30 - 20 + 17 = 27$ (10)

Fill the box with either <, >, or =. Remember point 'the arrow' to the smallest number.

Example

$9 + 2 \times 4$ (8) $\boxed{>}$ $30 - 8 \times 2$ (16)

17 Total each side 14

16 $10 + 15 \times 2$ (30) $\boxed{<}$ $40 + 10$
40 50

17 $86 - 6 \times 11$ (66) $\boxed{>}$ $5 + 3 \times 3$ (9)
20 14

18 $10 \div 2 \times 5$ (5) $\boxed{=}$ $15 + 5 \times 2$ (10)
25 25

19 $6 + 3 \times 11$ (33) $\boxed{>}$ $9 + 24 \div 3$ (8)
39 17

20 $99 - 81 \div 9$ (9) $\boxed{>}$ $48 \div 6 \times 2$ (8)
90 16

21 $12 + 64 \div 8$ (8) $\boxed{<}$ $80 \div 5 + 5$ (16)
20 21

22 $15 + 55 \div 5$ (11) $\boxed{>}$ $7 + 39 \div 3$ (13)
26 20

Find the missing number that makes these true

23 $10 + 5 \times \boxed{9} = 60 - 5$
55 55

24 $30 - 12 \times 2$ (24) $= 10 - \boxed{4}$
6 6

25 $20 + 16 \div 4$ (4) $= 9 + 5 \times \boxed{3}$
24 24

26 $35 - 3 \times \boxed{10} = 12 \div 4$ (3) $+ 2$
5 5

Read the sentence, select the matching operation but solve all three.

27 James is carrying 23 pair of shoes at once, if he drops three shoes, how many shoes is he carrying?

A $23 - 3 \times 2$ (6) $= 17$

B $23 \times 2 - 3 \times 2$
$= 46 - 6 = 40$ (46)

● $23 \times 2 - 3 = 43$

28 Jane has a sheep farm. If she has 14 sheep in the barn and three fields with 15 sheep in each field, how many sheep does she have?

A $15 + 14 \times 3 = 57$ (42)

● $14 + 3 \times 15 = 59$ (45)

C $15 \times 3 - 14 = 31$ (45)

29 An ex-soldier wishes to give all of his 14 service ribbons and half of his 32 medal collection to his grand-daughter. How many awards does the child receive?

A $32 + 14 \div 2 = 39$ (7)

● $14 + 32 \div 2 = 30$ (16)

C $32 \div 2 - 14 = 2$ (16)

30 A school music production has several acts by different groups. There will be 3 quartets, 4 duos and one trio. How many students are performing?

A $3 \times 4 \times 4 \times 2 + 1$ (12) (8)
$= 12 \times 8 + 1 = 97$ (96)

● $3 \times 4 + 4 \times 2 + 3$ (12) (8)
$= 12 + 8 + 3 = 23$ (20)

C $3 \times 4 + 4 \times 2 + 1$ (12) (8)
$= 12 + 8 + 1 = 21$ (20)

Using Brackets

Before attempting this sheet order of operations should be attempted first. This sheet involves using Brackets and their priority over the 4 operations. Square roots and powers are occasionally referred to as Orders, these come after brackets. Division and/or Multiplication comes before Addition and/or Subtraction, so….BODMAS is what you have.

Students forget what O refers to, it also implies that Division comes before Multiplication, which isn't correct, they have the same priority. As does Addition and Subtraction, so you can use BODMAS to help you remember, but it has its problems.

Column 1 starts with questions which have brackets. As brackets come first, evaluate the operation in the brackets then complete the rest of the question. The first 8 questions have no order of operation rules to apply, other than brackets. Like the example below.

$$100 \div (10 + 15) \div 2$$

$$= \underline{100 \div 25 \div 2} = \boxed{2}$$

Note that the example at the top of the column on the worksheet is an order of operations question, Q9 onwards are this style of question, testing your knowledge of order of operations.

Column 2 require brackets to be placed if they are required for the operation to equal the answer given. Questions 18 to 31 require one set of brackets or no brackets, if you put brackets in a question where they aren't required, usually due to order of operations, you may get the question wrong in a test. These questions are challenging. The last seven questions can either have 1, 2, or no pairs of brackets, so these could also be a challenge. Realise that you can place the brackets, test and see if it works, and if it doesn't, try placing them in a different position. This is a logical way of solving the question.

Column 3 starts with finding the number in the brackets for a given answer. The method is to find the total that the brackets must equal first, write the answer above the bracketed numbers, then write the number in the square inside the brackets that will get you the total.

Square roots and division operations are then briefly looked at. With square roots you find the total in the square root sign, then square root it. When there are operations above and below the division bar, total the top and total the bottom and then complete the division. If you aren't familiar with square roots: a square root is the number which when multiplied by itself equals the number in the square root sign.

Using Brackets

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Brackets are done before other operations. Evaluate these (find the answer).

Example

$10 + (\cancel{5} + \cancel{3}^{8}) \times 4$

$= 10 + \cancel{8}^{32} \times \cancel{4}$ $= \boxed{42}$

1 $10 \times (12 - 7) =$ ☐

2 $16 \div (5 + 3) =$ ☐

3 $(20 + 40) \div 30 =$ ☐

4 $(13 + 12) \times 3 =$ ☐

5 $80 \div (25 + 6 - 11)$

$=$ _____ $=$ ☐

6 $12 \times (17 + 10 - 23)$

$=$ _____ $=$ ☐

7 $(65 - 13 + 4) \div 7$

$=$ _____ $=$ ☐

8 $4 \times (4 + 5) \div 12$

$=$ _____ $=$ ☐

Remember brackets first, but then look for order of operation rules to apply.

9 $6 + (9 - 4) \times 9$

$=$ _____ $=$ ☐

10 $50 - (12 + 3) \times 3$

$=$ _____ $=$ ☐

11 $(34 - 16) \div 6 + 3$

$=$ _____ $=$ ☐

12 $120 \div (13 + 17) + 10$

$=$ _____ $=$ ☐

Put in <u>one</u> set of brackets to make these true, but only if they are required.

Example

$(\cancel{3} + \cancel{2}^{5}) \times 4 = 20$

13 $4 \times 3 + 2 = 14$

14 $6 + 5 \times 7 = 41$

15 $10 + 2 \div 2 = 6$

16 $19 - 4 \div 3 = 5$

17 $6 + 4 \times 5 = 26$

18 $8 - 3 \times 2 = 10$

19 $12 - 8 \div 4 = 10$

20 $25 - 18 \div 3 \times 2 = 22$

21 $9 + 2 \times 5 - 2 \times 4 = 47$

22 $80 \div 2 - 3 \times 7 - 6 = 25$

23 $48 + 3 \times 12 \div 4 = 57$

24 $12 + 7 \times 2 + 3 = 47$

25 $30 - 4 \times 8 - 3 = 1$

26 $24 \div 6 + 3 - 7 \times 2 = 24$

These <u>may</u> require up to 2 sets of brackets

27 $18 + 24 \div 2 + 4 = 7$

28 $9 - 6 \times 2 \times 4 - 3 = 6$

29 $30 \div 6 - 3 \times 5 - 1 = 40$

30 $60 \div 20 + 30 - 6 \div 2 = 30$

31 $3 + 3 \times 3 - 3 \div 3 = 3$

32 $10 + 2 \times 10 \div 1 + 4 = 38$

33 $50 - 24 \div 3 + 1 \times 6 = 48$

Find the missing value to make these correct.

34 $(3 + \square) \times 6 = 36$

35 $(2 + \square) \div 3 = 6$

36 $3 \times (8 - \square) = 9$

37 $35 \div (10 - \square) = 5$

38 $40 \div (3 + \square) = 8$

39 $(12 - \square) \times 5 = 25$

The division bar and the square root sign group like brackets. Try these.

Example (1) $\sqrt{12 - 3} = \sqrt{9} = 3$

Example (2) $\dfrac{29 + 13}{22 - 15} = \dfrac{42}{7} = 6$

Remember this means ÷

40 $\sqrt{65 - 40} = \sqrt{\square} = \square$

41 $\sqrt{4 \times 9} = \sqrt{\square} = \square$

42 $\dfrac{15 + 45}{3 \times 4} = \dfrac{\square}{\square} = \square$

43 $\sqrt{35 + 2 \times 7} = \sqrt{\square} = \square$

44 $\dfrac{100 - 8 \times 8}{32 \div 4 + 1} = \dfrac{\square}{\square} = \square$

45 $\dfrac{3 + 54 \div 9}{6 \times 6 \div 4} = \dfrac{\square}{\square} = \square$

46 $\sqrt{7 + 21 \times 2} = \sqrt{\square} = \square$

Using Brackets

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Brackets are done before other operations. Evaluate these (find the answer).

Example

$10 + (5 + 3) \times 4$

$= 10 + 8 \times 4 = 42$

1 $10 \times (12 - 7) = 50$

2 $16 \div (5 + 3) = 2$

3 $(20 + 40) \div 30 = 2$

4 $(13 + 12) \times 3 = 75$

5 $80 \div (25 + 6 - 11)$

$= 80 \div 20 = 4$

6 $12 \times (17 + 10 - 23)$

$= 12 \times 4 = 48$

7 $(65 - 13 + 4) \div 7$

$= 56 \div 7 = 8$

8 $4 \times (4 + 5) \div 12$

$= 4 \times 9 \div 12 = 3$

Remember brackets first, but then look for order of operation rules to apply.

9 $6 + (9 - 4) \times 9$

$= 6 + 5 \times 9 = 51$

10 $50 - (12 + 3) \times 3$

$= 50 - 15 \times 3 = 5$

11 $(34 - 16) \div 6 + 3$

$= 18 \div 6 + 3 = 6$

12 $120 \div (13 + 17) + 10$

$= 120 \div 30 + 10 = 14$

Put in one set of brackets to make these true, but only if they are required.

Example

$(3 + 2) \times 4 = 20$

13 $4 \times 3 + 2 = 14$

14 $6 + 5 \times 7 = 41$

15 $(10 + 2) \div 2 = 6$

16 $(19 - 4) \div 3 = 5$

17 $6 + 4 \times 5 = 26$

18 $(8 - 3) \times 2 = 10$

19 $12 - 8 \div 4 = 10$

20 $25 - 18 \div (3 \times 2) = 22$

21 $(9 + 2) \times 5 - 2 \times 4 = 47$

22 $80 \div 2 - (3 \times 7 - 6) = 25$

23 $48 + 3 \times 12 \div 4 = 57$

24 $12 + 7 \times (2 + 3) = 47$

25 $30 - (4 \times 8 - 3) = 1$

26 $24 \div (6 + 3 - 7) \times 2 = 24$

These may require up to 2 sets of brackets

27 $(18 + 24) \div (2 + 4) = 7$

28 $(9 - 6) \times 2 \times (4 - 3) = 6$

29 $30 \div (6 - 3) \times (5 - 1) = 40$

30 $60 \div 20 + 30 - 6 \div 2 = 30$

31 $3 + 3 \times (3 - 3) \div 3 = 3$

32 $10 + 2 \times (10 \div 1 + 4) = 38$

33 $(50 - 24 \div 3) + 1 \times 6 = 48$

Find the missing value to make these correct.

34 $(3 + \boxed{3}) \times 6 = 36$

35 $(2 + \boxed{16}) \div 3 = 6$

36 $3 \times (8 - \boxed{5}) = 9$

37 $35 \div (10 - \boxed{3}) = 5$

38 $40 \div (3 + \boxed{2}) = 8$

39 $(12 - \boxed{7}) \times 5 = 25$

The division bar and the square root sign group like brackets. Try these.

Example (1) $\sqrt{12 - 3} = \sqrt{9} = 3$

Example (2) $\dfrac{29 + 13}{22 - 15} = \dfrac{42}{7} = 6$

Remember this means ÷

40 $\sqrt{65 - 40} = \sqrt{25} = 5$

41 $\sqrt{4 \times 9} = \sqrt{36} = 6$

42 $\dfrac{15 + 45}{3 \times 4} = \dfrac{60}{12} = 5$

43 $\sqrt{35 + 2 \times 7} = \sqrt{49} = 7$

44 $\dfrac{100 - 8 \times 8}{32 \div 4 + 1} = \dfrac{36}{9} = 4$

45 $\dfrac{3 + 54 \div 9}{6 \times 6 \div 4} = \dfrac{9}{9} = 1$

46 $\sqrt{7 + 21 \times 2} = \sqrt{49} = 7$

Place Value

Place value is the value of a number in a set position. For example the value of the digit 3 in the following would be:

- 30 in 1 234
- 300 in 2 346.04
- 30 000 in 1 236 790
- 0.03 in 12.439.

If the number is in front of the decimal point count how many digits are behind it until the decimal point. Then write the number and count off the zeros behind it.

1 234

Example. For the place value of 5 in 457 609.7, write '5' then count the digits behind the 5 back to the decimal point, there are 4 digits so write 4 zeros, 50 000. If the number is behind the decimal point write '0.' then count the digits between the decimal point and the number.

12

Example. For the place value of 9 in 344.379, write '0.' then count the digits between the decimal point and the 9. There are 2 digits so write 2 zeros then the 9, 0.009. (which is zero point zero zero nine or just point zero zero nine).

Column 1 has 10 numbers, 5 written in words, the other 5 in numerals. Start by placing all of the numbers in the table at the top of the column then find the place value of both the 5 and the 7 in each number.

Column 2 starts with 10 questions on the place value of a number which is given in brackets. This is the same as the first column except that you are asked to give your answer in words. There are two acceptable ways as the example shows at the top of the column. The first way is as used in the first column, but in words. The other way is to write the value of the position. In the example it is ten thousands.

The last part of the column has three numbers in each question, you are asked to write the number which gives the largest place value for the number in brackets. Once you have done this you are asked to write your answer in words. Note that the commas in these questions separate the numbers, if you write 1 000 as 1,000 don't get confused with the commas, the actual numbers don't have commas in them.

Place Value

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Put the numbers in the questions below, in the table. Then give the place value of both the 5 and of the 7 in each number. The first one has been done for you.

Table 1 : Place Values

	Millions	Hundred Thousands	Ten Thousands	Thousands	Hundreds	Tens	Units (or ones)	Decimal Point	Tenths	Hundredths	Thousandths
	2	4	5	0	1	1	9	.	7		
1											
2											
3											
4											
5											
6											
7											
8											
9											
10											

Example (see table also)

Two million, four hundred and fifty thousand, one hundred and nineteen and seven tenths. 5: 50 000 7: 0.7

1 Five hundred and twenty-seven thousand and three, point zero four six. 5: _____ 7: _____

2 Eight million, seventy-six thousand, three hundred and ten, point two five. 5: _____ 7: _____

3 Two hundred and thirty-six thousand, seven hundred and twenty-three, point eight nine five. 5: _____ 7: _____

4 Five million, four hundred and thirty-seven thousand, one hundred and two. 5: _____ 7: _____

5 One thousand, five hundred and thirty-nine, point zero two seven 5: _____ 7: _____

6 117 002.5 5: _____ 7: _____

7 2 750 032 5: _____ 7: _____

8 67 025.43 5: _____ 7: _____

9 29 536.07 5: _____ 7: _____

10 315 019.7 5: _____ 7: _____

Give the place value of the bracketed number in words, either of the two formats shown is acceptable

Example

364 257.1 [6] Six ten thousands or Sixty thousand

11 3 583.452 [4] _____

12 2 877 643 [8] _____

13 9 227.023 [3] _____

14 345 002 [4] _____

15 311.129 [9] _____

16 768 909 [6] _____

17 9 076 223 [9] _____

18 7.008 [7] _____

19 329 777.3 [2] _____

20 555 712.6 [1] _____

Using the number in brackets, write the number (and in words) which has the largest corresponding place value.

Example

14 887, 2 300 403, 99 994 [4] 14 887

400 → 4 000 is largest place value of 4

Fourteen thousand eight hundred and eighty-seven

21 8 455 237, 322.095, 3 668 [3] _____

22 2 347.8, 554 237, 20.009 [2] _____

23 790, 567 352.96, 378 002 [7] _____

24 9 065, 336 950.8, 93.007 [9] _____

Place Value

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Put the numbers in the questions below, in the table. Then give the place value of both the 5 and of the 7 in each number. The first one has been done for you.

Table 1 : Place Values

	Millions	Hundred Thousands	Ten Thousands	Thousands	Hundreds	Tens	Units (or ones)	Decimal Point	Tenths	Hundredths	Thousandths
	2	4	5	0	1	1	9	.	7		
1		5	2	7	0	0	3	.	0	4	6
2	8	0	7	6	3	1	0	.	2	5	
3		2	3	6	7	2	3	.	8	9	5
4	5	4	3	7	1	0	2				
5				1	5	3	9	.	0	2	7
6		1	1	7	0	0	2	.	5		
7	2	7	5	0	0	3	2				
8			6	7	0	2	5	.	4	3	
9			2	9	5	3	6	.	0	7	
10		3	1	5	0	1	9	.	7		

Example (see table also)

Two million, four hundred and fifty thousand, one hundred and nineteen and seven tenths. 5: 50 000 7: 0.7

1 Five hundred and twenty-seven thousand and three, point zero four six. 5: 500 000 7: 7 000

2 Eight million, seventy-six thousand, three hundred and ten, point two five. 5: 0.05 7: 70 000

3 Two hundred and thirty-six thousand, seven hundred and twenty-three, point eight nine five. 5: 0.005 7: 700

4 Five million, four hundred and thirty-seven thousand, one hundred and two. 5: 5 000 000 7: 7 000

5 One thousand, five hundred and thirty-nine, point zero two seven 5: 500 7: 0.007

6 117 002.5 5: 0.5 7: 7 000

7 2 750 032 5: 50 000 7: 700 000

8 67 025.43 5: 5 7: 7 000

9 29 536.07 5: 500 7: 0.07

10 315 019.7 5: 5 000 7: 0.7

Give the place value of the bracketed number in words, either of the two formats shown is acceptable

Example

364 257.1 [6] Six ten thousands or Sixty thousand

11 3 583.452 [4] Four tenths

12 2 877 643 [8] Eight hundred thousands

13 9 227.023 [3] Three thousandths

14 345 002 [4] Four ten thousands

15 311.129 [9] Nine thousandths

16 768 909 [6] Six ten thousands

17 9 076 223 [9] Nine millions

18 7.008 [7] Seven units (or ones)

19 329 777.3 [2] Two ten thousands

20 555 712.6 [1] One tens

Using the number in brackets, write the number (and in words) which has the largest corresponding place value.

Example

400 4

14 887, 2 300 403, 99 994 [4] 14 887

4 000 is largest place value of 4

Fourteen thousand eight hundred and eighty-seven

21 8 455 237, 322.095, 3 668 [3] 3 668

Three thousand, six hundred and sixty-eight

22 2 347.8, 554 237, 20.009 [2] 2 347.8

Two thousand three hundred and forty-seven point eight

23 790, 567 352.96, 378 002 [7] 378 002

Three hundred and seventy-eight thousand and two

24 9 065, 336 950.8, 93.007 [9] 9 065

Nine thousand and sixty-five

Expanded Notation

This sheet has some questions written sideways. To read these questions click on the "View" menu, select the rotate option then "counter clockwise".

Numbers written in expanded notation are broken up into their place values. Multiplying the number by the place value of its position.

In column 1 a number has been expressed in expanded notation, this is to be rewritten in basic numerals. The best way to attempt these problems is to look at them digit by digit, for example : $7 \times 100\,000 + 4 \times 1\,000 + 8 \times 100 + 6$, follow these steps:

- The largest unit is 100 000 write the number 7
- After 100 000's comes 10 000's, how many are there? None, so write a zero
- How many thousands? Write the number 4
- How many hundreds? Write the number 8
- How many tens? None, so write a zero
- How many units (or ones)? Write the number 6
- You now have 704 806.

After the first 9 questions the sheet is written side ways, so follow the instruction in red above.

Column 2 works in the reverse, remember if there is a zero in the number write nothing for it.

Expanded Notation

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Change from expanded notation to basic numerals

Example

$7 \times 100\,000 + 4 \times 1\,000 + 3 = 704\,003$

1. $5 \times 10\,000 + 4 \times 1\,000 + 2 \times 10 =$ _____
2. $3 \times 1\,000 + 6 \times 100 + 3 \times 10 =$ _____
3. $9 \times 1\,000 + 7 \times 10 + 8 =$ _____
4. $1 \times 1\,000\,000 + 7 \times 10\,000 + 7 =$ _____
5. $4 \times 10\,000 + 8 \times 1\,000 + 5 \times 10 =$ _____
6. $2 \times 100\,000 + 5 \times 10\,000 + 9 =$ _____
7. $6 \times 1\,000 + 7 \times 100 + 2 \times 10 =$ _____
8. $8 \times 1\,000\,000 + 4 \times 10\,000 + 1 =$ _____
9. $1 \times 100\,000 + 6 \times 100 + 5 =$ _____
10. $5 \times 100\,000 + 2 \times 10\,000 + 3 \times 100 + 7 =$ _____
11. $9 \times 1\,000\,000 + 4 \times 1\,000 + 5 \times 100 + 3 \times 10 + 4 =$ _____
12. $8 \times 1\,000\,000 + 3 \times 10\,000 + 7 \times 1\,000 + 9 \times 10 =$ _____
13. $2 \times 100\,000 + 3 \times 10\,000 + 6 \times 100 + 4 \times 10 =$ _____
14. $7 \times 1\,000\,000 + 1 \times 100\,000 + 6 \times 100 =$ _____
15. $8 \times 100\,000 + 4 \times 1\,000 + 4 \times 10 + 7 =$ _____
16. $2 \times 1\,000\,000 + 6 \times 10\,000 + 5 \times 1\,000 + 9 \times 100 + 6 =$ _____
17. $9 \times 10\,000 + 3 \times 1\,000 + 8 \times 100 + 8 =$ _____
18. $4 \times 100\,000 + 5 \times 1\,000 + 9 \times 100 + 3 \times 10 + 3 =$ _____
19. $5 \times 100\,000 + 9 \times 10\,000 + 6 \times 1\,000 =$ _____
20. $8 \times 1\,000\,000 + 3 \times 100\,000 + 5 \times 100 + 8 =$ _____

Now the reverse, write these numbers in expanded notation

Example

$102\,700 = 1 \times 100\,000 + 2 \times 1\,000 + 7 \times 100$

21. $593 =$ _____
22. $1\,270 =$ _____
23. $50\,035 =$ _____
24. $9\,010\,002 =$ _____
25. $150 =$ _____
26. $70\,330 =$ _____
27. $8\,070 =$ _____
28. $3\,410 =$ _____
29. $7\,000\,900 =$ _____
30. $17\,431 =$ _____
31. $105\,309 =$ _____
32. $85\,317 =$ _____
33. $5\,608\,020 =$ _____
34. $4\,841 =$ _____
35. $6\,040\,902 =$ _____
36. $110\,882 =$ _____
37. $7\,720\,000 =$ _____
38. $15\,936 =$ _____
39. $276\,410 =$ _____
40. $5\,059\,107 =$ _____

Expanded Notation

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Change from expanded notation to basic numerals

Example

$7 \times 100\,000 + 4 \times 1\,000 + 3 = 704\,003$

1. $5 \times 10\,000 + 4 \times 1\,000 + 2 \times 10 = 54\,020$
2. $3 \times 1\,000 + 6 \times 100 + 3 \times 10 = 3\,630$
3. $9 \times 1\,000 + 7 \times 10 + 8 = 9\,078$
4. $1 \times 1\,000\,000 + 7 \times 10\,000 + 7 = 1\,070\,007$
5. $4 \times 10\,000 + 8 \times 1\,000 + 5 \times 10 = 48\,050$
6. $2 \times 100\,000 + 5 \times 10\,000 + 9 = 250\,009$
7. $6 \times 1\,000 + 7 \times 100 + 2 \times 10 = 6\,720$
8. $8 \times 1\,000\,000 + 4 \times 10\,000 + 1 = 8\,040\,001$
9. $1 \times 100\,000 + 6 \times 100 + 5 = 100\,605$
10. $5 \times 100\,000 + 2 \times 10\,000 + 3 \times 100 + 7 = 520\,307$
11. $9 \times 1\,000\,000 + 4 \times 1\,000 + 5 \times 100 + 3 \times 10 + 4 = 9\,004\,534$
12. $8 \times 1\,000\,000 + 3 \times 10\,000 + 7 \times 1\,000 + 9 \times 10 = 8\,037\,090$
13. $2 \times 100\,000 + 3 \times 10\,000 + 6 \times 100 + 4 \times 10 = 237\,090$
14. $7 \times 1\,000\,000 + 1 \times 100\,000 + 6 \times 100 = 7\,100\,600$
15. $8 \times 100\,000 + 4 \times 1\,000 + 4 \times 10 + 7 = 804\,047$
16. $2 \times 1\,000\,000 + 6 \times 10\,000 + 5 \times 1\,000 + 9 \times 100 + 6 = 2\,065\,906$
17. $9 \times 10\,000 + 3 \times 1\,000 + 8 \times 100 + 8 = 93\,808$
18. $4 \times 100\,000 + 5 \times 1\,000 + 9 \times 100 + 3 \times 10 + 3 = 405\,933$
19. $5 \times 100\,000 + 9 \times 10\,000 + 6 \times 1\,000 = 596\,000$
20. $8 \times 1\,000\,000 + 3 \times 100\,000 + 5 \times 100 + 8 = 8\,300\,508$

Now the reverse, write these numbers in expanded notation

Example

$102\,700 = 1 \times 100\,000 + 2 \times 1\,000 + 7 \times 100$

21. $593 = 5 \times 100 + 9 \times 10 + 3$
22. $1\,270 = 1 \times 1\,000 + 2 \times 100 + 7 \times 10$
23. $50\,035 = 5 \times 10\,000 + 3 \times 10 + 5$
24. $9\,010\,002 = 9 \times 1\,000\,000 + 1 \times 10\,000 + 2$
25. $150 = 1 \times 100 + 5 \times 10$
26. $70\,330 = 7 \times 10\,000 + 3 \times 100 + 3 \times 10$
27. $8\,070 = 8 \times 1\,000 + 7 \times 10$
28. $3\,410 = 3 \times 1\,000 + 4 \times 100 + 1 \times 10$
29. $7\,000\,900 = 7 \times 1\,000\,000 + 9 \times 100$
30. $17\,431 = 1 \times 10\,000 + 7 \times 1\,000 + 4 \times 100 + 3 \times 10 + 1$
31. $105\,309 = 1 \times 100\,000 + 5 \times 1\,000 + 3 \times 100 + 9$
32. $85\,317 = 8 \times 10\,000 + 5 \times 1\,000 + 3 \times 100 + 1 \times 10 + 7$
33. $5\,608\,020 = 5 \times 1\,000\,000 + 6 \times 100\,000 + 8 \times 1\,000 + 2 \times 10$
34. $4\,841 = 4 \times 1\,000 + 8 \times 100 + 4 \times 10 + 1$
35. $6\,040\,902 = 6 \times 1\,000\,000 + 4 \times 10\,000 + 9 \times 100 + 2$
36. $110\,882 = 1 \times 100\,000 + 1 \times 10\,000 + 8 \times 100 + 8 \times 10 + 2$
37. $7\,720\,000 = 7 \times 1\,000\,000 + 7 \times 100\,000 + 2 \times 10\,000$
38. $15\,936 = 1 \times 10\,000 + 5 \times 1\,000 + 9 \times 100 + 3 \times 10 + 6$
39. $276\,410 = 2 \times 100\,000 + 7 \times 10\,000 + 6 \times 1\,000 + 4 \times 100 + 1 \times 10$
40. $5\,059\,107 = 5 \times 1\,000\,000 + 5 \times 10\,000 + 9 \times 1\,000 + 1 \times 100 + 7$

Rounding Numbers

Numbers are often rounded when it is considered the smaller digits are not needed. An example would be a company's profits being rounded to the nearest $1 000, or even to the nearest $1 000 000 for large corporations, as the smaller amounts have little significance in overall profit.

Column 1 requires numbers to be rounded to the nearest 5. This means the answer will either end with a 5 or a 0. Note that 2.5 is halfway between 0 and 5 and 7.5 is halfway between 5 and 10. So if the last digit is less than 2.5 (1 or 2) it is changed to a 0. If it is between 2.5 and 7.5 (3, 4, 5, 6, 7) it is changed to a 5. If it is an 8 or 9 it is changed to a zero and 1 is added to the tens column.

To round to the nearest 10 the halfway point is 5. If the last digit is less than 5, ie (1, 2, 3 or 4) it is changed to a zero. If the last digit is 5 or more (5, 6, 7, 8 , 9) it is also changed to a zero but 1 is added to the tens column also.

Column 2 involves rounding to the nearest 100 and then 1 000. The method is the much the same as with 10's. For 100 the halfway point is 50 and with 1 000 the halfway point is 500. This means that all answers will end in '00' for hundreds and '000' when rounded to the nearest thousand.

An important point is that when a number is rounded it is possible for a number with value to become 0. For example, 430 when rounded to the nearest 1 000 becomes 0, as it is less than 500.

Column 3 is comparing answers if rounding is done at different stages of an addition. Given several numbers, add the numbers then round the answer to the nearest 100. Then perform the addition again except this time round the numbers before the addition.

Rounding Numbers

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Round these numbers to the nearest 5

Examples

i) 52 50 — In between 50 and 55 and is closer to 50 (< 52.5)

ii) 98 100 — In between 95 and 100 and is closer to 100 (≥ 97.5)

1	7	2	33
3	9	4	71
5	99	6	203
7	2	8	91
9	497	10	777
11	106	12	382

13 1 048

14 9 497

15 28 498

16 73 444

Round these numbers to the nearest 10

Example 167 170 — In between 160 and 170 and is closer to 170 (≥ 165)

17	12	18	56
19	104	20	255
21	4	22	86
23	193	24	464
25	298	26	99
27	11	28	67

29 1 011

30 9 889

31 10 573

32 19 996

Round these to the nearest 100

Example 1 371 1 400 — In between 1 300 and 1 400 and is closer to 1 400 (≥ 1 350)

33	149	34	670
35	29	36	250

37 1 809

38 5 037

39 3 099

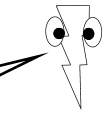
40 14 636

41 7 591

42 28 370

43 39 889

44 71 656



Round these to the nearest 1 000

Example 1 442 1 000

45 9 027

46 3 641

47 22 555

48 396

49 11 099

50 34 495

51 99 199

52 274 902

53 600 513

54 599 714

55 99 899

Add the numbers and round the answer to the nearest 100, then round the numbers to the nearest 100 and add them afterwards.

Example : 776, 345, 881 and 252

	1 1	
776 +		800 +
345		300
881		900
252		300
2 184 →	2 200	2 300

56 839, 242, 1 487, 3 510

\+ \+

57 112, 5 861, 8 170, 923, 756

\+ \+

57 2 859, 933, 5 211, 43, 1 169

\+ \+

9 822 →	9 800	9 900	

57 2 859, 933, 5 211, 43, 1 169

1 2 2		1	
2 859 +		2 900 +	
633		600	
4 211		4 200	
43		0	
1 169		1 200	
8 915 →	8 900	8 900	

Number - Find A Word

Look for words in the list at the bottom of the grid. Once you find a word cross it off the list.

A letter could be used more than once so don’t colour it in too dark (using a texta for example) so that you can still read it.

ALTITUDE

SHAPES & SOLIDS

Naming Plane Shapes

With naming shapes it is important to first count the sides and after that examine the properties like:

- parallel sides
- equal side lengths
- internal angles

Some descriptions used:
Triangles - right (has a right angle), scalene (unequal sides), equilateral (all sides and angles equal) and isosceles (two sides and two angles are equal).

Quadrilaterals - square, rectangle, rhombus, kite, parallelogram and trapezium. If a 4-sided shape doesn't match these names then label it a 'quadrilateral'.

Circle - semi-circle (half circle), oval or ellipse (stretched)

Shapes with more than 4 sides - pentagon (5), hexagon (6), heptagon (or septagon) (7), octagon (8), nonagon (9), and decagon (10).

If a shape with 5 sides or more has unequal sides or internal angles then the word 'irregular' is used to describe it. For example a five sided shape that has sides of different length is called an irregular pentagon.

Note that some shapes appear more than once.

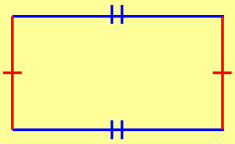
Drawing Plane Shapes

This sheet involves the drawing of 2D shapes, referred to as Plane shapes. In mathematics a drawn shape gives information about the shape. So that a person can look at the drawing and not confuse it with another similar shape. For example a square and a rectangle.

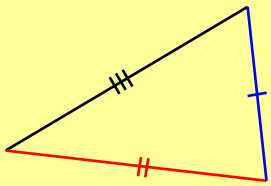
There are 3 features to include in all your drawings:

- Equal or unequal side lengths

Make sure that if a side is the same length as another side you mark it as so in your diagram, this is done by placing a dash on the sides that are the same length. If there are more than one pair of equal length sides then use two dashes on the next pair and so on. If a shape has unequal side lengths then mark the sides as unequal, see below.



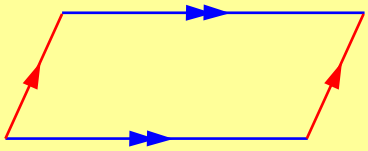
Red sides are the same length, blue sides are the same length. Because the blue sides use 2 dashes and the red sides have only 1 dash, then it is known that they are different lengths



The sides of this triangle have a different numbers of dashes, so all the side lengths are unequal.

- Parallel sides

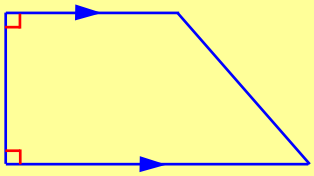
If pairs of sides are parallel then this should be shown on the diagram, this is done by placing arrow heads on sides that are parallel. Generally sides aren't labeled as parallel on shapes with more than 4 sides, a hexagon for example.



Red sides are parallel.
Blue sides are parallel.

- Right Angles

If a shape has one or more right angles then show this on the diagram.



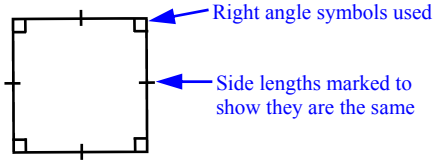
It may be that you are expected to show matching angle pairs on diagrams also, check with your teacher.

Drawing Plane Shapes

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Draw these shapes, show parallel lines ►► ,same side lengths ⊣ ⊣⊢ and right angles. ⊾

Example: Draw a square



1 Draw a rectangle showing same side lengths and right angles.

2 Draw a scalene triangle, label the sides as unequal.

3 Draw an equilateral triangle and label the sides as equal.

4 Draw a parallelogram and label each pair of sides as being equal and parallel.

5 Draw an oval which has a width greater than its height.

6 Draw an octagon and label all the sides as equal, (think of a stop sign).

7 Draw a rhombus, label the sides as equal and each pair of sides as parallel.

8 Draw a trapezium and label two sides as parallel.

9 Draw a pentagon and label the sides as equal.

10 Draw a isosceles triangle and label two sides as equal.

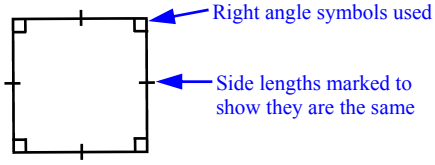
11 Draw a hexagon and label the sides as equal.

Drawing Plane Shapes

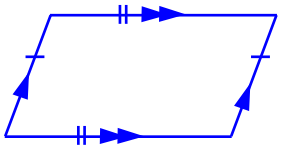
© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 1 - LICENSED FOR NON-COMMERCIAL USE

Draw these shapes, show parallel lines ►► ,same side lengths ─┼─ ─┼┼─ and right angles. ⊾

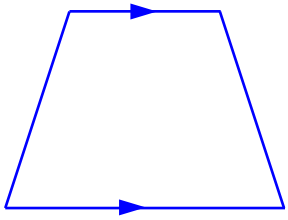
Example: Draw a square



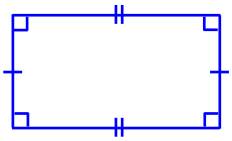
4 Draw a parallelogram and label each pair of sides as being equal and parallel.



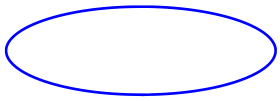
8 Draw a trapezium and label two sides as parallel.



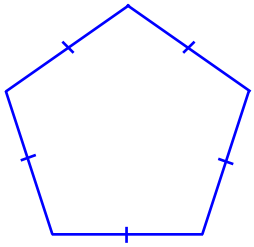
1 Draw a rectangle showing same side lengths and right angles.



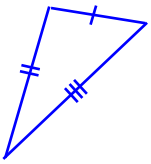
5 Draw an oval which has a width greater than its height.



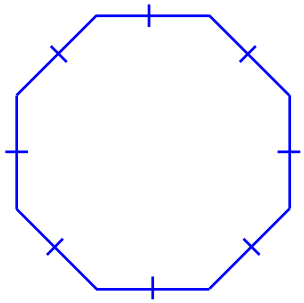
9 Draw a pentagon and label the sides as equal.



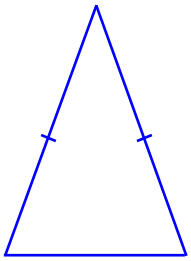
2 Draw a scalene triangle, label the sides as unequal.



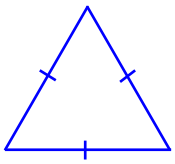
6 Draw an octagon and label all the sides as equal, (think of a stop sign).



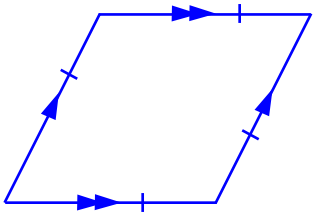
10 Draw a isosceles triangle and label two sides as equal.



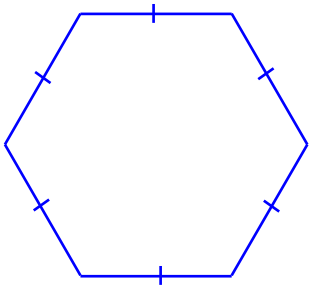
3 Draw an equilateral triangle and label the sides as equal.



7 Draw a rhombus, label the sides as equal and each pair of sides as parallel.



11 Draw a hexagon and label the sides as equal.



Naming Solids

When naming solids first decide whether it is a prism or a pyramid. Then look at the base to name the solid.

Use these words:
Triangular (3 sides), Rectangular (4 sides), Pentagonal (5 sides), Hexagonal (6) and Octagonal (8 sides). End these words with either the word ‘pyramid’ or ‘prism’.

The most confusion occurs with triangles, is it a pyramid or a prism? If there are only two triangles in the solid then it is a triangular prism. If there is more than two triangles then the solid is a pyramid, look at its base to decide what type of pyramid it is.

Other shapes to consider are cube, cone, sphere (and hemisphere), and cylinder.

This sheet repeats a few solids so don’t think that you have made a mistake if you have used the same name more than once.
